

Award Justification Statement
RFP# 202102021
eProcurement Solutions and Services

I. Summary

The State of Maine sought proposals for eProcurement solutions and services in furtherance of the NASPO ValuePoint Cooperative Purchasing Program. The objective of this cooperative procurement is to provide states, territories, and their authorized political subdivisions with access to high quality providers in the form of a menu of eProcurement solution and/or service offerings.

Bidders were able to respond to the RFP by providing proposals for one or more of the following categories:

- Category 1: Full Solution. Proposals for implementation of a comprehensive eProcurement Solution.
- Category 2: Individual Workstream Implementation. Proposals for implementation of eProcurement functionality for some but not all Workstreams.
- Category 3: eSoftware Only. Proposals for software only of a comprehensive eProcurement Solution.
- Category 4: Services Only. Proposals to provide some or all of the identified services, without the purchase of software.

II. Evaluation Process

An evaluation team comprised of employees and procurement professionals from the State of Maine, Delaware, Montana, and North Dakota used a staged approach to evaluate and score the proposals and applied a consensus method in scoring the Bidders' Qualifications and Experience and Proposed Services. Scores for the Cost Proposal were assigned using mathematical formulas. This evaluation team was supported by two Subject Matter Experts.

The evaluation team and subject matter experts are as follows:

Evaluation Team	Subject Matter Experts
Joe Zrioka	Gerard MacCrossan
Michael Bacu	Robert Sievert
Tom Hastings	
Angie Scherbenske	
Stacey Winter	

III. Determining Awards

- Stage 1: Each technical proposal was evaluated against the Stage 1 criteria identified in the RFP. Bidders receiving at least 60% of the points possible for Stage 1 moved on to Stage 2.
- Stage 2: Each technical proposal was evaluated against the Stage 2 criteria identified in the RFP. Bidders receiving at least 60% of the points possible for Stage 2 moved on to Stage 3.
- Stage 3: Each cost proposal was evaluated against other proposals offering or servicing the same software solution. Bidders receiving at least 60% of the total points possible across Stages 1, 2, and 3 in at least one category are being considered for award.
- Proposals in Category 2 that did not provide costs for specific workstreams, or required that specific workstreams be bundled with other workstreams, were rejected for those workstreams in Stage 3. Rejected workstreams (which met the Stage 2 technical scoring threshold) may be bundled with an awarded workstream as a value-add at no additional cost but may not be offered as a standalone product.
- Managed services were identified as an optional offering in the RFP but were included in the RFP scoring criteria. To maintain fairness, managed services was removed from the scoring criteria and the point totals were adjusted to maintain the percentage allocations identified in the RFP. Managed services will be negotiated with awarded Bidders that proposed managed services in the same manner as all other optional offerings identified in the RFP.

IV. Conclusion

Following successful contract negotiation and execution, Participating Entities will have access to nine unique and customizable software solutions, a variety of implementors servicing those solutions, and two implementors offering system-agnostic services, which entities using any software solution may utilize. The four-category structure of awards also means entities can hand-pick the best combination of software and services to meet their needs. The Bidders awarded through the RFP process all demonstrate a potential best-value scenario for any State that will participate in the resulting master agreements.

Attn: Bidders for RFP# 202102021

SUBJECT: Notice of Conditional Contract Awards under RFP# 202102021
eProcurement Solutions and Services

This letter is in regard to the subject Request for Proposals (RFP), issued by the State of Maine Department of Administrative and Financial Services and NASPO ValuePoint for eProcurement Solutions. The Department has evaluated the proposals received using the evaluation criteria identified in the RFP, and the Department is hereby announcing its conditional contract awards to the following bidders:

CATEGORY 1: Full Solution	CATEGORY 2: Individual Workstream Implementation	CATEGORY 3: eSoftware Only	CATEGORY 4: Services Only
Deloitte Consulting (Coupa)	Bonfire Interactive	Carahsoft	Accenture
GEP	GEP	GEP	Civic Initiatives
GEP & KPMG	Ivalua	Ivalua	Deloitte Consulting
GEP & Optis Consulting	KPMG & Ivalua	LSI Consulting	GEP
IBM	KPMG & SirionLabs	SirionLabs	KPMG (Coupa)
Infosys Public Services	LSI Consulting		KPMG (Ivalua)
Ivalua	Perfect Commerce		KPMG (Oracle)
KPMG	Periscope Holdings		Nitor Partners
LSI Consulting			
Perfect Commerce			
Periscope Holdings			

The bidders listed above received the evaluation team's highest rankings. The Department will be contacting the aforementioned bidders soon to negotiate a contract. As provided in the RFP, the Notice of Conditional Contract Award is subject to execution of a written contract and, as a result, this Notice does NOT constitute the formation of a contract between the Department and the apparent successful vendor. The vendor shall not acquire any legal or equitable rights relative to the contract services until a contract containing terms and conditions acceptable to

the Department is executed. The Department further reserves the right to cancel this Notice of Conditional Contract Award at any time prior to the execution of a written contract.

As stated in the RFP, following announcement of this award decision, all submissions in response to the RFP are considered public records available for public inspection pursuant to the State of Maine Freedom of Access Act (FOAA). 1 M.R.S. §§ 401 et seq.; 5 M.R.S. § 1825-B (6).

This award decision is conditioned upon final approval by the State Procurement Review Committee and the successful negotiation of a contract. A Statement of Appeal Rights has been provided with this letter.

Thank you for your interest in doing business with the State of Maine.

Sincerely,

DocuSigned by:

6D6437754DD0459...

Jaime C. Schorr, Chief Procurement Officer
State of Maine, Department of Administrative and Financial Services

STATEMENT OF APPEAL RIGHTS

Any person aggrieved by an award decision may request an appeal hearing. The request must be made to the Director of the Bureau of General Services, in writing, within 15 days of notification of the contract award as provided in 5 M.R.S. § 1825-E (2) and the Rules of the Department of Administrative and Financial Services, Bureau of General Services, Division of Purchases, Chapter 120, § (2) (2).

CATEGORY 1 - FULL SOLUTION

TEAM EVALUATION NOTES

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: Autocene
CATEGORY: 1 – Full Solution
DATE: 9/23/21

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - No experience with public procurement, have only done sourcing
 - More architectural/engineering focused
 - 30+ years experience
- Previous Projects
 - Projects provided were not relevant to eProcurement
 - Corporate customers seemed to be main experience
 - Projects did not seem to fit with “Full Solution” category

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Autocene

CATEGORY: 1 – Full Solution

DATE: 9/23/21

- Subcontractors
 - None
- Organizational Chart
 - Resumes were not clear to support the “30+ years” claim
 - Corporate chart provided
 - Did not identify project team
 - Fairly small scale
- Litigation
 - None in the past 10 years
- Financial Viability
 - Not provided

Bidder did not meet the minimum scoring requirements to move onto the next stage of evaluation (Stage 2).

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Been working on a single website for 6 years – using incremental development approach
 - Open source technologies
 - Strong in e-marketplace, diverse experience
 - Discussed scoring and assessment in some respects, though did not demonstrate strong experience
- Previous Projects
 - Projects/references seem to fit into the category fairly well

Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Did not include higher end reporting analytics (Coupa Analytics) – proposed based reporting functionality.ii. Supplier networks are not part of most state's approved catalogs (Coupa Open Buy)iii. Public transparency not addressediv. Batch or real time for existing financial management of core systems not addressedv. Ability to post directly to existing state websites not clearly definedvi. Subscription based on number of users instead of unlimited
b. User Experience <ul style="list-style-type: none">i. Mobile app included for no additional costii. Android and Apple compatibleiii. Sufficient intuitive navigationiv. Role based functionality – “content groups” give access to specific contracts/templates
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Major releases 3 times per yearii. Regular updates (every 2 weeks) – communication about updates will be importantiii. Sandbox and production done at the same time (daily)iv. Release schedule available to test changes prior to releasev. AI features are modern – fraudulent spin detectionvi. 3-year product roadmap not provided
d. Customizations/Extensions

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Deloitte (Coupa)

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/24/22

i. Customizations not allowed/available
2. Functional Requirements
a. General Functionality <ul style="list-style-type: none"> i. No public posting of solicitations included with proposal ii. Limit on attachment size (100MB) iii. No spellcheck available iv. Subscription based solution with limited number of users. Number of subscriptions/users are negotiable based on state/entity need. v. Emails coming out of the system show that they come from Coupa, not State system
b. Supplier Portal <ul style="list-style-type: none"> i. Admin fee can be paid through Coupa Pay – Can be configured to handle supplier fees paid to a state for sales ii. Suppliers are able to self-register but require invite link to portal (somewhat restrictive). Common page must be filtered to find specific information for each State. Seems cumbersome, not user friendly for suppliers. iii. Supplier portal system is not state-specific
c. Supplier Enablement/Management <ul style="list-style-type: none"> i. Suppliers are able to self-register but require invite link to portal ii. Supplier integration with financial system – Coupa does not require a supplier to be approved in the finance system in order to bid. Suppliers can bid without providing financial or transactional information. iii. Does not appear that the state can enter and maintain the supplier account
d. Buyer Portal <ul style="list-style-type: none"> i. Met requirements ii. Personalized dashboards by user roles is well done
e. Need Identification <ul style="list-style-type: none"> i. Met requirements ii. Configurable forms that can be used to capture needs requirements iii. Configurable approval chains
f. Request through Pay <ul style="list-style-type: none"> i. Requires significant configurations based on state workflows ii. Enables users to use both user level and supplier level payment cards. CoupaPay is included in the proposed modules. iii. Budget checking – must load budget from finance into Coupa iv. Ability to automatically schedule recurring purchases not supported without a workaround v. Contingent workforce management process included only as an optional module vi. Level 2 punch out search requires hosted catalog to be submitted for Coupa search to work – government resource to validate before publishing punch out to end users. vii. T&Cs – Policies accompanying the requisition to help users understand affected purchasing decision and to guide them. Creation of T&Cs are a separate action incorporated as part of the solution design. Provided an example of a PO layout. viii. “Soft” and “fully closed” approach to financial closeouts ix. No parallel workflow ability x. Access to Coupa Open Buy can be restricted by roles and permissions
g. Catalog Capability <ul style="list-style-type: none"> i. Limit of 1 million line items ii. Must be logged in in order to service the account log – does not meet RFP requirement iii. Catalogs may be loaded through ADI – automated instead of manual iv. Punch out to Amazon business, XML on return data

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - SaaS product with a focus on eProcurement
 - Developed through experience with reverse auctions, sourcing – interesting
 - EASiBuy is prime contractor, Nextenders based outside of North America
 - Focus on bids, not so much on services
- Previous Projects
 - State, county, and city experience

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: EASiBuy

CATEGORY: 1 – Full Solution

DATE: 9/23/21

- Single project demonstrate ability to provide some of the full-suite aspects
 - Most examples focused on reverse auctions (EASiBuy)
- Subcontractors
 - Stated none, but both HCA healthcare and Nextenders seem to be subs
 - Unclear
- Organizational Chart
 - Provided
 - Did not appear project specific, team members not identified besides “on-site/off-site” designation
 - Hard to tell what the relationship is between Nextenders and EASiBuy. Cannot easily identify how the organization is structured or who is responsible for what with this proposed solution.
- Litigation
 - Provided, none
- Financial Viability
 - Current D&B report provided
 - Appears stable, moderate risk in some categories

Bidder did not meet the minimum scoring requirements to move onto the next stage of evaluation (Stage 2).

DATE: Stage 1 – 9/23/21, Stage 2 – 1/24/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - provided
- Debarment Form - provided
- Certificate of Insurance – provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 20 years of experience
 - Graphic provided most of the relevant information
 - GEP Smart – identifies all workstreams
 - GEP Nexxe
- Previous Projects
 - No state government references
 - Proved transparency across the company

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: GEP-Optis

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/24/22

- U Cal example identified some key pieces of full-suite capability, but not all
 - Project examples do not fully cover all workstreams of RFP, but they are identified in the proposed product suite.
- Subcontractors
 - Optis – source-to-pay consultant, though does not identify experience with GEP products specifically.
- Organizational Chart
 - Combined State, GEP, and Optis resources to clearly define project roles.
- Litigation
 - Provided, none
- Financial Viability
 - Provided, dated 10/19/2020
 - Low risk

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Cross functional reportingii. All modules included and integratediii. Single unified platform
b. User Experience <ul style="list-style-type: none">i. Users may choose their own landing pageii. Drag and drop capability to make changes to the landing pageiii. Mobile responsiveiv. Window for pending tasks not organized by section
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Maintenance release testing window – 1 week.
d. Customizations/Extensions <ul style="list-style-type: none">i. Customizations not specifically supported/encouraged
2. Functional Requirements
a. General Functionality <ul style="list-style-type: none">i. Maintaining templates and clauses performed by system adminii. Have their own e-signature tooliii. Search function able to search fields as well as entire readable documentsiv. File size limit (set at 30MB) able to be increasedv. Emails will come from GEP instead of end uservi. Can support unlimited business and supplier user licenses
b. Supplier Portal <ul style="list-style-type: none">i. GEP will conduct all onboarding for suppliers

ii. Action plan concept with milestones and tasks identified, can be routed for approval
k. Purchasing/Data Analytics
i. GEP Minerva as an advanced capability and is included
ii. Can provide web crawlers if necessary
3. Technical Requirements
a. Availability
i. 24/7 availability except for scheduled maintenance
ii. 99.8% uptime
iii. Microsoft Azure cloud
b. Accessibility Requirements
i. Met requirements
c. Audit Trail and History
i. Met requirements
ii. Will keep audit logs until end of contract life
d. Browsers Supported
i. Recommend Edge and Chrome
ii. Met requirements
e. User Accounts and Administration
i. Role-based
ii. Admin responsibilities can be delegated to agencies
f. User Authentication
i. Response combined with Federated Identity Management
g. Federated Identity Management
i. Met requirements
h. Data Conversion
i. Data cleanout to be performed by customer unless outsourced to Optis for additional cost
ii. Optis will assist in testing of cleaned data
iii. Identified risks to data migration success
iv. GEP/Optis can provide data conversion services that the state may use on an optional basis. Resource model will be defined with each specific state
i. Interface and Integration
i. Focused on source to pay piece
ii. Real time integration limited to 50 lines in 1 request in API
iii. States may use their own middleware, or use the option to use GEP middleware at an additional cost
j. Office Automation Integration
i. Integration with Microsoft Outlook and Word
k. Mobile Device Support
i. Met requirements
ii. Mobile-native procurement platform
l. Mobile Applications
i. iOS and Android capability
m. Data Ownership and Access
i. Did not respond
n. Data Retention, Archive and Purge Considerations
i. Met requirements
o. Disaster Recovery Plan
i. Provided
p. Solution Environments

2. Functional Requirements	
a. General Functionality	<ul style="list-style-type: none"> i. Integrated applications that facilitates occasional and frequent buyers ii. Contracts only available to registered users through state website iii. More than half of the requirements are indicated as “standard” functionality – details not sufficiently provided iv. Admin fee collection and management not included with proposal v. A separate API is required to post directly to the state’s website vi. Participating entity buyer or analyst will post solicitations/awards/notices to state website manually
b. Supplier Portal	<ul style="list-style-type: none"> i. SAP Ariba supplier network portal is common to all Ariba customers, not specific to any one state ii. Hosted and catalog punch out support and Spot Buy catalog solution
c. Supplier Enablement/Management	<ul style="list-style-type: none"> i. Offer a supplier enablement team of hundreds of employees ii. Education and training materials available iii. Will design and develop an enablement strategy iv. Automated verification capability for IRS TIN/Name. System can validate supplier addresses with D&B provided the state has a current D&B license. v. Supplier can sign up for Ariba notification when a contract is re-solicited
d. Buyer Portal	<ul style="list-style-type: none"> i. Two entry points for casual user and power user ii. More functionality available for power users – access to pre-packaged reports iii. Configurable dashboard
e. Need Identification	<ul style="list-style-type: none"> i. Guided buying managed through landing page, will use tiles ii. Standard response – met requirements
f. Request through Pay	<ul style="list-style-type: none"> i. Attachment limit of 100 MB ii. Met requirements iii. Input forms to handle special requisitioning situations - have their own workflow capability iv. E-signatures on POs – IBM says not available in comments, but marked A. Not available out-of-the-box with Ariba Buy. v. There are multiple responses in this requirement set where “configurable” is stated but the Availability is marked A, not CF vi. Cannot create a PO from a contract vii. P-Card administration cannot be maintained by the user under their own profile
g. Catalog Capability	<ul style="list-style-type: none"> i. Negative dollar value not an option ii. Limit of 5,000 catalogs, 500,000 items iii. Did not address configurable catalogs iv. Catalog rules to enhance and enrich data – automate data cleansing process v. Catalog validation – IBM provides a mapping of NIGP codes to UNSPC codes
h. Sourcing/Bid Management	<ul style="list-style-type: none"> i. Out of the box functionality on common procurement types ii. Several solicitation templates available iii. Integration to contract module iv. Messaging feature available to collaborate with suppliers/external parties and internal team

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: IBM-Kyndryl
CATEGORY: 1 – Full Solution
DATE: 11/3/21

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Cloud solutions and infrastructure services
 - SAP Ariba eProcurement offered
 - Est. in 1911 (IBM)
 - Kyndryl is an IBM company launched in 2021 – seems to be very new.
 - Unclear what Kyndryl brings to the project
- Previous Projects
 - 3 provided – none involved Kyndryl

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: IBM-Kyndryl

CATEGORY: 1 – Full Solution

DATE: 11/3/21

- No state examples
 - Most did not appear to be eProcurement related or have much detail describing eProcurement experience
 - 1 Ariba reference
 - All were ongoing projects
- Subcontractors
 - Manpower, others to be used.
- Organizational Chart
 - Company org chart with some names and titles
 - No job descriptions or project-specific roles defined
- Litigation
 - Large company, ongoing cases.
- Financial Viability
 - D&B Provided
 - Low-moderate risk
 - IBM only

Bidder did not meet the minimum scoring requirements to move onto the next stage of evaluation (Stage 2).

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Infosys

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

- Wide range of public sector experience
 - Canada and California references indicated full-suite experience
 - Projects identify experience working with the subcontractors in this proposal
- Subcontractors
 - Allied Digital Services (IT transformation)
 - Ernst & Young (consulting)
 - SAP Ariba (eProcurement)
 - Well organized, easy to understand credentials and purpose
 - Subcontractors seem to have experience with this proposed solution
- Organizational Chart
 - Combination of State and Infosys positions
 - Identified project roles
- Litigation
 - Provided, none
- Financial Viability
 - D&B Snapshot – unclear on date, but shows low risk
 - Financial statements also included

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Ariba solutionii. Engaging Ernst & Young to deliver portion of the solutioniii. Listed various component pieces of Ariba to be usediv. Included middleware on an optional basis – Oracle Integration Cloudv. Supplier network will use a single accountvi. Ariba Spot Buy – open marketplacevii. Optional Infosys transparency portal
b. User Experience <ul style="list-style-type: none">i. Only certain users will be able to personalize their dashboard, vs. all users having that abilityii. Wizard response is essentially a guided workflowiii. Role based functionalityiv. Mobile app requirement addressedv. Ariba Discovery portal being proposed as combined supplier and transparency portalvi. Guided buying
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Mention leveraging out-of-the-box capabilities

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Infosys

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

<ul style="list-style-type: none"> ii. No user impact on monthly feature deliveries iii. Will help benchmark existing processes iv. Discussed components of roadmap but not clearly framed as a 3-year roadmap v. Ariba Best Practices Center – included in post-deployment services. Standard amount of time is 20 hours per acquired purchased solution. vi. Quarterly releases vii. Extensible/API strategy – can build out companion software
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. RTM lists 27 functional requirements as customizations ii. Changes and customizations required in state legacy systems to integrate with solution
<p>2. Functional Requirements</p>
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Size limit – 100 MB ii. State user licenses based on contract/number of users – not unlimited as required in RFP. Supplier licenses are no cost. iii. Robust search engine iv. API that will publish solicitations, notices, and awards through state websites v. No spellcheck feature, but plan to integrate Grammarly vi. Supplier side uses only UNSPSC codes
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Supplier can choose means of receiving orders and changing orders, as well as multiple means for suppliers to create and submit invoices. ii. Primary registration for Ariba network, second step includes state-specific form to be filled out. Supplier can request to be a supplier for the state themselves. iii. Suppliers can participate in Ariba Spot Buy with their own catalogs. Value to suppliers. iv. Allows creation of negotiation tasks and incorporating document changes from the negotiating parties v. Responses can be submitted through the interface or uploaded vi. Access to phone and chat-based support for suppliers during business hours
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. SLP solution has full onboarding process, can be initiated by suppliers or internally ii. Infosys will assess and advise if supplier enablement/management is necessary, will provide at additional cost if needed iii. Technical documents and online seminars available iv. Enablement strategy to onboard suppliers as part of Ariba services v. Included ability to check TIN without third party vi. Supplier email notification of specific solicitations not available
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Two entry points – casual user and power user ii. Configurable dashboard iii. Licensing and Certifications, etc. – Some fields are custom fields (require customization). Customizations must be performed by SAP Ariba.
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Guided buying – catalog tiles to make for easy access ii. Separated contract options vs spotlight options
<p>f. Request through Pay</p> <ul style="list-style-type: none"> i. Meets the zero-value line item requirement ii. Taxes must be manually entered

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Infosys

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

<ul style="list-style-type: none"> iii. P-card can be assigned to a user or act as a ghost card iv. Input form feature that can act as a pre-requisition or a special type of requisition v. Do not support entering a backdated requisition vi. Configurable ERP integration option for fund approvals vii. Must complete a configuration in order to assign state contract numbers viii. Workflow has a reviewer vs approver concept ix. PO system overall inefficient x. Electronic signatures on POs will require further discussion xi. Can be configured to use a P-card on non-catalog items xii. System requires PO or contract number in order to create a receipt xiii. Support EDI or CXML formats to upload invoices xiv. Messaging feature on POs and invoices for collaboration and communication xv. Unit of measurement defined by PO – not comparable to inventory unit of measurement for receipt entering
<p>g. Catalog Capability</p> <ul style="list-style-type: none"> i. Limit of 5,000 catalogs, 500,000 items – set for acceptable data load performance. Limits are configurable. ii. Does not meet negative dollar requirement iii. Updating hosted contract catalogs requires an amendment to the contract each time iv. Ariba Spot Buy – user can conduct an initial search, then conduct another search on just the Spot Buy area v. Can compare new and old catalog versions vi. Partial catalog item concept – user will be prompted to fill in additional information vii. Public facing catalog requires generic user account to be shared viii. Catalogs defined by type (hosted/punch out) within contract. Defined at the line-item level.
<p>h. Sourcing/Bid Management</p> <ul style="list-style-type: none"> i. Attachments are limited to 100 MB ii. Limit of 100 invited suppliers per event. Max of 700. iii. To add more suppliers/vendors to solicitations, must set up another solicitation – could be an issue iv. Only buyer can add suppliers to supplier list. v. Unregistered suppliers can access solicitation through Ariba Discovery.
<p>i. Contract Management</p> <ul style="list-style-type: none"> i. Electronic signature not part of contract system, but can integrate with DocuSign for an added cost ii. Upload size limit of 2 GB for contracts iii. Contracts for a pool of suppliers is not supported iv. Integrated CM and Contract Administration functionality. Contract award can flow directly into contract authoring. Compliance and auditing through platform. Ongoing supplier communication through platform, capturing performance measures through contract closeout v. Recommends API to make the procurement file and associated attachments publicly viewable on state's site. vi. Many integrations, customizations to CM vii. Capable of full text search of uploaded documents viii. Contract authoring done with templates, not Microsoft Word
<p>j. Vendor Performance</p> <ul style="list-style-type: none"> i. Scorecard functionality ii. Captures vendor performance data outside of the survey tool iii. Vendors get notified if performance does not meet certain criteria iv. Improvement plan concept not addressed

 - Provided, none
- Financial Viability
 - Provided financial statements 2017-2019

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Single landing page for users with user profile specific contentii. Ivalua Solutioniii. Single data ecosystem with homogenous look and feeliv. Built for public sectorv. Configuration layer to add new fields, rules, alerts, and workflowvi. Collaboration tools, logs, forms, and commentsvii. Open marketplace with hosted catalogs, punch out catalogs, and off-catalog searches; Search 360 functionality – searches punchouts as well as hosted catalogsviii. Many out of the box reports and ability for states to create their ownix. Integration toolbox with hundreds of data mapping formats and standard integration templates; Integration to over 60 ERPs, hundreds of data mapping formats and integration templates. Accept all document and files format typesx. Documents are available throughout all modulesxi. Coding is not required to make changesxii. Transparency - public portal specific to each customer
b. User Experience <ul style="list-style-type: none">i. Users have their own homepage unique to their profileii. Human-centered designiii. No wizard driven capabilitiesiv. Role-basedv. Able to mass-assign workflow tasks to other users
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Major software releases twice per yearii. Client decides when to upload to which major versioniii. Recommend major updates within 18 months of releaseiv. Multi-instance SaaS; independent tenant

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Ivalua

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

<ul style="list-style-type: none"> v. FedRAMP ready; StateRAMP is on the Roadmap vi. Roadmap – 60% from customer-sourced ideas vii. Dedicated upgrade support team viii. Collaborate authoring and enhanced clause libraries within the Roadmap ix. Invoicing and payment execution inside Ivalua
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. Ivalua SaaS platform relies on configuration, not custom code ii. 23 functional requirements identified as customizations; 1 general customization iii. Do not make customer-specific customizations iv. Maintain a copy of the customer's environment v. Allows the customer to choose when they go through an upgrade cycle
<p>2. Functional Requirements</p>
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Addresses all functional areas required in RFP ii. No extra cost for integration between solutions – can be completed within the software iii. Able to do a commodity code only with a crosswalk iv. E-Signature – DocuSign, AdobeSign, but must be integrated v. Public posting – recommend linking to Ivalua's public portal from the state's website for a simpler integration vi. Print format – reply on printing from the screen instead of a separate print version vii. File size limits determined at the project level
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Free for suppliers; unlimited number of suppliers ii. Submitting of admin fee payments requires a third-party payment provider iii. ERP financial data integration appears to be included, but does not address work required from customer/state in order to complete integration iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. Registration is a two-part process; public facing page, then full enrollment ii. Most of the registration functions/validations requires a third party – Ivalua will supply those integrations for an additional fee iii. Duplication check is part of workflow that state must complete; not automated iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured v. Changes to supplier account go through a change request process that must be work flowed and approved
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Add aspects to home page and rearrange home page ii. Home page has quick link and short cuts to workflow tasks iii. Provide ability to drive notifications for various alerts on screen and email
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Single landing page for user login ii. Fully integrated iii. Workflow engine invokes approvals as well as processes iv. Workflow driven by data setup v. Listed as a customization but narrative does not support/describe what the customization is
<p>f. Request through Pay</p>

BIDDER: Ivalua

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

i. Provided sample SLA
ii. Did not provide comments on model SLA
4. Security Requirements
a. Cloud Security Alliance (CSA) Compliance
i. CAIQ completed
b. Security and Privacy Controls
i. Currently in the process of creating NIST guides and controls – Initial review is complete, in-depth review remains underway. Multiple controls have been implemented.
c. Security Certifications
i. SOC II
ii. FedRAMP ready
iii. PCI DSS
iv. Annually audited for HIPAA compliance
d. Annual Security Plan
i. Information security management system in accordance with ISO 27001
ii. Security control is in alignment with NIST 800-53 moderate baseline
iii. Additional certifications provided
iv. Principle of least privilege enforced across the entire organization
v. Distinct boundary between the data of each client
e. Secure Application and Network Environment
i. Dedicated DMZ with network segmentation and site-to-site VPN
ii. Encryption according to industry standards; Ivalua also offers HSM encryption for data at rest for an additional fee.
f. Secure Application and Network Access
i. Perimeter defense and network intrusion defense systems
ii. Do not provide a means to force logout in user specific sessions
iii. Site-to-site VPN is provided by Ivalua for an additional fee if selected as a value-add service by the state
iv. Ability to perform upgrades and maintenance on an individual basis without affecting other clients
g. Data Security
i. Customer data is isolated/segregated from other customers
ii. All customer data is classified as confidential
iii. Least privilege controls for employee access to customer data
iv. Both data at rest and in transit is encrypted
v. Upon termination of contract, client data is securely destroyed using secure wipe protocol commensurate with US Dept of Defense standards
h. Personally Identifiable Information Protection
i. GDPR compliant
ii. Annually audited for HIPAA
i. Security/Privacy Issue Occurrence
i. Incident response plan and procedure
ii. Customer is notified without undue delay, no later than 72 hours – did not meet notification requirements in RFP
j. PII Data Actual/Attempted Access or Disclosure
i. Incident response plan and procedure
ii. Customer is notified without undue delay, no later than 72 hours – did not meet notification requirements in RFP
k. Security Breach Reporting
i. Incident response plan and procedure

iv. 4 levels of testing
b. Organizational Change Management (OCM Services) i. No additional OCM anticipated post-deployment
c. Training Services i. No additional training anticipated post-deployment
d. Catalog Support Services i. No additional catalog support anticipated post-deployment
e. Help Desk Services i. Level 1 and Level 2 included
f. Transition Out Assistance Services i. No services specifically offered ii. Will retain data and delete per terms of the contract

**EVALUATION OF SECTION IV
Cost Proposal
(Stage 3)**

The Small, Medium, and Large State cost scenarios and Minimum Discounts proposed for providing the functions/services specified in the RFP were assigned scores according to mathematical formulas. These formulas can be found in the Scoring Workbook for this Bidder, located at the following webpage:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: KPMG
CATEGORY: 1 – Full Solution
DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – provided
- Debarment Form – provided
- Certificate of Insurance – provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 300+ eProcurement implementations
 - 120 years of business
 - Have their own home-grown deployment strategy based on leading practices
 - Analysis on challenges and trends for government procurement was impressive/interesting
 - KMPG-Ivalua alliance
 - Described experience working with state government
- Previous Projects
 - Good amount of State experience

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: KPMG

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

- Appear to be mostly full-suite, many full deployed
- Subcontractors
 - Ivalua
- Organizational Chart
 - Combined State, KPMG, Ivalua positions
 - Project roles defined for KPMG but not other parties
- Litigation
 - Stated that have nothing pending that will impact operations
- Financial Viability
 - Unaudited, condensed balance sheets 2018-2020

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Single landing page for users with user profile specific contentii. Ivalua Solutioniii. Single data ecosystem with homogenous look and feeliv. Built for public sectorv. Configuration layer to add new fields, rules, alerts, and workflowvi. Collaboration tools, logs, forms, and commentsvii. Open marketplace with hosted catalogs, punch out catalogs, and off-catalog searches; Search 360 functionality – searches punchouts as well as hosted catalogsviii. Many out of the box reports and ability for states to create their ownix. Integration toolbox with hundreds of data mapping formats and standard integration templates; Integration to over 60 ERPs, hundreds of data mapping formats and integration templates. Accept all document and files format typesx. Documents are available throughout all modulesxi. Coding is not required to make changesxii. Transparency - public portal specific to each customer
b. User Experience <ul style="list-style-type: none">i. Users have their own homepage unique to their profileii. Human-centered designiii. No wizard driven capabilitiesiv. Role-basedv. Able to mass-assign workflow tasks to other users
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Major software releases twice per yearii. Client decides when to upload to which major version

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: KPMG

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

<ul style="list-style-type: none"> iii. Recommend major updates within 18 months of release iv. Multi-instance SaaS; independent tenant v. FedRAMP ready; StateRAMP is on the Roadmap vi. Roadmap – 60% from customer-sourced ideas vii. Dedicated upgrade support team viii. Collaborate authoring and enhanced clause libraries within the Roadmap ix. Invoicing and payment execution inside Ivalua
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. Ivalua SaaS platform relies on configuration, not custom code ii. 23 functional requirements identified as customizations; 1 general customization – 14 of the 23 <i>may</i> require customization depending on state's requirement. 3 will require customization. iii. Do not make customer-specific customizations iv. Maintain a copy of the customer's environment v. Allows the customer to choose when they go through an upgrade cycle
<p>2. Functional Requirements</p>
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Addresses all functional areas required in RFP ii. No extra cost for integration between solutions – can be completed within the software iii. Able to do a commodity code only with a crosswalk iv. E-Signature – DocuSign, AdobeSign, but must be integrated v. Public posting – recommend linking to Ivalua's public portal from the state's website for a simpler integration vi. Print format – reply on printing from the screen instead of a separate print version vii. File size limits determined at the project level
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Free for suppliers; unlimited number of suppliers ii. Submitting of admin fee payments requires a third-party payment provider iii. ERP financial data integration will be accommodated iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard and sent to supplier email addresses
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. Registration is a two-part process; public facing page, then full enrollment ii. Most of the registration functions/validations requires a third party – available for an additional fee, state is responsible for licensing iii. Duplication check is part of workflow that state must complete; not automated iv. Email notification when contract is being re-solicited – notifications will be displayed on the supplier dashboard and sent to supplier email addresses v. Changes to supplier account go through a change request process that must be work flowed and approved
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Add aspects to home page and rearrange home page ii. Home page has quick link and short cuts to workflow tasks iii. Provide ability to drive notifications for various alerts on screen and email
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Single landing page for user login ii. Fully integrated iii. Workflow engine invokes approvals as well as processes iv. Workflow driven by data setup

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – provided
- Debarment Form – provided
- Certificate of Insurance – sample document provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Partner with SAP Ariba
 - “Partner managed cloud model” - unclear on what that means, but may imply flexibility
 - Stated they are a re-seller as well as a partner
- Previous Projects
 - Good amount of public sector experience with SAP
 - Full-suite workstreams moderately addressed through previous projects

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – Provided
- Debarment Form – Provided
- Certificate of Insurance – Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Seem to be a consultant (Frame by Optis) that can implement others' solutions
 - Unclear what solution is being proposed for Category 1
- Previous Projects
 - Lengthy list, but very minimal descriptions and no project contacts provided with proposal
 - Projects demonstrated experience of partners, but not Optis specific experience implementing the solution

TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: Perfect Commerce
CATEGORY: 1 – Full Solution
DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – provided
- Debarment Form – provided
- Certificate of Insurance – provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - WebProcure
 - Business seems to be solely procurement
 - Cloud-based
 - Est. 1996
 - 360 view of projects
- Previous Projects
 - Good amount of state implementation experience

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Perfect Commerce

CATEGORY: 1 – Full Solution

DATE: Stage 1 – 9/23/21, Stage 2 – 1/25/22

- Examples fit well into Full-Solution category
 - Provided links to relevant government websites from previous projects
 - Experience interfacing with financial management suites
- Subcontractors
 - Civic Initiatives – implementation, business analysis
- Organizational Chart
 - Company/corporate org chart
 - Not project specific, though did define prime vs. subcontractor positions
- Litigation
 - Provided, none
- Financial Viability
 - Provided
 - Annual Reports w/ financial statements 2018-2020

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

- Multiple spelling and grammar errors throughout proposal

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. WebProcureii. COTS system designed and built by public sector professionalsiii. ProcureLINK - Real time integration capable with external systems/ERPsiv. Rule and provision-based access
b. User Experience <ul style="list-style-type: none">i. Single point of entry home page – allows customizationii. Notification and task reminders visible from all pagesiii. Currently designed to fit tablet and smartphone
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Lean-Agile approach to software developmentii. 6-8 releases per yeariii. Provide strategic account management to conduct business reviews throughout the contractiv. 3-year product roadmap not provided
d. Customizations/Extensions <ul style="list-style-type: none">i. Highly configurableii. Templates used
2. Functional Requirements
a. General Functionality <ul style="list-style-type: none">i. Modular installation available

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Established 2002
 - SmartProcure system – open architecture. List out components that demonstrate full-suite capability.
 - Described experience of team members, not a ton of information on the system itself
- Previous Projects
 - Mention eProcurement for some projects – all public entities. Did not go into detail with their project descriptions, hard to tell what the “eProcurement” experience is.

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Sysoft

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – not included with proposal.

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 30 permanent staff, not located in U.S.
 - eMarketplace and private purchasing portals
 - open-source platform
 - Est. 1998, re-est. 2020
 - Seems to be a lot of history with the ownership/success of original company
- Previous Projects
 - Not clear if current staff/ownership were involved with projects provided
 - 3 of 4 projects were international

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: CloudBuy

CATEGORY: 2 – Individual Workstream Implementation

DATE: 10/4/2021

- Difficult to identify what workstreams were demonstrated through projects provided
 - NHS project alluded to the fact that CloudBuy did not demonstrate clear understanding of the project at hand – concerning for future endeavors.
- Subcontractors
 - Provided, none
- Organizational Chart
 - Provided
 - Corporate, did not seem project specific
 - Provided profiles only for key personnel
- Litigation
 - Provided, none
- Financial Viability
 - Provided
 - Profit/Loss and balance sheet
 - Short history
 - Spreadsheet numbers did not seem to match summary

Bidder did not meet the minimum scoring requirements to move onto the next stage of evaluation (Stage 2).

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 20 years of experience
 - Graphic provided most of the relevant information
 - GEP Smart – identifies all workstreams
 - GEP Nexxe
- Previous Projects
 - No state government references
 - Proved transparency across the company
 - Many of the projects identified multiple workstreams

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: GEP

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 - 10/4/21, Stage 2 – 1/26/22

- Subcontractors
 - None
- Organizational Chart
 - Combined State and GEP resources to clearly define project roles.
- Litigation
 - Provided, none
- Financial Viability
 - Provided, dated 10/19/2020
 - Low risk

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Cross functional reportingii. All modules included and integratediii. Single unified platform
b. User Experience <ul style="list-style-type: none">i. Users may choose their own landing pageii. Drag and drop capability to make changes to the landing pageiii. Mobile responsiveiv. Window for pending tasks not organized by section
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Maintenance release testing window – 1 week.
d. Customizations/Extensions <ul style="list-style-type: none">i. Customizations not specifically supported/encouraged
2. Functional Requirements
a. General Functionality <ul style="list-style-type: none">i. Maintaining templates and clauses performed by system adminii. Have their own e-signature tooliii. Search function able to search fields as well as entire readable documentsiv. File size limit (set at 30MB) able to be increasedv. Emails will come from GEP instead of end uservi. Can support unlimited business and supplier user licenses
b. Supplier Portal <ul style="list-style-type: none">i. GEP will conduct all onboarding for suppliersii. In-house optical character recognition (OCR)iii. Response to work management and contract modification tends to be geared toward state instead of supplier

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Ivalua

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 - 10/4/21, Stage 2 – 1/26/22

<ul style="list-style-type: none"> ii. Client decides when to upload to which major version iii. Recommend major updates within 18 months of release iv. Multi-instance SaaS; independent tenant v. FedRAMP ready; StateRAMP is on the Roadmap vi. Roadmap – 60% from customer-sourced ideas vii. Dedicated upgrade support team viii. Collaborate authoring and enhanced clause libraries within the Roadmap ix. Invoicing and payment execution inside Ivalua
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. Ivalua SaaS platform relies on configuration, not custom code ii. 23 functional requirements identified as customizations; 1 general customization iii. Do not make customer-specific customizations iv. Maintain a copy of the customer's environment v. Allows the customer to choose when they go through an upgrade cycle
<p>2. Functional Requirements</p>
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Addresses all functional areas required in RFP ii. No extra cost for integration between solutions – can be completed within the software iii. Able to do a commodity code only with a crosswalk iv. E-Signature – DocuSign, AdobeSign, but must be integrated v. Public posting – recommend linking to Ivalua's public portal from the state's website for a simpler integration vi. Print format – reply on printing from the screen instead of a separate print version vii. File size limits determined at the project level
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Free for suppliers; unlimited number of suppliers ii. Submitting of admin fee payments requires a third-party payment provider iii. ERP financial data integration appears to be included, but does not address work required from customer/state in order to complete integration iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. Registration is a two-part process; public facing page, then full enrollment ii. Most of the registration functions/validations requires a third party – Ivalua will supply those integrations for an additional fee iii. Duplication check is part of workflow that state must complete; not automated iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured v. Changes to supplier account go through a change request process that must be work flowed and approved
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Add aspects to home page and rearrange home page ii. Home page has quick link and short cuts to workflow tasks iii. Provide ability to drive notifications for various alerts on screen and email
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Single landing page for user login ii. Fully integrated

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: KPMG-Ivalua
CATEGORY: 2 – Individual Workstream Implementation
DATE: Stage 1 - 10/4/2021, Stage 2 – 1/26/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 300+ eProcurement implementations
 - 120 years of business
 - Have their own home-grown deployment strategy based on leading practices
 - Analysis on challenges and trends for government procurement was impressive/interesting
 - KMPG-Ivalua alliance
 - Described experience working with state government
- Previous Projects
 - Good amount of State experience

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: KPMG-Ivalua

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 - 10/4/2021, Stage 2 – 1/26/22

- Many projects identify multiple workstreams
- Subcontractors
 - Ivalua
- Organizational Chart
 - Combined State, KPMG, Ivalua positions
 - Project roles defined for KPMG but not other parties
- Litigation
 - Stated that have nothing pending that will impact operations
- Financial Viability
 - Unaudited, condensed balance sheets 2018-2020

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Single landing page for users with user profile specific contentii. Ivalua Solutioniii. Single data ecosystem with homogenous look and feeliv. Built for public sectorv. Configuration layer to add new fields, rules, alerts, and workflowvi. Collaboration tools, logs, forms, and commentsvii. Open marketplace with hosted catalogs, punch out catalogs, and off-catalog searches; Search 360 functionality – searches punchouts as well as hosted catalogsviii. Many out of the box reports and ability for states to create their ownix. Integration toolbox with hundreds of data mapping formats and standard integration templates; Integration to over 60 ERPs, hundreds of data mapping formats and integration templates. Accept all document and files format typesx. Documents are available throughout all modulesxi. Coding is not required to make changesxii. Transparency - public portal specific to each customer
b. User Experience <ul style="list-style-type: none">i. Users have their own homepage unique to their profileii. Human-centered designiii. No wizard driven capabilitiesiv. Role-basedv. Able to mass-assign workflow tasks to other users
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Major software releases twice per yearii. Client decides when to upload to which major versioniii. Recommend major updates within 18 months of release

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: KPMG-Ivalua

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 - 10/4/2021, Stage 2 – 1/26/22

<ul style="list-style-type: none"> iv. Multi-instance SaaS; independent tenant v. FedRAMP ready; StateRAMP is on the Roadmap vi. Roadmap – 60% from customer-sourced ideas vii. Dedicated upgrade support team viii. Collaborate authoring and enhanced clause libraries within the Roadmap ix. Invoicing and payment execution inside Ivalua
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. Ivalua SaaS platform relies on configuration, not custom code ii. 23 functional requirements identified as customizations; 1 general customization – 14 of the 23 <i>may</i> require customization depending on state's requirement. 3 will require customization. iii. Do not make customer-specific customizations iv. Maintain a copy of the customer's environment v. Allows the customer to choose when they go through an upgrade cycle
2. Functional Requirements
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Addresses all functional areas required in RFP ii. No extra cost for integration between solutions – can be completed within the software iii. Able to do a commodity code only with a crosswalk iv. E-Signature – DocuSign, AdobeSign, but must be integrated v. Public posting – recommend linking to Ivalua's public portal from the state's website for a simpler integration vi. Print format – reply on printing from the screen instead of a separate print version vii. File size limits determined at the project level
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Free for suppliers; unlimited number of suppliers ii. Submitting of admin fee payments requires a third-party payment provider iii. ERP financial data integration will be accommodated iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard and sent to supplier email addresses
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. Registration is a two-part process; public facing page, then full enrollment ii. Most of the registration functions/validations requires a third party – available for an additional fee, state is responsible for licensing iii. Duplication check is part of workflow that state must complete; not automated iv. Email notification when contract is being re-solicited – notifications will be displayed on the supplier dashboard and sent to supplier email addresses v. Changes to supplier account go through a change request process that must be work flowed and approved
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Add aspects to home page and rearrange home page ii. Home page has quick link and short cuts to workflow tasks iii. Provide ability to drive notifications for various alerts on screen and email
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Single landing page for user login ii. Fully integrated iii. Workflow engine invokes approvals as well as processes iv. Workflow driven by data setup

Approx. 1% of users will call per day, with average call duration of 10-20 minutes *clarification* Do these users include suppliers?2. 25-35 calls per analyst per day3. Large states – up to 8,000 users
<ul style="list-style-type: none">f. Transition Out Assistance Services<ul style="list-style-type: none">i. 10-week timeline – does not match required timeline in RFP

**EVALUATION OF SECTION IV
Cost Proposal
(Stage 3)**

The Small, Medium, and Large State cost scenarios and Minimum Discounts proposed for providing the functions/services specified in the RFP were assigned scores according to mathematical formulas. These formulas can be found in the Scoring Workbook for this Bidder, located at the following webpage:

<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: KPMG & SirionLabs
CATEGORY: 2 – Individual Workstream Implementation
DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 300+ eProcurement implementations
 - 120 years of business
 - Have their own home-grown deployment strategy based on leading practices
 - Analysis on challenges and trends for government procurement was impressive/interesting
 - Described experience working with state government
- Previous Projects
 - Good amount of State experience
 - Many projects identified multiple workstreams

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: KPMG & SirionLabs

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

- Projects identifying KPMG/Sirion relationship not provided
- Subcontractors
 - SirionLabs
 - Projects related to Sirion discussed in this section
- Organizational Chart
 - Combined State, KPMG, Sirion
 - Project roles defined
 - RACI chart included
- Litigation
 - Stated that have nothing pending that will impact operations
- Financial Viability
 - Unaudited, condensed balance sheets 2018-2020

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Multiple users can provide input to contract drafting and parallelii. Price sheets can be uploaded or entered into contractiii. Rule-based approval workflow with email notificationsiv. Dashboard with over 250 standard reportsv. Various role or rule-based accessesvi. Can compare third-party and internal documents in review process- AI can flag variationsvii. Solution called Sirionviii. Walkthrough of contract construction, document managementix. AI data retrieval from contract docsx. Identifies components in 3rd party and matches to own documents
b. User Experience <ul style="list-style-type: none">i. Workstreams being offered – Contract Management and Vendor Performanceii. No personalizationiii. Legal and non-legal templates for contract draftingiv. No wizards identifiedv. Mobile app released Sept. 2021vi. Clause and template libraries available
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Automatic latest version releasesii. Quarterly release cycleiii. Monthly governance meetingsiv. Multi-tenant SaaS based app

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

v. Periodic survey of suppliers
d. Customizations/Extensions
i. Upgrades are backward compatible
2. Functional Requirements
a. General Functionality
i. Proposal did not include a response to some (29 out of 43) general functionality requirements that were applicable to all modules
b. Contract Management
i. Will integrate DocuSign for electronic signatures or through configuration
ii. Change management (including renewals), analytics, invoice management, collaboration tools
iii. Clause and template libraries available, smart tags
iv. Reporting dashboards
v. can access the clause library within the Word environment.
vi. Integrate with ERP and procurement systems
vii. Collaboration during contract creating via chat and concurrent editing
viii. Maximum file size 200mb each
ix. Has BI reporting capabilities
c. Vendor Performance
i. KPI's for vendors
ii. User role-based dashboards
iii. Realtime visibility and drill down action items
iv. BI analytics module
v. Contractor obligations can be captured and measured
vi. No improvement plan functionality offered
vii. Maximum file size 200mb each
viii. Has BI reporting capabilities
3. Technical Requirements
a. Availability
i. Meets up-time requirement
ii. Uses AWS, 2 locations, 24/7 support at no additional cost
iii. SLA ticket one will respond within 2 hours 90% of the time
b. Accessibility Requirements
i. Met requirements
c. Audit Trail and History
i. Audit log record for each entity in the system with a time stamp and user info
ii. MS Word plug-in that allows comparison to review contract versions
d. Browsers Supported
i. All standard ones supported
e. User Accounts and Administration
i. Role based access controls
ii. Multiple modes of permissions
iii. Uses document type tagging
iv. Fully configurable to meet customer requirements
v. Able to set permissions by user, role. Platform allows an entity to set permissions for clauses, edits, and template visibility for contracts.
f. User Authentication
i. Support single sign on
ii. SAML 2.0

h. Personally Identifiable Information Protection
i. Do not handle HIPAA or other PII
ii. Indicated SSN (when used as TIN) and banking information, though, are considered PII
i. Security/Privacy Issue Occurrence
i. Incident response procedures are confidential and therefore not provided
j. PII Data Actual/Attempted Access or Disclosure
i. Incident response procedures are confidential and therefore not provided
k. Security Breach Reporting
i. Incident response procedures are confidential and therefore not provided
5. Implementation Services Requirements
a. Project Management
i. Basic PM layout diagram – regulatory/prescriptive/procedural nature to the response
ii. Timeline not provided
b. Project Implementation Methodology
i. Included basis framework for managing the solution
ii. Provided sample role assignment charts for various deliverables. Does not define staffing as required in RFP requirements.
iii. Provided phase-based sample plans
iv. State is responsible for defining test cases and scenarios, scripts. LSI will assist with repairing as needed.
v. LSI training lead is responsible for an overall training plan, state lead is responsible for developing end user training schedules and providing train-the-trainer candidates
vi. LSI project team appeared lean/light compared to responsibilities of state teams
vii. Will use SAP Ariba Activate methodology
c. Catalog Support Services
i. Will use SAP catalog support services or state can use Spot Buy
ii. Support to supplier for onboarding/offboarding for catalogs during implementation
iii. Enablement of punch out catalogs are available for additional cost – SAP Ariba bundled catalog support service. LSI will provide guidance, enablement is responsibility of state
d. Data Conversion Services
i. 6-phase plan – strategy, analyze, design, build, test/implement, deploy
ii. Data cleansing is the sole responsibility of the state

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: LSI Consulting

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

**EVALUATION OF SECTION IV
Cost Proposal
(Stage 3)**

The Small, Medium, and Large State cost scenarios and Minimum Discounts proposed for providing the functions/services specified in the RFP were assigned scores according to mathematical formulas. These formulas can be found in the Scoring Workbook for this Bidder, located at the following webpage:

<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: Mercell
CATEGORY: 2 – Individual Workstream Implementation
DATE: Stage 1 - 10/4/21, Stage 2 – 1/26/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - NegoMetrics4, SaaS
 - Single page application (SPA)
 - ISEA 3000, ISO 27001, SOC II certified
 - Established 2000
 - Joined the Mercell Group Feb 2021 – unclear on what change that entailed
 - Multiple workstreams
- Previous Projects
 - State, local government experience demonstrated

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Merrell

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 - 10/4/21, Stage 2 – 1/26/22

- Single stream modules identified
 - Implementation time less than 2-4 months in some cases – impressive/surprising, especially with integrations and staff size.
 - NY example is a sourcing concept
- Subcontractors
 - None
- Organizational Chart
 - Project team is small
 - 2 implementation staff in U.S., remainder are abroad – concerning for large projects
- Litigation
 - Provided, none
- Financial Viability
 - D&B was supposed to be attached, but was not included in proposal.

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Users guided by recommended tasks in the solicitation processii. Off-the-shelf solution - NegoMetrixiii. User controls solicitations and contracts being made publiciv. Standard APIs for integrationv. Workflow configurablevi. Smart routingvii. All modules have their own dashboardviii. Sourcing system – sourcing and contract management modules (no marketplace)ix. Reporting dashboards and visualizations
b. User Experience <ul style="list-style-type: none">i. No personalizationii. Bid notifications by location and NIGP codeiii. Modules can be implemented as stand-alone or combinediv. Modules can be supportedv. Wizard-like functionsvi. Work can be reassignedvii. Contract action notifications by email and remindersviii. Supported on any mobile deviceix. Role-based functionality
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. 3-year Roadmap not provided with proposal – available once under contractii. Agile methodology

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - WebProcure
 - Business seems to be solely procurement
 - Cloud-based
 - Est. 1996
 - 360 view of projects
- Previous Projects
 - Good amount of state implementation experience
 - Provided links to relevant government websites from previous projects

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: Periscope Holdings
CATEGORY: 2 – Individual Workstream Implementation
DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Use ePro – proprietary solution. SaaS.
 - Established in 2001
 - Affiliated with NIGP
 - Won NASPO Bronze Chronin award
 - Multiple integrations
 - Interesting growth strategy
 - Have a supplier network
 - State experience through ePro solution and staff themselves

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Periscope Holdings

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

- Previous Projects
 - Public sector experience is strong
 - Arkansas – vendor management implementation
 - Multiple workstreams identified through projects provided
- Subcontractors
 - Have been prime on all previous contracts
 - Listed good options for subcontractors if needed
 - CGI specifically for ME, as ME uses CGI products currently.
- Organizational Chart
 - Combined org chart, specific to project
 - No roles actually defined within that chart
- Litigation
 - Provided, none
- Financial Viability
 - Provided audited summary of financials

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Single point of entry for suppliers and agency usersii. Unlimited number of catalogs in the marketplace; hosted and open marketiii. Smart routing - can create rule-based fields to routeiv. Integrate with major ERPs and financial systemsv. Periscope eProvi. Modular standalone or full eProvii. Open marketplace for access to suppliersviii. ePRO is the transparency portal for posted solicitations and award, contract, contract spend, and state supplier listsix. Solution was created by public procurement professionalsx. Buyer side and supplier side environments in the Periscope cloud
b. User Experience <ul style="list-style-type: none">i. Personalization if initial screen; user can select their own from a published listii. Intuitive navigation aimed at fewest clicks to completioniii. Default dashboard based on user role; colors can change based on roleiv. Central search bar on all pages; advanced search configurable at field levelv. Can support mobile user through the browservi. User defined fields that have guided narrative test informing the user of appropriate testvii. Mangers can track assignments and reassign within organization/department/location

RFP TITLE: eProcurement Solutions and Services

BIDDER: Periscope Holdings

CATEGORY: 2 – Individual Workstream Implementation

DATE: Stage 1 – 10/4/21, Stage 2 – 1/26/22

<ul style="list-style-type: none"> vi. Catalog can have different prioritization settings for different departments. vii. Hosted and punch out level 2 catalogs optioned to add non-contract vendors. viii. Local governments are set up as standalone organizations, so they do not have to inherit state approval paths or rules. ix. P-Cards processing for supplier that accept it. x. Credit memos for returned goods or services. xi. Subcontractor payment tracking. Subcontracts can login to verify payments. xii. Do not support recurring orders. xiii. Do not have email functionality for invoices that have attachments. xiv. Cannot split accounting on a requisition by quantity. xv. Do not provide a way for an authorized approver to override specific approvals. xvi. Do not support a means for an approver to make a change without starting over. xvii. Do not send POs by email, user has to log in to receive POs. Can send by CXML. xviii. Do not provide a P-card administrator capability xix. Capability to set defaults on requisitions based on location, role, privileges of user
<p>g. Catalog Capability</p> <ul style="list-style-type: none"> i. Marketplace – all catalogs in one location, no limit to number of catalogs ii. Supports level 1 and level 2 punch out iii. Will host other publicly sourced contract provided by suppliers iv. Will display price comparisons v. Administer and collect admin fees vi. Automatic notification if a price change on a catalog vii. Supplier enablement team will work with supplier to load catalogs viii. State contract admin can decide which catalogs are active or note ix. Catalog loads completed by agency personnel or Periscope x. Catalogs cannot have a negative dollar value xi. Catalog workflows and approvals can be configured
<p>h. Sourcing/Bid Management</p> <ul style="list-style-type: none"> i. Documents are routed through the solution based on pre-determined approval authority ii. Does not support a two-step ITB iii. All types of solicitations, including reverse auctions (except surplus auction and surplus sealed bid) iv. Audit tracking of all activity v. Can facilitate open and rolling enrollment vi. Templates and clause libraries for creating solicitations vii. Compiles bid tabulations for review viii. Multi-awards supported ix. Auto-attached documents to a solicitation (buyer cannot remove) x. Protest submission and management functionality xi. Do not have integrated video conferencing xii. Notifications on solicitations xiii. Cost can be hidden from evaluators, but bidder names cannot xiv. When cost and technical are separate components, must complete separate rounds so cost cannot be opened before technical is reviewed xv. Does not have a collaboration tool – must post notes or comments to communicate xvi. Bidder notification list does not include vendors who had prior contracts or POs for that commodity code xvii. Does not remove duplicate email addresses from a bidders list xviii. Posting an alert – must do an amendment to the solicitation xix. Cannot export response or score data

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Automate RFPs, RFQ, RFSs, etc. focused on construction sector/capital improvements
 - Established in 1999
 - Limited detail overall
- Previous Projects
 - Focused on construction/improvement services
 - Extensive list, provided reference letters from clients
 - Mentions electronic bidding services, e-hosting services

**STATE OF MAINE

BIDDER: GEP
CATEGORY: 3
DATE: Stage 1 – 9/23/21, Stage 2 – 1/27/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page – provided
- Debarment Form – provided
- Certificate of Insurance – provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - 20 years of experience
 - Graphic provided most of the relevant information
 - GEP Smart – identifies all workstreams
 - GEP Nexxe
- Previous Projects
 - No state government references
 - Proved transparency across the company
 - U Cal example identified some key pieces of full-suite capability, but not all

TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: GEP

CATEGORY: 3

DATE: Stage 1 – 9/23/21, Stage 2 – 1/27/22

- U Mass example did not relate to eProcurement requirements
 - Project examples do not fully cover all workstreams of RFP, but they are identified in the proposed product suite.
- Subcontractors
 - None
- Organizational Chart
 - Combined State and GEP resources to clearly define project roles.
- Litigation
 - Provided, none
- Financial Viability
 - Provided, dated 10/19/2020
 - Low risk

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Cross functional reportingii. All modules included and integratediii. Single unified platform
b. User Experience <ul style="list-style-type: none">i. Users may choose their own landing pageii. Drag and drop capability to make changes to the landing pageiii. Mobile responsiveiv. Window for pending tasks not organized by section
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Maintenance release testing window – 1 week.
d. Customizations/Extensions <ul style="list-style-type: none">i. Customizations not specifically supported/encouraged
2. Functional Requirements
a. General Functionality <ul style="list-style-type: none">i. Maintaining templates and clauses performed by system adminii. Have their own e-signature tooliii. Search function able to search fields as well as entire readable documentsiv. File size limit (set at 30MB) able to be increasedv. Emails will come from GEP instead of end uservi. Can support unlimited business and supplier user licenses
b. Supplier Portal <ul style="list-style-type: none">i. GEP will conduct all onboarding for suppliers

DATE: 10/5/2021

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Proposal is not clearly tailored to the requirements of Category 3
- Overview of the Organization
 - Partnering with Ernst & Young (consulting) and Ariba (eProcurement) to form Team Infosys
 - Est. 2009
 - Focus on end-to-end, source-to-pay and SaaS
 - Have depth of certified professionals with Ariba
 - 200 CISSP certified resources
 - Proposal seems to be focusing on implementation, which is not part of Category 3

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Infosys

CATEGORY: 3 – eSoftware Only

DATE: 10/5/2021

- Previous Projects
 - Public Services and Procurement Canada – no examples of software only system
 - Wide range of public sector experience
 - Projects identify experience working with the subcontractors in this proposal
- Subcontractors
 - Allied Digital Services (IT transformation)
 - Ernst & Young (consulting)
 - SAP Ariba (eProcurement)
 - Well organized, easy to understand credentials
 - Difficult to determine what role subcontractors will play in a software only situation
- Organizational Chart
 - Combination of State and Infosys positions
 - Identified project roles
 - Some roles seem to incorporate implementation, not relevant to this Category
- Litigation
 - Provided, none
- Financial Viability
 - D&B Snapshot – unclear on date, but shows low risk
 - Financial statements also included

Bidder did not meet the minimum scoring requirements to move onto the next stage of evaluation (Stage 2).

1. General Principal and Requirements
a. Key Solution Functionality Elements <ul style="list-style-type: none">i. Single landing page for users with user profile specific contentii. Ivalua Solutioniii. Single data ecosystem with homogenous look and feeliv. Built for public sectorv. Configuration layer to add new fields, rules, alerts, and workflowvi. Collaboration tools, logs, forms, and commentsvii. Open marketplace with hosted catalogs, punch out catalogs, and off-catalog searches; Search 360 functionality – searches punchouts as well as hosted catalogsviii. Many out of the box reports and ability for states to create their ownix. Integration toolbox with hundreds of data mapping formats and standard integration templates; Integration to over 60 ERPs, hundreds of data mapping formats and integration templates. Accept all document and files format typesx. Documents are available throughout all modulesxi. Coding is not required to make changesxii. Transparency - public portal specific to each customer
b. User Experience <ul style="list-style-type: none">i. Users have their own homepage unique to their profileii. Human-centered designiii. No wizard driven capabilitiesiv. Role-basedv. Able to mass-assign workflow tasks to other users
c. Bidder Best Practices and Roadmap <ul style="list-style-type: none">i. Major software releases twice per yearii. Client decides when to upload to which major versioniii. Recommend major updates within 18 months of release

STATE OF MAINE TEAM CONSENSUS EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: Ivalua

CATEGORY: 3 – eSoftware Only

DATE: Stage 1 – 10/5/21, Stage 2 – 1/27/22

<ul style="list-style-type: none"> iv. Multi-instance SaaS; independent tenant v. FedRAMP ready; StateRAMP is on the Roadmap vi. Roadmap – 60% from customer-sourced ideas vii. Dedicated upgrade support team viii. Collaborate authoring and enhanced clause libraries within the Roadmap ix. Invoicing and payment execution inside Ivalua
<p>d. Customizations/Extensions</p> <ul style="list-style-type: none"> i. Ivalua SaaS platform relies on configuration, not custom code ii. 23 functional requirements identified as customizations; 1 general customization iii. Do not make customer-specific customizations iv. Maintain a copy of the customer's environment v. Allows the customer to choose when they go through an upgrade cycle
<p>2. Functional Requirements</p>
<p>a. General Functionality</p> <ul style="list-style-type: none"> i. Addresses all functional areas required in RFP ii. No extra cost for integration between solutions – can be completed within the software iii. Able to do a commodity code only with a crosswalk iv. E-Signature – DocuSign, AdobeSign, but must be integrated v. Public posting – recommend linking to Ivalua's public portal from the state's website for a simpler integration vi. Print format – reply on printing from the screen instead of a separate print version vii. File size limits determined at the project level
<p>b. Supplier Portal</p> <ul style="list-style-type: none"> i. Free for suppliers; unlimited number of suppliers ii. Submitting of admin fee payments requires a third-party payment provider iii. ERP financial data integration appears to be included, but does not address work required from customer/state in order to complete integration iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured
<p>c. Supplier Enablement/Management</p> <ul style="list-style-type: none"> i. Registration is a two-part process; public facing page, then full enrollment ii. Most of the registration functions/validations requires a third party – Ivalua will supply those integrations for an additional fee iii. Duplication check is part of workflow that state must complete; not automated iv. Notifications to the suppliers – notifications will be displayed on the supplier dashboard, notifications can be sent to the supplier and additional notifications can be configured v. Changes to supplier account go through a change request process that must be work flowed and approved
<p>d. Buyer Portal</p> <ul style="list-style-type: none"> i. Add aspects to home page and rearrange home page ii. Home page has quick link and short cuts to workflow tasks iii. Provide ability to drive notifications for various alerts on screen and email
<p>e. Need Identification</p> <ul style="list-style-type: none"> i. Single landing page for user login ii. Fully integrated iii. Workflow engine invokes approvals as well as processes iv. Workflow driven by data setup

DATE: Stage 1 – 10/5/21, Stage 2 – 1/27/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance – Sample document provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Partner with SAP Ariba
 - “Partner managed cloud model” - unclear on what that means, but may imply flexibility
 - Stated they are a re-seller as well as a partner
- Previous Projects
 - Good amount of public sector experience with SAP
 - Multiple workstreams moderately addressed through previous projects
 - Some projects identify purchase-only transactions

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided
- Certificate of Insurance - Provided

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Identity Elements, Payment Type, Bank Agnostic
 - Primarily work with state and local governments
 - Niche product
- Previous Projects
 - All three projects are with universities
 - Use PaymentWorks to mitigate risks
- Subcontractors

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: PaymentWorks

CATEGORY: 3 – eSoftware Only

DATE: Stage 1 – 10/5/21, Stage 2 – 1/27/22

- None
- Organizational Chart
 - Provided, included job descriptions
- Litigation
 - Provided, none
- Financial Viability
 - Provided D&B # and screenshot, but not the actual report with financial information

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

- The evaluation team has determined that the proposal submitted by PaymentWorks is nonresponsive to the requirements of this RFP:
 - The proposal presented by PaymentWorks is more aligned with ERP payment processing rather than integrating with an eProcurement solution; specifically, the Bidder's response to VDR-1 describes PaymentWorks as a gatekeeper and front door to an ERP system.
 - The proposed solution was not presented as an eProcurement solution as described in the RFP.
- Therefore, the evaluation team has disqualified the proposal submitted by PaymentWorks.

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page - Provided
- Debarment Form - Provided

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER: LSI Consulting
CATEGORY: 4 – Services Only
DATE: Stage 1 – 10/5/21, Stage 2 – 1/28/22

SUMMARY

Department Name: DAFS/NASPO
Name of RFP Coordinator: Lindsey Kendall
Names of Evaluators: Michael Bacu, Tom Hastings, Angie Scherbenske, Stacey Winter, Joe Zrioka

The evaluation and scoring of proposals were conducted using a staged approach. Proposals were required to meet, or exceed, minimum scoring requirements of the stage in which the proposal was being evaluated to move onto the next stage of evaluation. Any proposal not meeting the stated minimum scoring requirements of a stage was deemed ineligible for award consideration and, at that point, removed from the evaluation process.

The numerical scores as a result of the team consensus notes shown below are identified in the Scoring Workbook for this Bidder. All Scoring Workbooks can be found at the following website:
<https://www.maine.gov/dafs/bbm/procurementservices/vendors/rfps/NASPOeProcurement>

**OVERVIEW OF SECTION I
Preliminary Information**

Evaluation Team Comments:

- Proposal Cover Page
- Debarment Form
- Certificate of Insurance

**EVALUATION OF SECTION II
Organization Qualifications and Experience
(Stage 1)**

Evaluation Team Comments:

- Overview of the Organization
 - Partner with SAP Ariba
 - “Partner managed cloud model” - unclear on what that means
 - Stated they are a re-seller as well as a partner
 - Provided a wide range of services for their customers on top of being a re-seller.
- Previous Projects
 - Good amount of public sector experience with SAP
 - Full-suite workstreams moderately addressed through previous projects
 - Implementation well addressed in some of the projects provided

**STATE OF MAINE
TEAM CONSENSUS EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER: LSI Consulting

CATEGORY: 4 – Services Only

DATE: Stage 1 – 10/5/21, Stage 2 – 1/28/22

- Subcontractors
 - None
- Organizational Chart
 - Combined State and LSI positions
 - Project roles defined
- Litigation
 - None
- Financial Viability
 - Provided D&B, current
 - Low-moderate risk

**EVALUATION OF SECTION III
Proposed Solutions and/or Services
(Stage 2)**

Evaluation Team Comments:

1. Implementation Services Requirements
a. Project Management <ul style="list-style-type: none">i. Basic PM layout diagram – regulatory/prescriptive/procedural nature to the responseii. Timeline not provided
b. Project Implementation Methodology <ul style="list-style-type: none">i. Included basis framework for managing the solutionii. Provided sample role assignment charts for various deliverables. Does not define staffing as required in RFP requirements.iii. Provided phase-based sample plansiv. State is responsible for defining test cases and scenarios, scripts. LSI will assist with repairing as needed.v. LSI training lead is responsible for an overall training plan, state lead is responsible for developing end user training schedules and providing train-the-trainer candidatesvi. LSI project team appeared lean/light compared to responsibilities of state teamsvii. Will use SAP Ariba Activate methodology
c. Catalog Support Services <ul style="list-style-type: none">i. Will use SAP catalog support services or state can use Spot Buyii. Support to supplier for onboarding/offboarding for catalogs during implementationiii. Enablement of punch out catalogs are available for additional cost – SAP Ariba bundled catalog support service. LSI will provide guidance, enablement is responsibility of state
d. Data Conversion Services <ul style="list-style-type: none">i. 6-phase plan – strategy, analyze, design, build, test/implement, deployii. Data cleansing is the sole responsibility of the stateiii. LSI will design, build, and test programs that will read flat files and will load those files to SAP – state must validateiv. Migration cockpit included as part of assessment

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Provided. Listed work with 2 States, 1 Province, 1 court, and 3 cities. Also listed 8 corporate customers.
 - Established in 2006. Based in CA with offices in Calgary, AB
 - Describe themselves as “Developing business automation technology and providing services.”
 - In the overview they seem very architectural, engineering, and construction project focused.
 - List 3 dedicated personnel to work with NASPO. 1 has 30+ years experience while the other 2 do not list their years, but seem ok.
 - 4 references provided – services provided for them do not seem to apply to this category.
2. Previous Projects
 - 4 listed. None of them are a full solution. They do not seem to be good examples for this category (1).
 - Commonwealth of Massachusetts – “Implement a statewide database to provide a searchable directory of minority woman, and veteran, owned architecture firms.”
 - Department of Housing and Community Development “Created a portal for contractors performing design, architectural, or construction services.”
 - Superior Court of CA – “Automated their Jury selection & onboarding.”
 - City of San Jose, Office of Equality Assurance – “Created a search tool for their manual processes”
3. Subcontractors
 - Vendor states none.
4. Organizational Chart
 - Yes an org. chart provided.
5. Litigation
 - None in past 10 years.
6. Financial Viability
 - **Not provided.**

EVALUATOR DEPARTMENT/STATE: (STATE OF MAINE DIVISION OF PROCUREMENT SERVICES)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Cert of Insurance – Cyber liability = 2 mil
 -
 -
2. Previous Projects
 - 7 gov entities, 8 commercial
 - 4 references provided but none were eProcurement specific
 -
3. Subcontractors
 - “We will not be any subcontractors for NASPO members”
 -
 -
4. Organizational Chart
 - 12 Customer Success team members – cannot determine if they are dedicated to project
 - 7 engineering team members - cannot determine if they are dedicated to project
 -
5. Litigation
 - None in the past 10 years
 -
 -
6. Financial Viability
 - Did not provide proof of viability
 -
 -

DATE: 8/21/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Less clear on how State projects would be addressed
 - Business located on west coast; however clients are scattered throughout country.
 - Not specific to unique skills for NASPO requirements
2. Previous Projects
 - Examples provided are facets of a whole state operation.
 - It isn't shown how they could provide a full solution or if they have done so in the past.
 - They only speak of a handful of clients, unclear if there are others.
3. Subcontractors
 - No subcontractors used
 - Did not identify any significant business partners
 - Unclear if all work is done internally then
4. Organizational Chart
 - Provided only a corporate level org chart
 - Unknown how projects would be managed with personnel resources
 - If the chart represents their entire organization numbers, questions on ability to handle a full statewide solution, and more so many states at once.
5. Litigation
 - No litigation in past 10 years
 -
 -
6. Financial Viability
 - Response provided no information to the request
 - Cannot score here without information, nonresponsive as received
 -

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Started company in 2014
 -
 -
2. Previous Projects
 - Large government and smaller state and local
 - Commonwealth of Mass.
 - State of Washington
 - Superior Court of Calif.
 - NYC
 - City of San Jose, Calif.
 - Province of Nova Scotia
 - City of Ventura, Calif.
 - All functionality is being used by Commonwealth of Mass.
 - Non-Government – FedEx, T.I., Tupperware, Thermo Fisher
3. Subcontractors
 - No Subcontractors used
 -
 -
4. Organizational Chart
 - 28 employees (12 customer success) (7 Engineering Team)
 -
 -
5. Litigation
 - No litigation in the last 10 years
 -
 -
6. Financial Viability
 - Private company and does not make financials available. They will share with NASPO
 -
 -

Individual Evaluator Comments:

Organization Qualifications and Experience – **Good content**

1. Overview of the Organization
 - State of Washington is a current client
 - Staff listed have a wide variety of degrees.
 -
 -
2. Previous Projects
 - Thermo Fisher Scientific
 - Texas Instruments
 - A wide variety of cities in California – Jury onboarding
 - **No contact name, number or email address**
 - **Supplied extensive information about their platform.**
3. Subcontractors
 - This company did NOT list any subcontractors in their response.
 -
 -
4. Organizational Chart
 - 7 people on engineering team
 - 12 customer success team
 - Government team lead
 - **No role job descriptions**
5. Litigation
 - No Litigation to report at this time
 -
 -
6. Financial Viability
 - **This vendor did not share financial viability.**

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - “Ready Now” Sambug.com Platform to deliver an eProcurement Solution
 - Strong start in E-marketplace
 - They discuss their core values and apply to their Sambug.com platform.
 - 4 references provided that seem to fit this category.
2. Previous Projects
 - 4 listed. Many fit category 1 well.
 - US Dept of VA, IT Dept. – “IT shared services platform, Marketplace platform”
 - US Dept of VA, Small Disadvantaged Bus. Unit – “Integrated Portal Initiative”
 - Public Consulting Group for States of FL and NH – “System to administer surveys for PCG’s state and local customers.”
 - Govt. of Australia “Cloud Marketplace”
3. Subcontractors
 - Vendor states none
4. Organizational Chart
 - Yes – provided along with position descriptions.
5. Litigation
 - None
6. Financial Viability
 - Provided dun&bradstreet - Moderate to low risk

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - “We have been working for 6 years on developing Sambuq.com.” Is it still being developed?
 - Amazon Web Services
 - Iterative and incremental development approach - Agile
2. Previous Projects
 - VA - outreach
 - Public Consulting Group - surveys
 - Government of Australia Digital Transformation Agency – cloud solutions
 - Do not see eProcurement experience in previous projects.
3. Subcontractors
 - No subcontractors
 -
 -
4. Organizational Chart
 - Org chart roles defined
 -
 -
5. Litigation
 - No litigation
 -
 -
6. Financial Viability
 - D&B dated 5/2021

Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Great focus on Sambuq.com B2B platform
 - Very broad and general business capabilities
 - No discussion on their size and capabilities
2. Previous Projects
 - VA project appears to be vendor management
 - Examples do not show a full solution, rather specific business areas
 - Perhaps would be stronger in category 4 providing consulting services
3. Subcontractors
 - No subcontractors
 - Did not provide any reference to business partners
 - Appears all work is accomplished completely with in-house personnel
4. Organizational Chart
 - Very high level, with no personnel listed
 - Lacks differentiation if NASPO projects are addressed differently
 - No understanding of their personnel depth to manage State requirements on a national level
5. Litigation
 - No litigation
 -
 -
6. Financial Viability
 - Low credit limit, relative to ability to implement large scale projects
 -
 -

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Deloitte providing a proposal with **Appian** eprocurement solution “Appian Low-code platform”
- Provided. Deloitte serving public sector over 50 years. Appian – unsure, but Deloitte did present at the Appian conference at 2020 and 2021 so around for 2 years (hopefully more)

2. Previous Projects

5 projects listed. Of those 5 – Four are federal and one State. They are all examples of various components of an eprocurement system.

