

TELOS LAKE
T5 R11, T6 R11, Piscataquis Co.
U.S.G.S. Telos Lake, Me.

Fishes

Brook trout (squaretail)	Minnows (cont'd)
Lake trout (togue)	Finescale dace
Hornpout (bullhead)	Pearl dace
Lake whitefish	Lake chub
Round whitefish	Creek chub
White sucker	Blacknose dace
Longnose sucker	Common shiner
Minnows	Blacknose shiner
Fallfish (chub)	Cusk
Redbelly dace	Threespine stickleback
	Freshwater sculpin

Physical Characteristics

Area - 2276 acres

Maximum depth - 86 feet

Temperatures

Telos

Surface - 67° F.

40 feet - 60° F.

80 feet - 57° F.

Round Pond

Surface - 67° F.

40 feet - 58° F.

Suggested Management

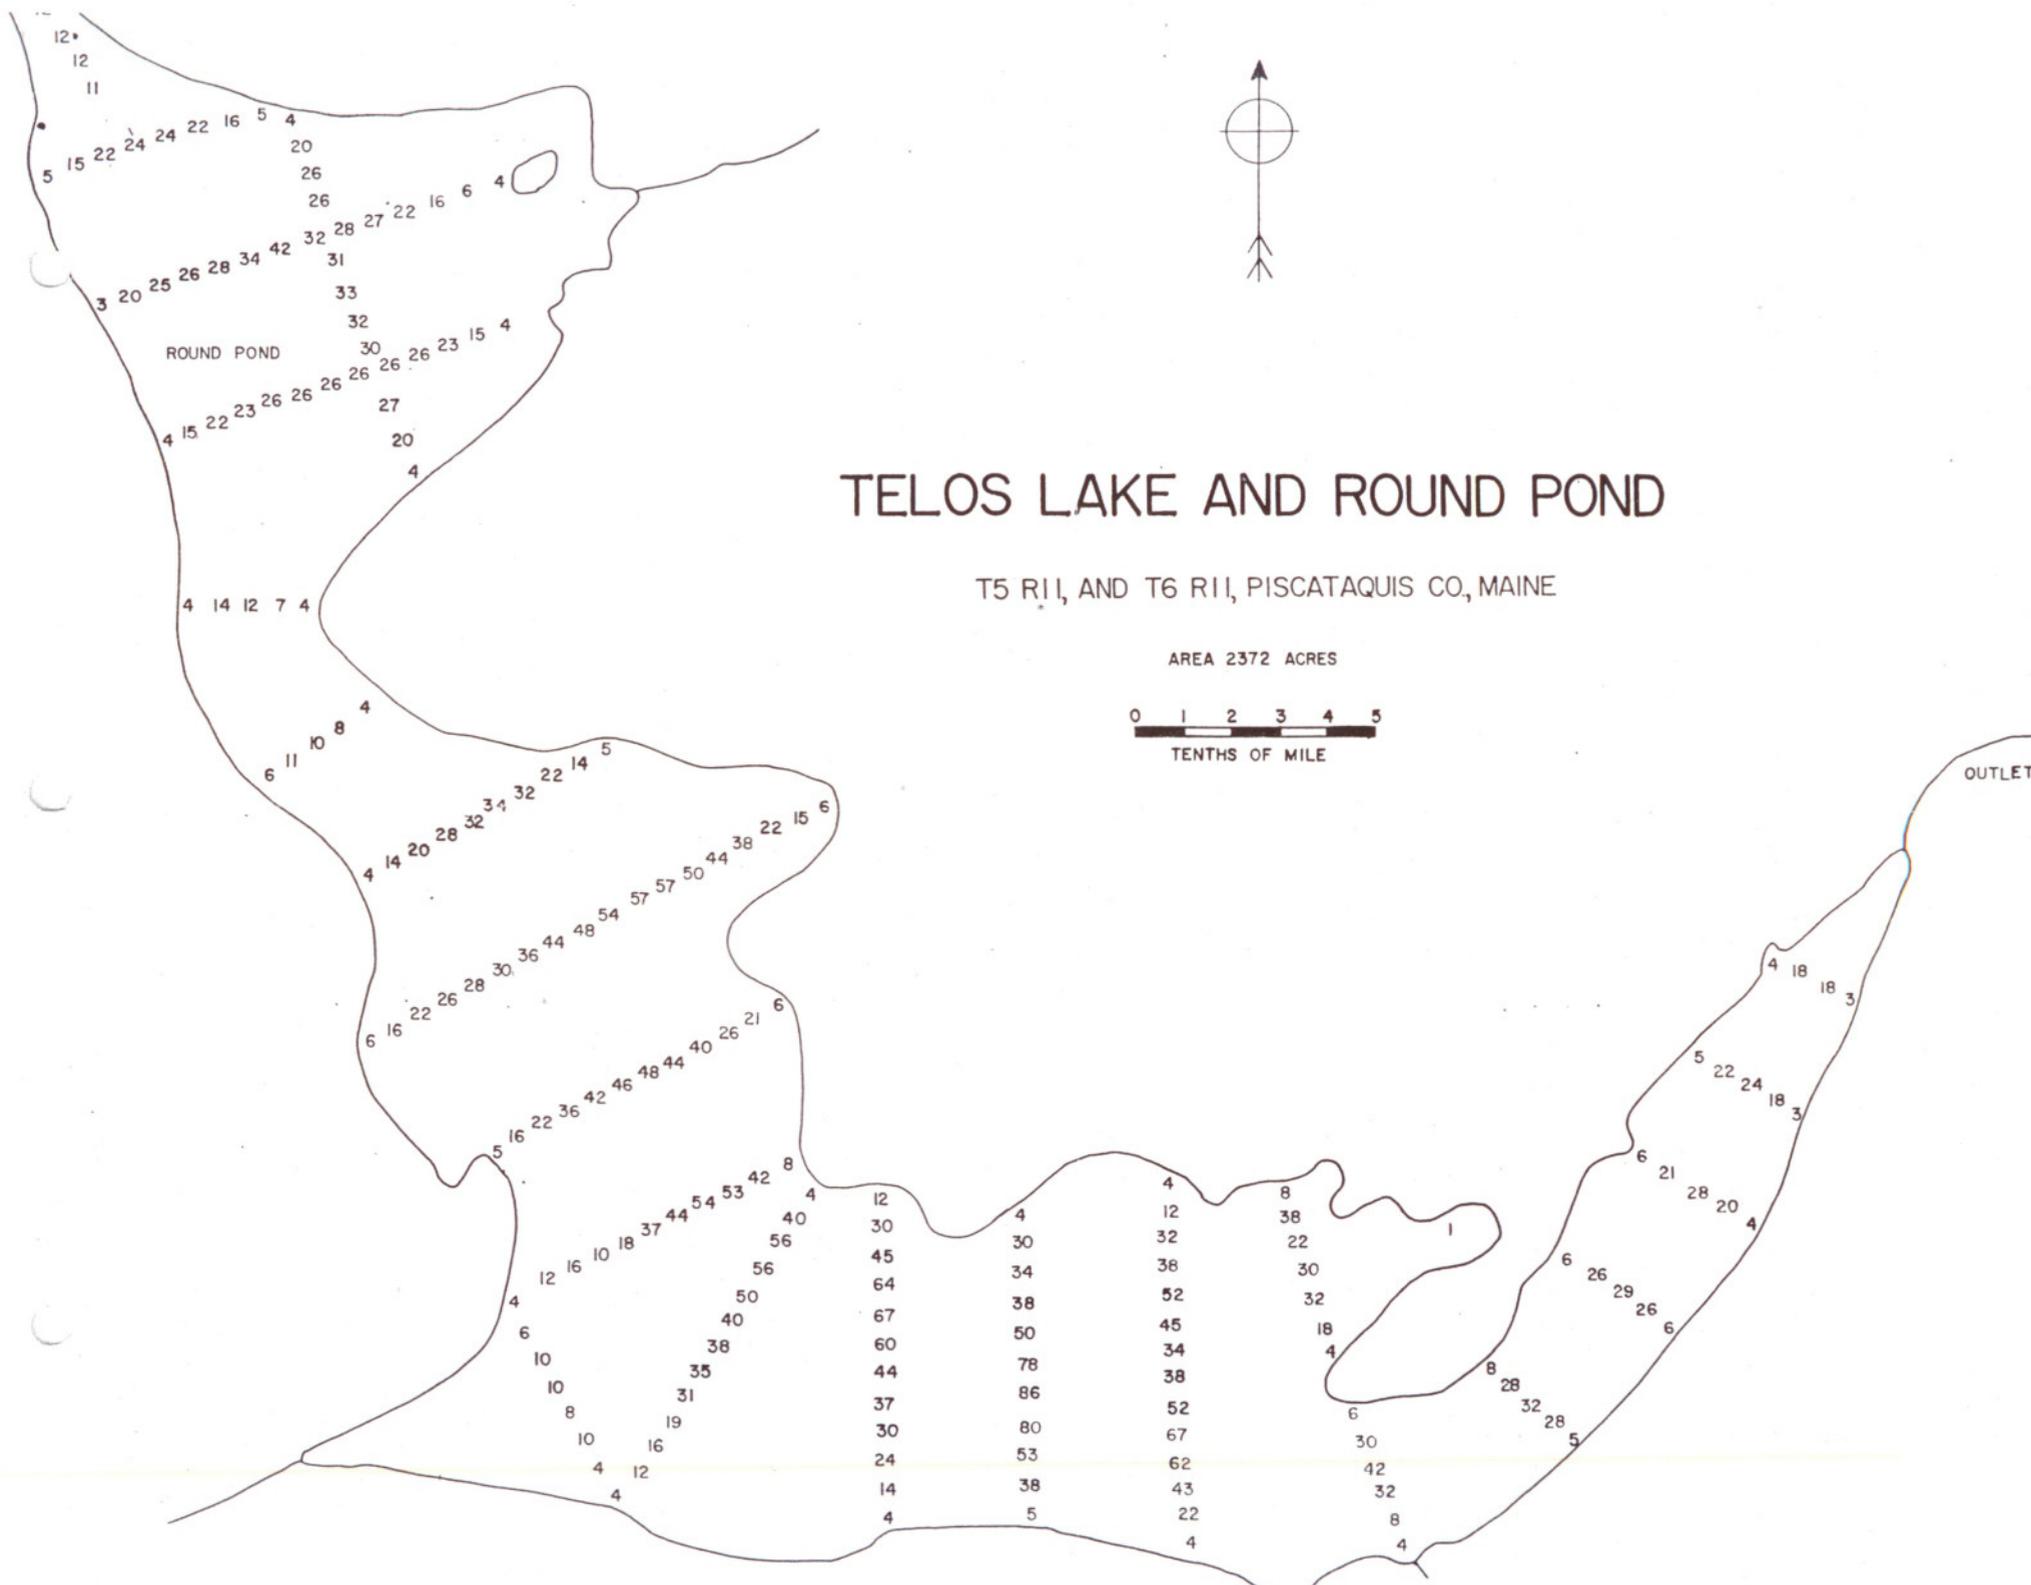

Telos Lake is considered ideal in water quality characteristics for coldwater game fishes. The deep water is cold with abundant dissolved oxygen throughout the summer.

Management of Telos Lake should be primarily for the togue fishery. Lake shoal areas for natural reproduction of togue are abundant. Togue spawning usually takes place in the rocky shallows after October 15. Therefore, any drawdown through the Telos dam should be made prior to October 15 to protect togue eggs in the shallow water areas from exposure and freezing. Whitefish provide a good source of food fish for the togue in Telos Lake.

Round Pond is considered part of Telos Lake; but physically and chemically it is a separate basin. Water below the 30-foot level is cold but is deficient in dissolved oxygen during late summer. However, this area is only a very small part of the basin and it is of no consequence to the fishery.
