Swine Influenza A (H1N1) Virus Information for School and Childcare Settings April 27, 2009

No cases of swine influenza (H1N1), known as swine flu, have been detected in Maine as of April 26, 2009. With many students and childcare attendees returning from spring vacation, Maine CDC is providing the following guidance for these settings. However, this is a rapidly evolving situation. As more information becomes available and the

Maine Center for Disease Control and Prevention (Maine CDC)
(Formerly Bureau of Health)

situation unfolds, guidance is likely to change in the upcoming days and weeks. It is important for people to stay informed by monitoring websites such as those provided in the FMI section.

Guidance for School and Childcare Settings

At this time, Maine CDC recommends that schools and childcare settings increase education on respiratory hygiene and monitor attendees for acute febrile respiratory illness.

Staff and children (as developmentally appropriate) should all be taught and asked to follow these steps that prevent the transmission of infections such as influenza:

- Cover your coughs and sneezes.
- Avoid touching your eyes, nose and mouth.
- Wash hands frequently, especially after coughing or sneezing.
- Stay home if you're sick, especially with a fever.

School or childcare participants with acute febrile respiratory illness, regardless of travel history, should be sent home according to facilities-established procedures with instructions to stay at home until 24-48 hours after their symptoms resolve. Instructions should be given to seek medical care with worsening of symptoms. At this time, exclusion is not recommended for school or childcare participants who have recently traveled to an affected area and who do not have symptoms.

Disease Reporting and Consultation

To contact Maine CDC to report suspected cases of swine influenza, outbreaks of influenza like illness, or to request other clinical consultation please call the 24/7 Disease Reporting and Consultation Line at 1-800-821-5821.

Definitions of Respiratory Illness:

1. Acute respiratory illness, defined as recent onset of at least two of the following:
 - rhinorrhea (runny nose) or nasal congestion
 - sore throat
 - cough
 - fever or feverishness
2. Influenza-like illness: fever $>37.8^{\circ}\text{C}$ (100°F) plus cough or sore throat