- US AirForce. Appian replaced their Contract Management System. Also Deloitte installed Oracle's(Peoplesoft) E-Business Suite.
- Defense Info. System Agency. Appian – IDEAS application (Contract closeout)
- Texas Dept of Public Safety. Appian Contract Management System
- US Dept of VA. Deloitte developed a tool to procure medical and surgical commodities.
- Navy Program Exec. Office for Enterprise Info. Systems. – supports a portal and built upon Appian's acquisition solution.

3. Subcontractors

- Yes – Appian Corporation.

4. Organizational Chart

- Yes – provided.

5. Litigation

- Yes – three current ones are listed.

6. Financial Viability

- Provided Dun & Bradstreet and stable with low-moderate risk.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Government and Private Sector practice
 - 12,000 practitioners, large capacity
 - Partnering with Appian; COTS low code platform
 - Does not identify implementation with existing market leaders such as SAP, Peoplesoft
2. Previous Projects
 - AF Contracting project only identifies cost avoidance from legacy systems, where is ROI?
 - Texas dept of safety is a small representation if they are bidding for a total statewide solution.
 - VA project show capability but does not give true ROI?
 - Questions whether the Deloitte solution is economically valued from a bottom-line view. Does the cost provide economic value or just process improvements?
3. Subcontractors
 - Appian appears a nimble solution
 - Unsure about customization or if an end user would need to change their processes/policies to use Appian.
 -
4. Organizational Chart
 - Provided Appian Org Chart. Why is subcontractor chart featured and not Prime Vendor Deloitte? Deloitte Coups listed general positions not identified as Deloitte assets or their Subcontractor.
 - No differentiation between general descriptions and NASPO unique requirements
 - Deloitte resources are identified in position descriptions, but not in org chart? What is Deloitte's true role?
 - Curious if this is a reseller model where liability is diverted among prime and subcontractors?
5. Litigation
 - 3 cases given, resolved.
 - One case with municipality
 -
6. Financial Viability
 - D&B Snapshot provided
 - Stable company
 -

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Deloitte providing a proposal with **Coupa** suite of products (market leading sourcing, procure to pay, contracting)
- Provided. Deloitte serving public sector over 50 years. Coupa – 2006

2. Previous Projects

5 projects listed. Of those 5 – Four are private entities and one is a university. They are all examples of various components of an eprocurement system.

- USPS. Deloitte implemented eBuy+ (Coupa's spend management platform).
- American Red Cross. Appian – Deloitte implemented Coupa's source-to-pay technology.
- Brandeis University. Deloitte help implement Coupa's Procure to Order solution.
- Molex Electronic Solutions. Deloitte streamlined procurement and accounts payable system by subcontracting with Coupa, SAP, and MuleSoft's products and services.
- American Airlines. – Deloitte worked with (consulted) to shift spend with airport services vendors to PO-backed spend by establishing service catalogs.

3. Subcontractors

- Yes – Coupa.

4. Organizational Chart

- Yes provided.

5. Litigation

- Yes – three current ones are listed.

6. Financial Viability

- Provided Dun & Bradstreet and stable with low-moderate risk.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte - Coupa

CATEGORY #(s): 1

DATE: 10/15/2021

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Comments:

Overall/General

1. Deloitte offering Coupa's software. (Global Elite Partner)
2. Requirements Traceability Matrix (RTM)
 - Provided.
 - Most all lines in all the tabs were labeled "A" = Available in the core "out-of-the-box" solution.
 - Most all lines in all the tabs were rated "L" low complexity to accomplish the requirement with less than 40 hours.
 - A couple items were "N" = not available.
 - I struggle with so many items being "A" and at a "L" for an end-to-end procurement system.
 - Since the entire Software and project seems to be a Low level of complexity a person would think that will equate to a lower Cost. It will be interesting to see where they come in at.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls "baked in" (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a "catalog of catalogs" like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

- Answered all 11 of the key solution functionality elements satisfactorily. The Coupa software seems to be able to meet most of these areas. The last one (transparency) it's questionable if they can provide visibility of info. to the public.
 - Single point of entry – yes – Business Spend Management (BSM) platform.
 - Smart routing – yes – discusses home page search engine in high level.
 - Compliance – Yes it states they can configure the policies into the system.
 - Portal – touts a 90%+ adoption rate of its system due to its design philosophy. Says its very user friendly

- Open marketplace environment – yes – they discuss “Coupa Open Buy” which is like an Amazon Business. Unsure if this is part of the solution or an extra module. However, either way unsure how you would have a marketplace environment without it.
- Integration – They discuss being able to connect with almost any type of software application. However, they do not cover batch or real-time with those existing financial management and other core systems.
- Workflow – yes – they cover this area well. a configurable, rule/role-based approval automation.
- Document management – yes – they allow for this.
- Reporting, dashboards and data visualization – yes – meets this.
- Configurable – seems they can.
- Transparency – It looks like employees can see it, but unsure if there is visibility to the public.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

Initial Screen – yes, most done by admin., but some preferences can be set by users.

Intuitive Navigation – yes, addresses few clicks

Wizard-driven capabilities – No; however, they explain that Coupa’s BSM offerings so straightforward that do not require wizards.

Informative Portal – Yes

Mobile Optimization – yes both Android and Apple

Workload Mgt Functionality – Yes, Admins can assign roles that will perform or do the work.

Role-Based Functionality – Yes.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

Coupa - SaaS solution

New Solution Releases – Major releases 3 times per year and regular updates for current version every 2 weeks. Maintenance Updates – yes and State is noticed. Daily Updates – yes, if needed but rare.

Latest Technology – Yes – claim “Smart Tech” embedded throughout platform and list several examples.

Timely updates – yes

Alternative Best Practices – Deloitte mentions themselves here for the first time. Mostly Continuous Improvement recommendations.

Cost Reduction – Yes – Give 2 reasons. Show and discuss Procurement Central (Deloitte’s) unsure, but possible extra charge.

Product Roadmap and Cont. Improvement. – Not provided. Instead they explain that Coupa uses an agile development model and collaborates with customers and is the disrupter in this Industry and has a history of rapid innovation.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: **OPTIONAL**

- **Inline Narrative:** If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

Yes - Completed section. They list Level 1 – 3 Helpdesk Services as a value Add. It seems strange the State would not have requested this type of Support. Supplier onboarding and enablement strategies is also listed.

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- **Inline Narrative:** Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

They provide OOB or use standard configuration. They state "code customizations/extensions are not allowed in Coupa, there is no introduction of performance issues, bottlenecks or processing delays, there is also no negative effect on the warranty or maintenance requirement that are delivered with the Master Subscription Agreement." Will this hinder some States if cannot have certain customizations?

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- **Inline Narrative:** If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

Offer 3 different funding models. 1. Supplier Funding, 2. Value Based Funding, 3. Working Capital Funding Deloitte recommends #2 option.

7. Contract Transition and Flexibility – page 27

Deloitte says they have the ability to transition existing contracts; however, they do not commit without contingencies and further negotiations. They say they are ok with as long as everything stays consistent (aka the same), which is not the point of this question. I feel this could lead to extra costs and time entering into a contract.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Coupa meets the requirement of Cloud – SaaS. Tab 2, GEN-1 through GEN-40. They use Amazon (AWS) as their Cloud. Mention a unified stream across **their MODULES “Sourcing, Contract Repository, Contract Drafting, Catalogs/Requisitions, Non-PO Invoicing and Reporting, Analytics and Actionable Insights.”** Which they refer to as **Business Spend Management (BSM)**.
 - Question on Matrix gen-4, Coupa says can create a contract from the sourcing event and total amount defaults to the contract maximum. What if the maximum is a percentage?
 - All General Functionalities in the Matrix 1-40 were of a low complexity and mostly out of the box with a couple integration/interfaces. With the exceptions of 14,16, 34, and 39 “No Spellcheck” – which is not offered, but is in the web browser as a work around, “No Public Facing Screen”, “Contract future and effective dating”, and “Unable to manage or provide Public posting”.
 - -31 and 35 lists it’s out of the box, but they mention a “custom data field” and “doesn’t support a “comments library” out of the box, but can be configured.
 - -38 requests an unlimited licenses for State users and suppliers. Coupa responds they are subscription based with LIMITED number of users, but we can buy as many as we need (unsure how this would work with suppliers.)
2. Coupa Supplier Portal. Tab 3, SPR-1 through SPR-23. Introduced as the single point of entry for supplier facing functions.
 - Matrix – was completed. 1 – “N -Not Available”, 1- “CF-Configuration Item”, and the rest “A – Available”. All “L” Low level of complexity.
 - However, noted more than half of these were not in the Coupa Supplier Portal instead they would be part of Coupa Contract Lifecycle Management (CLM) or the Coupa Open Business Network (OBN). See page 65 of proposal for grid of all modules and how they fall together.
 - A couple items I would like more clarification on:
 - Suppliers are able to self register – but they need an invite link to the portal (why, seems cumbersome).
 - System does not seem to be user and information friendly for Suppliers.
3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43
 - Matrix completed. All “L” Low level of complexity. “10 – “TP – Third Party / Other” and the rest “A – Available”.
 - The Coupa Supplier Risk and Performance Management (RPM) module is used consistently throughout all the tabs. The last tab added Coupa Sourcing Module.
 - The “A” fields seem to be satisfactorily answered.
 - Would have liked to see a partner or subcontractor for the “TP” fields. Instead, they mention we could achieve it through a third party.
4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15
 - Matrix completed. All “L” Low level of complexity and all “A – Available”. The Coupa Platform is used consistently throughout all the tabs. The first tab being Coupa Sourcing Module
 - The “A” fields seem to be satisfactorily answered.
5. Need Identification. Tab 3, NEED-1 through NEED-7
 - Matrix completed. All “L” Low level of complexity and all “A – Available”.
 - The “A” fields seem to be satisfactorily answered.
6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11
 - For all Matrix completed for all. All “L” Low level of complexity and all “A – Available”.
 - For PRD (Purchase Request Development) 1 – 62 .
 - Solutions/Tools/Modules covered – Coupa Procurement, .
 - PRD-3 mentions Coupa’s role is a specific Procurement process, but will capture encumbrances and financials for State’s ERP. Budgets and maintenance is generally performed within State’s ERP and then integrated into Coupa. I like this – as it’s showing Procurement is first then other systems.
 - PRD – 53 and 59 look to need customization or configuration even though it shows an “A”.
 - PRD-62 – Coupa recommends using their Virtual Card, Clarify that we can use State’s card without extra cost.

- WRK (Workflow Management) 1 – 28. WRK-12 Attachments are limited to 100MB.
 - *Solutions/Tools/Modules covered – Coupa Platform.*
 - WRK-12 **Attachments are limited to 100MB.** Not a bad thing, but worth noting.
 - PO (Purchase Order Generation & Management) 1 – 29.
 - *Solutions/Tools/Modules covered – Coupa Procurement*
 - PO-29 - Coupa recommends using their Virtual Card, **Clarify that we can use State's card without extra cost.**
 - PC (Payment Card Functionality) 1 - 21.
 - *Solutions/Tools/Modules covered – Coupa Procurement / Coupa Virtual Cards.*
 - Looks good. No more comments.
 - RC (Receiving) 1 - 21.
 - *Solutions/Tools/Modules covered – Coupa Procurement.*
 - Looks good. No more comments.
 - INV (Invoicing) 1 – 11.
 - *Solutions/Tools/Modules covered - Coupa Invoicing*
 - Looks good. No more comments.
7. Catalog Capability - Tab 3, CAT-1 through CAT-40. Matrix completed. All “L” Low level of complexity, 1 – “A/CF Configuration Item” and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Procurement.*
- CAT-7 – RFP requests unlimited number of items per catalog. Coupa marks an “A”, but **has a limit of 1,000,000**
8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. Matrix completed. All “L” Low level of complexity, 4 – “Not Available”, 1 – “CF Configuration Item”(46), 1 – “INT Integration/Interface”(90), and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Sourcing.*
- The “Not Available” numbers are 63, 65, 83, and 117. “Coupa limits the number of suppliers, system doesn’t remove duplicate email addresses, unable to provide recorded pre-proposal conference, and unable to hide the name of suppliers.
 - The proposal mentions “**Deloitte's Robot Process Automation (RPA)** bot library for a public posting process as an option.
 - **Not impressed with SRC 3 – 21, because instead of stating they can provide the type of documentation (i.e. RFP, RFI, ...) they explain what it is. So they don't answer it.**
9. Contract Management. Tab 3, CNT-1 through CNT-88. Matrix completed. All “L” Low level of complexity, 1 – “INT Integration/Interface”(66), 1 – “CF Configuration Item (72), and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Contract Lifecycle Management (CLM).*
- **Currently only Integrates with DocuSign** for securely signing documents. (12,13)
 - 32 and 38 request unlimited size and type of document to be uploaded. Coupa responds **they limit their size to 100MB.** This should probably **be rated as a “N” not an “A”**
10. Vendor Performance Tab 3, VPE-1 through VPE-25. Matrix completed. All “L” Low level of complexity, 2 – “CF Configuration Item” (14, 15), and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Risk and Performance Management (RPM).*
- 25 requests unlimited size and type of document to be uploaded. Coupa responds **they limit their size to 100MB.** This should probably **be rated as a “N” not an “A”**
 - The 2 CF are about suppliers who are not registered. It makes sense.
11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. Matrix completed. All “L” Low level of complexity and all “A – Available”. *Solutions/Tools/Modules covered – Coupa Reports and Dashboards; also Advanced reporting with Coupa Analytics as an **optional add-on.***

C. Technical Requirements: pages 49 - 74

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Amazon Web Services. Uptime SLA includes 99.8%
 - Good – Customer data is stored on redundant database servers with live failover in addition to what Azure provides.
 - Provided a link on page 57 for more info on uptime and metrics.
 - Standard wise - Availability and storage seems typical for software of this size – I feel each State will need to look at their own SLA and compare it against their standards.
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Mentions Coupa offers mobile, web homepage, and web-based for accessibility.
 - It seems they have WCAG but are still working on some areas of it for ALL product areas.
 3. **Audit Trail and History RTM:** Tab 4, TECH-1 through TECH-5
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform.*
 - Audit trail and tools sounds impressive.
 4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, Chrome, Firefox, and Safari). The only one **not tested is Safari.**
 5. **User Accounts and Administration RTM:** Tab 4, TECH-6 through TECH-20
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform.*
 - 11 – states once system is up that a State business administrator can make ALL configurations and customizations in the system. No programming needed, This is awesome; however, I **question where Deloitte enters into the process (I realize this is after system is established).**
 6. **User Authentication RTM:** Tab 4, TECH-21 through TECH-25
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform.*
 - State administrator will manage and be responsible for issuing new accounts to users and suppliers
 - **MFA and 2-FA must be maintained and decided by State and then extended to Coupa.**
 7. **Federated Identity Management** – nothing to add here.
 8. **Data Conversion RTM:** Tab 4, TECH-26 through TECH-34
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform.*
 - **33 and 34 for Historical spend data and conversion services say Coupa and Implementation Partner (assume Deloitte) will GUIDE the state in data conversion of these items.**
 - **Note: The bullets of what Coupa will convert in the Matrix vs the technical proposal do not match. See next bullets.**
 - Yes, Coupa Converts; however, **only Contracts and multi-year open purchase orders.** They do not migrate historical transactional data.
 - They will incorporate 50,000 supplier accounts, and 300 Contracts (**unsure if this is capped**)
 - They prefer to migrate with CSV files through UI or sFTP.
 - Data extracts and collection are to be performed by State
 9. **Interface and Integration RTM:** Tab 4, TECH-35 through TECH-60
 - Matrix completed. All “L” Low level of complexity, 1 – “Int” Integration (38), and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform.*
 - Page 65 has a link to different types of integrations that may fit different State's.
 - #54 ability for specific types of purchases not to integrate at any point in the process – should **really be “Int” not “A” from Coupa – as they answer saying they can set up an integration.**
 10. **Office Automation Integration**

- Coupa feels because spend management is within their application that extensive Office automation integration is not necessary ; however, if a State wants too they can import SCV files in.
- 11. Mobile Device Support RTM: Tab 4, TECH-61
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”.
Solutions/Tools/Modules covered – Coupa Platform.
 - Yes it can be accessed mobily
- 12. Mobile Applications - Nothing add here.
- 13. Data Ownership and Access
 - State will retain all ownership of data by requesting from Coupa.
 - For proprietary data after termination – needs to be requested before 60 days after termination.
- 14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-62
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”.
Solutions/Tools/Modules covered – Coupa Platform
 - Data stored for Life of the Contract or agreed up on documentation schedule.
- 15. Disaster Recovery Plan
 - Coupa states they have a Disaster Recovery Plan and outlines what is in it. **Curious if they can share it.**
- 16. Solution Environments RTM: Tab 4, TECH-63 through TECH-67
 - Matrix completed. All “L” Low level of complexity and the rest “A – Available”.
Solutions/Tools/Modules covered – Coupa Platform
 - State would **receive two environments for the lifetime of the Contract ((Production and User Acceptance Test/Training(sandbox)).** Others can be provided for additional charges.
 - Coupa feels a development environment is not needed since customization is not allowed.
- 17. Solution Technical Architecture
 - **Uses “Ruby on Rails”** as the framework for its web application development.
 - Uses Agile Methodology
 - Page 64 and 65 Chart of Architecture is a Great one to look at to see how Coupa’s systems overlay with AWS and all their BSM Platforms (modules)
- 18. Solution Network Architecture
 - Page 69 for graph.
 - Coupa uses **OSSEC** for its HIDS (Host Based Instrusion Detection System).
- 19. System Development Methodology
 - Normal PM.
- 20. Service Level Agreement
 - Coupa reviewed and acknowledged the SLA(Exhibit 2). **But they can not guarantee full compliance. (see page 81) for support targets and uptimes.**
 - **Nothing is mentioned about Deloitte – So imagine the State would do a direct SLA with Coupa?? This would need to be figured out because in the instance of this RFP, Coupa seems to be the subcontractor.**

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance
 - Coupa did complete and submit the CAIQ in file 3; I will rely on my more experienced SMEs to help evaluate the CAIQ.
2. Security and Privacy Controls
 - Not fully compliant but, expected to be offering available on the FedRAMP Moderate Ready with fully certified status by year end 2021.
3. Security Certifications
 - Seems like they meet. They give a link to request compliance reports on page 77.
4. Annual Security Plan
 - Coupa has reviewed this section and agrees to endorse meeting the annual security plan.
 - They mention **Deloitte here – (pg 86)** to help Coupa develop supporting security strategy and security plan. I imagine this will be extra cost.

- Deloitte then address plan on pages 87 – 88.
- Secure Application and Network Environment
 - Nothing additional on this one.
 - Secure Application and Network Access – Tab 5, SEC-1 through SEC-6
 - Matrix completed. All “L” Low level of complexity, 1- “N Not Available” (1) and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform*
 - The not available item is Coupa does not track device usage.
 - Item #2 states “A” but at this time it **is not available**.
 - Data Security – nothing to add.
 - Personally Identifiable Information Protection – nothing to add.
 - Security/Privacy Issue Occurrence – nothing to add.
 - PII Data Actual/Attempted Access or Disclosure – nothing to add.
 - Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform*
 - Seems to have many options for finding help and solutions for customers.
 - Training-wise they offer various types of training based on the State’s preference.
- Project Management
 - **Deloitte writes this section and would be performing the PM portion.**
 - **They suggest a “in parallel” implementation approach (see page 105) which is different than what Coupa’s suggested agile approach for their product. On page 114 they then call it Deloitte’s Coupa Implementation Methodology framework a “hybrid agile approach”. It leaves me uncertain on how much these partners have worked together.**
 - Project Implementation Methodology –
 - Reference bullets in #1 above.
 - The rest is fairly basic project knowledge or definitions of such. Nothing new.
 - Catalog Support Services
 - Page 111 – Deloitte’s first bullet will they will help by recommending the right contract for catalog setup. If I am understanding this correctly, they are looking through their buying channel and recommending Contracts for the State to use. **If this is the case – I don’t believe Deloitte understands Govt./ State Contracting.**
 - **This misunderstanding is seen again in “Setup/Config” Instead of allowing equal treatment of vendors, they want to drive enforcement of spend with preferred vendors.**
 - Data Conversion Services
 - Reference C8 above. This section says they can easily convert it.
 - Interface/Integration Development Services
 - Throughout this proposal, Coupa has demonstrated their flexibility to integrate to various tools including ERPs. This section explains the “how”nicely.
 - Organizational Change Management (OCM Services)
 - As a Certified Prosci Change Practitioner, I can attest Change Management is nice to have as an option. Deloitte would be performing this. The approach they offer is standard.
 - Training Services
 - Provided by Deloitte.
 - Pages 120 – 121 they breakdown the OnDemand which is nice.
 - Help Desk Services – good.
 - On-Site System Stabilization Support – good.

F. Managed Services Requirements: pages 128 - 136

- Matrix completed. All “L” Low level of complexity and the rest “A – Available”. *Solutions/Tools/Modules covered – Coupa Platform*
 - Coupa uses “Pingdom” to monitor response time and uptime.
- Solution Support
 - Organizational Change Management (OCM Services) – see section E comments above.

3. Training Services – see section E comments above.
4. Help Desk Services – see section E comments above.
5. Transition Out Assistance Services
 - Deloitte uses a “multi-phase transition out” plan. Done within 1 year of notification of contract termination.

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- AMS (Application Management Services) – provide more channels for accessibility to support services.
- Help Desk Services by Deloitte (basically help set up the State’s help desk)
- Supplier Enablement Services – above and beyond the normal (new supplier onboarding/training, etc.)

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Yes provided. Detailed and covered all of their 45 min.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

- Single point of entry – YES
- Smart routing – YES
- Compliance – YES.
- Portal – YES
- Open marketplace environment – YES
- Integration – YES
- Workflow – YES
- Document management – MAYBE automated solution not emphasized.
- Reporting, dashboards and data visualization – YES but Coupa Analytics' is an additional purchase
- Configurable – YES
- Transparency – MAYBE public visibility not clear.

User Experience

- Capability that allows user personalization - YES
- Intuitive navigation with as few clicks as possible.- YES
- Wizard-driven capabilities – NO wizards required – more like Amazon, Bestbuy.com, Google
- Portal that informs users and supports user work management.- YES
- Functionality optimized for mobile access and use.- YES
- Workload management re-assignment - purchase requests YES solicitations NO contracts NO
- Role-based functionality – MAYBE Guest, Admin, User, Buyer, Accounts Payable, Central Receiving, Accounting Supervisor, Edit as Approver, Inventory Manager, Expense User, Expense Auditor, Expense Processor, Supplier, Dashboard, CFO Role, Split Accounting, and Superadmin. RFP was looking for role based processes but bidder specified roles.

Bidder Best Practices and Roadmap

- new Solution version releases or new features/tools - YES.
- Ensure that the Solution is utilizing the latest technologies - YES
- Ensure that updates happen in a timely manner - YES
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement. YES

- In addition, the Contractor must constantly assess and recommend opportunities to **reduce costs** associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations. **YES**
- Innovations and Value-Added Features/Services **YES**
- Customizations/Extensions **YES**
- Alternative Funding Models **YES-Supplier Funding, Value Based Funding, Working Capital Funding (WCF), projected payback for each**

Functional Requirements

General Functionality **33 out of box, 3 with integration or API, 1 API integration, 3 not available**
Supplier Portal **21 out of box, 1 configuration, 1 not available**
Supplier Enablement/Management **33 out of the box, 10 3rd party**
Buyer Portal **15 out of box**
Need Identification **7 out of box**
Request through Pay **171 out of box, 1 configuration**
Catalog Capability **39 possibly 40 out of box with 1 configuration**
Sourcing/Bid Management **145 out of box, 1 with integration, 1 configuration, 4 not available (dupes/ limit)**
Contract Management **86 out of box, 1 with integration, 1 configuration**
Vendor Performance **23 out of box, 2 configuration**
Purchasing/Data Analytics **37 out of box**

Technical Requirements

Availability **99.99 -99.8**
Accessibility Requirements **Working towards 508..WCAG 2.0 but not W3C**
Audit Trail and History **5 out of box**
Browsers Supported **operating system agnostic and can be accessed from any major web browser. Microsoft Internet Explorer, Microsoft Edge, Google Chrome, Mozilla Firefox, Safari (but not tested)**
User Accounts and Administration **14 out of the box, dual sign-on for 1 acct N/A**
User Authentication **5 out of box, LDAP, SAML**
Federated Identity Management **supports using SAML 2.0**
Data Conversion **9 out of box**
Interface and Integration **25 out of box, 1 int for licensing**
Office Automation Integration **yes**
Mobile Device Support **yes**
Mobile Applications **yes**
Data Ownership and Access **copy can be obtained/extracted any time with request to Coupa support**
Date Retention, Archive and Purge Considerations **yes**
Disaster Recovery Plan **tested annually**
Solution Environments **5 out of box**
Solution Technical Architecture **separate database schema, database infrastructure segregated from application servers and the internet by firewalls**
Solution Network Architecture **virtual networking environment, IP address range selection, subnet creation, and route tables, and gateways configuration**
System Development Methodology **agile software development, SCRUM/Sprint iterative methodology**
Service Level Agreement **unable to guarantee full compliance, 99.8% system availability, tiered severity levels, premium support**

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Government and Private Sector practice
 - 12,000 practitioners, large capacity
 - Partnering with Coupa, using the Coupa platform
 - Implementation with SAP, Peoplesoft effective full suite implementation
2. Previous Projects
 - Broad example with USPS, no example of favorable cost savings result
 - Projects identify advantages to reporting, visibility, lesser on ROI
 -
3. Subcontractors
 - Coupa appears to have large footprint and influence
 - Business spend management platform
 - Uncertain if offers Shopping (Procure to Pay) platform as full solution
4. Organizational Chart
 - Good description of roles and responsibilities
 - No differentiation between general descriptions and NASPO unique requirements
 - Org Chart is very general and could be used for any proposal response. It also does not identify if resources are Deloitte or Coupa as their subcontractor.
5. Litigation
 - 3 cases given, resolved.
 - One case with municipality
 -
6. Financial Viability
 - D&B Snapshot provided
 - Stable company
 -

Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

- (Document Page 8) Good pricing flow, searches across all catalogs, identifies best price offering
- (10) Coupa "Open Buy" – can include other catalog items for one-time purchase?
- (11) Can integrate-unclear as to which ones
- (12) Reporting seems robust
- (15) Workflow with roles and groups is very good
- (16) Lots of updates and releases (will need to devote internal resources to test and validate operation with each change)
- (20) No mention of a test environment (yes on page 62)
- (21) Value added features appear expansive additional costs
- (22) States customizable, but pg. 22 "code customizations are not required or allowed".
- (23) Not all states can fund through admin fees within the system or billback options. This creates curiosity about actual cost to have the solution.
- (25) Savings are determined by "Deloitte's proprietary category-specific savings benchmarks" How are the results determined?
- (26) Roadmap shows Oracle Implementation. Oracle is not mentioned anywhere else in the response
- RTM-EPROC-GEN-11. Size restriction to 100MB
- RTM-EPROC-GEN-18. No public facing screen
- RTM-EPROC-GEN-3. Can link Coupa solicitations from outside websites
- RTM-EPROC-GEN-8. Are commodity codes standards such as NAICS or UNSPSC?
- RTM-EPROC-PRD-40. Level 2 search is a valuable resource for users to shop across hosted and punchout catalogs at the same time.

Functional Requirements

- (30) Supplier can update catalogs. Do States have ability to review/accept changes?
- (33) Free form request could lead to off contract purchases.
- (34) Hosted catalog and punchout directly from search is big advantage for shoppers
- (42) How are contracts negotiated? Document versioning?
- RTM-EPROC-PRD-40. Level 2 search is a valuable resource for users to shop across hosted and punchout catalogs at the same time.
- RTM-EPROC-SPR-7. includes vendor registration capability. Must register to receive solicitation. Possible barrier to entry.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: October 19, 2021

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Technical Requirements

- (56) No migration of historical data, later states it is possible
- (57) Integration with PeopleSoft
- (58) Good mobile device support
- (62) All customers receive Sandbox environment
- (70) Data hosted in the United States
- (74) Reference to Coupa SLA. Is NVP going to negotiate or leave to States?
- (74) Coupa states they cannot comply with their own SLA

Security Requirements

- (93) Coupa cannot meet 2-hour breach notification (within 24 hours proposed)

Implementation Services Requirements

- (100) Implementation Functional lead for each workflow areas is intuitive

Managed Services Requirements

- (127) Hypercare after go-live 90 days

Video Demonstrations

- Capability to search hosted catalogs and across punchout catalogs
- Services on platform as well materials
- Attributes within catalogs (OSD business, etc.)
- Can set order lists to repurchase of stock frequent items
- Approval workflows both individuals and teams
- Shows PO changes/edits when made
- RFQ can include T&Cs
- Is vendor list limited to only those in Coupa community?
- Contract management templates are very functional
- Interesting can export to Word to negotiate then being back in for signature
- Customizable fields
- Reporting seems intuitive

Individual SME Comments:

Overall

- Coupa – overall solution
- Valid 180 days
- 70 Enterprise wide implementations
-

General Principal and Requirements

Key Solution Functionality Elements

8	Single point of entry for all procurement activity	
8	Smart Routing – “what do you need?” – guides employees – can lock down what users see based on roles. <ul style="list-style-type: none"> • Coupa searches • Catalog items • Accessible forms • Punchout items – when open buy is configured • Buying Policies • Punch out sites 	Positive
9	Compliance – Policies are located in search, browsing, cart, policy dropdown	
10	Portal – Smart capabilities – use of phone email approvals	
10	Open Marketplace – cross catalog between internally hosted and punchout catalogs – Coupa search	
11	Integration – open architect – supports all ERP systems	
11-12	Workflow- Specific approval rules can be used – Approval driven by various conditions.	Positive
12	Document Management – document storage and uploading of files	
12	Reporting, Dashboard, and data visualization – Coupa includes at no cost. They also offer Coupa Analytics	Concern – “this additional purchase”
13	Configurable – once configured by Coupa, you don’t need a 3 rd party to configure	Positive

BIDDER NAME: Deloitte 1

CATEGORY #(s): Category #1, Stage 1

DATE: 08/18/2021

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments: **MARKED CONFIDENTIAL**

Organization Qualifications and Experience

1. Overview of the Organization
 - Coupa. 2000 clients
 - Consulting Firm
 - 10 years partnership with Coupa
2. Previous Projects
 - USPS
 - Red Cross – contract compliance
 - American Airlines -
3. Subcontractors
 - Coupa – Spend Management
 -
 -
4. Organizational Chart
 - Has project manager
 - Has team members for each service module provided
 -
5. Litigation
 - **Listed some legal actions**
 - Surround confidentiality agreements.
 -
6. Financial Viability
 - Supplied Dun & Bradstreet report – 30 pages
 -
 -

How does the State of Maine handle submissions marked CONFIDENTIAL?

Individual Evaluator Comments:

General Principal and Requirements – 19 concerns out of 40 requirements in this section

Key Solution Functionality Elements

User Experience

Bidder Best Practices and Roadmap

Innovations and Value-Added Features/Services

Customizations/Extensions

Alternative Funding Models

Functional Requirements

- Eliminates rogue spending. Show only items available
- Portal is configurable
- Get things done without ever having to login
- Marketplace cross catalog searching –Coupa Open Buy
- Amazon Business like functionality
- Integrate with ERP – Coupa API
- Custom fields workflow
- Coupa Analytics –dashboards and reporting
- Highly configurable
- Link event to contract
- No wizard driven capabilities
- New Release and testing sites
- Smart Technology
- Need to test solution
- Procurement Central
- Supplied additional proposed innovations
- Supplied funding models
- Mentioned 3 funding options
- Will work with entities on contract transition
- States vendor do not have to join a network – Page 30 States we invite them to a network?
- Can perform actions from the email notification eliminating the requirement to log into portal
- Deloitte uses Coupa Supplier & Catalog Enablement Accelerator toolkit
- Integrations are flat file or API
- Get things done without ever having to log in
- Form design elements

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1 Stage 2

DATE: 10/7/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Coupa's Open API option allows for real time integration
- Coupa Services Maestro – manage complex spend
- Contracts can be associated with suppliers and catalogs
- Coupa Open Buy
- Sourcing/Bid Management addressed
- Coupa' Projects Feature
- RPM Module
- Coupa Reports

Technical Requirements

- Availability - Use AWS, has backup strategy, replicate data to different zones. Provided link to uptime metrics.
- Accessibility Requirements - **Working towards 508 accessibility**. Handle this through product enhancements. Web Content Accessibility GuideLines version 2.1
- Audit Trail and History - Dashboard reports and permissions to users for audit reports.
- Browsers Supported - Listed all but Safari not tested. IE and Firefox are the system the browsers are tested with. Need to use the most updated versions
- User Accounts and Administration - Uses roles(Appendix A) and Content Groups (i.e Agencies)
- User Authentication – State responsible for MFA or 2FA. Can use LDAP Directory – Page 55
SAML Federated Identity Management – Uses SAML 2.0
- Data Conversion – Does not migrate historical transactional data but some exceptions- page 56, data extracts/collection is states' responsibility
- Interface and Integration – Use Coupa API for flat files – Page 57. Provided link for best practices.
- Office Automation Integration - Files need to be uploaded to the system page 58
- Mobile Device Support – Is operating system agnostic
- Mobile Applications – Can perform multiple functions and many security mechanisms.
- Data Ownership and Access - State retains all data
- Data Retention, Archive, and Purge Considerations – Data remains for the life of the contract.
- Disaster Recovery Plan - Business Continuity Management
- Solution Environments – Both TEST and Production.
- Solution Technical Architecture -

Video Demonstrations

- “Open Buy” functionality eliminates the need to upload vendor spreadsheets
- Can search for requests and fill them out before sent to vendor
- Can be notified of an item that has a better price than one selected in the search
- Has workflow ability
- Can collaborate with vendor on the purchase order in the system.
- Can make adjustments to the purchase order.
- Write a request functionality – Items not available currently for purchase.
- Request a new supplier to be added as a shopping option.
- Create goods receipts
- Supplier invoicing back to customer with comments.
- Supplier demo – user can request information from supplier with the supplier filling out a form to send back to the user
- Supplier performance shows many areas showing how the supplier is performing.
- System collects information from users for vendor performance..
- Connect requests to Sourcing, enter timeline and assign tasks to event team.
- Add attachments and questions. Looks like this is added via a template or library.
- Supplier side shows time left to submit response. Can “chat” with the buyer.
- Need to answer required fields before entering cost on bid.
- Create award scenario that connects back to new requisition or go to contract.
- Select contract template that fills in the legal text of the contract.
- Send the contract into workflow and signature capability.
- Has contract repository and can track spend on the contract.
- System admin has ability to customize areas of the application.
- Can drive workflows from conditionality custom questions.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: EASiBuy, Inc.

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- "EASi" Est. 2009.
- Focus on e-procurement.
- History of reverse auction and focus on bids.

2. Previous Projects

Listed 5 performed by EASiBuy. Of the 5, two were states, one county, and two cities. The projects have a component or two of eprocurement, but are very centralized around reverse auction **which will not work for all aspects of eprocurement such as IT Services or Consulting Services.**

- State of Connecticut. Managed reverse auction services.
- State of RI. Strategic sourcing solution – online bidding events.
- Hind County. Managed Reverse Auctions for goods and services.
- City of Los Angeles, GSD Supply Services. Reverse Auction services and support provider.
- City of Mesa – Purchasing Division. Hosted 3rd party reverse auction service.

Listed seven International Projects performed by EASiBuy's partner Nextender. While EASiBuy's projects seem to miss the mark for this Category. The international partner Nextender's projects more closely relate to this Category.

3. Subcontractors

- They do not list any in the subcontractor section and state they do not intend to use subcontractors for this project; **however, as stated above they use Nextender.** They also state on page 4 in their disclaimer their partnership with HCA Healthcare Inc and Nextenders. Unsure why it was not disclosed in the subcontractor section if their previous projects were use as examples.

4. Organizational Chart

- Yes, an organization chart is provided. There is no breakdown of job description. **As a side note. The Organization chart has their partner "Nextenders" next to their name "EASiBuy" on the header. We may need clarification.**

5. Litigation

- Vendor states none.

6. Financial Viability

- Dun and Bradstreet provided. Moderate risk.

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Focus on eProcurement, reverse auction
 - Unclear if they can off the full solution or just niche of reverse auction
 -
2. Previous Projects
 - Online bidding to CT, state level scale, not full solution though
 - County and City project examples, smaller scale than full state implementation
 - Better success with international projects, unsure why US projects are more anemic in scope and size.
3. Subcontractors
 - Appears to still be developing solutions of bid processes. Unproven solutions are a significant performance management obligation to the end users.
 - Does not intend to use subcontractors
 - Product solution does not demonstrate full solution
4. Organizational Chart
 - Larger personnel chart, for a seeming smaller niche company.
 - No clarification which resources would be assigned to NASPO contract is awarded
 - No clarification how resources are allocated between US and overseas projects
 - Org Chart is Spelled "Organisation" which is European, company is identified as Ohio based.
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Lower credit levels
 - Moderate business risk
 - 12-month stability concerns
 - UCC filing
 - Acquired by Electronic Auction Services 2015
 - Procured CARES loans twice
 -

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Yes. States 20 years of end-to-end procurement and supply chain expertise.
 - Seem to cover all areas of eprocurement.
2. Previous Projects
 - 5 listed. Four private entities and one university. They all fit Category 1.
 - Viatrix. Improved transparency across company with their system.
 - UCAL. Implemented S2C technology (spend analysis, sourcing, contract management, supplier mgt.) and a public bid site.
 - Chevron. Unified their online system with a mobile system.
 - LDS Church. Implement Contract and Supplier Management solution.
 - UMASS. Developed S2P processes, policies and workflows.
3. Subcontractors
 - Vendor states none.
4. Organizational Chart
 - Provided along with job descriptions.
5. Litigation
 - Vendor states none.
6. Financial Viability
 - D&B provided. Low risk.

Individual Comments:

Overall/General

- Product is GEP Software Source-to-Pay process.
- Note: NB Ventures Inc. dba Global eProcure (GEP)
- Product is cloud platform. SaaS.
- The technical proposal begin with small portions of information and I was unsure if they were meeting the mark, but once I was able to dig into the matrix it helped further see what they can do.
- Overall, it looks like much configuration can take place for any State entity. While this is great, I question how this would affect updates to the software (Clarification).
- Matrix - I like seeing that the level complexity is not all "L". It shows GEP put thought into each for each item.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product is GEP Software Source-to-Pay process. With modules of sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay.

- Single point of entry – yes – a centralized intake form. When I think Single point of entry- I do not think intake form.
- Smart routing – yes – GEP combined this bullet point with Compliance and Workflow. They state the platform can be configured to meet specific compliance policies/rules. GEP gives examples of Guided Buying, Robust Rule Engine, and Category Playbook.
- Compliance – refer to the second bullet.
- Portal – yes – buyers and suppliers have access to dedicated home page portal

- Open marketplace environment – yes – **Configure** hosted catalogs/punchouts.
- Integration – yes – has out of the box integration tool kit and use JSON protocols for document exchange.
- Workflow – yes – refer to the second bullet.
- Document management – yes – stored in centralized repository and accessed per user role.
- Reporting, dashboards and data visualization – yes – in-house cross-functional reporting framework.
- Configurable – yes – GEP Software cloud platform is a preconfigured application. GEP states they will use agile approach to preconfigure sandbox to align to State specific cases / requirements.
- Transparency – Yes – and mention track status on documents.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

2. GEP discusses their intuitive user interface built by using feedback from Fortune 500 costumers, user group requirements, industry standard practices, etc. **I have concerns with the Fortune 500 customers because we want a system that is more relatable to Govt/State business.**

- Initial Screen – yes, mention users can mark initial screen as landing page – **not sure this is what is meant in this section.**
- Intuitive Navigation – yes, GEP combines this bullet with “Wizard-driven capabilities” addresses few clicks, **but doesn't really address wizard capabilities.**
- Wizard-driven capabilities – Refer to second bullet.
- Informative Portal – Yes
- Mobile Optimization – yes, they call it Mobile App – IOS and Android.
- Workload Mgt Functionality – Yes they call it Work Management, addressed; however, **unsure if it contains the same intention of abilities as wanted in the RFP.**
- Role-Based Functionality – Yes, addressed.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

3. GEP introduced 4 best practices and roadmap: (1) Unified Source-to-Pay Platform, (2) Agile Methodology for Software Development, (3) Software Release and Update Cycles, and (4) Customer Success: Providing a High Touch Support Experience Throughout Engagement.

- Latest Technology – No – don't address any. Address their process as in number 3 above.
- Timely updates – yes – Quarterly and biweekly; however, **it's a bit confusing as they use words such as “generally available” Would like to see a more definite timeframe and surety.**
- Alternative Best Practices – yes see below bullet.

- Cost Reduction – Yes – Claim price compression will save 4% – 7% average realized savings, spend compliance 10%-50% reduction of noncompliant spend, productivity 40%-60% reduction in non-value added work, and working capital 10-20% extension in pay terms and 5-30% Increase in early pay discounts.
- Product Roadmap and Cont. Improvement. – Yes – see number 3 above.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

4. Yes - Completed section. They list Level (1) Organization Maturity Assessment, (2) Opportunity Assessment (3) Market Intelligence (4) Category Management. Explained further below.

- GEP illustrates their Assessment Approach in a 4 graphs and explains they would work with State to create a plan to outline desired outcomes by looking at various pieces of procurement operating models and identifying areas of improvement along with other types of analysis. **This reminds me of a BPM.**
- GEP illustrates in 3 graphs how they can analyze procurement spend to identify savings opportunities using GEP benchmarks, SME inputs, and industry best practices.
- GEP illustrates in 5 graphs how leveraging GEP's extensive network of SMEs and researchers could elevate the knowledge and awareness of State's procurement.
- GEP illustrates in 2 graphs a process for end-to-end category management across categories for sustainable outcomes

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

They provide preconfigured application deployed as a standard configuration. They suggest using the standard out of the box software, but will configure as necessary per the requirements of the State.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outlined above for each recommended funding model.

GEP does not have alternate funding models. They refer to Exhibit 3. Cost Proposal and other revisions of cost proposal.

7. Contract Transition and Flexibility – page 27

GEP complies with the contract review process and transition if negotiate terms. I feel they misunderstood the point of this question.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. Matrix completed. 5 – High (21, 26, 27, 28, 39), 3 – Medium (9, 25, 36), rest are all “L” Low level of complexity, 3 – “CF Configuration Items (3, 5, 25), 1 – “C Customization/Extension” (39), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Sourcing/Bid Management Software, Contract Management, Procure-to-Pay.
 - For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able to integrate with other eProcurement Workstreams. In areas where GEP does do this they suggest links or to CF.
 - I do like seeing that the level complexity is not all “L”. It shows GEP put thought into each for each item.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
 - #36 GEP has their own built in electronic signature solution instead of a partnership like docuSign, or adobe sign
 - #38 For number of licenses – sounds like gave cost based on what was provided in proposal; however, they confirm licensing is unlimited for business and supplier users. This may be deceiving, might want to confirm again that it's unlimited also for “State users”
2. Supplier Portal. Tab 3, SPR-1 through SPR-23. Matrix was completed. 1 – High (19), 1 – Medium (6), rest are all “L” Low level of complexity, 1 – “INT - Integration/Interface”(19), 1- “CF-Configuration Item” (6), and the rest “A – Available”. Solutions/Tools/Modules covered – Supplier Enablement / Management Software, GEP Core Platform, Contract Management, Request through Pay.
 - #13 I find it interesting that GEP has their own OCR in-house system. Nice to know, if State did not want to use or integrate theirs.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 Matrix – was completed. 1 – Medium (36), rest all “L” Low level of complexity, 1- “CF-Configuration Item”, and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement / Management, Core Platform.
 - The “A” fields seem to be satisfactorily answered and their solution meets the standards.
 - For the INT items 19-27. GEP has a partnership with Global Risk Management Solutions (GRMS), Rapid Ratings and with TinCheck that provides most of these services. GEP Software will enable a link to these partners to allow users to view. My concern here would be the risk of leaving their system (if any), what security measures are in place?
4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15. Matrix completed. 1 – Medium (9), rest are all “L” Low level of complexity. 1- “CF-Configuration Item”(9), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Supplier Enablement / Management.
 - The “A” fields seem to be satisfactorily answered.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
5. Need Identification. Tab 3, NEED-1 through NEED-7 Matrix completed. All “L” Low level of complexity. 1-“CF-Configuration Item”(5), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Sourcing Bid Management, Contract Management, and Request through Pay Software.

- The CF item does not seem to pose a problem. Other items seem to be standard within the software.
6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. Matrix completed. 1–High (PRD28), 5–Medium (PRD11, PRD56, WRK13, PO16, PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21, RC4), rest are all “L” Low level of complexity, 17 – “IN - in development” (PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21), 1- “CF-Configuration Item” (RC21), and the rest “A – Available”. Solutions/Tools/Modules covered–GEP Request through Pay Software, Contract Management.
 - For PRD (Purchase Request Development): No issues with this section. GEP’s responses meet the standards and our requests.
 - WRK (Workflow Management): All requirements in this section are sufficiently answered.
 - PO (Purchase Order Generation & Management): All requirements in this section are sufficiently answered.
 - PC (Payment Card Functionality): Much of the complexity is medium and the availability is “in development”. This is concerning if a State is counting on this service.
 - RC (Receiving): All requirements in this section are sufficiently answered.
 - INV (Invoicing): All requirements in this section are sufficiently answered.
 7. Catalog Capability - Tab 3, CAT-1 through CAT-40. Matrix completed. 1–High (19), 5–Medium (4,21,25,32,33) and the rest all “L” Low level of complexity, 4–“CF Configuration Item” (31-34), 1 – “ID - in development” (38), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Request through Pay Software, Contract Management.
 - Missing 38 – “The eProcurement Catalog functionality should provide the ability for catalogs to be accessible and searchable without requiring the user to login (e.g. public access for read/search only access). State must be able to specify any fields that will not be publicly visible (e.g. Tax ID).” GEP says “ID” and will work with State to have.
 - Other than 38 - All requirements in this section are sufficiently answered.
 8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. Matrix completed. 1–High (151), 5–Medium (31,77,78,83,138) and the rest all “L” Low level of complexity, 7–“CF Configuration Item” (17,18,73,76,102,138,147), 1–“ID - in development”(109), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Sourcing/Bid Management Software, Contract Management.
 - Items 15 and 16 – GEP says they can handle a surplus sealed bid and IFQC, but then say they would further like to discuss the requirement in detail with State as we move ahead in this process. Clarify – can they handle this type of procurement?
 - In some areas they offer multiple ways to tackle a situation – for example SRC72. This is seen throughout the Matrix.
 - Rest of requirements in this section are sufficiently answered.
 9. Contract Management. Tab 3, CNT-1 through CNT-88. Matrix completed. 3–High(30,71,72), 4–Medium (38,41,45,70) and the rest all “L” Low level of complexity, 8–“CF Configuration Item”(20,34,45,51,65,66,71,72), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Items 71 and 72 – GEP says they can track suppliers admin fees , but then say they would further like to discuss the requirement in detail with State and understand the logic behind the calculation.
 - Rest of requirements in this section are sufficiently answered.
 10. Vendor Performance Tab 3, VPE-1 through VPE-25. Matrix completed. 1–High(14), and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(15), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Requirements in this section are sufficiently answered.
 11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. Matrix completed. 2–High(32,33) and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(37), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Platform.

- Question #37 – where GEP can offer comparison of punchout item to non contract item. They state yes as long as the supplier is ok exposing themselves to GEP web crawlers. Even if they are ok with this, is there enough security for State and any other web crawlers?
- Rest of requirements in this section are sufficiently answered.

C. **Technical Requirements: pages 49 - 74**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.
 - Maintains a 99.8% uptime with a 24x7 availability.
 - Use Microsoft Azure (for backup)
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Short 3 sentence slide that gives confirmations that GEP: Observes ADA compliance standards, follows WCAG2.1 level AA guidelines, and will provide ACR.
3. **Audit Trail and History RTM:** Tab 4, TECH-1 through TECH-5. Matrix completed. 1–Medium(5) and the rest all “L” Low level of complexity, All “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Audit logs are retained until end of contract life.
 - Mentions backup policies and use of Microsoft Azure backup.
 - Much crossover between slide in technical proposal and matrix. No concerns.
4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, Chrome, Firefox, and Safari). No concerns.
5. **User Accounts and Administration RTM:** Tab 4, TECH-6 through TECH-20. Matrix completed. 1–Medium(12) and the rest all “L” Low level of complexity. 1–“CF Configuration Item”(16), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - No concerns. Meets requirements.
6. **User Authentication RTM:** Tab 4, TECH-21 through TECH-25. Matrix completed. 1–High(24) and the rest all “L” Low level of complexity, 1–“ID In Development”(25), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - #21 – Like the fact that they use Microsoft Active Directory for Single Sign on.
7. **Federated Identity Management –** No concerns. Meets requirements.
8. **Data Conversion RTM:** Tab 4, TECH-26 through TECH-34. Matrix completed. 1–High(28), 1–Medium(30), and the rest all “L” Low level of complexity. With all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Software Implementation services for Supplier Enablement Management, Services for Software Implementation, Services for Spend Analysis, Services for Sourcing/Bid Management, and Services for Request through Pay.*
 - Seem flexible in their approach to converting data and working with the State. A couple assumptions, but they are reasonable.
 - GEP provided many slides with graphs and pics laying out the conversion process. – I found this helpful.
9. **Interface and Integration RTM:** Tab 4, TECH-35 through TECH-60. Matrix completed. 1–Medium(60) and the rest all “L” Low level of complexity, 1–“ID In Development”(55), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Request through pay software, contract management, supplier enablement management.*
 - Met all requirements besides the Pcard #55 which is ID.
 - They list many ERP systems they have or currently integrate with (SAP, Oracle, PeopleSoft, JD Edwards, MS Dynamics, CGI Advantage, etc.) and provide options of how to integrate.

10. Office Automation Integration
 - Yes, GEP integrates with Microsoft products listed and others.
11. Mobile Device Support RTM: Tab 4, TECH-62. Matrix completed. "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Yes it can be accessed Mobily
12. Mobile Applications - Nothing add here.
13. Data Ownership and Access
 - State will retain all ownership of data.
14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63. Matrix completed. 1– "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Met all requirements. No concerns.
15. Disaster Recovery Plan
 - Coupa.
16. Solution Environments RTM: Tab 4, TECH-64 through TECH-67. Matrix completed "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - State would receive four environments Development, Quality Control/User Acceptance Testing, Training, and Production.
 - Graphs of each environment are provided and at what point in the process they are used.
17. Solution Technical Architecture
 - Met all requirements. No concerns.
 - Graphs and tools that will be used are provided in the tech. proposal.
18. Solution Network Architecture
 - Again – great graphs listing the software used and when scans, patching, etc. are done.
19. System Development Methodology
 - Normal PM with much explanation and tables/graphs.
20. Service Level Agreement
 - GEP notes they want to discuss and finalize SLA requirements with State and refers us to the GEP SLA.

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance
 - GEP supplied a CAIQ in file 3; I will rely on my more experienced SMEs to help evaluate the CAIQ.
2. Security and Privacy Controls
 - No Concerns based on data in the proposal.
3. Security Certifications
 - No Concerns based on data in the proposal.
4. Annual Security Plan
 - GEP details out their annual security plan.
 - GEP notes that they understand NASPO has asked for any additional documents and to see refer to GEP Appendix 2' which is their Information Security Policy. This will need to be reviewed when negotiating.
5. Secure Application and Network Environment
 - refer to GEP Appendix 3' which is their SMART Application Architecture & Security Overview.
6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6. Matrix completed. 2– Medium(1,2) and the rest all "L" Low level of complexity, 1–"CF Configuration Item"(2), 1–"ID In Development"(3), and the rest "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Mentions backup policies and use of Microsoft Azure backup.
 - GEP meets some of the requirements in this section but need to customize or develop others.
7. Data Security – nothing to add.
8. Personally Identifiable Information Protection – nothing to add.
9. Security/Privacy Issue Occurrence – nothing to add.
10. PII Data Actual/Attempted Access or Disclosure – nothing to add.
11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Matrix completed. 1–High(5) and rest “L” Low level of complexity and all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Seems to have many options for finding help and solutions for customers.
1. Project Management
 - GEP recommends AGILE implementation methodology with sprints and multiple workstreams.
 - They provide graphs and timelines.
 2. Project Implementation Methodology –
 - Reference bullets in #1 above.
 - Roles of both side are explained well.
 - Typical challenges are outlined.
 - The rest is fairly basic project knowledge or definitions of such.
 3. Catalog Support Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 4. Data Conversion Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 5. Interface/Integration Development Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 6. Organizational Change Management (OCM Services)
 - Change Management is nice to have as an option. GEP would be performing this. The approach they offer is standard.
 7. Training Services
 - good, maybe a bit more.
 8. Help Desk Services – good.
 - #3 – GEP provides a dedicated team of resources (helpdesk) for users and providers to call 24x5 via phone or email. This is a nice plus.
 - Great.
 9. On-Site System Stabilization Support – nothing to add.

F. Managed Services Requirements: pages 128 - 136

- Matrix completed. All “L” Low level of complexity and “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
1. Solution Support
 - Lay out roles in GEP and what each role will be responsible for after the implementation.
 - Lay out graphs of how the system is supported as well.
 2. Organizational Change Management (OCM Services) – see section E comments above, but also a nice graph on explaining ADKAR of Change Management.
 3. Training Services – see section E comments above.
 4. Help Desk Services – see section E comments above.
 5. Transition Out Assistance Services
 - GEP says they will be flexible when transitioning out and believes 4-6 months is optimized timeline for transitioning out.

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1
- Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).
- Points to slides 18-37. Which is their Innovations and Value-Added Services Section.

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Yes provided. Detailed and covered all of their 45 min.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 09/22/2021

EVALUATOR NAME: Joe Zrioka

EVALUATOR DEPARTMENT/STATE: State of Maine - Division of Procurement Services

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - GEP Smart Unified Source to Pay software
 - GEP NEXXE Cognitive Supply Nexus
 -
2. Previous Projects
 - Viatris – implemented direct and indirect buying and accounts payable
 - UCAL – Spend Analysis, Sourcing, Contract Management, Supplier Management
 - Chevron – eProcurement not present in project
 - LDS Church – Contract and Supplier Management
 - UMASS – no evidence of eProcurement
 - Reference calls should be coordinated through GEP
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - Combined state and GEP org chart specific to the project
 - Roles defined
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - D&B report 10/19/2020
 -
 -

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 1
DATE: 12/16/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **YES**

User Experience **YES**

Bidder Best Practices and Roadmap **AGILE, Maintenance Release/testing tight window for bug fixes, minor/low impact enhancements, manage commercials?**

Innovations and Value-Added Features/Services **Organizational Maturity Assessment – IT Procurement not identified, spend analysis, Market Intelligence. How is category management providing more value than the solution itself? I expect increased spend visibility, contract compliance, improved Supplier Performance – Is this innovation or additional cost?**

Customizations/Extensions **YES**

Alternative Funding Models **"GEP does not have any alternate funding models."**

Contract Transition and Flexibility **"GEP is able to comply with the contract review process and transition to a state's current contract terms"**

Functional Requirements

General Functionality **YES - 1 Customized, 3 configurations w/one medium effort, and 36 out of the box.**

Supplier Portal - **1 configuration w/medium effort, 1 integration w/high effort, and 21 out of the box**

Supplier Enablement/Management **9 integrations w/low effort and 34 out of the box.**

Buyer Portal **1 configurations w/medium effort, and 14 out of the box**

Need Identification **1 configurations w/low effort, and 6 out of the box**

Request through Pay **62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 17 in devp and all w/medium effort and 4 out of box for Pcard, 1 configuration w/low effort, and 20 out of the box for Receiving, 11 out of the box for invoicing.**

Catalog Capability **4 configurations w/medium (2) and low (2) LOE, 1 in devp w/low LOE, 34 OOBX**

Sourcing/Bid Management **7 configurations w/medium (1) and low (6) LOE, 1 in devp w/low LOE, 141 OOBX**

Contract Management **8 configurations w/medium (1) and low (5) and high (2) LOE, 80 OOBX**

Vendor Performance **1 configuration w/low LOE, 24 OOBX**

Purchasing/Data Analytics **1 configuration w/low LOE, 36 OOBX**

Technical Requirements

Availability **7 days/week twenty-four hours/day excluding scheduled maintenance and outages**

Accessibility Requirements **WCAG2.1 and Accessibility Conformance Report (based off a VPAT)**

Audit Trail and History **not sure minimum was met for user identifier, date/time stamp, field that was changed and the change that was made.**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 1
DATE: 12/16/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Browsers Supported **YES** Microsoft Edge (Version 70.0 and above), Google Chrome (Version 70.0 and above), Firefox and MacOS Safari
User Accounts and Administration **RBAC**
User Authentication **SAML**
Federated Identity Management – **SSO MFA**
Data Conversion **ETL, Cleanse and Standardize** addresses (Country, Region, City & Street), “Harmonize”
Interface and Integration **CGI Advantage** (example) 2 options for integration
Office Automation Integration **hosted on Microsoft Azure** and integrates with Microsoft Office products
Mobile Device Support **GEP Software** is a mobile-native procurement platform
Mobile Applications **GEPSMART** mobile app on Apple App Store and Google PlayStore
Data Ownership and Access **Missing?**
Data Retention, Archive and Purge Considerations **Yes but what standard?**
Disaster Recovery Plan **Annual test** does it include clients, is this Azure's DR test?
Solution Environments **Development/Quality Control, UAT, Training, Production Environments, multi-tenant mode**
Solution Technical Architecture **YES**
Solution Network Architecture **YES**
System Development Methodology **Agile development life cycle using Azure Dev Ops development tools, Functional, SIT, UAT, Regression/Automation, performance testing. Change Request Governance Process.**
Service Level Agreement **GEP would like to discuss and finalize the SLA requirements**

Security Requirements

Cloud Security Alliance (CSA) Compliance **CAIQ**
Security and Privacy Controls **Did not answer NIST 800-53 question**
Security Certifications **SOC1 Type II and SOC2 Type II, ISO 27018, PCI DSS v1.1, FedRAMP High, CJIS, IRS Publication 1075, HIPAA**
Annual Security Plan **No**
Secure Application and Network Environment **YES**
Secure Application and Network Access **YES**
Data Security **YES**
Personally Identifiable Information Protection **GDPR compliance**
Security/Privacy Issue Occurrence **reports any high severity security breach within 4 hrs – define high**
PII Data Actual/Attempted Access or Disclosure **YES**
Security Breach Reporting **2 hour and 24 hour notification cannot be met**

Implementation Services Requirements

Project Management **AGILE, roles/responsibilities defined**
Project Implementation Methodology **Sm Med Lrg, Risk/Mitigation strategies, Configuration/change control, Issue Tracking/Management,**
Catalog Support Services **hosted and punchout catalogs**
Data Conversion Services **Data centralization, Standardization, enrichment, and optimization**
Interface/Integration Development Services **YES**
Organizational Change Management (OCM Services **Human Centric Change Management**
Training Services **Train the trainer approach no training plan example**
Help Desk Services **global, severity levels**
On-Site System Stabilization Support **On site is on call**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1-Full Solution

DATE: 8/22/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Heavy marketing visuals in presentation
 - Overuse of market buzzwords
 - Underwhelmingly curious if they perform in all capacities the proposal identifies
2. Previous Projects
 - Results are buzz word driven. No savings identified worthy of expense beyond process efficiencies
 - Results achieved are just marketing focused, with vague points
 -
3. Subcontractors
 - GEP is full-service (why also submitting proposals with subcontractors?)
 -
4. Organizational Chart
 - Separate Org Chart from other GEP proposals.
 - Personnel role responsibilities are general in nature.
 - Different titles of employees from other proposals
5. Litigation
 - No litigation identified
 -
 -
6. Financial Viability
 - D&B results not showing concern
 - Unsure about their subcontract KPMG
 -

A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

- (Page 5) Centralized platform. Is this all or none, integration with other platforms?
- (8) Do suppliers have access outside of the portal?
- (10) High levels of functionality
- (13) Non-Value-added work reduction 40-60% is valuable
- (14) Agile no customization to cloud, unclear any potential impact to existing processes
- (15) Bi-Weekly maintenance releases seem overly frequent
- (23) Good gap analysis linking to reporting capabilities
- (24) Would like to see F2F workshops offered as well as virtual
- (30) How does Supplier database incorporate local and OSD vendors?

Functional Requirements

- (48) Interesting how the document process moves from one action to the next
- (46) Show good functionality across different workflows, very robust
- (60) Unsure if catalog search includes both hosted and punchouts including level 2
- (65) Concerned about the "Preferred Supplier" and what makes them chosen over others.
- (70) alludes to level 2 punchouts (searchable in the platform) but only if suppliers allow. How many suppliers allow this?
- (73) Sourcing seems very intuitive
- (79) Vendor Performance is good in the way it creates scorecard type data
- (82) Purchasing data has lots of functionality, would like to better understand if it is perhaps too much
- (RTM Tab 3, line 11, EPROC-SPR-7). Allow supplier access to solicitations, both invited and all others. Response did not meet the requirement. Did not address access to suppliers that have not been invited.

Technical Requirements

- (86) Availability should consider maintenance both planned and unplanned. The method identified is only identifying unexpected events relative to the vendor. The customer is inclusive of all events of any form where the service is unavailable. Their method is providing questionable percentages.
- (97) Single Sign on is preferred
- (102) Good data normalization
- (107) ERP integration is important as most states have existing solutions they will not abandon

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 11/02/2021

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- (CAIQ line 135) Does not support BYOD. Would Single Sign On at state level allow this?
- (CAIQ line 207) Unsure if test environments are available
- (CAIQ lines 216-219) Unsure of liability relationship with GEP and MSFT using Azure. GEP reference to MSFT portal only raise concerns with data breaches or problems and who is liable.
- (CAIQ line 245) No BYOD support, how will this impact states that do not provide state owned laptops/mobile devices to all employees?
- (160) Breach does not include any credit monitoring by vendor or liability acknowledgement

Implementation Services Requirements

- (163+) Project Implementation Methodology is robust
- (167) Projected time periods are not discussed, only unspecified milestones
- (192) How does future state design consider state needs

Managed Services Requirements

- (234) MSFT Intune is MSFT service, GEP does not manage.
- (215) Are training options varied (virtual/In-Person)

Video Demonstrations

- Dashboard formatting is hard on the eyes
- Can create solicitations within the platform
- Scoring within platform with weighted percentages or formulas
- Can invite suppliers, can suppliers invite themselves?
- Evaluators score within
- Interesting Parent-Child relationships
- Unknown if shopping search looks at punchout catalogs
- Results show non-contracted items. Where are they coming from?
- Where do accounting details come from?
- Can reject line items in requisitions or only entire request?
- Does this work with Peoplesoft?
- Supplier management is manual process for data entry?
- Does supplier profile integrate with Oracle or other platforms?
- Arbitrary supplier scorecard?
- Reporting seems intuitive

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

7	Single point of entry for all procurement activity based on their needs or use of the solution	
7	Smart Routing – Wizard driven capabilities	Positive
7	Portal – informs users and supports user work management	

User Experience

8	Wizard driven capabilities	Positive
8	Mobile app has access to many areas. Catalogs, create requisitions, approvals and to view dashboard.	Strength
8	User sets up the look of the dashboard and it stays that way for next login	

Bidder Best Practices and Roadmap

14	Approach to implementation is based on progress made and not timeline	Positive
15	Quarterly general release sent to UAT for a week and then to production. It is sent to production in Default Off mode	Weakness
15	Maintenance release every 2 weeks to fix bugs. Handle like quarterly release – sent to UAT for 1 week first. “the participating entity is not obligated to accept and implement any recommendations.”	Weakness

Supplier Portal

SPR	GEP will onboard all suppliers in the beginning and approved vendors will have access for ongoing basis	Weakness
-----	---	----------

Supplier Enablement/Management

54	Yes, meets requirements and can be used to pre-qualify suppliers	
----	--	--

Buyer Portal

58	Yes, meets requirements. Users can track the entire lifecycle of the transaction from Request – Invoice	
----	---	--

Need Identification

62	Yes, meets requirements	
----	-------------------------	--

Request through Pay

64	Yes, meets requirements. What if there is no contract to match to an order?	
67	3 ways for service procurement.	
PRD 1-12	Yes	
PRD 13	Did not answer correctly	
PRD 14-27	Yes	
PRD 28	Yes, it can handle a trade-in at line item. Would we want to be able to have a negative PO total? For any reason? Not possible here.	Question
PRD 29-36	Yes	
PRD 37-39	User must enter the non-contract items. System does not capture this item for the future or to update a state contract.	Weakness
PRD 40-55	Yes	
PRD 56	Should provide a means to limit creation of backdated purchases. GEP would like to further discuss this requirement in detail with State/Participating entities	Question
PRD 57-62	Yes	

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - 20 + years experience. Formed in 1999
 - Minority and Women owned
 -
 -
2. Previous Projects
 - University client
 - Church client
 - Large Gas Company
 -
3. Subcontractors
 - No Subcontractors for this response
 - GEP would provide software, implementation and value added services
 -
4. Organizational Chart
 - Supplied extensive organizational chart
 - Supplied roles and definitions for GEP team
 - Supplied roles and definitions for entity team
5. Litigation
 - Bidder stated none to report
 -
 -
6. Financial Viability
 - Supplied Duns & Bradstreet report.

 -

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): Stage 2, Category 1 – Full Solution
DATE: 11/08/2021
SME/EVALUATOR NAME: Tom Hastings
DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

One of my major concerns with this response is the vendor has requested many times that they would like further discussion on some of the requirements listed. This response also has many concerns where the entire requirement listed was not addressed in their response.

I believe the concerns would need to be addressed (i.e., PCard functionality) in order for their solution could be offered. I think some of the "clarifications" need be addressed for me to feel comfortable with their solution offering.

General Principal and Requirements

Key Solution Functionality Elements

- PDF Page 5 – Need form completed to be taken to proper module. Page 6 -Will configure catalogs and punchouts. Restrict access to documents. STRENGTH – Cross Functional reporting. Will configure to state specific cases.

User Experience

- STRENGTH Page 8 PDF – User personalization and access tasks from landing page
- Mobile Capability

Bidder Best Practices and Roadmap

- PDF Page 13 – STRENGTH – Best Practices. PAGE 15 – Default OFF Releases!

Innovations and Value-Added Features/Services

- PDF Page 19 – Organizational and Opportunity Assessment, Market Intelligence and Category Management. Lots of information and informational charts!

Customizations/Extensions

- PDF Page 39 – Highly configurable and lays out customer roadmap

Alternative Funding Models

- CONCERN – No alternative funding models available.

Contract Transition and Flexibility

- This vendor complies to this statement.

Functional Requirements

General Functionality

- STRENGTH EPROC-GEN-5 – Multiple options for posting data.
- WEAKNESS -EPROC-GEN-7 – Fill form to gain access?
- WEAKNESS -EPROC-GEN-8 – Can search by commodity code?
- STRENGTH - EPROC-GEN-11 – Can increase the file limit of 30MB.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): Stage 2, Category 1 – Full Solution

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- STRENGTH - EPROC-GEN-17 – Nice to be able to have new release data in the OFF by default mode.
- WEAKNESS - EPROC-GEN-25 – Does not allow email domain change to state email domain on emails sent from the system.
- CONCERN - EPROC-GEN-26 – Need to integrate with ERP to track administrative fees.
- STRENGTH - EPROC-GEN-36 – System has its own “built in” signature process but can integrate as well.

Supplier Portal

- STRENGTH - EPROC-SPR-13- Multiple ways for supplier to submit invoices.
- CONCERN - EPROC-SPR-15 – Did not mention if the SUPPLIER could not get to the historical data in the supplier portal?
- CONCERN - EPROC-SPR-19- Must submit administrative fees via an integration.
- CONCERN - EPROC-SPR-20 – Response seems to be on the user side rather than the supplier portal side?
- CONCERN - EPROC-SPR-23 – Response seems to be on the user side rather than on the supplier side?

Supplier Enablement/Management

- STRENGTH - EPROC-VDR-6 – Each contact can have their own log in to the supplier portal.
- CONCERN - EPROC-VDR-13 – Response did not address the foreign suppliers designation?
- STRENGTH - EPROC-VDR-16 - Triggers expire notifications on certificates
- CONCERN - EPROC-VDR-20 thru EPROC-VDR-27 – These responses ALL refer to the response in EPROC-VDR-19 which provides “link” to a management service solution. We need to ask for clarification on these requirements.

Buyer Portal-

- CONCERN -EPROC-BPRT-6 – System admin might have to run reports on behalf of the user?
- STRENGTH - EPROC-BPRT-10 – Can perform a “system-wide” search from the buyer landing page.
- **CONCERN - EPROC-BPRT-14 -Need to discuss further specific integration requirements? Needs to be addressed at implementation.**
- CONCERN - EPROC-BPRT-15 – Did not state if communication would default to user email address?

Need Identification

- PDF PAGE 62 - The need starts with a request form user needs to fill out.
- Meets all other requirements

Request through Pay

- PDF PAGE 66 – Core Features list is pretty extensive
- STRENGTH - EPROC-PRD-8 – Collated purchase requests into one centralized dashboard.
- CONCERN - EPROC-PRD-24 – Can you limit the user access to the form?
- CONCERN - EPROC-PRD-46 – Did not address the political subdivision unique chart?
- CONCERN - EPROC-PRD-47 – Can you control fields availability based on the agency?
- CONCERN - EPROC-PRD-56 – Vendor response states wants further discussion. Not sure they can meet this requirement.
- CONCERN - EPROC-PRD-59 – Did not submit information of calendar functionality.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): Stage 2, Category 1 – Full Solution

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-WRK-9 and EPROC-WRK-10 – Did not state if the user could enter a reason for workflow by pass?
- WEAKNESS - EPROC-WRK-22 – Referenced a previous requirement as their response to this requirement.
- CONCERN - EPROC-PO-2 – Supplier wants further discussion.
- CONCERN - EPROC-PO-15 – Did not state if they could print in groups?
- CONCERN - EPROC-PC-1 thru EPROC-PC-3, EPROC-PC-5 thru PC – 8, PC-10 thru PC – 15, PC -17 thru PC -19 and PC - 20 – Pcard functionality in development.

Catalog Capability

- PDF Page 69 – Has 3 catalog options with the Internal Catalog being new to me.
- CONCERN - EPROC-CAT-11 – Supplier has requested further discussion on ability to obtain quotes.
- CONCERN - EPROC-CAT-20 - Concern - Response is quick quote process where I thought we were looking for the ability to enter a quote in the punch out catalog?
- CONCERN - EPROC-CAT-38 – Search catalogs without logging in is in development.

Sourcing/Bid Management –

- PDF Page 74 – Comprehensive Automatic Scoring.
- CONCERN - EPROC-SRC-15 and SRC – 16- Supplier would like further discussions of IFQC and IFQP
- CONCERN - EPROC-SRC-19 thru EPROC-SRC-21 – Supplier response did not address if these event types could be done in the system?
- CONCERN - EPROC-SRC-28 – Response was directed at the supplier side and not for participants on the buyer side (solicitation participants).
- CONCERN - EPROC-SRC-37 – Need ability to update templates automatically but this supplier does not recommend.
- CONCERN - EPROC-SRC-83 – Did not address if recording of pre-proposal conference could be stored as part of the event?
- CONCERN - EPROC-SRC-102 – Response is NOT an electronic signature process.
- CONCERN - EPROC-SRC-109 – The ability to enter paper responses in under development and will aligned with entity's go live date.
- CONCERN - EPROC-SRC-130- Supplier wants further discussion on online collaboration.

