Pedestrian Facility Improvements - Preference Values

Student walkers/day

school days per year

trips per day (to and from school)

Number of Annual Student Trips

maximum miles allowed per BCA guidance

MPH reduction in speed, based on the addition of the roundabout and the conversion of both streets to two-way traffic

Value of reducing traffic speed by 1 mph

Value of Speed Reduction

Added Crosswalks. 1 additional on Park, 1 additional on Congress, and 3 additional at the roundabout. Only considered 4 for the purpose of this benefit part as the traffic in Park Avenue exceed 10,000 vehicles per day

Value added per new crosswalk

Value of New Crosswalks

Added rectangular rapid flashing beacons, one on Park and one on Congress

Value added per new signal

Value of New Signals

NOTES

Estimates are by calendar year. Vehicles types are defined as follows: light-duty vehicles (passenger cars); light-duty trucks (pickups, vans, and cargo vans); medium-duty vehicles (medium-duty trucks and vans); and heavy-duty vehicles (heavy-duty trucks and vans). Emissions factors are averages based on the national average age distributions, vehicle activity (speeds, operation hours, and idling), and average gasoline fuel properties in that calendar year. Total HC includes exhaust and non-exhaust emissions. Average emissions per vehicle rates assume a fleet comprised exclusively of gasoline and diesel vehicles. This table was generated using MOVES3, the U.S. Environmental Protection Agency's (EPA) mobile source emissions model. Data for this update are based on new estimation models and are not comparable to previous releases. MOVES3 thus provides the current best estimates of emissions for all calendar years. Data for 2021 and later are projections.
