

LILY POND
Gouldsboro, Hancock Co.
U.S.G.S. Winter Harbor, ME(7 1/2')

Fishes

Brown trout	White sucker
Brook trout	Hornpout(bullhead)
Largemouth bass	Pumpkinseed sunfish

Physical Characteristics

Area- 19 acres	Temperatures
	Surface- 73°F
Maximum depth- 22 feet	21 feet- 46°F

Principal Fishery: Largemouth bass

Lily Pond is a small, boggy pond situated in South Gouldsboro. Most of the pond is fringed with a 20-30 foot band of lily pads. Access(a 4-wheel drive is recommended) is over a dirt road off Route 186 just beyond the Union Evangelical Church.

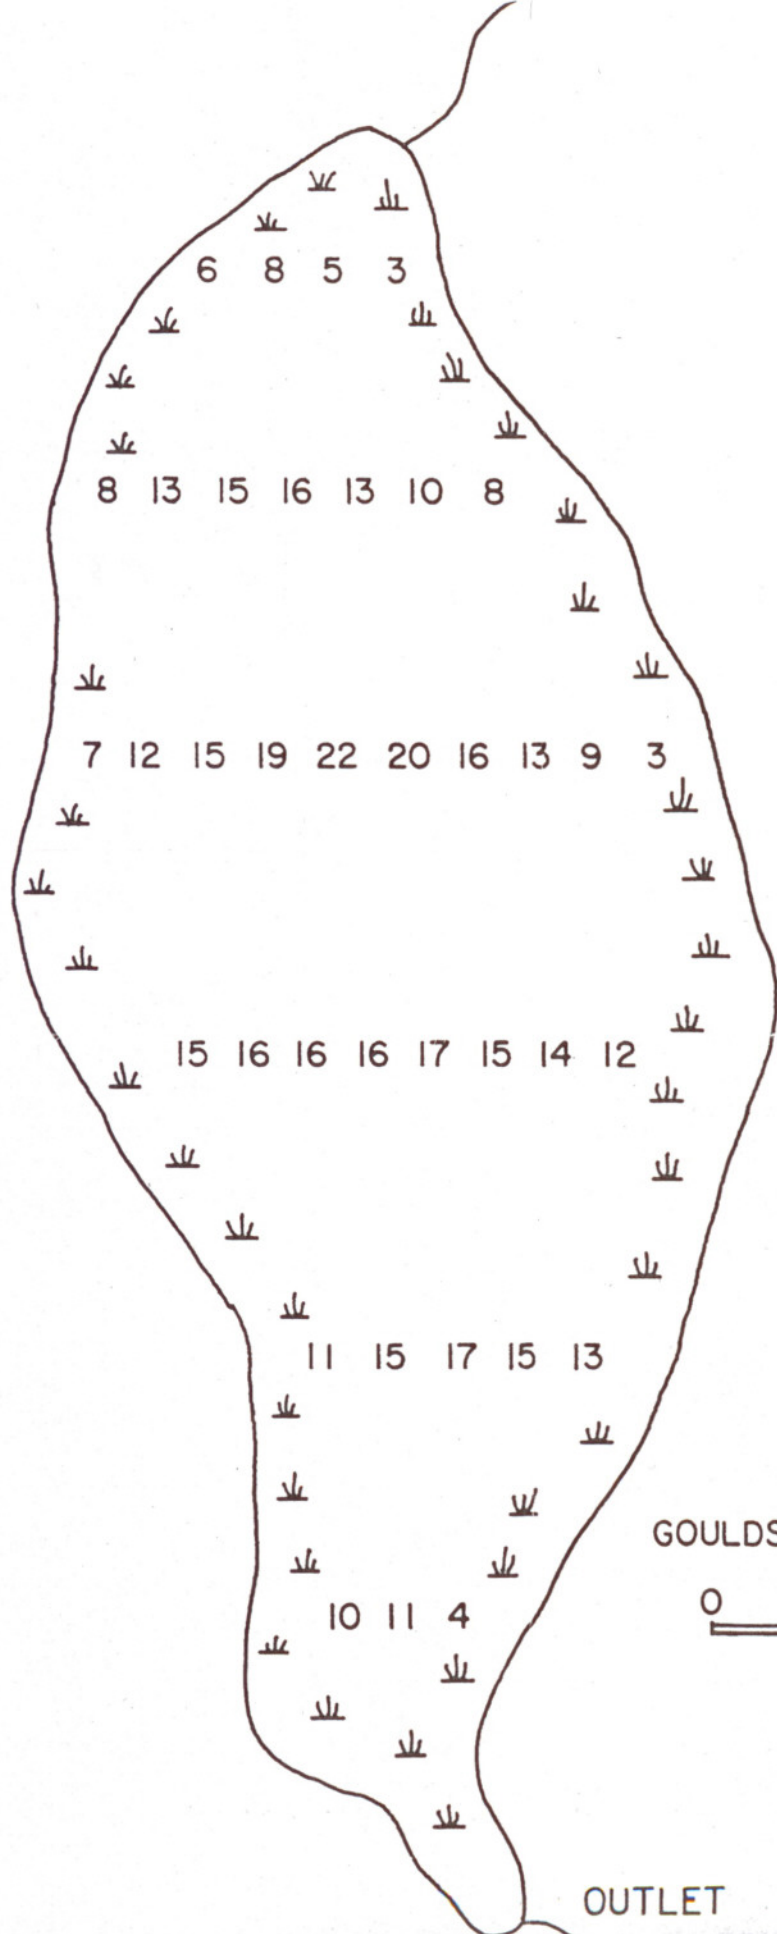

Although the pond has very marginal water quality for trout, an experimental brown trout stocking program was conducted in the late 1980's. A few fish weighing up to 3 pounds were caught, but overall, returns were insufficient to justify a regular stocking program. Occasional stockings of surplus brown trout are made.

Largemouth bass are abundant, but most measure only 6-9 inches. To encourage additional angler harvest of these fish, a special no size or bag limit on bass regulation is in effect.

Surveyed- August, 1981
(Revised- 1995)

Maine Department of Inland Fisheries and Wildlife

Funded in part by the Federal Aid in Restoration Act under Federal Project F-28-P L 4470 C
