TOYS: The Inside Story is coming to Maine

Maine Discovery Museum, October 10, 2009 – January 3, 2010.

With the support of the Yawkey Foundation II and Time Warner Cable, the Maine Discovery Museum is able to bring this traveling exhibition to the museum early in the school year, when it can help ignite students' curiosity about science and engineering. It seems perfect for grades 2-5, and it's supported with some strong pre- and post-visit materials for educators. We'll also be offering special hands-on workshops for schools coming on field trips and many related programs for children and the community during the run of the exhibition.

This exhibit supports the Maine Science Learning Results particularly in the areas of:

- Unifying Themes (A1: Systems, A2: Models)
- Skills & Traits of Technological Design (B2)
- The Physical Setting (D4: Force and Motion)

Subsidy assistance for funding field trips is currently being developed.

To date no funding is confirmed, but please contact the Maine discovery Museum to check on the possibility of assistance for a trip to the museum.
