

RAND LAKE
Robbinston Twp., Washington Co.
U. S. G. S. Robbinston, Me.

Fishes

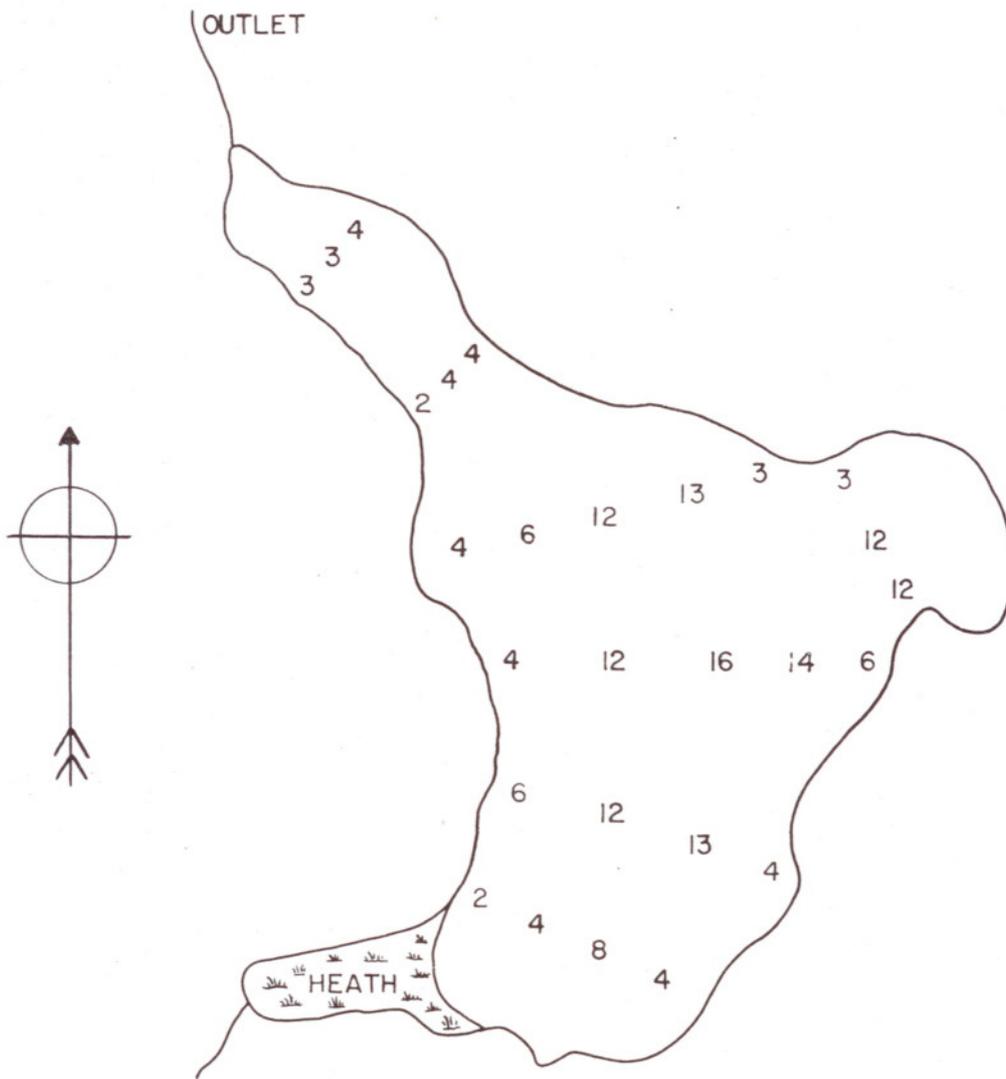

Chain pickerel	White sucker
Hornpout (bullhead)	Pumpkinseed sunfish

Physical Characteristics

Area - 19 acres	Temperatures
Maximum depth - 16 feet	Surface - 67° F.
	14 feet - 52° F.

Rand Lake has satisfactory water temperatures and oxygen content for coldwater fish, but harbors large numbers of warm-water species.

At the present time, management should emphasize pickerel and hornpout. If fishery needs in this area become more intense in future years consideration could be given to removing competing fish and managing the lake for brook trout.
