

UPPER ELLIS POND
T7 R14, Piscataquis Co.
U.S.G.S. Allagash Lake, Maine

Fishes

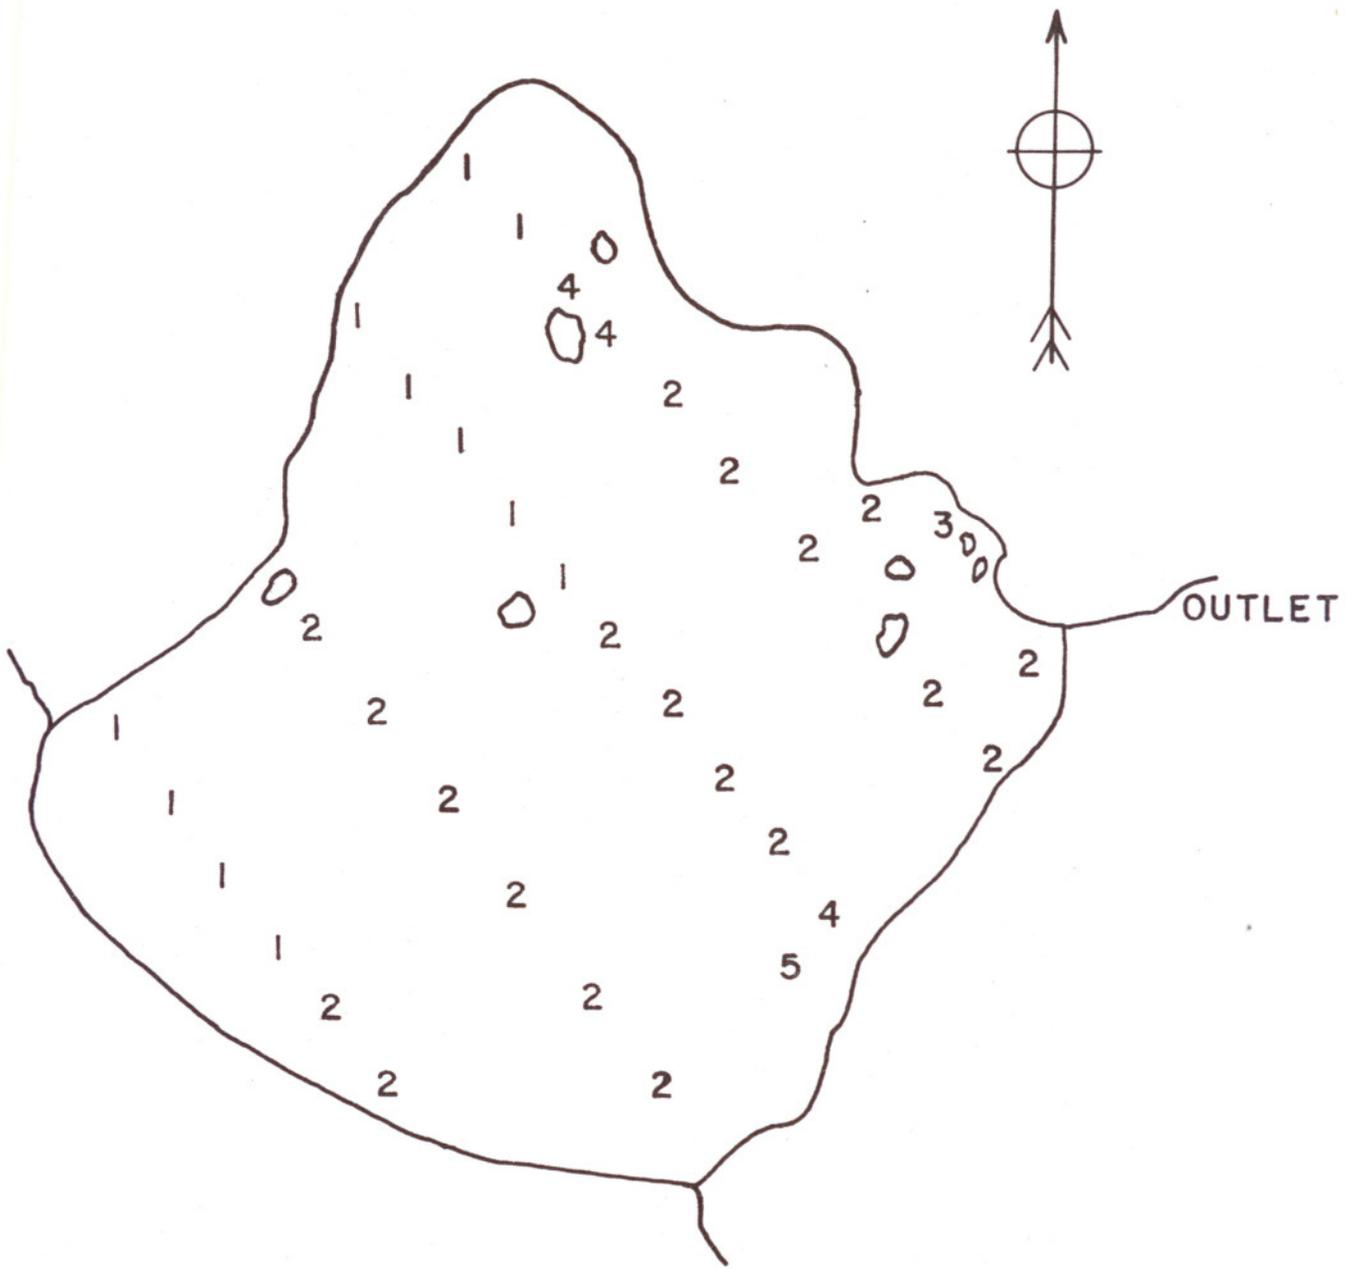

White sucker	Minnows (cont'd)
Minnows	Pearl dace
Finescale dace	Creek chub
Redbelly dace	Lake chub

Physical Characteristics

Area - 160 acres	Temperatures
	Surface - 65° F.
Maximum depth - 5 feet	4 feet - 65° F.

Upper Ellis Pond is an extremely shallow pond that is reaching the end of its productive life. Several ledges protrude up through the otherwise muddy bottom. The shallowness and muddy bottom may result in an oxygen depletion under the ice in the winter, causing periodic winterkills.

No game fish were found in the survey, but minnows and white suckers were seined near the outlet. The limited gravel areas in the outlet and southeast tributary are heavily silted and offer very poor spawning habitat for trout.
