PLAN

SPECIFICATIONS

DESIGN: Load Factor Design per AASHTO Standard Specifications for Highway Bridges 1989.

CONTRACT: State of Maine, Department of Transportation, Standard Specifications, Highways and Bridges, Revision of July 1988.

DESIGN LOADING

LIVE LOAD HS25

MATERIALS

CONCRETE: . . . . . Class "A"
REINF. STEEL: . . ASTM A615, Gr. 60
STRUCTURAL STEEL:
H.S. Bolts . . . ASTM A325, Type 1

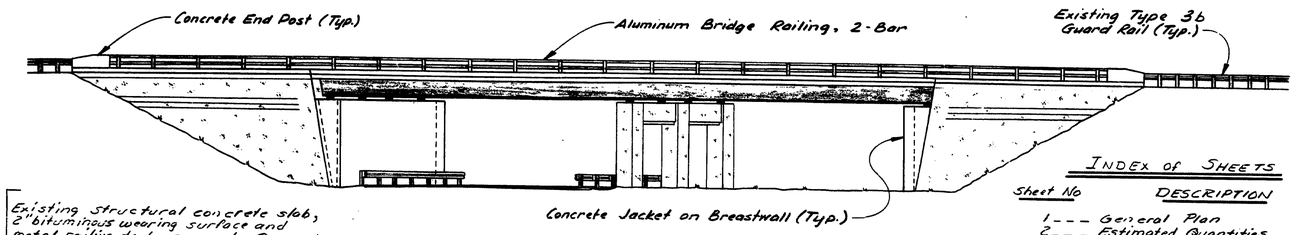
BASIC DESIGN STRESSES

CONCRETE: . . . . . f'_c = 3000 psi
REINF. STEEL: . . . f_y = 60,000 psi
STRUCTURAL STEEL:
H.S. Bolts . . . . F_v = 25,000 psi

TRAFFIC DATA

AADT 1990 8740
AADT 2010 13,980
DHV 1538
T % 4
D % 100
18 Kip P2.0 269
18 Kip P2.5 264

Plans of the existing bridge are available for the Contractor's reference at the Bridge Design Office in Augusta. The plans are reproductions of original drawings as prepared for the construction of the bridge and it is very unlikely that the plans will show any construction field changes or any alterations which may have been made to the bridge during its life span.



ELEVATION

Existing structural concrete slab, 2" bituminous wearing surface and metal railing to be removed. Payment will be made under Item 202.10 Removing Existing Superstructure. (Property of Contractor).

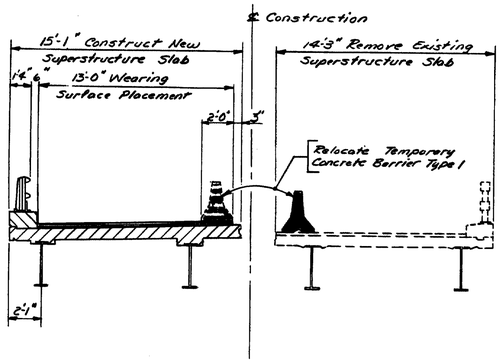
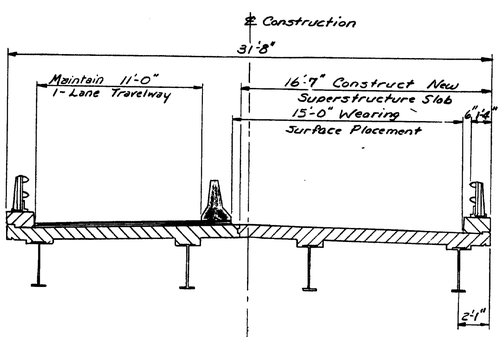
STAGE-1



STAGE-2



STAGE-3

SEQUENCE OF CONSTRUCTION

STAGE-1
Install traffic control devices,
Maintain 10'-0" one lane travelway,
Remove 17'-6" of existing superstructure slab, curb, railing and bituminous wearing surface.

STAGE-2
Install shear connectors,
Construct 15'-1" new superstructure slab, curb & railing,
Place membrane waterproofing & 13'-0" of 3" hot bituminous pavement wearing surface,
Relocate traffic control devices,
Maintain 11'-0" one lane travelway,
Remove 14'-3" of existing superstructure slab, curb, railing and bituminous pavement.

STAGE-3
Install shear connectors,
Construct 16'-7" new superstructure slab, curb & railing.
Place Membrane Waterproofing & 15'-0" of 3" hot bituminous pavement.

GENERAL CONSTRUCTION NOTES

1 - - - Place loam 2" deep, on slopes between station 15+50± and station 19+50± as directed by the Engineer.

2 - - - Sodded gutters shall be constructed, after paving and shoulder work is completed, where it is apparent that runoff will cause continual erosion.

3 - - - Clearing will be as directed by the Engineer. Payment shall be incidental to related contract items.

