MDOC COVID-19 Testing Plan
Effective September 1, 2020

Prior to June 17, 2020, MDOC conducted COVID-19 testing at its MDOC facilities utilizing the following plan (in consultation with the ME CDC):

- COVID-19 testing anytime a DOC client is symptomatic;
- Universal COVID-19 testing following one positive case in a facility (in accordance with the ME CDC Guidance);
- COVID-19 testing admissions to IMHU and LCYDC due to potential community exposure;
- At the request of a community medical provider as part of an urgent/emergent medical operation or treatment;

On June 17, 2020, as part of the Department’s planning to re-initiate certain facility operations, programs, and client movement, MDOC began conducting COVID-19 testing at its facilities utilizing the following plan, which requires testing at key “actionable points” in Department operations. This plan will continue to evolve as the Department’s response to COVID-19 evolves. This plan has been reviewed and is supported by the Maine CDC. All COVID-19 testing at MDOC facilities and results will be tracked and reported utilizing the facility’s tracking sheet, reported to DOC Incident Command by 5pm, daily. This plan does not alter or replace current isolation/quarantine practices in place at facilities related to the MDOC’s COVID-19 response plan (i.e. 14-day quarantine following emergency room trip):

- COVID-19 testing anytime a DOC client is symptomatic;
  - Symptomatic cases will be tested at the order of the Regional Medical Director, and will be subsequently staffed with the DOC Health Services Coordinator and Regional Medical Director to determine additional measures necessary;

- Universal COVID-19 testing at one facility following one positive case in the facility (in accordance with the ME CDC Guidance);

- COVID-19 testing all new admissions to all MDOC facilities (within 48 hours of admission);
  - All new admits from non-MDOC facilities will be quarantined for 14 days upon admission to MDOC, and COVID-19 tested within 48 hours of admission;

- COVID-19 testing all facility-to-facility DOC client transfers, up to 48 hours prior to transferring from the sending facility (transfer will be pending results);
  - All transfers, upon negative test result and transfer to another facility, will be isolated and monitored by medical at the receiving facility for 72 hours, prior to being moved into non-COVID-19 housing;
  - Clients are not required to be re-tested once received at the receiving DOC facility, following the transfer;
Maine Department of Corrections

• COVID-19 testing clients returning from community medical trips (within 48 hours of their return to the facility);
  o The quarantine placement will be determined by the facility’s quarantine plan and the length of quarantine will be determined by the location of the medical trip, the risk of transmission at the medical site, and other potential COVID-19 exposure risks (the standard quarantine period is 14 days);
  o Clients with regular/multiple community medical appointments are not required to be COVID-19 tested after each appointment, unless they are symptomatic. Individual cases may be staffed/consulted with the DOC Health Services Coordinator;

• COVID-19 testing clients participating in a facility’s Hospice/Helping Hands program (at least 24 hours prior to their first day of hospice/helping hands assignment);
  o Participating clients will complete a COVID-19 symptom screening prior to entrance into the hospice/medical housing area, and after their completed assignment, daily;

• COVID-19 testing clients returning from death bed visits (within 48 hours of their return to the facility);
  o The quarantine placement will be determined by the facility’s quarantine plan and the length of quarantine will be determined by the location of the death bed visit, the risk of transmission at the site, and other potential COVID-19 exposure risks (the standard quarantine period is 14 days);

• COVID-19 testing clients for work release assignment, upon placement and randomly:
  o Any client selected and assigned to work release will be COVID-19 tested at least 48 hours prior to their first day of employment in the community;
  o While work release remains non-public-facing, at least monthly, the facility CAO will ensure no less than 20% of the work release clients at the facility are randomly selected for COVID-19 testing;

• COVID-19 testing clients terminated from work release assignments:
  o Any client terminated from a work release assignment will be quarantined for 14 days upon return to the facility, and COVID-19 tested within 24 hours of their return;

• COVID-19 testing all releasing clients as part of the release process, with the test completed when the client is 3 days from release;
  o If the test is positive:
    ▪ The MDOC will notify ME CDC of any releasing MDOC client testing positive;
    ▪ If applicable, the MDOC will notify Adult Community Corrections and any residential placement of a releasing MDOC client testing positive;
  o If the test is negative:
    ▪ If applicable, the MDOC will notify Adult Community Corrections and any residential placement of a releasing MDOC client testing negative;
  o If the client refuses the test:
    ▪ If applicable, the MDOC will notify Adult Community Corrections and any residential placement of a releasing MDOC client refusing to be tested;