Contract Management

- PDF – Page 76 – Key Highlights to their Contract Management Solution.
- The contract request form goes directly to creation of a contract avoiding the need for a bid.
- STRENGTH - EPROC-CNT-8 – Mass update to contracts that have the same contract clause that has been updated.
- STRENGTH - EPROC-CNT-12- Built in electronic signature process but can also integrate.
- CONCERN - EPROC-CNT-18 – Supplier response does not address the sharing of responsibility of the contract record.
- CONCERN - EPROC-CNT-20 - This response does not address the contract number being the same as the solicitation number.
- CONCERN - EPROC-CNT-38- Supplier wants further discussion on the ability to capture subcontractor information.

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- **CONCERN - EPROC-CNT-41 – Supplier wants further discussion on certifications.**
- **CONCERN - EPROC-CNT-71 - Supplier wants further discussion on admin fees.**
- **CONCERN - EPROC-CNT-72 - Supplier wants further discussion on admin fees.**

Vendor Performance – Page 78

- CONCERN - EPROC-VPE-15 – Needs to be configured.
-

Purchasing/Data Analytics – Page 81

- PDF Page 82 – They use dashboards to display this data.
- CONCERN - EPROC-PDA-5 – Did they supply list of examples of reports?
- CONCERN - EPROC-PDA-11 - Copied response for contract expiry requirement. This requirement is for purchase orders.
-

Technical Requirements – Page 84

Availability – Page 85

- Offered a calculation of availability of the system

Accessibility Requirements – Page 87

- CONCERN – Did not mention if in compliance with Section 508?

Audit Trail and History – Page 89

- STRENGTH - Allows for adhoc approvers.
-

Browsers Supported – Page 91

- Meets requirements

User Accounts and Administration – Page 93

- STRENGTH - Disabling access does NOT remove access to data.
- CONCERN – Need to contact support to view list of permanently deleted users.

User Authentication – Page 96

- STRENGTH - Integration with OKTA
-

Federated Identity Management – Page 96 – Response is combined with User Authentication

Data Conversion – Page 98

- Data needs to be entered on templates provided by GEP.
- CONCERN - EPROC-TECH-29 – Did not mention if they could migrate attachments
- CONCERN - EPROC-TECH-30 – Interface is available at an additional cost.
-

Interface and Integration – Page 106

- CONCERN - EPROC-TECH-55 – Pcard functionality is in development
-

Office Automation Integration – Page 110

- Meet requirement

Mobile Device Support – Page 112

- EPROC-TECH-62 – this is the RTM number not 61 that is mentioned in the bid.

SME/EVALUATOR NAME: Tom Hastings
DEPARTMENT/STATE: State of Montana

Mobile Applications – Page 112 – Combined with above requirement.

- Meets requirements

Data Ownership and Access – This section was skipped in this response – Should be on page 112

Date Retention, Archive and Purge Considerations

- STRENGTH - Work to implement the state entity's retention plan.
-
-

Disaster Recovery Plan

- Showed their Business Continuity Management Plan

Solution Environments – Page 119

- CONCERN - EPROC-TECH-64 – Does not mention the ability to “refresh” the environments

Solution Technical Architecture – Page 121

- Meets Requirements

Solution Network Architecture – Page 124

- Meets Requirements

System Development Methodology – Page 128

- STRENGTH - Change Request Governance Process

Service Level Agreement – Page 133

- CONCERN – Will discuss this as they move ahead in the process but did provide SLA sample.

Security Requirements

Cloud Security Alliance (CSA) Compliance – Page 137

- Provided questionnaire as an attachment – questions answered

Security and Privacy Controls – Page 138

- Seems to meet requirements

Security Certifications – Page 140

- Supplied tables of certifications

Annual Security Plan – Page 142

- Provided additional attachment Appendix 2 – Information Security Policy

Secure Application and Network Environment – Page 145

- CONCERN - EPROC-SEC-2 – This needs to be configured.
- CONCERN - EPROC-SEC-3 - Does not allow forced log out of user.
-

Secure Application and Network Access – Same as Above?

Data Security – Page 152

- Meets requirements

SME/EVALUATOR NAME: Tom Hastings
DEPARTMENT/STATE: State of Montana

Personally Identifiable Information Protection – Page 155

- Meets requirements of GDPR
-

Security/Privacy Issue Occurrence – Combined with below requirements.

PII Data Actual/Attempted Access or Disclosure – Page 157

- States system has Security Incident Response Plan and Team

Security Breach Reporting – Page 159

- CONCERN – Notification for breach is 4 hours and not the 2 hours listed in the requirement

Implementation Services Requirements

Project Management – Combined with below requirement.

Project Implementation Methodology – Page 162

- STRENGTH - Mentioned key lessons for a successful implementation – Page 179.

Catalog Support Services – Page 184

- Meets Requirements

Data Conversion Services – Page 191

- Meets requirements

Interface/Integration Development Services – Page 199

- Refers to slides 107-109 to see integration approach.
- Provided list of API's
-

Organizational Change Management (OCM Services) – Page 203

- STRENGTH – Readiness Assessment
- Listed all services that they provide

Training Services – Page 214

- Train the trainer approach
- CONCERN – Did not provide links to examples of training materials

Help Desk Services – Page 218

- CONCERN - EPROC-IMPL-5 – Wants further discussion on integration with ticketing solution
- Meets requirements

On-Site System Stabilization Support – Page 226

- Meets requirements

Managed Services Requirements

Solution Support – Page 231

- Only will supply post-implementation support if the state implements their solution.
-

Organizational Change Management (OCM Services) – Page 237

- Meets requirements

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Yes. States 20 years of end-to-end procurement and supply chain expertise.
 - Seem to cover all areas of eprocurement.
2. Previous Projects
 - 4 listed. All private entities. They all fit Category 1.
 - Viatrix. Improved transparency across company with their system.
 - UCAL. Implemented S2C technology (spend analysis, sourcing, contract management, supplier mgt.) and a public bid site.
 - Chevron. Unified their online system with a mobile system.
 - LDS Church. Implement Contract and Supplier Management solution.
3. Subcontractors
 - KPMG LLG
4. Organizational Chart
 - Provided along with job descriptions.
5. Litigation
 - Vendor states none.
6. Financial Viability
 - D&B provided. Low risk.

DATE: 11/17/2021

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Product is GEP Software Source-to-Pay process.
- Note: NB Ventures Inc. dba Global eProcure (GEP) with KPMG LLP
- Product is cloud platform using Azure. SaaS.
- The technical proposal begin with small portions of information. I was unsure if they were meeting the mark, but once I was able to dig into the matrix it helped further see what they can do.
- Overall, it looks like much configuration can take place for any State entity. While this is great, I question how this would affect updates to the software (Clarification).
- Matrix - I like seeing that the level complexity is not all "L". It shows GEP put thought into each for each item.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product is GEP Software Source-to-Pay process. With modules of sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay.

- Single point of entry – yes – a centralized intake form. When I think Single point of entry- I do not think intake form.
- Smart routing – yes – GEP combined this bullet point with Compliance and Workflow. They state the platform can be configured to meet specific compliance policies/rules. GEP gives examples of Guided Buying, Robust Rule Engine, and Category Playbook.
- Compliance – refer to the second bullet.
- Portal – yes – buyers and suppliers have access to dedicated home page portal

- Open marketplace environment – yes – **Configure** hosted catalogs/punchouts.
- Integration – yes – has out of the box integration tool kit and use JSON protocols for document exchange.
- Workflow – yes – refer to the second bullet.
- Document management – yes – stored in centralized repository and accessed per user role.
- Reporting, dashboards and data visualization – yes – in-house cross-functional reporting framework.
- Configurable – yes – GEP Software cloud platform is a preconfigured application. GEP states they will use agile approach to preconfigure sandbox to align to State specific cases / requirements.
- Transparency – Yes – and mention track status on documents.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

2. GEP discusses their intuitive user interface built by using feedback from Fortune 500 costumers, user group requirements, industry standard practices, etc. **I have concerns with the Fortune 500 customers because we want a system that is more relatable to Govt/State business.**

- Initial Screen – yes, mention users can mark initial screen as landing page – **not sure this is what is meant in this section.**
- Intuitive Navigation – yes, GEP combines this bullet with “Wizard-driven capabilities” addresses few clicks, **but doesn't really address wizard capabilities.**
- Wizard-driven capabilities – Refer to second bullet.
- Informative Portal – Yes
- Mobile Optimization – yes, they call it Mobile App – IOS and Android.
- Workload Mgt Functionality – Yes they call it Work Management, addressed; however, **unsure if it contains the same intention of abilities as wanted in the RFP.**
- Role-Based Functionality – Yes, addressed.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

3. GEP introduced 4 best practices and roadmap: (1) Unified Source-to-Pay Platform, (2) Agile Methodology for Software Development, (3) Software Release and Update Cycles, and (4) Customer Success: Providing a High Touch Support Experience Throughout Engagement.

- Latest Technology – No – don't address any. Address their process as in number 3 above.
- Timely updates – yes – Quarterly and biweekly; however, **it's a bit confusing as they use words such as “generally available” Would like to see a more definite timeframe and surety.**
- Alternative Best Practices – yes see below bullet.

- Cost Reduction – Yes – Claim price compression will save 4% – 7% average realized savings, spend compliance 10%-50% reduction of noncompliant spend, productivity 40%-60% reduction in non-value added work, and working capital 10-20% extension in pay terms and 5-30% Increase in early pay discounts.
- Product Roadmap and Cont. Improvement. – Yes – see number 3 above.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

4. Yes - Completed section. They list Level (1) Organization Maturity Assessment, (2) Opportunity Assessment (3) Market Intelligence (4) Category Management. Explained further below.

- GEP illustrates their Assessment Approach in a 4 graphs and explains they would work with State to create a plan to outline desired outcomes by looking at various pieces of procurement operating models and identifying areas of improvement along with other types of analysis. **This reminds me of a BPM.**
- GEP illustrates in 3 graphs how they can analyze procurement spend to identify savings opportunities using GEP benchmarks, SME inputs, and industry best practices.
- GEP illustrates in 5 graphs how leveraging GEP's extensive network of SMEs and researchers could elevate the knowledge and awareness of State's procurement.
- GEP illustrates in 2 graphs a process for end-to-end category management across categories for sustainable outcomes

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

They provide preconfigured application deployed as a standard configuration. They suggest using the standard out of the box software, but will configure as necessary per the requirements of the State.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outlined above for each recommended funding model.

GEP – KPMG proposes two alternative funding model options:

- 1. Hybrid fixed fee plus transaction-based funding model (explained on page 42)**
- 2. Value-Based Funding Model (explained on pages 42-43)**

7. Contract Transition and Flexibility – page 27

GEP complies with the contract review process and transition if negotiate terms. I feel they misunderstood the point of this question.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. Matrix completed. 5 – High (21, 26, 27,28, 39), 3 – Medium (9, 25,36), rest are all “L” Low level of complexity, 3 – “CF Configuration Items (3,5,25), 1 – “C Customization/Extension” (39), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Sourcing/Bid Management Software, Contract Management, Procure-to-Pay.
 - For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able to integrate with other eProcurement Workstreams. In areas where GEP does do this they suggest links or to CF.
 - I do like seeing that the level complexity is not all “L”. It shows GEP put thought into each for each item.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
 - #36 GEP has their own built in electronic signature solution instead of a partnership like docuSign, or adobe sign
 - #38 For number of licenses – sounds like gave cost based on what was provided in proposal; however, they confirm licensing is unlimited for business and supplier users. This may be deceiving, might want to confirm again that it's unlimited also for “State users”
2. Supplier Portal. Tab 3, SPR-1 through SPR-23. Matrix was completed. 1 – High (19), 1 – Medium (6), rest are all “L” Low level of complexity, 1 – “INT - Integration/Interface”(19), 1- “CF-Configuration Item” (6), and the rest “A – Available”. Solutions/Tools/Modules covered – Supplier Enablement / Management Software, GEP Core Platform, Contract Management, Request through Pay.
 - #13 I find it interesting that GEP has their own OCR in-house system. Nice to know, if State did not want to use or integrate theirs.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 Matrix – was completed. 1 – Medium (36), rest all “L” Low level of complexity, 1- “CF-Configuration Item”, and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement / Management, Core Platform.
 - The “A” fields seem to be satisfactorily answered and their solution meets the standards.
 - For the INT items 19-27. GEP has a partnership with Global Risk Management Solutions (GRMS), Rapid Ratings and with TinCheck that provides most of these services. GEP Software will enable a link to these partners to allow users to view. My concern here would be the risk of leaving their system (if any), what security measures are in place?
4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15. Matrix completed. 1 – Medium (9), rest are all “L” Low level of complexity. 1- “CF-Configuration Item”(9), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Supplier Enablement / Management.
 - The “A” fields seem to be satisfactorily answered.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
5. Need Identification. Tab 3, NEED-1 through NEED-7 Matrix completed. All “L” Low level of complexity. 1-“CF-Configuration Item”(5), and the rest “A – Available”. Solutions/Tools/Modules

covered – GEP Sourcing Bid Management, Contract Management, and Request through Pay Software.

- The CF item does not seem to pose a problem. Other items seem to be standard within the software.
6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. Matrix completed. 1–High (PRD28), 5–Medium (PRD11, PRD56, WRK13, PO16, PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21, RC4), rest are all “L” Low level of complexity, 17 – “IN - in development” (PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21), 1- “CF-Configuration Item” (RC21), and the rest “A – Available”. Solutions/Tools/Modules covered–GEP Request through Pay Software, Contract Management.
- For PRD (Purchase Request Development): No issues with this section. GEP’s responses meet the standards and our requests.
 - WRK (Workflow Management): All requirements in this section are sufficiently answered.
 - PO (Purchase Order Generation & Management): All requirements in this section are sufficiently answered.
 - PC (Payment Card Functionality): Much of the complexity is medium and the availability is “in development”. This is concerning if a State is counting on this service.
 - RC (Receiving): All requirements in this section are sufficiently answered.
 - INV (Invoicing): All requirements in this section are sufficiently answered.
7. Catalog Capability - Tab 3, CAT-1 through CAT-40. Matrix completed. 1–High (19), 5–Medium (4,21,25,32,33) and the rest all “L” Low level of complexity, 4–“CF Configuration Item” (31-34), 1 – “ID - in development” (38), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Request through Pay Software, Contract Management.
- Missing 38 – “The eProcurement Catalog functionality should provide the ability for catalogs to be accessible and searchable without requiring the user to login (e.g. public access for read/search only access). State must be able to specify any fields that will not be publicly visible (e.g. Tax ID).” GEP says “ID” and will work with State to have.
 - Other than 38 - All requirements in this section are sufficiently answered.
8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. Matrix completed. 1–High (151), 5–Medium (31,77,78,83,138) and the rest all “L” Low level of complexity, 7–“CF Configuration Item” (17,18,73,76,102,138,147), 1–“ID - in development”(109), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Sourcing/Bid Management Software, Contract Management.
- Items 15 and 16 – GEP says they can handle a surplus sealed bid and IFQC, but then say they would further like to discuss the requirement in detail with State as we move ahead in this process. Clarify – can they handle this type of procurement?
 - In some areas they offer multiple ways to tackle a situation – for example SRC72. This is seen throughout the Matrix.
 - Rest of requirements in this section are sufficiently answered.
9. Contract Management. Tab 3, CNT-1 through CNT-88. Matrix completed. 3–High(30,71,72), 4–Medium (38,41,45,70) and the rest all “L” Low level of complexity, 8–“CF Configuration Item”(20,34,45,51,65,66,71,72), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
- Items 71 and 72 – GEP says they can track suppliers admin fees , but then say they would further like to discuss the requirement in detail with State and understand the logic behind the calculation.
 - Rest of requirements in this section are sufficiently answered.
10. Vendor Performance Tab 3, VPE-1 through VPE-25. Matrix completed. 1–High(14), and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(15), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
- Requirements in this section are sufficiently answered.
11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. Matrix completed. 2–High(32,33) and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(37), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Platform.

- Question #37 – where GEP can offer comparison of punchout item to non contract item. They state yes as long as the supplier is ok exposing themselves to GEP web crawlers. Even if they are ok with this, is there enough security for State and any other web crawlers?
- Rest of requirements in this section are sufficiently answered.

C. **Technical Requirements: pages 49 - 74**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.
 - Maintains a 99.8% uptime with a 24x7 availability.
 - Use Microsoft Azure (for backup)
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Short 3 sentence slide that gives confirmations that GEP: Observes ADA compliance standards, follows WCAG2.1 level AA guidelines, and will provide ACR.
3. **Audit Trail and History RTM:** Tab 4, TECH-1 through TECH-5. Matrix completed. 1–Medium(5) and the rest all “L” Low level of complexity, All “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Audit logs are retained until end of contract life.
 - Mentions backup policies and use of Microsoft Azure backup.
 - Much crossover between slide in technical proposal and matrix. No concerns.
4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, Chrome, Firefox, and Safari). No concerns.
5. **User Accounts and Administration RTM:** Tab 4, TECH-6 through TECH-20. Matrix completed. 1–Medium(12) and the rest all “L” Low level of complexity. 1–“CF Configuration Item”(16), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - No concerns. Meets requirements.
6. **User Authentication RTM:** Tab 4, TECH-21 through TECH-25. Matrix completed. 1–High(24) and the rest all “L” Low level of complexity, 1–“ID In Development”(25), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - #21 – Like the fact that they use Microsoft Active Directory for Single Sign on.
7. **Federated Identity Management –** No concerns. Meets requirements.
8. **Data Conversion RTM:** Tab 4, TECH-26 through TECH-34. Matrix completed. 1–High(28), 1–Medium(30), and the rest all “L” Low level of complexity. With all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Software Implementation services for Supplier Enablement Management, Services for Software Implementation, Services for Spend Analysis, Services for Sourcing/Bid Management, and Services for Request through Pay.*
 - Seem flexible in their approach to converting data and working with the State. A couple assumptions, but they are reasonable.
 - GEP provided many slides with graphs and pics laying out the conversion process. – I found this helpful.
9. **Interface and Integration RTM:** Tab 4, TECH-35 through TECH-60. Matrix completed. 1–Medium(60) and the rest all “L” Low level of complexity, 1–“ID In Development”(55), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Request through pay software, contract management, supplier enablement management.*
 - Met all requirements besides the Pcard #55 which is ID.
 - They list many ERP systems they have or currently integrate with (SAP, Oracle, PeopleSoft, JD Edwards, MS Dynamics, CGI Advantage, etc.) and provide options of how to integrate.

10. Office Automation Integration
 - Yes, GEP integrates with Microsoft products listed and others.
11. Mobile Device Support RTM: Tab 4, TECH-62. Matrix completed. "L" Low level of complexity, "A – Available". Solutions/*Tools/Modules covered* – GEP Core Platform.
 - Yes it can be accessed Mobily
12. Mobile Applications - Nothing add here.
13. Data Ownership and Access
 - State will retain all ownership of data.
14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63. Matrix completed. 1– "L" Low level of complexity, "A – Available". Solutions/*Tools/Modules covered* – GEP Core Platform.
 - Met all requirements. No concerns.
15. Disaster Recovery Plan
 - Coupa.
16. Solution Environments RTM: Tab 4, TECH-64 through TECH-67. Matrix completed "L" Low level of complexity, "A – Available". Solutions/*Tools/Modules covered* – GEP Core Platform.
 - State would receive four environments Development, Quality Control/User Acceptance Testing, Training, and Production.
 - Graphs of each environment are provided and at what point in the process they are used.
17. Solution Technical Architecture
 - Met all requirements. No concerns.
 - Graphs and tools that will be used are provided in the tech. proposal.
18. Solution Network Architecture
 - Again – great graphs listing the software used and when scans, patching, etc. are done.
19. System Development Methodology
 - Normal PM with much explanation and tables/graphs.
20. Service Level Agreement
 - GEP notes they want to discuss and finalize SLA requirements with State and refers us to the GEP SLA.

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance
 - GEP supplied a CAIQ in file 3; I will rely on my more experienced SMEs to help evaluate the CAIQ.
2. Security and Privacy Controls
 - No Concerns based on data in the proposal.
3. Security Certifications
 - No Concerns based on data in the proposal.
4. Annual Security Plan
 - GEP details out their annual security plan.
 - GEP notes that they understand NASPO has asked for any additional documents and to see refer to GEP Appendix 2' which is their Information Security Policy. This will need to be reviewed when negotiating.
5. Secure Application and Network Environment
 - refer to GEP Appendix 3' which is their SMART Application Architecture & Security Overview.
6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6. Matrix completed. 2– Medium(1,2) and the rest all "L" Low level of complexity, 1–"CF Configuration Item"(2), 1–"ID In Development"(3), and the rest "A – Available". Solutions/*Tools/Modules covered* – GEP Core Platform.
 - Mentions backup policies and use of Microsoft Azure backup.
 - GEP meets some of the requirements in this section but need to customize or develop others.
7. Data Security – nothing to add.
8. Personally Identifiable Information Protection – nothing to add.
9. Security/Privacy Issue Occurrence – nothing to add.
10. PII Data Actual/Attempted Access or Disclosure – nothing to add.
11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Matrix completed. 1–High(5) and rest “L” Low level of complexity and all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Seems to have many options for finding help and solutions for customers.
1. Project Management
 - KPMG-GEP is handling the PM portion of the project.
 - They reference using PPM methodology. *It would be nice to see them spell out Agile or Waterfall or a quasi of either, rather than the large umbrella of PPM.*
 - *Most of the PM section is basic definitions and a general outline of a PM for a project.*
 2. Project Implementation Methodology –
 - KPMG is handling the project implementation. (page 176)
 - They use Target Operating Model (TOM) a proprietary tool. (page 176)
 - They explain their process in detail and where GEP will be entering in to help.
 3. Catalog Support Services
 - KPMG is handling
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 - They prefer to train end users.
 4. Data Conversion Services
 - KPMG is handling
 5. Interface/Integration Development Services
 - KPMG-GEP is handling. Used to integrating with several types of ERPs.
 - Seems like it will meet requirements.
 6. Organizational Change Management (OCM Services)
 - Offer a proprietary software tool called TRIP (People Transformation Readiness Platform). It says there is no cost.
 - Like the PM section, the CM section is a bit confusing as it gives some CM tools, but then convolutes and dilutes all of it with wordiness and areas that are not true Change Management
 7. Training Services
 - KPMG-GEP is handling
 - Focus on train the trainer.
 - About training the right people at the right item.
 - Also offer – on -demand web-based training modules, instructor led, reference guides/user manuals, and FAQs.
 8. Help Desk Services – good.
 - *#3 – GEP provides a dedicated team of resources (helpdesk) for users and providers to call 24x5 via phone or email. This is a nice plus.*
 - Great.
 9. On-Site System Stabilization Support – nothing to add.
 - KPMG is handling

F. Managed Services Requirements: pages 128 - 136

- Matrix completed. All “L” Low level of complexity and “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
1. Solution Support
 - Lay out roles in GEP and what each role will be responsible for after the implementation.
 - Lay out graphs of how the system is supported as well.
 2. Organizational Change Management (OCM Services) – see section E comments above, but also a nice graph on explaining ADKAR of Change Management.
 3. Training Services – see section E comments above.
 4. Help Desk Services – see section E comments above.
 5. Transition Out Assistance Services
 - GEP says they will be flexible when transitioning out and believes 4-6 months is optimized timeline for transitioning out.

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any **additional** services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1

- Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Pages 290 -303. Offered by KPMG, they suggest:
 - Strategic Sourcing (page 290)
 - Should-Cost Modeling (page 293)
 - Contract performance Management (page 298)
 - Localization Support (page 302)
- There is an Assumptions Page (304-310)
- This page definitely will need to be reviewed before negotiations if this proposal continues for award, as it has:
 - concepts of separate contracts vs. a partnership or a subcontractor,
 - they state changes of their pricing,
 - Pricing and increase of 5% annually (for implementation??)
 - Point to other terms and conditions in the AICPA
 - Amongst many other pages for review

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Yes provided. Detailed and covered all of their 45 min.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (NB Ventures (GEP) & KPMG)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - GEP Smart Unified Source to Pay software
 - GEP NEXXE Cognitive Supply Nexus
 -
2. Previous Projects
 - Viatris – implemented direct and indirect buying and accounts payable
 - UCAL – Spend Analysis, Sourcing, Contract Management, Supplier Management
 - Chevron – eProcurement not present in project
 - LDS Church – Contract and Supplier Management
 - Reference calls should be coordinated through GEP
3. Subcontractors
 - KPMG
 -
 -
4. Organizational Chart
 - Combined state, KPMG, and GEP org chart specific to the project
 - Roles defined
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - D&B report 10/19/2020

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **YES**

User Experience **YES**

Bidder Best Practices and Roadmap **AGILE, Maintenance Release/testing tight window for bug fixes, minor/low impact enhancements, manage commercials?**

Innovations and Value-Added Features/Services **Organizational Maturity Assessment – IT Procurement not identified, spend analysis, Market Intelligence. How is category management providing more value than the solution itself? I expect increased spend visibility, contract compliance, improved Supplier Performance – Is this innovation or additional cost?**

Customizations/Extensions **YES**

Alternative Funding Models **(1) Hybrid fixed fee(50-75% of implementation costs) plus transaction-based (1-3% for every PO), (2) Value-Based funding models (Strategic sourcing 4% to 15% spend visibility 1% 2.1% spend compliance 2.5% to 5% early payment discounts 0.3% two 2% optimized P card usage 0.5% to 2% supplier payment method 0.1% to 2% process optimization 3% to 5%**

Contract Transition and Flexibility **“GEP is able to comply with the contract review process and transition to a state's current contract terms”**

Functional Requirements

General Functionality **YES - 1 Customized, 3 configurations w/one medium effort, and 36 out of the box.**

Supplier Portal - **1 configuration w/medium effort, 1 integration w/high effort, and 21 out of the box**

Supplier Enablement/Management **9 integrations w/low effort and 34 out of the box.**

Buyer Portal **1 configurations w/medium effort, and 14 out of the box**

Need Identification **1 configurations w/low effort, and 6 out of the box**

Request through Pay **62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 17 in devp and all w/medium effort and 4 out of box for Pcard, 1 configuration w/low effort, and 20 out of the box for Receiving, 11 out of the box for invoicing.**

Catalog Capability **4 configurations w/medium (2) and low (2) LOE, 1 in devp w/low LOE, 34 OOBX**

Sourcing/Bid Management **7 configurations w/medium (1) and low (6) LOE, 1 in devp w/low LOE, 141 OOBX**

Contract Management **8 configurations w/medium (1) and low (5) and high (2) LOE, 80 OOBX**

Vendor Performance **1 configuration w/low LOE, 24 OOBX**

Purchasing/Data Analytics **1 configuration w/low LOE, 36 OOBX**

Technical Requirements

Availability **7 days/week twenty-four hours/day excluding scheduled maintenance and outages**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP KPMG
CATEGORY #(s): 1
DATE: 12/17/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Accessibility Requirements **WCAG2.1 and Accessibility Conformance Report (based off a VPAT)**
Audit Trail and History **not sure minimum was met for user identifier, date/time stamp, field that was changed and the change that was made.**
Browsers Supported **YES Microsoft Edge (Version70.0and above), Google Chrome (Version70.0 and above), Firefox and MacOS Safari**
User Accounts and Administration **RBAC**
User Authentication **SAML**
Federated Identity Management– **SSO MFA**
Data Conversion **ETL, Cleanse and Standardize addresses (Country,Region,City&Street), “Harmonize”**
Interface and Integration **CGI Advantage (example) 2 options for integration**
Office Automation Integration **hosted on Microsoft Azure and integrates with Microsoft Office products**
Mobile Device Support **GEPSMART is a mobile-native procurement platform**
Mobile Applications **GEPSMART mobile app on Apple App Store and Google PlayStore**
Data Ownership and Access **Missing?**
Date Retention, Archive and Purge Considerations **Yes but what standard?**
Disaster Recovery Plan **Annual test does it include clients, is this Azures DR test?**
Solution Environments **Development/Quality Control, UAT, Training, Production Environments, multi-tenant mode**
Solution Technical Architecture **YES**
Solution Network Architecture **YES**
System Development Methodology **Agile development life cycle using Azure Dev Ops development tools, Functional, SIT, UAT, Regression/Automation, performance testing. Change Request Governance Process.**
Service Level Agreement **GEP would like to discuss and finalize the SLA requirements**

Security Requirements

Cloud Security Alliance (CSA) Compliance **CAIQ**
Security and Privacy Controls **Did not answer NIST 800-53 question**
Security Certifications **SOC1 Type II and SOC2 Type II, ISO 27018, PCI DSS v1, FedRAMP High, CJIS, IRS Publication 1075, HIPAA**
Annual Security Plan **No**
Secure Application and Network Environment **YES**
Secure Application and Network Access **YES**
Data Security **YES**
Personally Identifiable Information Protection **GDPR compliance**
Security/Privacy Issue Occurrence **reports any high severity security breach within 4 hrs – define high**
PII Data Actual/Attempted Access or Disclosure **YES**
Security Breach Reporting **2 hour and 24 hour notification cannot be met**

Implementation Services Requirements

Project Management **Program and Project Management (PPM) Deliverables are an integrated project plan, a project charter, risk, action, issue, decision logs, project status reports, steering committee status reports, and a project communications plan.**
Project Implementation Methodology **Governance of scope, schedule, budget, quality, resource, communications, risk, and issue management.**

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP KPMG
CATEGORY #(s): 1
DATE: 12/17/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Catalog Support Services **Punch-out catalogs**, which are maintained by vendor and require exiting eProcurement tool and going to vendors catalog. **Hosted catalogs**, which are maintained by vendor or customer and reside within eProcurement tool.

Data Conversion Services Data Assessment, data conversion source and environment analysis, initial data extract, mock data extract, production data extract , data cleansing and harmonization, transform and load process , quality assurance and reconciliation.

Interface/Integration Development Services CGI advantage, PeopleSoft, Oracle, and SAP. Initiate and analyze, design, build, configure and test, cutover, train, move to production, post implementation hyper care.

Organizational Change Management (OCM Services Vision - make it clear, validate - make it known, construct - make it real, deploy -make it happen, evolve - make it stick. Mature methodology.

Training Services Vision - validate - construct - deploy - evolve Standard methodology like OCM

Help Desk Services global, severity levels same as other GEP props

On-Site System Stabilization Support Blend of on site implementation project team members and off-site resources. Tiered support model- critical, high, medium, and low

Managed Services Requirements

Solution Support **YES**

Organizational Change Management (OCM Services **YES**

Training Services **YES**

Help Desk Services **YES**

Transition Out Assistance Services **robust**

Other Available Resources **Shouldn't these other available services be part of the E procurement tool?**

Assumptions - Price increase in year 2022, Government furnished equipment required. Assume limit of 15 pilot agencies during each implementation. Two environments are assumed to be procured, production and nonproduction but this does not sync with earlier descriptions in the proposal where more than two environments were listed. Many client responsibilities.

Video Demonstrations

- Dashboard
- Templates
- Clause repository which can link to contracts
- Contract wizard
- Supplier enablement
- Vendor performance scorecards
- IT Procurement

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1-Full Solution

DATE: 8/23/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Heavy marketing visuals in presentation
 - Overuse of market buzzwords
 - Underwhelmingly curious if they perform in all capacities the proposal identifies
2. Previous Projects
 - Results are buzz word driven. No savings identified worthy of expense beyond process efficiencies
 - Results achieved are just marketing focused, with vague points
 -
3. Subcontractors
 - Subcontracting with KPMG
 - Description is too high level not identifying what benefits they will bring to NASPO
 -
4. Organizational Chart
 - Unsure if these are the resources for NASPO or complete US/Worldwide resources.
 - More ePro projects than anyone but no numbers to support it
 - Personnel role responsibilities are general in nature.
5. Litigation
 - No litigation identified
 -
 -
6. Financial Viability
 - D&B results not showing concern
 - Unsure about their subcontract KPMG
 -

Individual SME Comments:

General Principal and Requirements

- (Page 5) Centralized platform. Is this all or none, integration with other platforms?
- (8) Do suppliers have access outside of the portal
- (10) High levels of functionality
- (13) Non-Value-added work reduction 40-60% is valuable
- (14) Agile no customization to cloud, unclear any potential impact to existing processes
- (15) Bi-Weekly maintenance releases seem overly frequent
- (23) Good gap analysis linking to reporting capabilities
- (24) Would like to see F2F workshops offered as well as virtual
- (30) How does Supplier database incorporate local and OSD vendors?

Functional Requirements

- (48) Interesting how the document process moves from one action to the next
- (46) Show good functionality across different workflows, very robust
- (60) Unsure if catalog search includes both hosted and punchouts.
- (65) Concerned about the "Preferred Supplier" and what makes them chosen over others.
- (70) alludes to level 2 punchouts (searchable in the platform) but only if suppliers allow. How many suppliers allow this?
- (73) Sourcing seems very intuitive
- (79) Vendor Performance is good in the way it creates scorecard type data
- (82) Purchasing data has lots of functionality, would like to better understand if it is perhaps too much
- (RTM Tab 3, line 11, EPROC-SPR-7). Allow supplier access to solicitations, both invited and all others. Response did not meet the requirement. Did not address access to suppliers that have not been invited.

Technical Requirements

- (86) Availability should consider maintenance both planned and unplanned. The method identified is only identifying unexpected events relative to the vendor. The customer is inclusive of all events of any form where the service is unavailable. Their method is not providing accurate percentages.
- (97) Single Sign on is preferred
- (102) Good data normalization
- (107) ERP integration is important as most states have existing solutions they will not abandon

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 12/01/2021

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- (CAIQ line 135) Does not support BYOD. Would Single Sign On at state level allow this?
- (CAIQ line 207) Unsure if test environments are available
- (CAIQ lines 216-219) Unsure of liability relationship with GEP and MSFT using Azure. GEP reference to MSFT portal only raise concerns with data breaches or problems and who is liable.
- (CAIQ line 245) No BYOD support, how will this impact states that do not provide state owned laptops/mobile devices to all employees?
- (160) Breach does not include any credit monitoring by vendor or liability acknowledgement

Implementation Services Requirements

- (163+) Project Implementation Methodology is robust, very general discussion
- (187) Good balance of responsibilities

Managed Services Requirements

- (234) MSFT Intune is MSFT service, GEP does not manage.
- (215) Are training options varied (virtual/In-Person)

Video Demonstrations

- Dashboard formatting is hard on the eyes
- Can create solicitations within the platform
- Scoring withing platform with weighted percentages or formulas
- Can invite suppliers, can suppliers invite themselves?
- Evaluators score within
- Interesting Parent-Child relationships
- Unknown if shopping search looks at punchout catalogs
- Results show non-contracted items. Where are they coming from?
- Where do accounting details come from?
- Can reject line items in requisitions or only entire request?
- Does this work with Peoplesoft?
- Supplier management is manual process for data entry?
- Does supplier profile integrate with Oracle or other platforms?
- Arbitrary supplier scorecard?
- Reporting seems intuitive

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): CAT1 STAGE1

DATE: 08/23/2021

EVALUATOR NAME: Stacey Winter

EVALUATOR DEPARTMENT/STATE: Purchasing/North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - End to end procurement and supply chain
 - 20 years
 - Woman and minority owned
2. Previous Projects
 - Viatris, UCAL, Chevron and LDS Church
 -
 -
3. Subcontractors
 - Global Organization of independent professional services firms.
 - Will subcontract with KPMG
 -
4. Organizational Chart
 - Org chart is combination of Client, KMPG and GEP
 -
 -
5. Litigation
 - No material or significant claims, litigation or regulatory actions in the past 5 years
 - No law suits
 -
6. Financial Viability
 - D & B Low risk
 -
 -

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

7	Single point of entry for all procurement activity based on their needs or use of the solution	
7	Smart Routing – Wizard driven capabilities	Positive
7	Portal – informs users and supports user work management	

User Experience

8	Wizard driven capabilities	Positive
8	Mobile app has access to many areas. Catalogs, create requisitions, approvals and to view dashboard.	Strength
8	User sets up the look of the dashboard and it stays that way for next login	

Bidder Best Practices and Roadmap

14	Approach to implementation is based on progress made and not timeline	Positive
15	Quarterly general release sent to UAT for a week and then to production. It is sent to production in Default Off mode	Weakness
15	Maintenance release every 2 weeks to fix bugs. Handle like quarterly release – sent to UAT for 1 week first. “the participating entity is not obligated to accept and implement any recommendations.”	Weakness

innovations and Value-Added Features/Services

18-37	These are optional 1. Organizational Maturity Assessment – 16 weeks – a lot of time and a lot of people involved to get current state assessment. 2. Opportunity Assessment -spend analysis on current practices. 3. Market Intelligence 2-3 days for off the shelf report. 2.5 weeks for detailed reports 4. Category Management	1.Concern- we do know pricing - depends on scope, level of detail, and timing

Individual SME Comments: This response is the same as GEP 1 & 3 and GEP 1 & 4 up until funding models' section as this response has funding models

One of my major concerns with this response is the vendor has requested many times that they would like further discussion on some of the requirements listed. This response also has many concerns where the entire requirement listed was not addressed in their response.

I believe the concerns would need to be addressed (i.e., PCard functionality) in order for their solution could be offered. I think some of the "clarifications" need be addressed for me to feel comfortable with their solution offering.

General Principal and Requirements

Key Solution Functionality Elements

- PDF – Need form completed to be taken to proper module. -Will configure catalogs and punchouts. Restrict access to documents. STRENGTH – Cross Functional reporting. Will configure to state specific cases.

User Experience

- STRENGTH Page 8 PDF – User personalization and access tasks from landing page
- Mobile Capability

Bidder Best Practices and Roadmap

- PDF Page 12 – STRENGTH – Best Practices. PAGE 15 – Default OFF Releases!

Innovations and Value-Added Features/Services

- PDF Page 19 – Organizational and Opportunity Assessment, Market Intelligence and Category Management. Lots of information and informational charts!

Customizations/Extensions

- PDF Page 39 – Highly configurable and lays out customer roadmap

Alternative Funding Models – Page 40

- Offered 2 different funding models, hybrid and value based.

Contract Transition and Flexibility

- This vendor complies to this statement.

Functional Requirements – Same response as GEP 1 & 3 up until the Implementation Services Requirements

General Functionality

- STRENGTH EPROC-GEN-5 – Multiple options for posting data.
- WEAKNESS -EPROC-GEN-7 – Fill form to gain access?
- WEAKNESS -EPROC-GEN-8 – Can search by commodity code?
- STRENGTH - EPROC-GEN-11 – Can increase the file limit of 30MB.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- STRENGTH - EPROC-GEN-17 – Nice to be able to have new release data in the OFF by default mode.
- WEAKNESS - EPROC-GEN-25 – Does not allow email domain change to state email domain on emails sent from the system.
- CONCERN - EPROC-GEN-26 – Need to integrate with ERP to track administrative fees.
- STRENGTH - EPROC-GEN-36 – System has its own “built in” signature process but can integrate as well.

Supplier Portal

- STRENGTH - EPROC-SPR-13- Multiple ways for supplier to submit invoices.
- CONCERN - EPROC-SPR-15 – Did not mention if the SUPPLIER could not get to the historical data in the supplier portal?
- CONCERN - EPROC-SPR-19- Must submit administrative fees via an integration.
- CONCERN - EPROC-SPR-20 – Response seems to be on the user side rather than the supplier portal side?
- CONCERN - EPROC-SPR-23 – Response seems to be on the user side rather than on the supplier side?

Supplier Enablement/Management

- STRENGTH - EPROC-VDR-6 – Each contact can have their own log in to the supplier portal.
- CONCERN - EPROC-VDR-13 – **Response did not address the foreign supplier's designation?**
- STRENGTH - EPROC-VDR-16 - Triggers expire notifications on certificates
- CONCERN - EPROC-VDR-20 thru EPROC-VDR-27 – These responses ALL refer to the response in EPROC-VDR-19 which provides “link” to a management service solution. We need to ask for clarification on these requirements.

Buyer Portal-

- CONCERN -EPROC-BPRT-6 – System admin might have to run reports on behalf of the user?
- STRENGTH - EPROC-BPRT-10 – Can perform a “system-wide” search from the buyer landing page.
- **CONCERN - EPROC-BPRT-14 -Need to discuss further specific integration requirements?** Needs to be addressed at implementation.
- CONCERN - EPROC-BPRT-15 – Did not state if communication would default to user email address?

Need Identification

- PDF PAGE 62 - The need starts with a request form user needs to fill out.
- Meets all other requirements

Request through Pay

- PDF PAGE 66 – Core Features list is extensive
- STRENGTH - EPROC-PRD-8 – Collated purchase requests into one centralized dashboard.
- CONCERN - EPROC-PRD-24 – Can you limit the user access to the form?
- CONCERN - EPROC-PRD-46 – Did not address the political subdivision unique chart?
- CONCERN - EPROC-PRD-47 – Can you control fields availability based on the agency?
- **CONCERN - EPROC-PRD-56 – Vendor response states wants further discussion. Not sure they can meet this requirement.**
- CONCERN - EPROC-PRD-59 – Did not submit information of calendar functionality.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-WRK-9 and EPROC-WRK-10 – Did not state if the user could enter a reason for workflow bypass?
- WEAKNESS - EPROC-WRK-22 – Referenced a previous requirement as their response to this requirement.
- **CONCERN - EPROC-PO-2 – Supplier wants further discussion.**
- CONCERN - EPROC-PO-15 – Did not state if they could print in groups?
- CONCERN - EPROC-PC-1 thru EPROC-PC-3, EPROC-PC-5 thru PC – 8, PC-10 thru PC – 15, PC -17 thru PC -19 and PC - 20 – Pcard functionality in development.

Catalog Capability

- PDF Page 69 – Has 3 catalog options with the Internal Catalog being new to me.
- CONCERN - EPROC-CAT-11 – Supplier has requested further discussion on ability to obtain quotes.
- CONCERN - EPROC-CAT-20 - Concern - Response is quick quote process where I thought we were looking for the ability to enter a quote in the punch out catalog?
- CONCERN - EPROC-CAT-38 – Search catalogs without logging in is in development.

Sourcing/Bid Management –

- PDF Page 74 – Comprehensive Automatic Scoring.
- CONCERN - EPROC-SRC-15 and SRC – 16- Supplier would like further discussions of IFQC and IFQP
- CONCERN - EPROC-SRC-19 thru EPROC-SRC-21 – Supplier response did not address if these event types could be done in the system?
- CONCERN - EPROC-SRC-28 – Response was directed at the supplier side and not for participants on the buyer side (solicitation participants).
- CONCERN - EPROC-SRC-37 – Need ability to update templates automatically but this supplier does not recommend.
- CONCERN - EPROC-SRC-83 – Did not address if recording of pre-proposal conference could be stored as part of the event?
- CONCERN - EPROC-SRC-102 – Response is NOT an electronic signature process.
- CONCERN - EPROC-SRC-109 – The ability to enter paper responses in under development and will aligned with entity's go live date.
- **CONCERN - EPROC-SRC-130- Supplier wants further discussion on online collaboration.**

Contract Management

- PDF – Page 78 – Key Highlights to their Contract Management Solution.
- The contract request form goes directly to creation of a contract avoiding the need for a bid.
- STRENGTH - EPROC-CNT-8 – Mass update to contracts that have the same contract clause that has been updated.
- STRENGTH - EPROC-CNT-12- Built in electronic signature process but can also integrate.
- CONCERN - EPROC-CNT-18 – Supplier response does not address the sharing of responsibility of the contract record.
- CONCERN - EPROC-CNT-20 - This response does not address the contract number being the same as the solicitation number.
- **CONCERN - EPROC-CNT-38- Supplier wants further discussion on the ability to capture subcontractor information.**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-CNT-41 – Supplier wants further discussion on certifications.
- CONCERN - EPROC-CNT-71 - Supplier wants further discussion on admin fees.
- CONCERN - EPROC-CNT-72 - Supplier wants further discussion on admin fees.

Vendor Performance – Page 80

- CONCERN - EPROC-VPE-15 – Needs to be configured.
-

Purchasing/Data Analytics – Page 82

- PDF Page 82 – They use dashboards to display this data.
- CONCERN - EPROC-PDA-5 – Did they supply list of examples of reports?
- CONCERN - EPROC-PDA-11 - Copied response for contract expiry requirement. This requirement is for purchase orders.
-

Technical Requirements – Page 85

Availability – Page 86

- Offered a calculation of availability of the system

Accessibility Requirements – Page 88

- CONCERN – Did not mention if in compliance with Section 508?

Audit Trail and History – Page 90

- STRENGTH - Allows for adhoc approvers.
-

Browsers Supported – Page 92

- Meets requirements

User Accounts and Administration – Page 94

- STRENGTH - Disabling access does NOT remove access to data.
- CONCERN – Need to contact support to view list of permanently deleted users.

User Authentication – Page 96

- STRENGTH - Integration with OKTA
-

Federated Identity Management – Page 97 – Response is combined with User Authentication

Data Conversion – Page 99

- Data needs to be entered on templates provided by GEP.
- CONCERN - EPROC-TECH-29 – Did not mention if they could migrate attachments
- CONCERN - EPROC-TECH-30 – Interface is available at an additional cost.
-

Interface and Integration – Page 107

- CONCERN - EPROC-TECH-55 – Pcard functionality is in development
-

Office Automation Integration – Page 111

- Meet requirement

Mobile Device Support – Page 113

- EPROC-TECH-62 – this is the RTM number not 61 that is mentioned in the bid.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Mobile Applications – Page 113 – Combined with above requirement.

- Meets requirements

Data Ownership and Access – This section was skipped in this response – Should be on page 112

Date Retention, Archive and Purge Considerations – Page 116

- STRENGTH - Work to implement the state entity's retention plan.
-
-

Disaster Recovery Plan – Page 118

- Showed their Business Continuity Management Plan

Solution Environments – Page 120

- CONCERN - EPROC-TECH-64 – Does not mention the ability to “refresh” the environments

Solution Technical Architecture – Page 122

- Meets Requirements

Solution Network Architecture – Page 125

- Meets Requirements

System Development Methodology – Page 129

- STRENGTH - Change Request Governance Process

Service Level Agreement – Page 134

- CONCERN – Will discuss this as they move ahead in the process but did provide SLA sample.

Security Requirements

Cloud Security Alliance (CSA) Compliance – Page 137

- Provided questionnaire as an attachment – questions answered

Security and Privacy Controls – Page 139

- Seems to meet requirements

Security Certifications – Page 141

- Supplied tables of certifications

Annual Security Plan – Page 143

- Provided additional attachment Appendix 2 – Information Security Policy

Secure Application and Network Environment – Page 146

- CONCERN - EPROC-SEC-2 – This needs to be configured.
- CONCERN - EPROC-SEC-3 - Does not allow forced log out of user.
-

Secure Application and Network Access – Same as Above?

Data Security – Page 153

- Meets requirements

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Personally Identifiable Information Protection – Page 156

- Meets requirements of GDPR

Security/Privacy Issue Occurrence – Combined with below requirements.

PII Data Actual/Attempted Access or Disclosure – Page 158

- States system has Security Incident Response Plan and Team

Security Breach Reporting – Page 160

- CONCERN – Notification for breach is 4 hours and not the 2 hours listed in the requirement

Implementation Services Requirements

Project Management – Combined with below requirement

Project Implementation Methodology – Page 163

- Program and Project Management Methodology. GEP-KPMG team
- Use PPM Toolkit
- Provided Sample Implementation Plan – Page 185
- Extensive Staffing Plan

Catalog Support Services – Page 195

- Offer complete catalog support and set up.

Data Conversion Services – Page 198

- Analysis, Extraction, Cleansing, Transform and Load
- Performs quality assurance.
- Offer Data Load Templates

Interface/Integration Development Services – Page 205

- Offers “phased” approach
- Provided possible list of system integrations and Interfaces – Page 210
-

Organizational Change Management (OCM Services) – Page 213

- Provided government change management example
- Make It methodology – Page 216
- Customizable approach – Page 224

Training Services – Page 226

- Aligns with their implementation plan – Page 227
- Use Target Learning Model – Page 229
- Recommended Training Plan – Page 233
- Train the Trainer – Page 237
- Recommends Supplier Training – Page 239

Help Desk Services – Page 241

- Same response as GEP 1 & 3 and GEP 1 & 4

On-Site System Stabilization Support – Page 249

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - KPMG

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Meets requirements

Managed Services Requirements - Same response as GEP 1 & 3 and GEP 1 & 4

Solution Support -Page 252

-

Organizational Change Management (OCM Services - Same response as GEP 1 & 3 and GEP 1 & 4

Training Services – Page 273

- Train the Trainer Approach
- Training Plan – Page 276

Catalog Support Services - Page 277

- Detailed online process for hosted or punch out catalogs.

Help Desk Services – Page 284

- Refer to slides 243-249 for Details

Transition Out Assistance Services – Page 286

- Provided GEP's Approach

Other Available Services – Page 289

- Strategic Sourcing
- Should – Cost Modeling – Page 293
- Contract Performance Management – Page 298
- Localization Support – Page 302

Assumptions – Page 304 – These need to be presented up front to the State entity.

- Price increase every of 5 % year over year
- 15 pilot agencies during implementation
-

Video Demonstrations – This video is the same for responses GEP 1 & 3 and GEP 1 & 4

- Reporting Dashboard is helpful for reporting.
- This system has the functionality called “Guided Buying” which allows the user to perform a keyword search which results in the user being in the correct location needed based on their search (Contract, Punch Out Catalog, Hosted Catalog, Purchase Request, etc.)

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP – Optis Consulting

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Yes. States 20 years of end-to-end procurement and supply chain expertise.
 - Seem to cover all areas of eprocurement.
2. Previous Projects
 - 4 listed for GEP. All private entities. They all fit Category 1.
 - Viatrix. Improved transparency across company with their system.
 - UCAL. Implemented S2C technology (spend analysis, sourcing, contract management, supplier mgt.) and a public bid site.
 - Chevron. Unified their online system with a mobile system.
 - LDS Church. Implement Contract and Supplier Management solution.
3. Subcontractors
 - Optis Consulting. A source to pay consultant.
4. Organizational Chart
 - Provided along with job descriptions.
5. Litigation
 - Vendor states they have **no material or significant** claims, litigation or regulatory actions against them.
6. Financial Viability
 - D&B provided. Low risk.

Individual Comments:

Overall/General

- Product is GEP Software Source-to-Pay process.
- Note: NB Ventures Inc. dba Global eProcure (GEP) and Optis
- Product is cloud platform. SaaS.
- The technical proposal begin with small portions of information and I was unsure if they were meeting the mark, but once I was able to dig into the matrix it helped further see what they can do.
- Overall, it looks like much configuration can take place for any State entity. While this is great, I question how this would affect updates to the software (Clarification).
- Matrix - I like seeing that the level complexity is not all "L". It shows GEP put thought into each for each item.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product is GEP Software Source-to-Pay process. With modules of sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay.

- Single point of entry – yes – a centralized intake form. When I think Single point of entry- I do not think intake form.
- Smart routing – yes – GEP combined this bullet point with Compliance and Workflow. They state the platform can be configured to meet specific compliance policies/rules. GEP gives examples of Guided Buying, Robust Rule Engine, and Category Playbook.
- Compliance – refer to the second bullet.
- Portal – yes – buyers and suppliers have access to dedicated home page portal

- Open marketplace environment – yes – **Configure** hosted catalogs/punchouts.
- Integration – yes – has out of the box integration tool kit and use JSON protocols for document exchange.
- Workflow – yes – refer to the second bullet.
- Document management – yes – stored in centralized repository and accessed per user role.
- Reporting, dashboards and data visualization – yes – in-house cross-functional reporting framework.
- Configurable – yes – GEP Software cloud platform is a preconfigured application. GEP states they will use agile approach to preconfigure sandbox to align to State specific cases / requirements.
- Transparency – Yes – and mention track status on documents.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

2. GEP discusses their intuitive user interface built by using feedback from Fortune 500 costumers, user group requirements, industry standard practices, etc. **I have concerns with the Fortune 500 customers because we want a system that is more relatable to Govt/State business.**

- Initial Screen – yes, mention users can mark initial screen as landing page – **not sure this is what is meant in this section.**
- Intuitive Navigation – yes, GEP combines this bullet with “Wizard-driven capabilities” addresses few clicks, **but doesn't really address wizard capabilities.**
- Wizard-driven capabilities – Refer to second bullet.
- Informative Portal – Yes
- Mobile Optimization – yes, they call it Mobile App – IOS and Android.
- Workload Mgt Functionality – Yes they call it Work Management, addressed; however, **unsure if it contains the same intention of abilities as wanted in the RFP.**
- Role-Based Functionality – Yes, addressed.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

3. GEP introduced 4 best practices and roadmap: (1) Unified Source-to-Pay Platform, (2) Agile Methodology for Software Development, (3) Software Release and Update Cycles, and (4) Customer Success: Providing a High Touch Support Experience Throughout Engagement.

- Latest Technology – No – don't address any. Address their process as in number 3 above.
- Timely updates – yes – Quarterly and biweekly; however, **it's a bit confusing as they use words such as “generally available” Would like to see a more definite timeframe and surety.**
- Alternative Best Practices – yes see below bullet.

- Cost Reduction – Yes – Claim price compression will save 4% – 7% average realized savings, spend compliance 10%-50% reduction of noncompliant spend, productivity 40%-60% reduction in non-value added work, and working capital 10-20% extension in pay terms and 5-30% Increase in early pay discounts.
- Product Roadmap and Cont. Improvement. – Yes – see number 3 above.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

4. Yes - Completed section. They list Level (1) Organization Maturity Assessment, (2) Opportunity Assessment (3) Market Intelligence (4) Category Management. Explained further below.

- GEP illustrates their Assessment Approach in a 4 graphs and explains they would work with State to create a plan to outline desired outcomes by looking at various pieces of procurement operating models and identifying areas of improvement along with other types of analysis. **This reminds me of a BPM.**
- GEP illustrates in 3 graphs how they can analyze procurement spend to identify savings opportunities using GEP benchmarks, SME inputs, and industry best practices.
- GEP illustrates in 5 graphs how leveraging GEP's extensive network of SMEs and researchers could elevate the knowledge and awareness of State's procurement.
- GEP illustrates in 2 graphs a process for end-to-end category management across categories for sustainable outcomes

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

They provide preconfigured application deployed as a standard configuration. They suggest using the standard out of the box software, but will configure as necessary per the requirements of the State.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outlined above for each recommended funding model.

GEP does not have alternate funding models. They refer to Exhibit 3. Cost Proposal and other revisions of cost proposal.

7. Contract Transition and Flexibility – page 27

GEP complies with the contract review process and transition if negotiate terms. I feel they misunderstood the point of this question.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. Matrix completed. 5 – High (21, 26, 27, 28, 39), 3 – Medium (9, 25, 36), rest are all “L” Low level of complexity, 3 – “CF Configuration Items (3, 5, 25), 1 – “C Customization/Extension” (39), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Sourcing/Bid Management Software, Contract Management, Procure-to-Pay.
 - For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able to integrate with other eProcurement Workstreams. In areas where GEP does do this they suggest links or to CF.
 - I do like seeing that the level complexity is not all “L”. It shows GEP put thought into each for each item.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
 - #36 GEP has their own built in electronic signature solution instead of a partnership like docusign, or adobe sign
 - #38 For number of licenses – sounds like gave cost based on what was provided in proposal; however, they confirm licensing is unlimited for business and supplier users. This may be deceiving, might want to confirm again that it's unlimited also for “State users”
2. Supplier Portal. Tab 3, SPR-1 through SPR-23. Matrix was completed. 1 – High (19), 1 – Medium (6), rest are all “L” Low level of complexity, 1 – “INT - Integration/Interface”(19), 1- “CF-Configuration Item” (6), and the rest “A – Available”. Solutions/Tools/Modules covered – Supplier Enablement / Management Software, GEP Core Platform, Contract Management, Request through Pay.
 - #13 I find it interesting that GEP has their own OCR in-house system. Nice to know, if State did not want to use or integrate theirs.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 Matrix – was completed. 1 – Medium (36), rest all “L” Low level of complexity, 1- “CF-Configuration Item”, and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement / Management, Core Platform.
 - The “A” fields seem to be satisfactorily answered and their solution meets the standards.
 - For the INT items 19-27. GEP has a partnership with Global Risk Management Solutions (GRMS), Rapid Ratings and with TinCheck that provides most of these services. GEP Software will enable a link to these partners to allow users to view. My concern here would be the risk of leaving their system (if any), what security measures are in place?
4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15. Matrix completed. 1 – Medium (9), rest are all “L” Low level of complexity. 1- “CF-Configuration Item”(9), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Supplier Enablement / Management.
 - The “A” fields seem to be satisfactorily answered.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
5. Need Identification. Tab 3, NEED-1 through NEED-7 Matrix completed. All “L” Low level of complexity. 1-“CF-Configuration Item”(5), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Sourcing Bid Management, Contract Management, and Request through Pay Software.

- The CF item does not seem to pose a problem. Other items seem to be standard within the software.
6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. Matrix completed. 1–High (PRD28), 5–Medium (PRD11, PRD56, WRK13, PO16, PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21, RC4), rest are all “L” Low level of complexity, 17 – “IN - in development” (PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21), 1- “CF-Configuration Item” (RC21), and the rest “A – Available”. Solutions/Tools/Modules covered–GEP Request through Pay Software, Contract Management.
 - For PRD (Purchase Request Development): No issues with this section. GEP’s responses meet the standards and our requests.
 - WRK (Workflow Management): All requirements in this section are sufficiently answered.
 - PO (Purchase Order Generation & Management): All requirements in this section are sufficiently answered.
 - PC (Payment Card Functionality): Much of the complexity is medium and the availability is “in development”. This is concerning if a State is counting on this service.
 - RC (Receiving): All requirements in this section are sufficiently answered.
 - INV (Invoicing): All requirements in this section are sufficiently answered.
 7. Catalog Capability - Tab 3, CAT-1 through CAT-40. Matrix completed. 1–High (19), 5–Medium (4,21,25,32,33) and the rest all “L” Low level of complexity, 4–“CF Configuration Item” (31-34), 1 – “ID - in development” (38), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Request through Pay Software, Contract Management.
 - Missing 38 – “The eProcurement Catalog functionality should provide the ability for catalogs to be accessible and searchable without requiring the user to login (e.g. public access for read/search only access). State must be able to specify any fields that will not be publicly visible (e.g. Tax ID).” GEP says “ID” and will work with State to have.
 - Other than 38 - All requirements in this section are sufficiently answered.
 8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. Matrix completed. 1–High (151), 5–Medium (31,77,78,83,138) and the rest all “L” Low level of complexity, 7–“CF Configuration Item” (17,18,73,76,102,138,147), 1–“ID - in development”(109), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Sourcing/Bid Management Software, Contract Management.
 - Items 15 and 16 – GEP says they can handle a surplus sealed bid and IFQC, but then say they would further like to discuss the requirement in detail with State as we move ahead in this process. Clarify – can they handle this type of procurement?
 - In some areas they offer multiple ways to tackle a situation – for example SRC72. This is seen throughout the Matrix.
 - Rest of requirements in this section are sufficiently answered.
 9. Contract Management. Tab 3, CNT-1 through CNT-88. Matrix completed. 3–High(30,71,72), 4–Medium (38,41,45,70) and the rest all “L” Low level of complexity, 8–“CF Configuration Item”(20,34,45,51,65,66,71,72), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Items 71 and 72 – GEP says they can track suppliers admin fees , but then say they would further like to discuss the requirement in detail with State and understand the logic behind the calculation.
 - Rest of requirements in this section are sufficiently answered.
 10. Vendor Performance Tab 3, VPE-1 through VPE-25. Matrix completed. 1–High(14), and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(15), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Requirements in this section are sufficiently answered.
 11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. Matrix completed. 2–High(32,33) and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(37), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Platform.

- Question #37 – where GEP can offer comparison of punchout item to non contract item. They state yes as long as the supplier is ok exposing themselves to GEP web crawlers. Even if they are ok with this, is there enough security for State and any other web crawlers?
- Rest of requirements in this section are sufficiently answered.

C. **Technical Requirements: pages 49 - 74**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.
 - Maintains a 99.8% uptime with a 24x7 availability.
 - Use Microsoft Azure (for backup)
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Short 3 sentence slide that gives confirmations that GEP: Observes ADA compliance standards, follows WCAG2.1 level AA guidelines, and will provide ACR.
3. **Audit Trail and History RTM:** Tab 4, TECH-1 through TECH-5. Matrix completed. 1–Medium(5) and the rest all “L” Low level of complexity, All “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Audit logs are retained until end of contract life.
 - Mentions backup policies and use of Microsoft Azure backup.
 - Much crossover between slide in technical proposal and matrix. No concerns.
4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, Chrome, Firefox, and Safari). No concerns.
5. **User Accounts and Administration RTM:** Tab 4, TECH-6 through TECH-20. Matrix completed. 1–Medium(12) and the rest all “L” Low level of complexity. 1–“CF Configuration Item”(16), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - No concerns. Meets requirements.
6. **User Authentication RTM:** Tab 4, TECH-21 through TECH-25. Matrix completed. 1–High(24) and the rest all “L” Low level of complexity, 1–“ID In Development”(25), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - #21 – Like the fact that they use Microsoft Active Directory for Single Sign on.
7. **Federated Identity Management –** No concerns. Meets requirements.
8. **Data Conversion RTM:** Tab 4, TECH-26 through TECH-34. Matrix completed. 1–High(28), 1–Medium(30), and the rest all “L” Low level of complexity. With all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Software Implementation services for Supplier Enablement Management, Services for Software Implementation, Services for Spend Analysis, Services for Sourcing/Bid Management, and Services for Request through Pay.*
 - Optis will handle this piece. Page 98
 - They do a good job cleanly outlining conversion and the strategies to do so.
 - Interestingly – Optis offers oversight for free, but if you want them to data cleanse there is a cost and they use Middleware (link on page 102)
 - Found although Optis is handling the conversion, the matrix portion was still completed by GEP – if enter in negotiations would want to clarify that Optis would honor the replies in the Matrix.
9. **Interface and Integration RTM:** Tab 4, TECH-35 through TECH-60. Matrix completed. 1–Medium(60) and the rest all “L” Low level of complexity, 1–“ID In Development”(55), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Request through pay software, contract management, supplier enablement management.*
 - Optis will handle this piece. Page 105

- They list many ERP systems they have or currently integrate with (NetSuite, EBS, SAP, Oracle, PeopleSoft, JD Edwards, MS Dynamics, CGI Advantage, etc.) and provide options of how to integrate.
 - They discuss two integration methods – API and Flat file (page 107)
 - Found although Optis is handling the interface and integration, the matrix portion was still completed by GEP – if enter in negotiations would want to clarify that Optis would honor the replies in the Matrix.
10. Office Automation Integration
 - Yes, GEP integrates with Microsoft products listed and others.
 11. Mobile Device Support RTM: Tab 4, TECH-62. Matrix completed. “L” Low level of complexity, “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform.
 - Yes it can be accessed Mobily
 12. Mobile Applications - Nothing add here.
 13. Data Ownership and Access
 - State will retain all ownership of data.
 14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63. Matrix completed. 1– “L” Low level of complexity, “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform.
 - Met all requirements. No concerns.
 15. Disaster Recovery Plan
 - Coupa.
 16. Solution Environments RTM: Tab 4, TECH-64 through TECH-67. Matrix completed “L” Low level of complexity, “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform.
 - State would receive four environments Development, Quality Control/User Acceptance Testing, Training, and Production.
 - Graphs of each environment are provided and at what point in the process they are used.
 17. Solution Technical Architecture
 - Met all requirements. No concerns.
 - Graphs and tools that will be used are provided in the tech. proposal.
 18. Solution Network Architecture
 - Again – great graphs listing the software used and when scans, patching, etc. are done.
 19. System Development Methodology
 - Normal PM with much explanation and tables/graphs.
 20. Service Level Agreement
 - GEP notes they want to discuss and finalize SLA requirements with State and refers us to the GEP SLA.

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance
 - GEP supplied a CAIQ in file 3; I will rely on my more experienced SMEs to help evaluate the CAIQ.
2. Security and Privacy Controls
 - No Concerns based on data in the proposal.
3. Security Certifications
 - No Concerns based on data in the proposal.
4. Annual Security Plan
 - GEP details out their annual security plan.
 - GEP notes that they understand NASPO has asked for any additional documents and to see refer to GEP Appendix 2’ which is their Information Security Policy. This will need to be reviewed when negotiating.
5. Secure Application and Network Environment
 - refer to GEP Appendix 3’ which is their SMART Application Architecture & Security Overview.
6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6. Matrix completed. 2– Medium(1,2) and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(2), 1-“ID In Development”(3), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform.
 - Mentions backup policies and use of Microsoft Azure backup.

- GEP meets some of the requirements in this section but need to customize or develop others.
7. Data Security – nothing to add.
 8. Personally Identifiable Information Protection – nothing to add.
 9. Security/Privacy Issue Occurrence – nothing to add.
 10. PII Data Actual/Attempted Access or Disclosure – nothing to add.
 11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Matrix completed. 1–High(5) and rest “L” Low level of complexity and all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Found although Optis is handling the implementation services, the matrix portion was still completed by GEP – if enter in negotiations would want to clarify that Optis would honor the replies in the Matrix.
 - Seems to have many options for finding help and solutions for customers.
1. Project Management (169)
 - Use a Hybrid approach (Agile and waterfall)
 - 85% of team are certified PMP – Nice.
 - Ask that both Optis and State provide a PM resource. Great!
 - Did a nice job overall explaining approach to PM.
 2. Project Implementation Methodology – (182)
 - Like the look at implementation for small, medium, and large State. (pages 183-190)
 - Roles of both side are explained well.
 - Explained very well throughout. Covered requirements.
 3. Catalog Support Services
 - Optis supplying services.
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 4. Data Conversion Services
 - Asks to refer to slides 99-103. Seems like it will meet requirements.
 5. Interface/Integration Development Services
 - Asks to refer to slides 105-116. Seems like it will meet requirements.
 6. Organizational Change Management (OCM Services)
 - Optis goes above and beyond in the CM area (page 232), they state they will provide what the RFP asked for and recommend and will provide 4 more deliverables.
 - Explain and show CM well in slides.
 7. Training Services
 - Optis identifies and tailors training based on clients requirements.
 - Use a “Source to Contract” implementation (page 250)
 - Entails a 70/20/10 approach to adult learning. (page 251)
 - Finally they recommend Train-theTrainer, but it various based on who is being trained. For example “See-Learn-Do” works better with employees.
 8. Help Desk Services – good.
 - Optis offers 3 models for a help desk and support with various degrees of cost (from free to a cost) and a link to all 3 models on page 275.
 - Choices are nice to have as each State will have different needs.
 9. On-Site System Stabilization Support – nothing to add.

F. Managed Services Requirements: pages 128 - 136

- Matrix completed. All “L” Low level of complexity and “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Found although Optis is handling the managed services, the matrix portion was still completed by GEP – if enter in negotiations would want to clarify that Optis would honor the replies in the Matrix.
1. Solution Support
 - Optis offers 3 models for a help desk and support with various degrees of cost (from free to a cost) and a link to all 3 models on page 275.

2. Organizational Change Management (OCM Services) – see section E comments above.
3. Training Services – see section E comments above.
4. Help Desk Services – see section E comments above.
5. Transition Out Assistance Services
 - Optis helps manage this service and says it's a 3 phase approach to transition out.
 - Give an estimation of 24 weeks.

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Pages 289 -291. List following 3 categories of services offered by Optis:
 - Focus: Strategy and Software Selection
 - Launch: Precision Implementation
 - Perform: Value Realization & Continuous Improvement

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Yes provided. Detailed and covered all of their 45 min.

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - GEP Smart Unified Source to Pay software
 - GEP NEXXE Cognitive Supply Nexus
 -
2. Previous Projects
 - Viatris – implemented direct and indirect buying and accounts payable
 - UCAL – Spend Analysis, Sourcing, Contract Management, Supplier Management
 - Chevron – eProcurement not present in project
 - LDS Church – Contract and Supplier Management
 - Reference calls should be coordinated through GEP
 - 20 other project references were cited but no details were provided
3. Subcontractors
 - Optis
 -
 -
4. Organizational Chart
 - Combined state, Optis, and GEP org chart specific to the project
 - Roles defined
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - D&B report 10/19/2020
 -
 -

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **YES**

User Experience **YES**

Bidder Best Practices and Roadmap **AGILE, Maintenance Release/testing tight window for bug fixes, minor/low impact enhancements, manage commercials?**

Innovations and Value-Added Features/Services **Organizational Maturity Assessment – IT Procurement not identified, spend analysis, Market Intelligence. How is category management providing more value than the solution itself? I expect increased spend visibility, contract compliance, improved Supplier Performance – Is this innovation or additional cost?**

Customizations/Extensions **YES**

Alternative Funding Models **(1) Hybrid fixed fee(50-75% of implementation costs) plus transaction-based (1-3% for every PO), (2) Value-Based funding models (Strategic sourcing 4% to 15% spend visibility 1% 2.1% spend compliance 2.5% to 5% early payment discounts 0.3% two 2% optimized P card usage 0.5% to 2% supplier payment method 0.1% to 2% process optimization 3% to 5%**

Contract Transition and Flexibility **“GEP is able to comply with the contract review process and transition to a state's current contract terms”**

Functional Requirements

General Functionality **YES - 1 Customized, 3 configurations w/one medium effort, and 36 out of the box.**

Supplier Portal - **1 configuration w/medium effort, 1 integration w/high effort, and 21 out of the box**

Supplier Enablement/Management **9 integrations w/low effort and 34 out of the box.**

Buyer Portal **1 configurations w/medium effort, and 14 out of the box**

Need Identification **1 configurations w/low effort, and 6 out of the box**

Request through Pay **62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 17 in devp and all w/medium effort and 4 out of box for Pcard, 1 configuration w/low effort, and 20 out of the box for Receiving, 11 out of the box for invoicing.**

Catalog Capability **4 configurations w/medium (2) and low (2) LOE, 1 in devp w/low LOE, 34 OOBX**

Sourcing/Bid Management **7 configurations w/medium (1) and low (6) LOE, 1 in devp w/low LOE, 141 OOBX**

Contract Management **8 configurations w/medium (1) and low (5) and high (2) LOE, 80 OOBX**

Vendor Performance **1 configuration w/low LOE, 24 OOBX**

Purchasing/Data Analytics **1 configuration w/low LOE, 36 OOBX**

Technical Requirements

Availability **7 days/week twenty-four hours/day excluding scheduled maintenance and outages**

RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP Optis
CATEGORY #(s): 1
DATE: 12/17/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Accessibility Requirements **WCAG2.1 and Accessibility Conformance Report (based off a VPAT)**
Audit Trail and History **not sure minimum was met for user identifier, date/time stamp, field that was changed and the change that was made.**
Browsers Supported **YES Microsoft Edge (Version 70.0 and above), Google Chrome (Version 70.0 and above), Firefox and MacOS Safari**
User Accounts and Administration **RBAC**
User Authentication **SAML**
Federated Identity Management– **SSO MFA**
Data Conversion **Identify “to be” data and data scope to be converted, create data migration and conversion strategy and plan, perform cleanup and or conversion per the plan, build and execute test loads this is an iterative approach could take many cycles, validate test results and identify fixes, load to production**
Interface and Integration **Methodology is integration kick off, determine integration scope, design and develop integrations in scope many iterations, test integrations, move to production. Experience with source Source two pay solutions and enterprise systems like CGI, Oracle, NetSuite, jde, PeopleSoft, EBS, SAP, EC and S4 hana, maxximo, Qbyte, dynamics 365, NAV vision dynamics,**
Office Automation Integration **hosted on Microsoft Azure and integrates with Microsoft Office products**
Mobile Device Support **GEP Software is a mobile-native procurement platform**
Mobile Applications **GEPSMART’mobile app on Apple App Store and Google PlayStore**
Data Ownership and Access **Missing?**
Data Retention, Archive and Purge Considerations **Yes but what standard?**
Disaster Recovery Plan **Annual test does it include clients, is this Azures DR test?**
Solution Environments **Development/Quality Control, UAT, Training, Production Environments, multi-tenant mode**
Solution Technical Architecture **YES**
Solution Network Architecture **YES**
System Development Methodology **Agile development life cycle using Azure Dev Ops development tools, Functional, SIT, UAT, Regression/Automation, performance testing. Change Request Governance Process.**
Service Level Agreement **GEP would like to discuss and finalize the SLA requirements**

Security Requirements

Cloud Security Alliance (CSA) Compliance **CAIQ**
Security and Privacy Controls **Did not answer NIST 800-53 question**
Security Certifications **SOC1 Type II and SOC2 Type II, ISO 27018, PCI DSS v1.1, FedRAMP High, CJIS, IRS Publication 1075, HIPAA**
Annual Security Plan **No**
Secure Application and Network Environment **YES**
Secure Application and Network Access **YES**
Data Security **YES**
Personally Identifiable Information Protection **GDPR compliance**
Security/Privacy Issue Occurrence **reports any high severity security breach within 4 hrs – define high**
PII Data Actual/Attempted Access or Disclosure **YES**
Security Breach Reporting **2 hour and 24 hour notification cannot be met**

Implementation Services Requirements

Project Management **Hybrid approach combining waterfall and agile methodologies.**

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP Optis

CATEGORY #(s): 1

DATE: 12/17/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Project Implementation Methodology Small, medium , large state implementations. Project governance plan with project sponsor, steering committee, core delivery team,, subject matter experts, people and change management committee.

