All deliveries of fish feed must be made within (1) month of ordering and deliveries are to be prearranged between the Supplier and IFW. The Supplier must notify the receiving facility at least 24 hours prior to delivery. Shipments are to be unloaded between the hours of 7 am to 2 pm, Tuesday thru Thursday. Any delivery made at other times will not be unloaded unless specifically prearranged with the receiving facility. It is the responsibility of the Supplier to ensure that their selected feed shipping agents are informed of and adhere to the terms and conditions of this contract. To ensure the prevention of the transmission of fish or aquatic pathogens it is a requirement that no other fish, shellfish, crustacean or other aquatic organism or byproduct of the above be shipped with the fish feed designated for IFW facilities. IFW reserves the right to use their own shipper at their discretion which shall have no effect on feed prices.

PRODUCT COMPONENTS: The Supplier must provide a nutritionally complete diet with appropriate pellet and/or crumble sizes to satisfy the growth and development needs of salmonids through fry, fingerling, yearling, and broodstock life stages. All pelleted fish feed is to be extruded. A certified manufacturing designation (e.g., ISO 9001), BAP certification, and proven experience with diets for trout and salmon are preferred. Preference will be given to manufactures with a track record and focus of producing high quality salmonid feeds as demonstrated by the supplying feed mill having 50% or more of its production dedicated to the production of such feeds on an annual basis. Preference will also be given to suppliers that operate their own aquatic research labs with a primary focus on salmonid research. Preference will also be given to suppliers that have USA manufacturing capability to ensure continuity of being a provider in the event of cross border trade restrictions.

The feed label must list all ingredients printed legibly using the official Association of American Feed Control Officials (AAFCO)-defined ingredient name or common or usual name of the ingredient. The first five ingredients must be listed in decreasing order of percentage of diet. Fishmeal shall be one of the first three ingredients. Feather meal should not be listed as one of the first five ingredients. Variable formulations shall be based on maintaining digestible energy to protein ratios and minimum nutrient, fatty acid, and amino acid levels with a profile and overall composition that has a proven track record of good performance for the life stage in which it is destined for use.

The diet should be formulated to result in a fatty acid profile in fed hatchery fish that is consistent with that which is found in wild salmonids in the freshwater environment in regard to docosahexaenoic acid, eicosapentaenoic acid, and omega 3 to omega 6 ratios. Dietary oils must remain soluble at ambient winter hatchery water temperatures and cannot form lipid plaques on raceway walls, clog screens, or foul wastewater treatment equipment.

The Supplier will provide IFW with a statement regarding the availability of both floating and low phosphorus salmonid diets.

The Supplier will provide IFW with assurance that fishmeal is obtained from a source that abides by the Global Standard for Responsible Supply as developed by the International Fishmeal and Fish Oil Organization (IFFO). **The Supplier must disclose** the percentage of plant protein sources being used in the formulation of the diets. Diets (3.0mm and greater) must be available with 40 - 60 PPM astaxanthin or 60-80 PPM pigment as a combination of astaxanthin and canthaxanthin.

The Supplier should use:

- only fishmeal with crude protein >68%.
- only fishmeal with histamine level <1200 PPM.
- fishmeal with pepsin solubility >92%.

The Supplier will provide the most updated feed analysis sheet for each feed type and size contracted for, listing the percentages of the ingredients incorporated in the formulated diet. Information to include % protein, % fat, % fiber, % ash, % moisture, % carbohydrate, % phosphorous, as well as any vitamins, minerals, or additional additives the types and levels. If feed ingredient levels or percentages change during the contract period, IFW will be notified and an updated analysis sheet will be provided.

PRODUCT PERFORMANCE: **The Supplier will provide** sufficient information to IFW that the trout or salmon diet is designed to give the lowest cost of production (feed cost/pounds of fish produced) by delivering excellent growth rates and low feed conversion rates (goal 1:1 FCR) in salmonid hatcheries

located in latitudes >45° N. Cold water temperatures (ground water = 49 °F; surface water ranges 0 – 75° F) affect the solubility and digestibility of fish diets.

The Supplier will provide an amino acid profile for the separate feed products that match the requirements for trout and salmon to ensure that the maximum amount of dietary protein is used for muscle growth and the least possible amount is converted to body fat or excreted as nitrogenous waste in hatchery effluent water. Diets that prove to be unpalatable, deliver unacceptable growth rates (based on three-year average growth rates for that species and location using other diets), result in poor feed conversions, that utilize ingredients at inclusion levels known to result in enteritis in salmonids, or abnormally decrease water quality (total solids, pH, ammonia levels, or phosphorus levels) will not be used.

PRODUCT QUALITY ASSURANCE: The Supplier will provide Hazard Analysis Critical Control Point (HACCP) documentation (e.g., product temperature, moisture, microbial count, etc.) for products manufactured under this contract. Product quality assurance will include traceability of fishmeal and fish oil from the feed compounder back to the producer, all transporters, and any storage facility. Ingredients must not contain contaminants, impurities, pesticides, microorganism, natural toxins (e.g., nitrosamine, histamine, cadaverine, putrescine), mycotoxins or aflatoxins at levels detrimental to fish health or to the consumers of product reared with feeds made with said ingredients. **The Supplier will provide** written verification that feeds are not impure or contaminated with that which will cause harm to fish or humans which consume fish produced with said feed. Contaminant concentrations are to be less than maximum levels expressed as allowable by the European Union. Total Dioxins, Furans, and Dioxin like PCB's of the feed shall be less than 6 ng WHO- TEQ/kg. **The Supplier will disclose** any problems with feed impurities (e.g., melamine, pesticides, or heavy metals) that reached other customers occurring within the past three years and how the problem was remediated.

PRODUCT SUPPORT: The Supplier will provide information regarding available product support including availability and qualifications of local feed representatives, company web based support, fish diet feeding training, availability of medicated feeds (FDA-1900 certification), product technical information, and fish nutrition training printed materials, videos, webinars, etc.
