

KNIGHT POND

South Berwick Twp., York Co.
U.S.G.S. Somersworth, Me-NH. (7.5')

Fishes

Brook trout
White perch
Yellow perch
Chain pickerel

Minnows
Golden shiner
White sucker
Hornpout (bullhead)

Physical Characteristics

Area - 49 acres

Maximum depth - 18 feet

Temperatures:

Surface - 73°F

15 feet - 70°F

Principal fisheries: Largemouth bass, white perch, and chain pickerel

Knight Pond is a shallow pond that is best suited for warmwater fish species such as bass, perch and pickerel. This pond is too warm during the summer months to support coldwater fish species, but catchable-size brook trout are stocked each spring to provide a seasonal fishery.

Access is limited to walk-in or carry in across private property with landowner permission.

Surveyed - September 1960
