

A Street sign in good condition with properly sized letters, and correct usage of color contrast as recommended by the MUTCD (white on Green).

Acceptable sign. However, it has no reflectivity for nighttime visibility and it is bent with chipped paint. The MUTCD recommends white on green for contrasting colors.

Not recommended. It's distinctive but lettering is too small and sign is nonreflective.

This sign serves its purpose but it is NOT reflective.

Good sign but lettering is only 2" tall when it should be minimum 4" tall.

A sign in poor condition. No reflectivity, but does it use contrasting colors. However, the MUTCD recommends using white lettering on a green background. Plus, E-911 standards discourage "FR" (Fire Road) signs, because you would have addresses such as 24 Fire Rd. 42 or 42 Fire Rd. 24.

This is not a recommended standard in the MUTCD. It has vertical lettering (which may be buried in the snow), a wooden post, non-reflective paint and black on white lettering instead of white on green lettering. It is also "unnatural" for human eyes to read vertically.

Quaint idea and provides refuge for birds, but is NOT recommended for street name signs.
