

CHALK POND
Albany Twp., Oxford Co.
U.S.G.S. East Stoneham, Me. (7.5')

Fishes

Chain pickerel

Physical Characteristics

Area – 25 acres

Temperatures:

Surface - 75°F

Maximum depth – 6 feet

6 feet - 74°F

Principal fisheries: Chain pickerel

The boggy shoreline of Chalk Pond is largely undeveloped, except for a single farmhouse. This shallow, homothermous pond is not suitable for coldwater fish species. Despite its shallow nature, the pond has limited weed beds and darkly stained water. Pickerel are the only known fish species present in the pond, but their low abundance and small size quality does not attract many anglers. Periodic winterkill severely limits the fishery potential of this water.

A privately owned access road leads to within 80 yards of the pond, but access is limited to permissive trespass across private property.

Surveyed – August 1974