4 - - - All joints between existing and proposed hot bituminous pavement shall be butted unless otherwise directed by the Engineer. Payment will be considered incidental to related contract items.

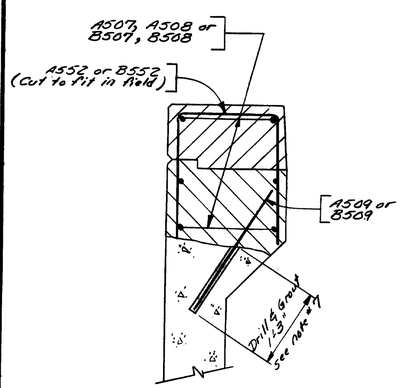
TYPICAL EXISTING WING SECTION

TYPICAL NEW WING SECTION
(Existing Vertical Reinforcing Steel)

TYPICAL ABUTMENT SECTION



TYPICAL NEW WING SECTION
(New Vertical Reinforcing Steel)

ABUTMENT NOTES

1 — Reinforcing steel shall have two inches minimum cover unless otherwise indicated.

2 — Protective coating for concrete surfaces shall be applied to all exposed surfaces of new concrete curbs and all exposed surfaces of concrete end posts.

3 — Remove the existing 2'-1½" wide structural concrete curbs and 1'-1" wide structural concrete rail on wings down 1'-6" to the coping as shown on the plans. Saw cut the existing face of wings 1" deep before removing the tops of the wings as shown in the Typical Existing Section. Payment will be made under Item 202.17 Removing Existing Structural Concrete, which will include the saw cut.

4 — The existing concrete shall be removed so as not to damage the existing vertical reinforcing steel. Any damaged vertical reinforcing steel shall be replaced at the contractor's expense.

5 — The existing reinforcing steel shall be bent to fit into the new concrete as shown in the sections. Payment for this work shall be incidental to Item 503.13 Reinforcing Steel Placing.

6 — Existing reinforcing steel that has been exposed from concrete removal that will be on an exposed surface shall be removed to 2" below the finished surface and the holes shall be filled with an approved non-shrink grout.

7 — Material used to grout the reinforcing steel shall be an approved non-shrink grout. No seperate payment will be made for drilling and grouting, and all such work will be considered incidental to Item 503.13, Reinforcing Steel Placing.

8 — All concrete for wing curbs, end posts and concrete jacket will be paid for under Item 502.21, Structural Concrete Abutments and Retaining Walls.

9 — Remove all deteriorated concrete in the breastwall area, as directed by the Engineer, prior to placement of concrete jacket. Payment for all labor & equipment will be incidental to Item 502.21, Structural Concrete Abutments and Retaining Walls.

10 — All curb, end post, and Jacket concrete for the abutments shall contain a Silica Fume Additive.

