Re: Bio-methane Injection into the Bangor Gas Pipeline System

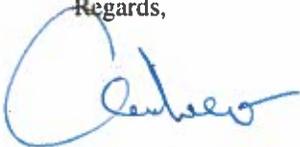

Dear Mr. Stuart-Paul,

I write this letter regarding our recent discussions with Fiberight LLC concerning its proposal to enter into an agreement with Bangor Gas to inject approximately 450,000 MMBtu/year of bio-methane into Bangor Gas's system that is proposed to be produced at the Fiberight MSW to Bio-fuels facility to be located in Hampden, Maine.

Bangor Gas is very much interested in discussing this arrangement and believes it possible for the parties to work toward a final agreement. In addition to any applicable regulatory and local approvals, any final agreement between Bangor Gas and Fiberight would be subject to the parties reaching agreement on commercial terms as well as the ability of Fiberight to meet specifications by Bangor Gas relating to engineering/system configurations upstream of Bangor's facilities or other technical requirements such as gas quality and composition standards. We are fairly confident, based on preliminary discussions, these issues will not prevent us from reaching a final agreement.

We look forward to working with Fiberight in the coming months to work towards a final agreement.

Regards,

Andrew Barrowman
