Fire Prevention Tips

Debris Burning

- Never burn during windy days.
- Burning during evening hours is safest, due to less winds, lower temperatures and higher humidity levels.
- Always have plenty of water on hand.
- Have hand tools available.
- Place your materials on mineral soil to reduce the chance of your fire burning deep into organic-ground materials.
- Burn all debris at least 100' from all flammable materials, including homes and other buildings.
- Never leave your fire unattended.
- Always double check your fire before leaving.
