

NOTE: This map depicts open areas with POTENTIAL views of the substation and DRF. Forested areas are assumed to have no visibility due to intervening vegetative cover. Visibility is generated from the highest points on the substation at 54 ft, and the DRD a 45 ft. The map only accounts for topography and deciduous, coniferous, and mixed forest cover at an assumed height of 40 feet. The map does not account for other factors such as buildings and structures, actual tree height and density, site specific vegetation and/or removal, variations in eyesight, and atmospheric and weather conditions. Under certain conditions this map overstates where structures will be seen from. Potential viewedshed is based on GIS data available at the time from the Maine Office of GIS, USGS and First Wind, LLC. Data is only as accurate as the original source and is not guaranteed by LandWorks.

Exhibit 8: Substation and DRD Potential Viewshed Map
