Here goes FirstWind with another shell company with its hand out for gov. grants and env. rollbacks from the expedited process. Are you going to let FirstWind steam roll all over the state? I watch these ugly monstrosities rise here in Lincoln and they are mega ugly and detract from the view. That is why a lot of people buy their homes, for the view. To let big wind ruin the state with their fantasy science is sad. Do you even bother to check their math? The carbon to make the turbines cannot be made up , especially if wind power replaces hydro or nuke. Both are greener than wind turbines. The lies, exaggerations, and bull crap need to stop and someone needs to do the homework. Windsprawl is not worth the env. destruction. The tiny erratic amount of wind energy is negligable. The scam needs to stop. Mike DiCenso www.friendsoflincolnlakes.org
