Aves (Birds)

All pet birds including federally regulated birds, including finches and parrots brought into this state, must be obtained from companies that are registered with the Maine Department of Agriculture.

Birds identified with **Health certificate required**: Anyone who will be importing the following birds from out of state, regardless of the purpose must have a current VS 9-3 or VS 9-2 form certifying that the birds come from a flock participating in the Nation Poultry Improvement Plan (NPIP).

For more information on importing domesticated game birds and examples of the required forms please visit the Department of Agriculture, Conservation and Forestry's website:

http://www.maine.gov/dacf/ahw/animal_health/documents/Importationoflivegamebirdsetc.pdf

If you intend to train dogs on domesticated fowl please contact the department at (207) 287-8000 regarding field trials, commercial shooting areas, or training dogs with firearms on Sundays.

Psittaciformes (Parrots)

These species are particularly long lived, potentially outliving the owner. The Maine Department of Inland Fisheries and Wildlife suggests caution and careful consideration before purchasing these species. While your heirs or survivors can manage and transfer many inherited possessions, living creatures present a bigger challenge. A change in environment or owners can be difficult or fatal for some animals. Think about what is best for the animal and the challenge you are accepting before acquiring it. In addition to their longevity many of these species also require special accessories or programs that provide physical and mental stimulation to ensure the animal's health. Failure to address these needs can result in the animal engaging in destructive behaviors. Consult an animal care professional or work through a licensed pet supplier and learn what ownership of this species will entail before buying. You should receive a Certificate of Veterinary Inspection or Health Certificate issued specifically for the pet you are acquiring dated within the last 30 days from the supplier. To help ensure the animal is healthy and legally acquired, check to be sure.

Testudines (Turtles And Tortoises)

Captive Bred Origin Only; must be a minimum 4" diameter.

These species are particularly long lived, potentially outliving the owner. The Maine Department of Inland Fisheries and Wildlife suggests caution and careful consideration before purchasing these species. While your heirs or survivors can manage and transfer many inherited possessions, living creatures present a bigger challenge. A change in environment or owners can be difficult or fatal for some animals. Think about what is best for the animal and the challenge you are accepting before acquiring it. In addition to their longevity many of these species also require special accessories or programs that provide physical and mental stimulation to ensure the animal's health. Failure to address these needs can result in the animal engaging in destructive behaviors. Consult an animal care professional or work through a licensed pet supplier and learn what ownership of this species will entail before buying. You should receive a Certificate of Veterinary Inspection or Health Certificate issued specifically for the pet you are acquiring dated within the last 30 days from the supplier. To help ensure the animal is healthy and legally acquired, check to be sure.
