

WEST GARLAND POND
Garland Twp., Penobscot Co.
U. S. G. S. Dover-Foxcroft, Me.

Fishes

Yellow perch	Minnnows
Chain pickerel	Creek chub
Hornpout (bullhead)	Blacknose dace
Eel	Pumpkinseed sunfish
White sucker	Yellowbelly sunfish

Physical Characteristics

Area - 32 acres	Temperatures
	Surface - 70° F.
Maximum depth - 38 feet	38 feet - 44° F.

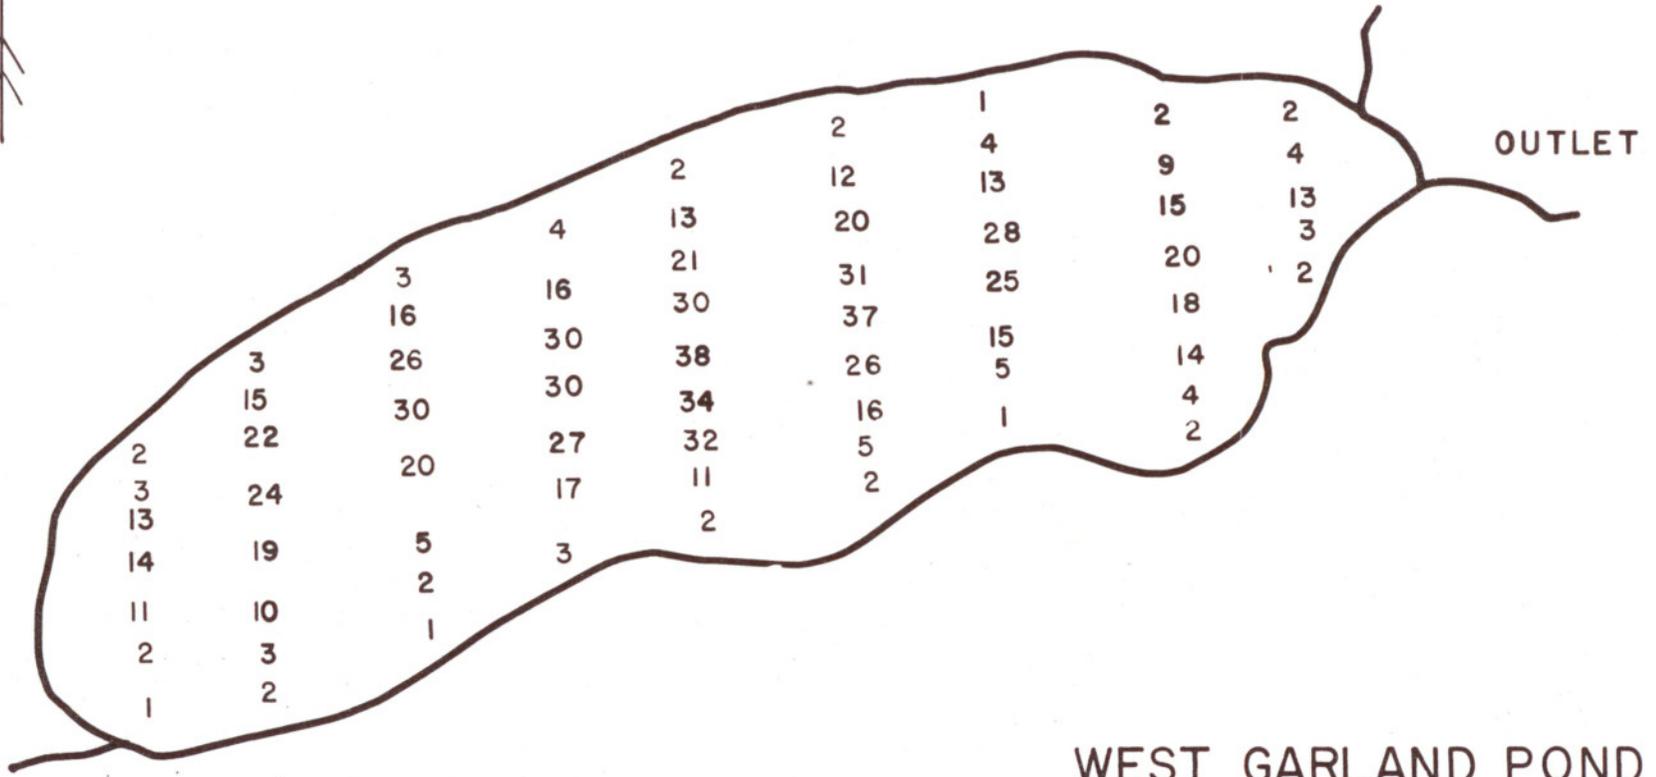

Suggested Management

West Garland Pond contains large numbers of warmwater fishes. Chain pickerel are abundant in this small pond and provide a summer and winter fishery.

Successful chemical reclamation of West Garland Pond for trout is not feasible because of the inability to successfully treat the long marshy tributary which enters this pond.

Management of West Garland Pond for pickerel should be continued.

No stocking is recommended.
