

LONG LAKE
Littleton Twp., Aroostook Co.
U. S. G. S. Houlton, Me.

Fishes

Brook trout (squaretail)	Minnows
Yellow perch	Redbelly dace
Eel	Creek chub
White sucker	Yellowbelly sunfish

Physical Characteristics

Area - 19 acres

Temperatures

Upper Basin

Maximum depth - 32 feet

Surface - 66° F.

30 feet - 43° F.

Lower Basin

Surface - 67° F.

24 feet - 44° F.

Suggested Management

Long Lake is a small lake with two distinct basins. Water below the 10-foot level in both basins is cold, but dissolved oxygen is too low to support trout in any numbers.

Populations of yellow perch, suckers, and minnows in the lake are extensive and are limiting trout production by competition for available food and space.

Long Lake can probably support a small brook trout fishery in spite of limiting water quality conditions and strong competition. Chemical reclamation would not be feasible because of the necessity of covering the many miles of inlet tributaries.

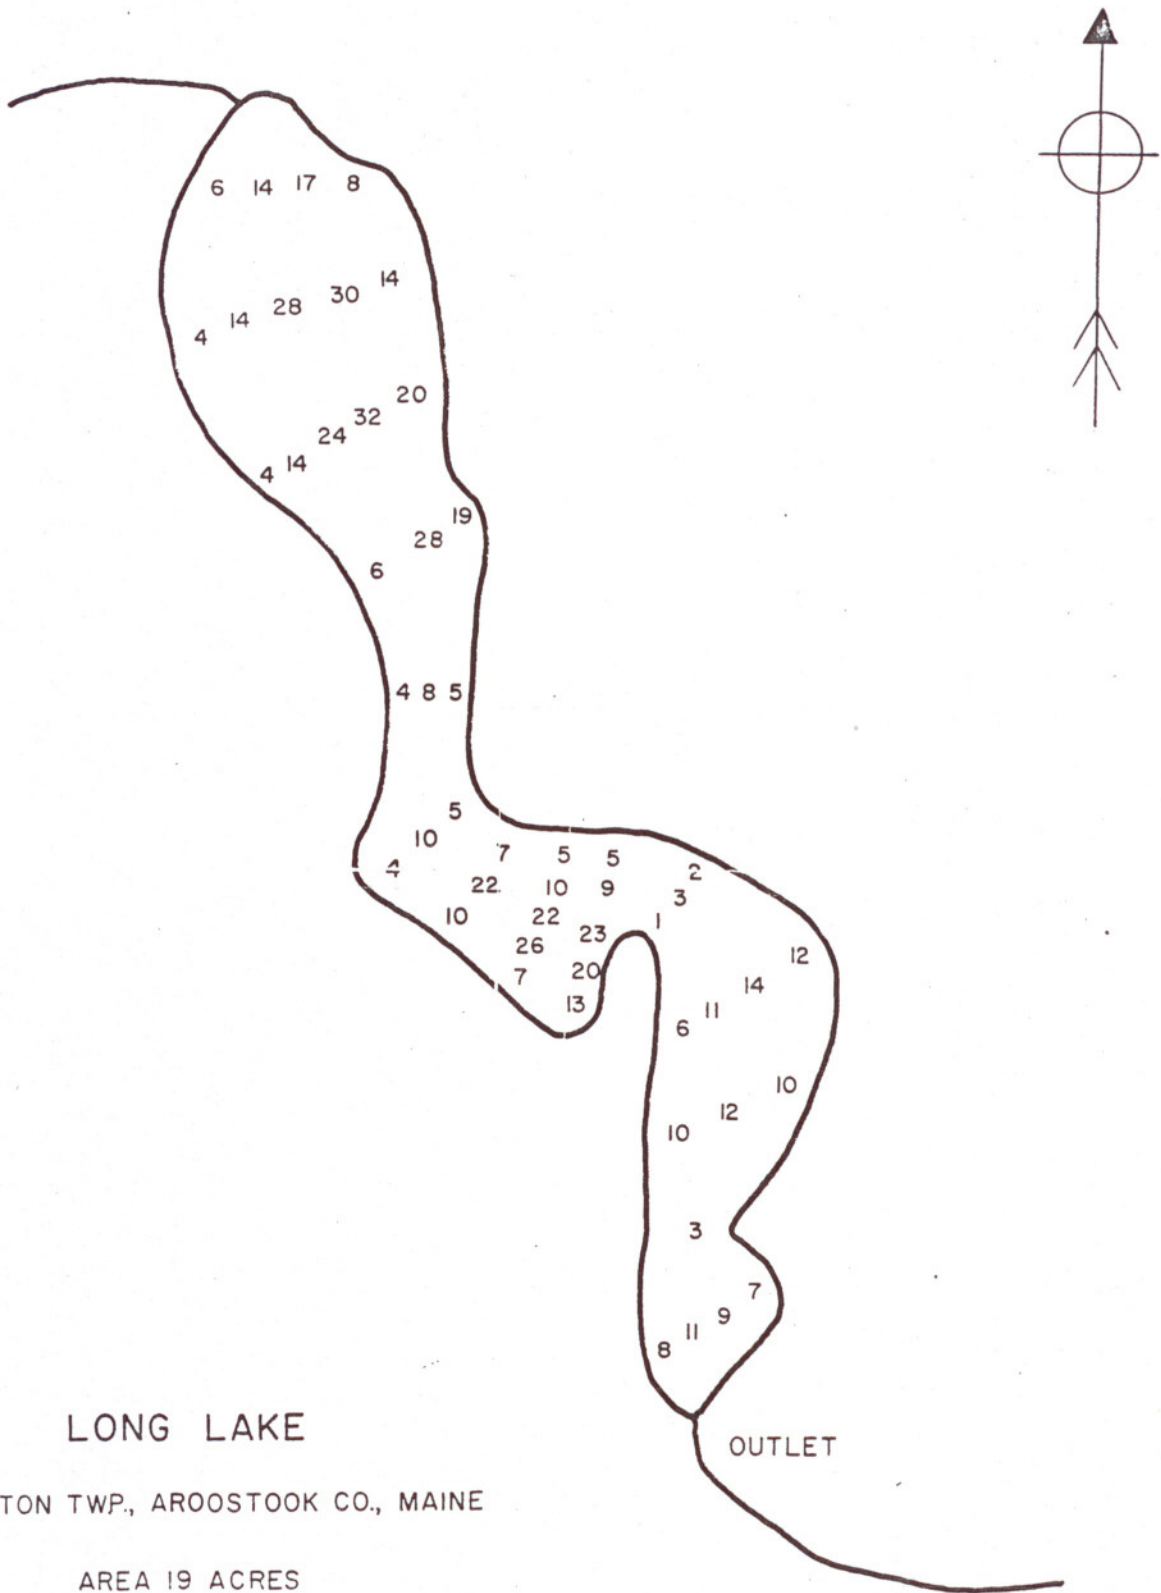

Two old dams on the lake outlet should be removed to permit free upstream migration of trout into the lake.

No stocking of any kind is recommended as long as present fishing pressure and habitat conditions persist.

Surveyed - August, 1951