Catalog Support Services Seed methodology strategize , engage , enable , developed.

Data Conversion Services **Same as in Technical requirements** Identify “to be” data and data scope to be converted, create data migration and conversion strategy and plan, perform cleanup and or conversion per the plan, build and execute test loads this is an iterative approach could take many cycles, validate test results and identify fixes, load to production

Interface/Integration Development Services **Same as in Technical requirements** Methodology is integration kick off, determine integration scope, design and develop integrations in scope many iterations, test integrations, move to production. Experience with source Source two pay solutions and enterprise systems like CGI, Oracle, NetSuite, jde, PeopleSoft, EBS, SAP, EC and S4 hana, maxximo, Qbyte, dynamics 365, NAV vision dynamics,

Organizational Change Management (OCM Services Best practices in change management for ePROC or source to pay is organizational alignment, stakeholder engagement, communications, learning.

Communications and engagement toolkit . Sponsor and leader engagement, project SME's, road shows and demos, customized communications, feedback exchanges and open dialogue, kpi results. Two way knowledge transfer scorecard.

Training Services Step one confirm the scope of change and impacted users step two set the preferred training tactics and vehicles step three define the learning outcomes Step 4 Taylor the training plan Step 5 evaluate training effectiveness and improve.

Help Desk Services Three models

On-Site System Stabilization Support **Cannot determine** if any resources will be on site.

Managed Services Requirements

Solution Support **Same as above in implementation services**

Organizational Change Management (OCM Services **Same as above in implementation services**

Training Services **Mostly the same as above in implementation services except for core team members and end users on site instructor LED classroom training web based instructor LED training in web based self-service training**

Help Desk Services **Same as above in implementation services.**

Transition Out Assistance Services **Prepare** transfer support approach

Other Available Resources **Shouldn't these other available services be part of the E procurement tool?**

Video Demonstrations

- Dashboard
- Templates
- Clause repository which can link to contracts
- Contract wizard
- Supplier enablement
- Vendor performance scorecards
- IT Procurement

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Heavy marketing visuals in presentation
 - Overuse of market buzzwords
 - Underwhelmingly curious if they perform in all capacities the proposal identifies
2. Previous Projects
 - Results are buzz word driven. No savings identified worthy of expense beyond process efficiencies
 - Results achieved are just marketing focused, with vague points
 -
3. Subcontractors
 - Subcontracting with Optis
 - Source to Pay ePro consultancy
 - Just for consultancy it appears
 -
4. Organizational Chart
 - Interesting the Org Charts are different structure entirely for GEP with different subcontractors.
 - Personnel role responsibilities are general in nature.
5. Litigation
 - No litigation identified
 -
 -
6. Financial Viability
 - D&B results not showing concern
 - Unsure about their subcontract KPMG
 -

Individual SME Comments:

General Principal and Requirements

- (Page 5) Centralized platform. Is this all or none, integration with other platforms?
- (8) Do suppliers have access outside of the portal,
- (10) High levels of functionality
- (13) Non-Value-added work reduction 40-60% is valuable
- (14) Agile no customization to cloud, unclear any potential impact to existing processes
- (15) Bi-Weekly maintenance releases seem overly frequent
- (23) Good gap analysis linking to reporting capabilities
- (24) Would like to see F2F workshops offered as well as virtual
- (30) How does Supplier database incorporate local and OSD vendors?

Functional Requirements

- (48) Interesting how the document process moves from one action to the next
- (46) Show good functionality across different workflows, very robust
- (60) Unsure if catalog search includes both hosted and punchouts. If not a level 2 search that includes the punchouts, buyers are not seeing best value or all products in a seamless manner.
- (65) Concerned about the "Preferred Supplier" and what makes them chosen over others.
- (70) alludes to level 2 punchouts (searchable in the platform) but only if suppliers allow. How many suppliers allow this?
- (73) Sourcing seems very intuitive
- (79) Vendor Performance is good in the way it creates scorecard type data
- (82) Purchasing data has lots of functionality, would like to better understand if it is perhaps too much
- (RTM Tab 3, line 11, EPROC-SPR-7). Allow supplier access to solicitations, both invited and all others. Response did not meet the requirement. Did not address access to suppliers that have not been invited.

Technical Requirements

- (86) Availability should consider maintenance both planned and unplanned. The method identified is only identifying unexpected events relative to the vendor. The customer is inclusive of all events of any form where the service is unavailable. Their method is providing questionable percentages.
- (97) Single Sign on is preferred
- (102) Good data normalization
- (107) ERP integration is important as most states have existing solutions they will not abandon

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-Optis

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 12/01/2021

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- (CAIQ line 135) Does not support BYOD. Would Single Sign On at state level allow this?
- (CAIQ line 207) Unsure if test environments are available
- (CAIQ lines 216-219) Unsure of liability relationship with GEP and MSFT using Azure. GEP reference to MSFT portal only raise concerns with data breaches or problems and who is liable.
- (CAIQ line 245) No BYOD support, how will this impact states that do not provide state owned laptops/mobile devices to all employees?
- (160) Breach does not include any credit monitoring by vendor or liability acknowledgement

Implementation Services Requirements

- (163+) Project Implementation Methodology is robust
- (173) Project Management has standard categories
- (187) Good examples of small, medium, and large implementations

Managed Services Requirements

- (250) Training services seem very detailed

Video Demonstrations

- Dashboard formatting is hard on the eyes
- Can create solicitations within the platform
- Scoring withing platform with weighted percentages or formulas
- Can invite suppliers, can suppliers invite themselves?
- Evaluators score within
- Interesting Parent-Child relationships
- Unknown if shopping search looks at punchout catalogs
- Results show non-contracted items. Where are they coming from?
- Where do accounting details come from?
- Can reject line items in requisitions or only entire request?
- Does this work with Peoplesoft?
- Supplier management is manual process for data entry?
- Does supplier profile integrate with Oracle or other platforms?
- Arbitrary supplier scorecard?
- Reporting seems intuitive

General Principal and Requirements

Key Solution Functionality Elements

7	Single point of entry for all procurement activity based on their needs or use of the solution	
7	Smart Routing – Wizard driven capabilities	Positive
7	Portal – informs users and supports user work management	

User Experience

8	Wizard driven capabilities	Positive
8	Mobile app has access to many areas. Catalogs, create requisitions, approvals and to view dashboard.	Strength
8	User sets up the look of the dashboard and it stays that way for next login	

Bidder Best Practices and Roadmap

14	Approach to implementation is based on progress made and not timeline	Positive
15	Quarterly general release sent to UAT for a week and then to production. It is sent to production in Default Off mode	Weakness
15	Maintenance release every 2 weeks to fix bugs. Handle like quarterly release – sent to UAT for 1 week first. “the participating entity is not obligated to accept and implement any recommendations.”	Weakness

innovations and Value-Added Features/Services

18-37	These are optional 1. Organizational Maturity Assessment – 16 weeks – a lot of time and a lot of people involved to get current state assessment. 2. Opportunity Assessment -spend analysis on current practices. 3. Market Intelligence 2-3 days for off the shelf report. 2.5 weeks for detailed reports 4. Category Management	1.Concern- we do know pricing - depends on scope, level of detail, and timing

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Customizations/Extensions

39	Customizations are done with the help of a user's group call PAG. Based on the feedback given, GAP prepares its product roadmap for all of the solutions.	
----	---	--

Alternative Funding Models

41 AND 42	Option 1 a. Fixed fee payment reduced to 50-75 % of implementations costs b. Transaction fee of 1-3% would be added to every PO processed during the platform Option 2 Value based funding model – self funding or value based.	
-----------------	---	--

Contract Transition and Flexibility

43	Able to comply with the contract review process a transition to a state's current ter4ms.	
----	---	--

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Same information supplied as GEP & KPMG response
 -
 -
2. Previous Projects
 - Same information supplied as GEP & KPMG response
 -
 -
3. Subcontractors
 - Optis is contractor – Source to Pay
 - This subcontractor is Optis Consulting for implementation of GEP Software
 -
4. Organizational Chart
 - Supplied chart for each size state (small, medium and large)
 - Mentioned roles and responsibilities of each
 -
5. Litigation
 - Stated none to report
 -
 -
6. Financial Viability
 - Supplied Dun & Bradstreet Report
 -

Individual SME Comments: This response is the same as GEP – KPMG up until the funding model section.as this response does NOT have funding models.

Because this response is similar in nature to KPMG, I have copied the notes from that evaluation, and they are listed below.

One of my major concerns with this response is the vendor has requested many times that they would like further discussion on some of the requirements listed. This response also has many concerns where the entire requirement listed was not addressed in their response.

I believe the concerns would need to be addressed (i.e., PCard functionality) in order for their solution could be offered. I think some of the "clarifications" need be addressed for me to feel comfortable with their solution offering.

General Principal and Requirements

Key Solution Functionality Elements

- PDF – Need form completed to be taken to proper module. -Will configure catalogs and punchouts. Restrict access to documents. STRENGTH – Cross Functional reporting. Will configure to state specific cases.

User Experience

- STRENGTH Page 8 PDF – User personalization and access tasks from landing page
- Mobile Capability

Bidder Best Practices and Roadmap

- PDF Page 12 – STRENGTH – Best Practices. PAGE 15 – Default OFF Releases!

Innovations and Value-Added Features/Services

- PDF Page 19 – Organizational and Opportunity Assessment, Market Intelligence and Category Management. Lots of information and informational charts!

Customizations/Extensions

- PDF Page 39 – Highly configurable and lays out customer roadmap

Alternative Funding Models – Page 40

- They do NOT offer an alternative funding models.

Contract Transition and Flexibility – Page 42

- Is able to comply with these requirements

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Functional Requirements – This is the same response as the GEP – KPMG for ALL the functional requirements.

General Functionality

- STRENGTH EPROC-GEN-5 – Multiple options for posting data.
- WEAKNESS -EPROC-GEN-7 – Fill form to gain access?
- WEAKNESS -EPROC-GEN-8 – Can search by commodity code?
- STRENGTH - EPROC-GEN-11 – Can increase the file limit of 30MB.
- STRENGTH - EPROC-GEN-17 – Nice to be able to have new release data in the OFF by default mode.
- WEAKNESS - EPROC-GEN-25 – Does not allow email domain change to state email domain on emails sent from the system.
- CONCERN - EPROC-GEN-26 – Need to integrate with ERP to track administrative fees.
- STRENGTH - EPROC-GEN-36 – System has its own “built in” signature process but can integrate as well.

Supplier Portal

- STRENGTH - EPROC-SPR-13- Multiple ways for supplier to submit invoices.
- CONCERN - EPROC-SPR-15 – Did not mention if the SUPPLIER could not get to the historical data in the supplier portal?
- CONCERN - EPROC-SPR-19- Must submit administrative fees via an integration.
- CONCERN - EPROC-SPR-20 – Response seems to be on the user side rather than the supplier portal side?
- CONCERN - EPROC-SPR-23 – Response seems to be on the user side rather than on the supplier side?
-

Supplier Enablement/Management

- STRENGTH - EPROC-VDR-6 – Each contact can have their own log in to the supplier portal.
- CONCERN - EPROC-VDR-13 – Response did not address the foreign supplier’s designation?
- STRENGTH - EPROC-VDR-16 - Triggers expire notifications on certificates
- CONCERN - EPROC-VDR-20 thru EPROC-VDR-27 – These responses ALL refer to the response in EPROC-VDR-19 which provides “link” to a management service solution. We need to ask for clarification on these requirements.
-

Buyer Portal-

- CONCERN -EPROC-BPRT-6 – System admin might have to run reports on behalf of the user?
- STRENGTH - EPROC-BPRT-10 – Can perform a “system-wide” search from the buyer landing page.
- CONCERN - EPROC-BPRT-14 -Need to discuss further specific integration requirements? Needs to be addressed at implementation.
- CONCERN - EPROC-BPRT-15 – Did not state if communication would default to user email address?

Need Identification

- PDF PAGE 62 - The need starts with a request form user needs to fill out.
- Meets all other requirements

Request through Pay

- PDF PAGE 66 – Core Features list is extensive

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - Optis

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- STRENGTH - EPROC-PRD-8 – Collated purchase requests into one centralized dashboard.
- CONCERN - EPROC-PRD-24 – Can you limit the user access to the form?
- CONCERN - EPROC-PRD-46 – Did not address the political subdivision unique chart?
- CONCERN - EPROC-PRD-47 – Can you control fields availability based on the agency?
- CONCERN - EPROC-PRD-56 – Vendor response states wants further discussion. Not sure they can meet this requirement.
- CONCERN - EPROC-PRD-59 – Did not submit information of calendar functionality.
- CONCERN - EPROC-WRK-9 and EPROC-WRK-10 – Did not state if the user could enter a reason for workflow bypass?
- WEAKNESS - EPROC-WRK-22 – Referenced a previous requirement as their response to this requirement.
- **CONCERN - EPROC-PO-2 – Supplier wants further discussion.**
- CONCERN - EPROC-PO-15 – Did not state if they could print in groups?
- CONCERN - EPROC-PC-1 thru EPROC-PC-3, EPROC-PC-5 thru PC – 8, PC-10 thru PC – 15, **PC -17 thru PC -19 and PC - 20 – Pcard functionality in development.**

Catalog Capability

- PDF Page 69 – Has 3 catalog options with the Internal Catalog being new to me.
- **CONCERN - EPROC-CAT-11 – Supplier has requested further discussion on ability to obtain quotes.**
- CONCERN - EPROC-CAT-20 - Concern - Response is quick quote process where I thought we were looking for the ability to enter a quote in the punch out catalog?
- CONCERN - EPROC-CAT-38 – Search catalogs without logging in is in development.

Sourcing/Bid Management –

- PDF Page 74 – Comprehensive Automatic Scoring.
- CONCERN - EPROC-SRC-15 and SRC – 16- Supplier would like further discussions of IFQC and IFQP
- CONCERN - EPROC-SRC-19 thru EPROC-SRC-21 – Supplier response did not address if these event types could be done in the system?
- CONCERN - EPROC-SRC-28 – Response was directed at the supplier side and not for participants on the buyer side (solicitation participants).
- CONCERN - EPROC-SRC-37 – Need ability to update templates automatically but this supplier does not recommend.
- CONCERN - EPROC-SRC-83 – Did not address if recording of pre-proposal conference could be stored as part of the event?
- CONCERN - EPROC-SRC-102 – Response is NOT an electronic signature process.
- CONCERN - EPROC-SRC-109 – The ability to enter paper responses in under development and will aligned with entity's go live date.
- CONCERN - EPROC-SRC-130- Supplier wants further discussion on online collaboration.

Contract Management

- PDF – Page 77 – Key Highlights to their Contract Management Solution.
- The contract request form goes directly to creation of a contract avoiding the need for a bid.
- STRENGTH - EPROC-CNT-8 – Mass update to contracts that have the same contract clause that has been updated.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - Optis

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- STRENGTH - EPROC-CNT-12- Built in electronic signature process but can also integrate.
- CONCERN - EPROC-CNT-18 – Supplier response does not address the sharing of responsibility of the contract record.
- CONCERN - EPROC-CNT-20 - This response does not address the contract number being the same as the solicitation number.
- CONCERN - EPROC-CNT-38- Supplier wants further discussion on the ability to capture subcontractor information.
- CONCERN - EPROC-CNT-41 – Supplier wants further discussion on certifications.
- CONCERN - EPROC-CNT-71 - Supplier wants further discussion on admin fees.
- CONCERN - EPROC-CNT-72 - Supplier wants further discussion on admin fees.

Vendor Performance – Page 78

- CONCERN - EPROC-VPE-15 – Needs to be configured.
-

Purchasing/Data Analytics – Page 81

- PDF Page 82 – They use dashboards to display this data.
- CONCERN - EPROC-PDA-5 – Did they supply list of examples of reports?
- CONCERN - EPROC-PDA-11 - Copied response for contract expiry requirement. This requirement is for purchase orders.

Technical Requirements – This is the same response as the GEP – KPMG up to the Data Conversion section. This data conversion section response is different.

Availability – Page 85

- Offered a calculation of availability of the system

Accessibility Requirements – Page 87

- CONCERN – Did not mention if in compliance with Section 508?

Audit Trail and History – Page 89

- STRENGTH - Allows for adhoc approvers.
-

Browsers Supported – Page 91

- Meets requirements

User Accounts and Administration – Page 93

- STRENGTH - Disabling access does NOT remove access to data.
- CONCERN – Need to contact support to view list of permanently deleted users.

User Authentication – Page 96

- STRENGTH - Integration with OKTA
-

Federated Identity Management – Page 96 – Response is combined with User Authentication

Data Conversion – Page 98

- Offer high level overview on page 99
- Also uses the Project Implementation Methodology – Page 102

Interface and Integration – Page 104

- Use Optis Integrations and Solutions Architecture Team – Page 105
- Provided Integration Development Process – Page 106

Data Security – Page 159

- Meets requirements

Personally Identifiable Information Protection – Page 162

- Meets requirements of GDPR

-
Security/Privacy Issue Occurrence – Combined with below requirements.

PII Data Actual/Attempted Access or Disclosure – Page 164

- States system has Security Incident Response Plan and Team

Security Breach Reporting – Page 166

- CONCERN – Notification for breach is 4 hours and not the 2 hours listed in the requirement

Implementation Services Requirements – Page 169

Project Management – Combined with below requirements

Project Implementation Methodology – Page 170

- Optis to provide Project Management services-
- Optis Development Lifecycle Approach – Page 172
- Scope Management Page 174
- Schedule Management Page 175
- Cost Management Page 176
- KPI Selection - Page 180
- Extensive information supplied in this section.

-
Catalog Support Services – Page 217

- SEED Technology - Page 218 – Strategize, Engage, Enable, Develop

Data Conversion Services – Page 226

- Refer to slides 99-103

Interface/Integration Development Services – Page 228

- Refer to slides 105-116

Organizational Change Management (OCM Services) – Page 230

- Optis Deliverable Package – Page 232
- Collaboration between resources – Page 238
- Extensive information supplied with this response

Training Services – Page 249

- Training Needs Assessment
- Offered table with training information on each area – Page 255

Help Desk Services – Page 258

- Offered 3 different models of help desk – page 259

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP - Optis

CATEGORY #(s): Category 1 Stage 2

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Different cost involved with each model.

On-Site System Stabilization Support – Page 268

- Offered 3-month stabilization period
- Show model plan for move to sustainment – Page 270

Managed Services Requirements

Solution Support – Page 274

- Offered 3 distinct models with link provided to view which takes back to page 259 of response.

Organizational Change Management (OCM Services) – Page 276

- Offered link which takes user back to Page 231 of their response.

Training Services – Page 278

- Offered link which references Page 250 of their response.

Catalog Support Services – Page 280

- Offered link which references Page 218 of their response
- Offered link which references Page 259 of their response.

Help Desk Services – Page 282

- Offered link which references Page 259 of their response.

Transition Out Assistance Services – Page 284

- Prepare-Transfer-Support approach

Other Available Services – Page 288

- Focus, Launch and Perform.

Video Demonstrations - This video is the same for the response of GEP - KPMG

- _Reporting Dashboard is helpful for reporting.
- This system has the functionality called “Guided Buying” which allows the user to perform a keyword search which results in the user being in the correct location needed based on their search (Contract, Punch Out Catalog, Hosted Catalog, Purchase Request, etc.)

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 1911.
 - E-procurement solution – “SAP Ariba”
2. Previous Projects
 - 4 projects provided. All four are private firms and seem to fit category 1.
 - Lilly. Transformed procurement processes. Moved from SAP ECC SRM to Ariba solution.
 - Pfizer. Transitioned from SAP Ariba online to a cloud based Ariba suite.
 - Lumen. Transitioned from SAP ECC SRM solution to an Ariba solution.
 - IBM.
3. Subcontractors
 - Vendor does not state any subcontractors.
4. Organizational Chart
 - Provides an organizational chart. **However, it seems very small for the work that could be coming their way. No job descriptions are provided.**
5. Litigation
 - Page 12, yes they list they have several; **however, they do not list any.**
6. Financial Viability
 - DnB provided. Low – Moderate risk.

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Product is SAP Ariba Cloud Services and is SaaS and is hosted by SAP and provided as a subscription based offering.
- Because of the above they state no software to install or additional maintenance or support costs and **no need to hire consultants** or tech specialist to run the baselined system.
- The full matrix was not completed – did not complete tabs 5 (security requirements) and 6 (Implementation requirements)
- The Redline of the NASPO ValuePOINT Master Agreement T and C's #14.3 (page 22) Assignment/Subcontracts, they add 14.3.3 and essentially state will be transferring portion of business operations responsible for some of the services provided the Contract to Kyndri, Inc. This is concerning, since Kyndri inc. was vetted and did not make it through the initial evaluation phase.
- Overall – this system seems more user friendly for a Supplier.
- Demonstration: Many items in the matrix were stated as “supported” “configurable” “standard functionality”; **without any details on how the tool/solution will meet the requirement it's hard to assess. Was hoping to find in demo, but when reached that portion, it was not accessible.**
- Side note: Many typos and formatting errors throughout the submitted proposal. Possible reflection on work to come.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product is SAP Ariba and is SaaS and is hosted by SAP and provided as a subscription based offering.

- Single point of entry – yes – Single Sign on

- Smart routing – Maybe? – They discuss the State maintain workflows using the dynamic configurable workflow engine. **Is that the State's engine, IBM's, or Ariba's? May know more as I read.**
- Compliance – yes – state industry standards and annual or semiannual audits.
- Portal – yes – single point of access.
- Open Marketplace Environment. - yes
- Integration – yes holistic integration approach.
- Workflow – yes
- Document management – yes.
- Reporting, dashboards and data visualization – yes – native reporting analytics.
- Configurable – yes – they state their system is.
- Transparency – Yes

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

2. IBM discusses Ariba's innovative Guided Buying capabilities. **This is section does not follow the bullets laid out below well, have tried to capture if they meet them within their proposal paragraphs.**

- Capability – initial screen: – **Do not see addressed in this section.**
- Intuitive Navigation – yes, address this by using a tile based structure.
- Wizard-driven capabilities – possibly – the visual workflows, reminders, and notifications could fall into this.
- Informative Portal – Maybe – I believe this is what they are eluding to in their dashboard.
- Mobile Optimization – yes, they have a mobile App. **It would be nice to know if they can do both IOS and Android.**
- Workload Mgt Functionality – Yes, addressed.
- Role-Based Functionality – Yes, addressed.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

3. IBM didn't introduce anything new, instead relied on the explaining the functional enhancements, etc. of Ariba.

- Quarterly Releases – They explain products may be released quarterly.
- Timely updates – yes – Quarterly Releases – They explain products may be released quarterly.
- Alternative Best Practices – yes have a best practice center that is part of the subscription.
- Road Map: **To see the Road Map we must register on SAP's site; therefore, not able to score as was not provided.**

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

4. Yes - Completed section.

- Ariba developed APIs which is no cost to State to access nor is the developer portal.
- SAP FieldGlass is another solution that is of cost (not in the cost proposal) that helps find the right type of workers/staff.
- SAP Ariba Supplier Risk Management is another solution that helps buyers make smarter decisions with less risk.

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- IBM feels at this time (looking at the Matrix) the requirements can be met with configurations and customizations are not necessary.
- Pages 12-14 list Apps and Partners that are not included in the SAP Ariba solution and price at this time. IBM feels these could help the State. In a quick review of some of the Apps they seem like they are some of the areas that are requirements of this RFP. So the question then is, Is this for the mobile app and we need to purchase all of these for that OR is this a different option than what Ariba has? I think we need **to CLARIFY** this.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

IBM does not have alternate funding models. They suggest looking at each State's financial structure and helping address the funding then.

7. Contract Transition and Flexibility – page 27

IBM has many contingencies and given the high likelihood that IBM has an agreement with most States, it is very likely this area will pose a problem for States and maybe NASPO Contractually.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

1. **General Functionality.** Tab 2, GEN-1 through GEN-40. 2 – Medium (3,5), 1 – “N/A”(38), rest are “L” Low level of complexity. 2-“INT-Integration/interface”(5,14), 1-“partial”(3), 1 – “N/A”(38), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba Buying and Sourcing, Sourcing, Buying and Contacts, Contracts, Cloud Analytics, Full Suite.
 - #3 is marked as “partial”, which is not a choice in the codes. **Based on the notes it looks like they do not have the ability to integrate to post on the State’s procurement website.**
 - #38 is marked N/A, which is not a choice in the codes. **After reading the reply – it seems the answer is “N” as they do not comply with this.**
 - For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able
 - Many of the Comments state “**Standard Functionality**” (there are 22 of these). As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to “*describe how the identified tools/solution will meet the requirement. Include benefits or limitations.*” **Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.**
 - Use Native Integration for integration of purchase requests.
 - Supports all types of files and mentions a “really robust search engine” in many of the comments.
2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23. 1 – Medium (7), rest are all “L” Low level of complexity, 1 – “INT - Integration/Interface”(7), 1- “BP-BusinessProcess”(18), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Supplier LifeCycle, Network, Sourcing, Full Suite, Buying, Invoicing, and Contracts.
 - 10 comments that state “**Standard Functionality**” without further description. As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to “*describe how the identified tools/solution will meet the requirement. Include benefits or limitations.*” **Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.**
 - Ariba seems to have a good handle on the Supplier portal side and a understanding of what the suppliers need.
 - #3 states suppliers can integrate their financial systems to Ariba Network. While the State will want supplier spend reports, **I am not certain about connecting to the system – for security reasons the State would want to look into this.**
 - #7, 8, where allow supplier to access solicitations and to submit proposals... IBM responds that State APIs are available to post but suppliers will need to be directed to an external State website. **This is concerning – as this is a requirement of the eprocurement system.**
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43. 9–Medium (19-27), rest all “L” Low level of complexity, 9-“INT-Integration/Interface(19-27)”, and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Supplier LifeCycle.
 - 6 comments that state “**Standard Functionality**” without further description. As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to “*describe how the identified tools/solution will meet the requirement. Include benefits or limitations.*” **Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.**
 - Suppliers are able to self register and meet requirements 1 – 10
 - **It’s not clear if the system accepts commodity codes**, as the answers given to the questions are not straightforward.
 - #18 - #27 are marked as “INT” and the State asks that the verification of the supplier items be done. **IBM’s answer is they can validate the format, I am unsure if this will meet the requirement.**
4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15. All “L” Low level of complexity. and “A – Available”. Solutions/Tools/Modules covered – SAP Buying, Invoicing.
 - 7 comments that state “**Standard Functionality or Configurable or both of these**” without further description. As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality / configurable” for that particular requirement. I believe that is why the

- instructions outline to “describe how the identified tools/solution will meet the requirement. Include benefits or limitations.” Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.
- The answer to #11 is of concern. The State can download any account information (data) as long as subscribed, but only within the functionality of their application. It doesn’t answer the question if we can get the minimum items that are asked for in the requirement.
5. **Need Identification.** Tab 3, NEED-1 through NEED-7. All “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Guided Buying.
- The CF item does not seem to pose a problem. Other items seem to be standard within the software.
6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. All “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba Buying, Invoicing, Network, Risk Management.
- All the requirements in this section were answered with the same generic answer “Standard Functionality. This is a generally available feature within the Solution and is currently leveraged by multiple customers across multiple industries”. I do not feel this section was completed as they did not describe or go into any type of detail of “how, etc.”
 - PRD 4 – Doesn’t seem to answer the Role question. They answer it with groups, but not by role.
 - PRD 15 and 16, WRK12, PO11 and 12 – Limit attachments to 100MB size limit, but can support any type of attachment.
 - PRD49 – Ariba uses UNSPSC (United Nations Standard Products and Services Code) – it seems much configuration will need to be done to work in State’s chart of accounts.
 - PRD59 – is essentially **not answered**. Gives “Standard Functionality supported and configurable”.
 - WRK28 – only one user in Que at a time.
 - PC 6 – Comment that it’s not supported; however, they list as “Available”.
7. **Catalog Capability** - Tab 3, CAT-1 through CAT-40. All “L” Low level of complexity. 1-“N-Not Available”(19) and rest “A – Available”. Solutions/Tools/Modules covered – SAP Buying.
- 9 comments that state “Standard Functionality” without further description. As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to “describe how the identified tools/solution will meet the requirement. Include benefits or limitations.” Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.
 - #3 - 3 channels that catalogs can be updated from: (1) Loaded directly by customer via CSV or CIF format, (2) Loaded by us acting as the catalog management service to the customer, (3) Self- loaded by the supplier via the Ariba Network.
 - #6 and 7. Catalogs are limited to 5,000 catalogs and there is a limit to 500,000 items in a catalog.
 - #19 – To enter Items of negative values is not an option.
8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151. 1 – Medium (71), 2 – “N/A”, rest are “L” Low level of complexity. 1-“partial”(109), 2 – “N/A”(76, 138), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba Sourcing, Supplier Life Cycle.
- 5 comments that state “Standard Functionality or Configurable or both of these” without further description. As a nonuser of ASP Ariba’s system, I do not know what is “standard functionality / configurable” for that particular requirement. I believe that is why the instructions outline to “describe how the identified tools/solution will meet the requirement. Include benefits or limitations.” Based on the vagueness and essentially a guess on my part, these lines won’t be evaluated.
 - #2 – System has several solicitation templates to use; however, most all State’s will want to use their AG approved templates and forms. Some such as the RFI are delivered out of the box, unsure if can configure.
 - #36, 52, 63, 70 – limited to 100MB

- #76 – Ariba’s system doesn’t provide ability to post solicitation documentation unless **manually done**.
 - #138 – Ariba’s system does not post award results to State’s procurement website. It must be **done manually**.
9. **Contract Management.** Tab 3, CNT-1 through CNT-88. 1 – Medium (64), 12 – “N/A”, rest are “L” Low level of complexity. 2-“partial”(65,66), 12 – “N/A”(45, 52-62), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba Contract Management, Buying, Supplier Lifecycle and Performance Management.
- #45 – **Ariba’s system doesn’t support read only** format with redaction properties.
 - #52 through #62 – **Ariba’s system doesn’t support** posting of various items to State’s public Contracts website. The State must manually post.
10. **Vendor Performance** Tab 3, VPE-1 through VPE-25. All “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Supplier Lifecycle & Performance.
- VPE 1 – 11, 15 states “supported and configurable” and rate as an “A”, **but gives no comments on how or detail**.
 - VPE 21 – **CLARIFY** that the system provides this requirement as IBM says it does, because they comment that the best way is through scorecards, which in my mind is paper or a simple excel form. Maybe scorecards is a name of one of their forms. **If not, this does not meet the requirement**.
 - VPE 25 – **File size limit 100MB per attachment. – does not meet requirement**.
11. **Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37. All “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba Analytics Solutions.
- PDA 1 – Ariba solutions comes with 250 pre-packaged reports.
 - **PDA 34 – “Standard Functionality” no Detail.**

C. **Technical Requirements: pages 49 - 74**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider’s (ISP’s) should also be in place.
 - SAP offers a 99.5% system availability percentage during each month for production versions, with exception of **regularly scheduled and emergency maintenance**. **CLARIFY –** How often is regular maintenance and during what hours and days. Additionally, how often in the past has SAP had emergency maintenance (example of how many times in one year?).
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Page 45. They state they will provide accessibility to customers upon request. **It seems the software does not come with accessibility requirements.**
3. **Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5. All “L” Low level of complexity. 3 - “INT-Integration/interface”(3,4,5) and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba.
 - TECH 3 – 5 are “INT”; however, they repeat TECH 1 and do not explain/detail out how or why integration or interface is needed.
4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.
5. **User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20 – 2 – Medium (10,11), rest are “L” Low level of complexity. 3 -“INT-Integration/interface”(11,14,17), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba.

- **TECH 12 – Does not meet requirement.**
- 6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25. All “L” Low level of complexity. 1- “INT-Integration/interface”(22,25), the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba.
- 7. **Federated Identity Management** – Pages 49 – 50. **Unsure that their response answers / meets the requirement.**
- 8. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34. ALL – High and all “INT-Integration/interface”. Solutions/Tools/Modules covered – SAP Ariba.
 - SAP plans to use “SAP’s Activate Methodology”
 - Integration of legacy systems are extra cost.
- 9. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60. 20 – Medium (many), rest are “L” Low level of complexity. 20-“INT-Integration/interface”(many), 1-“**not completed**”(40), 1 – “CF” configuration item (60), and the rest “A – Available”. Solutions/Tools/Modules covered – SAP Ariba.
 - **TECH 57 – I believe they misunderstood this requirement.** This requirement is not solely about tracking the credits of this Contract. It’s about tracking credits within all Contracts held by/with the State.
- 10. **Office Automation Integration**
 - Yes, they integrate with Microsoft products listed and others.
- 11. **Mobile Device Support** RTM: Tab 4, TECH-62. “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba.
 - Yes it can be accessed Mobily
- 12. **Mobile Applications** - Nothing add here. – TECH 62.
- 13. **Data Ownership and Access**
 - SAP Ariba retains data for duration of the subscription unless required by law, but State will retains ownership of data. – They send us to their URL. (page 54)
- 14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63. “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba..
 - SAP Ariba retains data for duration of the subscription unless required by law, but State will retains ownership of data. – They send us to their URL. (page 54)
 - **Concern with a URL.**
- 15. **Disaster Recovery Plan**
 - *Page 55. “Every SAP Cloud Line of Business (LoB) participates in disaster recovery planning (DRP) and business continuity planning (BCP). The scope of DRP and BCP obligations **generally** follow these lines: SAP Ariba maintains one or more disaster recovery plans (DR Plan) to protect production instances at data centers when the recovery solution is more than restoration from backups. SAP Ariba **discloses to eligible** customers, **upon request annually**, one or more DR Plans relating to the recovery of cloud products and services used by a customer.”*
- 16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67. “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba..
 - State would receive two environments by default: Test and Production.
 - Additional environments (i.e. Development, Quality Control/User Acceptance, Training) are additional charges.
- 17. **Solution Technical Architecture**
 - Diagram not provided.
 - They described some tools and gave some “various” options for exchanging data between SAP Ariba and external system.
- 18. **Solution Network Architecture**
 - Diagram on page 59.
 - SAP Ariba solutions are offered and delivered in a true subscription-based model
- 19. **System Development Methodology**
 - Based upon Agile Scrum Development methodology.
- 20. **Service Level Agreement**
 - **IBM refers State to their SLA attachment. They do not mention anything about reviewing or indicating compliance with our SLA.**

D. Security Requirements: pages 75 - 94

1. **Cloud Security Alliance (CSA) Compliance**
 - SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines.
2. **Security and Privacy Controls**
3. **Security Certifications**
4. **Annual Security Plan**
5. **Secure Application and Network Environment**
6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6. . “L” Low level of complexity and “A – Available”. Solutions/Tools/Modules covered – SAP Ariba..
 - Mentions backup policies.
7. **Data Security** – nothing to add.
8. **Personally Identifiable Information Protection** – nothing to add.
9. **Security/Privacy Issue Occurrence** – nothing to add.
10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
11. **Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Three of the Matrix Columns (Bidder Approach/Comments, Availability, and Level of Complexity) were not completed. Only the “Bidder Proposed Tools and Solution” was completed.
1. **Project Management**
 - “IBM believes that successful collaboration and teaming is such a critical success factor for complex projects like this, we recommend a 3-tiered governance model that includes The State and its two partners in the program...”
 - They provide graphs and timelines page 80 - 85
 2. **Project Implementation Methodology –**
 - Reference the use of SAP IMPACT through the use of their BlueworksLive process design modeler.
 - IBM uses hybrid agile delivery methodology.
 3. **Catalog Support Services**
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 4. **Data Conversion Services**
 5. **Interface/Integration Development Services**
 - They list out how their standard process works.
 6. **Organizational Change Management (OCM Services)**
 - Change Management is discussed in graphs and overall looks like it will meet requirements.
 7. **Training Services**
 - IBM/SAP IMPACT is discussed again here and the use of “WalkMe” software.
 8. **Help Desk Services – good.**
 - IBM describes it in section F below.
 9. **On-Site System Stabilization Support**

F. Managed Services Requirements: pages 128 - 136

- Matrix was not completed – left blank.
1. **Solution Support**
 - IBM proposes:
 - Transition support. \$\$\$
 - Tier 2 service Desk
 -
 2. **Organizational Change Management (OCM Services)** – see section E6 comments above, .
 3. **Training Services**
 - “As a part of Organization Change Management activities, training services (Train-the-Trainer for State functions and for Supplier Enablement) will be provided during the Implementation Phase for the modules and functions in scope for SAP Ariba implementation. IBM’s Tier-2 Help Desk services (described in Question #5 below) will be available to respond to How-to questions once implementation is complete. In addition to self-help documentation and Tier-2 Help-Desk services, if required, IBM can provide additional training (onsite or remote) for requested SAP

Ariba modules and functions using rates established in the rate card. This will be handled as a Project Change Request”

4. Catalog Support Services
 - SAP Ariba doesn't support catalog enablement in Ariba Buying & Invoicing.
5. **Help Desk Services** – Refer to section F1
6. **Transition Out Assistance Services**

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- A sentence that IBM provides consulting, implementation, and managed services and more info. can be provided upon specific request.

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Unable to download. Did finally get to a screen – wanted email to register – therefore cannot score.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (IBM)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - E-procurement cloud solutions SAP Ariba
 - highest number of Ariba certified professionals (no data to confirm)
 - SOC 1, 2, and 3.FedRAMP, ISO, GDPR certifications
 - To assess, measure, manage and report on the project health - the Seven Keys Framework
2. Previous Projects
 - Lilly- Ariba Source to Pay Capabilities
 - Pfizer - Ariba Suite Capabilities: Guided Buying, Invoice Management, Supplier Management, Sourcing, Contracts Management
 - Lumen - Ariba Capabilities: Guided Buying, Invoice Management, Procurement Operations Desk, Sourcing, Contracts
 - IBM – From legacy to Ariba Source to Pay
 -
3. Subcontractors
 - SAP
 -
 -
4. Organizational Chart
 - Executive Org Chart
 - Roles not defined
 - SAP driven
 -
5. Litigation
 - variety of ongoing claims
 -
 -
6. Financial Viability
 - D&B Report dated 5/2021
 -
 -

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **YES ARIBA**

User Experience **YES**

Bidder Best Practices and Roadmap **SAP ARIBA Best practices center**

Innovations and Value-Added Features/Services **SAP field glass**

Customizations/Extensions **Configurations will meet requirements there for customizations or not necessary.**

Alternative Funding Models **None**

Contract Transition and Flexibility **It all depends**

Functional Requirements

General Functionality - **2 integration w/medium and low LOE, 1 not available, 1 partial requirement met for posting solicitations on state website, 36 Out of the box.**

Supplier Portal - **1 integration w/Medium Loe an API where suppliers can access a posted solicitation , and 21 out of the box, 1 business process to handle vendor complaints outside of the tool.**

Supplier Enablement/Management **9 integrations w/med LOE and 34 out of the box.**

Buyer Portal **15 out of the box**

Need Identification **7 out of the box**

Request through Pay **62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 21 out of box for Pcard, 21 out of the box for Receiving, 11 out of the box for invoicing.**

Catalog Capability **1 not available items with negative dollar value, 39 OOBX**

Sourcing/Bid Management **Three not available, 1 partial sourcing bid management not displayed publicly, 147 OOBX**

Contract Management **74 OOBX, One not supported 11 not available and must be performed manually. 2 Available however these are manual processes.**

Vendor Performance **25 OOBX**

Purchasing/Data Analytics **37 OOBX**

Technical Requirements

Availability **99.5% system availability**

Accessibility Requirements **301 549 is a European standard for digital accessibility.**

Audit Trail and History **logs are retained so long as the customer has an active contract with SAP.**

Browsers Supported **Apple Safari (64-bit)•Google Chrome (64-bit)•Microsoft Edge (32-bit)•Microsoft Edge**

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: IBM
CATEGORY #(s): 1
DATE: 12/17/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Chromium (32-bit and 64-bit)•Mozilla Firefox (64-bit)•Microsoft Internet Explorer (32-bit) until December 31, 2021oNote: Compatibility mode isn't supported
User Accounts and Administration RBAC
User Authentication MFA supported
Federated Identity Management– requires integration
Data Conversion SAP's activate methodology however methodology was hard to determine as far as specific data conversion tasks.
Interface and Integration Using SAP ARIBA open APIs. Oracle and PeopleSoft and they also integrate with SAP?
Office Automation Integration Word, Excel, and PowerPoint. CSV imports.
Mobile Device Support SAP Ariba mobile app Functionality appears to differ between IOS and Android devices
Mobile Applications SAP Ariba mobile app
Data Ownership and Access Data retained so long as the contract is active however it's not clear how long they will keep data after termination
Date Retention, Archive and Purge Considerations Retains customer data for the life of this subscription in accordance with their terms and conditions
Disaster Recovery Plan Annual test does it include clients? Data centers appear to be SAP owned RPO 5 minutes
Solution Environments test and production environments only
Solution Technical Architecture Technical architecture diagram not provided weak description overall
Solution Network Architecture More of an overview
System Development Methodology Agile Scrum Development methodology. Product lifecycle management includes a quality control process that involves technical reviews automated and manual testing performance and stress testing.
Service Level Agreement A list of definitions In a separate document

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ
Security and Privacy Controls SAP Ariba is officially not certified for NIST 800-53
Security Certifications SAE 3402 SOC1 Type II, SOC2 every six months. SAP has attained PCI (Payment Card Industry) –DSS (Data Security Standard) certification as a Level 1 Service Provider. SAP Ariba does not support storing HIPAA/PII/Personal data.
Annual Security Plan SAP's annual security plan are internal facing documents.
Secure Application and Network Environment SAP Ariba provides 24/7 monitoring from a Security operation center
Secure Application and Network Access Data at rest and in transit are encrypted
Data Security Access based on leased privilege
Personally Identifiable Information Protection SAP Ariba are not designed to handle HIPAA data. Our solutions are designed Business to business transaction, and SAP Ariba doesnot support storing HIPAA/PII/Personal data. For example: SSN, Personal Banking information etc.
Security/Privacy Issue Occurrence incident response procedures are confidential
PII Data Actual/Attempted Access or Disclosure Same procedure for security slash privacy issue above
Security Breach Reporting refer to security privacy issue occurrence

Implementation Services Requirements

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 12/17/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Project Management **Three tiered governance model includes the state and the two partners in the project IBM and SAP arriba includes roles and responsibilities.**

Project Implementation Methodology **SAP impact solution. One size fits all.**

Catalog Support Services **Heavy focus on supplier enablement**

Data Conversion Services **Methodology includes source , assessment , extract transform which includes data cleansing, validate , target system**

Interface/Integration Development Services **Minimum detail provided**

Organizational Change Management (OCM Services **Methodology is IBM's digital change. OCM phases are prepare, explore, realize, deploy, sustain**

Training Services **Some of the training is covered by OCM and the training plan will be developed with the state. Appears short on methodology.**

Help Desk Services **described in Section F1?**

On-Site System Stabilization Support **Hypercare and managed services**

Managed Services Requirements

Solution Support **Same as above**

Organizational Change Management (OCM Services **Same as above**

Help Desk Services **Same as above**

Transition Out Assistance Services **standard operating procedures**

Other Available Resources **provides consulting, implementation and managed services "is" almost all industries**

Video Demonstrations

- **Could not access video – it DID want a password**

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Deploying Ariba
 - Experience
 - Developed implementation process stated
2. Previous Projects
 - Lilly example was transition from one SAP to another in Ariba, no end results demonstrated except changeover
 - Pfizer transitioned from Ariba On-Prem to cloud, results only identified changeover within IBM solutions
 - Lumen from one SAP product to another, results do not show ROI
 - IBM project is their own transition from on-prem to cloud?
 - Would have expected more state procurement project examples if they are available and new enablement, not just transition from one IBM solution to another
 - Projects do not show capability of IBM to implement state procurement solutions
3. Subcontractors
 - No subcontractors
 -
 -
4. Organizational Chart
 - Only provided 4 team members.
 - Not shown how they would develop a team for a statewide implementation
 -
5. Litigation
 - Response does not identify litigation pending only that there is
 - Question on responsiveness to this section
 -
6. Financial Viability
 - Moderate Risk overall unexpected
 -
 -

Individual SME Comments:

General Principal and Requirements

- SAP Ariba Solution
- POSITIVE (p.3) SAP Ariba Solution, SaaS
- POSITIVE (p.3) SAP manages infrastructure
- QUESTIONING (p.5)- Spot buy catalog avenue to encourage off contract purchases.
- POSITIVE (p.5)- mobile platform focus
- POSITIVE (p.7)- end to end system, task management functions
- QUESTIONING (p.8)- Monthly feature deliveries, what is state resource demand for these?
- INTERESTING (p.8-9)- API open access developer portal
- NEGATIVE (p.8)-Many value-added services, why not included in base products
- INTERESTING (p.11)-Does IBM support customized or is the configurable system the proposed option. States may be in a situation where configuration limitations do not meet compliance requirements.
- QUESTIONING (p.12)-Extension partners for functionality what is relationship and liability
- QUESTIONING (p.15)- Does IBM have current NVP contract for eProcurement
- QUESTIONING RTM line 9, EPROC-GEN-5, access to contracts only to licensed users

Functional Requirements

- INTERESTING (p.16) Ariba provided less costly ways of procurement. Would like to see ROI data.
- POSITIVE (p.17) fully automated source to pay
 - SAP Ariba Buying& Invoicing (including Guided Buying)
 - SAP Ariba Sourcing
 - SAP Ariba Contracts
 - SAP Ariba Supplier Lifecycle & Performance Management
 - SAP Ariba Network
 - SAP Fieldglass
- QUESTIONING (p.17) How does SAP synch with other ERP software, cost and effort involved
- POSITIVE (p.17) increases touchless invoicing
- POSITIVE (p.19) Business network well established
- POSITIVE (p.26) Role based user dashboard
- QUESTIONING (p.29) Does guided buying allow for weighted criteria (OSD, local, USA, etc.)

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

- INTERESTING (p.31) Buying and Invoicing reconciles all purchases. How is integration from existing solutions considered.
- POSITIVE (p.33) Catalog searches across hosted and punchout (level 2)
- POSITIVE (p.34) Ariba sourcing most widely adopted in marketplace (vendor familiarity)
- POSITIVE (p.34) Solicitation template management, historical library, electronic solicitation
- POSITIVE (p.34) Proposal side by side evaluation
- QUESTIONING (p.37) Contract documents versioning related to negotiating activities
- QUESTIONING (p.40) Public access API website details
- QUESTIONING (p.42) Reporting limitations to customize or export not clarified very well

Technical Requirements

- QUESTIONING (p.45) accessibility limitations are very broad
- NEGATIVE (p.45) Audit logs retained only with active account (3-5 years typical requirement)
- NEGATIVE (p.47) Roles do not appear to have a buyer/shopper type category
- POSITIVE (p.48) Single Sign On consistent with Ariba
- POSITIVE (p.50) Deep level of experience with data conversion and SAP projects
- POSITIVE (p. 51) Integration with ERP Oracle and PeopleSoft
-

Security Requirements

- POSITIVE (p.63) credit card security standards met
- QUESTIONING (p.76) SAP does not handle HIPAA data
- NEGATIVE (p.88) IBM will specify charges for investigating changes?
- POSITIVE (p.100) Good change manage processes identified

Implementation Services Requirements

- NEGATIVE (p.88) IBM will specify charges for investigating changes?
- POSITIVE (p.100) Good change manage processes identified

Managed Services Requirements

- POSITIVE (p.108) various levels of support identified

Video Demonstrations

- NEGATIVE Inaccessible using link provided.

Individual SME Comments:

Overall

SAP Ariba is the solution

General Principal and Requirements

Key Solution Functionality Elements

3	Ariba is the solution they are proposing	
3	There is no software to install and no hardware to buy.	
3	Subscription includes system maintenance, automatic upgrades, base product enhancements and application of service packs	
4	Single point of entry	
4	Open marketplace environment	

User Experience

5	Guided buying.	
5	Each module has configurable dashboards. Users can create multiple dashboards	
6	Ariba also provides mobile app.	

Bidder Best Practices and Roadmap

7-8	Quarterly releases	
	Optional monthly features.	
	Best practice Center – access to solution experts.	

Innovations and Value-Added Features/Services

9-11	API's – currently no cost for this	
	SAP Fieldglass – vendor management system that helps organizations to find, engage and manage their external workforce and services procurement resources.

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Started in 1911 with lots of employees
 - Strategic Direction and Procurement Transformation
 - 7 Keys to Success
2. Previous Projects
 - Large drug company implementations
 - Telecommunications company
 - **Did not provide contact information for projects**
3. Subcontractors
 - No subcontractors reported. Will use US and global based resources
 -
 -
4. Organizational Chart
 - **Did not provide role and responsibility chart**
 - Chart submitted has very limited information.
 -
5. Litigation
 - **Stated litigation exists but no information supplied**
 - Discloses information quarterly to SEC
 -
6. Financial Viability
 - Supplied Duns & Bradstreet report – 24 pages
 -

Individual SME Comments: Video link has been removed or is no longer available. Not able to watch video demonstration.

Concern that some of the standard responses in the comment section of the RTM is "Standard Functionality"

Provided attachment (REDLINE) to NASPO ValuePoint Terms and Conditions but I cannot designate changes Did NOT supply a copy of their SLA originally, but NASPO found it and uploaded it for review. Some responses stated a "reference" to another section for their response but could have easily just copied and pasted the response.

I suggest that the concerns be addressed so the solution could be a better fit for entities.

General Principal and Requirements

Key Solution Functionality Elements – Page 4

- PDF Page 4 – Proposing SAP Ariba as the solution.
- PDF Page 5 – Guided Buying used as SSO.

User Experience – PDF Page 6

- Add items to a personal dashboard to monitor and gain access.
- Can access most of tasks required using the mobile application.

Bidder Best Practices and Roadmap – PDF Page 8

- Quarterly releases (4 times a year)
- Offer Road Map support.
- State can offer strategic guidance to SAP solution experts
- Registered to view RoadMap at this link <https://roadmaps.sap.com/welcom>. Provided roadmaps on all their products

Innovations and Value-Added Features/Services – PDF Page 9

- State has access to APIs at no additional cost
- New Innovations "SAP FieldGlass" and "SAP Ariba Supplier Risk Management" are available with an ADDITIONALCOST.

Customizations/Extensions – PDF Page 12

- States system is configurable, and customizations are not necessary at this time.
- Recommends not deviating from standard configurations.
- Can use SAP Ariba Partner Apps but are not included in the solution or price at this time.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): Category 1 Stage 2

DATE: 11/09/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Provides list of SAP Ariba App Extensions and Partners on PDF Page 13 – **Not included in solution or price!**

Alternative Funding Models – PDF Page 15

- State will incur a monthly usage-based subscription cost after initial implementation.
- Do NOT offer a custom payment plan and will require further discussions.

Contract Transition and Flexibility – PDF Page 16

- If State wants to move to this agreement from current one, contingent factors apply – Page 16

Functional Requirements

General Functionality – PDF Page 17

- PDF Page 18 – Suppliers are in the Ariba Network
- PDF Page 18 – Solution is Guiding Buying, Sourcing, Contracts, Supplier Lifecycle, Ariba Network and Fieldglass.
- PDF Page 19- Personal Dashboards
- PDF Page 19- Can import data from external systems.
-
- CONCERN - EPROC-GEN-5 – Line 9 – This will require an integration
- CONCERN - EPROC-GEN-11 – Line 15 – Do we assume there is no file size limit?
- CONCERN - EPROC-GEN-13 – Line 17 – Response does not address the ability to reassign work?

Supplier Portal – PDF Page 20

- SAP Ariba Business Network is the Supplier Portal SBN
- Ariba offers Open, Smart and Simple Networks for suppliers PDF Page 22.
- Offers Supplier Portal assistance.
- Suppliers have access to dashboard for transactional details
- CONCERN - EPROC-SPR-18 – Line 22 - Vendor Complaints are handled outside of system

Supplier Enablement/Management – PDF Page 26

- Unlimited number of suppliers – Page 26
- Supplier Enablement Team
- Supplier account allows for access to perform multiple processes.
- CONCERN - EPROC-VDR-19 – Line 48 – The question is for TIN, but response talks about “addresses”
- CONCERN - EPROC-VDR-26 – Line 55 and EPROC-VDR-27 – Line 56- These talk about OFAC and SOS certifications, but the response talks about “addresses”

Buyer Portal – PDF Page 26

- Users use same “Front Door” and land in the system and view a dashboard
- Or users can use “Guided Buying” as the landing page
- Contact Managers would use the SAP Ariba’s Homepage Dashboard
- Dashboards have drill down functionality – PDF Page 29
- CONCERN - EPROC-BPRT-3 – Line 77 – Why is not the user information, ID, first and last name, etc. available under the user profile? Response states API needed.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): Category 1 Stage 2

DATE: 11/09/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-BPRT-9 and EPROC-BPRT-10 Lines 83 and 84 – The requirements are for online access to records and ability to search for suppliers, but the response references alerts and notifications?
- CONCERN - EPROC-BPRT-15 – Line 89 – Requirement talks about notifications but response talks about searching and reporting?

Need Identification – PDF Page 30

- Guided Buying is the solution name for this requirement
- It has redirect ability to other solutions.
- Need Guidance tile is also an option – PDF Page 31
- CONCERN – Most all responses of this section of the RTM are **Standard Functionality. This is a generally available feature within the Solution and is currently leveraged by multiple customers across multiple industries**

Request through Pay- PDF Page 32

- SAP Ariba Buying and Invoicing is the solution name integrated with the Ariba Network
- Process starts with purchase requisition and ends with invoice via SAP Ariba Business Network.
- CONCERN - EPROC-PRD-16 – Line 117 - The **file size limit is 100MB**
- CONCERN - EPROC-PRD-28 – Line 129 – Negative value for trade in not supported.
- CONCERN - EPROC-WRK-14 – Line 179 – States workflow will NOT be retrIGGERED!
- CONCERN - EPROC-PO-3 – Line 198 – Needs more discussion on encumbering fund's function
- CONCERN - EPROC-PO-5 – Line 200 – Cannot handle different PO types. Handles this through workflow
- CONCERN - EPROC-PO-8 – Line 203 – Did not address the attachment requirement.
- CONCERN - EPROC-PO-16 – Line 211 – Cannot electronically sign Purchase Orders
- CONCERN - EPROC-PC-6 – Line 232 – Currently does not support maintaining PCard as part of the user profile.
- CONCERN - EPROC-RC-4 – Line 253 – Cannot record a receipt without a PO reference.

Catalog Capability – PDF Page 34

- SAP Ariba Catalog is the solution name with cross-catalog search functionality
- Level 2 Punchout catalogs
- Also has Spot Buy catalog solution to buy non-sourced goods
- CONCERN - EPROC-CAT-6 -Line 291 – Unlimited catalogs not supported, 5000 is limit
- CONCERN - EPROC-CAT-7 -Line 292 – Unlimited catalog items not supported, 500,000 is limit
- CONCERN - EPROC-CAT-19 – Line 304 – Negative Dollar Value not supported.
- CONCERN - EPROC-CAT-39 – Line 324 – Response does NOT address publish announcement within system about new or updated catalogs.

Sourcing/Bid Management – PDF Page 35

- SAP Ariba Sourcing is the name of the solution
- Integration to SAP Ariba Contacts
- Has supporting solutions like Solicitation Project Management and Supplier Proposal Review
- CONCERN - EPROC-SRC-63 – Line 390 – The event is limited to 100 supplier participants
- CONCERN - EPROC-SRC-76 – Line 403- To post solicitation to State public website is a “manual” process

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): Category 1 Stage 2

DATE: 11/09/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Supplied UAT Testing Activity screenshot
- Offer Business Readiness

Catalog Support Services – PDF Page 92

- Provided end to end approach for supplier enablement
- Offer Catalog Enablement – Hosted and Punchout catalogs plus integrations

Data Conversion Services – PDF Page 94

- Must provide a conversion assessment
- Benefits – Standardize and Simplify
- Supplied Data Migration Methodology- Chart on Page 95
- The EnterpriseHub is the solution to aid with data migration
- Offer Data Load testing
- Good response on data conversion

Interface/Integration Development Services – PDF Page 98

- Integration assessment is required
- Integration Development is NOT included in the costs.
- Has tool kits to help with integrations

Organizational Change Management (OCM Services) – PDF Page 100

- Provide OCM Progress Reports
- Offer Learning Modes
- Provided OCM Phases screenshot on PDF Page 102
- Changes Impacts chart on PDF Page 102
- Change Network/Readiness process

Training Services -PDF Page 104

- IMPACT solution has lots of pre-built training documents
- Train the trainer approach
- WalkMe is another learning tool.

Help Desk Services – PDF Page 106

- CONCERN – The response directs the reader to Managed Services Requirements section listed below?
- CONCERN - EPROC-IMPL-1 -Tab 6 Line 1 – They suggest creating our own training documents
- CONCERN -EPROC-IMPL-2 -Tab 6 Line 2 – Direct Training of end users are not in scope of price. Do they train the system admins?

On-Site System Stabilization Support -PDF Page 106

- Provide 2 post live support – Hyper-care and Managed Services

Managed Services Requirements – PDF Page 107

Solution Support – PDF Page 109

- Offered link to SAP SLA's
- Supplied Services Transition to Steady State snapshot – Page 111
- Supplied Tier – 2 Help Desk Service Model Page 113

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM - Kyndryl

CATEGORY #(s): 1

DATE: 10/29/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- IBM - Est. 1911.
- IBM – infrastructure services for hybrid cloud, enterprise application management, business resiliency, network, digital workplace, and technology support.
- Kyndryl (page 6) is an IBM company. Says they are going to be launched later in 2021. This is somewhat concerning. But on the next page says they have been doing this for 30 years. Unsure here.
- I believe the product Ariba can meet category 1, but concerns about Kyndryl providing the service if they are just starting up.

2. Previous Projects

3 projects provided. Kyndryl is mentioned nowhere in the references. No State examples given. Two are not eprocurement end to end. Only one Ariba reference, but done by an IBM subcontractor.

- PayPal Giving Fund – project is still ongoing since 2011. IBM migrated PPGF's ERP platform to SAP Cloud.
- Shared Services Canada – project ongoing. It says the reference is mandated to consolidate and modernize the Government of Canada's IT infrastructure. It discusses Experis (subcontractor) and IBM provide technical support.
- Santander Group Ongoing project – ManpowerGroup's IT brand "Experis" delivering E-procurement solution – "SAP Ariba"

3. Subcontractors

- Yes. Experis, ManpowerGroup, Jefferson Wells, Amick Brown

4. Organizational Chart

- Provides a high-level organizational chart with subcontractors underneath it and a layout of job titles under that.

5. Litigation

- Page 18, yes, they list they have several; however, they do not list any.

6. Financial Viability

- DnB provided. Low – Moderate risk. For IBM only.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Cloud solutions
 - Infrastructure services
 - SAP Ariba eProcurement suite
2. Previous Projects
 - PayPal Giving Fund - Donations
 - Shared Services Canada - delivery of email, data center and telecommunication services
 - Santander Group - procurement operations modernization
 - details lacking on eProcurement experience
3. Subcontractors
 - Amick Brown
 - ManpowerGroup (Experis, Manpower, Jefferson Wells, ManpowerGroup Solutions)
4. Organizational Chart
 - Executive and project Org Chart
 - Roles not defined
 -
 -
5. Litigation
 - variety of ongoing claims
 -
 -
6. Financial Viability
 - D&B Report dated 5/2021

A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Deploying Ariba
 - New company in 2021?
 - Developed implementation process stated
2. Previous Projects
 - Unconvincing previous projects
 - Projects do not show capability of IBM to implement state procurement solutions
3. Subcontractors
 - Amick Brown as consultants
 - Manpower Group – are they going to provide a staffing resource for the states? Not clear on what their role will be performing in this contract scope.
 - Experis – Resources for implementing?
 - Jefferson Wells – Consultants?
4. Organizational Chart
 - Seems very diluted with numerous subcontractors as project leads
 - Unclear what role Kyndryl or IBM has in the process
 -
5. Litigation
 - Response does not identify litigation pending only that there is
 - Question on responsiveness to this section
 -
6. Financial Viability
 - IBM D&B is good, unknown for Kyndryl of numerous Subcontractors identified.
 - Noteworthy that IBM is moderate risk
 -

Individual Evaluator Comments: Does not appear to be a response for full solution other than mentioning the SAP Ariba reference? Could have done a better job on explaining the solution proposed.

Organization Qualifications and Experience

1. Overview of the Organization

- Providing link to website
- Kyndryl is an IBM company will be launched later in 2021
- Spin off company- Recognized by Gartner, IDC, HFS Research, and Everest Group
- Combined team with Manpower Group and Amick Brown
- Cloud Management, Security, Migration, Managed SAP & Oracle Services, Data Management and Cloud Infrastructure
- Proposing SAP Ariba to integrate with on prem Oracle Peoplesoft. Uses Cloud Exchange for virtual network
- Supplied table on page 7

2. Previous Projects

- Canada project- modernize the IT structure of the Government of Canada
- Pay Pal project is to update their ERP system to handle more load.
- Bank project – mentioned this contained “procurement transactions”
- No government client examples with eprocurement experience.

3. Subcontractors

- Amick Brown – ISO certified and an SAP partner. Consultant services for SAP. Provided Link
- ManpowerGroup- staffing brands, Manpower and Experis. Hold State contracts. Seems to be a recruiter for businesses. Provided link
- Experis – Professional Resourcing – Provided link
- Jefferson Wells – offers help with Business Optimization Risk & Compliance, Finance & Accounting and Tax Services

4. Organizational Chart

- Only provided company org chart with some names and titles. Did not provide job descriptions
- Did not provide the org chart for the client, nor job titles or descriptions
-

5. Litigation

- State they have been involved in litigation as plaintiff or defendant but did not offer specific information.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2009.
 - End-to-end, Source-to-pay, SAAS system.
 - Partner with Ernst & Young (EY) and SAP Ariba (SAP), Infosys-EY-SAP partnership under the banner of "Team Infosys"
2. Previous Projects

5 projects listed. One providence entity, two private, and two state. All projects are Category 1 related.

 - Public Services and Procurement Canada. Implemented EPS (e-procurement solution)
 - Eversource Energy. Implemented a supply chain procure to pay system.
 - Zoetis. Implemented and supported the SAP Ariba eprocurement solution.
 - Chicago Public Schools. EY provided consulting and project management.
 - California Dept. of Healthcare Services. Deployed the entire SAP Ariba procurement platform.
3. Subcontractors
 - Ernst & Young (EY) - consulting
 - SAP Ariba (SAP SE) – the eprocurement solution
 - Allied Digital Services LLC – IT Transformation
4. Organizational Chart
 - Yes, provided along with job descriptions.
5. Litigation
 - Vendor states none.
6. Financial Viability
 - DnB provided and audited financials. Low risk.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys Public Services (Infosys)

CATEGORY #(s): 1

DATE: 12/3/2021

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Hybrid Cloud Solution.
- Product is SAP Ariba. Cloud Services with technical architecture of SaaS and PaaS stack.
- In-Scope Items (modules, etc.) are laid out nicely in a table on pages 11 and 12.
- Infosys is offering the professional services portion of the proposal (implementation, long-term support, etc.)
- Infosys Public Services review of SLA. Throughout the SLA they consistently acknowledges the value and need for the clauses, but want to negotiate the exact parameters during the contract negotiation
- Pages 10-15 focus on a summary of what is in the proposal. I appreciate that Infosys took the time to write this, as it is helpful.
- Table 2 – lists out estimate of Large, Medium, and Small State implementations to include time, sourcing, contracting, etc.
- List what is in scope and what is out of scope.
- Table 4 Optional Scope Items (pages 13 and 14).
 - Identity/Access Mgmt & SAP Fieldglass:
 - Transparency Portal
- There are items in the “Key Assumptions” (page 15) that require **CLARIFICATION** or **negotiation where many or most States could or would not agree**. Examples are: **bullet #7** – 3 days for review of a deliverable is not enough time for such a large project, **bullet #9** – rollout only to one agency, **bullet #10** – must accept EULA terms from SaaS and relevant software vendors, **bullet #12** – State is responsible for 3rd party contractors/vendors.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product/Solution components:

- a. SAP Ariba Cloud-based. For eProcurement solution (Sourcing, Contracts, Procure to Pay, etc.)
 - b. Oracle Integration Cloud (OIC). The OIC will act as the middleware layer (SAP Ariba/eProcurement with State's existing ERP system) for the proposed solution OR can use the State's existing middleware tool.
 - c. Identity, Credential and Access Management (ICAM) a cloud-based security management solution – optional solution if State does not have a SML-compliant user management system to integrate directly with the eProcurement system.
 - d. Cloud-based Transparency Portal: Infosys's public portal. OR Ariba's Can be used by State (SAP Ariba Buying and Invoicing solution) and by providers (SAP Ariba Business Network).
 - e. ServiceNow. An OPTION, not a part of the core solution. Helps workflow and manage incidents (side note – our State uses this).
- Single point of entry. Yes – Single Sign on.
 - Smart routing. Yes – Ariba Guided Buying solution.
 - Compliance. Yes - Ariba Guided Buying solution
 - Portal. Yes . Page 21 - Infosys's Cloud Based Transparency Portal Solution OR SAP Ariba's Buying and Invoicing solution for State and the SAP Ariba Business Network for providers. Need **to CLARIFY** which one they are giving us the cost on – because on page 18 they offer Infosys's but on page 21 they offer SAP Ariba's with Infosys's as another option.
 - Open Marketplace Environment. Yes – Spot Buy is the SAP Ariba Cloud procurement application that provides the catalog piece.
 - Integration. Yes – Native out of the box integrations come with the SAP Ariba suite of applications. Support HTTPS using CSV, SOAPWeb use XML payload, and REST APIs.
 - Workflow. Yes
 - Document management. Yes – Ariba Contract Authoring and Ariba Buying & Invoicing module.
 - Reporting, dashboards and data visualization. Yes – native reporting analytics.
 - Configurable. Yes, they state it's highly configurable.
 - Transparency. Yes - with use of the history table in Ariba's application. OR as another option could purchase Infosys's solution – Transparency Portal capability.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
 - **Capability**. Addresses with personalization to the dashboard.
 - **Intuitive Navigation**. Yes.
 - **Wizard-driven capabilities**. Yes – they point to the SAP Ariba Guided Buying as an example.
 - **Informative Portal**. Yes – using pre-configured business rules in forms, templates, and workflows.
 - **Mobile Optimization**. Yes – They have, but seems more geared towards the Catalog app. **CLARIFY** what apps all work on mobile.
 - **Workload Mgt Functionality**. Yes through role assignments.
 - **Role-Based Functionality**. Yes.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.

- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

- Incorporating New Features/Tools. Yes.
- Latest Technologies. Yes.
- Quarterly Releases. Yes in Feb, May, Aug, and Nov of each year.
- Timely updates. yes – Quarterly Releases – They explain products may be released quarterly.
- Monthly Feature Deliveries Alternative Best Practices. Use SAP Ariba Best Practices Center. (extra cost?).
- Road Map: They discuss ideas and new products out there, but no real 3-year product roadmap and how or if they will be using these products.
- Cost Reduction. Yes – they state the KPIs among others listed on page 28.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

Yes . Completed this section; however, they based the innovations and value added services upon studying the State of Maine. While this is not entirely a bad thing, it would be much more beneficial to think bigger picture for all States. They offered the following (pages 29-34):

- SAP Fieldglass. A vendor management system
- SAP Ariba Spend Analysis
- ICAM
- Transparency Portal / Drupal CMS based Portal
- Celonis Process Mining
- Power Approver
- Source to pay Best Practices

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.

• Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- Page 34 – Infosys feels most requirements can be met and any that may need customizations/extensions are addressed in the Matrix. They give an example of customized fields.
- They address such customizations will need extra time.
- They also point out SaaS customization/extension of the product vendor's involvement will require a service request – guessing extra \$\$\$. State's would want to be aware of this and have it built into the Contract when negotiating.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
 - Explain how each model would work;
 - Identify the benefits that Participating Entities and their suppliers would realize; and
 - Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

They are open and flexible. They suggest levying a per usage fees for procurement related transactions (RFx or invoice processing fees).

7. Contract Transition and Flexibility – page 27

Infosys offers 2 approaches. 1. To use the State's current Master agreement. Or 2. Use the new MSA and incorporate the appropriate sub-clauses from the legacy agreement.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40.

- a. 4-“INT-Integration/interface”
- b. 2 – Medium

- #3 (Solicitations), #5 (Contract Management) and #6 (Purchase Data Analytics) – Integration of these must be done through the use of the Oracle Integration Cloud tool. The other 3 (Purchase Requests, Contracts, ID – Single point of entry)
- Restriction of 100mb per file throughout all requirement responses for attachments.
- #14 – No spellcheck feature but can integrate a software such as Grammarly.
- Good - A really robust search engine for all of SAP Ariba's solution.
- The remaining requirements are standard or can be met.

2. Supplier Portal. Tab 3, SPR-1 through SPR-23.

- a. 1- “BP-BusinessProcess”, 1 – TP”ThirdParty”, 1 - CF”configuration item”
- b. 1 – Medium, 1 – High,

- SPR2 is marked as “BP” and it say the system has this ability; however, it does not say what business process will need to be updated or changed.
- SPR9 – is “TP”. They use a custom portal for allowing suppliers access to award data. The Ariba system can send an email of notification.
- SPR12 – Unsure about the meeting of requirement. Can reports ONLY be uploaded during registration? The verbiage says it's standard to the system, but it's marked as “CF”.
- SPR23 – marked as “BP” unsure what the business process is as they will use messaging feature of Ariba for communication of the contract modification that needs to happen, but then it looks like they point to using a “tasks” or “notes like” option to collect everyone's notes which will then be captured and placed in the contract. **This does not seem very streamlined.**

3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43.

- a. 8-“INT-Integration/interface”, 1- “N-NotAvailable”,
- b. 8 – Medium

- #10 – besides collecting ACH payment info. the Ariba system can take it a step further and include internal questionnaires created by the State for the supplier's profile.
- #11 – Like that there is an option for the buyers to define unspecified if they choose a commodity code of that type.

- #12 – Seems to be a work around. Pointing back to #10 the suppliers can complete a questionnaire to obtain site specific commodity assignments, but it does not seem to support location specific commodity situations.
 - #13 – is marked as “A” however, upon reading it looks like the State will need to set up conditional logic in a registration questionnaire for foreign companies.
 - #18 - #27 will need an integration of Dun & Bradstreet or like product to meet this requirement
 - #40 – Not available for specific contract notification to vendor, but suggested some workarounds listed.
4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15.
- a. 2 - CF “configuration item, ”1- “BP-BusinessProcess”, 2-C”Customization”
 - b. 4 – Medium
 - #3 – Password change portion will need to be configured via customizations.
 - #10 and #11 – the licenses and insurance fields (if State wants) will need to be customized.
 - #15 – broadcasting notifications. Would need customization in the provided system or could purchase Ariba’s Business Network .
5. **Need Identification.** Tab 3, NEED-1 through NEED-7.
- a. 1 - CF “configuration item
 - b. 1 – Medium
6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. Pg 49 proposal
- a. 50- CF “configuration item, 10- C “Customization”, 5- BP “Business Process”, 1-A-“Out of the Box”, 1 – N “Not Available”
 - b. 21– Medium, 1-High, 1 - A -marked as this but doesn’t exist.
 - PRD 2 through 5 – CF will need to be done for all of these.
 - PRD 14 - Users have to manually attach the attachments to the copied requisition as Ariba doesn't allow requisitions attachments to be copied OTB.
 - PRD 29 – Meets Zero value line item requirement and mentions it also available in catalogs, contracts and non-catalog item. This is a plus at the start of a Contract.
 - PRD 31 – taxes will need to be manually entered.
 - PRD 38 – Like the idea of being able to configure a warning message
 - WRK 3 – 6 – CF will need to be done for all of these. From page 50 of proposal for this section:
“The request through pay workstream is the heart of the eProcurement solution starting with a purchase requisition and concluding with the receipt of an electronic invoice via the SAP Ariba Business Network.
- SAP Ariba provides a robust approval rule management process through a web-based interface, allowing users to graphically build out simple and complex flows and rules. Specific technical resources are not required to manage the approval process. SAP Ariba provides out-of-the-box conditions for faster rule building, but the user can configure a variety of simple and complex rules. Approvers are identified with each approval and a record is kept of each approval in the “History Tab” of the document. Workflows/approvals/business rules can be configured on any data point on the Purchase request document. Rules for one organization can be driven by the organization/agency/company code value so that a specific rule set applies to that group.”*
- PO 5 – Rather than meet the requirement of supporting State standard PO templates – Ariba answers with they have out of the box templates and the State can capture data within the templates. To manually do this each time could lead to many errors.
 - PO 6 – Requirement does not seem to be met or only partially met. The SAP Ariba system will automatically generate a PO number. The State can not edit or configure their own number.
 - PO 8 – Unsure if this requirement is met. Is it a link to State’s standards or a file??
 - PO 16 – Requirement not met. No electronic signature functionality in the POs.
 - Overall the PO process seems clunky and not fully mature for an eProcurement System.
 - PC – Unsure if Infosys understood the Pcard section entirely. The questions were addressed from the perspective of Infosys providing the Pcard (only). I believe the requirements were addressing a type of payment not the service of providing the card and pcard system; therefore, I struggle to evaluate this section.
 - RC 3 – Sounds like it may be a manual process to attach old POs to receipts.

