

ELBOW POND
T3 R10, Piscataquis Co.

Fishes

Brook trout (squaretail)

Physical Characteristics

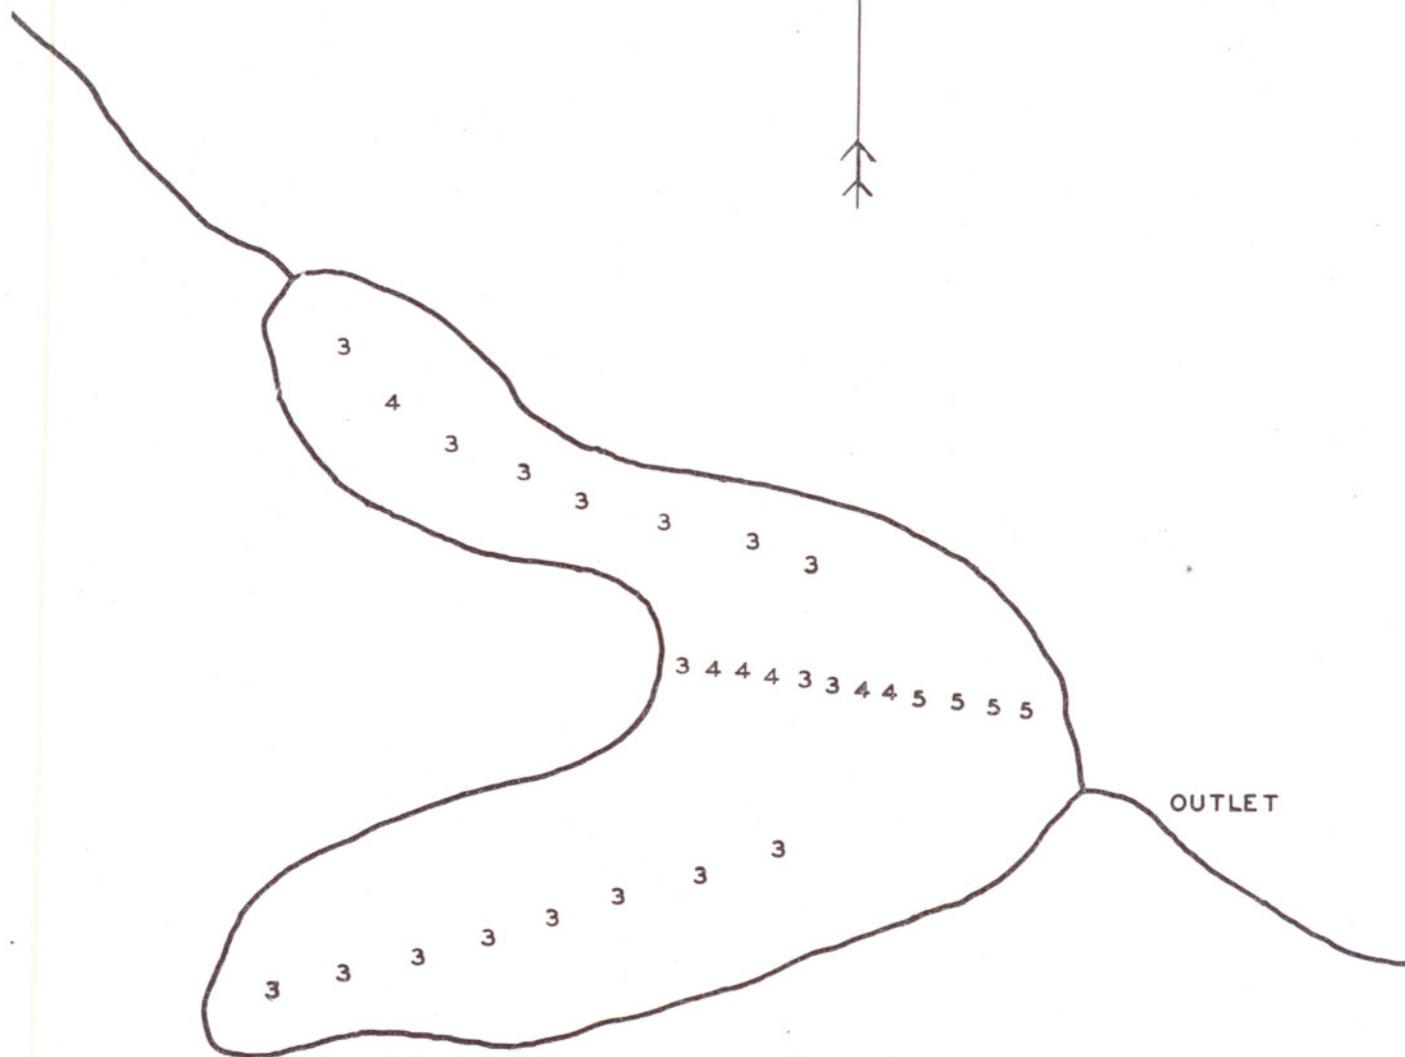

Area - 13 acres	Temperatures
	Surface - 64° F.
Maximum depth - 5 feet	5 feet - 58° F.

Suggested Management

Elbow Pond is a typical example of a shallow, cold-water pond. Numerous springs and spring tributaries keep the temperature low throughout the year.

This low temperature, largely responsible for the population of brook trout, is also responsible in turn for the relatively slow growth rate of the fish in this pond.

Excessive pressure may easily deplete the population of trout to a dangerous level in small ponds. A 5-fish limit is recommended for this pond.
