U.S.G.S. Fayette, Me.

### Fishes

Smallmouth bass  
Chain pickerel  
Hornpout (bullhead)  
Yellow perch  
White sucker

Eel  
Minnows  
Golden shiner  
Blacknose dace  
Pumpkinseed sunfish

### Physical Characteristics

Area - 82 acres

#### Temperatures

Surface - 73°F.  
44 feet - 40°F.

Maximum depth - 50 feet

Principal Fishery: Smallmouth bass, pickerel

Hales Pond is a small, attractive body of water containing excellent bass habitat. Smallmouth bass introduced by the department in 1972 increased very rapidly and now provide an excellent fishery.

Unfortunately, Hales Pond is surrounded by private land and not accessible to the general public at this time.

No other stocking is recommended.

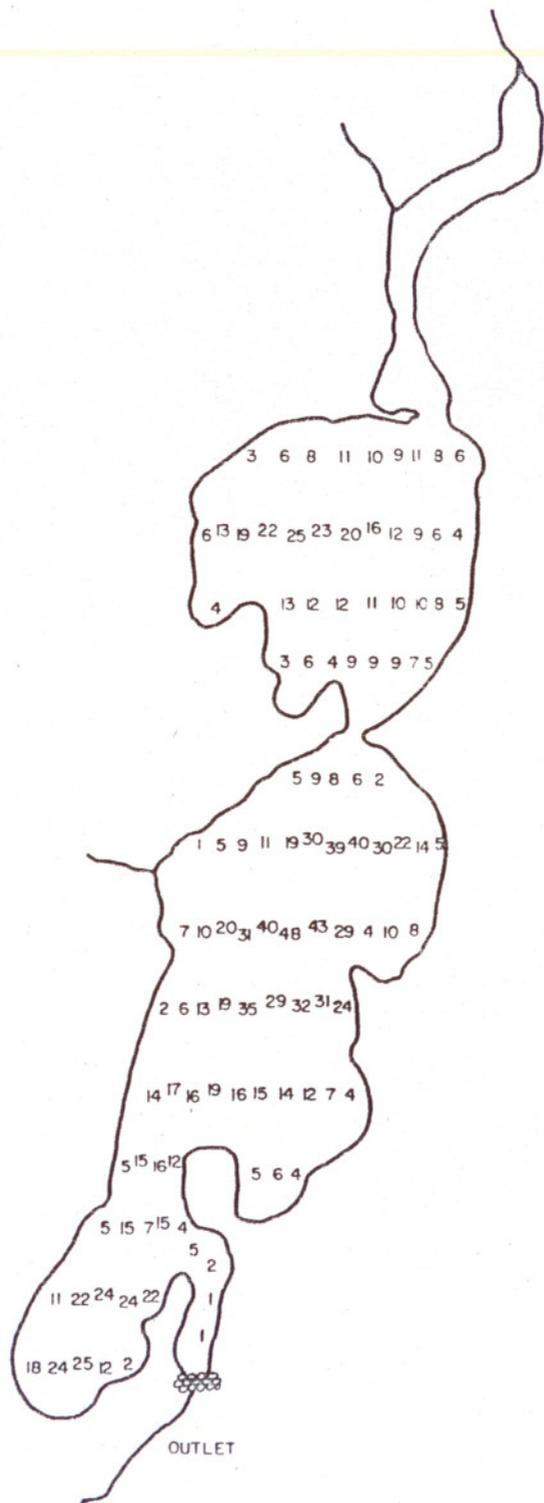

Surveyed - August, 1960

(Revised - 1977)

Maine Department of Inland Fisheries and Wildlife

Published under Appropriation No. 4550