- RC 4 – Does not meet requirement. The Ariba system requires a PO or Contract # to create a receipt. They cannot create a receipt without one and attach later.
 - RC 21 – System does not meet this requirement.
 - INV 1 – Ariba supports EDI or cXML format and Suppliers can upload invoices and create attachments.
- 7. Catalog Capability - Tab 3, CAT-1 through CAT-40.**
- a. 4- CF "configuration item", 2 – N "Not Available"
 - b. 2 – Medium, 2 – unfilled
 - CAT-7 – Doesn't meet unlimited requirement. System is limited to 5000 catalogs.
 - CAT-8 - Doesn't meet unlimited requirement. System limit is 500,000 items in a catalog.
 - CAT-19 – Doesn't meet negative dollar value requirement. Discount on items can have a negative value, but a line item price can't.
 - CAT-23 – Discount Pricing. The Ariba system offers two types in the system 1. Discounted Price (fixed price) or Discount Percent (fixed percentage off pricing). Unsure if this will pose difficulties to certain Contracts.
 - CAT 32 – Suggest using "Spot Buy" and mention where a custom suppliers list will restrict users to only buying from them in the catalog search results page.
 - Page 53 of their proposal discuss "Spot Buy" more. Unsure about the security of it for some or all States. It sounds like it will bounce you out of the Ariba Eprocurement system to an Ebay system.
 - CAT 40 - Doesn't meet requirement. System will allow creation of Contract with items, but does not define punchouts that support contractors contract.
- 8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. pg54proposal**
- a. 1- "BP-BusinessProcess", 1 – N "Not Available", 4-"INT-Integration/interface", 1- C "Customization",
 - b. 3 – Medium, 3– High, 1 - unfilled
 - Attachments are limited to 100MB.
 - System has out of the box features and functions to create and manage all types of solicitation templates (ITB, RFI, RFP, etc.)
 - SRC 59 – 65. Ability to auto generate registered supplier list for a solicitation. #63 Not met - There is a limit of 100 suppliers per event, you would need to set up another ((event (solicitation?)) as a workaround to add more. This could lead to a large protest problem and our State's IT event's are well over 100 suppliers.
 - SRC 67 – Does not meet Requirement.
 - SRC 75 – Currently does not have ability to post documentation to state's website, but can integrate.
 - SRC 76 – Currently does not have ability to archive, but can.
- 9. Contract Management. Tab 3, CNT-1 through CNT-88.**
- a. 5-"INT-Integration/interface", 2- "BP-BusinessProcess", 14- C "Customization", 1 – N "Not Available" 1- CF "configuration item"
 - b. 5– Medium, 12 – High, 1 - unfilled
 - CNT 10 – Maximum upload size of 2GB for Contracts. Supports many of the common extension types.
 - CNT 12 – Electronic Signature is not part of the SAP Ariba Contract system. It has the ability to intergrate with docu-sign, but is an add-on feature (\$\$\$).
 - **CLARIFY** – besides DocuSign – if a State has another electronic signature software – will they be able to Int. with that?
 - CNT 28 – Does not meet requirement. Contracts for a pool of suppliers is not supported.
 - Overall – many concerns with the Contract Management portion because of all the customizations and integrations that will drive up the cost. Many of the C's are of a High level of complexity.
- 10. Vendor Performance Tab 3, VPE-1 through VPE-25.**
- 2- "BP-BusinessProcess"
 - Pg 63 proposal – It seems as though much of the information is not autogenerated. It needs to be requested through surveys, invoices, scorecards, evaluator notes, etc. and will need to be

compiled to identify performance problems in their SAP Ariba Supplier Performance Management (SPM) system. **Unsure if this is normal for most or cumbersome.**

- **Pg 64 proposal** - Buyer/analyst will receive notification when a contractor completes performance but will not provide information about the criteria, it will just notify. The contractor will need to view the project to check performance.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. *Proposal page 64*

- Ariba Strategic Sourcing / Ariba B&I
- Ariba has a set of over 250 pre-packaged reports – pg 64. Additional reports can be created or modified.
- Reports can be exported from the solution via excel, .csv and .pdf. Reports can also be scheduled to run in the background and emailed to users. Page 65

C. Technical Requirements: pages 49 – 74 (proposal page 65)

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- SAP core of the eProcurement solution proposed is based on SAP Ariba SaaS application. Ariba Cloud Services are deployed as a true SaaS Model IV solution. (page 65)
- SAP offers a 99.5% system availability percentage during each month for production versions, with exception of **regularly scheduled and emergency maintenance**. **CLARIFY** – How often is regular maintenance and during what hours and days. Additionally, how often in the past has SAP had emergency maintenance (example of how many times in one year?).
- Page 67 – **LARGE CONCERN** - 5 subcontractors to review 4 links provided and one (SAP ARIBA) to go to their site that will need to be reviewed during negotiations or by each State for terms that the State can agree to.

- 2. Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*

- Page 68. **It seems the software does not meet or come with accessibility requirements.**

- 3. Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5. (Page 68 proposal)

- **Saviynt Enterprise Identity Cloud (EIC)** is discussed on page 70 s the comprehensive logging and monitoring part of Audits and history capabilities. But I do not see it addressed anywhere in the matrix. I am unsure if this is part of SAP Ariba or an Add-on. **CLARIFY. Seems like it may be part of ICAM which is an optional software.**
- The solution can export up to 10,000 audit log entries to a Microsoft Excel file. (pg 68)
- Otherwise no concerns with audit trail section.

- 4. Browsers Supported** – (pages 70-71 proposal)

- No concerns. The general web browsers are supported by SAP Ariba cloud solutions:
 - Apple Safari (64-bit)
 - Google Chrome (64-bit)
 - Microsoft Edge (32-bit)
 - Mozilla Firefox (64-bit)
 - Microsoft Internet Explorer (32-bit) until December 31, 2021

The optional custom portal solution for public access to awards will be certified for use with following browsers:

- Apple Safari (64-bit)
- Google Chrome (64-bit)
- Microsoft Edge (32-bit)

- Note: Compatibility mode is not supported
 - For ICAM Solution - Saviynt Enterprise Identity Cloud (EIC) supports the following browsers/versions:
 - Firefox ESR 67 and later
 - Google Chrome 75 and later
 - Microsoft Internet Explorer 11 and later
 - Safari macOS 12.1 and later
- EIC also supports HTML5 for compatibility with mobile browsers
- For ICAM Solution - Azure Portal Supports the following browsers
 - Microsoft Edge (latest version)
 - Safari (latest version, Mac only)
 - Chrome (latest version)
 - Firefox (latest version)
5. **User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20.
 - a. 1- CF "configuration item", 1- "BP-BusinessProcess"
 - b. 1 – Medium
 - Page 71 – Infosys continues to address only the State of Maine users. For context, will continue to see State of Maine as any State.
 - **TECH 11 – Does not meet requirement.** Dual sign on. Infosys states State is responsible for setting SSO for buyer account and supplier is responsible for setup SSO in Ariba. Dual Sign on is not supported.
 6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25.
 - a. 1- CF "configuration item"
 - b. 1 – Medium
 - Tech 21 - Ariba can support a 2-factor authentication, **BUT it requires adding on a 3rd party authentication tool – MS Azure ICAM.** (and page 82)
 - **Tech 22 – Single Sign-On requires the same as Tech 21 above.**
 7. **Federated Identity Management** – Pages 49 – 50.
 - Proposal pages 83 – 85. Offers two options. Choose the IAM solution as in State of Maine's existing IAM or the proposed optional ICAM solution by Infosys. Because the IAM solution is probably not in most States, the ICAM (optional) solution is the option. **This should be kept in mind for negotiations as a General/normal software component.**
 8. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34.
 - a. 8- C "Customization",
 - b. 8- High
 - Offer the Infosys NIA ETL tool integrated with SAP Ariba to meet the Data Conversion requirements.
 - **Concerns with the area of Data conversion because of the 8 Highly Customizable requirements that could lead to high costs (\$\$\$).**
 9. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60.
 - a. 26-"INT-Integration/interface"
 - b. 23 – Medium
 - Use SAP Ariba and Oracle Integration Cloud (OIC)
 10. **Office Automation Integration** RTM: Tab 4, TECH-61. (page 95 proposal)
 - Tech 61 – Yes can support with Microsoft products. Does state at the end that there are varying levels of integration based on the type of service area.
 11. **Mobile Device Support** RTM: Tab 4, TECH-62.
 - Yes seems can support. Supports:
 - iOS versions 10.x and later
 - Android 8.0 and later
 12. **Mobile Applications** - TECH 62. (page 97)
 - Yes SAP Ariba supports various browsers on Windows and Mac platforms.

SAP Ariba cloud solutions are certified for use with the following browsers:

Supported Browsers

- Microsoft Edge 32-bit

- Microsoft Internet Explorer 11 32-bit
- Chrome 53+ 64-bit
- Firefox 48+ 64-bit
- Safari 9+ 64-bit

13. Data Ownership and Access – (proposal pg 97-98)

- (page 98) *Transactional data can stay in SAP Ariba without the need of archiving or purging. On the other hand, a customer is in complete control of data deletion and purging which can be manual or automated via integration. SAP retains customer data for the life of the subscription and in accordance with the Ariba Data Policy and privacy statement found at the following URL: <http://www.sap.com/corporate-en/about/our-company/policies/ariba/data-policy.html>*

14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63.

- Requirements seem to meet.

15. Disaster Recovery Plan (proposal pg 97-98)

- Seems to meet requirements.

16. Solution Environments RTM: Tab 4, TECH-64 through TECH-68. And page 103

- Offers in their standard license includes 3 environments: Development, Test, and Production. Training is extra. Because doesn't offer all – doesn't meet requirement. However, earlier in the proposal they say only 2 environments are offered. **CLARIFY**

17. Solution Technical Architecture

- Seems to meet requirements.

18. Solution Network Architecture

- Seems to meet requirements.

19. System Development Methodology

- Seems to meet requirements.

20. Service Level Agreement (proposal page 120)

- They indicate they reviewed and indicate compliance; however, when looking at Attachment A SLA they state : ***"We agree on the framework and the parameters established to measure and track SLA. We would like to have the option to negotiate the terms and values associated with each SLA during the contract negotiation phase."***

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance

- SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines.

2. Security and Privacy Controls

3. Security Certifications

4. Annual Security Plan

5. Secure Application and Network Environment

6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6.

- Seems that it meets requirements.

7. Data Security – nothing to add.

8. Personally Identifiable Information Protection – nothing to add.

9. Security/Privacy Issue Occurrence – nothing to add.

10. PII Data Actual/Attempted Access or Disclosure – nothing to add.

11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

1. Project Management (proposal page 193 - 228)

- PM Key tasks are typical (page 195)
- Stage Gate Process (page 206)
- Lengthy explanation on describing their PM method.
- Implementation charts for L, M, S projects seem aggressive for timeline. (page 200)
- **Basing their Major Risk Areas on private clients examples (top of page 211) – This is concerning.**

2. Project Implementation Methodology (proposal page 228 - 264)

- Typical IT project implementation.
- Infosys methodology: *"Infosys' IDEA-Activate™ utilize SAP Activate methodology, enhanced with Infosys' experienced consultants using proven Infosys accelerators, consisting of tools,*

templates, and leading practices; to-simplify and streamline your transformation project. Using a hybrid-agile framework”

3. **Catalog Support Services** (proposal page 264)
 - Discuss types of implementations of catalogs:
 - Hosted catalog
 - Punchout Catalog
 - Use Spot Buy for the non-sourced goods.
4. **Data Conversion Services** (proposal page 270)
 - Infosys proposes NIA ETL for data conversion services. NIA ETL is Infosys' proprietary tool which helps in ingesting, managing, cleansing and transforming data from any source system.
5. **Interface/Integration Development Services** (proposal page 270)
 - Seems to meet requirements.
6. **Organizational Change Management (OCM Services)** (proposal page 274)
 - Will use EY Real-Time Collaborator Tool, to continuously engage government leaders in a collaborative and accelerated environment to drive collective understanding and alignment on the future state vision and business value, objectives and intended outcomes. What is the extra cost of this tool?
 - Contains all typical change management processes.
7. **Training Services** (proposal page 283)
 - Blended learning model to develop what fits – examples (page 287):
 - Instructor Led Training (In-person & virtual) – Interactive training content developed to be delivered by a live trainer.
 - • On-Demand Training – Recorded training webinars designed to be delivered through a self-guided learning approach.
 - • Micro Learnings – Content that's delivered to users in small, very specific bursts with tools such as SnagIt Videos, among other highly visual formats.
 - • Community Forums – Organic, self-powered community where users can answer questions, help solve problems, and generally make life more “secure” for each other (leveraging tools such as Teams, which can be accessed on smartphones, tablets and PCs can be leveraged to share ideas across diverse stakeholder groups).
 - • Gamification – A powerful tool when building and delivering successful, high-impact trainings and assessing results, focused on interactivity and active learning (including word puzzles, quizzes or other creative formats).
 - • Digital Quick Reference Guides – Tools leveraged when building and delivering successful, high-impact trainings, focused on active learning (including interactive PDF self-paced
 - Train the Trainer.
8. **Help Desk Services** – Tab 6 IMPL 1 – 5
 - 4 - Medium
 - They offer the following suggested softwares to cover all 5 requirements: Drupal CMS, ServiceNow Portal, and Amazon Connect Chat.
 - The above seems clunky for what should not be.
9. **On-Site System Stabilization Support** (proposal page 300)
 - Infosys proposes Hypercare support plan (Stabilization period) for post go-live.
 - Support provided for 3 months post go live (seems short)
 - After the three months of Hypercare support, the team will transition to Managed Services team.
 - The Managed Services team will be comprised of a portion of the project team and the Managed Services team so that knowledge is retained and the transition is smooth.

F. Managed Services Requirements: pages 128 - 136

1. **Solution Support** – Tab 7 MNGD-1
 - Yes provided; however, to get must purchase the “Preferred Care Subscription”
2. **Organizational Change Management (OCM Services)**
3. **Training Services** - (proposal page 340)
 - See Implementation section above.
4. **Catalog Support Services** - (proposal page 340)
 - Seem to meet requirements
5. **Help Desk Services** –

- Seem to meet requirements
- 6. Transition Out Assistance Services – (proposal page 341)**
- Seem to meet requirements

G. Other Available Services: pages 137 – 139 – (proposal pages 346 – 348)

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

All at additional cost.

- Celonis Process Mining
- Power Approver
- SAP Field Glass
- Spend Analysis

H. Video Demonstrations:

- 35 minute demo. Much repeat of wording in the technical proposal (lots of slides). Would have liked to see more of a demonstration approach of how the actual system works.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (Infosys Public Services)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - SaaS on Ariba platform
 - Full Functionality in One Product
 - Delivered 780 supply chain and procurement transformation programs
 - over 200 CISSP certified resources
2. Previous Projects
 - Public Services and Procurement Canada (eProcurement - Complex integration)
 - Eversource, Berlin, Connecticut (Supply Chain Mgt)
 - Zoetis implementation & support of SAP Ariba eProcurement
 - Chicago Public Schools - Supply Portfolio Optimization – Category Mgt & Strategic Sourcing
 - SAP Ariba procurement for California Department of Healthcare Services
 - Detailed descriptions of each project
3. Subcontractors
 - SAP
 - Ernst and Young
 - Allied Digital Services
 - Each sub credentialed by the prime with history and metrics
4. Organizational Chart
 - Proposed Maine and Infosys org charts specific to the project
 - Roles defined
 -
5. Litigation
 - No litigation
 -
 -
6. Financial Viability
 - D&B “snapshot” dated 10/5/2021????????
 - Financial Statements going back to 2018
 -

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Infosys
CATEGORY #(s): 1
DATE: 12/19/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **Guiding or general principle and requirements?** SAP Ariba solution. no custom integration required among various Ariba modules such as Supplier Management, Sourcing and Contracting, and Procurement Management. Do it the SAP way. ServiceNow ITSM integration.

User Experience **smart, easy, and intuitive user interface**

Bidder Best Practices and Roadmap **Adopt best practice of leveraging out-of-the-box capabilities in SaaS to minimize business operational risks and stay aligned with SaaS vendors' product roadmap.**

Innovations and Value-Added Features/Services **Transparency Portal capability using Drupal technology, SAP Fieldglass, Celonis Process Mining makes business processes 100% transparent to uncover inefficiencies, bottlenecks, and compliance violations. Power Approver mobile application.**

Customizations/Extensions **Most of the requirements provided by the State in RTM can be addressed by out-of-the-box Ariba functionality. A few requirements would require customization/extensions**

Alternative Funding Models **flexible on considering alternative funding model. One option is to levy per usage fees for procurement related transactions such as RFx fees or invoice processing fees.**

Contract Transition and Flexibility **Transfer the MSA or create a new one.**

Functional Requirements

General Functionality - **1 unlimited license is not available, 4 configurations w/2 med 2 low loe, and 37 out of the box.**

Supplier Portal - **1 configuration w/medium effort, 2 biz process w/low effort, 1- 3rd party w/high effort and 19 out of the box**

Supplier Enablement/Management **8 integrations w/med effort, Supplier sign up for email notification when a specific contract is to be re solicited not available, and 34 out of the box.**

Buyer Portal **2 configurations w/medium effort, 1 biz process, 2 customizations, 26 configurations with medium and lo Loe, and 10 out of the box**

Need Identification **1 configurations w/med effort, and 6 out of the box**

Request through Pay **54 out of the box, 3 biz process, 5 customizations w/med LOE, – Purch Req, 8 Configurations with low effort, 20 out of the box for Wrkflw mgt, 4 customizations with one low two medium and one high level of effort, 8 configurations with low and medium level of effort, store 17 out of the box for PO gen and mgt, 21 out of box for Pcard, 1 configuration w/low effort, 1 business process with low level of effort, One customization with low level of effort, 8 configurations with low and medium level of effort, and 20 out of the box for Receiving, 11 out of the box for invoicing.**

Catalog Capability **5 configurations w/medium (2) and low (3) LOE, 2 Not available, 33 OOBX**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Infosys
CATEGORY #(s): 1
DATE: 12/19/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Sourcing/Bid Management 9 Integrations with 7 medium and two high level of effort , 1 Business process with low level of effort, 1 customization with medium level of effort, One not available suppliers adding themselves to a selected solicitations supplier list for future notifications , 144 OOBX
Contract Management 2 configurations w/medium LOE, Three business processes with low level of effort, 14 customizations with mostly high level of effort, 5 integrations with 4 medium and one hi level of effort, One not available, 63 OOBX
Vendor Performance 2 business processes with low level of effort, 23 OOBX
Purchasing/Data Analytics, 37 OOBX

Technical Requirements

Availability more than 99.5% availability, Oracle integration cloud 99.5%, cloud based portal solution 99.95%, identity credential and access management 99.5%, ServiceNow 99.8%.
Accessibility Requirements Working towards meeting WCAG 2.0 level AA.
Audit Trail and History Audit logs capture information such as the date and timestamp of every action taken on the transaction, user information, content changes, approvals, and rejection of transactions. Audit log captures ID, date, event type, real user, effective user, which is the name of the user who performed the action , description, customer site, node , stack trace.
Browsers Supported Apple safari, Google Chrome , Microsoft Edge, Mozilla Firefox, Microsoft Internet Explorer 32 bit. Browsers having more than 10% of web traffic.
User Accounts and Administration Three categories of users, state, solution and ministrator's, suppliers. User account administration includes creating new user accounts deleting users resetting user passwords acting as another user locking and unlocking user accounts and monitoring user activity. User groups and user roles. Optional ICAM solution a central dashboard to manage user accounts and related administration
User Authentication Single sign on with state network administration and MFA. Password policies case sensitivity between 12 and 32 characters in length any Latin characters and punctuation marks must include at least one numeral between the first and last character must also include at least one letter configured to require users to change passwords at least every 180 days.
Federated Identity Management– YES
Data Conversion plan, design, execute. validate, deploy. NIA ETL proprietary tool for ingesting, managing, cleansing , and transforming data from any source. Data mapping will follow three activities , fields in areba directly mapped to legacy fields or other legacy data source, fields in areba but not in legacy systems, feels not in areba but available in legacy systems. Data load via CSV templates. Data testing includes numerous mock runs or dry runs. Data conversion RACI matrix.
Interface and Integration Methodology is Based on Oracle integration cloud model.
Office Automation Integration Word, excel, PowerPoint, PDF files
Mobile Device Support Mobile app supports IOS and Android devices with the following operating systems; IOS version 10.X and later, Android 8.0 and later, SAP ARIBA supplier supports IOS versions 14.X or higher and Android versions 9.X or higher
Mobile Applications Ariba Mobile app
Data Ownership and Access State completely owns the data in the SAP Ariba Solution and all of its components
Date Retention, Archive and Purge Considerations Data retention is governed by the active contract.
Disaster Recovery Plan simulations and exercises once a year. The exercise will be run with the support team and State of Maine's key stakeholders, including the IT support team, leadership

team, and some State of Maine users. deployed in regional data center pairs so, in the event of a failover, the data will remain within the region. Oracle cloud business continuity and disaster recovery, service now business continuity and disaster recovery.

Solution Environments Development shared, test shared, training shared, production dedicated.

Solution Technical Architecture Key applications and platform SAP arriba Oracle integration cloud, help desk is a WS connect and service now, portal is ACQUIA, identity and access management is Azure Active Directory and SAVIYNT.

Solution Network Architecture Border gateway protocol . Access control lists. Load balancers control traffic and provide optimal utilization of the web servers. Firewalls employ next generation appliances. No single point of failure architecture design principle.

System Development Methodology Software development cycle is aligned with ISO 27034 principles.

Code is reviewed by peers before build cycles static and dynamic code analysis with load testing for resiliency reviews and approvals at multiple phases for meeting security criteria prior to production.

Service Level Agreement SLA performance credits based on red yellow green performance levels with a consecutive occurrence performance credit for red and yellow. SLAs to be agreed upon.

Security Requirements

Cloud Security Alliance (CSA) Compliance CSA CCM requirements and NIST 800-53 requirements.

Reference to complete CAIQ but it was not on their folder.

Security and Privacy Controls will inherit FEDRAMP/NIST compliance from the cloud service providers and configure customer specific controls as applicable for the eProcurement solution.

Security Certifications certified to ISO 27001:2013 standard. is assessed for SSAE 18 SOC 1 Type II, Both parties shall discuss and mutually agree on timeframe for compliance with (e.g., PCI DSS, HIPAA, FISMA, NIST, SSAE 16 SOC 1 and SOC 2 etc.). Sapps arriba has SOC 2 PCI DSS ISO 27001 certification. Service now has SOC 2 ISO 27001 fedramp moderate Microsoft Azure ISO 27001 fedramp SOC 2 IRS 1075 HIPAA hi TRUST 9.2 Oracle cloud infrastructure ISO 9001 ISO 27001 PCI DSS SOC 2 fedramp

Annual Security Plan Infosys will develop a detailed security plan (SSP)

Secure Application and Network Environment Discovery and Ariba network.

ServiceNow Cloud together with Saviynt IAM feature, Azure Active Directory security posture of each component provided in detail.

Secure Application and Network Access Infosys has deployed SIEM (Security Information and Event Management) platform which is an event and log monitoring & management platform at an enterprise level. collects logs from various enterprises devices (servers, network devices, firewalls etc.).

Data Security Infosys leverages individual cloud service providers Data security process

Personally Identifiable Information Protection GDPR and PII process from the CSPs to meet compliance

Security/Privacy Issue Occurrence CSPs individual process; some meet, some don't

PII Data Actual/Attempted Access or Disclosure YES

Security Breach Reporting Infosys will notify within 2 hours of the Security Breach/Incident is notified to Infosys by individuals, cloud Service Providers. Some

Implementation Services Requirements

Project Management Proprietary impact framework integrated approach with value streams each value stream has a playbook holistic view of key initiatives. Large medium and small. Risk management assessed with Infosys idea activate implementation methodology.

Project Implementation Methodology IDEA-Activate Insight , design, execute, achieve. Agile life cycle.

Catalog Support Services Hosted and punch out catalogs.

SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Data Conversion Services **proprietary NIA ETL .**

Interface/Integration Development Services **Integration execution methodology**; interface analysis, environment validation, design phase, development phase, testing, integration training, cutover, hyper care.

Organizational Change Management (OCM Services **Evaluating the magnitude of change impacts; people , process, technology, policy; high medium low**

Training Services **Training approach is aligned with project lifecycle and recognized Industry standard addie model which is analyze, design, develop, implement, evaluate.**

Help Desk Services **Allied digital IT services ITIL and ITS M**

On-Site System Stabilization Support **Hypercare for three months user called the helpdesk war room established daily defect triage command center prioritizes issues by severity technical team analyzes and provides fix.**

Managed Services Requirements

Solution Support **adopted ITIL V4 practices as the foundation operating model for operations support.**

Organizational Change Management (OCM Services **Continuous Learning Process**

Training Services **same as above**

Help Desk Services **Same as above in implementation services.**

Transition Out Assistance Services **Transition out planning for either situation, in-flight project or during managed services, will be jointly developed between Infosys and the incoming service provider.**

Other Available Resources **Shouldn't these other available services be part of the E procurement tool?**

Video Demonstrations

- Digitizing manual processes
- Built on 5 components:
 - Portal
 - ARIBA modules: Catalog management , sourcing supplier lifecycle and performance, contract management, procure to pay.
 - Service now service desk
 - Ms Azure based identity compliance optional
 - Oracle cloud integration platform
- Getting started page
- Bidding rules can be applied to sourcing module
- Contract workspace
- Suppliers build and manage catalogs which are approved by procurement

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - SAP Ariba Cloud Solution
 - Azure / Oracle Cloud
 - Somewhat general information, but references capabilities to NASPO needs
 - Action driven response instead of marketing centered
2. Previous Projects
 - More prevalent overseas referenced
 - Canada Government large scale, not mature to show true ROI
 - Energy Company Eversource does not show breadth for statewide engagement, Supply Chain Management; no reference to purchase flow through solution compared to prior.
 - Zoetis is new enablement 2020, not mature to show results or effectiveness
3. Subcontractors
 - Ernst & Young (EY) for consulting, business strategy
 - EY more active in Canada
 - SAP is subcontractor
 - Allied Digital Services system design
4. Organizational Chart
 - Good to see customer org chart to show team approach and ed user commitment needed
 - Personnel descriptions are vague and general
 -
5. Litigation
 - No litigation to InfoSys
 - No discussion around subcontractors
 -
6. Financial Viability
 - Partial B&B snapshot submitted.

Individual SME Comments:

General Principal and Requirements

- INTERESTING (p.10) Ariba Solution
- POSITIVE (p.11) Full Ariba suite offered
- INTERESTING (p.12) almost a full year to implement
- INTERESTING (p.13) Oracle Cloud platform, not sure impact to anyone using Oracle On-Prem currently
- QUESTIONING (p.14) Peoplesoft integrations are out of scope. What does that look like?
- NEGATIVE (p.15) proposal is for a single rollout. If not to an entire state at once, the State is responsible for adding additional agencies.
- INTERESTING (p.16) No custom integration
- INTERESTING (p.20) Service Now upsell
- NEGATIVE (p.29) Continual reference to optional tools (Fieldglass, Spend Analysis, ICAM, etc.) Unclear what proposed solution value is.

Functional Requirements

- POSITIVE (p.27) Full functionality in one product
- NEGATIVE (p.37) Full business solution, potential conflicts with current operations
- QUESTIONING (p.38) Supplier portal allows for open supplier participation for bids and not only for those that have joined the portal
- NEGATIVE (p.42) Enablement services, "the current commercial deal does not include this service."
- QUESTIONING (p.44) Prequalified suppliers are awarded through competitive bid?
- POSITIVE (p.55) Sourcing and negotiating seems promising to save time, few details are provided
- QUESTIONING (p.56) Public posting is for "certain attachments"
- QUESTIONING (p.60) Electronic Signature merges with DocuSign. Does it also merge with Adobe Sign or other platforms? These are all additional costs.
- QUESTIONING (p.62) Customization reports are at extra cost?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 12/26/2021

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Technical Requirements

- **NEGATIVE** (p.78) Saviynt is proposed as a robust life cycle solution, however it is part of ICAM which is at additional cost for the proposed solution.
- **QUESTIONING** (p.98) Data retention available for years after subscription ends for audit purposes? Required customer download?
- **QUESTIONING** (p.101) Is Service now and ICAM the proposed Business Continuity solutions? Both are an extra cost.

Security Requirements

- **INTERESTING** (p.120) Many different cloud providers, is data more at risk?
- **QUESTIONING** (p.135) Breach notification is to client, is that all?
- **NEGATIVE** (p.136) Different entities managing security, how is liability established?
- **QUESTIONING** (p.164) "Infosys proposed procurement solution leverages individual cloud service providers..." Need to be cognizant of breach terms and liability terms.

Implementation Services Requirements

- **INTERESTING** (p.193) IMPACT proprietary project management process
- **INTERESTING** (p.194) SAP Activate methodology used to implement
- **NEGATIVE** (p.197) Project Management cliches detract from capability (show-and-tell, lead from the front, double-click)
- **QUESTIONING** (p.202) Various entities involved with implementation may cloud responsibility and complicate the project
- **POSITIVE** (p.214) Table 40, Deliverables are well outlines. Be sure the Master Agreement or State PA defines these goals very clearly.
- **POSITIVE** (p.308) Good that UAT environments are updated with the live environment

Managed Services Requirements

- **POSITIVE** (p.308) Good that UAT environments are updated with the live environment
- **POSITIVE** (p.305) Well defined change management lifecycle
- **POSITIVE** (p.312) Redundancy is appreciated

Video Demonstrations

- **POSITIVE** – Digitizing solutions
- **POSITIVE** – 20 years' experience
- **POSITIVE** – experience with SAP Ariba and EY
- **POSITIVE** – well established
- **PORTAL** good for suppliers and transparency
- **QUESTIONING** – Is portal an additional cost?
- **SUPPLIER LIFECYCLE** – Good workflow
- **QUESTIONING** – Do suppliers need to be enrolled in the portal to bid? Any barriers to entry?

Individual SME Comments:

Overall

Proposal written more for the State of Maine.

Attachments are limited 100MB

All of the assumed metrics for each State scenario is too low for the project that was defined in the Cost Workbook. So, the Fixed price costs and timelines will need to be negotiated to realistic values to be able to evaluate costs and especially if costs are to be compared between proposals. Also, if they proceed to award then needs good fixed prices for each scenario to be a good starting point for a State/Entity.

Bob's notes

Table 3, Technology In-Scope, pg. 13: Risk that this table is not tied to the specific req'ts of the RTM or other req'ts in the RFP. Suggest getting a statement added that the tech provided will be whatever is necessary to meet the req'ts stipulated in the RFP and RTM.

- Table 4 Optional Scope Items, pg. 13/14:

o Identity/Access Mgmts. & SAP Fieldglass: need to negotiate the pricing into Scope for the percent off list pricing.

o Transparency Portal: need to get this included in scope as the means to meet the Sourcing, Contract Mgmts. and Reports public posting RTM req'ts.

- Out of Scope, pg. 14/15: "upgrades or business transformations activities": need to get clear definition of what "activities" means so a State/Entity is not going to have to pay extra to get future upgrades of any component/tool (SAP or Infosys).

- Key Assumptions, pg. 15:

o 2nd Bullet: "global delivery model is assumed", need a definition of this "model" to determine whether there are any issues.

o 7th Bullet: deliverable review/approval times are too short as default values and are not realistic for large deliverables (e.g. Design docs).

o 8th Bullet: "Customizations will only be performed within the restriction of SaaS". NOTE, there are 27 Functional and 9 Technical req'ts in RTM identified as "Customization" in the Availability Codes column (F). CLARIFICATION, need to confirm that these RTM identified customizations can be accomplished "within the restriction of SaaS".

o 10th Bullet: requires acceptance of EULA for "relevant software vendors". Need to identify/include these EULAs in the proposal so they can be assessed before this statement could be agreed to.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): 1 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

General Principal and Requirements

Key Solution Functionality Elements

16-22	SAP Ariba solutions. Assumes it will be using Maine's existing ERP system. Cloud based secured tool.	
	Single point of entry	
	Smart Routing	
	Compliance	
	Portal – for users and suppliers	
	Open marketplace environment – catalogs outside of state's catalog	
	Integration	
	Workflow	
	Document Management	
	Reporting, dashboard and data visualization	
	Configurable	
	Transparency -how will public posting of contracts happen?	concern

User Experience

23	Dashboard for power users. – access all solutions from one screen	
	Intuitive Navigation -minimizes clicks. Ergonomic user experience	
	Wizard Driven capabilities -guided buying for both casual and super user	
	User work management in portal – work reassignment	
	Mobile access	
	Workload Management -reassignment of work	
	Role based functionality -Access based on user profile	

Bidder Best Practices and Roadmap

25	Latest updates. Timely updates, monthly feature deliveries. Major products may have an optional, no-impact release. You do not need to prepare for or act on monthly feature deliveries. May not be ready for releases	concern
	Is SAP Ariba Best Practice Center included in price?	?
	Did not submit the required 3-year roadmap	

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Innovations and Value-Added Features/Services

29-33	SAP Fieldglass - optional	
	A lot of optional things offered pg 347	
32-33	Other tools and accessories – Source to pay, best practices. Kits and deliverable templates by phase	

Customizations/Extensions

34	Most of the requirements provided by the state in RTM can be addressed by out of the-box Ariba functionality.	concern
----	---	---------

Alternative Funding Models

35	"Levy per usage fees" for transactions. - "Fees can be levies for suppliers as well as for buying agencies". - Infosys "has not used this kind of model specifically for the eProcurement solution in the past"	
----	---	--

Contract Transition and Flexibility

35	response discussed transitioning the Master Services Agreement from Maine to another State, not transitioning any current eProcurement contract Infosys might have with a State/Entity to this agreement	
----	--	--

Functional Requirements

General Functionality

Pg. 36-65

GEN 1-19	ok	
GEN 20	The solution only uses UNSPSC commodity codes and would need a crosswalk to other state used codes	concern
GEN 21-37	ok	
GEN 38	Licensing is based on users and volumes, not unlimited licensing	concern
GEN 39-40	ok	

Supplier Portal

Pg. 38-42

	Proposing Ariba Network. Offers an intuitive user experience that supports self-service supplier management and e-procurement and payables.	
	Suppliers can enter their own agreements	
	Multi document invoicing and PO-flip. Multiple languages. On demand platform help. iOS and Android mobile devices. At a glance update of orders. Real-time push notifications. Powerful search for up to previous 12 months. Intuitive graphs. The ability to pin orders to your desktop. Easy login with fingertip or saved username.	
SPR 9	Does not make award viewable by the public.	weakness

CAT 8 and 11	Different responses were given in CAT 13 and CAT 10	concern
CAT 12	System does not provide catalog capabilities for configurable products or services.	concern
CAT 13-18	yes	
CAT 19	Does not allow for negative dollars	concern
CAT 20-39	Yes	
CAT 40	Resellers cannot share catalogs. Must all have separate catalogs.	

Sourcing/Bid Management

54-58	Supports direct and indirect materials as well as services. Access to own registered suppliers and to Ariba's global network of suppliers. Quick quotes and 3 bids and a buy. Multi step IDB's for example technical and pricing. Initiate solicitations from a requisition. Solicitation project management. Alternate bid options. Suppliers bundles can be submitted for pricing. Volume tiers can be created for volume tier structures.	
SRC 1-15	yes	
SRC 16	No solution for invitation for qualified products	weakness
SRC 17-22	yes	
SRC 23	Sourcing module may be licensed different from the other modules	Pricing
SRC 24-34	Yes

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): 1 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

SRC 136	The system does not provide means to award directly to a purchase order. You must create a Contract and then do a release from the contract to create a PO.	Concern
SRC 137-142	Yes	

Contract Management

58 -62	SAP Ariba Strategic Sourcing (Product) encompasses the Contract Management module" The Ariba Contract Workspace is the legal document between the supplier and buyer agreed-upon the terms & conditions, pricing, discounts & rebates. Contract Workspaces can be used as the simple repository documents as well as the spend accumulators. Contract templates can include "set of documents, To-do tasks, approval tasks, Members of the project, groups involved in the project". Templates can be organization specific. System can integrate DocuSign for eSignature. NOTE: this is "an add-on feature" Contract approval workflow can be pre-configured and approvals can be done in the system or using the iOS/Android mobile apps. Contracts can have defined tasks that "can be assigned to owners and can have a notification profile that will send email notification to users when tasks are pending, active, overdue, and completed.	
CNT 1-7	Yes	
CNT 8	No means to auto update templates	weakness
CNT 9	yes	
CNT 10	Contract attachments are limited to 2gb	weakness
CNT11-27	Yes	
CNT 28	Cannot establish a pool of suppliers	weakness
CNT 29-37	yes	
CNT 38	Limit on attachments is 100MB	weakness
CNT 39-50	yes	
CNT 51-66	Does not provide an OOTB means to post to the state website	weakness

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Category #1 Stage 1

DATE: 08/19/2021

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments: Extensive opening information

Organization Qualifications and Experience

1. Overview of the Organization
 - 40 years of service and Global
 - Good amount of clients
 -
2. Previous Projects – Stated CONFIDENTIAL
 - Mentioned a country project
 - Energy and drug company clients
 - Schools and government clients
3. Subcontractors
 - Ernst & Young - EY
 - SAP
 - Allied Digital Services LLC - ADSL
4. Organizational Chart
 - Supplied org chart
 - Defined roles and descriptions
 -
5. Litigation
 - Bidder reported no litigation
 -
 -
6. Financial Viability
 - Supplied Duns & Bradstreet report
 - Supplied financial statements.

NOTE – My expectation for the video was to show more of the system then they showed in this video. It did contain valuable information but presented their WHOLE process rather than showing system functionality.

This response provides lots of screenshots (numbered Figures) which is helpful as a visual aid for evaluators.

This response goes into a lot of detail in many sections of their response. It appears they meet requirements in Managed Services, Security Requirements and the Implementation Services section.

I believe the concerns listed below should be addressed or made available to state entities. The lack of some requirements could lead to not be selected for a solution. For example, CONCERN EPROC-SRC-39 - Line 366 - The system does not allow for the state to configure solicitation numbers.

General Principal and Requirements - Page 16

Key Solution Functionality Elements – Page 16

- SAP Ariba is the solution proposed.
- Offer additional components to compliment the Ariba capabilities.
- Oracle Integration Cloud is the integration tool.
- ICAM is the security management tool offering SSO and MFA
- Uses a Transparency Portal as the public portal for general users.
- STRENGTH – Can integrate with ServiceNow. – Page 20
- Offers “Guided Buying” which directs user to the correct procurement option.
- Suppliers’ entry is SAP Ariba Business Network
- The buyer portal is SAP Ariba Buying and Invoicing solution.
- Transparency Portal for posting bids
- Spot Buy is the marketplace solution.
- Ariba Contract Authoring is the contract management module

User Experience – Page 23

- Can configure dashboards to help organize tasks.
- Guided Buying to purchase goods and services
- Re-assignment of work – Page 24
- Mobile Access
- STRENGTH – Workload Management allows the ability to re-assign work – Page 25
- Role based functionality with approval workflow

Bidder Best Practices and Roadmap – Page 25

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Offer quarterly releases with communication prior to the release.
- Offer monthly feature deliveries
- SAP Ariba Best Practices Center team – Page 26
- Will set up a strategy for supplier enablement. Page 28
- Offered Benefits explanation – Figure 7 Page 28

Innovations and Value-Added Features/Services – Page 29

- These tools are not included in the core scope and additional fees will be required – Page 29
- SAP Fieldglass External Talent Management automates the entire process of procuring and managing flexible labor, from requisition all the way through invoice and payment. Page 30
- SAP Ariba Spend Analysis
- ICAM - Identity, Credential and Access Management
- Transparency Portal – Public site -page 31
- Power Approver for mobile – Page 32

Customizations/Extensions – Page 34

- These deviations are addressed in the RTM – Page 34 – **Notes will be made accordingly to the response section in these notes.**

Alternative Funding Models – Page 35

- Possible solution is to levy per usage fees – Page 35

Contract Transition and Flexibility – Page 38

- This depends on what is listed in the MSA – Page 35

Functional Requirements – Page 36

General Functionality – Page 36

- Listed all modules included in their response – Page 36 – Appears to cover requirements
- Using SAP Ariba Cloud as core procurement but will bring other solution components for future expansion. Page 37. See Figure 11
- Also offers additional Hybrid Cloud Components. Page 38 Figure 12
- CONCERN - EPROC-GEN-11 – Line 15 – The attachment limit size is 10 MB
- CONCERN - EPROC-GEN-36 – Line 40 – eSignature only available with contracts.
- CONCERN - EPROC-GEN-38 – Line 42 – Unlimited licenses for state and supplier users NOT available.

Supplier Portal – Page 38

- SAP Business Network – the Ariba Network is the solution name
- Supplier landing page has “widgets” to help access tasks and data in the system. Page 39 Figure 13
- End to end solution for suppliers. Registration, Orders, Solicitations, Catalog collaboration and Invoicing.
- Landing page displays user information. Page 40
- Supplier Mobile App is available. Page 41 Figure 14
- Optional custom portal solution for customers to access solicitation results. Page 42

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SPR-9 – Line 13 – Public notice of solicitation results require a third-party solution component.
- CONCERN - EPROC-SPR-11 -Line 15 – The ability to maintain subcontracting in supplier portal was the requirement, but the response talks about the contract module.

Supplier Enablement/Management – Page 42

- SAP Ariba Supplier Lifecycle and Performance (SLP) is the solution
- Also have the SAP Business Network (SBN) aka Supplier Portal
- CONCERN – Page 42 - Below are specialized services of supplier enablement. Infosys will support the State with Supplier enablement strategy and plan. In addition to this, Infosys will assess the current capability and suggest the State if these services are needed. As of now, the **current commercial deal does not include this service.**
- Uses supplier request functionality
- Pre-qualified suppliers with specific commodity codes.
- CONCERN - EPROC-VDR-12 – Line 41 – Need to add custom question to allow each location to have specific commodity codes assigned to that location.
- **CONCERN - EPROC-VDR-18 and EPROC-VDR-19 – Lines 47 and 48 - Requires integration with Duns & Bradstreet to obtain supplier information and to obtain a TIN.**
- CONCERN - EPROC-VDR-23 thru EPROC-VDR-27 – Line 52 thru line 56 – These functions require integration with Duns & Bradstreet.
- CONCERN - EPROC-VDR-40 – Line 69 – Supplier contract re-solicited email notification is NOT available.
- CONCERN - EPROC-SRC-152 – Line 479 - This is a copy of SRC -73 Line 400 – **Bob's email**
- CONCERN - EPROC-SRC-153 – Line 480 - This is a copy of SRC -76 Line 403
- CONCERN - EPROC-SRC-154 – Line 481 - This is a copy of SRC -77 Line 404
- CONCERN - EPROC-SRC-155 – Line 482 - This is a copy of SRC -78 Line 405
- CONCERN - EPROC-SRC-156 – Line 483 - This is a copy of SRC -81 Line 408

Buyer Portal – Page 44

- SAP Ariba Buying and Invoicing is the solution name.
- Guided Buying functionality
- Buyers could be linked to other solutions like ServiceNow
- CONCERN - EPROC-BPRT-10 and EPROC-BPRT-11 – Lines 84 and 85 – These registration data fields are NOT part of the original registration record, but in the buying module?

Need Identification – Page 46

- SAP Guided Buying is the solution name.
- Can access different modules from Guided buying
- Guided Buying has landing page – Page 47 – Figure 15
- Can place a “tile” labeled Need Identification on the Guided Buying page – Page 48 Figure 16

Request through Pay – Page 49

- SAP Ariba Buying and Invoicing is the solution name
- Guiding Buying is the front door to procurement
- Has purchase request, to catalog, to electronic order dispatch, to invoicing

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Allow integration to financial system.
- EPROC-PRD-13 -Line 114 – Attachment limit is 100 MB
- EPROC-PRD-28 – Line 129 – Does not support negative value shopping carts. Could use custom field.
- CONCERN - EPROC-PRD-39 – Line 140 – Need additional solution enabled to have a search result show a possible existing source for the product.
- CONCERN - EPROC-PO-3 – Line 198 – Encumbering funds may require additional integrations.
- CONCERN - EPROC-PO-6 Line 201 - The PO number is NOT configurable.
- CONCERN - EPROC-PO-16 – Line 211 – Does NOT allow for electronic signatures on Pos
- CONCERN - EPROC-PO-27 – Line 222 – **Example of interpretation on Purchasing Request. PR and PO are part of making an order, but PR could also be a request to start a procurement purchase.**
- CONCERN - EPROC-PC-6 – Line 232 – Response does NOT state PCard information can be maintained at the users' profile? Do all users need a PCard Manager role to maintain card information?
- CONCERN - EPROC-RC-4 – Line 253 - Does NOT allow to record a receipt without a reference to a PO
- CONCERN - EPROC-RC-21 – Line 270 – Does not allow the conversion of PO unit of measure to an inventory unit of measure

Catalog Capability – Page 51

- Supports multiple punch out catalog types
- Catalogs can be updated from 3 different channels
- AutoSubscriptionSync is the tool that helps suppliers maintain their own catalogs.
- Can compare new and old catalogs
- Spot Buy is the catalog solution name for purchasing non-sourced goods
- Results are separated into Company Catalog and Spot Buy Catalog.
- Supplied Entity and Supplier Catalog Responsibilities – Page 53
- CONCERN - EPROC-CAT-6 – Line 291 – **There is not an unlimited number of catalogs. The limit is 5000 catalogs.**
- CONCERN - EPROC-CAT-7 – Line 292 – **There is not an unlimited number of items per catalog. The limit is 500,000 items**
- CONCERN - EPROC-CAT-11 – Line 296 – The response appears to reference Sourcing (REQ for quote) rather than the ability for a catalog to have quote functionality.
- CONCERN - EPROC-CAT-19 -Line 304 - Items cannot have a negative value.
- CONCERN - EPROC-CAT-40 – line 325 - Response states this is not available?

Sourcing/Bid Management – Page 54

- SAP Ariba Strategic Sourcing is the solution name
- Solution has Standard templates and libraries
- Can include a “checklist” used to consult when evaluation proposals. Page 55
- Initiate solicitations from a requisition.
- Has Project Management components – Page 56 Figure 18
- SAP Ariba Discovery displays opportunities to the supplier's Leads Dashboard
- Suppliers can submit alternative bids but seems to be only on pricing and volume discounts?
- Design Build is the solution to help award the event.
- Integrated with SAP Ariba Contract Management

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SRC-39 - Line 366 - The system does not allow for the state to configure solicitation numbers.
- CONCERN - EPROC-SRC-52 – Line 379 - Does not address the ability to identify an attachment viewable by the public?
- CONCERN - EPROC-SRC-63 – Line 390 – The number of suppliers per event is NOT unlimited 100 is the limit.

Contract Management – Page 58

- SAP Ariba Strategic Sourcing (Product) encompasses the Contract Management module.
- Use pre-defined templates
- Check out and check in functionality
- Has maximum size of 2 GB per uploaded attachment – Page 60. But next paragraph states 100MB?
- Uses DocuSign as the electronic signature tool.
- Can track accumulated spend based on some requirements. Page 60
- Allows Contract workflow and approvals. Page 61
- Supplier profile information is automatically carried over to the contract record. Page 61
- Has reporting function. Page 62
- Contract tracking and notifications. Page 63
- CONCERN - EPROC-CNT-28 – Line 513 – Contracts creation with a pool of suppliers is not supported.

Vendor Performance – Page 63

- SAP Ariba Supplier Performance Management (SPM) is the solution name.
- Provide “scorecard” functionality
- Import/Export surveys
- Key Performance Indicators (KPI)
- Some of our requirements may need a business process be put in place to achieve the desired outcome of the requirement.

Purchasing/Data Analytics – Page 64

- Ariba Strategic Sourcing/Ariba B&I is the solution name.
- 250 Pre-packaged reports
- Can display on user’s dashboard or be exported.
- Offers browser based, ad-hoc, pre-packaged and analytical reports

Technical Requirements – Page 65

Availability – Page 66

- Availability Design Considerations – Page 66 Table 7
- Shows how the system handles redundancy – Page 67 Figure 20
- Supplied table showing overall availability - Page 67 Table 8

Accessibility Requirements – Page 68

- All products have undergone a WCAG 2.0 assessment – Page 68

Audit Trail and History – Page 68

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Audit logs can be accessed under the history tab or running reports.
- Can export up to 10,000 audit logs
- Supplied sample audit logs. Page 68-69 Table 9
- Supplied list of events tracked – Page 69 Table 10
- Saviynt houses the data for audits and histories.

Browsers Supported – Page 70

- Listed browsers supported
- Ariba tracks a user's browser
- Supports browsers updated to the latest version

User Accounts and Administration – Page 71

- Suppliers will be managed by the SAP Ariba Network
- End users will be managed by the State's preferred IAM solution.
- Administrators Task listed – Page 71 Table 11
- Access is based on roles and permissions
- System sends notifications for tasks that need to be completed.
- Uses user groups and roles with permissions to set up users.
- ICAM Solution is optional. Used to manage user accounts on a central dashboard
- Listed options on what solution to implement and listed assumptions and benefits. – Page 74
- Figures 21 and 22 show the integration architecture options
- Supplied proposed reference Architecture – Page 76 Figure 23
- Can manage workflow, create roles (role engineering), implement use access certification and compile reports – Page 78
- CONCERN - EPROC-TECH-12 – TAB 4 Line 16 - Buyer and Supplier users CANNOT sign in via one account.
- CONCERN - EPROC-TECH-15 – TAB 4 Line 19 - Does disabling a user account make the data for that user unavailable to other users?
- CONCERN - EPROC-TECH-16 – Line 20 - No automation to user accounts due to inactivity

User Authentication – Page 78

- Has user administration functionality performed by system support
- Have multiple user authentication methods, regular user, SSO, Federated Single Sign On.
- Supports multifactor authentication and SSO with corporate authentication
- Supplied SAP Ariba Password Policies – Page 81 Table 12
- ICAM Solution is optional and will provide all of the user authentication requirements mentioned.
- Azure AD Authentication is an option. Page 83 Figure 24

Federated Identity Management – Page 83

- Can select from the IAM Solution or the proposed optional ICAM solution
- IAM is the state's own identity access management solution and should integrate with SAP
- ICAM will manage full identity lifecycle and can integrate with state' user identity directories. Page 84 Figure 25

Data Conversion – Page 85 Requires Customization some requirements have duplicate responses.

- Supplied data conversion approach – Page 85 Figure 26
- Explained the Plan, Design, Execution, Validate and Deploy steps in the data conversion process

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Explained Ariba data load process. Page 87 Figure 27
- Explained Data Conversion Landscape Page 88 Figure 28
- Supplied data testing process and reconciliation responsibilities. Page 89 Figure 29 and table 13
- Supplied data migration tools and accelerators. Page 90 Table 14
- CONCERN - EPROC-TECH-28 and EPROC-TECH-29 – TAB 4 Line 32 and line 33 - Does this response cover the ability to transfer attachments?

Interface and Integration – Page 92 – Duplicate vendor responses in RTM. Most responses require an integration and the state client will need to be specific when setting up the integrations.

- Oracle Integration Cloud (OIC) is the solution to provide real-time integration capabilities. Page 92 Table 16 and Page 93 Figure 30
- Ariba adapter in the OIC handles features of the integration requirements
- Infosys will leverage following OIC Integration patterns for integrating with Ariba in order to meet the State of Maine's requirements Page 94 Table 17
- Real Time integrations are HTTP, SOAP and REST APIs. Page 94
- Offered data import process from adapter to system Page 94
- Supplied high level integration architecture. Page 95 Figure 31
- Majority of responses to requirements in RTM is a duplicate response.
- CONCERN - EPROC-TECH-55 – TAB 4 Line 59 – Does the system allow the ability to load user PCard data? The response entered here is an example of supplier using duplicate responses to requirements.

Office Automation Integration – Page 95

- Desktop File Sync is the solution that allows uploading and downloading of files to SAP Strategic Sourcing
- The dominant file is Excel for transactional documents to be uploaded/downloaded.
- Proper access can import data using the CSV format.

Mobile Device Support – Page 96

- Supports the most recent versions of Apple and Android devices
- Listed phones that work best with specific SAP modules
- The SAP Ariba mobile app is not certified with mobile device management (MDM) platforms – Page 96

Mobile Applications – Page 97

- Ariba Mobile App allows shopping, approvals, tracking “watcher” on requisitions and touch support

Data Ownership and Access – Page 97-98

- State owns data and can be exported with no additional costs.
- Mobile Gateway allows access to the SAP Ariba Supplier mobile app

Date Retention, Archive and Purge Considerations – Page 98

- Complete control of data deletion and purging done manual or via integration.
- Data is for the life of the subscription. Supplied privacy statement link on page 98
-
-

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): Stage 2 Category 1

DATE: 11/17/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Disaster Recovery Plan – Page 98 thru 102

- Simulations run once a year and will be conducted during the weekend.
- Will work with respective service plans and vendors when performing this exercise
- Supplied DRP for SAP Ariba and OIC – Page 99
- Supplied DRP for ServiceNow, Business Continuity (BC) and Disaster Recovery (DR)
- Supplied DRP for ICAM Solution, BC and DR

Solution Environments – Page 103 – Copied response in RTM for lines 69, 70 and 71

- Have Development, Testing and Production environments
- Supplied Solutions Environments information on Page 103 Table 18
- Can “test” environments be “scrubbed” at some point and the data in Production be put into TEST?

Solution Technical Architecture – Page 103 – Meets Requirements

- Supplied High Level Solution Architecture - Page 104 Figure 32
- Key Application and Platform – Page 105 Table 18
- Supplied Data Exchanges (Figure 33) and Core Data Exchanges (Table 20) – Page 106
- Supplied Logical Components and Tools – Table 21 Page 107
- Supplied Ariba High Level Architecture – Figure 34 Page 108. Table 22 defines the eProcurement layers
- Supplied Portal High Level Architecture – Page 110 Figure 35
- Supplied OIC High Level Architecture (Figure 36) and On-Premise Integration (Figure 37) – Page 111
- Supplied Helpdesk High Level Architecture (Figure 38) Page 112
- Supplied ServiceNow Application Layers – Table 23

Solution Network Architecture – Page 112

- Hybrid Cloud based architecture
- Supplied detailed overview of the path of a request – Page 113
- Supplied Logical Network Architecture – Page 114 Figure 39
- Connectivity of various hardware components supplied on Page 115 Figure 40
- Data is stored in the US – Page 116
- Table 24 shows the eProcurement Network Features – Page 116
- Table 25 shows the data center locations – Page 118

System Development Methodology – Page 118

- Meets requirements listed in this section

Service Level Agreement – Page 120

- Supplied an attachment sample of their SLA

Security Requirements Page 120

Cloud Security Alliance (CSA) Compliance – Page 120

- CONCERN – Supplied a “narrative” response but did NOT supply any reports listed as options in the RFP.

Security and Privacy Controls – Page 124

- Example of Transition Out Plan – Page 346 Figure 136

Other Available Services – Page 346-347

- Value Add Solutions – Table 69 on Page 347
- Listed additional services that can be provided
- NOTE – Supplied critical items that stood out to Infosys on Page 349
- Page 350 – An appendix which is the SLA for SAP Cloud Services

Video Demonstrations

Video – SAP Ariba is the solution offered. Ernst and Young is a strategic partner. End to end solution and can integrate with other systems. Cloud based integration platform. Live chat for suppliers in their portal with help desk options. Portal integrates with the Ariba SAP. Procurement staff builds the supplier profile, the records go to approvals. Another solution offers supplier to register. Sourcing Module showed standard options for events. Can award the bid to a supplier, then the contract can be complied. Contract uses DocuSign. Catalog Management module allows to suppliers to build and manage catalogs. Can build buyer managed catalog. Procure to Pay creates a PR, and then trigger workflow. Once approved, a PO is generated and sent to the supplier. Can do receiving on the PO. Suppliers can generate invoices on the order. Can integrate with Oracle Cloud. 2- or 3-way match. ICAM is the identity solution module which can be integrated with the State system using SSO and MFA. Can integrate with ServiceNow from the identity management module. Showed the process for implementation and project management. Offers a readiness assessment. Offered Managed services process to help with training, support, helpdesk, transition, and catalog support. Pricing for catalogs is done by uploading a file by the supplier via the Ariba Network. Adopted the ITIL process. Offers transition services and works with new incoming client. Showed 9 different “hubs” with 7 in the US.

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2000.
 - Cloud based Spend Management Solutions.
2. Previous Projects

5 projects given, four of them States and one city dept. The projects meet Category 1.

 - City of New York. Implementation of Full suite of Ivalua software.
 - State of Maryland. Implementation of Ivalua's complete platform. Eprocurement system.
 - State of Ohio. Implemented the Source to pay portion of Ivalua.
 - State of Alabama. Implemented the Source to pay portion of Ivalua.
 - Los Angeles Dept of Water and Power. Implemented Solicitation and Supplier Information Mgt. solution.
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart is provided; however, **no job descriptions.**
5. Litigation
 - Vendor states there are no litigation.
6. Financial Viability
 - Provided financial statements (3 years)

Individual Comments:

Overall/General

- The Ivalua Solution.
- SaaS Hybrid Cloud Solution.
- State that they built it for the public sector.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 3 - 7

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single landing page for the single point of entry with same look and feel throughout the whole system.
- Smart Routing: workflow is tailored to meet each organization's needs
- Compliance: Ivalua continues to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding
 - Subcontractor Reporting
 - Cooperative Reporting
- Portal: All users (internal and external) have ability to access their account through portal and personalize their page.
- Open Marketplace Environment: They express they want it like a “Google experience” - modern digital and ecommerce experience, driven by search and content.
- Integration: Robust Integration Toolbox with capability to connect with multiple ERP solutions, third-party data providers, and suppliers' systems. Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI,

SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.

- **Workflow:** Ivalua expresses this area as one of their “crown jewels” – area of expertise.
- **Document Management:** Core platform with an integrated foundation.
- **Reporting:** Many out of the box reports and the ability for users to create their own. Reports can be simple to graphs, bar, line, pie, etc.
- **Configurable:** Ivalua claims their SaaS solution is the most configurable hosted solution on the market as extensively reported by industry analysts.
- **Transparency:** public portal allows for transparency and authorized users have ability to get oversight through audit trail.

2. User Experience – p. page 7 - 8

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- **Ivalua's explanation to User Experience is short, but addresses most of the points. I do not see anything on Wizard-driven capabilities.**

3. Bidder Best Practices and Roadmap – p. page 9 - 11

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- **Major Software Product releases are delivered by the Ivalua R&D division twice a year.**
- **Client can choose to upgrade their client application either 18 months or 24 months**
- **Ivalua leverages advanced technologies such as machine learning, natural language processing (NLP) etc. and are members of various industry and procurement or supply chain associations, that contributes to their knowledge.**
- **Updates can be scheduled by the State**
- **During the implementation phase, Ivalua together with State will work to better, more effective solutions, processes, and approaches, based on their experience. These will then be built into the design of the solution.**
- **Product Roadmap: No direct 3 year map, but a high level of what is being worked on.**
 - Investing heavily in developing specific capabilities to meet Public Sector Procurement needs. Approximately 60% of the roadmap items coming from the customers information.
 - They have a dedicated Public Sector team.
 - Enhancements in mobile experience.
 - Invoicing and payments investments.
 - Enterprise-wide AI powered **Contract Lifecycle Management (CLM)**
 - Supplier Risk and Performance – adding and enhancing new features / capabilities
 - Highest level of security – investing resources to maintain highest level.
 - Continue toward more seamless and simpler.

4. Innovations and Value-Added Features/Services – p. page 11 - 13

In addition to the stated requirement/GEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

1. Help Desk – level 1: Provide suppliers or internal users to get on- demand help from Ivalua if they run into difficulties using the system. Level 1 help desk is the users first interaction when they need help, as opposed to a State/organization managed help desk.
2. Advanced Services Procurement:
3. Expenses:
4. Vendor Master Management

5. Customizations/Extensions – p. page 14

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- The Ivalua SaaS platform relies on configuration, not custom code, as the means for clients to modify and maintain a solution that meets their needs.
- enhancements are not custom code but instead configuration & data and that configuration & data is carried forward with the State's instance as the Ivalua solution is updated.
- Ivalua keeps an extra environment of a copy of the State's customizations / extensions.

6. Alternative Funding Models – p. page 14

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- No alternative funding proposed. They are open to discussion and options.

7. Contract Transition and Flexibility – p. page 14

- Ivalua answers this in one sentence: *Ivalua is certainly willing to enter into good faith discussions with Participating Entities that wish to explore transitioning their current contract under the terms of the newly awarded Master Agreement.*

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 15 - 16
 - a. 1-C-“Customization/Extension” and 7-CF “Configuration Item”

- b. 6 – Medium
 - #4 – No extra cost for integration between solutions – can all be done in software.
 - #9 – Able to use our commodity code, but will need to configure a crosswalk.
 - #35 will need configuration
 - #36 – **Esignature capability**. Ivalua system allows for native plugins of popular softwares (DocuSign, Universign, and AdobeSign), but doesn't have it built into Ivalua system.
- 2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 16 - 18
 - a. 4-CF "Configuration Item", 1-TP-"Third Party"
 - b. 3 – Medium
 - #1 - The Ivalua supplier portal is completely free of charge for suppliers
 - #19 – Submitting of admin fee payments will require a third party payment provider.
- 3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 18 - 25
 - a. 5-"INT-Integration/interface", 2-TP-"Third Party", 1-"C-Customization/Extension", 4-CF "Configuration Item", and 1-N"Not Available"
 - b. 7 – Medium
 - Seem to meet requirements except for:
 - VDR 18, 19, 20, 24, 25, 26, and 27. – All will require integration with a third party system either for tax or SOS, etc. **Ivalua can integrate, but State needs to find their own third party solution.**
 - VDR 31 – Configuration needed on workflows to meet each organizations approvals.
 - VDR 32 – Does not meet requirement – vendor states due to security reasons.
 - VDR 38 – 40. Although realtime, scorecards will need to be configured.
 - VDR 43. Configuration needed.
- 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 25 - 26
 - a. 1-"INT-Integration/interface", 5-"CF-Configuration Item "
 - b. 3 – Medium
 - BPRT 8 - Ivalua provides the ability to drive notifications for various alerts both on screen and through email, **however not a daily summary notifications. CF needed.**
- 5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 26 - 27
 - a. 1-"C-Customization/Extension", 1-"CF-Configuration Item "
 - b. 2 – Medium
 - NEED 1: The fully integrated system has a single landing page when a user logs in.
 - NEED 4: Ivalua workflows have configurable steps that allow for setup in any sequence, the ability for variations to be invoked based on the context (user's organization, commodity, dollar value, geography, etc.), and workflows can be set to require specific "actors" who have profiles to either approve, amend or deny a request coming to them. Workflows include both manual (human input needed) and "automatic" steps that apply business rules to send alerts and/or route objects (Requisition, PO, Invoice, Contract, sourcing award, etc.) accordingly.
- 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 27 - 32
 - a. 2-"INT-Integration/interface", 1-TP-"Third Party", 6-"C-Customization/Extension", 38-CF "Configuration Item", 5-ID "In Development" and 2-N"Not Available"
 - b. 21 – Medium, 2 - High
 - PRD 12 – **CLARIFY** – Does "force" attaching the terms and conditions of contract to the requisition and carry forward to POs and beyond mean the State will manually need to attach each time (transaction)?
 - PRD 15 – States no size limit to amount of data a client can store – **only cost \$\$ to consider. If enter into Contract with Ivalau make sure to spell this out in the Contract.**
 - PRD 28 – Their system can handle negative items with some configuration.
 - PRD 29 - Their system can handle \$0 value items. **It does not mention configuration.**
 - PRD 37 – **Ivalua does not have this requirement.** They explain it as: *"This is possible if data from external sources are loaded through spend analytics for comparison. Web scraping of retail sites to compare pricing to the larger market (outside of the Ivalua system) is not supported."*
 - WRK 1 – 28: Workflow Functionality seems to be a strong suit as it is very streamlined and customizable as needed – a big plus for States. Can meet all requirements with none to some configuration.

- Meets most PO requirements.
- PO 6 - Only meets ½ requirement. Creates PO # in system for you. Does not let create own PO number – would need to be configured.
- PO 16 – Esignature – doesn't come with the system. Will need to be State's third party that can be integrated.
- PO-15: System does not have the capability to have two versions of a printed purchase order.
- **Payment Card Functionality PC 1 – 21: This is not a strong area for Ivalua. They system currently does not provide many of the requirements with a promise of an anticipated release in 2022 that will or customization. A work around will need to be established for Pcards if this system is chosen by a State.**
- Request through Pay Receiving RC1 – 21: Meets all requirements with some configurations needed.
- Invoicing INV 1 – 11: Meets all requirements with some configurations needed.

7. Catalog Capability - Tab 3, CAT-1 through CAT-40 and - p. 33 - 36

- a. 12-CF "Configuration Item"
- b. 2 – Medium
- CAT 6 & 7: Meets the requirement of Unlimited catalogs and items per catalog.
- Meets all requirements with some configurations needed.

8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151 and - p. 36 - 44

- a. 2-TP-"Third Party", 33-CF "Configuration Item", 8-"C-Customization/Extension",
- b. 6 – Medium, 1- High
- E-signature third party applies here also.
- Posting items to the State's public procurement website (i.e. notice of award and solicitation documentation) requires a High amount of customization and Ivalua recommends another approach. SRC76
- Otherwise SRC 1-151: Meets the requirements of Sourcing / Bid Management Workstream with some configurations needed.

9. Contract Management. Tab 3, CNT-1 through CNT-88 and - p. 44 - 48

- a. 3-TP-"Third Party", 24-CF "Configuration Item", 3-"C-Customization/Extension",
- b. 6 – Medium
- CNT 12 – 14 requirements – Same E-signature Third Party.
- CNT 64 – **Concern having a link to the punchout/catalog.** Not standard functionality in Ivalua, could be customized. Ivalua recommends a standard public item browse in which users can search by contract.

10. Vendor Performance Tab 3, VPE-1 through VPE-25 and - p. 49 - 50

- a. 14- CF "Configuration Item"
- **VPE 1 – 11 all require Configurations which are suggested as a questionnaire for metrics.**
- Remaining items meet the requirements of vendor performance none or little configuration needed.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 51 - 54

- a. 1-ID-"In Development", 7-CF "Configuration Item", 1-"C-Customization/Extension", 1-INT"Integration/interface"
- b. 3 – Medium
- PDA 3 – 5: System has a large reporting tool with a variety of adhoc reports that are exportable in common formats.
- PDA 20 – 21: Pcard related reports are not available as the system does not have the function yet – In 2022 version software update.

C. Technical Requirements:

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday).*

Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Page 55. Ivalua is accessible 24/7 days a week. They guarantee a Hosting SLA uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours. Scheduled maintenance occurs once a month on a weekend around midnight and the system is down for a maximum of 30 minutes if required.
- 2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Page 55. Ivalua is working with a third party to implement accessibility of the system in accordance with the WCAG 2.1; however, do not have right now. VPATs are completed.
- 3. **Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5 and - p. 56
 - TECH 5 - In the Ivalua Solution, while a user is logged on, all actions and activities are registered, logged and time-stamped.
 - Ivalua meets all the requirements, no concerns.
- 4. **Browsers Supported** - p. 56 - 57
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.
- 5. **User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20 and - p. 57
 - a. 4- CF "Configuration Item"
 - b. 1 – Medium
 - TECH 6: Access to the app is controlled by an authentication method.
 - TECH 11 – Information is available in real time.
 - TECH 12 – requires CF. Linked accounts set up for internal users only but can be configured to allow a supplier account.
- 6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25 and - p. 58
 - a. 1- CF "Configuration Item"
 - TECH 22: Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers.
 - TECH 24 – CLARIFY – the system has a password policy, but unsure if it can conform to the State's password change policy.

Federated Identity Management – Pages 49 – 50 and - p. 58

 - Users will only require one ID and pw to access the full solution.
- 7. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 59
 - a. 2- N "Not Available", 2- CF "Configuration Item"
 - b. 2 – High
 - TECH 27 – 30 are not supported (*conversion of in-process purchase request & POs, Active Solicitation data, *All Contract data, and Vendor Performance data). *TECH 27 and 29 can be configured but are rated a very high level of complexity.
 - It seems any historical spend, user account data, and chart of accounts data requirements can be met.
- 8. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 59 - 60
 - a. 2- CF "Configuration Item",
 - TECH 35 - Ivalua totes their strong integration capabilities with major ERP systems.
 - TECH 36 – CLARIFY. They list that they can import and export data with 3 out of the formats the State requests in the requirements. What about the others?
- 9. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 60
 - Meets all Word products mentioned.
- 10. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 61
 - Is responsive on a mobile device screen, but does not have a mobile app.

11. Mobile Applications - TECH 62 and - p. 61

- TECH 62 - Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari.
- Does not have a mobile app.

12. Data Ownership and Access - p. 61

- States remain owners of their own data and control own data.
- Through term of the contract, State can export data using features available in the Ivalua system through the Query extraction tool.

13. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63 and - p. 62

- **CLARIFY** Ivalua responded in TECH 63: "Ivalua maintains data in its systems with Ivalua's data retention schedule." But on page 62 it's the State's data and they decide what information to be stored, how, when in accordance with the Contract.

14. Disaster Recovery Plan - p. 62 - 63

- Ivalua does have a Business Continuity (BC) and a Disaster Recovery (DR) Program based off on ISO/IEC 22301 standard framework. The plan is reviewed and approved by Ivalua management annually. Additionally, this is communicated to all relevant stakeholders.
- Have secondary servers geographically located elsewhere.

15. Solution Environments RTM: Tab 4, TECH-64 through TECH-67 and - p. 63

- Provided 3 environments (Development, Acceptance, and Production).
- Training or other environments are EXTRA.

16. Solution Technical Architecture - p. 63 - 65

- Ivalua cloud features a "multi-instance" architecture of which isolates all customers' data from each other.
- All interactive end user activities are performed using a standard Microsoft, Firefox, or Chrome web browser. There is no requirement for customers to install any client software on any desktop, laptop, tablet, or smart phone to access their Ivalua instances.
Application Arch. – Servers are in undisclosed location. The app. is built on Microsoft 64-bit technology stack, including .NET, C#, ASP.NET SQL Server and SQL Server Analysis and open standards such as REST Web Services, JavaScript, HTML, XML, and JSON.
- Ivalua also provides an EDI tool as part of the products supporting SFTP interface, AS2 and REST APIs, Ivalua Solution also integrates off-the-shelf packages (COTS and Open Source).
- Diagrams provided.

17. Solution Network Architecture - p. 65 - 67

- Diagram provided. All Ivalua's data center/laaS partners adhere to stringent data center certifications such as: ISO 9001/14001/ISO 27001/SOC I and II

18. System Development Methodology - p. 67 - 68

- Seems to meet.

19. Service Level Agreement - p. 68

- Ivalua attached their own SLA, but I do not see where they reviewed the RFP's SLA or commented on it.

D. Security Requirements: p. pages 69 - 87

1. Cloud Security Alliance (CSA) Compliance

- CAIQ completed.

2. Security and Privacy Controls

3. Security Certifications

4. Annual Security Plan

5. Secure Application and Network Environment

6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6.

- Requirements in this section are met.

7. Data Security – nothing to add.

8. Personally Identifiable Information Protection – nothing to add.

9. Security/Privacy Issue Occurrence – nothing to add.

10. PII Data Actual/Attempted Access or Disclosure – nothing to add.

11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements:

- **Project Management p. 88 - 90**
Ivalua's project methodology is a semi-agile based design that is typically composed of the following phases.
 - MOBILIZE
 - EXPLORE/DESIGN
 - BUILD/CONFIGURATION
 - TEST
 - DEPLOY/GO-LIVE
 - RUN
 - Table on page 89 along with a recommended project team structure and percentage of times of each role
 - Deliverables they suggest are: Kick-off presentation, Implementation project plan, status report template, design document, test plan / scripts, cutover plan, and configured environment and integrations.
 - **Project Implementation Methodology p. 91**
 - Rapid deployment and prototyping and agile development.
 - **Catalog Support Services p. 91 - 92**
 - Import process include 2 stages
 - Creating and loading the file
 - Controlling and approving imported data.
 - Supplier Created Catalog
 - **Data Conversion Services p. 92**
 - Ivalua uses partners for data conversion services.
 - They provide a link to an updated list and information on Ivalua partners:
<https://www.ivalua.com/company/partners>.
 - **Interface/Integration Development Services p. 93**
 - Ivalua's approach to integration is to integrate by configuration by mapping State's data to Ivalua data.
 - Connectors include: REST API (json/xml), AS2/EDI, HTTPS, sFTP, OCI, IDOCs and more.
 - **Organizational Change Management (OCM Services) p. 94 - 95**
 - It does not seem Ivalua meets the OCM minimum requirements entirely. They discuss each point; however, I would like to see the tools used in each section and outcome reports/plans that are more typical of OCM.
 - **Training Services – p. 95 - 96**
 - Provide E-learning with eventual Certificate that includes:
 - Key-user Training
 - Administrator Training
 - Technical Administrator
 - Also offered are other training methods: Instructor-Led Training, Web Based, Job Aids, Simulations, and Quick Reference Guides.
 - **Help Desk Services - Tab 6 IMPL 1 – 5 and – p. 97-98**
 - IMPL 3 through 5: Do not have a live chat feature
 - The subscription provides Technical Support (Level 3):
 - Defect requests and corrective maintenance.
 - Maintenance releases and proactive maintenance (new major release upgrade for innovation)
 - Questions on Product
 - Specific enhancement analysis (and through partners when applicable)
- In addition to the Application Maintenance included in the SaaS, Ivalua provides three optional types of support:
- End-users Help-desk;
 - Suppliers Help-desk;
 - Administrators Configuration Support.
- A Value-Added option is available also for extra cost \$\$ – see #4 page 3 above.

