White sucker	Fallfish (chub)
	Golden shiner
	Pumpkinseed sunfish

Physical Characteristics

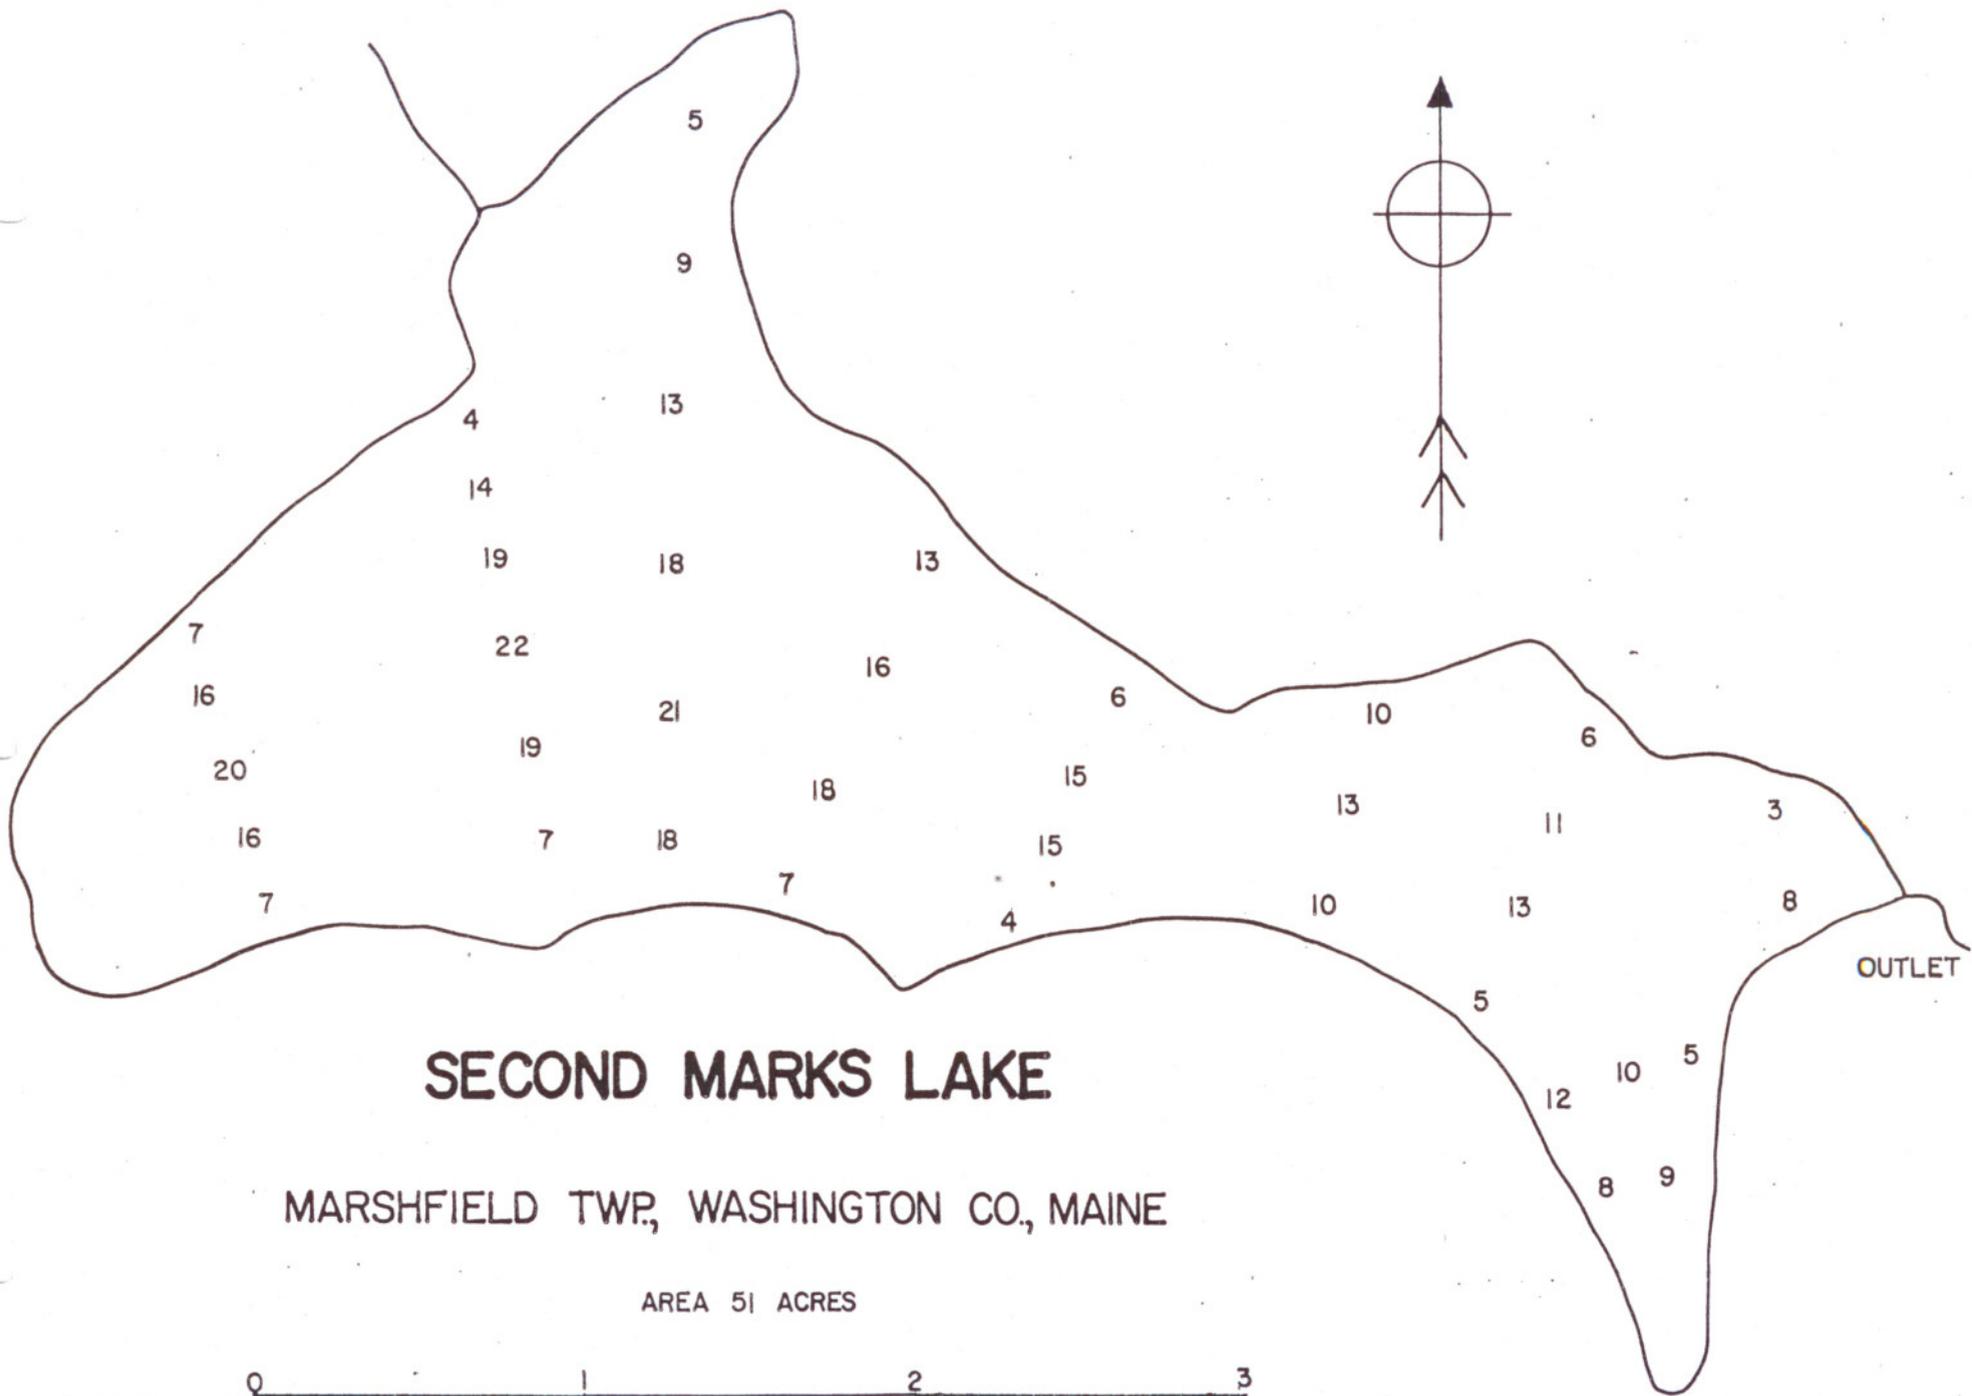

Area - 51 acres	Temperatures
	Surface - 69°F
Maximum depth - 22 feet	19 feet - 53°F

Principal Fishery: Brook trout

Second Marks Lake is located in a remote section of Marshfield and is one of the headwater lakes for the Middle River, which flows into the Machias River estuary. The lake contains a moderate amount of cold, well-oxygenated water suitable for brook trout. Formerly, the lake's remote location limited fishing pressure to levels that did not require stocking; natural reproduction was adequate to produce a small fishery. However, a recently constructed logging road has improved access and resulted in more fishing pressure. Fall fingerling brook trout were stocked in 1988, and the pond is under consideration for regular stocking.

Surveyed - August, 1957
