

DAN CHARLES POND

Lovell Twp., Oxford Co.
U.S.G.S. North Waterford, Me. (7.5')

Fishes

Chain pickerel

Physical Characteristics

Area – 20 acres

Temperatures:

Surface - 75°F

Maximum depth – 13 feet

10 feet - 54°F

Principal fisheries: Chain pickerel

Dan Charles Pond is a small, shallow water located along the eastern bank of the Kezar River. The pond is undeveloped and offers some pleasant views of the surrounding hillsides. The presence of cold bottom water during the summer months suggests the presence of springs or other sources of groundwater influence, which might support trout. The opportunity to reclaim the pond was rejected at a public hearing held in 1972. Competition and predation from warmwater fish species currently limits the potential for a coldwater fisheries program. Chain pickerel provide fast action.

There is no public access site, and anglers are limited to permissive trespass over privately owned property.

Surveyed – September 1970

(Revised – 2003)
