Chain pickerel	Pumpkinseed
Landlocked alewives	

Physical Characteristics

Area - 778 acres	Temperatures
	Surface - 77° F
Maximum depth - 49 feet	45 feet - 48° F

Principal Fishery: Largemouth bass, smallmouth bass, white perch, chain pickerel

Located on the Maine New Hampshire border in western York County, this long, sandy-bottom pond provides year-round fishing for residents of both states. Because of its geographic location, anglers should be familiar with Maine-New Hampshire boundary water fishing regulations.

Largemouth bass, smallmouth bass, white perch, and hornpout are the fish species most summer anglers test their skills on. Ice fishermen with tip ups try mostly for brown trout and chain

pickerel. The warm water fisheries are naturally self-sustaining, while the brown trout fishery is maintained by annual stockings.

Bass and pickerel are most often taken by casting artificial lures along the shoreline. White perch are commonly caught in numbers out in the open lake at dusk with bait. After filleting, skinning, then cooking, the firm tasty white meat will prove to be excellent eating. Fishermen seeking hornpout usually try their luck in sheltered muddy coves after dark. Many calm, warm evenings are peacefully spent by these anglers huddled next to a lantern listening to the frogs and other night sounds. The rumor is spread by these anglers that you have not lived until you have eaten fresh hornpout stew.