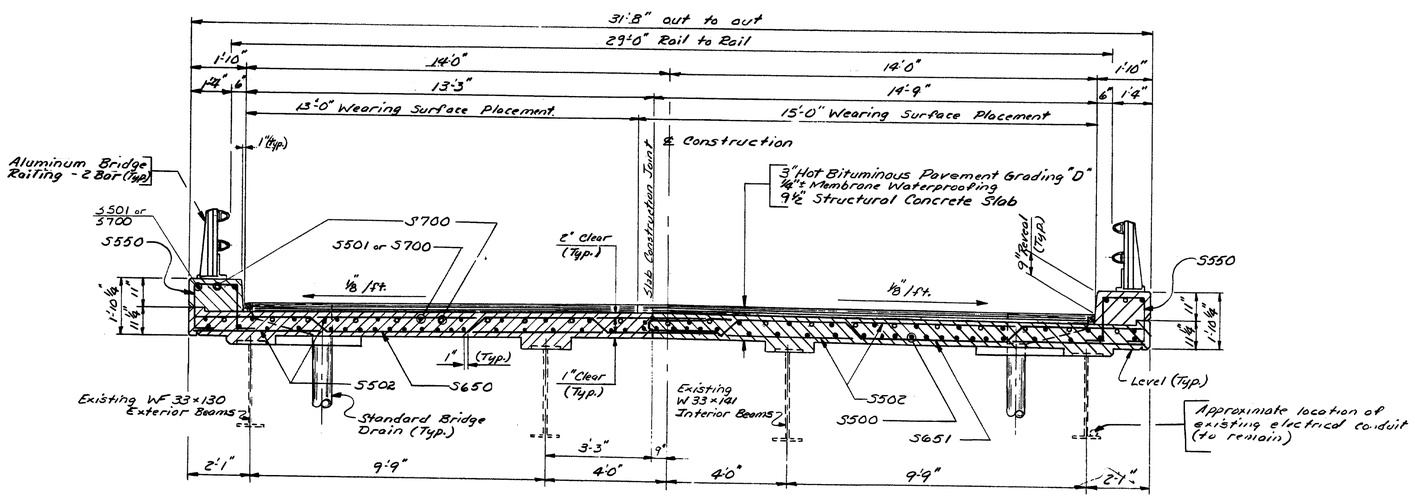
SUPERSTRUCTURE SLAB PLAN



TRANSVERSE SECTION

SUPERSTRUCTURE NOTES

1. Form a 1" V-groove on the fascia at the horizontal joint between the curb and slab.
2. Reinforcing steel shall have a minimum cover of 2" unless otherwise indicated.
3. Adjust reinforcing steel to fit around the drains in a manner approved by by the Engineer. Do not cut transverse reinforcing bars.
4. The superstructure slab concrete shall be placed in one continuous operation and the concrete shall be kept plastic the entire length of placement.
5. Protective coating for concrete surfaces shall be applied to the following areas:
   - Top and face of concrete curbs.
   - Fascia down to the drip notch.
6. All curb concrete shall contain a Silica Fume Additive.

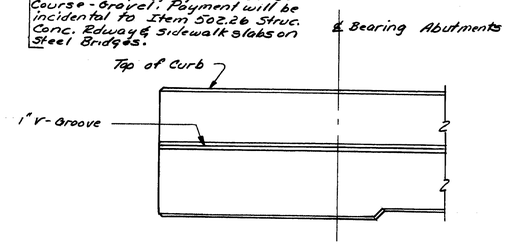
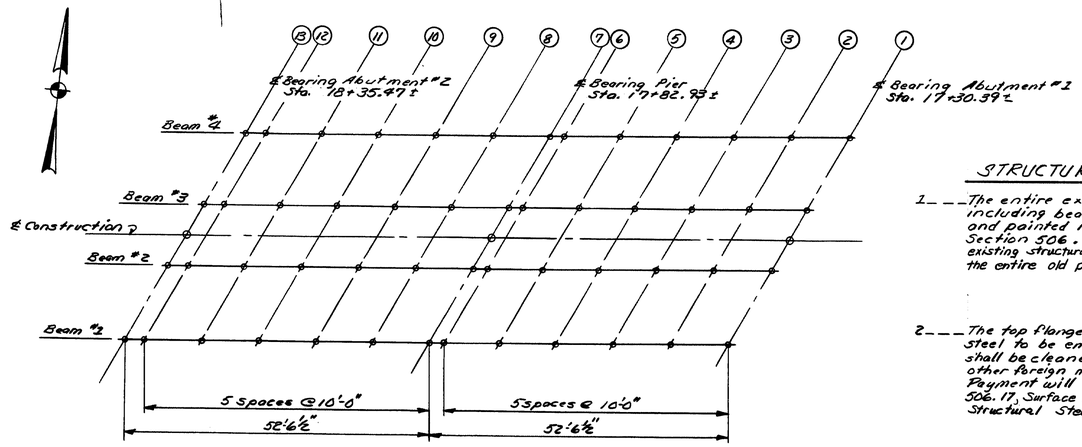
Pay Limits for Structural Earth Excavation & Aggregate Subbase Course - Gravel. Payment will be incidental to Item 502.26 Struc. Conc. Rdway & Sidewalk Slabs on Steel Bridges.



FASCIA DETAIL



BLOCKING LAYOUT

STRUCTURAL STEEL NOTES

1 - - - The entire existing structural steel, including bearings, shall be cleaned and painted in accordance with Section 506. The surface preparation of the existing structural steel will require removal of the entire old paint system.

2 - - - The top flanges of the existing structural steel to be embedded in the new concrete, shall be cleaned of all paint, rust, and other foreign matter before placing concrete. Payment will be included under Item 506.17, Surface Preparation of Existing Structural Steel.

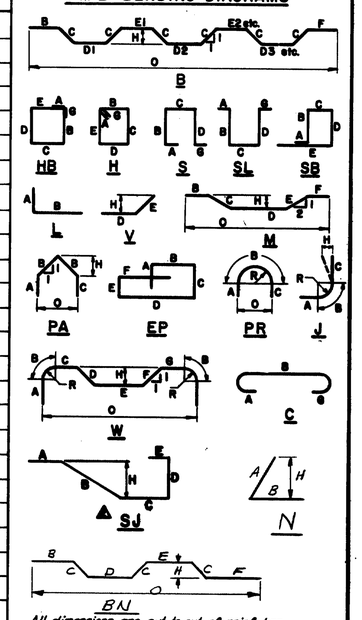
TYPE-BENDING DIAGRAMS



All dimensions are out to out of reinf. bar

Bending details and hooks shall conform to the recommendations of the current revision of ACI Standard 318.

Reinforcing Bar: ASTM A615 Grade 60

GENERAL NOTES

1. First digit(s) following the letter of the Mark indicates size of reinf. bar.
   - Mark (A502) bar size - #5
   - Mark (P1001) bar size - #10
   - Mark (S603) bar size - #6
2. Each truss bar, Type B, may be replaced by two (2) straight bars (one top & one bottom) of the same bar size as the truss bar. Payment in either case shall be based on truss bars as scheduled on plans.