- **On-Site System Stabilization Support** – p. 98
 - Provides on-site support (they call it Hypercare) for 3 months after go-live. Meets requirements.

F. Managed Services Requirements:

1. **Solution Support** – p. 100 - 102
 - Yes met. Fully explained – see pages 100-102 of proposal.
2. **Organizational Change Management (OCM Services)** – p. 103
 - They state they include OCM as part of implementation proposal section and do not see the need for it here.
3. **Training Services** – p. 103
 - They state they include Training Services as part of implementation proposal section and do not see providing additional training services.
4. **Catalog Support Services** – p. 103
 - They state they include Catalog Support Services as part of implementation proposal section and do not see providing additional catalog services.
5. **Help Desk Services** – p. 103
 - See Helpdesk response in 17e.
6. **Transition Out Assistance Services** – p. 105
 - Hold State's processed data and files for limited period of time according to Contract then delete according to Contract. A backup can be provided to client upon request.
 - Will work with PE to assist with understanding their requirements and tailor a plan and scope to support the Transition Out activities. No detail is provided.
 - Not much detail overall in this section.

G. Other Available Services: p page 106: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- **Aware** – in-house developed tool that tracks all the activities of the production instance and generates statistics like simultaneous users, hit rate, response times across various pages of the application, overall response time, errors etc.

H. Video Demonstrations:

- 44 minute demo. Well done from beginning to end. Was able to follow the eprocurement process from beginning to end of each module of their total solution.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (IVALUA)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - cloud based Spend Management solutions
 - S2C (source to contract) and P2P (Procure to pay)
 - Ivalua solution is modular: Supplier Risk & Performance, Solicitations & Bid Management, Contract Management, eProcurement, Invoicing, and Spend Analytics
 -
2. Previous Projects
 - City of New York - SRM, eSourcing, Contracts & Catalogs, eProcurement, Invoicing and Business Intelligence
 - State of Maryland - implemented eMaryland Marketplace Advantage (eMMA), digital platform integrates with other State systems for all users and procurement processes
 - State of Ohio – “OhioBuys” an online purchasing solution for buyers within state government and suppliers to the government
 - State of Alabama - Ivalua’s Source to Pay solution
 - Los Angeles Department of Water and Power - Solicitation and Supplier Information Management solution; part of the Ivalua Source to Pay platform
 - Did not provide client contacts now but will if they move forward in selection
3. Subcontractors
 - Ivalua Cloud (except for Azure based regions) is hosted in third-party datacenters, and all the infrastructure equipment is owned, administered, and monitored by Ivalua personnel only. Since Ivalua does not rely on any 3rd party personnel or 3rd party infrastructure, we know at all times where the client data is stored.
 -
4. Organizational Chart
 - Combined state and Ivalua proposed project org chart
 - Roles not defined
 -
5. Litigation
 - No litigation
 -
 -
6. Financial Viability
 - Financial statements provided with 2019 being most recent

Sourcing/Bid Management 33 Configurations with medium and low level of effort , 2 third parties with low level of effort, 8 customizations with 1 medium and 7 low level of effort, 108 OOBX
Contract Management 3 customizations with low level of effort, 24 configurations w/low and medium LOE, Three Third parties with low level of effort , 58 OOBX
Vendor Performance 14 Configurations with low level of effort , 11 OOBX
Purchasing/Data Analytics, 1 customization with medium level of effort, 7 configurations with low level of effort, 1 in development with medium level of effort, 1 integration with medium level of effort, 27 OOBX

Technical Requirements

Availability Accessible 24 hours a day seven days a week hosting SLA uptime 99.8% outside of scheduled maintenance.
Accessibility Requirements Working towards meeting WCAG 2.0 level AA. Working with third party company to audit and value a platform VPAT completed in available upon request
Audit Trail and History All user actions and activities are registered logged in time stamped. Every transaction created every status change every movement to the next step in a workflow in every addition or deletion of a data item is logged. If audit trail must be activated for specific field the auditable checkbox can be marked corresponding to the field on the value a table.
Browsers Supported Internet Explorer all Microsoft supported versions , Microsoft Edge last three major releases, Chrome last three major releases, Firefox last three major releases.
User Accounts and Administration Application pages and functions are controlled by profiles , authorization, and perimeters. A perimeter can be geographic or functional , or a combination of both. User roles and user access are defined through administrative components. Only users with the appropriate profile can load a page or execute a function. Possible to limit the data access of business objects on a per user basis.
User Authentication Supports multiple authentication schemes; login password authentication, single sign on with saml 2, two factor authentication, reverse proxy II S agent. Password rules are fully customizable.
Federated Identity Management– supports SAML 2.0 protocols for Single Sign On
Data Conversion Conduct a data assessment. Data strategy will be established identifying the data conversion scope. Leverage ivalua tools. Combination of ivalua and participating entity resources perform data conversions which include methodology to perform several iterations in small batches to test and validate. Too Simple? Data cleansing not evident at the source or during testing.
Interface and Integration Integration capabilities with major ERP systems and standard integration with suppliers and 3rd party business services. Offer standard interface templates out of the box.
Office Automation Integration Word excel and PDF
Mobile Device Support Screen menus change from PC layout to mobile friendly layout.
Mobile Applications Mobile solution is not based on mobile app but mobile web solution
Data Ownership and Access Applies a single data classification to all customer data. Internally customer data is confidential and limited to a small number of individual individuals on a need to know basis. Customers remain the data owner and data controller of all data and control it in accordance with their access control data retention and data classification policies. Through the term of contract customers can export data.
Date Retention, Archive and Purge Considerations Customers decide what information is to be stored, how it is to be used, and how long it is retained. I value a does not delete or modify customer data unless requested by the customer , and only processes data in accordance with contractual obligations and customers configuration of their instances

SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Disaster Recovery Plan BC and Dr program is based on ISO I EC 22301 standard framework and is tested annually. Not clear if clients are involved with testing unless they are relevant stakeholders.

Solution Environments Development, acceptance, production.

Solution Technical Architecture Multi instance architecture delivers a logical single tenancy by isolating all customers data from each other. Application servers are in a discrete network segment. Database layer consists of database servers, installed in a discrete non Internet routable network segment. No Co mingling of any customer data between application instances and databases.

Solution Network Architecture Dedicated DMZ, network segmentation, dedicated URL, and site to site VPN which is a paid service. Intrusion detection system and intrusion prevention system monitors. Firewalls filter inbound and outbound connections to the Internet as well as between intra sites VLAN zones. VLAN partition various networks. Principle of least access. Monitoring logs unexpected network activity and notifies staff in real time via emails and text messages physical access control through identity control, badge access, interior and exterior video surveillance . Security guards 24 7365 dedicated locked racks on interruptible power supply with diesel generator redundant heating ventilation air conditioning firesafety inert gas all components are fully fault tolerant including uplinks storage chillers HVAC systems HV AC everything is dual powered.

System Development Methodology Open web application security project OWASP. Secure SDLC policy and procedures. New features are evaluated for security impact during design phase with regular code reviews peers and SA St tools. Tested for effectiveness during the QA process. Development process based on agile methodology with iterative approach. Penetration testing conducted prior to major software release by independent security firm. Cloud services are in accordance with NIST security focused configuration management of information systems guidelines. All application changes and updates are at the customer request and controlled by the customer they are performed behind the scenes for minor updates or through scheduled downtime for major updates.

Service Level Agreement SLA performance credits When performance falls below 99 point 8%. RTO 48 hours 8 hours 4 hours RPO 24 hours 24 hours 12 hours these are standard premium and platinum service levels and presumably additional cost

Security Requirements

Cloud Security Alliance (CSA) Compliance CAI Q completed

Security and Privacy Controls currently validating controls and safeguards against NIST SP 800 53 revision 4 moderate

Security Certifications ISO IEC 27001, SOC2 , ISAE 3402 Europe , annually audited for HIPAA. Not currently audited for PCI DSS compliance. Fedramp ready with our Gov cloud

Annual Security Plan Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE3402 (Europe).

Secure Application and Network Environment Ivalua has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.

Secure Application and Network Access Ivalua uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest

Data Security Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers. Our model creates a very distinct boundary between the data of each client. Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also

facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances.

Personally Identifiable Information Protection compliance with the GDPR
Security/Privacy Issue Occurrence Ivalua has a Security Incident Response Plan and Procedure; reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours. Details, special cases, and additional terms can be discussed during discovery.
PII Data Actual/Attempted Access or Disclosure same as above
Security Breach Reporting same as above

Implementation Services Requirements

Project Management Methodology is a semi agile based designed . Phases include mobilize, explore design, build configure, test, deploy go live, run. Customer resources to support project; project sponsor 15% project manager 75% business leads 50 or 100% technical lead 20 or 100% third party system and middleware SME's 20 or 100% administrator 50% process experts pilot users 25%

Project Implementation Methodology Implementation Methodology is based on the principles of rapid deployment and prototyping that reflect the **same agile development principles we use to build our software.**

Catalog Support Services Ivalua excels at "flipping" a contract or sourcing event into an e-catalog, a traditional catalog loading process that leverages either excel, CSV file formats, EDI, email or a template that suppliers filled and load it by themselves.

Data Conversion Services network of partners conversion services are leveraged to provide data conversion services such as needs assessment data cleansing tools accelerators.

Interface/Integration Development Services **integrate by configuration**

Organizational Change Management (OCM Services provides an array of change management and custom training services, including Change Management and Custom Training development (Instructor led training, Train-the-trainer, Web-based recording, and Quick Reference Guides (QRGs))

Training Services e-learning program for customers, partners, and our own staff to learn at their own pace using documentation, video instruction and study guides

Help Desk Services the Application Maintenance included in the SaaS, Ivalua provides three optional types of support:

- End-users Help-desk;
- Suppliers Help-desk;
- Administrators Configuration Support

On-Site System Stabilization Support provides On-Site System stabilization support after the 'go-live'. hypercare provided for a period of 3 months for the Participating Entity

Managed Services Requirements

Solution Support Ivalua is a SaaS solution. The infrastructure is administered and monitored by Ivalua IT staff. All updates of Ivalua Solution application are at the customer request and control, and they will be performed automatically with no downtime (for minor updates) or through scheduled downtime (for major updates). Ivalua manages environments and their lifecycle using Ivalua's 'Factory'. Release packages are automatically created and deployed using the Factory. Each client project has its own versioning managed by the Ivalua source code control server.

Organizational Change Management (OCM Services no

Training Services as part of our implementation proposal section

Help Desk Services Same as above in implementation services.

Transition Out Assistance Services Ivalua will work with the Participating Entity to understand their requirements and tailor a plan and scope to support the Transition Out activities needed.

Other Available Resources **Shouldn't these other available services be part of the E procurement tool?**

Video Demonstrations

- Supplier portal
- Solicitation and bid module
- Scoring options
- Contract linked to sourcing event
- Renewal reminders
- Clause library
- Workflow flexible and configurable
- Shop
- Analytics with ADHOC and Dashboard reporting

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1-Full Solution

DATE: 8/23/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Collaborative Network
 - Six modules
 - Take note of how modules integrate with outside solutions in practice
2. Previous Projects
 - NYC Mayor's office is a very narrow implementation
 - Maryland Good reference of Statewide implementation; however unspecific results given to validate the value of efforts.
 - Ohio good representation of state implementation; only a single module test to limited agencies in 2018. Supplier supports expanding, no mention if Ohio does or will.
 - Alabama is limited in scope and still in implementation; unknown if successful
 - LA water department limited scope and still in implementation; premature reference as there is no ROI provided
3. Subcontractors
 - Interesting that Data for on-prem is stored by third party. Exploration is needed on data security and liability to end users.
 -
 -
4. Organizational Chart
 - Extremely brief and general org chart
 - Note that a minimal number of resources are lvalua resources; most are Customer Resources. This lends itself to customer providing more effort than Ivana for solution
 -
5. Litigation
 - No Litigation
 -
 -
6. Financial Viability
 - Statements in Euros
 -
 -

Individual SME Comments:

General Principal and Requirements

- POSITIVE (p.4)– Routing workflow appears efficient
- QUESTIONING (p.5) Is/can MWBE be broken out into subcategories or customized?
- QUESTIONING (p.5) Search 360 appears to be level 2 punchout but uncertain if that is the functionality
- POSITIVE – document management across modules is very efficient
- QUESTIONING – Is FedRAMP ready the same as FedRAMP certified?

Functional Requirements

- QUESTIONING – Is every supplier even for low dollar purchase required to establish an account?
- QUESTIONING – Can Supplier portal import other ERP solution data
- QUESTIONING – can buyers be restricted to certain business practices?
- POSITIVE – Audi workflow is good. How long is it maintained?
- QUESTIONING – are hosted catalogs searchable withing the solution and not just independently?
- POSITIVE – Search 360 ability to consider punchouts in the search
- POSITIVE – Document versioning
- INTERESTING – Public portal can act similarly to current webpage activities
- POSITIVE – MS Word document synching seems a valuable tool to save time. Would like to see more on what that looks like
- POSITIVE – reporting seems to give the user many options

Technical Requirements

- POSITIVE – multiple authentication options
- QUESTIONING – Data conversion seems very tentative and non-committal to success, just explains a very broad set of all potential options
- QUESTIONING – What ERP systems are supported?
- QUESTIONING – WebKit is for iOS. How are PC devices supported?
- POSITIVE – different environments are needed to properly test
- QUESTIONING (p.70) When will Ivalua be compliant with PCI-DSS for payment cards
- QUESTIONING – How long is the FedRAMP process to become authorized?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/3/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- POSITIVE – limitations of access based on need
- POSITIVE – data at-rest and in-transit encrypted
- QUESTIONING – Customer data is limited, but customer should apply access controls. What responsibility does Ivalua have in a breach?
- QUESTIONING – What does Ivalua do in a breach situation aside from notification within 72 hours?

Implementation Services Requirements

- QUESTIONING – Imbalance of customer resources to Ivalua resources.
- QUESTIONING – very general process information. What percentage of clients achieve implementation on time and within original budget?
- POSITIVE – different levels and types of training identified
- QUESTIONING (p.98) 90% of tickets level one and solved within 1 hour. Does this demonstrate a challenge to client training quality?

Managed Services Requirements

- Standard services presented
- QUESTIONING – What is Ivalua data retention schedule

Video Demonstrations

- POSITIVE - Modules
- INTERESTING – FOIA request from the solution
- POSITIVE – repository for documents
- POSITIVE – Other third-party integration (which ones?)
- POSITIVE – Catalog Management
- POSITIVE – Roles
- POSITIVE – Workflows and notifications on dashboard
- POSITIVE – Good supplier data
- NEGATIVE – P2P information limits supplier access to RFPs?
- INTERESTING – Project types can be for individual low dollar quotes
- QUESTIONING – are Outlook addresses imported for SME's?
- QUESTIONING – how are suppliers not in the system notified and able to respond?
- POSITIVE – email templates are good
- NEGATIVE – How are small businesses with technology challenges able to respond?
- QUESTIONING – Have SME expressed concern with challenges to evaluate, there are many steps and files to review?
- QUESTIONING – how are no definite quantity awards considered
- POSITIVE – contract templates
- INTERESTING – Parent child hierarchy
- POSITIVE – proposal pricing comes from vendor bid
- POSITIVE – Edit versioning is good
- POSITIVE – workflows triggered by sections edited are efficient

Customizations/Extensions

13-14	The Ivalua SaaS platform relies on configuration, not custom code, as the means for clients to modify and maintain a solution that meets their needs. As a result, the enhancements are not custom code but instead configuration & data and that configuration & data is carried forward with your instance as the Ivalua solution is updated. Ivalua does not make coding customizations specific to individual clients; all coding changes on the Ivalua platform are part of their release cycle and are by definition part of the baseline product	
-------	---	--

Alternative Funding Models

14	Did not offer	
----	---------------	--

Contract Transition and Flexibility

14	Ivalua is certainly willing to enter into good faith discussions with Participating Entities that wish to explore transitioning their current contract under the terms of the newly awarded Master Agreement.	
----	---	--

Functional Requirements

General Functionality

15-16	Ivalua's single complete unified suite will provide participating organizations with a highly configurable, robust, and comprehensive e-Procurement Solution, purpose built for the public sector. Ivalua is a cloud based, SaaS solution RFP# 202102021 eProcurement Solutions and Services File 3 Ivalua Inc. CONFIDENTIAL © 2021 Ivalua, Inc. This document contains information confidential and proprietary to Ivalua. The information may not be used, disclosed, or reproduced without the prior written authorization of Ivalua. Page 16 and offers the most comprehensive, natively built Source-to-Pay suite in the market which includes Public Portal, Supplier Risk & Performance Management, Sourcing, Contract Management and P2P processes, standard integrations and extensive system administration and reporting capabilities	
GEN 15	Transaction print formulas are based on the layout of the page and may need additional effort	weakness

BIDDER NAME: Ivalua

CATEGORY #(s): 1 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Supplier Portal

16-18	Ivalua offers a free supplier portal where suppliers may perform self-registration and other activities with their customers. Ivalua supplier registration & information management capabilities allows to quickly and easily onboard suppliers for RFPs, orders and invoices, and push data to ERP or other relevant systems. Suppliers can easily register with basic information such as their tax identification number, email address, and company name to establish an account within the system. Note that in the Ivalua system, there is no charge for suppliers to use the solution, allowing organizations to have unlimited suppliers with unlimited users registered to do business with their organization	
-------	---	--

Supplier Enablement/Management

18-25	Registration is 2 parts. Available 24/7 365 days. No charge for suppliers conditional logic can be utilized to tailor the registration page to specific information required by type – such as US vs. non-US suppliers. At this time, the supplier can register for notifications for solicitations that are released within their scope, based on the commodity code(s) that they register for and/or the areas they serve across the organization. Fields captured through the registration process will be tailored to your needs	
VDR 15	Does not check for duplicate registrations	
VDR 19,20 & 24-27	State will have to license 3 rd party system	

Buyer Portal

25-28	internal users can login to the system through their secure username/password, where password rules can be setup by each organization. Alternatively, suppliers can login via SSO with their organization. Once the user login they will be directed to their homepage. Each homepage features a dashboard is unique to the user based on their user. Page 26 role. In addition, authorized users can also add new aspects to their homepage or rearrange the webparts on the screen, to ensure that their portal caters to their unique needs. From the user's homepage they will have access to all the actions throughout the solution that they support. In addition, the user's homepage will have a quick link to all their workflow tasks as well as shortcuts to their frequently created or in-progress objects.

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Need Identification

26-27	Ivalua offers a suite of integrated procurement services, entity buying profiles, and entity data-driven dynamic workflow. Ivalua provides users the ability to initiate any procurement action from a single spot through the platform. Each action is driven by data setup (entity buying profile) and workflow setup specific to that user and heir organization. Ivalua also provides a powerful and flexible workflow engine that not only invokes approval flows, but also provides the ability to invoke processes. This ability to invoke business processes allows procurement policies and regulations to become part of workflow and not something the end-user needs to think about. Ivalua will guide the end user to begin any type of procurement activity by clearly identifying and outlining the process and steps that need to be taken	
-------	--	--

Request through Pay

27-33	Did not address the requirements for external retail	
27-33	All purchases within the Ivalua solution will begin from a purchase request within the tool. These can be created from a catalog, automatically carrying over all item information, or from scratch. Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions	
	Once the requisition is submitted, it will route through organization users for approval, where needed. Ivalua uses a combination or algorithms and user approval to navigate through the approvals that are necessary, as well as performing automated checks to verify if there are any issues. The organizations/agencies and public bodies will have the ability to define conditional logic to determine when and who should be approving each requisition. This makes our workflow dynamic, so they are automatically routed to the appropriate approvers. Additionally, different organizations and commodities can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases. Approvers will have a full audit trail of approval activity directly on their workflow screen, including any rejections and comments. They will also receive email notifications of workflow tasks pending their approval, as well as can receive reminders if they do not act. Ivalua workflows can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase.	
	Invoices can be created in multiple ways within the Ivalua solution • PO flip • From scratch • EDI/cXML transmission (for enabled suppliers) • OCR capability	
PRD 1-6	Yes	
PRD 7	Requires a manual step for future release of a PO once the date has passed.	weakness

36-44	Procurement types are identified based on the solicitation (BPM) type which drives which tabs and parts of the solicitation process are required. Throughout the solicitation module, tools to ensure transparency and drive competition are included to meet the organization's goals of finding the best product at the best value.	
	Suppliers to be invited to a solicitation can be captured by adding them through the suppliers' tab within the solicitation record. Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities that were defined at solicitation set-up. Additionally, suppliers can be added by searching the supplier database	
	Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities" and "can be added by searching the supplier database	
	Pricing for the solicitation can be collected directly in the system via the item grid. Multiple item grid templates can be accommodated and applied automatically to the event based on event type, organization, or commodity. This will allow suppliers to enter their pricing in a structure format via the method that the user has chosen (ex. Unit price vs.% discount).	
SRC 1-24	Yes

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Contract Management

44-48	The contract record within lvalua captures all aspects of contract information, documentation, activity, and performance within the single record. The tabs on the left, shown in figure 51 can capture the different areas that will consist of the contract record, including dates, items, documents, subcontractor information, among others.	
	Contracts can be created from a complete solicitation or from scratch.	
	MS WORD can be used for authoring contracts	
CNT 1-88	yes	

Vendor Performance

49-50	Over the life of the supplier, users can create performance assessments against their suppliers or contracts. All performance information is maintained within the supplier's profile for reporting, as well as can trigger alerts to users if a supplier is consistently performing poorly.	
	Performance assessments can be triggered manually or periodically. Templates for performance criteria are stored within lvalua for users to respond to questions related to the supplier's performance and based on the weights of each question, will roll up a total score.	
	lvalua provides the ability to track exceptions and collaborate with suppliers to address these exceptions. If a supplier scores poorly on a performance or risk assessment, exceptions can be created to inform the supplier of areas that need improvement. The exception documents the issue or non-conformance and the severity, tied to the triggering event (for example, contract, delivery, or invoice exception). The supplier is notified of the exception	
	Improvement plans provide a collaboration tool to help improve supplier performance at a granular level by creating tasks that will lead to overall supplier improvement	
VPE 2-12	System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data

Purchasing/Data Analytics

51-54	There are three different types of reporting with the lvalua solution, ranging from simple excel extracts to data visualization dashboards. The system can, by default, report on all data stored within the system from across modules. Importing data from an external system can be accommodated. lvalua has over 100 out of the box reports that are provided within our system, but additional reports can be configured during implementation or by super users. The different types are reports within lvalua are detailed below.	
	Any browse page within lvalua can become a report by utilizing powerful search and filter capabilities combined with the ability to extract pages into excel.	
	Queries are Excel based reports that are run via SQL statements in lvalua's reporting module	
	Analysis reports provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users.

Transition Out Assistance Services

104-105	Upon termination of the contract, lvalua retains processed data and files for a limited period of time in accordance with the contract. We then delete the client online files (skipping the file trash). When the physical servers are terminated, media is destroyed, except for encrypted data in archived storage (which is destroyed in accordance with lvalua's data retention schedule). lvalua follows NIST 800-88 Media Sanitization guidelines. Media is destroyed by repeatedly zeroing out prior to secure disposal by crushing. Prior to the deletion, a copy of the most recent backup can be provided to the client, upon request, in a usable format (.txt or .csv).

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Founded in 2000
 - Received multiple awards
 -
2. Previous Projects
 - State clients
 - City clients
 - Municipalities clients
 - **Did not supply contact information for above projects – Contractual obligations?**
3. Subcontractors
 - Only mentioned hosting region choice
 - No subcontractors
 -
4. Organizational Chart
 - Showed chart with both company and client resource role names
 - **No mention of role descriptions**
 -
5. Litigation
 - Bidder stated no litigation
 -
 -
6. Financial Viability – **Marked Confidential**
 - Supplied Financial statements rather than Duns & Bradstreet

Individual SME Comments: The video demonstrated an overview of the solution and provided information from both sides of the application. The response could have offered more information in some of the areas that seemed to need a better explanation. The solution does NOT offer PCard functionality and some of the help desk requirements are not available either. The supplier does state these requirements are in development. This supplier could offer a solution over time, but the client needs to be made aware of the functionality that does not exist.

I believe that each of the concerns and verification topics need to be addressed or at least known to the entity. For example - CONCERN – Page 30 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.

General Principal and Requirements Page 3 – Addressed all requirements listed.

Key Solution Functionality Elements – Page 3

- Single landing page with access to other modules from this landing page.
- Workflow can be attached to any object in the system or be based on different criteria. Workflow is configured during implementation. Figure 2 page 4 is sample workflow.
- Can configure solution to meet our needs which include personal dashboards and internal collaboration tools (blogs, forums, and comments)
- Google search experience in the open marketplace which allows for side-by-side comparison of products.
- Robust integration capability which supports multiple formats. Can connect to any data source
- Workflows come out of the box with best practices but can configure workflows.
- Documents are available throughout all the modules.
- Reporting is out of the box, or users can create their own reports and use graphics for display
- Highly configurable.
- Transparency from the supplier portal with authorized user have oversight to all procurement activity.

User Experience – Page 7

- Homepages are configurable. Sample Homepage Page 8 Figure 3
- User experience is role based
- Tasks assigned can be accessed from the user's home screen (i.e., workflow)
- Can delegate functionality – Page 8 Figure 4

Bidder Best Practices and Roadmap – Page 8 – 9

- Releases are performed twice a year and allows the client to choose which version and when to apply upgrades. Customers are in control of the upgrades

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 1

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Constant communication with customers to stay up to speed with new technologies.
- Work closely with customers to learn their best practices
- 60% roadmap comes from clients with 20% reserved for innovation and 20% for market trends.
- Areas of significant investment are Mobile, Invoicing, Contract Management, Supplier Risk and Security.
- Leveraging new AI technologies. Page 10
- Automated obligation tracking and management is being enhanced. Page 11

Innovations and Value-Added Features/Services – Page 11

- Offers Help Desk support. Page 12 Figure 5
- 90% of tickets solved in an hour.
- Advanced Services Procurement - Improvements to contingent labor
- Expenses – Capture PCard transactions
- Vendor Master Management – Better manage vendor data.

Customizations/Extensions – Page 14

- Client is responsible for when they go through an upgrade cycle.
- The platform relies on configuration not custom code.
-

Alternative Funding Models – Page 14

- Not proposing alternative funding but is open to discussion

Contract Transition and Flexibility – Page 14

- Willing to enter into good faith discussions about this process

Functional Requirements – Page 15

General Functionality – Page 15 – 16

- Full Source to Pay Solution - Page 16 Figure 6
- Automated notifications
- Single Platform and configurable solution – Page 16
- Offers native public site for posting – RTM line 7
- CONCERN - EPROC-GEN-6 – TAB 2 Line 10 – Can the system be integrated based on this response?
- CONCERN - EPROC-GEN-11 -TAB 2 Line 15 - Has a limit on a file type (executables) and states size limits do exist?
- CONCERN - EPROC-GEN-15 – TAB 2 Line 19 - PO is the only printing format that is printable?

Supplier Portal – Page 17

- Unlimited suppliers with free supplier portal.
- After establishing an account, the supplier portal has a one stop shop on their homepage. Page 17 Figure 7
- Self-manage users with roles when they set them up in the system. Account has system admin to manage supplier's account.
- CONCERN - EPROC-SPR-5 – TAB 3 Line 9 – Does the system notification get sent via email, or does supplier just have to monitor notifications on their supplier dashboard?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 1

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Supplier Enablement/Management – Page 18

- Enablement is 2 parts, public facing page to create an account, and “full enrollment” used to be fully onboarded – Page 18
- Sample supplier registration Page 19 Figure 8
- Supplier Full Enrollment happens after workflow approval. The information required here is banking information and W9 documents. Page 20 Figure 9
- Integrations can be designed to verify real-time profile information. Page 21 Figure 10
- Can create their own user contacts. Page 21 Figure 11
- Supplier accounts have document storage and tracking. Page 22 Figures 12 and 13
- Solution has supplier workflow. Page 23 Figure 14
- Internal users (Buyers) can have access to search for suppliers. Page 23 Figure 15
- Access to view the supplier record. Page 24 Figure 16
- Suppliers maintain their own profiles, but changes can be put into workflow for approval by internal users.
- STRENGTH - Ability to have “changes” done on a registration get put into workflow.
- CONCERN - EPROC-VDR-32 – Line 61 – Supplier’s response leads me to believe they did not understand the requirement. We asked if other agencies be put into workflow, not have data passed into other state systems?
- CONCERN - EPROC-VDR-36 – Line 65 – Need to release an RFI to remind suppliers to log in and update their registration?

Buyer Portal – Page 25

- This is the access point for procurement activities. Homepage Dashboard -Page 25 Figure 17
- SSO can be a login and each user’s dashboard are based on their user roles
- User roles are tied to authorizations and the user is assigned a “perimeter”. Page 26 Figure 18
- CONCERN - EPROC-BPRT-7 – Line 81 – The requirement is for the Buyer Portal, but the response received is for the “vendor” portal?
- CONCERN - EPROC-BPRT-8 – Line 82 – Does not support daily summaries of buyer notifications.
- CONCERN - EPROC-BPRT-9 - Line 83 – Cannot provide link to external users due to security
- CONCERN - EPROC-BPRT-15 – Line 89 - Supplier notification needs to be handled through the RFI module?
-

Need Identification – Page 26-27

- The solution has a single point of entry and can manage a request in several ways via “requests”.
- Options include request form, purchase, or exemption request, create a sourcing event or contract, or gather quotes. Page 27
-

Request through Pay – Page 28

- Process starts with a “request” that will populate relevant requisition details. Page 28 Figure 19
- Exceeding contracted amount could be triggered by the allocations grid. Page 29 Figure 20
- Requisitions are submitted to workflow. Page 29 Figure 21
- Once approved, the requisition is flipped to a purchase order. Page 30 Figure 22
- CONCERN – Page 30 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.
- Can flip purchase orders into receipts. Page 30 Figure 23

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): Stage 2 Category 1

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Receipts are shown on the receipt page (Page 31 Figure 24) and then the receipt is submitted to workflow. Page 31 Figure 25
- Invoice will be created (Page 32 Figure 26), and then payment can be applied to the invoice. Page 32 Figure 28
- CONCERN - EPROC-PRD-1 – Line 102 - Response refers to Sourcing event from the requisition, but requirement is asking for need identification to Purchase Request?
- CONCERN - EPROC-PRD-15 – Line 116 – Does not support executables file type
- CONCERN - EPROC-PRD-37 – Line 138 – Capturing noncontract price for later analysis is not supported.
- CONCERN - EPROC-WRK-24 Line 189 – Can the PO, PR or change request be re-submitted after it was changed?
- CONCERN - EPROC-PO-17 – Line 212 – eFax submission of orders in not supported.
- CONCERN - EPROC-PO-26 – Line 221 - Additional configuration will be required for facilitate fiscal year end.
- CONCERN - EPROC-PC-1 thru EPROC-PC-4 – Lines 227 thru 230 – These PCard requirements are in the process of being developed.
- CONCERN - EPROC-PC-5 – Line 231 - Full administration of PCards is not available in the system
- CONCERN - EPROC-PC-6 – Line 232 – Pcard maintenance is not currently available but is anticipated for release in 2022.
- CONCERN - EPROC-PC-7 – Line 233 – Ghosted cards are not currently available but is expected to be released mid to late 2022
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 – These requirements will require some kind of customization, configurable item, or integration.

Catalog Capability – Page 33 – 34

- Ability to view catalogs are limited to the user's organization scope
- Search results landing screen – Page 34 Figure 29
- Can shop via hosted or punch out catalogs. Page 34 Figure 30
- Hosted catalog process can be done by supplier. Internal user can compare catalog versions Page 34 Figure 31
- Users can use the search functionality to search and filter results. Page 35 Figure 32
- Item tags to find preferred items
- Search punchout and hosted in the same search. Page 35 Figure 34
- CONCERN - EPROC-CAT-32 – Line 317 – The ability to compare catalog item search results in NOT supported.
- CONCERN - EPROC-CAT-34 – Line 319 – Additional functionality is required to compare items and will be based on number of punchouts required.

Sourcing/Bid Management – Page 36 thru Page 44

- Wizard solicitation set up – Page 36 Figure 35
- Supplier can be added several ways (commodity code selection, public site, etc.) – Page 37 Figure 36
- Has Sealed Bid functionality
- Conditionality can be applied to questions.
- Item grid (pricing) has multiple set up options. Page 39 Figure 40
- Notifications to supplier about event and has access to public portal

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 1

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Suggest posting information to client's website and provide link to public portal to view full solicitation. Page 40 Figure 42
- Suppliers need to add open solicitations to their account to create a response. Page 41 Figure 44
- Supplier can Management of Responses. Page 42 Figure 46
- Users can monitor suppliers' activity and award events
- Can notify suppliers and create a contract from the solicitation. Page 44 Figure 50
- CONCERN - EPROC-SRC-3 thru EPROC-SRC-9 and EPROC-SRC-11 – Lines 330 thru 336 and 338 – Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-14 thru EPROC-SRC-21 – Lines 341 thru 348 - Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-22 -Line 349 – The response talks about envelope bidding, but requirement talks about separate Cost and Technical sections?
- STRENGTH - Has no limit on number of suppliers being invited to an event.
- CONCERN - EPROC-SRC-68 – Line 395 – eFax is not supported
- CONCERN - EPROC-SRC-70 – Line 397 – This response does not address the requirement that states the eProcurement file of the event needs to be "complete" to meet public records laws. SRC 71 has this same response which meets that requirement.
- CONCERN - EPROC-SRC-83 – Line 410 – System does not support web conferences, but supplier offered the ability to upload the recorded conference. Do they support that file type?
- STRENGTH – Size limitations can be set up by system administrator
- CONCERN - EPROC-SRC-143 – Line 470 - Must start a new solicitation instead of cancelling award on bid and move to the next highest bidder?

Contract Management – Page 44 – 45

- Wizard driven entry. Page 45 Figure 51
- Information brought over from the contract header
- Alerts on documents uploaded to the document section – Page 46 Figure 53
- Native authoring (Word) – Page 47 Figure 54
- Subcontractors can be added.
- Can integrate with multiple eSignature tools. Page 48 Figures 57 and 58
- CONCERN - EPROC-CNT-16 – Line 496 – Loading of external price list for contracts will need to be worked out to identify data elements. Additional cost possible?
- CONCERN - EPROC-CNT-52 thru EPROC-CNT-63 – Line 532 thru line 543 – The supplier has used the same response for all of these requirements, but the response does not mention the requirement? Also see lines 555 and beyond as an example. These responses are duplicate but at least start with "this information".
- CONCERN - EPROC-CNT-66 – Line 546 – Response states alert could be posted to public portal, but requirement asks if it can be posted to state's procurement website.
- CONCERN - EPROC-CNT-67 – Line 547 – The response does not address the email notification listed in the requirement?

Vendor Performance – Page 49

- System has supplier performance dashboard. Page 49 Figure 59
- Allows ability to track a supplier's performance.

**STATE OF MAINE

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Improvement plans provide a collaboration tool to help improve the supplier performance. Page 50
- CONCERN - EPROC-VPE-3 thru EPROC-VPE-11 – Line 573 thru line 581 – The response to each of these requirements refers back to the response on line 572 which states vendor performance needs to be handled by a questionnaire.

Purchasing/Data Analytics – Page 51

- System has 3 different types of reporting, Ad Hoc, Queries and Analysis
- Reports are compiled by running a search and exporting data to Excel.
- Analysis reports can be put on dashboard for view of any user.
- Offers 100 standard reports
- CONCERN - EPROC-PDA-5 thru EPROC-PDA-16 – Line 602 thru line 613 – A duplicate response was used to answer all of these requirements, but the response does not reference the reporting requirement? Can this supplier supply reports based on the listed requirement?
- CONCERN - EPROC-PDA-20 and EPROC-PDA-21 - Line 617 and 618 – This supplier currently does not have PCard functionality.
- CONCERN - EPROC-PDA-36 – Line 633 – This supplier currently does not have PCard functionality.

Technical Requirements – Page 55

Availability – Page 55

- Meets requirements

Accessibility Requirements – Page 55

- CONCERN – States they are committed to being Section 508-compliant as soon as possible.

Audit Trail and History – Page 56

- Meets requirements

Browsers Supported – Page 56 – 57

- Supports the most update browser versions

User Accounts and Administration – Page 57

- Controlled by an authentication method and roles, authorization and perimeters.

User Authentication – Page 58

- Supports multiple authentications and password rules are fully customizable.

Federated Identity Management – Page 58

- Meets requirements

Data Conversion – Page 59

- Offers data assessment to determine data requirements
- Historical data conversions require a larger scope where cost needs to be determined
- CONCERN - EPROC-TECH-28 -Line 32 – Solicitation data conversion is NOT supported.
- CONCERN - EPROC-TECH-30 -Line 34 – Vendor performance data conversion is NOT supported.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 1

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Stated they included this in their implementation proposal section of this RFP

Training Services – Page 103

- Stated they included this in their implementation proposal section of this RFP

Catalog Support Services – Page 103

- Stated they included this in their implementation proposal section of this RFP

Help Desk Services – Page 103 – 104

- Provided Help Desk Flow chart – Page 104 Figure 72
- CONCERN - EPROC-IMPL-3 thru EPROC-IMPL-5 – Tab 6 Line 6 thru line 8 – These requirements for help desk services are not available.

Transition Out Assistance Services – Page 104 – 105

- Supplier will assist with data to be exported

Other Available Services

- Tool called Aware is available to track all activities of the solution. Page 106

Video Demonstrations

Full Suite platform containing end to end procure to pay. Supplier Login screen has additional links to other services, FOIA request, public bid site, new supplier registration and help desk information. Supplier portal page has announcements, registration progress and many other widgets showing information about the vendor. Links on left takes supplier to registration information. Has change log for changes to registration. Links across top takes them to contracts, bids, catalogs, invoicing and performance links. Buyer has landing page with to do lists and many other widgets and analytical reports. Links on right allow access to supplier registration, sourcing, contracts, etc. Across the top has links to the other modules they have access based on the roles assigned. Can search suppliers from the supplier landing screen. 360 supplier is available, and the left side of the landing page give the user access to each of the section of a supplier's registration. Bid Management module has search ability and project creation. Solution is wizard driven and has setup options on left side of screen. Has scoring capability and houses templates and libraries to aid in bid creation. Supplier can view bids without logging into their portal. If interested, can add themselves to the bid and log into their portal. Responses are wizard driven. The system allows for individual and consensus scoring of proposals. Can send out award notifications to suppliers by creating scenarios. Can create separate contract record or create a contract from a sourcing event. The creating contract process is wizard driven. Offers Word authoring of contracts and a library to house contract templates that can be used to create contracts. Can submit contracts into workflow approval. Has integration with DocuSign and other solutions. Buyers search for products via the procurement home page with is configurable dashboard. Can have hosted or punch out catalogs which are searched on with each search. Can put items in a "kit" search. Requisitions can be configured with budget information sent over from the ERP. Workflow can be applied to each requisition. Requisition and PO are linked in the system. Supplier logs in to their support to manage orders. Invoicing module has several invoice options. User can flip an invoice to a receipt which can be put into workflow. Supplier can see

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG, LLP

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - KPMG, LLC over 120 old.
 - Proposing the "Ivalua solution"
 - Much experience in source-to-pay.
2. Previous Projects

5 projects listed, all State. **The projects listed are a small part of what Category 1 entails. They seem to be more of a Subcontractor to Ivalua.**

 - State of Ohio. Interfaced both inbound and outbound with the State's PeopleSoft ERP.
 - State of Arizona. Integrated and interfaced both between CGI Advantage ERP, Tririga, and Ivalua.
 - State of Alabama. Integrated and interfaced both between CGI Advantage ERP and Ivalua.
 - State of Texas (TRS). Interfaced both inbound and outbound with the State's PeopleSoft ERP.
 - California Dept. of Transportation. Migrated contracts from legacy system to Ivalua.
3. Subcontractors
 - Ivalua – Est. 2000. Eprocurement platform.
4. Organizational Chart
 - Yes – both org. chart and job descriptions.
5. Litigation
 - Vendor states they have no pending litigation that **will materially affect** the firm's operations or ability to perform services for us.
6. Financial Viability
 - Yes. Provided unaudited balance sheets and further descriptive information.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG LLG

CATEGORY #(s): 1

DATE: 12/13/2021

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- After full review KPMG is offering: A (6) Alternative Funding Models, E. Implementation, F. Managed Services, and G. Other Available Services, to apply towards the Ivalua Solution. Because of this, I have highlighted these areas specifically to be aware of what is KPMG.
- KPMG LLG with The Ivalua Solution.
- SaaS Hybrid Cloud Solution.
- KPMG is not mentioned much at all in the Matrix.
- Have numerous concerns with the number of assumptions they take.
- Many of these assumptions (page 181 – 187) are contractual terms and conditions in nature versus an assumption.
- Some assumptions may be deal breakers for the Contract.
- Concerns with the numerous exceptions (pages 189-221) they take and that many States could not agree with.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 2 - 5

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single landing page for the single point of entry with same look and feel throughout the whole system.
- Smart Routing: workflow is tailored to meet each organization's needs
- Compliance: Ivalua continues to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding

- Subcontractor Reporting
- Cooperative Reporting
- Portal: All users (internal and external) have ability to access their account through portal and personalize their page.
- Open Marketplace Environment: They express they want it like a “Google experience” - modern digital and ecommerce experience, driven by search and content.
- Integration: Robust Integration Toolbox with capability to connect with multiple ERP solutions, third-party data providers, and suppliers' systems. Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.
- Workflow: Ivalua expresses this area as one of their “crown jewels” – area of expertise.
- Document Management: Core platform with an integrated foundation.
- Reporting: Many out of the box reports and the ability for users to create their own. Reports can be simple to graphs, bar, line, pie, etc.
- Configurable: Ivalua claims their SaaS solution is the most configurable hosted solution on the market as extensively reported by industry analysts.
- Transparency: public portal allows for transparency and authorized users have ability to get oversight through audit trail.

2. User Experience – p. page 6 - 7

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- KPMG's explanation of Ivalua's User Experience is short, but addresses most of the points. I do not see anything on Wizard-driven capabilities.

3. Bidder Best Practices and Roadmap – p. page 7 - 9

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
 - Major Software Product releases are delivered by the Ivalua R&D division twice a year.
 - Client can choose to upgrade their client application either 18 months or 24 months
 - Ivalua leverages advanced technologies such as machine learning, natural language processing (NLP) etc. and are members of various industry and procurement or supply chain associations, that contributes to their knowledge.
 - Updates can be scheduled by the State
 - During the implementation phase, Ivalua together with State will work to better, more effective solutions, processes, and approaches, based on their experience. These will then be built into the design of the solution.
 - Product Roadmap: No direct 3-year map, but a high level of what is being worked on.
 - Investing heavily in developing specific capabilities to meet Public Sector Procurement needs. Approximately 60% of the roadmap items coming from the customers information.
 - They have a dedicated Public Sector team.

- Enhancements in mobile experience.
- Invoicing and payments investments.
- Enterprise-wide AI powered **Contract Lifecycle Management (CLM)**
- Supplier Risk and Performance – adding and enhancing new features / capabilities
- Highest level of security – investing resources to maintain highest level.
- Continue toward more seamless and simpler.

4. Innovations and Value-Added Features/Services – p. page 9 - 11

In addition to the stated requirement, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: **OPTIONAL**

• **Inline Narrative:** If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

KPMG discusses Ivalua offering all these innovations and value adds versus KPMG on any of them.

1. **Help Desk – level 1:** Provide suppliers or internal users to get on- demand help from Ivalua if they run into difficulties using the system. Level 1 help desk is the users first interaction when they need help, as opposed to a State/organization managed help desk.
2. **Advanced Services Procurement:**
3. **Expenses:**
4. **Vendor Master Management**

5. Customizations/Extensions – p. page 11

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- **Inline Narrative:** Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- **The Ivalua SaaS platform relies on configuration, not custom code, as the means for clients to modify and maintain a solution that meets their needs.**
- **enhancements are not custom code but instead configuration & data and that configuration & data is carried forward with the State's instance as the Ivalua solution is updated.**
- **Ivalua keeps an extra environment of a copy of the State's customizations / extensions.**

6. Alternative Funding Models – p. page 11

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- **Inline Narrative:** If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- **KPMG proposes two options:**

- **Hybrid fixed fee plus transaction-based funding model – a model where the State pays a reduced fixed fee and they finance a portion of the program cost through a transaction fee-based funding model.**
- **Value-Based Funding Model – a model more common in commercial/private procurement programs is to develop a "self-funding" or "value-based" funding model with limited cost to the State.**

7. Contract Transition and Flexibility – p. page 13

- KPMG notes what can go into transitioning and then answers this with: *We will work with the PE to assess the above and other factors and mutually agree to transition from a state's current contract to a new contract or amendment under the terms of a newly awarded Master Agreement and PA where requested or applicable.*

B. Functional Requirements: pages 15 – 51

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 15

- a. 1-C-“Customization/Extension” and 7-CF “Configuration Item”
- b. 6 – Medium

- #4 – No extra cost for integration between solutions – can all be done in software.
- #9 – Able to use our commodity code, but will need to configure a crosswalk.
- #35 will need configuration
- #36 – **Esignature capability**. Ivalua system allows for native plugins of popular softwares (DocuSign, Universign, and AdobeSign), but doesn't have it built into Ivalua system.

2. Supplier Portal. Tab 3, SPR-1 through SPR-23 and - p. 15 - 16

- a. 4-CF “Configuration Item”, 1-TP-“Third Party”
- b. 3 – Medium

- #1 - The Ivalua supplier portal is completely free of charge for suppliers
- #19 – Submitting of admin fee payments will require a third party payment provider.

3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 and p. 17 - 23

- a. 5-“INT-Integration/interface”, 2-TP-“Third Party”, 1-“C-Customization/Extension”, 4-CF “Configuration Item”, and 1-N“Not Available”
- b. 7 – Medium

- Seem to meet requirements except for:
- VDR 18, 19, 20, 24, 25, 26, and 27. – All will require integration with a third party system either for tax or SOS, etc. **Ivalua system can integrate, but State needs to find their own third party solution.**
- VDR 31 – Configuration needed on workflows to meet each organizations approvals.
- VDR 32 – Does not meet requirement – vendor states due to security reasons.
- VDR 38 – 40. Although realtime, scorecards will need to be configured.
- VDR 43. Configuration needed.

4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15 and - p. 23 - 25

- a. 1-“INT-Integration/interface”, 5-“CF-Configuration Item ”
- b. 3 – Medium

- BPRT 8 - Ivalua system provides the ability to drive notifications for various alerts both on screen and through email, **however not a daily summary notifications. CF needed.**

5. Need Identification. Tab 3, NEED-1 through NEED-7 and - p. 25

- a. 1-“C-Customization/Extension”, 1-“CF-Configuration Item ”
- b. 2 – Medium

- NEED 1: The fully integrated system has a single landing page when a user logs in.
- NEED 4: Ivalua system workflows have configurable steps that allow for setup in any sequence, the ability for variations to be invoked based on the context (user's organization, commodity, dollar value, geography, etc.), and workflows can be set to require specific "actors" who have profiles to either approve, amend or deny a request coming to them. Workflows include both manual (human input needed) and "automatic" steps that apply business rules to send alerts and/or route objects (Requisition, PO, Invoice, Contract, sourcing award, etc.) accordingly.

6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 26 - 30
 - a. 2-“INT-Integration/interface”, 1-TP-“Third Party”, 6-“C-Customization/Extension”, 38-CF “Configuration Item”, 5-ID “In Development” and 2-N“Not Available”
 - b. 21 – Medium, 2 - High
 - PRD 12 – **CLARIFY** – Does “force” attaching the terms and conditions of contract to the requisition and carry forward to POs and beyond mean the State will manually need to attach each time (transaction)?
 - PRD 15 – States no size limit to amount of data a client can store – **only cost \$\$ to consider. If enter into Contract with Ivalua make sure to spell this out in the Contract.**
 - PRD 28 – Their system can handle negative items with some configuration.
 - PRD 29 – The Ivalua system can handle \$0 value items. **It does not mention configuration.**
 - PRD 37 – **Ivalua system does not have this requirement.** They explain it as: “*This is possible if data from external sources are loaded through spend analytics for comparison. Web scraping of retail sites to compare pricing to the larger market (outside of the Ivalua system) is not supported.*”
 - WRK 1 – 28: Workflow Functionality seems to be a strong suit as it is very streamlined and customizable as needed – a big plus for States. Can meet all requirements with none to some configuration.
 - Meets most PO requirements.
 - PO 6 - Only meets ½ requirement. Creates PO # in system for you. Does not let create own PO number – would need to be configured.
 - PO 16 – Esignature – doesn’t come with the system. Will need to be State’s third party that can be integrated.
 - PO-15: System does not have the capability to have two versions of a printed purchase order.
 - **Payment Card Functionality PC 1 – 21: This is not a strong area for Ivalua. They system currently does not provide many of the requirements with a promise of an anticipated release in 2022 that will or customization. A work around will need to be established for Pcards if this system is chosen by a State.**
 - Request through Pay Receiving RC1 – 21: Meets all requirements with some configurations needed.
 - Invoicing INV 1 – 11: Meets all requirements with some configurations needed.
7. **Catalog Capability -** Tab 3, CAT-1 through CAT-40 and - p. 31 - 33
 - a. 12-CF “Configuration Item”
 - b. 2 – Medium
 - CAT 6 & 7: Meets the requirement of Unlimited catalogs and items per catalog.
 - Meets all requirements with some configurations needed.
8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 33 - 42
 - a. 2-TP-“Third Party”, 33-CF “Configuration Item”, 8-“C-Customization/Extension”,
 - b. 6 – Medium, 1- High
 - E-signature third party applies here also.
 - Posting items to the State’s public procurement website (i.e. notice of award and solicitation documentation) requires a High amount of customization and Ivalua recommends another approach. SRC76
 - Otherwise SRC 1-151: Meets the requirements of Sourcing / Bid Management Workstream with some configurations needed.
9. **Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 43 - 46
 - a. 3-TP-“Third Party”, 24-CF “Configuration Item”, 3-“C-Customization/Extension”,
 - b. 6 – Medium
 - CNT 12 – 14 requirements – Same E-signature Third Party.
 - CNT 64 – **Concern having a link to the punchout/catalog.** Not standard functionality in Ivalua System, could be customized. Ivalua recommends a standard public item browse in which users can search by contract.

10. Vendor Performance Tab 3, VPE-1 through VPE-25 and - p. 46 - 47

a. 14- CF "Configuration Item"

- VPE 1 – 11 all require Configurations which are suggested as a questionnaire for metrics.
- Remaining items meet the requirements of vendor performance none or little configuration needed.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 48 - 51

a. 1-ID-"In Development", 7-CF "Configuration Item", 1-"C-Customization/Extension", 1-INT"Integration/interface"

b. 3 – Medium

- PDA 3 – 5: Ivalua system has a large reporting tool with a variety of adhoc reports that are exportable in common formats.
- PDA 20 – 21: Pcard related reports are not available as the system does not have the function yet – In 2022 version software update.

C. Technical Requirements: pages 53 - 67

1. Availability. *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Page 53. Ivalua is accessible 24/7 days a week. They guarantee a Hosting SLA uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours. Scheduled maintenance occurs once a month on a weekend around midnight and the system is down for a maximum of 30 minutes if required.

2. Accessibility Requirements. *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*

- Page 53. Ivalua is working with a third party to implement accessibility of the system in accordance with the WCAG 2.1; however, do not have right now. VPATs are completed.

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 53

- TECH 5 - In the Ivalua Solution, while a user is logged on, all actions and activities are registered, logged and time-stamped.
- Ivalua meets all the requirements, no concerns.

4. Browsers Supported - p. 54

- The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 54 - 57

a. 4- CF "Configuration Item"

b. 1 – Medium

- TECH 6: Access to the app is controlled by an authentication method.
- TECH 11 – Information is available in real time.
- TECH 12 – requires CF. Linked accounts set up for internal users only but can be configured to allow a supplier account.

6. User Authentication RTM: Tab 4, TECH-21 through TECH-25 and - p. 57

a. 1- CF "Configuration Item"

- TECH 22: Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers.
- TECH 24 – **CLARIFY** – the system has a password policy, but unsure if it can conform to the State's password change policy.

Federated Identity Management – Pages 49 – 50 and - p. 58

- Users will only require one ID and pw to access the full solution.
- 7. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 59
 - a. 2- N "Not Available", 2- CF "Configuration Item"
 - b. 2 – High
 - **TECH 27 – 30 are not supported** (*conversion of in-process purchase request & POs, Active Solicitation data, *All Contract data, and Vendor Performance data). *TECH 27 and 29 can be configured but are rated a very high level of complexity.
 - It seems any historical spend, user account data, and chart of accounts data requirements can be met.
- 8. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 59 - 61
 - a. 2- CF "Configuration Item",
 - TECH 35 - Ivalua totes their strong integration capabilities with major ERP systems.
 - TECH 36 – **CLARIFY**. They list that they can import and export data with 3 out of the formats the State requests in the requirements. **What about the others?**
- 9. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 61
 - Meets all Word products mentioned.
- 10. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 61
 - Is responsive on a mobile device screen, **but does not have a mobile app.**
- 11. **Mobile Applications** - TECH 62 and - p. 61
 - TECH 62 - Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari.
 - **Does not have a mobile app.**
- 12. **Data Ownership and Access** - p. 62
 - States remain owners of their own data and control own data.
 - Through term of the contract, State can export data using features available in the Ivalua system through the Query extraction tool.
- 13. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 62
 - **CLARIFY** Ivalua responded in TECH 63: *"Ivalua maintains data in its systems with Ivalua's data retention schedule."* But on page 62 it's the **State's** data and they decide what information to be stored, how, when in accordance with the Contract.
- 14. **Disaster Recovery Plan** - p. 62 - 63
 - Ivalua does have a Business Continuity (BC) and a Disaster Recovery (DR) Program based off on ISO/IEC 22301 standard framework. The plan is reviewed and approved by Ivalua management annually. Additionally, this is communicated to all relevant stakeholders.
 - Have secondary servers geographically located elsewhere.
- 15. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 63
 - Provided 3 environments (Development, Acceptance, and Production).
 - Training or other environments are EXTRA.
- 16. **Solution Technical Architecture** - p. 63 - 65
 - Ivalua cloud features a "multi-instance" architecture of which isolates all customers' data from each other.
 - All interactive end user activities are performed using a standard Microsoft, Firefox, or Chrome web browser. There is no requirement for customers to install any client software on any desktop, laptop, tablet, or smart phone to access their Ivalua instances.
Application Arch. – Servers are in undisclosed location. The app. is built on Microsoft 64-bit technology stack, including .NET, C#, ASP.NET SQL Server and SQL Server Analysis and open standards such as REST Web Services, JavaScript, HTML, XML, and JSON.
 - Ivalua also provides an EDI tool as part of the products supporting SFTP interface, AS2 and REST APIs, Ivalua Solution also integrates off-the-shelf packages (COTS and Open Source).
 - Diagrams provided.
- 17. **Solution Network Architecture** - p. 65 - 66
 - Diagram provided. All Ivalua's data center/laaS partners adhere to stringent data center certifications such as: ISO 9001/14001/ISO 27001/SOC I and II
- 18. **System Development Methodology** - p. 66 - 67
 - Seems to meet.
- 19. **Service Level Agreement** - p. 67

- Ivalua attached their own SLA, but I do not see where they reviewed the RFP's SLA or commented on it.

D. Security Requirements: p. pages 69 - 81

- 1. Cloud Security Alliance (CSA) Compliance**
 - CAIQ completed.
- 2. Security and Privacy Controls**
- 3. Security Certifications**
- 4. Annual Security Plan**
- 5. Secure Application and Network Environment**
- 6. Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.
 - Requirements in this section are met.
- 7. Data Security** – nothing to add.
- 8. Personally Identifiable Information Protection** – nothing to add.
- 9. Security/Privacy Issue Occurrence** – nothing to add.
- 10. PII Data Actual/Attempted Access or Disclosure** – nothing to add.
- 11. Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements: pages 83 - 101

- **Project Management**
 - KPMG will provide a dedicated senior PM.
 - They mention similar projects in Alabama, AZ, Ohio, and Vermont.
 - Key PM tasks KPMG commits to:
 - Establish PM Office and Project Governance
 - Scope Management
 - Schedule Management
 - Budget Management
 - Quality Management
 - Resource Management
 - Communication Management
 - Risk Management
 - Issue Management
 - Set up program logistics
 - Align on project templates for status reporting
 - Establish and execute program meeting and communication plan
 - Execute program and governance management processes
 - Execute progress status reporting
 - Perform ongoing risk mitigations and issue tracking
 - Execute project change control and escalation process
 - Setup processes for and conduct Steering Committee updates per your organization's structure
 - Coordinate with eProcurement solution provider CSM
 - Manage all dependencies are accounted for across all parts of the implementation.
- **Project Implementation Methodology p. 101 – 112**
 - KPMG calls their implementation methodology "Powered Procurement" and label it as a proprietary and accelerated Enterprise Business Transformation approach for Ivalua and other cloud-base solutions. Additionally, they claim acceleration through proprietary tools and templates. The tools mentioned are all very familiar PM tools, unsure how proprietary they are.
 - KPMG describes the following approach/methods for implementation to accelerate their process:
 - Vision
 - Validate
 - Construct
 - Deploy
 - Evolve
 - Supplier Enablement
 - Change Management

- Learning and Development
- **Catalog Support Services p. 112 – 115**
 - Ivalua has a robust catalog capability for items within the system.
 - For items outside the system, KPMG offers to deliver and support a marketplace solution.
- **Data Conversion Services p. 115 – 123**
 - KPMG will work with the State to define the data conversion strategy and convert in three steps:
 - Extract
 - Transform and load
 - Data reconciliation
- **Interface/Integration Development Services p. 123 – 128**
 - KPMG will help perform for the State with the assumption (page 128) that there will be middleware solution or adapter to manage the integration of data between Ivalua, your ERP, and any optional applications.
- **Organizational Change Management (OCM Services) p. 128 – 138**
 - KPMG describes their OCM methodology as proprietary and calls it “Make It” methodology; however, it’s typical OCM.
- **Training Services – p. 138 – 148**
 - Will provide all training as requested / required.
- **Help Desk Services - Tab 6 IMPL 1 – 5 and – p. 148 - 149**
 - KPMG will develop the appropriate support strategy. They will train all help desk staff to prepare for ongoing post implementation support. They offer to provide level/tier 2.
 - Tier 1 is to be provided by the “Client”
 - Tier 2 is to be provided by KPMG
 - Tier 3 is to be provided by Ivalua or Client, depending on whether the issue is with the Ivalua system or the Client-side integration/interface.
- **On-Site System Stabilization Support – p. 150**
 - Meets some of the onsite system stabilization support. – Handles it through level /tier 2. negotiation suggested

F. Managed Services Requirements: 154 - 166

1. **Solution Support – p. 154 - 158**
 - KPMG provides what they call Powered Evolution services to help sustain the State’s investment.
2. **Organizational Change Management (OCM Services) – p. 159 - 160**
 - Yes, see above, meets requirements.
3. **Training Services – p. 160 - 162**
 - Yes, see above, meets requirements.
4. **Catalog Support Services – p. 162**
 - Yes, see above, meets requirements.
5. **Help Desk Services – p. 162 - 163**
 - Partially meets req’ts. It is unclear whether KPMG would provide Tier 1 support or if the Participating Entity must provide that level. Note that in the Support Services section on pg. 155 the Table list “Base Services” refers to L2 and L3 support which implies that the Participating Entity is providing L1 (Tier 1) support
6. **Transition Out Assistance Services – p. 163 - 165**
 - They provide a complete transition out assistance service plan.

G. Other Available Services: p page 167 - 175: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- **Strategic Sourcing:** Provide “strategic sourcing process entails spend analysis, market analysis, demand research, go-to market strategy development, bid document creation, bid evaluation and analysis, supplier negotiations, and contract awards.”

- Should-Cost Modeling: Provide cost modeling using “Data Engineering, External Market Data Library, Granular Economic Modeling, Advanced Root Cause Analysis”.
- Contract Performance Management (CPM): Provide contract management for the State/Entity, identifying contract leakage and taking corrective action.
- Localization Support: “help onboard the remaining agencies as a part of the post implementation activities”... “loading data, training end users, and deploying the solution”.

H. Video Demonstrations:

- Yes
 - Cooperation; Use of information and State Materials.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (KPMG)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Ivalua solution
- Full-scale procurement transformation solutions; help optimize “Source-to-Pay” processes
- 300+ eProcurement implementations
- Powered Enterprise approach, pre-configured, eProcurement solution, providing a set of leading practices as a starting point to map requirements
- Challenges and trends for government procurement
- Factors shaping the future of procurement

2. Previous Projects

- State of Ohio – eMarketplace, Supplier Management, Procure-to-Pay. Source-to-Contract
- State of AZ - Vendor Management, Requisitions, Purchase Orders, Receipts, Invoices, Master Data, and Inventory
- State of Alabama - Master Data (Suppliers, Chart of Account Elements)—Budget Validation—Purchase Orders—Invoices
- Teachers Retirement System of Texas - Source-to-Pay implementation, including general platform, supplier management, purchase request/intake, sourcing, contract authoring and management, KPMG proprietary tool cognitive contract management (CCM), purchase/change order, invoicing, payment, and reporting
- CalTRANS - Supplier Information (internal facing only) and Contracts modules

3. Subcontractors

- Ivalua
- Description and qualifications

4. Organizational Chart

- Combined state, KPMG, and Ivalua proposed eProcurement org chart
- Roles defined

5. Litigation

- no pending litigation that would materially affect KPMG's operations or ability to perform services for this RFP

6. Financial Viability

- Unaudited condensed balance sheets provided from 2020 - 2018
-

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **Ivalua solution** implemented by KPMG. single point of entry smart routing compliance portal open marketplace environment integration workflow document management reporting configurable transparency

User Experience **Human centered design** streamlined experience home page for users

Bidder Best Practices and Roadmap **New releases** solution utilizes latest technologies updates are timely alternative processing approaches and best practices product road map simpler seamless

Innovations and Value-Added Features/Services **Help desk?** Advanced services procurement RFX profiles configurable profile seniority configurable working duration work assignments time and material purchase requests timesheet receiving expenses vendor master management.

Customizations/Extensions **Ivalua SaaS platform** relies on configuration, not custom code – The functional requirements (RTM) offer numerous customizations.

Alternative Funding Models **KPMG proposes** -that the Participating Entity pay a reduced fixed fee and finance a portion of the program cost through a transaction fee-based funding model. Fixed fee payment reduced to 50 75% of implementation costs. A transaction fee of 1- 3 percent added to every purchase order processed. **Option 2** Value based funding model - Value levers R strategic sourcing, spend visibility, spend compliance, early payment discounts, improved P card usage , supplier payment method, process efficiency improvement.

Contract Transition and Flexibility **will work with the participating entity to assess.**

Functional Requirements

General Functionality - 1 Customization with medium level up effort , 7 configurations w/5 med 2 low loe, and 32 out of the box.

Supplier Portal - 4 configuration w/2 medium and 2 low level of effort, 1- 3rd party w/med effort and 18 out of the box

Supplier Enablement/Management 4 integrations w/med effort, 1 customization, 4 configurations with low level of effort, 1 not available, 2 third party with medium level of effort, 1 third party and integration with medium level of effort, and 30 out of the box.

Buyer Portal 5 configurations w/2 medium and 3 low effort, 1 configuration with medium Loe, and 9 out of the box

Need Identification 1 Customization with low effort, 1 configuration with low effort, and 5 out of the box

Request through Pay 40 out of the box, 1 n/a, 21 configurations with low and medium LOE, – **Purch Req**, 4 Configurations with 1 med and 3 low effort , 1 customization with medium level of effort, 1 third party with low level of effort comma 26 out of the box for **Wrkflw mgt**, 2 customizations with medium level of effort, 8 configurations with low and medium level of effort, 19 out of the box for **PO gen and mgt**, 6 customizations with 2 low and 2 medium and 2 high level of effort 21 out of box for **Pcard**, 1 configuration

Technical Requirements

Availability Accessible 24 hours a day seven days a week hosting SLA uptime 99.8% outside of scheduled maintenance.

Accessibility Requirements Working towards meeting WCAG 2.0 level AA. Working with third party company to audit and value a platform VPAT completed in available upon request

Audit Trail and History All user actions and activities are registered logged in time stamped. Every transaction created every status change every movement to the next step in a workflow in every addition or deletion of a data item is logged. If audit trail must be activated for specific field the auditable checkbox can be marked corresponding to the field on the value a table.

Browsers Supported Internet Explorer all Microsoft supported versions , Microsoft Edge last three major releases, Chrome last three major releases, Firefox last three major releases.

User Accounts and Administration Application pages and functions are controlled by profiles , authorization, and perimeters. A perimeter can be geographic or functional , or a combination of both. User roles and user access are defined through administrative components. Only users with the appropriate profile can load a page or execute a function. Possible to limit the data access of business objects on a per user basis.

User Authentication Supports multiple authentication schemes; login password authentication, single sign on with saml 2, two factor authentication, reverse proxy II S agent. Password rules are fully customizable.

Federated Identity Management– supports SAML 2.0 protocols for Single Sign On

Data Conversion Conduct a data assessment. Data strategy will be established identifying the data conversion scope. Leverage ivalua tools. Combination of ivalua and participating entity resources perform data conversions which include methodology to perform several iterations in small batches to test and validate. Too Simple? Data cleansing not evident at the source or during testing.

Interface and Integration Integration capabilities with major ERP systems and standard integration with suppliers and 3rd party business services. Offer standard interface templates out of the box.

Office Automation Integration Word excel and PDF

Mobile Device Support Screen menus change from PC layout to mobile friendly layout.

Mobile Applications Mobile solution is not based on mobile app but mobile web solution

Data Ownership and Access Applies a single data classification to all customer data. Internally customer data is confidential and limited to a small number of individual individuals on a need to know basis.

Customers remain the data owner and data controller of all data and control it in accordance with their access control data retention and data classification policies. Through the term of contract customers can export data.

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: KPMG
CATEGORY #(s): 1
DATE: 12/21/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Date Retention, Archive and Purge Considerations Customers decide what information is to be stored, how it is to be used, and how long it is retained. I value a does not delete or modify customer data unless requested by the customer , and only processes data in accordance with contractual obligations and customers configuration of their instances

Disaster Recovery Plan BC and Dr program is based on ISO I EC 22301 standard framework and is tested annually. Not clear if clients are involved with testing unless they are relevant stakeholders.

Solution Environments Development, acceptance, production.

Solution Technical Architecture Multi instance architecture delivers a logical single tenancy by isolating all customers data from each other. Application servers are in a discrete network segment. Database layer consists of database servers, installed in a discrete non Internet routable network segment. No Co mingling of any customer data between application instances and databases.

Solution Network Architecture Dedicated DMZ, network segmentation, dedicated URL, and site to site VPN which is a paid service. Intrusion detection system and intrusion prevention system monitors. Firewalls filter inbound and outbound connections to the Internet as well as between intra sites VLAN zones. VLAN partition various networks. Principle of least access. Monitoring logs unexpected network activity and notifies staff in real time via emails and text messages physical access control through identity control, badge access, interior and exterior video surveillance . Security guards 24 7365 dedicated locked racks on interruptible power supply with diesel generator redundant heating ventilation air conditioning firesafety inert gas all components are fully fault tolerant including uplinks storage chillers HVAC systems HV AC everything is dual powered.

System Development Methodology Open web application security project OWASP. Secure SDLC policy and procedures. New features are evaluated for security impact during design phase with regular code reviews peers and SA St tools. Tested for effectiveness during the QA process. Development process based on agile methodology with iterative approach. Penetration testing conducted prior to major software release by independent security firm. Cloud services are in accordance with NIST security focused configuration management of information systems guidelines. All application changes and updates are at the customer request and controlled by the customer they are performed behind the scenes for minor updates or through scheduled downtime for major updates.

Service Level Agreement SLA performance credits When performance falls below 99 point 8%. RTO 48 hours 8 hours 4 hours RPO 24 hours 24 hours 12 hours these are standard premium and platinum service levels and presumably additional cost

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed

Security and Privacy Controls currently validating controls and safeguards against NIST SP 800 53 revision 4 moderate

Security Certifications ISO IEC 27001, SOC2 , ISAE 3402 Europe , annually audited for HIPAA. Not currently audited for PCI DSS compliance. Fedramp ready with our Gov cloud

Annual Security Plan Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE3402 (Europe).

Secure Application and Network Environment Ivalua has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: KPMG
CATEGORY #(s): 1
DATE: 12/21/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Secure Application and Network Access Ivalua uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest

Data Security Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers. Our model creates a very distinct boundary between the data of each client. Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances.

Personally Identifiable Information Protection compliance with the GDPR

Security/Privacy Issue Occurrence Ivalua has a Security Incident Response Plan and Procedure; reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours. Details, special cases, and additional terms can be discussed during discovery.

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management KPMG project management methodology an approach includes APP M overview toolkit and governance model which includes scope, schedule, budget, quality, resource, communications, risk, and issue management. Robust offering.

Project Implementation Methodology KPMG's Powered Procurement is a proprietary and accelerated Enterprise Business Transformation approach

Catalog Support Services To enable the correct catalogs within your Ivalua, KPMG takes a methodical approach in identifying the correct suppliers fit for punch-out and hosted catalogs. Our approach consists of the following: Vision, validate, construct, deploy, evolve.

Data Conversion Services KPMG overall data conversion from your legacy system consists of three broad steps extract, transform and load, data reconciliation. Initial data extract, mock data extract, production data extract, data cleansing and harmonization, transform and load process, quality assurance and reconciliation data load templates cognitive contract management optional.

Interface/Integration Development Services KPMG will use the Ivalua platform model to configure (rather than code-level customization) and includes its own workflow engine, document management support, SOA/web- service integration capabilities, template/field/form and related editing, security, reporting, collaboration, and third-party supplier/partner network connectivity at the core.

Organizational Change Management (OCM Services KPMG's approach to Organizational Change Management and Training (OCMT) is centered around engaging the right people, at the right time, with the right information. Robust methodology.

Training Services Our approach to training your organization's end users, system administrators, help desk staff, and suppliers to use Ivalua is centered on several key components; for instance: —An integrated organizational change management and training approach and methodology that drives adoption and aligns to the phases of the transformation —A Target Learning Model which builds on our experience and a robust Training Needs Assessment to deliver a robust approach to training—A collaborative approach to work with your organization and its project members to provide a strong and sustainable training solution—A blended learning approach for both internal and external stakeholder groups that helps raise end user confidence and reinforces increased retention and adoption—A comprehensive Train-the-Trainer (TTT) program to train your identified trainers, change agents, and super users so they are ready and able to deliver end user training to their colleagues—An emphasis on internal staff preparation via Ivalua Academy and knowledge transfer sessions to help enable a Post-Implementation Transition Plan that builds lasting knowledge of the Ivalua platform. KPMG approach aligns with our implementation plan.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/21/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Help Desk Services The KPMG Service Desk will augment existing Help Desk capability by providing Case Management support for client Power Users via tickets raised through KPMG's ServiceNow ticketing system. Tickets will be assigned to Tier 1/Level 1 (L1) Support (Client i.e. your organization), Tier 2/Level 2 (L2) Support (KPMG), or Tier 3/Level 3 (L3) Support (eProcurement solution provider or Client IT Support) as applicable. KPMG/KPMG subcontractor can provide Tier 1/Level 1 support as well, which would be contracted by your organization. Defect resolution will include a root-cause analysis, solution explanation, testing, and deployment.

On-Site System Stabilization Support post go-live, post-implementation support/Hypercare will be provided to your organization by KPMG to address defects and transition to steady state run and operate mode for a period of three months. Post-implementation support will be a blend of on-site (implementation project team members) and off-site resources (KPMG Service Center for Help Desk Support).

Managed Services Requirements

Solution Support KPMG's Powered Evolution services help sustain your investment in the Target Operating Model (TOM) by keeping it refreshed and maintained after the post-implementation stabilization phase. This helps ensure that your processes continuously improve and extend capabilities and capacity as your business evolves. Robust offering.

Organizational Change Management (OCM Services Post implementation, our Organizational Change Management & Training (OCMT) practitioners help create a sense of consistency as technical changes arise. We do this by working with the implementation team to help maintain stability as the solution reaches a larger audience and as testing is conducted. Our OCM team works with Manage Services throughout the duration of Ivalua Hypercare, standard and / or enhanced support, Optional Service Packs or T&M.

Training Services KPMG will devise and implement a training program that will incorporate your organization's evolving policy and procedure changes and allow both Operations staff and general users to remain current and compliant with these policy and procedures, as related to the solution. Operations staff also need to be equipped with answers to "How do I?" questions that users might present.

Help Desk Services KPMG's ServiceNow ticketing system.

Transition Out Assistance Services Powered Evolution Managed Service Termination Framework - phased approach allows KPMG to hold formal toll gate discussions as check points – robust offering.

