Subject: 2.75-103 Nameplate increase to 2.85 MW

Dear Andy:

The GE 2.85-103 wind turbine generator being proposed for Canton and Saddleback projects was updated in power output capability from 2.75MW to 2.85MW in the time that Patriot's projects matured. This update resulted from improvements in the electrical system and did not impact any other operational characteristic such as acoustic performance or safety.

Very truly yours,

A handwritten signature in black ink, appearing to read 'Thomas Amirault'.
