III. SPECIFICATIONS

HDPE Pipe Liner Material Specifications

These specifications cover the purchase of high density polyethylene (HDPE) pipe liners for lining existing culvert pipes. Pipe liners furnished to these specifications shall meet or exceed all requirements in one of the following two categories:

Solid Wall HDPE Pipe Liner

- The liner pipe shall be made of high density polyethylene resins in accordance with the requirements of ASTM D3350. The Cell Classification shall be a minimum of 345464C and shall have the Plastic Pipe Institute designation of PE4710. The supplier shall furnish a manufacturer's certification stating that the material in the pipe meets these requirements and the dimension requirements of ASTM F714.
- Pipe liner shall be a Dimension Ratio (DR) of 32.5.
- The pipe shall have a smooth, non-corrugated interior and exterior surface.

- The liner shall be capable of being joined into a continuous length by an interlocking method.
- The joints shall not create an increase in the outside diameter of the liner pipe to eliminate any coupling difficulties.
- The joints must be water-tight with gaskets that are capable of handling pressures up to 25 feet of head per ASTM D3212.
- The pipe shall be homogenous throughout and free from visible cracks, holes, foreign inclusions or other injurious defects. The pipe shall be as uniform as commercially practical in color, opacity, density and other physical properties.
- Each HDPE shall have a male and a female end.

Profile Wall HDPE Pipe Liner

- The liner pipe shall be made of high density polyethylene resins in accordance with the requirements of ASTM D3350. The Cell Classification shall be a

STATE OF MAINE | MASTER AGREEMENT

minimum of 334433C. The supplier shall furnish a manufacturer's certification stating that the material in the pipe meets these requirements and the dimension requirements of ASTM F894.

- The polyethylene raw material shall contain a minimum of 2%, well dispersed finely divided carbon black for UV stabilization.
- The pipe manufacturers' Quality System shall be certified by an appropriate independent body to meet the requirements of the ISO 9001-2000 Quality Management Program.
- The nominal inside diameter of the pipe shall be true to the specified pipe size. The pipe shall be manufactured by the continuous winding of a closed profile onto suitably sized mandrels and shall be produced to constant internal diameters.
- The pipe shall have a "smooth" OD for ease of installation.
- Lengths of pipe shall be manufactured with end treatments that allows for consecutive lengths of pipe, with a profile cut end treatment along the helix to be field extrusion welded.
- The pipe shall be homogenous throughout and free from visible cracks, holes, foreign inclusions or other injurious defects. The pipe shall be as uniform as commercially practical in color, opacity, density and other physical properties.
- The liner pipe should have sufficient wall stiffness to safely resist external hydrostatic pressures generated by ground water levels above the top of the pipe and/or by grouting pressures (if appropriate). When grouted, the liner pipe will react as though it was buried in soil; thus flexible pipe/soil backfill design equations apply.

No replacement of defective articles or work shall be made unless specified by OSPS.

- 9. MODIFICATIONS.** OSPS reserves the right to increase or decrease all or any portion of the work and the articles required by the bidding documents or this agreements, or to eliminate all or any portion of such work or articles or to change delivery date hereon without invalidating this Contract.
