Fishes

None

Physical Characteristics

Area — 7 acres

Temperatures

Surface — 73<sup>o</sup> F.

Maximum depth — 17 feet

16 feet — 51<sup>o</sup> F.

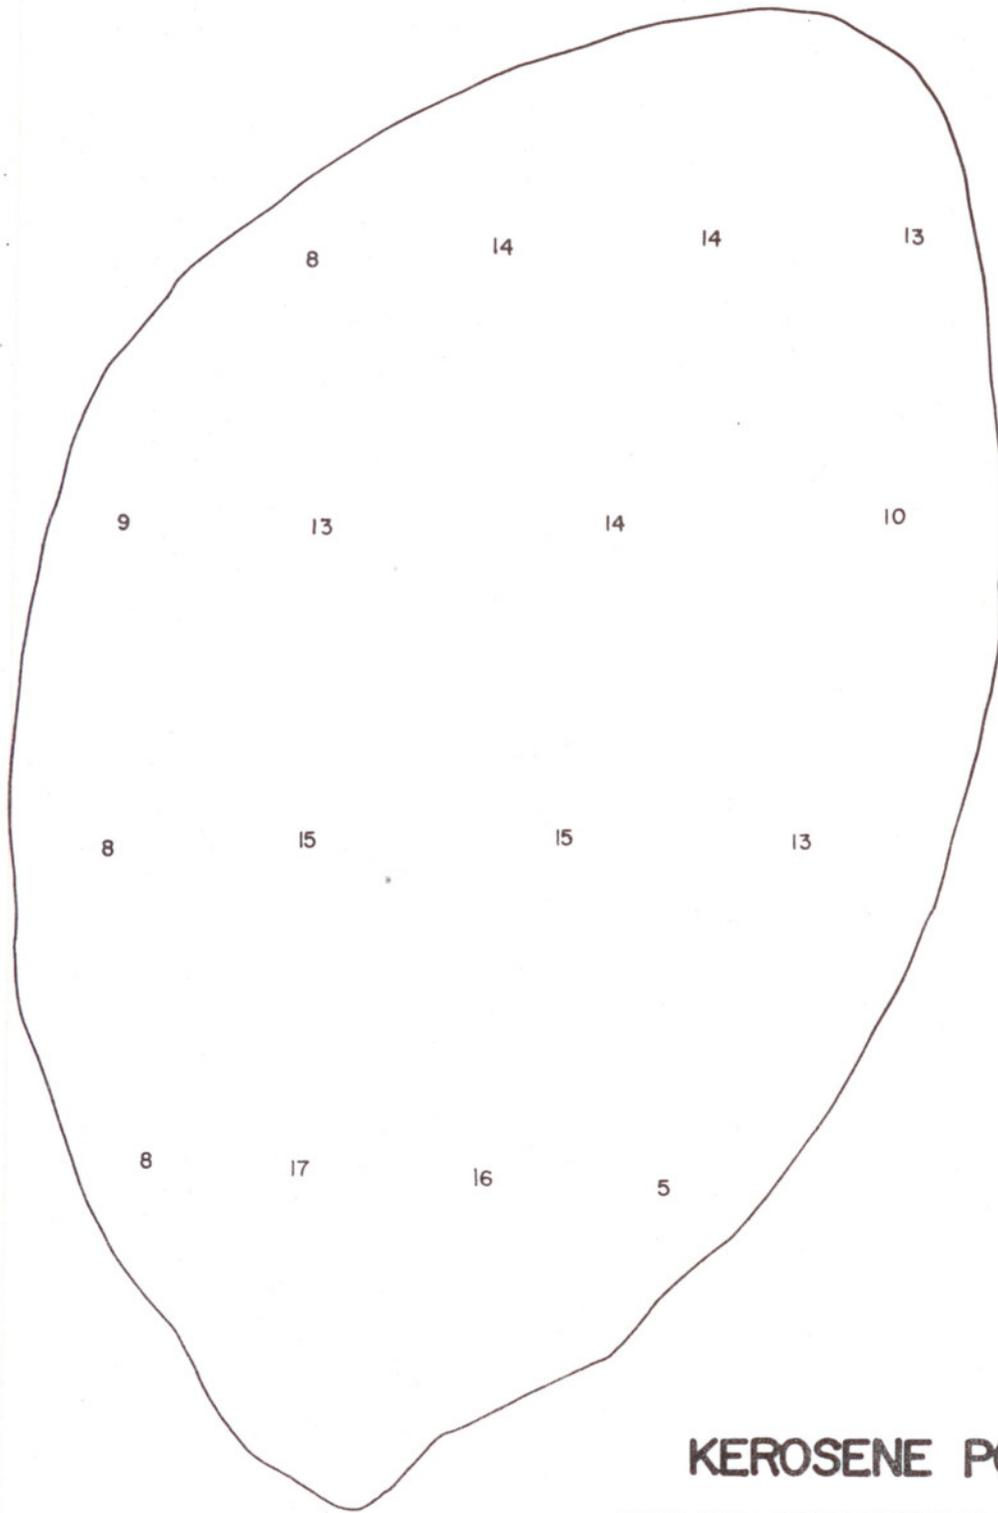

Kerosene Pond is a small, bog-type pond that is devoid of any fish life. Since there is a small amount of cold and well-oxygenated water present for brook trout, an experimental stocking program was carried out in the late 50's and early 60's. It is believed these stockings failed because of the unusually high acidity of the water. No further stocking is recommended.

Surveyed — August, 1957
