PROJECT DESCRIPTION (Anticipated completion November 2020)

The Town of Stonington will contract with an engineering consultant to assess the vulnerability of pumping stations, sewer lines, roads, and other critical municipal infrastructure to flooding due to coastal storms and projected sea-level rise. The consultant would provide options to mitigate and/or adapt to the effects of that flooding in order to allow continued use of vulnerable sections of the transportation network, sewer system, and other critical infrastructure. This assessment will then guide the Town's capital investments in its critical infrastructure to help ensure those systems will be useable for the next 100 years.
