

Maine Highway Safety Facts 2016

2016 MAINE HIGHWAY SAFETY FACTS

The Bureau of Highway Safety and the Maine Department of Transportation are pleased to present the 2016 edition of Maine Highway Safety Facts. This publication provides Maine crash data facts through 2015 giving a view of traffic crashes and their factors. It can be a valuable tool in problem identification, safety education and community activities. Since it is intended to provide a general information overview, the data is presented in a very basic format. Trend lines reflect five-year annual averages. Topics covered represent the most frequently requested information. Data sources are from the Maine Fatal Analysis Reporting System (FARS) and MaineDOT's crash data system. Any comments or questions you may have about the information are welcome.

Maine Quick Crash Facts

Facts based on average annual experience from 2011-2015

Motor vehicle crashes occurred with the following average frequency:

- One fatal crash **every 60 hours**
- One personal injury crash **every 56 minutes**
- One property-damage only crash **every 24 minutes**
- One reportable traffic crash **every 17 minutes**

There were 30,482 traffic crashes on Maine public roads involving:

- 48,158** vehicles
- 63,836** vehicle occupants (drivers and passengers)
- 297** pedestrians
- 212** bicyclists
- 17** ATV's
- 7** snowmobiles

Nearly **15 billion** vehicle miles were traveled within the State of Maine.

146 people were killed in traffic crashes. **37** of those deaths were the result of drinking and driving.

21% of Maine's crash fatalities occur between **9pm** and **2am**, even though there is very low traffic volume at this time.

Collisions involved **42,361** Maine drivers and **3,877** out-of-state drivers.

65-98 Year Old	5,335	35.4	6.6	5,010	33.1
Motorcycles	577	19	32.9	624	20.6
Winter	6,030	15	2.5	6,215	16.4
Intersections	8,732	17.4	2.0	9,058	21.6
Large Trucks	518	5.2	10.0	749	12
Pedestrians	297	11.8	39.7	249	12.2
Moose	365	0.8	2.2	561	2.2
Bicycles	208	1.4	6.7	192	2.0

Overall results from 2011-2015 (white) have shown improvement over the earlier five-year study period of 2006-2010 (blue).

Severity comparison (orange column) shows relative potential for a fatal outcome - the higher the number, the higher the chance of a fatality in that crash type.

***NOTE:** The significant variance in this area is due to the 2011 Maine Crash Reporting System (MCRS) change in distracted driving reporting definition. Distracted driving results are for 2012-2015.

Crashes by Time of Day (2006-2015)

Fatalities by Time of Day (2006-2015)

Lane Departure Crashes

Lane departure crashes result when a vehicle leaves its designated lane of travel and veers left or right. Two crash types will normally result– either head-on or went-off-road. Those two crash types are further detailed on the following pages.

Lane Departure Fatalities

Head-On Crashes

Head-On Fatalities

Head-on crashes are much more severe than went-off-road. There is an average of 42 fatalities/1,000 crashes for head-on compared to 8.3 fatalities/1,000 crashes in went-off-road crashes.

Went-Off-Road Crashes

Went-Off-Road Fatalities

Went-off-road crashes are more frequent than head-on, occurring 10 times more often.

Alcohol and Non-Alcohol Related Fatalities

Distracted Driving Crashes

Prior to 2011, police crash reports captured general distracted/inattentive driving factors, and 10,000+ distraction/inattention related crashes were reported annually. During 2011, Maine switched to an updated crash report in line with national guidance that now reports on specific distracted practices, but does not include generic inattention, greatly reducing the reported number of distracted crashes. Distracted driving behaviors are usually self-reported.

Distracted Driving Fatalities

Crashes Involving Drivers with Suspended Licenses						
Year	All Crashes	Suspended Crashes	% of Suspended Crashes	All Fatalities	Suspended Fatalities	% of Suspended Fatalities
2003	35,208	795	2.26%	207	9	4.35%
