Exhibit 7: Generator Lead and Electrical Collector Potential Visibility Map

1 inch = 11,750 feet 0 1.25 2.5 5 Miles Date: 4.18.13
Drawn By: NS

Bingham Wind Project

NOTE: This map depicts open areas with POTENTIAL views of one or more poles. Forested areas are assumed to have no visibility due to intervening vegetative cover. Visibility is generated from the top of poles which range in height 34-80 ft. Not all poles (or all parts of poles) will be seen from each location. The map only accounts for topography and deciduous, coniferous, and mixed forest cover at an assumed height of 40 feet. The map does not account for other factors such as buildings and structures, actual tree height and density, site specific vegetation and/or removal, variations in eyesight, and atmospheric and weather conditions. Under certain conditions this map overstates where poles will be seen from. Potential viewed is based on GIS data available at the time from the Maine Office of GIS, USGS and First Wind, LLC. Data is only as accurate as the original source and is not guaranteed by LandWorks.
