

## Town of Bowdoinham: Re-Development of Public Works Waterfront Property

The project site is located within the Beginning with Habitat Program's Kennebec Estuary Focus Area

### PARTNERS

Maine Geological Survey

### PROJECT DESCRIPTION (Anticipated completion November 2020)

This project is part of the Town's efforts to re-develop the Town's former Public Works property on the Cathance River. With the Coastal Community Grant and matching funds, the Town and its subcontractors will conduct necessary surveys, produce preliminary and final designs and construction documents, and obtain permits for stabilizing the property's shorefront. The stabilization efforts will focus on one or more low-impact or living shoreline stabilization measures. Through public access, outreach and education, the Town will introduce "green" shoreline stabilization methods to visitors to the site and coordinate with the Maine Geological Survey on ways to use the site as a demonstration project to reach a wider audience.