Other Available Resources Strategic Sourcing, Contract Performance Management, Localization support,

Video Demonstrations

- Supplier portal
- Solicitation and bid module
- Scoring options
- Contract linked to sourcing event
- Renewal reminders
- Clause library
- Workflow flexible and configurable
- Shop

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1-Full Solution

DATE: 8/23/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Large company; good representation of 4 states and 3 local government initiatives
- Called out implementing Ivalua 7 out of past 9 projects
- Unsure if KPMG is consulting only
- Preconfigured solutions; do not allow unique procurement laws to be included
- Jargon with solutions, not very specific

2. Previous Projects

- Ohio is complete solution; no ROI identified
- Alabama very limited implementation primarily financial activities; too early to validate (go live 6/28/2021)
- Teachers retirement system of Texas is very limited in scope compared to statewide scope required, hasn't gone live yet still in implementation

•

3. Subcontractors

- Ivalua is new to full solution implementation (2013) previously source to pay since 2000.

•

•

4. Organizational Chart

- KPMG acting as project manager; significant customer requirement
- Implementation of Ivalua solution
- General descriptions, not specific to NASPO

5. Litigation

- Non Answer.
- Appears they are declining to disclose as requested

•

6. Financial Viability

- Did not provide D&B financial data but references a good credit rating from them. What is in the B&B report that is unfavorable that KPMG does not provide is as requested.
- Financial reports are not audited, brings accuracy into question; overly condensed and only for short period; high debt to partners.

Individual SME Comments:

General Principal and Requirements

- Proposing Ivalua Solution
- QUESTIONING – Option for hybrid reduced fee with transaction fee is not possible for all states
- QUESTIONING – What is anticipated throughout if 1-3% covers up to 75% of implementation fee
- QUESTIONING – Value based option show challenge to ROI
- POSITIVE– Routing workflow appears efficient
- QUESTIONING Is/can MWBE be broken out into subcategories or customized?
- QUESTIONING Search 360 appears to be level 2 punchout but uncertain if that is the functionality
- POSITIVE – document management across modules is very efficient
- QUESTIONING – Is FedRAMP ready the same as FedRAMP certified?

Functional Requirements

- QUESTIONING – Is every supplier even for low dollar purchase required to establish an account?
- QUESTIONING – Can Supplier portal import other ERP solution data
- QUESTIONING – can buyers be restricted to certain business practices?
- POSITIVE – Audi workflow is good. How long is it maintained?
- QUESTIONING – are hosted catalogs searchable withing the solution and not just independently?
- POSITIVE – Search 360 ability to consider punchouts in the search
- POSITIVE – Document versioning
- INTERESTING – Public portal can act similarly to current webpage activities
- POSITIVE – MS Word document synching seems a valuable tool to save time. Would like to see more on what that looks like
- POSITIVE – reporting seems to give the user many options

Technical Requirements

- POSITIVE – multiple authentication options
- QUESTIONING – Data conversion seems very tentative and non-committal to success, just explains a very broad set of all potential options
- QUESTIONING – What ERP systems are supported?
- QUESTIONING – WebKit is for iOS. How are PC devices supported?
- POSITIVE – different environments are needed to properly test

DEPARTMENT/STATE: Government Support Services / Delaware

- QUESTIONING (p.70) When will Ivalua be compliant with PCI-DSS for payment cards
- QUESTIONING – How long is the FedRAMP process to become authorized?

Security Requirements

- POSITIVE – limitations of access based on need
- POSITIVE – data at-rest and in-transit encrypted
- QUESTIONING – Customer data is limited, but customer should apply access controls. What responsibility does Ivalua have in a breach?
- QUESTIONING – What does Ivalua do in a breach situation aside from notification within 72 hours?

Implementation Services Requirements

- QUESTIONING – Unknown value of KPMG implementing.
- POSITIVE – Noted on time and within original budget
- POSITIVE – Stronger project management response
- POSITIVE – different levels and types of training identified
- QUESTIONING – Selecting which vendors to implement catalogs typically require a contract award
- QUESTIONING (p.98) 90% of tickets level one and solved within 1 hour. Does this demonstrate a challenge to client training quality?
- QUESTIONING – Imbalance of customer resources to Ivalua resources.
- QUESTIONING – very general process information. What percentage of clients achieve implementation on time and within original budget?
- POSITIVE – different levels and types of training identified
- QUESTIONING (p.98) 90% of tickets level one and solved within 1 hour. Does this demonstrate a challenge to client training quality?

Managed Services Requirements

- Standard services presented
- QUESTIONING – What data retention schedule

Video Demonstrations

- POSITIVE - Modules
- INTERESTING – FOIA request from the solution
- POSITIVE – repository for documents
- POSITIVE – Other third-party integration (which ones?)
- POSITIVE – Catalog Management
- POSITIVE – Roles
- POSITIVE – Workflows and notifications on dashboard
- POSITIVE – Good supplier data
- NEGATIVE – P2P information limits supplier access to RFPs?
- INTERESTING – Project types can be for individual low dollar quotes
- QUESTIONING – are Outlook addresses imported for SME's?
- QUESTIONING – how are suppliers not in the system notified and able to respond?
- POSITIVE – email templates are good

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/4/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

- **NEGATIVE** – How are small businesses with technology challenges able to respond?
- **QUESTIONING** – Have SME expressed concern with challenges to evaluate, there are many steps and files to review?
- **QUESTIONING** – how are no definite quantity awards considered
- **POSITIVE** – contract templates
- **INTERESTING** – Parent child hierarchy
- **POSITIVE** – proposal pricing comes from vendor bid
- **POSITIVE** – Edit versioning is good
- **POSITIVE** – workflows triggered by sections edited are efficient
- **POSITIVE** – use of DocuSign
- **QUESTIONING** – Is punchout/hosted search Tier 2 supplier search
- **QUESTIONING** – do requisitions link to PeopleSoft data?

EVALUATOR NAME: Stacey Winter

EVALUATOR DEPARTMENT/STATE: Purchasing/North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - KPMG and Ivalua - since 2013
 -
 -
2. Previous Projects
 - State of Ohio
 - State of Arizona
 - State of Alabama California Dept Transportation, Teachers Retirement of Texas
3. Subcontractors
 - Ivalua will be a subcontractor to KPMG
 -
 -
4. Organizational Chart
 - Project roles and responsibilities
 -
 -
5. Litigation
 - Yes. Not listed
 -
 -
6. Financial Viability
 - Unaudited balance sheets
 - Not formally rated by d & b

Individual SME Comments:

Overall

Appendix B -31 exceptions to Maine T&Cs

- 28 exceptions to the NASPO ValuePoint T&Cs

- Added terms for Help Desk and Managed Services:

o Definitions

o Provider Services Personnel

o Term and Termination

o Disclaimer and Limitation of Liability

o Indemnification

o Cooperation; Use of information and State Materials

Page 180-187 Assumptions

General, pg. 181/182

o 1st bullet: Participating Entities will "contract directly with the eProcurement Solution provider for the software licenses and with KPMG for implementation services". CONCERN, this may not be possible with some States or other Participating Entities based on their laws.

o 4th bullet: pricing is "subject to five percent year-over-year increase". CONCERN, not all Participating Entities can agree to an automatic price increase. In some cases they may need to use a Term/Condition for price increases based on an index instead. NEGOTIATION, suggest negotiating this.

o 7th bullet: "KPMG assumes up to 25% travel". NOTE, pricing reflects this amount of travel expense.

NEGOTIATION, suggest having a means to reduce costs if a particular project does not need this much KPMG travel.

o 14th bullet: WEAKNESS... KPMG "may not be permitted to participate in a NASPO ValuePoint Administrative Fee or a State imposed administrative fee under this contract"

- Project Related, pg. 182-184

o 1st bullet: Fixed prices assume implementation periods of Small State=12 months, Medium State=15 months & Large State=24 months. CONCERN, this may make the prices between proposals not be comparable. Also, the time period for Small and Medium is too short.

o 2nd bullet: "Implementation plans provided assume 15 pilot agencies during each implementation. Any additional agencies/localization is out of scope and may be contracted by your organization as a change order." CONCERN, it is unrealistic to have

assumed the same number of agencies for each size of State. So the pricing is not realistic and also not going to be comparable to other proposals.

o 9th bullet: "any modifications to the out of the box functionality requiring custom code" is limited to only situations where there are "statutory requirements". CONCERN, there may be RFP/RTM req'ts that end

DEPARTMENT/STATE: Purchasing North Dakota State University

up requiring "custom code" so suggest getting this language modified to include any changes necessary to comply with RFP/RTM reqts. NOTE, this assumption is repeated under reports (10th bullet, pg. 186) o 13th bullet: "Client will procure five environments". CONCERN, on pg. 63, "Solution Environments" it refers to 3 environments. Need to CLARIFY what is included in the pricing.

o 15th bullet "up to three supplier management questionnaires" will be configured. NEGOTIATION, suggest getting this number increased to five for Medium and Large State implementations.

o 16th bullet: "will configure up to five contract templates". NEGOTIATION, suggest getting this number increased to ten for Medium and Large State implementations.

o 17th bullet: "maximum of 25 configured fields". NEGOTIATION, suggest getting this number increased to 50 for Medium and Large State implementations.

o 19th bullet: "eProcurement system is considered the system of record for eProcurement supplier information". CONCERN, some Participating Entities may have to have the Finance System be the system of record, depends on the implementation. Suggest NEGOTIATING to strike this assumption.

o 24th bullet: "During hypercare" the Participating Entity will "perform Tier 1 support". "KPMG will act as Tier 2 support" and Ivalua "will act as Tier 3 support". NOTE, need to check this against the narrative regarding Implementation Services HELP DESK.

- Help Desk/Managed Services (pg. 184-185)

o 1st bullet: Participating Entities will be limited to 25 users that can submit tickets to the KPMG Service Desk. NEGOTIATIONS, suggest increasing this number for Medium and Large States.

o 3rd bullet: On-going help desk services assumes that the Participating Entity will provide "Tier 1 support". NOTE, need to check this against the narrative regarding Managed Services HELP DESK.

o 6th bullet: "assumes approximately 1% of the users will call/day with an average call duration lasting between 10 to 20 minutes". CONCERN, what about support for Suppliers? Are they considered "users"?

o 7th bullet: "20 to 35 calls/analyst/day is assumed (8:00 AM to 5:00 pm local time)". CONCERN, unclear how this metric fits with the "1% of the users" in the previous bullet. Also, what is meant by "local time"?

Also, same question as previous bullet regarding Suppliers.

o 9th bullet: End-user support numbers. WEAKNESS

§ the "Total end-users" count does not match the Cost Workbook req'ts.

§ The "At Go-live" numbers are too low

§ "Ramp-up" numbers based on quarters along with the implementation plan months in the Projects assumptions means Large doesn't get to 8000 users until end of 3rd year of implementation and just past 2 years for Medium and Small. This is not realistic.

o 10th bullet: WEAKNESS, Supplier support numbers for "Total Suppliers" should be 50,000 for each size State according to the Cost Workbook req'ts. Also the numbers are too low for "At Go-live".

o 13TH bullet: SLA metrics.

§ KPMG is only agreeing to two of the 10 Production SLAs, Catalog Onboarding/Maintenance and External Sources Onboarding.

§ KPMG is not agreeing to any of the Implementation SLAs

§ Ivalua is responsible any other SLAs and according to the Service Level Agreement section (pg. 67) they have their own "hosting and maintenance SLA".

§

- Reports/Conversion/Interfaces, pg. 185/186

o 1st bullet: Limits the number of reports for each size of State. NEGOTIATION, suggest increasing to at least twice the listed numbers.

o 16th bullet, pg.186: "only active suppliers, purchase orders, and contracts will be converted/moved".

NOTE, this conflicts with Implementation Req'ts Data Conversion Services, pg. 118-120, which states the "preliminary recommendation of the data conversions based on the req'ts state in the RFP" includes In-

DEPARTMENT/STATE: Purchasing North Dakota State University

process Requisitions, Approve Requisitions, Purchase Orders Transactions, Solicitation Data, Contract Data, Vendor Performance Data, User Account Data, Chart of Accounts Data and Historical Spend Data.

o 10TH BULLET: “any modifications to the out of the box functionality requiring custom code” is limited to only situations where there are “statutory requirements”. CONCERN, there may be RFP/RTM req’ts that end up requiring “custom code” so suggest getting this language modified to include any changes necessary to comply with RFP/RTM reqts.

- OCM/Training, pg. 186/187

o 4th bullet: Client required to do “analysis of historic purchasing data...” NEED TO CHECK OCM SECTION TO SEE IF THIS ANALYSIS IS INCLUDED.

o 5TH bullet: KPMG will leverage your organization’s current Learning Management System”. CONCERN, there will be some Participating Entities that do not have LMS’s. What will the impact be?

o 7th bullet: Limits the number of “Client end users”, “Key Technical Resources” and “Help Desk Administrators” to be trained. NEGOTIATIONS, suggest that getting these numbers increased.

o 8th bullet: TTT is limited to not “exceed three weeks”. WEAKNESS, this is too short a timeframe to learn the entire system and it will not fit into a phased implementation where training is divided among the phases.

General Principal and Requirements

Key Solution Functionality Elements

3-7	<ul style="list-style-type: none">• Single point of entry – a single initiation points for all procurement activity. –• Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway. –• Compliance – a technology solution that has business rules and controls “baked in” (See APSM). –• Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users. –• Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces. –• Integration – batch and Realtime with existing financial management and other core systems. –• Workflow – a configurable, rule/role-based approval automation. –

DEPARTMENT/STATE: Purchasing North Dakota State University

	<ul style="list-style-type: none"> • Document management – automated solution to create, transact and store documents. – • Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics. – • Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually. – • Transparency – provide public and internal visibility into purchasing activity and outcomes. 	
--	--	--

User Experience

7-8	<p>Users have their own home page. Unique to their profile. Workers access their workflow from their homepage. Each user is given one or multiple roles in the system which is tied to a series of authorizations. This limits what the user can do, what they can see and determines workflow steps throughout the system.</p>	
-----	---	--

Bidder Best Practices and Roadmap

8-11	<p>New releases – delivered by R & D division twice a year. Client decides when to upgrade and with which major version. Latest technology – Achieved security status for being Fedramp ready. Updates are timely. Alternate approaches – best practices have been built in to the public sector tailored solution. Product Roadmap - Public Sector customer base is strong and growing, as such we continue to invest heavily in developing specific capabilities to meet Public Sector Procurement needs. We have a dedicated Public Sector team that interfaces with R&D to ensure necessary and innovative Public Sector requirements and functionality are prominently featured on the roadmap.</p>	
------	--	--

Innovations and Value-Added Features/Services

11-13	<p>Available should they be of interest</p> <p>Help desk Advance Services Procurement Expenses – being submitted from workers. Expense stream handles the flow of claims. Vendor Master Management</p>

DEPARTMENT/STATE: Purchasing North Dakota State University

Request through Pay

27-33	Did not address the requirements for external retail	
27-33	All purchases within the Ivalua solution will begin from a purchase request within the tool. These can be created from a catalog, automatically carrying over all item information, or from scratch. Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions	
	Once the requisition is submitted, it will route through organization users for approval, where needed. Ivalua uses a combination of algorithms and user approval to navigate through the approvals that are necessary, as well as performing automated checks to verify if there are any issues. The organizations/agencies and public bodies will have the ability to define conditional logic to determine when and who should be approving each requisition. This makes our workflow dynamic, so they are automatically routed to the appropriate approvers. Additionally, different organizations and commodities can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases. Approvers will have a full audit trail of approval activity directly on their workflow screen, including any rejections and comments. They will also receive email notifications of workflow tasks pending their approval, as well as can receive reminders if they do not act. Ivalua workflows can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase.	
	Invoices can be created in multiple ways within the Ivalua solution • PO flip • From scratch • EDI/cXML transmission (for enabled suppliers) • OCR capability	
PRD 1-6	Yes	
PRD 7	Requires a manual step for future release of a PO once the date has passed.	weakness
PRD 8-12	yes	
PRD 13	There is no automated functionality that will include text or attachments based on a commodity or other field value.	weakness
WRK 1-28	Yes	
PO 1-14	Yes	
PO 15	Cannot have 2 versions of a printed PO	weakness
PO 16	Yes	
PO 17	No eFax	
PO 18-29	Yes

PC 1-7	Yes	
PC 8	On roadmap for 2022	weakness
PC 9-21	Yes	
RC 1-21	Yes	

Catalog Capability

33-35	<p>Technical Proposal response did not address the req'ts to "provide access" to "external internet retail or commercial markets of goods/services" or access to "non-contract Suppliers offering goods and services".</p> <p>System supports both "internal and external (punchout) catalogs".</p> <ul style="list-style-type: none"> - "view catalogs are limited to the user's organization scope" NOTE: scope = combination of Role/Authorizations/Perimeter/Commodity restrictions assigned to a user. - Suppliers can "self-service" manage their catalogs by uploading them to the system. Done via excel templates. After upload "system does an automated format check". - "routed through an approval process for an internal user to validate" with "side-by-side comparison of old vs. new pricing" - "internal users can also upload catalogs on a supplier's behalf" - "Search 360" <p>"item tags" to "provide visual indicators" on search results to "identify preferred, discounted, or emergency items". Tags can be 'prioritized'.</p> <ul style="list-style-type: none"> o "has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal lvalua catalog" 	
-------	---	--

Sourcing/Bid Management

33-42	Procurement types are identified based on the solicitation (BPM) type which drives which tabs and parts of the solicitation process are required. Throughout the solicitation module, tools to ensure transparency and drive competition are included to meet the organization's goals of finding the best product at the best value.	
	Suppliers to be invited to a solicitation can be captured by adding them through the suppliers' tab within the solicitation record. Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities that were defined at solicitation set-up. Additionally, suppliers can be added by searching the supplier database	
	Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities" and "can be added by searching the supplier database

DEPARTMENT/STATE: Purchasing North Dakota State University

	Pricing for the solicitation can be collected directly in the system via the item grid. Multiple item grid templates can be accommodated and applied automatically to the event based on event type, organization, or commodity. This will allow suppliers to enter their pricing in a structure format via the method that the user has chosen (ex. Unit price vs.% discount).	
SRC 1-24	Yes	
SRC 25	No check in/check out	weakness
SRC 26-65	Yes	
SRC 66	User cannot add unregistered vendors	weakness
SRC 67	Yes	
SRC 68	Does not support eFax	weakness
SRC 69-75	Yes	
SRC 76	The system does not OOTB provide capabilities to post to the "State's public procurement website	
SRC 77-151	Yes	

Contract Management

43-46	The contract record within Ivalua captures all aspects of contract information, documentation, activity, and performance within the single record. The tabs on the left, shown in figure 51 can capture the different areas that will consist of the contract record, including dates, items, documents, subcontractor information, among others.	
	Contracts can be created from a complete solicitation or from scratch.	
	MS WORD can be used for authoring contracts	
CNT 1-88	yes

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Vendor Performance

46-47	Over the life of the supplier, users can create performance assessments against their suppliers or contracts. All performance information is maintained within the supplier's profile for reporting, as well as can trigger alerts to users if a supplier is consistently performing poorly.	
	Performance assessments can be triggered manually or periodically. Templates for performance criteria are stored within Ivalua for users to respond to questions related to the supplier's performance and based on the weights of each question, will roll up a total score.	
	Ivalua provides the ability to track exceptions and collaborate with suppliers to address these exceptions. If a supplier scores poorly on a performance or risk assessment, exceptions can be created to inform the supplier of areas that need improvement. The exception documents the issue or non-conformance and the severity, tied to the triggering event (for example, contract, delivery, or invoice exception). The supplier is notified of the exception	
	Improvement plans provide a collaboration tool to help improve supplier performance at a granular level by creating tasks that will lead to overall supplier improvement	
VPE 2-12	System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data	

Purchasing/Data Analytics

48-51	There are three different types of reporting with the Ivalua solution, ranging from simple excel extracts to data visualization dashboards. The system can, by default, report on all data stored within the system from across modules. Importing data from an external system can be accommodated. Ivalua has over 100 out of the box reports that are provided within our system, but additional reports can be configured during implementation or by super users. The different types are reports within Ivalua are detailed below.	
	Any browse page within Ivalua can become a report by utilizing powerful search and filter capabilities combined with the ability to extract pages into excel.	
	Queries are Excel based reports that are run via SQL statements in Ivalua's reporting module	
	Analysis reports provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users.

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments: -

Organization Qualifications and Experience

1. Overview of the Organization
 - Long standing professional services firm
 - Challenges and Trends
 -
2. Previous Projects – **Marked CONFIDENTIAL**
 - State clients
 - Explained methodologies
 -
3. Subcontractors
 - Ivalua is listed as a subcontractor
 -
 -
4. Organizational Chart
 - Supplied chart broken down by bidder, subcontractor and entity
 - Roles and descriptions were supplied
 -
5. Litigation
 - No litigation reported by bidder
 - Mentioned litigation is highly confidential
 -
6. Financial Viability -**Marked CONFIDENTIAL**
 - Supplied condensed balance sheets
 -

Individual SME Comments: The video demonstration for KPMG is the SAME as offered in the Ivalua response. The video shows the Ivalua solution, so I have copied the video notes over from the Ivalua response.

The narrative for this response is in a different FONT than the Ivalua response, but the CONTENT in some of the response sections is the same!

The Implementation Services Requirements section moving forward (Pages 85 thru 233) is different than the Ivalua response. These sections contain much more detailed information than the Ivalua response. The RTM for this response is the same response as Ivalua. I have copied over the notes from the Ivalua response here:

I believe that each of the concerns and verification topics need to be addressed or at least known to the entity. For example - CONCERN – Page 30 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.

General Principal and Requirements

Key Solution Functionality Elements – PDF Page 4 thru PDF Page 7

- Single point of entry with landing page displaying profile information. Can search from this page.
- Offers workflow routing known as Smart Routing – PDF Page 5 has sample workflow chart.
- Can tailor the system to match each organizations compliance requirements.
- Offers portal to all users external and internal that will display dashboards to manage the tasks needing to be addressed.
- Marketplace can house hosted and punch out catalogs with searching across all catalogs
- Powerful Integration tool box
- Workflow is highly configurable containing over 50 different controls. PDF Page 6
- Document management with reporting capabilities across all modules
- Public portal is offered to view the source to pay activities without an account.

User Experience – PDF Page 8

- User has configurable homepage landing which helps the user in deciding what needs to be done. PDF Page 8 shows sample homepage
- Users access is role based and tied to “authorizations”. Can delegate workflows. PDF Page 9 shows delegate functionality screenshot.

Bidder Best Practices and Roadmap – PDF Page 9 thru PDF Page 11 – Same as Ivalua response notes copied over.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): Stage 2 Category 1

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Releases are performed twice a year and allows the client to choose which version and when to apply upgrades. Customers are in control of the upgrades
- Constant communication with customers to stay up to speed with new technologies.
- Work closely with customers to learn their best practices
- 60% roadmap comes from clients with 20% reserved for innovation and 20% for market trends.
- Areas of significant investment are Mobile, Invoicing, Contract Management, Supplier Risk and Security. PDF Page 10
- Leveraging new AI technologies. PDF Page 11
- Automated obligation tracking and management is being enhanced.
-

Innovations and Value-Added Features/Services – PDF Page 11 thru PDF Page 13 – Same response as the Ivalua response. Notes copied over.

- Offers Help Desk support. PDF Page 12
- 90% of tickets solved in an hour. PDF Page 11
- Advanced Services Procurement - Improvements to contingent labor PDF Page 12
- Expenses – Capture PCard transactions. PDF Page 12
- Vendor Master Management – Better manage vendor data. PDF Page 13
-

Customizations/Extensions – PDF Page 13 - Same response as the Ivalua response. Notes copied over.

- Client is responsible for when they go through an upgrade cycle.
- The platform relies on configuration not custom code.

Alternative Funding Models – PDF Page 11 thru PDF Page 15 –

- Offering 2 options for this section and numbers presented are representational only.
- Option 1 - Hybrid fixed fee plus transaction-based model. Fixed fee payment and/or transaction fee of 1-3%. PDF Page 14
- Option 2 – Value Based Funding Model – Self-Funding model. Table of examples provided on PDF Page 14 and 15

Contract Transition and Flexibility – PDF Page 15

- State this process is complicated and will work with our entities based on the terms in the awarded Master Agreement.

Functional Requirements – PDF Page 16

General Functionality – PDF Page 17 - Same response as the Ivalua response. Notes copied over.

- Full Source to Pay Solution – PDF Page 17
- Automated notifications
- Single Platform and configurable solution – PDF Page 17
- Offers native public site for posting – RTM line 7
- CONCERN - EPROC-GEN-6 – TAB 2 Line 10 – Can the system be integrated based on this response?
- CONCERN - EPROC-GEN-11 -TAB 2 Line 15 - Has a limit on a file type (executables) and states size limits do exist?
- CONCERN - EPROC-GEN-15 – TAB 2 Line 19 - PO is the only printing format that is printable?

Supplier Portal – PDF Page 17 - Same response as the Ivalua response. Notes copied over.

- Unlimited suppliers with free supplier portal.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): Stage 2 Category 1

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- After establishing an account, the supplier portal has a one stop shop on their homepage. PDF Page 18
- Self-manage users with roles when they set them up in the system. Account has system admin to manage supplier's account.
- CONCERN - EPROC-SPR-5 – TAB 3 Line 9 – Does the system notification get sent via email, or does supplier just have to monitor notifications on their supplier dashboard?

Supplier Enablement/Management – PDF Page 19 thru PDF Page 25 - **Same response as the Ivalua response. Notes copied over.**

- Enablement is 2 parts, public facing page to create an account, and “full enrollment” used to be fully onboarded –
- Sample supplier registration PDF Page 20
- Supplier Full Enrollment happens after workflow approval. The information required here is banking information and W9 documents. PDF Page 21
- Integrations can be designed to verify real-time profile information. PDF Page 21
- Can create their own user contacts. PDF Page 22
- Supplier accounts have document storage and tracking. PDF Page 22 and PDF Page 23
- Solution has supplier workflow. PDF Page 23
- Internal users (Buyers) can have access to search for suppliers. PDF Page 24
- Access to view the supplier record. PDF Page 24
- Suppliers maintain their own profiles, but changes can be put into workflow for approval by internal users.
- STRENGTH - Ability to have “changes” done on a registration get put into workflow.
- CONCERN - EPROC-VDR-32 – Line 61 – Supplier's response leads me to believe they did not understand the requirement. We asked if other agencies be put into workflow, not have data passed into other state systems?
- CONCERN - EPROC-VDR-36 – Line 65 – Need to release an RFI to remind suppliers to log in and update their registration?

Buyer Portal – PDF Page 25 - **Same response as the Ivalua response. Notes copied over.**

- This is the access point for procurement activities. Homepage Dashboard – PDF Page 26
- SSO can be a login and each user's dashboard are based on their user roles
- User roles are tied to authorizations and the user is assigned a “perimeter”. PDF Page 26
- CONCERN - EPROC-BPRT-7 – Line 81 – The requirement is for the Buyer Portal, but the response received is for the “vendor” portal?
- CONCERN - EPROC-BPRT-8 – Line 82 – Does not support daily summaries of buyer notifications.
- CONCERN - EPROC-BPRT-9 - Line 83 – Cannot provide link to external users due to security
- CONCERN - EPROC-BPRT-15 – Line 89 - Supplier notification needs to be handled through the RFI module?

Need Identification – PDF Page 27 - **Same response as the Ivalua response. Notes copied over**

- The solution has a single point of entry and can manage a request in several ways via “requests”.
- Options include request form, purchase, or exemption request, create a sourcing event or contract, or gather quotes. PDF Page 27

Request through Pay – PDF Page 28 thru PDF Page 32 - Same response as the Ivalua response. Notes copied over

- Process starts with a “request” that will populate relevant requisition details. PDF Page 28
- Exceeding contracted amount could be triggered by the allocations grid. PDF Page 29
- Requisitions are submitted to workflow. PDF Page 29
- Once approved, the requisition is flipped to a purchase order. PDF Page 29
- CONCERN – Page 29 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.
- Can flip purchase orders into receipts. Page 30
- Receipts are shown on the receipt page (PDF Page 31) and then the receipt is submitted to workflow. PDF Page 31
- Invoice will be created (PDF Page 32), and then payment can be applied to the invoice. PDF Page 32
- CONCERN - EPROC-PRD-1 – Line 102 - Response refers to Sourcing event from the requisition, but requirement is asking for need identification to Purchase Request?
- CONCERN - EPROC-PRD-15 – Line 116 – Does not support executables file type
- CONCERN - EPROC-PRD-37 – Line 138 – Capturing noncontract price for later analysis is not supported.
- CONCERN - EPROC-WRK-24 Line 189 – Can the PO, PR or change request be re-submitted after it was changed?
- CONCERN - EPROC-PO-17 – Line 212 – eFax submission of orders in not supported.
- CONCERN - EPROC-PO-26 – Line 221 - Additional configuration will be required for facilitate fiscal year end.
- CONCERN - EPROC-PC-1 thru EPROC-PC-4 – Lines 227 thru 230 – These PCard requirements are in the process of being developed.
- CONCERN - EPROC-PC-5 – Line 231 - Full administration of PCards is not available in the system
- CONCERN - EPROC-PC-6 – Line 232 – Pcard maintenance is not currently available but is anticipated for release in 2022.
- CONCERN - EPROC-PC-7 – Line 233 – Ghosted cards are not currently available but is expected to be released mid to late 2022
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 – These requirements will require some kind of customization, configurable item, or integration.
-

Catalog Capability – PDF Page 33 - - Same response as the Ivalua response. Notes copied over

- Ability to view catalogs are limited to the user’s organization scope
- Search results landing screen – PDF Page 33
- Can shop via hosted or punch out catalogs. PDF Page 33
- Hosted catalog process can be done by supplier. Internal user can compare catalog versions PDF Page 34
- Users can use the search functionality to search and filter results. PDF Page 34
- Item tags to find preferred items
- Search punchout and hosted in the same search. PDF Page 35
- CONCERN - EPROC-CAT-32 – Line 317 – The ability to compare catalog item search results in NOT supported.

**STATE OF MAINE

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): Stage 2 Category 1

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-CAT-34 – Line 319 – Additional functionality is required to compare items and will be based on number of punchouts required.

Sourcing/Bid Management – PDF Page 35 – KPMG uses “vendor” where Ivalua uses “supplier”. Same response as the Ivalua response. Notes copied over

- Wizard solicitation set up – PDF Page 36
- Supplier can be added several ways (commodity code selection, public site, etc.) – PDF Page 37
- Has Sealed Bid functionality
- Conditionality can be applied to questions.
- Item grid (pricing) has multiple set up options.
- Notifications to supplier about event and has access to public portal
- Suggest posting information to client's website and provide link to public portal to view full solicitation.
- Suppliers need to add open solicitations to their account to create a response. PDF Page 41
- Supplier can Management of Responses. PDF Page 42
- Users can monitor suppliers' activity and award events
- Can notify suppliers and create a contract from the solicitation. PDF Page 44
- CONCERN - EPROC-SRC-3 thru EPROC-SRC-9 and EPROC-SRC-11 – Lines 330 thru 336 and 338 – Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-14 thru EPROC-SRC-21 – Lines 341 thru 348 - Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-22 -Line 349 – The response talks about envelope bidding, but requirement talks about separate Cost and Technical sections?
- STRENGTH - Has no limit on number of suppliers being invited to an event.
- CONCERN - EPROC-SRC-68 – Line 395 – eFax is not supported
- CONCERN - EPROC-SRC-70 – Line 397 – This response does not address the requirement that states the eProcurement file of the event needs to be “complete” to meet public records laws. SRC 71 has this same response which meets that requirement.
- CONCERN - EPROC-SRC-83 – Line 410 – System does not support web conferences, but supplier offered the ability to upload the recorded conference. Do they support that file type?
- STRENGTH – Size limitations can be set up by system administrator
- CONCERN - EPROC-SRC-143 – Line 470 - Must start a new solicitation instead of cancelling award on bid and move to the next highest bidder?

Contract Management – PDF Page 45 - Same response as the Ivalua response. Notes copied over

- Wizard driven entry. PDF Page 45
- Information brought over from the contract header
- Alerts on documents uploaded to the document section – PDF Page 46
- Native authoring (Word) – PDF Page 46
- Subcontractors can be added.
- Can integrate with multiple eSignature tools. PDF Page 48
- CONCERN - EPROC-CNT-16 – Line 496 – Loading of external price list for contracts will need to be worked out to identify data elements. Additional cost possible?
- CONCERN - EPROC-CNT-52 thru EPROC-CNT-63 – Line 532 thru line 543 – The supplier has used the same response for all of these requirements, but the response does not mention the

DEPARTMENT/STATE: State of Montana

requirement? Also see lines 555 and beyond as an example. These responses are duplicate but at least start with "this information".

- CONCERN - EPROC-CNT-66 – Line 546 – Response states alert could be posted to public portal, but requirement asks if it can be posted to state's procurement website.
- CONCERN - EPROC-CNT-67 – Line 547 – The response does not address the email notification listed in the requirement?

Vendor Performance – PDF Page 48 - **Same response as the Ivalua response. Notes copied over**

- System has supplier performance dashboard. PDF Page 48
- Allows ability to track a supplier's performance.
- Improvement plans provide a collaboration tool to help improve the supplier performance. PDF Page 49
- CONCERN - EPROC-VPE-3 thru EPROC-VPE-11 – Line 573 thru line 581 – The response to each of these requirements refers back to the response on line 572 which states vendor performance needs to be handled by a questionnaire.

Purchasing/Data Analytics – PDF Page 50 - **Same response as the Ivalua response. Notes copied over**

- System has 3 different types of reporting, Ad Hoc, Queries and Analysis
- Reports are compiled by running a search and exporting data to Excel.
- Analysis reports can be put on dashboard for view of any user.
- Offers 100 standard reports
- CONCERN - EPROC-PDA-5 thru EPROC-PDA-16 – Line 602 thru line 613 – A duplicate response was used to answer all of these requirements, but the response does not reference the reporting requirement? Can this supplier supply reports based on the listed requirement?
- CONCERN - EPROC-PDA-20 and EPROC-PDA-21 - Line 617 and 618 – This supplier currently does not have PCard functionality.
- CONCERN - EPROC-PDA-36 – Line 633 – This supplier currently does not have PCard functionality.

Technical Requirements – PDF Page 54 - **Same response as the Ivalua response. Notes copied over. KPMG provided screenshots where Ivalua did not in this section.**

Availability – PDF Page 55

- Meets requirements

Accessibility Requirements – PDF Page 55

- CONCERN – States they are committed to being Section 508-compliant as soon as possible.

Audit Trail and History - PDF Page 55

- Meets requirements

Browsers Supported – PDF Page 56

- Supports the most update browser versions

User Accounts and Administration – PDF Page 56 – 57 – **Narrative response is different**

- Supplied multiple authentication options. PDF Page 57
- Access is controlled by authentication. Pages in the system are controlled by users roles and permissions.

- Will be notified no later than 72 hours. Our requirement states 2 hours

PII Data Actual/Attempted Access or Disclosure - PDF Page 83 - Same response as the Ivalua response. Notes copied

- Requirements are set forth in the customer's contract.
- Will be notified no later than 72 hours. Our requirement states 2 hours

Security Breach Reporting - PDF Page 83 - Same response as the Ivalua response. Notes copied

- Requirements are set forth in the customer's contract.
- Will be notified no later than 72 hours. Our requirement states 2 hours

Implementation Services Requirements – PDF Page 84 – THIS SECTION IS DIFFERENT FROM IVALUA RESPONSE.

Project Management – PDF Page 85 thru PDF Page 103

- Program and Project Management Methodology is the tool that the KPMG team uses.
- PPM Framework chart on PDF page 85
- Listed Key Project Management Tasks PDF Page 86
- Provide both Scope and Schedule Management PDF Page 86
- Implementation Plan Development will help manage requested services.
- Provide an sample implementation plan PDF Page 94 thru PDF Page 103
- Offers Budget and Quality Management PDF Page 88
- Will team up with state entities using deliverables management
- Offers Resource, Staff and Communications Management tools. PDF Page 89
- Provide periodic status meetings and share status reports.
- Risk Management will be implemented to reduce risk
- Mitigation is key and they supplied list of topics to approach risk Management. PDF Page 91
- Issue Management is used to help solve issues quickly. PDF Page 92
- Project Management Deliverables were listed and they use a Project Manager to manage project

Project Implementation Methodology – PDF Page 103 thru PDF Page 114

- Uses the Vision, Validate, Construct, Deploy, and Evolve phases. PDF Page 104
- State experience in procurement enablement mention on PDF Page 105
- They described in detail each phase of the implementation mentioned above.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): Stage 2 Category 1

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Provided testing approach on PDF Page 109

Catalog Support Services – PDF PAGE 114 thru PDF Page 117

- Provided shopping screenshot on PDF Page 115
- Stated they support Punch out or hosted catalogs
- Suppliers can upload the catalogs from the portal. Files can be compared before approved.
- The 360 search is used to search across catalogs
- Uses the Vision, Validate, Construct, Deploy, and Evolve phases to identify the correct suppliers fit for a catalog in the system.

Data Conversion Services – PDF Page 117 thru PDF Page 125

- Initial Data Extract PDF Page 117
- Mock Data Extract PDF Page 118
- Production Data Extract PDF PAGE118
- Provide data cleansing and harmonization
- Transform and Load Process
- Quality Assurance and Reconciliation
- Provided roles and responsibilities. PDF Page 119
- Data Load Templates. PDF Page 122

Interface/Integration Development Services - PDF Page 125 thru PDF Page 130

- Provided table of each phase of an integration that included a description.
- Provided table of integration activities with the KPMG and the state entity responsibilities. PDF Page 127
- Provide list of integrations and Interfaces. PDF Page 128
-

Organizational Change Management (OCM Services) - PDF Page 130 thru PDF Page 140

- KPMG's "Make it" Methodology. PDF Page 132
- Supplied benefits of using above methods. PDF Page 133
- Provided a comprehensive view of the OCM services. PDF Page 133 – thru 138
- Offers TRIP – A tool used to analyze the readiness of an organization. PDF Page 138
- Listed additional optional tools PDF Page 139 and 140

Training Services - PDF Page 140 thru PDF Page 150

- Provided chart that explains their approach to training. PDF Page 141
- Target Learning Model, (TLM). PDF Page 142
- Collaborative approach as implementations requires process changes. PDF Page 143. First Paragraph
- Provided Training Plan for each Impacted Stakeholder. PDF Page 144
- Procurement Training Overview table on PDF Page 145
- Stakeholders Training table on PDF Page 146
- Train-the-trainer. PDF Page 147
- System Administrator training PDF Page 148
- Help desk and supplier training.
-

Help Desk Services - PDF Page 150 thru PDF Page 152

- 3 tier Help Desk Support Model. PDF Page 150

- Uses ServiceNow to enter tickets

On-Site System Stabilization Support - PDF Page 152 thru PDF Page 155

- Contains post implementation support combined with off-site resources.
- Exit criteria supplied on PDF Page 153
-

Managed Services Requirements - PDF Page 155

Solution Support - PDF Page 156 thru PDF Page 161

- Extensive information supplied by this supplier to this section of their response.
- Provided table of priority levels with a description of each PDF Page 160

Organizational Change Management (OCM Services) - PDF Page 161 thru PDF Page 162

- Provided a "Change Agent Network (CAN) screen shot on PDF Page 162

Training Services - PDF Page 162 thru PDF Page 164

- Service center change monitoring process. PDF Page 163
- Provided examples of training models. PDF Page 163 bottom of page

Catalog Support Services – PDF Page 164

- Offers hosted and punch out catalogs support

Help Desk Services - PDF Page 165

- Provided table of process on PDF Page 165
- CONCERN - EPROC-IMPL-3 thru EPROC-IMPL-5 – Tab 6 Line 6 thru line 8 – These requirements for help desk services are not available

Transition Out Assistance Services - PDF Page 165 thru PDF Page 167

- Provided "Power Evolution managed service termination framework" chart and table with explanation on PDF Page 166

Other Available Services - PDF Page 168 thru PDF Page 177

- Listed quite a few optional available services

Appendix A; Assumptions – PDF Page 182 thru PDF Page 189

Appendix B; Exceptions – PDF Page 190 thru PDF Page 223 – Red lining of NASPO documents.

Appendix C; Sample Implementation Plan - PDF Page 224 thru PDF Page 233

Video Demonstrations – This video submitted with this proposal is the SAME video used in the Ivalua response. I have copied over the notes from the Ivalua response. The video demonstrated an overview of the solution and provided information from both sides of the application.

Full Suite platform containing end to end procure to pay. Supplier Login screen has additional links to other services, FOIA request, public bid site, new supplier registration and help desk information. Supplier portal page has announcements, registration progress and many other widgets showing information about the vendor. Links on left takes supplier to registration information. Has change log for changes to registration. Links across top takes them to contracts,

bids, catalogs, invoicing and performance links. Buyer has landing page with to do lists and many other widgets and analytical reports. Links on right allow access to supplier registration, sourcing, contracts, etc. Across the top has links to the other modules they have access based on the roles assigned. Can search suppliers from the supplier landing screen. 360 supplier is available, and the left side of the landing page give the user access to each of the section of a supplier's registration. Bid Management module has search ability and project creation. Solution is wizard driven and has setup options on left side of screen. Has scoring capability and houses templates and libraries to aid in bid creation. Supplier can view bids without logging into their portal. If interested, can add themselves to the bid and log into their portal. Responses are wizard driven. The system allows for individual and consensus scoring of proposals. Can send out award notifications to suppliers by creating scenarios. Can create separate contract record or create a contract from a sourcing event. The creating contract process is wizard driven. Offers Word authoring of contracts and a library to house contract templates that can be used to create contracts. Can submit contracts into workflow approval. Has integration with DocuSign and other solutions. Buyers search for products via the procurement home page with is configurable dashboard. Can have hosted or punch out catalogs which are searched on with each search. Can put items in a "kit" search. Requisitions can be configured with budget information sent over from the ERP. Workflow can be applied to each requisition. Requisition and PO are linked in the system. Supplier logs in to their support to manage orders. Invoicing module has several invoice options. User can flip an invoice to a receipt which can be put into workflow. Supplier can see payment status in their customer portal. System does have analytics with 3 different options for reports including queries and data visualization.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - “Implementation and Development Services” Gold Partner of SAP (Ariba)
 - “Reseller” of SAP software.
2. Previous Projects
 - 5 listed. One university. One private. Three State or public entity. All fit within Category 1.
 - San Diego County, CA. Implemented Ariba public sector supplier and Contract mgt. and integrated it with Oracle.
 - University of Kentucky. Implemented SAP HCM, Finance, SAP Student Lifecycle Management, BW,SRM/PPS 7.0 and Analytics.
 - Sempra Energy. Implemented Ariba Contract mgt. and integrated to MS Dynamics ERP.
 - City of San Diego, CA. Implemented SAP Ariba procurement platform.
 - CA Dept. of Healthcare Services. Deployed SAP Ariba procurement platform.
3. Subcontractors
 - Vendor states it will not be utilizing subcontractors for this engagement.
4. Organizational Chart
 - Yes, Org. chart provided along with job descriptions
5. Litigation
 - Vendor states no litigation.
6. Financial Viability
 - DnB provided. Low to Moderate risk.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): 1

DATE: 12/15/2021

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Hybrid Cloud Solution.
- Product is SAP Ariba. Cloud Services with technical architecture of SaaS
- LSI Consulting is a Gold Partner and is submitting proposal as a part of the Partner Managed Cloud (PMC) who is offering the professional services portion of the proposal (implementation, long-term support, etc
- Really touts the Spend Management portion of SAP Ariba.
- LSI takes seven exceptions (pages 142 – 145), These will want to be reviewed carefully and negotiated should this offeror be in negotiations.
- There are 34 items in the “Assumptions” (page 140 – 141) that require CLARIFICATION or negotiation where many or most States could or would not agree. Examples are: #4 State must follow the LSI provided methodology to implement software, #6 – can’t revisit deliverables once they have been closed, #18 – Postponements and delays of scheduled events due to lack of State staff availability will likely result in an extended project schedule and/or additional fees, #12 –in case of sickness or vacation, the key State decision-makers will have an alternate assigned.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 21)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product/Solution components: pages 8 - 10

a. SAP Ariba Cloud-based. For eProcurement solution (Sourcing, Contracts, Procure to Pay, etc.)

- Single point of entry. Yes – Single Sign on.
- Smart routing. Yes

- Compliance. Yes
- Portal. Yes . “SAP Portal product portfolio”. Can obtain as:
 - as “SAP Enterprise Portal (on-premise)
 - on SAP BTP as SAP cloud Portal service
 - (portal-like) sap Launchpad service
- Open Marketplace Environment. Yes – uses the SAP Ariba Business Network (SBN) for business-to-business network (B2B) and use Spot Buy as the catalog solution.
- Integration. Yes. With the use of integration with out-of-the-box SAP's intelligent suite along with end-to-end business process.
- Workflow. Yes. “SAP Business Workflow enables the design and execution of business processes”
- Document management. Yes. “SAP Ariba Contract Management module can track, manage, and store documents”.
- Reporting, dashboards and data visualization. Yes. “SAP Ariba is delivered with native reporting and analytics, including numerous pre-packaged reports.”
- Configurable. Yes. “Configurable workflows to document templates” with “the flexibility to reflect state-wide or agency-specific rule-sets and processes
- Transparency. Yes - “Vendor Portal” built on SAP's Portal Services. “The offering includes a customer specific deployment of a Transparency Portal. This portal is scoped to meet each entities specifications by giving the organization the ability to surface procurement activity and information to public stakeholders including solicitations, contracts, supplier information and purchasing reporting data.” .

2. User Experience - pages 10 - 12

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- Do not cover all the characteristics in the user experience explanation, but they do offer that “The interface has been designed with special attention to:
 - Minimizing clicks and number of steps
 - Seamless transition from mobile app to desktop with "follow-me" process from one another
 - Community help
 - Visual workflows, reminders and notifications
 - Bulk actions over many items (i.e. bulk receive purchase orders)
 - Integrations to facilitate multiple catalog search (items in the material master, inventoried items, MRO Supplies and contracted supplier catalogs), cost accounting and more”

3. Bidder Best Practices and Roadmap – pages 12 - 13

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

- “Quarterly Releases – Releases are delivered every quarter in February, May, August, and November each year. Individual products may be released on any or all of the quarterly dates. You should expect to receive advance communication of features and should allow time to prepare for impactful changes to your systems. “
- “Monthly Feature Deliveries – Major products may have an optional, no-impact release on harmonized monthly feature delivery weekends. As with the quarterly releases, each product has the option to release during any or all these windows. You should not need to prepare for or take action for the monthly feature deliveries. Changes delivered in a feature delivery should be virtually invisible to the end users. Many of our largest cloud products follow a harmonized release calendar.”
- Road Map is provided in an attachment.

4. Innovations and Value-Added Features/Services – pages 13 - 16

In addition to the stated requirement(s), the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

Yes . they give some past and present innovations.

- SAP Ariba has:
 - Launched the first online catalog for procurement.
 - Developed the first software to conduct reverse auctions.
 - Created the Ariba Network, the first business network that today is the largest, most global on the planet, with more than 2 million companies transacting nearly \$1 trillion in commerce on an annual basis.
 - Went live with Ariba Discovery, the first business matching service that like Match.com, connects buyers with needs to sellers who can fulfill them.
 - Ariba Spot Buy
- SAP FieldGlass.
- SAP Ariba Supplier Risk Management.

5. Customizations/Extensions – pages 17 - 20

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder’s base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder’s product roadmap submitted with the proposal.

• Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- SAP Ariba Application Extension Partners and Applications
- Help deliver new and innovative applications that augment SAP Ariba solutions. List of SAP Ariba App Extensions and our Partners:
 - **Spotline Inc.** Chatbot
 - **Seal Software.** Helps organizations gain visibility, control, mitigate risk and better manage their contracts o Seal Contract Discovery and Analytics helps organizations gain visibility, control, mitigate risk and better manage their contracts in conjunction with various SAP products including SAP Ariba. Seal’s AI powered engine extracts many types of data elements, and presents that data in an intuitive user experience. Seal integrates to SAP Ariba to load contracts and metadata directly into Ariba leveraging APIs. New and existing SAP

Ariba contract workspaces can be sent to Seal to clean up existing content and for many high-value use cases such as regulatory, risk, M&A, audit, etc.

- **CloudTrade** - Optimize your PDF Invoicing channel
- ISMS Applications. Provide compliance to suppliers for a healthy supply chain
- Keelvar Sourcing. The Keelvar Sourcing Optimizer Connector to send event data (suppliers & item master data) from SAP Ariba to Keelvar Sourcing Optimizer. Run, analyze and award complex or large events in Keelvar Sourcing Optimizer, then send awarded supplier data back to SAP Ariba Contracts.
- AppZen AI. Real-time accounts payable fraud and non-compliance detection
- Cordis.
 - Procure-to-Pay integration between SAP Ariba and Oracle
 - Add a layer of protection to personally identifiable information .
 - Digitize your supplier invoices into a single compliant e-invoice process o Intelligent Invoice Express (IIE) allows you to automatically capture and register purchase invoices in one application for verification, validation and efficient processing in Ariba Invoicing or ERP Accounts Payable, even for suppliers who are not yet on the Ariba Network (AN).
 - A prebuilt analytical dashboard for procurement using SAP Ariba and SAP ERP data o Category Manager Dashboard provides valuable insights and reporting, plus the ability to integrate aggregated data across Sourcing, Contracts, Spend, Performance and Risk. It provides a status for each project to manage the category of spend, including a display of all associated business documents.
 - Combine your catalog and non-catalog requests into the e-procurement process, Intelligent Content Capture.
- Fairmarkit.
 - Automatically get quotes for purchase requests from your existing suppliers.
 - Empower end users to competitively bid their purchases
- Vertex - Tax calculation during purchase requisition and invoice reconciliation o Vertex provides automated tax calculation during requisition & invoice reconciliation. During requisition, purchasing managers can view tax implications when approving or rejecting a purchase request and during invoice reconciliation.
- • Accenture - Intelligent chatbot for a simplified buying experience o Paula is an intelligent chatbot designed to modernize user's experience through a simple and intuitive process allowing organization to transform their tasks into value-added work..
- • EcoVadis - Sustainability ratings for procurement - Manage supplier risk and performance.
- • D&B- Proactively identify vendor financial stress to mitigate supply chain disruption.
- • APOS Systems - Live mode data connectivity for SAP Ariba o Live Data Gateway for SAP Ariba provides virtualized data connectivity to SAP Ariba data from SAP Analytics Cloud. Live Data Gateway can also serve data to SAP Data Warehouse Cloud, SAP HANA, and many others.
- • Nitor Relish Xbridge – Seamless SAP Ariba & Qualtrics XM for suppliers integration.
- Nitor Relish DATA ASSURE - Fully automatic supplier data validation in one step, without human interaction.
- • iCertis AI - AI from Icertis turns contracts into live documents connected to your business o Icertis is enabling SAP users to address previously intractable contract challenges. This includes digitizing legacy contracts and importing third-party contracts at scale, analyzing past negotiation history to gain insights for improvement, and deep data visualization.
- • Globality - Seamlessly Integrate Globality's Platform with SAP Fieldglass o Globality's AI Platform transforms sourcing of high-value, complex services by automating the demand creation, supplier identification, tendering, proposal evaluation, and SoW creation process through a self-serve, consumer-like solution. SoW data are automatically sent to SAP Fieldglass

6. Alternative Funding Models – Pages 20

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and

be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
 - Explain how each model would work;
 - Identify the benefits that Participating Entities and their suppliers would realize; and
 - Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

They do not offer any alternative funding models, but do recommend SAP Fieldglass app.

7. Contract Transition and Flexibility – page 20 - 21

LSI possesses an extremely high level of flexibility to transition from a state's current contract to a new contract or amendment".

B. Functional Requirements: pages 22 – 46

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. **Currently the following applications are widely deployed and support the procurement functions of Ariba customers:**

- SAP Ariba Buying& Invoicing
- SAP Ariba Sourcing
- SAP Ariba Contracts
- SAP Ariba Supplier Lifecycle & Performance Management
- SAP Ariba Network
- SAP Fieldglass

- Uses Native Integration for integration of purchase requests.
- Supports all types of files and mentions a “really robust search engine” in many of the comments.
- “A super user will be granted broader access to the solution by assigning multiple roles” to access functionality across the solution and “provide administration capabilities across the solution or for specific functional areas”. Except for Guided Buying.
- #3 is marked as “partial”, which is not a choice in the codes. **Based on the notes it looks like they do not have the ability to integrate to post on the State's procurement website.**
- #38 is marked N/A, which is not a choice in the codes. **After reading the reply – it seems the answer is “N” as they do not comply with this.**
- For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able
- Many of the Comments state **“Standard Functionality”** (there are 22 of these). As a nonuser of ASP Ariba's system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to *“describe how the identified tools/solution will meet the requirement. Include benefits or limitations.”* **Based on the vagueness and essentially a guess on my part, these lines won't be evaluated.**

2. Supplier Portal. Tab 3, SPR-1 through SPR-23.

- Ariba seems to have a good handle on the Supplier portal side and a understanding of what the suppliers need.
- SAP Ariba Business Network (SBN) for the supplier portal includes:
 - Ariba Business Network (aka Ariba Network, Ariba Supplier Network)
 - Ariba “Supplier Enablement Services” for the Network are included
 - Supplier Portal functionality across all customers, not specific to a State/Entity using Ariba
- #3 states suppliers can integrate their financial systems to Ariba Network. While the State will want supplier spend reports, **I am not certain about connecting to the system – for security reasons the State would want to look into this.**

- #7, 8, where allow supplier to access solicitations and to submit proposals... IBM responds that State APIs are available to post but suppliers will need to be directed to an external State website. **This is concerning – as this is a requirement of the eprocurement system.**
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43.
 - SAP Supplier Enablement Team will “design and develop the most effective enablement strategy” based on their “profile, PO and invoice volume, and spend”. Segment the “State’s vendor master data to effectively target/onboard suppliers in tiered waves”.
 - Provides IRS TIN/Name “verification capabilities”
 - For the Ariba Network, offers suppliers “user guides, FAQs, technical documentation, and free online seminars”.
 - Can have “account specific information” via a “supplier information portal embedded in the Ariba Network”.
 - Suppliers are able to self register and meet requirements 1 – 10
 - **It's not clear if the system accepts commodity codes**, as the answers given to the questions are not straightforward.
 - #18 - #27 are marked as “INT” and the State asks that the verification of the supplier items be done. **IBM's answer is they can validate the format, I am unsure if this will meet the requirement.**
 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15.
 - The answer to #11 is of concern. The State can download any account information (data) as long as subscribed, but only within the functionality of their application. It doesn't answer the question if we can get the minimum items that are asked for in the requirement.
 5. **Need Identification.** Tab 3, NEED-1 through NEED-7.
 - The CF item does not seem to pose a problem. Other items seem to be standard within the software.
 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11.
 - **PRD 4 – Doesn't seem to answer the Role question. They answer it with groups, but not by role.**
 - **PRD 15 and 16, WRK12, PO11 and 12 – Limit attachments to 100MB size limit, but can support any type of attachment.**
 - **PRD49 – Ariba uses UNSPSC (United Nations Standard Products and Services Code) – it seems much configuration will need to be done to work in State's chart of accounts.**
 - **PRD59 – is essentially not answered.** Gives “Standard Functionality supported and configurable”.
 - **WRK28 – only one user in Que at a time.**
 - **PC 6 – Comment that it's not supported; however, they list as “Available”.**
 7. **Catalog Capability -** Tab 3, CAT-1 through CAT-40.
 - **#3 - 3 channels that catalogs can be updated from: (1) Loaded directly by customer via CSV or CIF format, (2) Loaded by us acting as the catalog management service to the customer, (3) Self-loaded by the supplier via the Ariba Network.**
 - **#6 and 7. Catalogs are limited to 5,000 catalogs and there is a limit to 500,000 items in a catalog.**
 - **#19 – To enter Items of negative values is not an option.**
 8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151.
 - **#2 – System has several solicitation templates to use; however, most all State's will want to use their AG approved templates and forms. Some such as the RFI are delivered out of the box, unsure if can configure.**
 - **#36, 52, 63, 70 – limited to 100MB**
 - **#76 – Ariba's system doesn't provide ability to post solicitation documentation unless manually done.**
 - **#138 – Ariba's system does not post award results to State's procurement website. It must be done manually.**
 9. **Contract Management.** Tab 3, CNT-1 through CNT-88.
 - **#45 – Ariba's system doesn't support read only format with redaction properties.**

- #52 through #62 – Ariba's system doesn't support posting of various items to State's public Contracts website. The State must manually post
10. **Vendor Performance** Tab 3, VPE-1 through VPE-25.
- VPE 21 – **CLARIFY** that the system provides this requirement as IBM says it does, because they comment that the best way is through scorecards, which in my mind is paper or a simple excel form. Maybe scorecards is a name of one of their forms. **If not, this does not meet the requirement.**
 - VPE 25 – **File size limit 100MB per attachment. – does not meet requirement.**
11. **Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37.
- PDA 1 – Ariba solutions comes with 250 pre-packaged reports.

c. Technical Requirements: pages 47 - 59

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*
- Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.*
- SAP offers a 99.5% system availability percentage during each month for production versions, with exception of **regularly scheduled and emergency maintenance. CLARIFY – How often is regular maintenance and during what hours and days. Additionally, how often in the past has SAP had emergency maintenance (example of how many times in one year?).**
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
- Page 45. They state they will provide accessibility to customers upon request. **It seems the software does not come with accessibility requirements.**
3. **Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5.
- TECH 3 – 5 are “INT”; however, they repeat TECH 1 and do not explain/detail out how or why integration or interface is needed.
4. **Browsers Supported**
- The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.
5. **User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20.
- TECH 12 – **Does not meet requirement.**
6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25.
7. **Federated Identity Management**
- Refers to a link. Page 50
8. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34.
- SAP plans to use “SAP's Activate Methodology”
 - Integration of legacy systems are extra cost 10
9. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60.
- “integrate with all the major ERP systems. We provide flexible integration support for Oracle, PeopleSoft, AS400 and SAP. Given our flexible EAI infrastructure, we have also mapped out applications to Salesforce, Lawson, GEAC and a multitude of custom developed legacy systems.”
 - Real-time and/or batch integration
 - HTTPS using CSV interface
 - SAP Web services
 - REST APIs
10. **Office Automation Integration**
- Yes, they integrate with Microsoft products listed and others.

11. **Mobile Device Support** RTM: Tab 4, TECH-61.
 - Yes it can be accessed Mobily
12. **Mobile Applications** - TECH 62.
 - Nothing to add here..
13. **Data Ownership and Access**
 - State owns the data.
14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63.
 - Data retention is governed by the active contract.
15. **Disaster Recovery Plan**
 - Meets requirements.
16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67.
 - State would receive two environments by default: Test and Production.
 - Additional environments (i.e. Development, Quality Control/User Acceptance, Training) are additional charges.
17. **Solution Technical Architecture**
 - They described some tools and gave some “various” options for exchanging data between SAP Ariba and external system.
18. **Solution Network Architecture**
 - Diagram on page 57.
 - SAP Ariba solutions are offered and delivered in a true subscription-based model
19. **System Development Methodology**
 - Based upon Agile Scrum Development methodology.
20. **Service Level Agreement**
 - UNABLE to open embedded document.
- D. **Security Requirements:** pages 60 - 72
 1. **Cloud Security Alliance (CSA) Compliance**
 - SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines.
 2. **Security and Privacy Controls**
 3. **Security Certifications**
 4. **Annual Security Plan**
 5. **Secure Application and Network Environment**
 6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.
 - Mentions backup policies.
 7. **Data Security** – nothing to add.
 8. **Personally Identifiable Information Protection** – nothing to add.
 9. **Security/Privacy Issue Occurrence** – nothing to add.
 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
 11. **Security Breach Reporting** – nothing to add.
- E. **Implementation Services Requirements:** pages 73 - 126
 1. **Project Management**
 - LSI provides a basic PM layout diagram on page 73 explanation of PM.
 - Very prescriptive in nature, almost regulatory.
 - Do not see a timeline
 - Does not address most of PM section in RFP.
 2. **Project Implementation Methodology**
 - Very prescriptive in nature, almost regulatory.
 - LSI would like that most SAP cloud implementations use the SAP Activate Cloud methodology. The SAP Activate Cloud methodology follows Agile principles and is well suited to cloud software implementation.
 - Sample role assignment charts are provided for deliverables (pages 79 – 81 and 83 and 88 – 90 and 93). Will want to review these for negotiations if are awarded a contract.
 - **Note:** There are many PM areas that should be reviewed in the Assumptions section (pages 140 – 141) of this proposal.
 3. **Catalog Support Services**

- Uses SAP Ariba Catalog management services or Spot Buy.
- The supplier is responsible for uploading catalogs on Ariba Network.
- Suppliers hosting content on their sites provide a catalog feed with links to their content as authenticated by Ariba Network. Both Level 1 PunchOut (Site and Aisle/category level) as well as Level 2 PunchOut (Aisle, Shelf, and Item level for cross-PunchOut search experience) are supported. SAP Ariba catalog management services manage the enabled catalogs including validation, cleansing, catalog activation and any subsequent refreshes. The catalog set-up includes setting up a catalog hierarchy. Enablement of Punch Out catalogs are available as an optional item for additional charges – Clarify charges.
- Doesn't address training staff or suppliers on catalog management roles.

4. Data Conversion Services

- 6 activities make up the conversion project:
 - Strategy
 - Analyze
 - Design
 - Build
 - Test/Implement
 - Deploy

5. Interface/Integration Development Services

- Pages 98-99 - *“LSI will recommend, design and deploy interfaces based on the best practices and the latest tools available with the SAP environment. In addition to technical assessment, we develop an **Interface Strategy document** that includes the general architecture of the Current and Future Landscape, describes various Interface types, file transfer and process of interface design and implementation.”*

6. Organizational Change Management (OCM Services)

- Explains their OCM method well and with diagrams. They seem to have done OCM before.
- Meets requirements.

7. Training Services

- Training is divided into two different but critical areas:
 - Project Team Training
 - End User Training

8. Help Desk Services – good.

- Page 117 - *“LSI will provide post implementation support / SAP Application Management Services (“AMS”) Services.”*
- Confusion on what LSI is providing and what SAP might be providing or if LSI is providing all.

9. On-Site System Stabilization Support

- LSI explains post go-live stabilization support and some of the help desk again, but don't seem to commit to the 3-month post go-live coverage requirement.

F. Managed Services Requirements: pages 127 - 131

1. Solution Support

- Yes seems to meet requirements

2. Organizational Change Management (OCM Services)

- They offer an hourly rate in their cost proposal, but do not offer any description of services. Unable to evaluate.

3. Training Services

- Meets requirements – point to Section E for description of services.

4. Catalog Support Services

- Provided at an hourly rate but separate from services from proposal. No description of services offered. Unable to evaluate.

5. Help Desk Services

- Meets requirements. – point to Section E for description of services.

6. Transition Out Assistance Services

- Sample transition plan offered. Would like to see a description of how they help transition out. Does not meet requirement.

G. Other Available Services: pages 131 - 138

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1

- Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- SAP S/4 Financials Assessment.
- SAP Fieldglass

H. Video Demonstrations: page 139

- 44 minute demo.
- Some areas the author kept saying they would show more at the demo. Which is confusing since this is the demo.
- Looks very user friendly for Catalog purchasing of items.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **SAP ARIBA** implemented by **LSI Consulting**. single point of entry
smart routing compliance portal open marketplace environment integration workflow document
management reporting configurable transparency

User Experience "Guided Buying" capabilities, - UX experts redesigned user's view to deploy a
platform adaptable on multiple platforms (desktop, tablets, mobile) •Minimizing clicks and number of
steps•Seamless transition from mobile app to desktop with "follow-me" process from one
another•Community help•Visual workflows, reminders and notifications•Bulk actions over many items (i.e.
bulk receive purchase orders)•Integrations to facilitate multiple catalog search (items in the material
master, inventoried items, MRO Supplies and contracted supplier catalogs), cost accounting and more
Bidder Best Practices and Roadmap **A configurable system** is out-of -the-box solution that allows the
owner to easily personalize certain aspects of the system, without the help of costly software
developers. Configurable software is flexible, scalable and can be continually shaped to meet
an organization's industry-specific and organization-specific needs. Configurable solutions carry
a much lower total cost of ownership. You don't pay for updates. **A customized system is**
developed specifically and only for one customer, locking that organization into a static
workflow that can only be changed by hiring cost prohibitive engineers to make updates to the
system's code. This increases the total cost of ownership exponentially. The system is
static and does not evolve with the industry. SAP® Ariba® Best Practices Center.

Innovations and Value-Added Features/Services •SAP Fieldglass•SAP Ariba Supplier Risk Management -
Customizations/Extensions SAP arriba application extensions and partners; spot line chat bot, seal
software, cloud trade, I SMS applications, kill var sourcing, app Zen artificial intelligence, core disc, fair
market, vertex, Accenture, echo vedis, Dun and bradstreet, APOS systems, nitor, iCertis artificial
intelligence, globality.

Alternative Funding Models **LSI CONSULTING** did not propose any

Contract Transition and Flexibility flexibility to transition from a state's current contract to a new contract
or amendment under the terms of a newly awarded Master Agreement and Participating Addendum.. SI
becomes a one-stop-shop for the participating State for software and services contracting. **Could not
open PDF**

Functional Requirements

General Functionality - 2 integration w/medium and low LOE, 1 not available, 1 partial requirement met
for posting solicitations on state website, 36 Out of the box.

Supplier Portal - 1 integration w/Medium Loe an API where suppliers can access a posted solicitation ,
and 21 out of the box, 1 business process to handle vendor complaints outside of the tool.

Supplier Enablement/Management 9 integrations w/med LOE and 34 out of the box.

SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Buyer Portal 15 out of the box
Need Identification 7 out of the box
Request through Pay 62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 21 out of box for Pcard, 21 out of the box for Receiving, 11 out of the box for invoicing.
Catalog Capability 1 not available items with negative dollar value, 39 OOBX
Sourcing/Bid Management Three not available, 1 partial sourcing bid management not displayed publicly, 147 OOBX
Contract Management 74 OOBX, One not supported 11 not available and must be performed manually. 2 Available however these are manual processes.
Vendor Performance 25 OOBX
Purchasing/Data Analytics 37 OOBX

Technical Requirements

Availability 99.5% system availability percentage during each month for production versions, with the exception of regularly scheduled and emergency maintenance.
Accessibility Requirements 301 549 is a European standard for digital accessibility.
Audit Trail and History logs are retained so long as the customer has an active contract with SAP.
Browsers Supported Apple Safari (64-bit)•Google Chrome (64-bit)•Microsoft Edge (32-bit)•Microsoft Edge Chromium (32-bit and 64-bit)•Mozilla Firefox (64-bit)•Microsoft Internet Explorer (32-bit) until December 31, 2021oNote: Compatibility mode isn't supported
User Accounts and Administration RBAC
User Authentication Customers may activate 2 factor authentications if they use SAML based authentication or ADFS for accessing the SAP Ariba Cloud Services.
Federated Identity Management– see user authentication above
Data Conversion LSI will leverage SAP's activate methodology however methodology was hard to determine as far as specific data conversion tasks.
Interface and Integration Using SAP ARIBA open APIs. Oracle and PeopleSoft and they also integrate with SAP?
Office Automation Integration Word excel and Powerpoint
Mobile Device Support the Ariba Mobile app to view, track, and approve purchase requisitions, nudge approvers, and access informative articles on the Exchange User Community, all from their mobile devices.
Mobile Applications IOS version 7. X, Android Kit Kat 4. 4 and lollipop 5.0
Data Ownership and Access Data retained so long as the contract is active however it's not clear how long they will keep data after termination
Date Retention, Archive and Purge Considerations Retains customer data for the life of this subscription in accordance with their terms and conditions
Disaster Recovery Plan Annual test does it include clients? Data centers appear to be SAP owned RPO 5 minutes. (RTO) to not exceed four hours. LSI Consulting leveraging SAP plan.
Solution Environments production and test; Extra charge for more environments
Solution Technical Architecture The native integration with SAP ECC and S/4HANA covers the full suite of SAP Ariba applications including Ariba Network Automation, SAP Ariba Buying and Invoicing master data and transactional interfaces as well as SAP Ariba Sourcing and SAP Ariba Contracts and direct materials management. This is accomplished by using the SAP Ariba Cloud Integration Gateway (CIG). The Cloud Integration Gateway provides a means of integrating SAP Ariba with SAP ERP products (S/4 and ECC6) without the use of middleware for delivery. Detailed architectural diagram provided.

Solution Network Architecture servers utilize a network infrastructure designed for scalability, reliability, and security. The SAP Ariba Operations team monitors and maintains the systems. Redundant load balancing and security firewall devices are inserted between each tier. Detailed architectural diagram provided

System Development Methodology Agile Scrum Development methodology. Product lifecycle management includes a quality control process that involves technical reviews automated and manual testing performance and stress testing.

Service Level Agreement A list of definitions In a separate document

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed – could not access doc.

Security and Privacy Controls SAP Ariba is officially not certified for NIST 800-53

Security Certifications ISO 9001 – Quality Management System, ISO/IEC 27001 – Security Management System, ISO 22301 – Business Continuity Management System, BS 10012 Personal Information Management System, ISO/IEC 27018 – Code of Practice for Personally Identifiable information, ISO/IEC 27017 Code of practice for Cloud service information security, SOC 2 type II, Payment Card Industry Data Security Standard (PCI DSS), Good Practice Quality Guidelines and Regulations (GxP), Trusted Information Security Assessment Exchange (TISAX), FedRAMP authorized.

Annual Security Plan Annual security plan are internal facing documents

Secure Application and Network Environment SAP Ariba provides 24/7 monitoring from a Security operation center

Secure Application and Network Access SAP ARIBA uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest

Data Security Access based on leased privilege

Personally Identifiable Information Protection solutions are designed Business to business transaction, and do not support storing HIPAA/PII/Personal data

Security/Privacy Issue Occurrence incident response procedures are confidential, overview only

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management **LSI CONSULTING** will have leadership provided by the Program Sponsor, Engagement Lead and Project Manager who share responsibility for the successful delivery of the State implementation. •Clearly define project scope, responsibilities, and authority via the project charter and responsibilities matrix. •Finalize the project team resources and organizational chart •Implement the toolset and procedures for scope, risk and issue management •Establish communication protocols including status reporting and issue reporting •Create the project requirements traceability matrix framework •Prepare a Kick Off presentation to communicate PMO standards and expectations to the project team.

Project Implementation Methodology **LSI CONSULTING** will use the SAP Activate Cloud methodology. Extensive detail on this methodology.

Catalog Support Services **LSI CONSULTING** takes will use SAP Ariba catalog management service is a complete, end-to-end combination of proven technology, extensive domain expertise and expert services. Elements include: Supplier Road Mapping, Project Management, Electronic Catalog Enablement, Catalog Maintenance, PunchOut Catalog Enablement, Punch-Out Catalog Maintenance, and State & Supplier Helpdesk Support.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): 1

DATE: 12/23/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Data Conversion Services **LSI CONSULTING** data conversion project plan is broken down into six activities, which mirror the project phases; Strategy, analyze, design, build, test implement, deploy. Data cleansing appears to be the sole responsibility of the state because no tools were mentioned.

Interface/Integration Development Services **LSI CONSULTING** will develop and implement interfaces and integrations with legacy systems. **LSI** will recommend, design and deploy interfaces based on the best practices and the latest tools available with the **SAP environment**. **LSI will develop an Interface Strategy document** that includes the general architecture mn of the Current and Future Landscape, describes various Interface types, file transfer and process of interface design and implementation.

Organizational Change Management (OCM Services **LSI** consulting has a robust organizational change management road map. It has five phases; prepare, explore, realise, deploy, run post go live. A comprehensive strategy and communication plan will be created to drive the creation and delivery of effective messaging. This plan is a dynamic, living, and breathing document. It will be updated periodically to ensure the right communication is getting to the right stakeholders at the right time. The following principles lay the foundation for effective communication: •Message redundancy is related to message retention. •The use of several communication channels is more effective than the use of one single medium to convey a message. •Face-to-face communication is a preferred medium for providing a forum of dialogue with constituents. •The existing organization structure is oftentimes the best channel for disseminating information about the implementation. •Direct supervision is the expected and most effective source of organizationally sanctioned information. •Opinion leaders, who may not necessarily be organizational leaders, are effective change agents. •Information that is consistent and reinforces basic values and beliefs is effective in changing opinions and attitudes. •Personally relevant information is better retained than abstract, unfamiliar or general information

Training Services **LSI CONSULTING** Training is divided into two different but critical areas: 1. Project Team Training 2. End User Training approach aligns with our implementation plan. **LSI CONSULTING will leverage online** SAP Services courses. **LSI** will train State personnel with business expertise to conduct instructor led classroom training, virtual learning classrooms or deskside coaching for fellow employees. **LSI** will train State trainers in best practice training principles and familiarize them with the training content to be used by conducting tailored train-the-trainer workshops for each applicable area.

