

BIRCH HARBOR POND
Winter Harbor Twp., Hancock Co.
U. S. G. S. Bar Harbor, Me.

Fishes

Eel	Banded killifish
White sucker	Threespine stickelback
Minnnows	Pumpkinseed sunfish
Golden shiner	

Physical Characteristics

Area - 19 acres	Temperatures
	Surface - 73° F.
Maximum depth - 36 feet	34 feet - 42° F.

Suggested Management

Birch Harbor Pond provides excellent cold-water game fish habitat. Brook trout do well in the smaller ponds and would provide the most satisfactory fishery.

No suitable spawning areas exist, so annual trout stocking will be necessary.

Closure to ice fishing, a five-fish bag limit and the prohibiting of live fish as bait would help distribute the catch and guard against introductions of undesirable species.
