

MILL PRIVELEGE LAKE  
T5 R1 and Carrol, Penobscot Co.  
U.S.G.S. Springfield, Me.

Fishes

Brook trout (squaretail)	Minnows
Smallmouth bass	Creek chub
White perch	Lake chub
White sucker	Sunfish

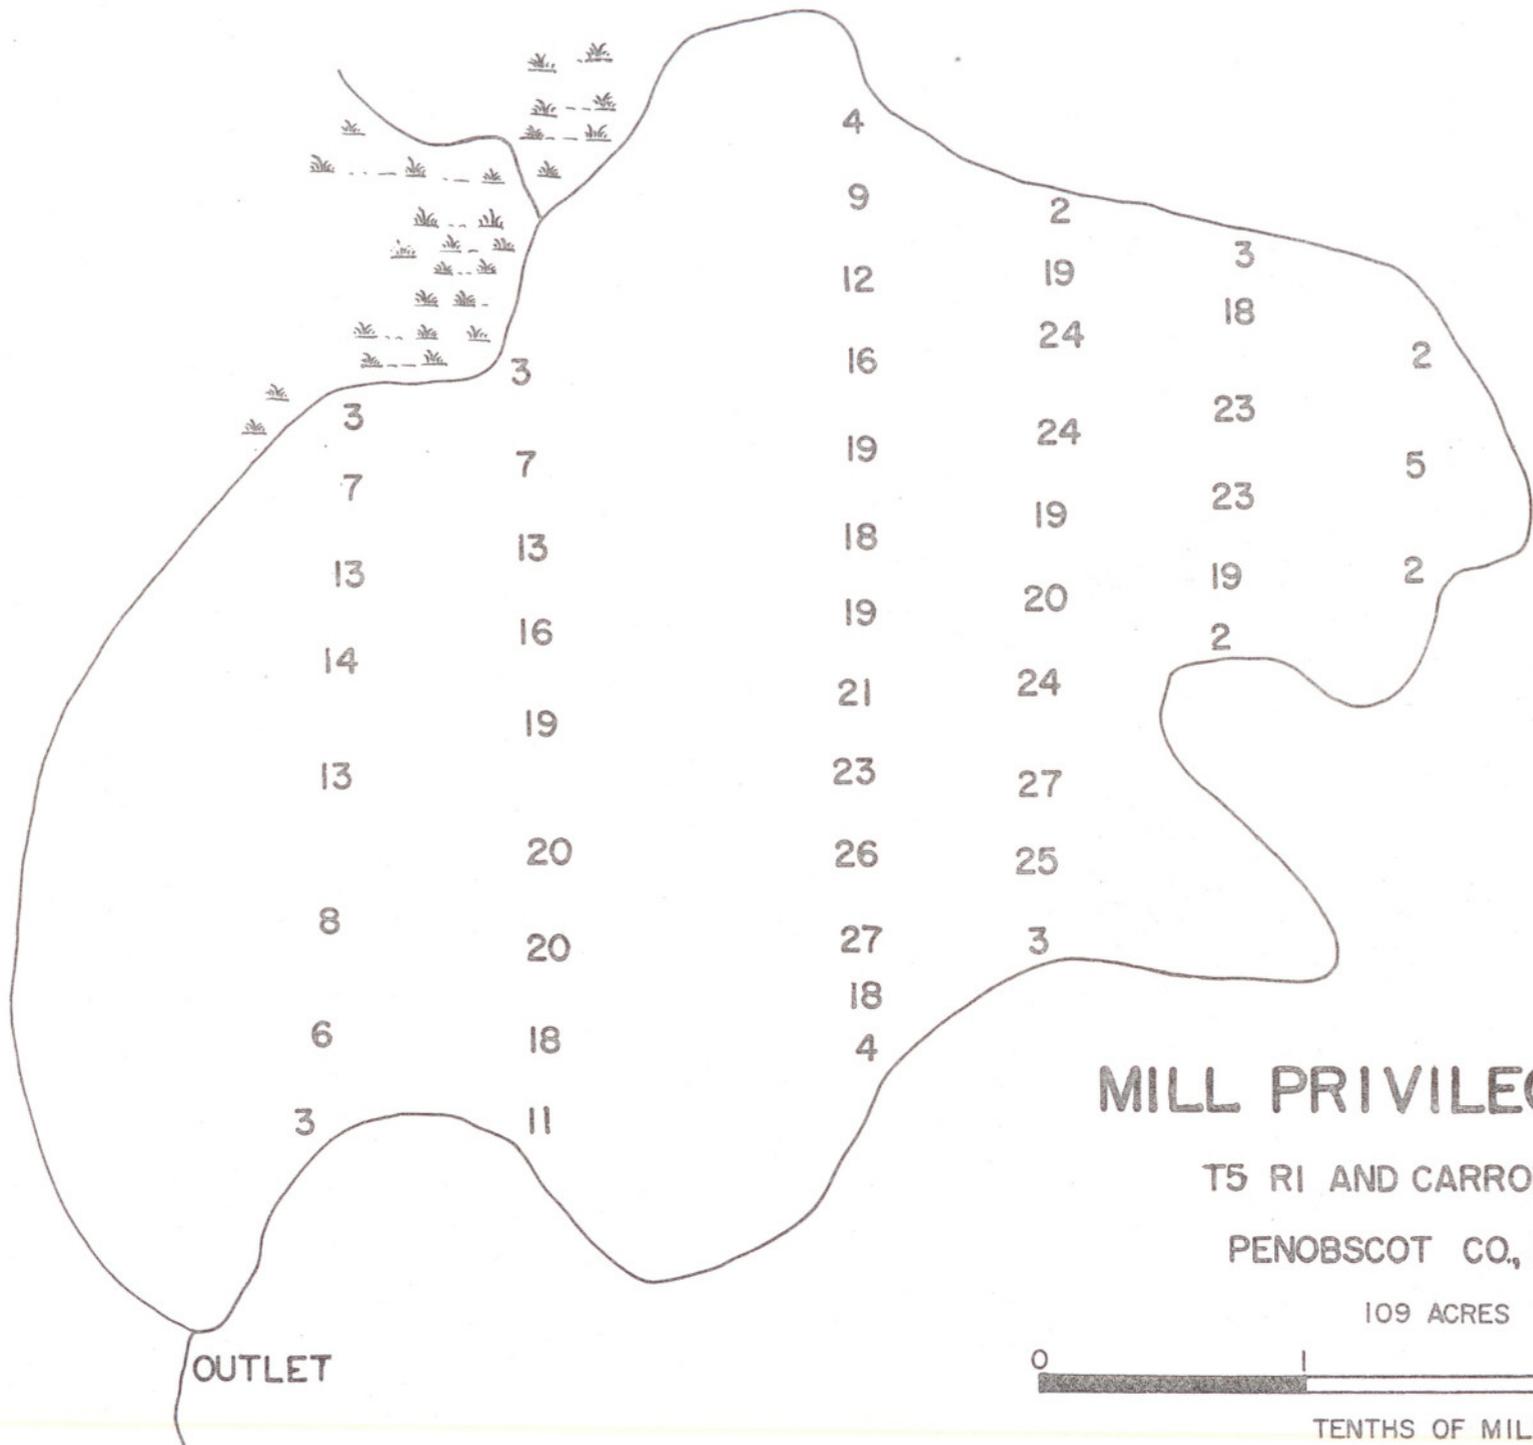

Physical Characteristics

Area - 109 acres	Temperatures
	Surface - 70° F.
Maximum depth - 28 feet	28 feet - 50° F.

Mill Privelege Lake is one of four small lakes that flow through short outlets into the northwest end of Junior Lake, one of the large lakes of the West Grand Lake complex. To get there, take the Duck Lake road about four miles east of Springfield village and bear left about a mile north of Duck Lake. The last quarter mile or so of road is likely to be very muddy in the spring. The lake, nestled as it is among the rolling hills in the Springfield area, is quite scenic.

We recommend management for bass and perch, and no stocking of any kind. There is a little cold, well-oxygenated water in the lake, but it is unlikely that trout or salmon would do well in competition with the bass and perch living here.

One tributary, Barker Brook, is a good trout brook. From time to time a few brook trout will probably migrate into the lake to be caught there by bass and perch fishermen.
