

APPENDIX C

This collection of photographs were taken between July, 1998 and August, 2004 to illustrate characteristic landscapes within 15 miles of the Black Nubble Wind Farm. The photographs were taken under a variety of atmospheric conditions during different times of the day and year to give a comprehensive view of the study area.

Most of the photographs were taken with Nikon digital cameras, set to replicate the image created by a 'normal' lens on a 35 mm film camera. All photographs are available on CD from MMP.

All images were taken by TJD& A staff unless otherwise noted. The photographs are referenced extensively in the report, on Maps 6-1 through 6-6, and on Table 6-3, Summary of Visual Impacts.

TABLE OF CONTENTS

Bald Mountain.....1 - 7

North and South Crocker Mountains.....8 - 15

Appalachian Trail from Caribou Valley Road to Spaulding Mountain.....16 - 21

Mount Abraham..... 22 - 23
