Area - 112 acres	Temperatures
	Surface - 69°F.
Maximum depth - 50 feet	48 feet - 43°F.
Principal Fishery: Smallmouth bass, white perch, yellow perch, pickerel, bullhead	

Williams Pond is a scenic body of water located in the lower reaches of the Orland River drainage. Consult your "topo" map for access routes.

Williams Pond possesses poor spawning tributaries and the water area cold enough to support trout or salmon has a serious oxygen deficiency.

It is recommended that Williams Pond be managed primarily for smallmouth bass, white perch, and pickerel.

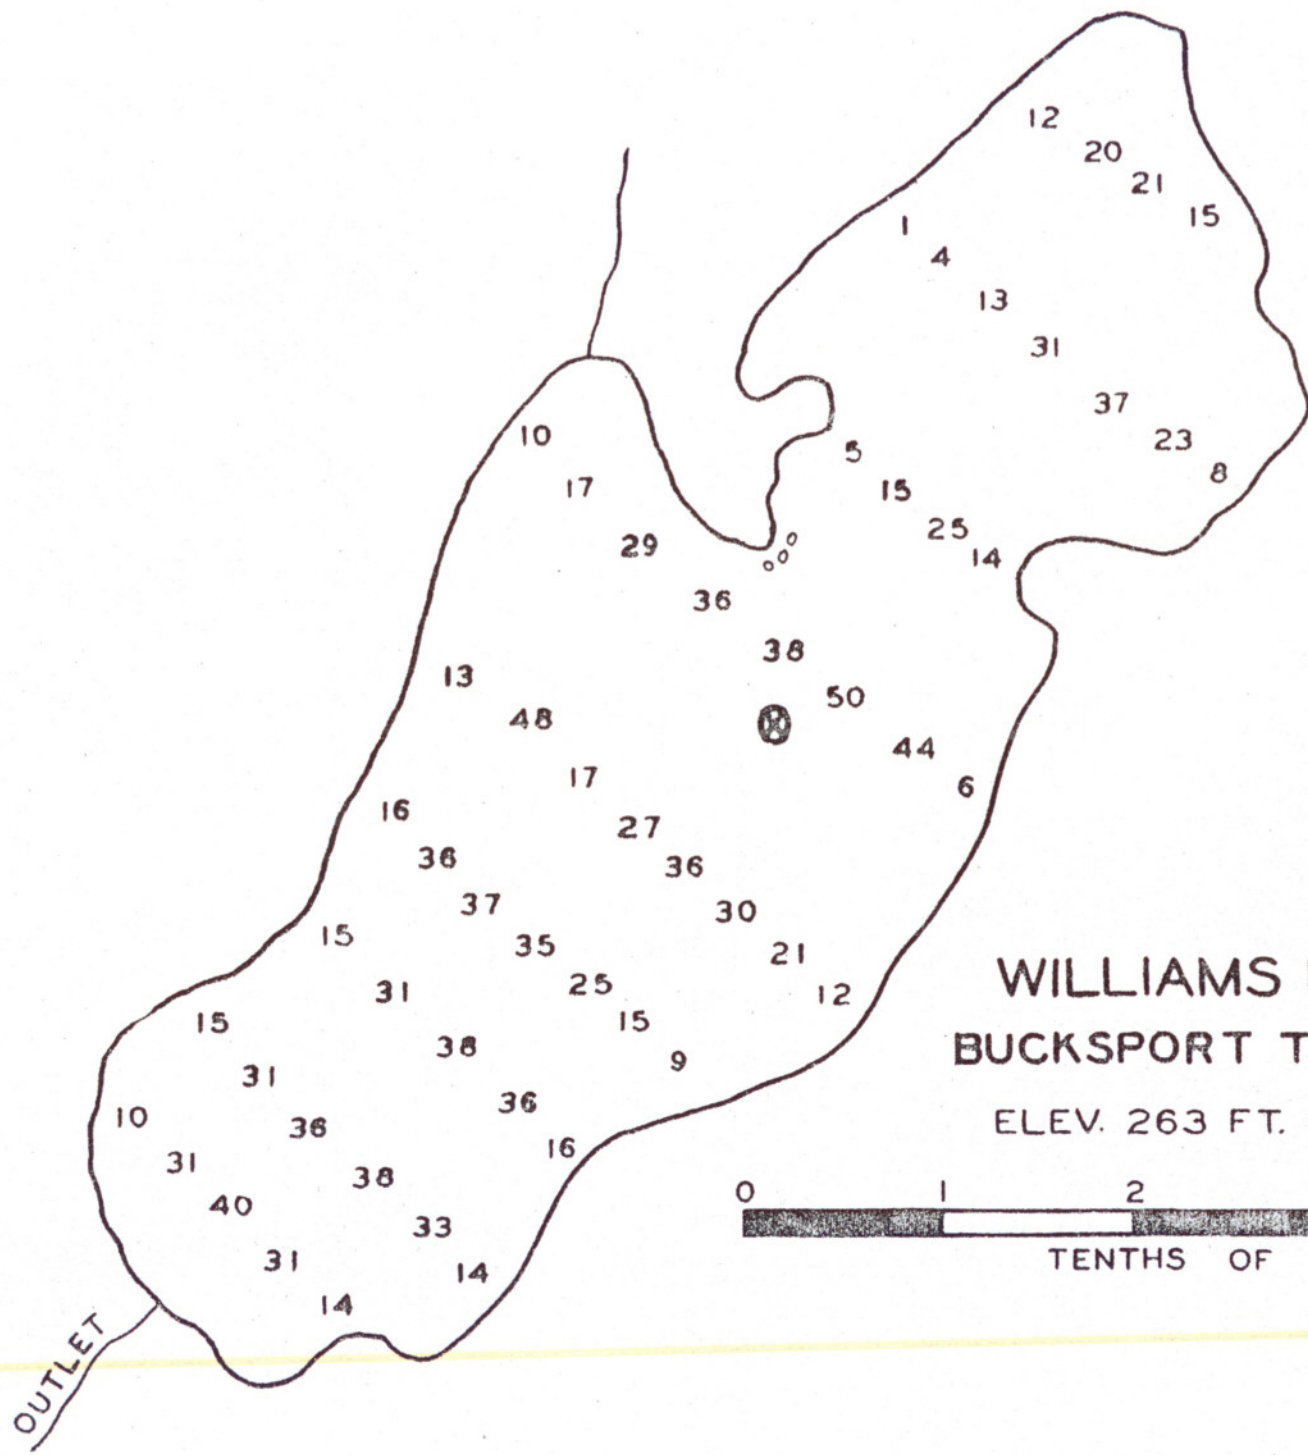

Surveyed - September, 1942
