

Bridge Breaking Competition

The University of Maine ASCE Student Chapter will be hosting a Bridge Breaking Competition at the 66th Maine Transportation Conference. Challenge your co-workers, consultants, contractors, and students! Show off your engineering skills! The Maine Better Transportation Association will be providing a prize to the first place winner.

Bridge Kits are available for \$10 from:

Atlee Mousseau, MaineDOT
207-592-0086
atlee.mousseau@maine.gov

The kits will be mailed upon request, but no later than November 15th, so bridges can be painstakingly designed and built in advance.

Bridges will first be weighed and then tested to failure in a test frame. The most efficient (strength to weight ratio) bridge will win! FYI, the rules have been modified this year. More details will be provided in the kit.

Retrofit bridges will not qualify for the award, but can be broken for the fun of it, if time allows.