Help Desk Services The **LSI CONSULTING** These services were designed to complement our customers in house support team. Our service is easily adapted to integrate with State's support provider. **LSI's** Application Support Services offers application support across all modules. Support is made available at a predetermined rate, with guaranteed response time. End-users simply call a dedicated toll-free number, or enter their problem tickets over the web to receive direct access to consulting resources. Application Helpdesk support covers Level II Application Critical Support, and Level III Application Enhancement Support . Level III or Enhancement Support is designed for customers who want to expand the functionality of their current systems. Level III (Tier Three) support must be approved by Customer's Support Manager. The intention of Level III is to give Customer flexible and cost-effective access to consulting resources to continually improve Customer's SAP systems. Each level III request is **priced separately** and will be evaluated, quoted on a case by case basis, and must be approved by the customer. JIRA Work Management for Customer Care system

On-Site System Stabilization Support **LSI CONSULTING will run** Hypercare for 3-months post go-live. On site not clear.

Managed Services Requirements

Solution Support All of our Ariba customers run the latest release of our products. As part of our SaaS deployment model, we handle all maintenance packs, services packs, and product upgrades. Customers automatically receive patches and upgrades when they become generally available for no additional cost. We schedule releases during off-peak hours and weekends to minimize the impact of downtime. Many of

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Installing Ariba SAP
 - LSI is consulting role
 - Partner managed cloud; should consider liability and data security terms
 - Gateway to full SAP saturation
2. Previous Projects
 - Large list of clients; all but a few are municipalities/cities or smaller entities than full statewide scope
 - Provide examples, but no reference to ROI; provides limited value to spend the money for the services
 -
3. Subcontractors
 - No subcontractors; should be identifying SAP?
 -
 -
4. Organizational Chart
 - All work aside from highest level is done by Ariba and SAP resources
 - Job descriptions show limited responsibilities of LSI. Majority of work appears by States
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Research needed if LSI absorbs risk to project or defers to SAP or others. States should be aware of liability limits for prime vendors when acting as project managers but do not own solution

Individual SME Comments:

General Principal and Requirements

- SAP Ariba Solution
- POSITIVE SAP Ariba Solution, SaaS
- POSITIVE SAP manages infrastructure
- QUESTIONING Spot buy catalog avenue to encourage off contract purchases.
- POSITIVE mobile platform focus
- POSITIVE End to end system, task management functions
- NEGATIVE Many value-added services, why not included in base products
- QUESTIONING Extension partners for functionality what relationship and liability is
- POSITIVE – Gold Partner for SAP
- QUESTIONING – GovOne Accelerator template benefits or restriction
- POSITIVE – SAP is widely used throughout the industry
- POSITIVE – Modules are beneficial to choose which are best
- QUESTIONING – Is vendor portal a barrier to entry for technology challenged small business
- QUESTIONING – SAP Fieldglass and Supplier Risk Management, using LSI as a third party to implement, and various application extension partners demonstrates a complex fragmented solution.

Functional Requirements

- POSITIVE – separate modules
- POSITIVE – Use of UNSPSC codes is preferred
- POSITIVE – Ariba is far reaching
- QUESTIONING – how simple is the network considering the size and effort needed to implement
- POSITIVE – Resources on page 30 seems interesting
- QUESTIONING – mention of approval workflows
- QUESTIONING – page 34 references guided buying, how does this influence the buyer
- INTERESTING – Need guidance seem very manipulative
- POSITIVE – Catalog features and attribute designations are good
- QUESTIONING – How do technologically challenged vendors submit a bid response?

Technical Requirements

- QUESTIONING – accessibility for differently-abled?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/4/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

- QUESTIONING – Has lack of browser compatibility mode created problems for customers?
- POSITIVE – Single sign-on and 2 factor is good and appears standard
- QUESTIONING - Organizational change management details are deferred in response
- POSITIVE – Mobile App has basic functionality of solution
- QUESTIONING – Is response page 53, mobile applications dated? iPhone should work on phones above 6s.

Security Requirements

- QUESTIONING – Mobile app does not work if MDM platform?
- NEGATIVE – continuous referral to sap policies for compliance is difficult to determine clear response
- POSITIVE – limited access to data is appropriate
- QUESTIONING (p.76) SAP does not handle HIPAA data, possible concern?
- POSITIVE – Secure systems in place

Implementation Services Requirements

- POSITIVE Good overview of project plan processes
- QUESTIONING – How is responsibility clarified with LSI and State for implementing. LSI places many obligations on the State in the proposal.
- POSITIVE Level 2 punchout is a very good attribute

Managed Services Requirements

- QUESTIONING – quarterly hours for monitoring, what is more are needed?
- NEGATIVE – Training at hourly rate
- NEGATIVE – Catalog Support Services at hourly rate
- NEGATIVE – Help desk services at additional cost
- QUESTIONING – Additional costs may challenge end user ROI

Video Demonstrations

- POSITIVE – SAP is large solution end to end
- QUESTIONING – Is guided buying only view available to buyers, would not like to be overly restrictive
- QUESTIONING – Is there a training session available for new users, solution appears complex
- POSITIVE Dashboard seems beneficial
- QUESTIONING – Data appears a great advantage to power users, can be overwhelming to casual users.

Individual SME Comments:

Overall

Exception to #7 of NASPO T' & C's

General Principal and Requirements

Key Solution Functionality Elements

8-10	Ariba is the solution	
	Single point of entry	
	Smart routing – dynamic workflow engine	
	Compliance – SAP s/4 HANA – you can manage regulations, track registrations and substance volumes, classify products and create compliance documents	
	Portal – SAP portal product	
	Open Marketplace Environment – users choose to have access to all of the available catalogs or just their own. Also has spot buy catalog solution available	
	Integration – holistic integration application	
	Document Management – module can track, manage and store documents that can help digitize the contracting process.	
	Reporting, dashboard, and data virtualization. – native reporting and analytics including-packaged reports	
	Configurable – highly configurable solution	
	Transparency – Vendor Portal streamline operations and engagement with your vendor community.	

User Experience

10-12	Guided buying	
	Multiple platforms. Designed to deliver a fast and ergonomic user experience.	
	Interface designed to minimize clicks, seamless transition from mobile to desktop app, visual workflows, bulk actions, and integration s to facilitate multiple catalog searches

Individual SME Comments: The video provided did show the functionality of the system, but at a very high level. It concentrated more on tips and lessons learned rather than getting deep into the functionality of the system. I got the impression this company wanted to provide a deeper explanation of the system when they offer a "demo" but not sure what that meant?

Some of the responses in the RTM are completed by stating "standard functionality" which does not show me they understand the requirement and can state that their solution can perform the requirement. Another issue is the vendor's response comments state an integration will be needed, but the "availability" on the RTM is labeled "A" which means out of the box. See example on Tab 3 Line 198 on suppliers RTM.

I am confident that the system can be offered to state clients but would feel that the concerns listed in these notes would need to be addressed/verified so clients and this supplier are clear on any discrepancies.

General Principal and Requirements – Page 8

Key Solution Functionality Elements – Page 8

- Offers the SAP Ariba Guided Buying with SSO
- Smart Routing is workflow that can be configured.
- Compliance helps track registrations.
- Portal provides access for employees
- Have open marketplace functionality with Spot Buy catalog solution to aid buyers in finding goods.
- Offers integration, workflow, document management and configurable dashboards.
- The vendor portal helps with the transparency requirements.

User Experience – Page 10

- Each module has configurable dashboards - Page 11
- Allows for mobile use to save time.

Bidder Best Practices and Roadmap – Page 12

- Presents both Quarterly and Monthly releases.
- Supplied 2 attachments embedded in the response document showing their expected road maps. These documents contain good information and could be very useful
- Best Practices Center service provides access to knowledge of best practices

Innovations and Value-Added Features/Services – Page 13

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- "Moving away from customized systems to configurable systems is the key to enable innovation"
Page 14
- Offers SAP Ariba APIs.
- Does offer some other tools that would be advantageous to the State. SAP Fieldglass and SAP Ariba Supplier Risk Management. Page 15
- Supplied Link to YouTube video explaining that SAP Fieldglass aids to develop external workforces. Can submit a SOW and then work with the vendor. Can integrate with existing systems.
- Supplied YouTube link to explain Supplier Risk Management. I tried to access the video but received a warning stating this is a "private video" – Page 16

Customizations/Extensions – Page 17 thru Page 20

- Supplied a well define list of extensions and partners. Page 17
- Chat bots, pdf invoices, integrations with Oracle, supplier data validation are some examples. I am just curious if these are included or offered at an additional cost.

Alternative Funding Models – Page 20

- SAP Fieldglass is offered with an option to pay as you go and only pay for what you use at the end of the month.

Contract Transition and Flexibility – Page 20 – 21

- Partner Managed Cloud (PMC) is a tool to offer expedition the legal review process.
- Referred to document titled LSI Partner Managed Cloud attachment which provided information on the benefits for using this tool.

Functional Requirements – Page 22

General Functionality – Page 22 thru Page 24

- Single platform for supplier and buyers
- Buying & Invoicing, Sourcing, Contracts, Supplier Lifecycle and Performance, Ariba Network and Fieldglass are the solutions listed.
- Profiles can be set up via an integration.
- User should configure their own dashboards to simplify the user experience.
- CONCERN - EPROC-GEN-11 – Line 15 - Did not address the ability to Import/Export attachments
- CONCERN - EPROC-GEN-13 – Line 17 - Did not address the ability to re-assign work to another user?
- CONCERN - EPROC-GEN-26 – Line 30 - The ability to track admin fees in not available with integration to state's ERP?

Supplier Portal – Page 24 thru Page 30

- Proposing the SAP Ariba Business Network (SBN) as the single point of entry.
- Landing page for all suppliers has access to all procurement related transactions.
- Offers Open, Smart, and Simple network services.
- Sourcing, contracts, catalogs, and invoice access for the suppliers.
- Supplier support with training tutorials and documentation.
- Has supplier mobile app functionality

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SPR-9 and EPROC-SPR-10 – Lines 13 and 14 - The comment response of "Partner" is not familiar to me?
- CONCERN - EPROC-SPR-18 and EPROC-SPR-19 – Lines 22 and 23 – One line is not supported and the other line the comment response of "Partner" is not familiar to me?

Supplier Enablement/Management – Page 30

- Buyers can manage the entire purchasing process.
- Offers a supplier enablement team
- Offer supplier education and training materials
- Help manage data collection.
- CONCERN - EPROC-VDR-19 thru EPROC-VDR-27 – Line 48 thru line 56 – The responses here are labeled as needing an “integration”, but I am not clear what integration is required?
- CONCERN - EPROC-VDR-31 thru EPROC-VDR-39 – Lines 60 thru line 68 - Concern - This is a duplicate response from requirements in this section. Does the system offer this requirement?
- CONCERN - EPROC-VDR-43 - Concern - This is a duplicate response from requirements in this section. Does the system offer this requirement?

Buyer Portal – Page 31 thru Page 34

- Can have a configurable landing page with a dashboard, or have a user experience a guidance in buying.
- User will log in using the same portal and what they see can be set up within their roles.
- Casual users purchase, complete forms and be linked to other solutions like ServiceNow
- Power users can have dashboards, run reports, manage records, and post solicitations.
- Provided screen shots on pages 33 and 34

Need Identification – Page 34 thru Page 36

- Guided Buying provides access to catalogs and state contracts and the vendor thinks this is the perfect solution to Need Identification.
- Can trigger workflows that can be configured.
- Can configure a landing page dashboard containing widgets to guide the user in the buying process.

Request through Pay – Page 36

- The narrative response from this supplier is very limited on information.
- Interpretation of Purchase Request – Could be a form or “request” that is filled out or could be the result of submitted a “shopping cart” that goes to a PR (purchase request or requisition) and then to a purchase order. See response in RTM line 106
- CONCERN - EPROC-PRD-15 – Line 116 - Attachment size limit is 100 MB per attachment
- CONCERN - EPROC-WRK-12 – Line 177 – Can you add comments, and can you control if comments go to the vendor?
- CONCERN - EPROC-WRK-14 – Line 179 - States the workflow will not be re-triggered. Would if we want workflow started again?
- CONCERN - EPROC-PO-3 – Line 198 – Response states requirement needs an integration, but “Availability” is marked with A which means out of box?
- CONCERN - EPROC-PO-6 – Line 201 – PO number is not configurable by the State.
- CONCERN - EPROC-PO-16 – Line 211 – Cannot electronically sign Purchase Orders
- CONCERN - EPROC-PC-6 – Line 232 – Pcard as part of the user’s profile is not supported.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-PC-10 – Line 236 - Availability states out of the box, but wouldn't this require an integration? Loading data from the bank.
- CONCERN - EPROC-RC-4 – Line 253 – Cannot record a receipt without a reference to a PO.

Catalog Capability – Page 36 – 37

- Cross- catalog search among the catalogs.
- Spot Buy catalogs for those items not found in other catalogs.
- CONCERN - EPROC-CAT-6 – Line 291 – Does not have an unlimited number of catalogs. 5000
- CONCERN - EPROC-CAT-7 – Line 291 – Does not have an unlimited number of items. 500,000
- CONCERN - EPROC-CAT-10 – Line 295 - Supplier availability states out of box but response is talking about custom forms - Should be labeled C for customization?
- CONCERN - EPROC-CAT-11 – Line 296 - Supplier availability states out of box but response is talking about custom forms - Should be labeled C for customization?
- EPROC-CAT-19 – Line 304 - Items with negative dollar value not supported
- CONCERN - EPROC-CAT-39 – Line 324 - This response is the same requirement in line 323. Does not address the publish announcement about new catalog requirement.

Sourcing/Bid Management – Page 37 thru Page 40

- SAP Ariba Sourcing is the solution name.
- Ariba Discovery is the supporting public posting.
- Integrates with SAP Ariba Contracts solution
- Configurable templates allow for agency process variations
- Has project management process – Page 39
- Side by side comparison
- Offered links for more information on Public Posting which is also contained in Section 10 Vendor Performance of their response. Page 40
- CONCERN - EPROC-SRC-15 – Line 342 - This response shows the functionality of qualified vendor lists and not if the Sourcing module can handle this solicitation type.
- CONCERN - EPROC-SRC-39 - The system assigned number is not configurable by the State
- CONCERN - EPROC-SRC-41 - Does it support Adobe Acrobat?
- CONCERN - EPROC-SRC-63 – Line 390 - The system has a 100-supplier limit for events
- CONCERN - EPROC-SRC-76 – Line 403 - Response does not state what means this information is to be posted? Integration? Line 404 states integration with that requirement?
- CONCERN - EPROC-SRC-102 – Line 429 - eSignature functionality is limited to contracts not sourcing events.
- CONCERN - EPROC-SRC-130 – Line 457 - The response references communication between buyer and supplier, but requirement is referencing evaluation panel members?
- CONCERN - EPROC-SRC-131 - The requirement references communication between the "buyer side" of the application, but the response references the supplier communication ability?
- CONCERN - EPROC-SRC-143 – Line 470 - I interpret this requirement as being able to "unaward" and awarded solicitation and then awarding it to the next responsive supplier. The response submitted does not address that requirement.

Contract Management – Page 40 thru Page 42

- SAP Ariba Contract Management is the solution proposed
- Offers both Contract Management and Administration

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Bridges the sourcing process to the transactional procurement process.
- Contract can be published to SAP Ariba Buying and Invoicing and then leverage Guided Buying
- Leverage workspaces, templates, documents, and libraries
- Configure contract dashboards to help manage contracts
- Contains numerous pre-packaged reports
- CONCERN - EPROC-CNT-25 – Line 505 – Does the solution support Adobe Acrobat?
- CONCERN - EPROC-CNT-65 – Line 545 – Buyer cannot control which contracts or content is displayed on public site. Can the system use the contract status?
- CONCERN - EPROC-CNT-71 – Line 551 – The vendor's response did not address the administrative fee requirement. Only talked about updating prices on price file.

Vendor Performance – Page 42 thru Page 44

- SAP Ariba Supplier Lifecycle and Performance is the solution name.
- Supplier has self-service access to maintain data
- Centralized view of supplier's data
- Offers vendor performance tool.
- Can use API to display supplier performance.
- Can send surveys and system automatically scores the response.

Purchasing/Data Analytics – Page 44 thru Page 47

- SAP Ariba Reporting is the solution name.
- Reporting can be created with many data elements and displayed on personal dashboards.
- System offers pre-packaged reports across the solution.
- Offer Ad Hoc Reports. (Wizard driven)
- I liked that they copied a duplicate response on lines 602 thru 608 but bolded the requirement in the duplicate response that showed they could meet the requirements. This practice is better than "see requirement XXX".
-

Technical Requirements Page 47

Availability – Page 47

- Guarantee 99.5% availability.
- Offered example of their SLA

Accessibility Requirements – Page 47

- Offered link to a design guide of the system.

Audit Trail and History – Page 48

- Meets requirements

Browsers Supported – Page 48

- Listed browsers supported and noted compatibility mode is not supported

User Accounts and Administration – Page 48 – 49

- Based on roles and permissions and assignment to groups
- Common data is shared across modules automatically

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-TECH-12 – Line 16 Dual sign-on via one account is not supported. Buyer/Supplier
- CONCERN - EPROC-TECH-16 – Line 20 - Deactivating an account is not automated.
- CONCERN - EPROC-TECH-17 – Line 21 – System does NOT display profile information, even under the user profile?
- CONCERN - EPROC-TECH-20 – Line 24 - This response does not address the searchable functionality that was mentioned in the requirement?

User Authentication – Page 49 – 50

- Offers regular authentication or single sign on
- Supplied password information policies

Federated Identity Management – Page 50

- Suppliers' response referred back to previous section, User Authorization section 6 Page 49-50

Data Conversion – Page 50

- Plan to leverage SAP's Activate Methodology which provides tools with rapid migrations.
- Supplied suggested role names and responsibilities.
- CONCERN - EPROC-TECH-26 – Line 30 - Legacy integration is provided as an extra cost

Interface and Integration – Page 51

- Stated 3 kinds of integration options, HTTPS, SOAP, and REST
- CONCERN - EPROC-TECH-57 – Line 61 - The supplier response refers to THEIR SLA. I thought the requirement was to address an SLA entered in the system.

Office Automation Integration – Page 51

- Meets requirements

Mobile Device Support – Page 52

- Uses the mobile "app" to perform system tasks and supplied list of features available with the app.

Mobile Applications – Pages 52 – 54

- Listed the operating system that the mobile app supports
- SAP Ariba mobile app is not certified with mobile device management (MDM) platforms. Page 53
- Listed security features offered by the app

Data Ownership and Access – Page 54

- Customer owns the data throughout the life of the subscription

Date Retention, Archive and Purge Considerations – Page 54

- Does not mention how the purge and archive functionality works in the narrative response.
- CONCERN - EPROC-TECH-63 – Line 67 – Does not provide detailed information about the purge process

Disaster Recovery Plan – Page 54 -55

- SAP Ariba uses a documented system recovery plan.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Would have been beneficial to share this documented plan?

Solution Environments – Page 55

- Narrative offered very limited information on environments proposed other than to mention test and production.
- CONCERN - EPROC-TECH-64 – Line 68 - This response does not address the "refresh" functionality

Solution Technical Architecture – Page 55 thru Page 57

- Solution is single platform with solutions natively integrated.
- The SAP Ariba Cloud Integration Gateway allows all the solution modules to be integrated.
- cXML language for document exchange.
- Offered information on integration to external systems. Page 56
- System shares servers.

Solution Network Architecture – Page 57 – 58

- Chart on page 57 shows network structure

System Development Methodology – Page 58 – 59

- Uses Product Lifecycle Methodology to help with development.
- Some changes are subject to change management procedures.

Service Level Agreement – Page 29

- Provided/referenced the embedded SLA offered in their response. 2 different versions.

Security Requirements – Page 60 – Most of my responses to this section I will need to defer to a security SME

Cloud Security Alliance (CSA) Compliance – Page 60

- Referenced the CAIQ document embedded in this response. Excel spreadsheet looks complete

Security and Privacy Controls – Page 60

- Not officially NIST 800-53 certified.
- Offered link to certification compliance Page 60
- Offered link to Attestation of Compliance.
- Defer rest of evaluation to Security SME

Security Certifications – Page 60 thru Page 62

- Current certificates available upon request. Provided link
- Offer link to Service Organization Controls (SOC) reports. Page 61
- PCI and DSS certified
- Provided link to current Attestation of Compliance
- Defer rest of evaluation to Security SME

Annual Security Plan – Page 62

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- SAP does not attach SOC reports with an RFP.
- Provided link to request SOC report

Secure Application and Network Environment – Page 62 thru Page 66

- Boundary Protection – Page 62
- Network logs are available
- Has firewall functionality
- Has security plans and policies
- Suggested to request the SAP Cloud Security Framework document for more detail – Page 64.
- Provide list of Maintenance tools – Page 64
- Defer rest of evaluation to Security SME

Secure Application and Network Access – Page 66 thru 68

- Uses encryption to protect information
- Leverages Secure Software Development (SDC)
- Suggested to request the SAP Cloud Security Framework document for more detail.
- Defer rest of evaluation to Security SME

Data Security – Page 68 thru Page 71

- Have established formal process to protect data – Page 68
- Data is encrypted. Page 69
- Moderate Business Impact Data is considered person contact information.
- Provided URL to their data policy and privacy statement. Page 69
- Defer rest of evaluation to Security SME

Personally Identifiable Information Protection – Page 71

- Not designed to handle HIPAA data including SSN, and Personal Banking information

Security/Privacy Issue Occurrence – Page 71

- Can provide general overview of their incident response but their full documentation is confidential. Page 71

PII Data Actual/Attempted Access or Disclosure – Page 72

- Response states “see our response to Section 9”

Security Breach Reporting- Page 72

- Response states “see our response to Section 9”

Implementation Services Requirements – Page 73

Project Management – Page 73 thru Page 75

- LSI Project Team is the lead for project management
- Starts with Prepare phase
- Kick off meeting will be held
- Each team responsible for their own team members

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Should establish a project repository and the PMO will develop a project work plan Page 74
- Meetings are held to review status and discuss actions required.
- Uses traceability matrix

Project Implementation Methodology – Page 75 thru Page 94

- SAP Activate Cloud methodology is the solution used.
- Structured into 4 implementation phases. Page 75
- Prepare, Explore, Realize, and Deploy
- Activate Phases table on Page 76
- Process also contains 4 Quality Gates called Q-Gates. Page 76. Table Page 77
- Phase 1 explanation Page 78. Each Phase contains deliverables and work product and activities
- Phase 2 explanation Page 81. Contains deliverables and work product and activities
- Phase 3 explanation Page 84. These are divided into Sprints
- Phase 4 explanation. Page 90. Contains deliverables and work product and activities
- Post Go-Live/Hypercare Phase – Refers to section 9 On-Site System Stabilization Support. Page 126.

Catalog Support Services – Page 94

- Supports many catalogs.
- Can search across all catalogs.
- Level 1 and Level 2 are supported

Data Conversion Services – Page 94 thru Page 98

- Divided into 6 activities.
- #1 – Strategy Page 95
- #2 Analysis. Page 95-96
- #3 Design. Page 97
- #4 Build Page 97
- #5 Test/Implement
- #6 Deploy

Interface/Integration Development Services – Page 98 thru Page 99

- Happens during the Explore phase. Prerequisites listed on Page 99
- Realize phase requires deliverables. Page 99
- Referenced Interface Strategy Sample document. This document is embedded in the response.

Organizational Change Management (OCM Services – Page 99 thru Page 109

- Organizational Change Management Roadmap chart. Page 100
- Starts with Change Readiness Assessment. Page 100
- Timeline for above process on Page 101. Should take 4 weeks
- Next – Leadership/Sponsor /Alignment. Figure on Page 102
- Stakeholder engagement. Page 103
- Change Impact Analysis. Factors for this impact listed on page 104
- Communication Planning and Execution Page 105. Shows the goals and objectives.
- Samples of effective communication tools on Page 107

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Training Services – Page 109 thru Page 117

- 2 different training areas, Project Team and End User trainings.
- Participated in SAP Ariba training first then attend the LSI project team training.
- Provided link to SAP training
- Provided list of contract roles on page 110
- Training Development Methodology chart on Page 111
- Activities during the design phase on Page 112
- Each phase lists the activities or requirements need to be performed.
- Train the trainer approach. Chart on Page 114
- List of training delivery options. Page 115
- Training and Readiness coordinators are available along with facilities.
- Self-Serve Training Guides and Resources. Page 117

Help Desk Services – Page 117 thru Page 126

- Provided chart of services provided on page 118
- Post implementation support is called SAP Application Management Services (AMS)
- Provides AMS Governance and Application Management Services. Page 119
- Offers Level 1, 2, and 3 Tiers 1, 2, and 3 Support. Tables on Pages 120 – 121
- Customer Care System Chart on Page 123
- Help Desk Responsibility Matrix on page 125 - 126

On-Site System Stabilization Support – Page 126 – 127

- 3-month post go-live phase for success.
- Works collaborative with project team and help desk.

Managed Services Requirements – Page 127

Solution Support – Page 127 thru Page 130

- Have 4 different Priority Level guidelines. Page 127
- Showed schedule used to escalate requests. Page 128
- Release strategy is quarterly and monthly
- Offered link to SAP Support Portal. Page 129
- Follows the ITIL and ITSM service and support modules. Page 129
- Referenced back to Section 8. Help Desk Services – Help Desk Responsibility Assignment Matrix. Page 125

Organizational Change Management (OCM Services) – Page 130

- Here is their statement for this section. “LSI can support the Organizational Change Management (OCM) Services separate from services proposed in the Implementation section of this RFP for all of the eProcurement solutions. These OCM services can be provided at an hourly rate as detailed in our FILE 4 Cost Proposal.”

Training Services - Page 130

- Here is their statement for this section. “LSI can support the Training Services, as described in Section E. 7 Training Services separate from services proposed in the Implementation section of this RFP for all of the eProcurement solutions. These training services can be provided at an hourly rate as detailed in our FILE 4 Cost Proposal.”

Catalog Support Services – Page 130

- Here is their statement for this section. “LSI can support the Catalog Support Services separate from services proposed in the Implementation section of this RFP for all of the eProcurement solutions. These services can be provided at an hourly rate as detailed in our FILE 4 Cost Proposal.”

Help Desk Services - Page 130

- Here is their statement for this section. “LSI can support the Help Desk Services as described in Section E. 8 Help Desk Services separate from services proposed in the Implementation section of this RFP for all of the eProcurement solutions. Please also see our response to 1. Solution Support, above, for more detail on these services.”
- CONCERN - EPROC-IMPL-3 Tab 6 Line 6 – LSI does NOT recommend providing help desk contract information on every screen. This is a customization as well.

Transition Out Assistance Services – Page 131

- Reference embedded document titled ‘Transition Plan Sample Confidential’

Other Services Available – Page 131 thru Page 138

- Financial Systems Assessment
- Workforce Management
- Vendor Management System to Manage Projects and Services

Video Demonstrations

SAP Ariba is the solution that is being proposed with this response. The first step in the solution is Guiding Buying which helps the user decide what path to take for procurement. The access is given to users by roles and permissions and access to ordering certain items can be restricted to users. Can support any catalog, internal or external. Search feature results are from all catalogs across the solution. Can configure alerts on purchases and accounting information to show up on the requisition along with workflow. Once flipped to a PO, the user can request a change request on the order as this is now a PO that has already been sent to the supplier. The supplier receives an alert and then logs into his supplier portal. The supplier can create an invoice for the order. The AP staff for the state will receive an alert that the supplier has invoiced them for the order. The system from the accounts payable view has a landing page containing data generated for reports. The order can now be received by the AP person.

Sourcing – User has a landing page that can be configured with tiles of tasks need to be performed. Manager of user can assign or re-assign workloads of users. Events can be created from templates or copied from a previous event. Event can be awarded to multiple vendors and allows to create different award scenarios. Can view bid content, suppliers, reports, messages, and award content.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 1

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Contract Management – Can configure their own landing page that will contain all information related to contracts. The creation of contracts is wizard driven and information is populated from the event. You can also use a template to create contracts. After contract creation, tabs available are overview, documents, tasks, team, message board and history. You can see the contract spend on the contract and enter tasks assigned to team members. Can sign documents electronically.

Supplier Management – Has a configurable landing page with tasks or reporting available. Allows to view and report on supplier performance. User can create supplier requests which contains custom fields, and templates can be used here as well. Can view supplier information in a 360 view.

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Specialize in source-to-pay called “Frame by “Optis”
 - Consultants that leverage their partners to build a plan for your business needs.
2. Previous Projects
 - Listed 23 projects citing the various partners used for each project and what type of procurement piece was implemented.
 - The projects fit Category 1 for the partners, but the actual work is not done by Optis, as they seem to be the consultant that brings everyone together. **I am not certain Category 1 is the right fit for them.**
3. Subcontractors
 - The vendor states they do not rely on subcontractors.
4. Organizational Chart
 - **Not included. Says to refer to File 4 ?**
5. Litigation
 - The vendor states they do not have any.
6. Financial Viability
 - DnB provided – low to moderate risk.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: **Optis Consulting**

CATEGORY #(s): **Category #1 Stage 1**

DATE: **08/19/2021**

EVALUATOR NAME: **Tom Hastings**

EVALUATOR DEPARTMENT/STATE: **State of Montana**

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience – **Limited information**

1. Overview of the Organization
 - Consulting firm
 - Involved with 4 source to pay solutions
 - Founded in 2011
2. Previous Projects – **Information to be provided when bidder is shortlisted.**
 - Listed clients names but no other information
 - Counties, cities, states are clients
 -
3. Subcontractors
 - No subcontractors listed by bidder
 -
 -
4. Organizational Chart – **Bidder states this info is in file 4?**
 -
 -
 -
5. Litigation
 - No litigation was reported by the bidder
 -
 -
6. Financial Viability
 - Supplied Duns & Bradstreet – American and Canadian
 -
 -
 -

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Proactis

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 1996.
 - Development of Cloud-based procurement solutions
 - “WebProcure” name of solution. Business is solely procurement.
2. Previous Projects
 - 4 listed. All States. All fit nicely into Category 1.
 - State of Missouri. Implement the full suite of WebProcure
 - State of New York. Created eMarketplace to connect with their ERP (Peoplesoft)
 - State of Rhode Island. Implemented WebProcure for procurement and interergrated with their ERP financial system.
 - State of Connecticut. Chose WebProcure to replace their inhouse procurement application.
3. Subcontractors
 - Civicinitiatives
4. Organizational Chart
 - Yes, the org. chart is provided, but **the job descriptions are not.**
5. Litigation
 - The vendor states they do not have any.
6. Financial Viability
 - Provided highlights and 3 years of annual reports.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Proactis_Perfect Commerce

CATEGORY #(s): 1

DATE: 1/7/2022

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Comments:

Overall/General

- Solution is called WebProcure.
- COTS solution
- SaaS solution.
- Designed, built, and developed by public sector professionals specifically for state and local government users.
- Real time integration when using their enterprise-integration platform ProcureLink.
- Great graph on page 5 showing the layout of all the modules and who (buyer or supplier) has what.
- Requirements in the Matrix Proactis asked for more information or clarification. Note: Two question and answer periods were held.
- Many spelling and grammar errors.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 5 - 7

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources, and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts, and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

- In this section Proactis introduces their WebProcure system and all their modules with a brief description of what each does. They do not directly answer the Key Solution Functionality Elements above. The modules are:
 - Vendor Management
 - Solicitation Management
 - Contract Management
 - Request Management
 - Order Management
 - Invoice Management

- Analytics & Reporting
 - Supplier Portal
 - Public Components
- Single point of entry: Does not mention directly, although alludes to in its modules. Found in next section – page 8.
- Smart Routing: Does not mention directly, although alludes to in modules.
- Compliance: Yes – explained throughout modules.
- Portal: Yes – Supplier portal module.
- Open Marketplace Environment: Yes – Catalog Management module.
- Integration: Yes, real time integration when using their enterprise-integration platform ProcureLink.
- Workflow: Does not mentioned directly, although workflow is mentioned in a couple of the modules.
- Document Management: Possibly the Contract Management module. Need to **CLARIFY**.
- Reporting: Yes – Analytics & Reporting module.
- Configurable: seems to.
- Transparency: Yes, see graph on page 5 and the Public Components Module.

2. User Experience – p. page 7 - 9

The Solution must provide a user experience that is simple, direct, and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations, and contracts.
- Role-based functionality for drafting, review and approval, evaluator, and other processes.
- This section does speak to the single point of entry (page 8)
- Yes, have a portal.
- Intuitive in that each menu (of module) is arranged similarly to help with familiarity.
- Homepage can be customized.
- Mobile use – yes. Designed to fit tablet and smartphone formats. **Unsure yet, if have an app.**
- **Nothing discussed on Wizard-driven capabilities.**

3. Bidder Best Practices and Roadmap – p. page 10

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits, and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- SaaS model so latest version, enhancements, and technology delivered to customer.
- Use a Lean-Agile approach to our software development lifecycle to ensure continuous development and improvement of WebProcure.
- Deliver releases approximately 6 - 8 times a year.
- Will provide a Strategic Account Manager (“SAM”) that will meet with your state team frequently for business reviews, discusses challenges and opportunities, and other ways to simplify and gain efficiencies.
- **A 3-year product Roadmap was not provided.**

4. Innovations and Value-Added Features/Services – p. page 11 - 16

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Proactis partners with Civic Initiatives to support public procurement in three main areas.
 - Acquisition Support Services: Civic Initiative provides direct support of acquisitions events.
 - Instant-on Staff Extension
 - Workload and Backlog Analysis
 - Group / Individual Staff Training
 - Category Market Assessments
 - Full Solicitation Management
 - Strategic Procurement Transformation: *Increase program capacity to be a strategic asset.*
 - Program Benchmarking
 - Contract Portfolio & Spend Analysis
 - Policy/Process Redesign
 - Training & Certification Models
 - Contract Grant Management Programs
 - Procurement Automation Success: *Help procurement organizations assess their options and implement procurement automation in a way that emphasizes the business value and the opportunity for transformation.*
 - Automation Readiness Assessments
 - Solution Definition/Platform Selection
 - Implementation Planning/Execution
 - Marketplace Creation/Maintenance
 - Change Management & Onboarding
- Under innovative – Proactis has INSTANTmarkets. They explain it as: A Search Engine that *allows any authorized entity to post RFP/RFP solicitations or bid packages that are intelligently searchable by potential bidders. If an entity already has its own e-procurement system or bid board, the bids are automatically pulled from the entity's bid board on to the InstantMarkets platform. In addition, InstantMarkets also pulls all solicitations/bids from various federal government sites along with data such as location of performance that is relevant to the vendor community. This allows for total participation of all government entities in the county and availability of all bids in a single search engine to improve vendor discovery / participation. "A Google like search engine"*
- I like that the vendors do not need to have NIGP or UNSPSC or other commodity code knowledge to search.

5. Customizations/Extensions – p. page 17 - 18

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck, or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate, or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade, or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- WebProcure is a COTS solution. Proactis does state that it has been designed to allow it to be configurable and fully extensible without requiring code development. They point to the areas of platform, templates, and supplemental data fields of examples of such.

6. Alternative Funding Models – p. page 18

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- No alternative funding proposed. They are open to discussion and options.

7. Contract Transition and Flexibility – p. page 18

- Proactis answers this in one sentence: *Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.*

B. Functional Requirements: pages 19 – 98

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 19 - 22

- 1-C-“Customization/Extension” and 1-ID “In Development”, 4 – TP”ThirdParty”
 - 1 – Medium
- Gen12 – Searching for attachments by file name. Proactis has marked this one as A and ID. **CLARIFY** what is in development.
 - GEN25 – in order to meet this requirement of sending from the State’s domaine’s, e.g., maine.gov, proper access must be granted WebProcure to use State’s email servers. **This could be a concern or potential problem for some State’s.**
 - Gen27 – **Marked as TP. But probably should be N as Proactis system does not provide the ability for administrative fee invoices to be created and disseminated automatically in accordance with the state's pre-determined billing cycle.**
 - Gen28 - **Marked as TP. But probably should be N as Proactis system does not provide functionality to track payment of supplier administrative fees, create second and final notices for unpaid fees, and create reports on state-determined collection metrics.**
 - Gen32 – **Partially** meets the requirement of required languages.
 - Gen36 – WebProcure supports (will integrate with) Esignature, **but does not** have it as part of their software. Additional fees apply for this.
 - Seem that the rest of the requirement are fully met.

2. Supplier Portal. Tab 3, SPR-1 through SPR-23 and - p. 23

- 1-C-“Customization/Extension”, 1-TP-“Third Party”
 - 2 – Medium
- An inline narrative **was not provided** in the technical proposal.
 - Vendor Management module is used.
 - Many of the deliverables are marked with “integrated suppliers” **CLARIFY** difference of what integrated suppliers vs. suppliers can do and what is meant by integration.
 - Suppliers self-register on registration page on the State’s website and maintain their profiles thereafter.
 - SPR 18 – Proactis asked for further context/information to answer this. **CLARIFY**
 - SPR 19 – system needs a third party to be able to submit administrative fee payments.
 - SPR 23 – System does not have the ability to let suppliers initiate a contract change from within the system.

3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 and p. 24 - 29

- 6-“INT-Integration/interface”, 1-“C-Customization/Extension”

- b. 1 – High
 - WebProcure gives vendors the ability to self-register 24/7 directly from State's website using Proactis's white-label, java applets. The State defines the data fields, documents, requisite information, and process flow.
 - VDR 19 – 27: A majority of them require integrating a third party to automatically verify the IRS TIN/Name, Debarment status, licensure with state, state tax registry, OFAC list, and SOS certs.
 - VDR 43 – will require a high level of customization to obtain pre-qualification functionality to control access to be able to bid on specific categories of goods/services. Currently the workaround is to add "gating" questions.
 - Rest of requirements seem met.
- 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 30 - 32
 - a. 1-"INT-Integration/interface"
 - BPRT 2 – "The eProcurement Buyer Portal must, for State employees, provide secure login capabilities." May require integration, Proactis's solution supports single sign-on for secure authentication of State employees.
 - Meets rest of requirements in the Buyer Portal arena.
- 5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 33 - 35
 - a. 1-"INT-Integration/interface"
 - b. 1 – Medium
 - NEED 5 – Requires Integration. *"Checking stock levels or availability would require integration with 3rd party solutions. Users have the ability to search contracts, create informal (quick quote) or formal solicitations or search the catalog for goods/services at contract rates."*
 - Meets the rest of requirements in Need Identification.
- 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 36 - 54
 - a. 6-"INT-Integration/interface", 6-BP "Business Process", 7-"C-Customization/Extension", 1-ID "In Development", 1-INT-"Integration/interface", and 10-N"Not Available"
 - b. 2 – Medium, 13 - High
 - **PRD 3** - Proactis system unable to create PO to not be dispatched, but they can integrate with the State's ERP system and then not dispatch the PO once created.
 - **PRD 7** – Meeting this requirement is contingent on upon the State's ERP system.
 - **PRD 8** – Did not answer. **CLARIFY**
 - **PRD 9** - Purchase requests for similar items cannot be combined into a single purchase order.
 - **PRD 19** – Partially meets the requirement.
 - **PRD 46 and 47** – Can support State's chart of accounts, but must be integrated from State's ERP over to the Proactis system.
 - **PRD 57** – The solution supports user-defined request types. However, the different types do not dynamically create different supplemental fields.
 - Meets rest of the PRD requirements
 - **WRK 5** – Solution does not meet deliverable (does not restrict purchase order creation into a new biennium).
 - **WRK 27** - Solution **does not have/ meet requirement** of workflow based on request type.
 - Meets rest of the WRK requirements
 - **PO 9** – Partially meets requirement. Can not support organization level field configuration.
 - **PO 26 – 28:** BP on these *"A request by an authorized user requiring no approval automatically creates a PO."*
 - Meets rest of the PO requirements
 - Can manage user Pcard data in the system.
 - System complies with PCI standards.
 - **PC 8 – 21: Other than PC16. Requirements not met.** *"PCard reconciliation would occur in the ERP."*
 - **RC 16:** Partially met. System can over receive, but does not enforce a commodity, dollar, or percentage tolerance.
 - **RC 19 – Not met.** Routing approval occurs with the invoice

- **RC: 21: Not met.** System does not handle unit of measure conversions.
 - Meets rest of the RC requirements
 - Integrated suppliers can electronically deliver invoices via EDI, cXML, etc.
 - Meets rest of the INV requirements
- 7. Catalog Capability** - Tab 3, CAT-1 through CAT-40 and - p. 55 - 63
- a. 1-BP “Business Process”,
 - CAT 6 and 7 - There is no limit to number of catalogs or items within catalogs.
 - CAT 14 – can enter zero-dollar amounts.
 - **CAT 19** – System does not meet requirement through ability to enter a negative dollar value; instead, it’s a workaround of creating credit memos.
 - Meets most of all the Catalog Capability requirements.
- 8. Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 64 - 79
- a. 5-TP-“Third Party”, xx-CF “Configuration Item”, 2-BP “Business Process”, and 7-“C-Customization/Extension”,
 - b. 6 – Medium
 - SRC 12 – 13: A third party solution (reverse auction and surplus auction) is required to meet this requirement.
 - **SRC 34 – Does not meet requirement.** Solution does not contain Version control to track changes to documents, terms/conditions, and templates.
 - **SRC 43 - Does not meet requirement.** The solution does not provide the ability to temporarily or permanently re-assign work between users within the defined organizational hierarchy.
 - **SRC 65 - Does not meet requirement.** System does not automatically eliminate duplicate e-mail addresses from the Supplier e-mail list.
 - **SRC 82 - Does not meet requirement.** The solution does not provide the ability for users authorized to access the solicitation to create documents, notes, and attachments (any size or type) to a solicitation that are for internal purposes only (e.g., administrative changes) which (1) will not create an Addenda/Amendment to the solicitation; (2) will not publish to the state's public procurement website and (3) will not send electronic notifications to suppliers.
 - **SRC 82 - Does not meet requirement.** The solution does not have the ability to have the system hide the name of the suppliers;
 - Meets most of the remaining SRC requirements.
- 9. Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 80 - 90
- a. 1-TP-“Third Party”, 1-N “Not Available”, 3-“C-Customization/Extension”,
 - b. 3 – Medium
 - **CNT 6 – 7: Does not meet requirement.** Software does not contain version control to track changes to documents and templates; and Check-in/out capabilities for maintenance/management of documents and templates with audit history of changes.
 - **CNT 9 - Does not meet requirement.** Software does not contain the capability to identify templates and contracts that include documents, terms/conditions and specifications that have been updated.
 - CNT 12 – Solution does not have ESignature, but will integrate with Esignature third party solutions.
 - CNT 41 – **Proactis does not answer.** Asks for more information.
 - Remaining CNT requirements are met.
- 10. Vendor Performance** Tab 3, VPE-1 through VPE-25 and - p. 91 - 93
- a. 2- C Customization/Extension”, 1-TP-“Third Party”, 3 – BP “Business Process”,
 - b. 1 – Medium
 - **VPE 10: Fees** and invoiced payments would need to be pulled from TP and put into system to be tracked for KPIs.
 - **VPE 14 and 15: Does not meet requirement.** Software does not support offline templates. They offer a workaround of an informal event could be created to solicit this feedback.
 - **VPE 17: Does not meet requirement.** Software does not provide cure templates for contracts that are in default based on the performance issues.

- **VPE 18 :** It seems the State will manually need to update the specific contract; whereas the Contractors can perform the uploads.
- **VPE 20: Does not meet requirement.** Software does not provide the ability to send notifications to the buyer/analyst when contract items are ordered without using the contract number.
- **VPE 25:** There is no size limit for any safe file type attachments.
- **Meets most of the remaining VPE requirements.**

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 94 - 98

a. 1- INT"Integration/interface"

- **Meets all of the PDA requirements with one requirement requiring an integration.**

C. Technical Requirements: pages 99 - 125

1. Availability. pages 99 - 100

The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- **Yes – they explain their availability well and seem to meet. A bit of concern with the 8 hours recovery time as an object. This seems like a bit long.**

2. Accessibility Requirements. page 100

The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.

- **Meets the requirement.**

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 101 - 102

- **Ad hoc reporting module is a good module for viewing audit info.**
- **Meets these requirements.**

4. Browsers Supported - p. 103

- **Chrome 70 or newer**
- **Firefox 68.4 or newer**
- **Microsoft Edge 80 or newer**
- **Internet Explorer 11 (NOTE: As of August 2021, Internet Explorer 11 is no longer being supported by Microsoft.)**
- **Safari 13 or newer**

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 103 - 104

- **Meets these requirements.**

6. User Authentication RTM: Tab 4, TECH-21 through TECH-25 and - p. 105 - 106

a. 1- BP"BusinessProcess", 1-"C-Customization/Extension"

- **TECH 21: State's Requirement - The eProcurement Solution should provide 2-factor authentication capabilities. Concern as WebProcure single sign-on. Doesn't discuss 2-factor.**
- **TECH 25: Currently doesn't have this requirement. – provide capability to automate acceptance and tracking off user acceptable use agreements and electronic notice...**

7. Federated Identity Management – Pages 49 – 50 and - p. 107

- **For single sign-on, WebProcure uses Ping Identity's Federation Server to connect with the State's authentication service using standard SAML message platforms.**

8. Data Conversion RTM: Tab 4, TECH-26 through TECH-34 and - p. 107 - 109

a. 1-"INT-Integration/interface", 1-"C-Customization/Extension",

b. 5 – Medium, 2 High

- **Bulk upload tools.**
- **They provide a data conversion / migration tasks of responsibilities of parties' chart (page 107) – Would want to review in negotiations.**

9. Interface and Integration RTM: Tab 4, TECH-35 through TECH-60 and - p. 110 - 113

a. 19-"INT-Integration/interface"

- b. 19 – Medium
 - Meets all matrix requirements either out of box or by integration.
 - WebProcure is ERP agnostic capable with real-time integration with use of ProcureLINK (powered by webMethods).
- 10. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 114 - 115
 - Supports Microsoft Word products.
- 11. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 116 - 117
 - Yes, a responsive design framework, but no application.
- 12. **Mobile Applications** - TECH 62 and - p. 118
 - Accessible from any mobile device or tablet with internet connection; however, no application.
- 13. **Data Ownership and Access** - p. 118
 - Proactis states that the ownership of all data within the system is at all times the States.
- 14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 118 - 119
 - Proactis does not archive or purge State data.
- 15. **Disaster Recovery Plan** - p. 120
 - State they maintain a plan.
- 16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 120 - 121
 - The SaaS subscription provides two environments:
 - Production
 - UAT / Training
 - Proactis maintains the following environments; however, these environments are not customer accessible.
 - Development
 - QA
- 17. **Solution Technical Architecture** - p. 122 - 123
 - Webprocure is a Java based application
 - XML data formats
 - CSV (Comma Separated Values)
 - Tab separate file
 - Microsoft Excel
 - xCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
 - EDI (Electronic Data Interchange)
 - Communication data file types
 - FTP over secure 3-DES VPN tunnel
 - Secure FTP or SFTP
 - SCP or secure copy protocol
 - Secure HTTP or HTTPS
- 18. **Solution Network Architecture** - p. 123 - 125
 - WebProcure is hosted in the US at a Flexential facility. The facility is Tier 1 hosting providers with five-level security defenses, including biometric scanning and 24/7 internal and external video.
- 19. **System Development Methodology** - p. 125
 - Use agile methodology for software development.
 - Customers get an opportunity to review the updates in the UAT environments.
- 20. **Service Level Agreement** - p. 125
 - Proactis states: "...will work with each Participating Entity to mutually agree to a SLA framework that governs each agreement in proportion to the scope of work. Holistically, Proactis supports this framework."
- D. **Security Requirements:** p. pages 126 - 136
 1. **Cloud Security Alliance (CSA) Compliance**
 - CAIQ completed.
 2. **Security and Privacy Controls** partially provide the requirement of meeting the NIST SP 800-53 requirements.
 3. **Security Certifications** – Only meet two certificates of the 9 provided in the RFP. However, list many others they do have. Page 126

4. **Annual Security Plan** Discussed the annual security plan and they can partially provide the requirement of meeting the NIST SP 800-53 requirements.
5. **Secure Application and Network Environment** - nothing to add.
6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.
 - Requirements in this section are met.
7. **Data Security** – Proactis utilizes a primary and secondary data center (500 miles apart). They list many additional failsafe measures they feel aid data security (pages 131-134)
8. **Personally Identifiable Information Protection** – say they have and provide a link.
9. **Security/Privacy Issue Occurrence** – nothing to add – say they have.
10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add – say they have.
11. **Security Breach Reporting** – nothing to add – say they have.

E. Implementation Services Requirements: 137 - 211

- **Project Management** p. 137 – 192
 - PM process well defined. A typical PM.
 - Key aspects of the Proactis' project management methodology include, among others, these primary critical components:
 - Project Planning
 - Project Tracking, Oversight
 - Change Control/Configuration Management
 - Communication Management
 - Issues Management
 - Document Management
 - Schedule Management
 - Subcontractor Management
 - Proactis states they developed a preliminary Project Workplan and attached it. The workplan covers 2/4/2019 to 7/22/2020. Their dates are outdated. The time range of a 1.5 years may work for small project. They have it marked as a "Simple Project Plan".
 - Did a great job providing the staffing plan and key positions with resumes to identify skills and qualifications, etc.
 - Outlined responsibility roles and activities in a graph (pages 156 – 160). **Should mark this area for review for negotiations as needed.**
- **Project Implementation Methodology** p. 193 - 198
 - Use iterative and agile methods and the Kanban methodology.
 - The PM implementation approach is standard.
 - Implementation methodology is outlined in phases with key tasks/deliverables under each:
 - Project Planning
 - Solution Design
 - Solution Build
 - Test Readiness
 - Solution Deployment
 - Transition
- **Catalog Support Services** p. 199 - 200
 - Yes, can supply. Key work steps and deliverables in the implementation phase include:
 - Supplier and spend assessment to identify and prioritize contracts as potential for hosted or punchout catalog
 - Conversion plan for catalog data (i.e., contract line item or legacy catalogs)
 - Creation of hosted catalogs
 - Setup/configuration of punchout sites
 - On-boarding and training of suppliers to prepare them to manage catalog content
 - Training of State support staff to assume catalog management duties
- **Data Conversion Services** p. 201
 - Can provide. Has upload tools to help in data conversion and migration of legacy data.

- **CLARIFY.** Nothing is straightforwardly addressed on the cleansing of data; however, in looking at the matrix provided on data conversion (page 201) it looks like the State is possibly responsible for this (*Develop data extract from existing system*).
- **Interface/Integration Development Services** p. 202 - 203
 - ProcureLINK is utilized to integrate numerous systems.
 - WebProcure is capable of real-time integration with a variety of external systems and ERPs.
 - The data formats that are supported by WebProcure are as follows:
 - XL (Extensible Markup Language)
 - CSV (Comma Separated Values)
 - Tab separate file
 - Microsoft Excel
 - XCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
 - EDI (Electronic Database Interchange)
 - WebProcure typically utilizes the following communication conduits for the exchange of the aforementioned data file types:
 - FTP over secure 3-DES VPN tunnel
 - Secure FTP or SFTP
 - SCP or secure copy protocol
 - Secure HTTP or HTTPS
- **Organizational Change Management (OCM Services)** p. 203 - 205
 - Proactis discusses the customers and processes that will be impacted by OCM services and how it will affect them.
 - They provide a framework of the key processes in OCM.
 - There is no discussion about how the actual implementation, assessments they will use, type of OCM (i.e., Prosci) using, analysis tools to be used, etc. to provide the OCM.
- **Training Services** – p. 205 - 208
 - Training needs assessment – will meet and work with State to customize a training plan. Training will be provided at multiple points during the process.
 - Training plan –
 - Typically begins with broad based training sessions for large groups (remote web-based), they do offer onsite, but recommend remote. State data (live) will be used.
 - Train the trainer plan program suggested next.
 - Train the system admins
 - Train the supplier management admin.
 - Attached an example of a full system training plan along with hours (page 206)
 - Training materials - they provide online training portal with a FAQ section , learning videos, and interactive tutorial videos.
 - Suppliers can for help or use the online training portal.
- **Help Desk Services** - Tab 6 IMPL 1 – 5 and – p. 208 – 210
 - 1-ID-“In Development”, 1- INT”Integration/interface”
 - Client-facing support is available:
 - Mission critical: 24/7.
 - First level support: Monday- Friday, 8:00 a.m. to 8:00 p.m. EST, excluding holidays.
 - Online context sensitive help that includes video tutorials is available for both the State and its suppliers.
 - Meets first three matrix requirements.
 - IMPL3 - Chat tool not available yet. A system update is promised “sometime” in the near future.
 - IMPL5 – **CLARIFY** – do not seem to fully answer.
- **On-Site System Stabilization Support** – p. 211
 - Proactis will provide the 3 months post project stabilization support.
 - Additionally they will assign to the State a Customer Operations Manager (COM) and a Strategic Account Manager (SAM) for the lifecycle of the Contract.

F. Managed Services Requirements: page 212

- Proactis has marked this section as N/A. This would indicate that none of the below services are being offered after implementation. **This may be Concerning.** **Note:** Maine has called this a requirement, but do state: *Bidders may propose to provide any of the following services separate from the services proposed in the implementation section of this RFP.*

1. **Solution Support**
2. **Organizational Change Management (OCM Services)**
3. **Training Services**
4. **Catalog Support Services**
5. **Help Desk Services**
6. **Transition Out Assistance Services**

G. Other Available Services: RTM: Tab 7 MNGD-1. Page 213

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- **The inline narrative is not provided**
- The matrix is completed; however, MNGD-1, **they do not meet the requirement.** They will consider a third party performing the monitoring of their system using an independent response time measurement service vs. handling it internally (**this would result in extra costs**).

H. Video Demonstrations: Page 214

- Yes, provided. It was a bit clunky in accessing it, as Proactis provided a PW and seven different videos that made up the demonstration. The PW needed to be entered for each video. Not as professionally presented as others. Once inside and watching
- Total time 53:23 minute demo, which was beyond the 45-minute maximum length requirement (page 47 of RFP)
- Demonstrated Missouri and RI's website, which was nice to see how another State uses the system.
- Was set up sequentially in how a typical procurement might take place and was able to view screens.
- Solution look seems outdated.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **WEBPROCURE** (by proactis) designed, built, and developed by public sector professionals specifically for state and local government users. This source-to-pay (S2P) system incorporates industry best practices for the public sector. Available as a Software-as-a-Service (SaaS) solution, WebProcure is capable of real-time integration with a variety of external systems and ERPsvia our enterprise-integration platform ProcureLINK. Modular platform offers

- vendor management,
- solicitation management,
- contract management,
- catalog management,
- request management,
- order management,
- invoice management,
- analytics and reporting,
- supplier portal
- public components.

User Experience Single point of entry home page supports customization for personal as well as organizational dashboards

Bidder Best Practices and Roadmap **A Configurable off the Shelf (COTS) solution, which is designed and delivered as a SaaS model.** deliver releases approximately 6 -8 times a year.

Innovations and Value-Added Features/Services partner, Civic Initiatives, the State can benefit from numerous value-added services - Acquisition support services, strategic procurement transformation, procurement automation success. InstantMarkets a new generation of bids and contracts search engine,

Customizations/Extensions **WEBPROCURE** highly configurable and fully extensible without requiring complex code development. WebProcure enables business process and facilitates additional user capabilities through workflow rules in the different application modules. Templates are used throughout the solution to serve as a consistent and approved structure for users to perform an activity efficiently.

Alternative Funding Models **Proactis is open to additional funding models and will engage with each potential buyer on an account-by-account basis when specific detail is known.**

Contract Transition and Flexibility Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.

Functional Requirements

Technical Requirements

Availability system availability percentage ?????? current Recovery Time Objective is less than 8 hours.
UPS, redundant HVAC, fire suppression , physical security
Accessibility Requirements designed with Section 508 standards in mind; Web-Based Intranet and Internet Information Applications Standards (section 1194.22)
Audit Trail and History audit engine logs all user activity including changes at the field level with date and time stamps. WebProcure's **automated** audit tool also provides a **manual** audit feature to capture events like phone calls and emails, which occur outside of the system. ad hoc reporting module provides a quick and easy way for you to view audit information.
Browsers Supported • Chrome 70 or newer
• Firefox 68.4 or newer
• Microsoft Edge 80 or newer
• Internet Explorer 11 (NOTE: As of August 2021, Internet Explorer 11 is no longer being supported by Microsoft.)
• Safari 13 or newer
User Accounts and Administration hierarchical structure for assigning roles and permissions to multiple organizations and users within each organization. Access is controlled at the top, starting at the enterprise level, where enterprise-level users determine appropriate access levels to a set of agencies and their respective users. Each module has associated roles, permissions, and scope parameters.
User Authentication username and password or via single sign-on (SSO). Passwords must be at least 8 characters in length, must be a mix of upper-case letters, lower-case letters, numbers, and special characters, and must not be the same as any password used within the past five (5) generations. For SSO, we use Ping Identity's Federation Server to connect with the State's authentication service using standard SAML message platforms
Federated Identity Management– see user authentication above

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s): 1

DATE: 12/27/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Data Conversion variety of bulk upload tools to aid in data conversion and the transfer of legacy data. Bulk upload import tools include data related bill to / ship to addresses, contracts, solicitations, and vendors. Bulk upload tools allow our customers to collect or export data from existing data sources and format them into an easy to use Excel file. The Excel file can then be uploaded into WebProcure by a system administrator.

Interface and Integration WebProcure is ERP agnostic. data formats supported by WebProcure are as follows:

- XML (Extensible Markup Language)
- CSV (Comma Separated Values)
- Tab separate file
- Microsoft Excel
- xCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
- EDI (Electronic Data Interchange)

Office Automation Integration supports Microsoft Office suite products

Mobile Device Support WebProcure built within a responsive design framework accessible from any mobile device or tablet with an Internet connection.

Mobile Applications Currently, there are no apps required to access any of the WebProcure modules.

Data Ownership and Access at all times and will always remain vested in the State. At no time will Proactis have title to data provided by the State, wherever located. The State has access within numerous areas of the solution to download its data on demand without cost.

Date Retention, Archive and Purge Considerations Proactis does not archive or purge State data. If specified and mutually agreed to in writing, Proactis IT Operations will execute against the policy retention schedules on behalf of the State to ensure compliance

Disaster Recovery Plan disaster recovery plan designed to combat any number of eventualities which might interrupt service. WebProcure is hosted in both a primary and secondary data center with full replication between locations and a distance of more than 700 miles between each data center. In the event of a system failure that requires implementation of our disaster recovery plan, the applications can be transferred to the secondary location and recovered. In the event of a complete site failure where a disaster has been declared, utilizing VMware's Site Recovery Manager (SRM), Proactis will stand up the production application servers, synchronization of file share data will stop, and the servers will be taken out of read only mode so they are available to the application. Databases will mount the latest snapshot from the replication manager and will be brought online. The Proactis disaster recovery process is regularly tested (with clients?) and audited to ensure compliance with published and audited disaster recovery procedures, and as part of our ISO 27001 certification.

Solution Environments two (2) instances: Production and UAT/Training environments. development and QA instances are not customer accessible.

Solution Technical Architecture WebProcure is a java based application developed for cloud deployment. flexible scalability depending on transaction capacity with the ability to scale to each customer's current and future growth rates. servers are load balanced using redundant Cisco ACE Load Balancers. utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange.

Solution Network Architecture hosted in the United States at a state-of-the-art hosting facility operated by Flexential, which is a Tier 1 hosting providers with five-level security defenses, including biometric scanning and 24/7 internal and external video. The data centers are more than 500 miles apart. They are compliant with numerous information security

standards including SSAE 18 Type II standards which ensures our solution offering demonstrates established control objectives and effectively designed control activities. We have front-to-back fault tolerance and redundancy built into our system. From routers and switches, to servers, to power sources, everything is redundant in the environment. We replicate data across a secure data connection between our primary and secondary data centers utilizing block level duplication on our SAN solution. Our current Recovery Time Objective is less than 8 hours. Our systems can be rolled back to any point in the preceding 30 days with our EMC Recover Point appliance. File level replication and storage has a snapshot every 2 weeks and is saved for 6 months. Database snapshots (deltas) happen daily with two full backups (level 0) every week. These policies apply to applications servers, databases and file shares.

System Development Methodology Agile methodology for all software development. Customers get an opportunity to review the updates in our UAT environments.

Service Level Agreement Proactis will work with each Participating Entity to mutually agree to a SLA framework that governs each agreement in proportion to the scope of work.

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed – Do you have the capability to restrict the storage of customer data to specific countries or geographic locations?- NO

Security and Privacy Controls maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards which encompass many of the NIST SP 800-53 requirements. To illustrate Proactis' compliance with ISO 270001 and ISAE 3402 standards, Proactis conducts annual, independent third party audits and certifications. Upon request from a Client, Supplier is willing provide independent third party audit reports and/or certifications for ISO 27001 and ISAE 3402 SOC 1, Type 2 annually.

Security Certifications

- ISO27001
- PCI DSS
- ISAE 3402
- SOC 1 Type II
- SOC 2 Type II
- SOC 3 Type II
- NIST 800-53
- ITAR
- SSAE 18
- HITRUST CSF
- EU-US Privacy Shield framework

Secure Application and Network Environment addresses issues such as: which ports and services are required to support access to systems holding Customer data and limiting access to these points; firewalls; internet protocol specification for source and destination; authentication procedures; logical segregation; encryption; packet filtering; activity logging within the product and for the system infrastructure; implementation of security fixes and patches; data privacy; disaster recovery; business continuity; penetration and vulnerability testing; and access control. The Proactis mobile device policy is part of the Proactis security plan, and under this policy and the associated procedures Customer data is not accessible via mobile and portable devices.

Secure Application and Network Access secure data transmission protocols including SSL protocols, public key authentication, signing and encryption in relation to the WebProcure SaaS solution and the solution infrastructure. As a SaaS solution we do not have direct access to Customer systems/networks. Proactis supports modern standard such as TLS 1.2 and TLS 1.3. We allow no

non-encrypted traffic to be used in conjunction with our services. Integration data will normally be provided using either in-built web API's, SFTP or site to site VPN connectivity.

Data Security Proactis replicates data across a secure data connection between our primary and secondary data centers utilizing block level duplication on our SAN solution, and has a recovery point objection (RPO) of 30 minutes and a recovery time objective (RTO) of no more than **six hours (8?)** which support our business continuity plan.

Personally Identifiable Information Protection control objectives managing the security of personal data, access controls of information systems, and a robust privacy policy. Proactis' solutions are designed to require only the minimum personal data necessary to operate the solutions.

Security/Privacy Issue Occurrence Customers will be notified about security or privacy issues which involve their particular solution and/or service as soon as **reasonably possible** after Proactis has confirmed a security or privacy event has occurred.

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management **PROACTIS** projects are conducted according to a structured, well-defined, phased project life cycle.

- Project Planning
- Project Tracking, Oversight
- Change Control/Configuration Management
- Communication Management
- Issues Management (workflow)
- Document Management (workflow)
- Schedule Management
- Subcontractor Management

Proactis developed a preliminary project workplan. **One size fits all?** RACI chart outlines the activities and responsibilities in each phase of each solution workstream of the project. Extensive Representative Personnel Qualifications provided.

Project Implementation Methodology **Proactis** methodology utilizes iterative and agile methods for delivery, and structured risk and change management for the project management. Our product development organization utilizes highly optimized Kanban methodology enabling consistent delivery of products meeting customers' demands on time while continuously adapting to change on a weekly basis.

Catalog Support Services **Proactis** During the implementation phase of the project, our catalog enablement team will provide the services necessary for the initial launch of the marketplace. These services include the creation, loading, management, and maintenance of hosted catalogs and punchout sites. Key work steps and deliverables in the implementation phase include:

- Supplier and spend assessment to identify and prioritize contracts as potential for hosted or punchout catalog
- Conversion plan for catalog data (i.e. contract line item or legacy catalogs)
- Creation of hosted catalogs
- Setup/configuration of punchout sites
- On-boarding and training of suppliers to prepare them to manage catalog content
- Training of State support staff to assume catalog management duties

Data Conversion Services **Proactis** can provide assistance with both data conversion and data migration.

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Perfect Commerce
CATEGORY #(s): 1
DATE: 12/27/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Interface/Integration Development Services **Proactis** will work in conjunction with the customer to determine what interfaces and integrations are necessary for each particular project and will also assist in those integrations. The majority of the transaction interchanges take place through the integration platform ProcureLINK. ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange.

Organizational Change Management (OCM Services **Proactis** The first and most significant incorporation of OCM activities is during implementation, where OCM processes are embedded in tasks related to process design, configuration, report development and of course training. OCM framework; stakeholder management, change impacts, communication, change readiness, knowledge and training, sustainment.

Training Services **Proactis** During the discovery sessions we will perform a detailed walkthrough, or demonstration, of all the system modules with the relevant core team members. Proactis begins with broad based training sessions used to train large numbers of users. We will conduct as many web-based training sessions as is necessary to adequately train the anticipated 100+ users. In our experience, remote web-based training sessions are the most effective way to deliver end user training to a large number of end-users, but we can also conduct on-site, inperson trainings provided logistical constraints allow. All training exercises will be conducted on a live training environment with State data, which is by far the most effective hands-on learning experience. Trainees will be guided through customized training activities based on the State's business processes. Train-the-Trainer program has proven to be the most effective method to encourage customer ownership and system usage.

Help Desk Services Ongoing help desk support is available for both **buyers and suppliers** who interact with the State via our solution. Client-facing support is available 24/7 for mission critical items. First level procurement support is available Monday through Friday from 8:00 a.m. to 8:00 p.m. Eastern Standard Time, excluding holidays. All support staff, including Level 2 Development, is located at our US headquarters in Virginia. Support is accessible via email, telephone, and our on-line support ticketing system Help Desk

On-Site System Stabilization Support **Proactis** will provide resources as necessary to support a stabilization period of 3 months post project implementation. **Onsite not clear.**

Individual SME Comments:

General Principal and Requirements

- Uses WebProcure platform, COTS
- QUESTIONING-Vendor identity is unclear, perfect commerce, proactis, web procure, ProcureLINK, etc.
- POSITIVE-Modules are good. Can solution be only for certain ones or only for all?
- POSITIVE-Web Access makes easily available, App?
- QUESTIONING-The look and feel is very industrial looking
- INTERESTING-releases 6-8 times a year requires end user to test quite often
- QUESTIONING-civic initiatives at additional cost? Does this complicate the vendor/customer relationship?
- QUESTIONING-instant markets as third party or within team?
- POSITIVE-Templates are good

Functional Requirements

- QUESTIONING-Is vendor registration restrictive to where it could be a barrier to entry
- POSITIVE-Vendor KPI is a valuable tool if it is accurate
- QUESTIONING-Can data be exported from another source or solution?
- QUESTIONING-How are contracts negotiated? Versioning of edits available
- QUESTIONING-How are promotional price items available to buyers
- POSITIVE-Attributes (buy local, etc.) are presented well in shopping platform
- POSITIVE- Workflow appears functional for approvals
- NEGATIVE-No identification if level 2 catalog search available
- QUESTIONING (pg.67)-Select, remove or add vendors during bid creation is not an open bid
- QUESTIONING-Vendor performance is good, but based on what data?
- POSITIVE-the scheduling of reports is convenient

Technical Requirements

- POSITIVE-Data center infrastructure
- POSITIVE-SSO for ease of access
- QUESTIONING-Mobile functionality limited? Based on pg.116 direction not to use mobile devices as primary device.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce (Proactis)

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/9/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- POSITIVE-ISO certifications and standards
- QUESTIONING-RPO 30 mins, RTO 6 hours, how frequently utilized?
- POSITIVE-Data encryption at rest and in transit is preferred
- NEGATIVE-PII attempted access, will notify "as soon as reasonably possible" is not a comfortable position for the customer.

Implementation Services Requirements

- POSITIVE-Detailed project plan information provided
- POSITIVE-Meeting planning considers normal business obligations
- QUESTIONING-Activities and responsibilities (p.156) seem imbalanced with overabundance of state responsibilities
- QUESTIONING-Resumes have no names but specific work experience. Noncommittal appearance by bidder in not identifying that.
- POSITIVE-End user training appears beneficial, videos did not demonstrate such level of personal activity.

Managed Services Requirements

- Not Applicable

Video Demonstrations

- POSITIVE-Web Procure is cloud online solution
- INTERESTING- Modules, help has a great deal of information, impersonal
- QUESTIONING-Vendor Data platform seems like a word heavy form style
- POSITIVE-Appears solution can be customized for end user
- POSITIVE-Bid Board seems intuitive
- POSITIVE-Contract board and bid board connectivity is efficient
- NEGATIVE-Format of site is aged, could have a better presentation
- POSITIVE-Solicitations both formal and informal are good
- POSITIVE-Converting solicitation to contract is efficient
- POSITIVE-Request module provides clear information
- QUESTIONING-How are invoices entered, roles?
- POSITIVE-Scanning pdf invoices is a very good function
- POSITIVE-Scheduling reports is good

Individual SME Comments:

Overall

General Principal and Requirements

Key Solution Functionality Elements

5	This source-to-pay (S2P) system incorporates industry best practices for the public sector. Available as a Software-as-a-Service (SaaS) solution, WebProcure is capable of real-time integration with a variety of external systems and ERPs via our enterprise-integration platform Procure LINK.	
	Vendor Management	
	Solicitation Management	
	Contract Management	
	Catalog Management	
	Order Management	
	Invoice Management	
	Analytics & Reporting	
	Supplier Portal	
	Public Components	

User Experience

8-9	single point of entry to create new transactions.	
	The homepage can be customized	
	Because menu selections within each module are arranged similarly, knowing one module promotes familiarity with all other modules.	
	WebProcure was designed using responsive web design methods allowing the application to natively fit different tablet and smartphone formats. Rather than developing a standalone app, the responsive design enforces user roles and promotes security.

Bidder Best Practices and Roadmap

10	6-8 releases per year	
	Proactis will provide a Strategic Account Manager (“SAM”) who will work closely with you and meet with your team frequently to conduct business reviews and discusses challenges and opportunities you may have which we can support within the business.	

Innovations and Value-Added Features/Services

11	Acquisition Support Services	
	Strategic Procurement Transformation	
	Procurement Automation Success	

Customizations/Extensions

17	While WebProcure is a Commercial off the Shelf (COTS) SaaS based solution, we’ve designed it to be highly configurable and fully extensible without requiring complex code development	
	From a platform perspective, WebProcure enables business process and facilitates additional user capabilities through workflow rules in the different application modules. These workflow rules are built dynamically based on the properties of the State’s business document (e.g. solicitation pre-addenda, contract approval, requisition approval based on a specific commodity, etc.). Workflows can be serial or parallel.	
	Templates are used throughout the solution to serve as a consistent and approved structure for users to perform an activity efficiently. Our registration template is 100% customizable to capture vendor data and documentation unique to the State	

Alternative Funding Models

18	Did not offer	
----	---------------	--

Contract Transition and Flexibility

18	Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.	
----	---	--

Functional Requirements

DEPARTMENT/STATE: Purchasing North Dakota State University

General Functionality

19	Available as a Software-as-a-Service (SaaS) solution, WebProcure is capable of real-time integration with a variety of external systems and ERPs via our enterprise-integration platform Procure LINK. As a modular, role-based solution, WebProcure offers a number of flexible implementation alternatives which affords our customers the ability to solve their immediate needs all while ensuring expansion according to the future needs of their departments and agencies.	
	Vendor Management, Solicitation Management, Contract management, Procurement, Invoice management, Reporting and Analytics	
GEN 1-10	Yes	
GEN 11	No size restriction on attachments	strength
GEN 12-19	Yes	
GEN 20	Can match any version of commodity codes that the user is using	strength
GEN 21-26	Yes	
GEN 27-28	Would need third party to do administrative fee invoicing	weakness
GEN29-31	Yes	
GEN 32	Only English and French for languages	weakness
GEN 33	Yes	
GEN 34	SOM elements of the solution support future dating. Did not say what elements	weakness
GEN 35-40	Yes	

Supplier Portal

?	?	
SPR 18-23	No vendor compliant tool, Not native foundation to accept pay and No supplier request method for contract changes in tool	weakness

Supplier Enablement/Management

24	Supplier enablement begins with vendor registration. WebProcure provides vendors the ability to self-register 24/7 directly from your website using our white-label, java applets. The State defines the data fields, documents, requisite information, and process flow. While vendors provide basic business information, contact information,

DEPARTMENT/STATE: Purchasing North Dakota State University

	business certifications and licensure, commodity/service category codes using NIGP or UNSPSC as well as any unique State data elements.	

Buyer Portal

30	State users can access the WebProcure buyer portal directly by logging in via the login banner on the State's website or through single sign-on using the State's authentication service. The homepage can be tailored to include personal dashboards specific to the user and their role.	
----	--	--

Need Identification

33	Within each module menu, users simply navigate to create, view current, view historical or review/award (solicitations). With a single entry point to the application, the user is able to manage their request in a variety of ways.	
	Once the user submits their request, it follows a pre-defined approval path based on the State's business rules, the phase of procurement, the commodity being requested, and the type of request. Requests, solicitations, contracts and invoices all have dynamic approval paths based on the State's business rules	

Request through Pay

36	allows users to create multiple types of purchase requests, including catalog, round trip (punchout), and off-catalog requests. Catalogs can be generated for all contracts within WebProcure,	
	Requests can trigger contract release requests, generate orders, or begin a sourcing event.	
	WebProcure provides a central location for buyers to create, monitor, modify, and/or receive against purchase orders (POs). Buyers enjoy an easy, user friendly means to view existing State of Maine (NASPO ValuePoint) 39 © Proactis 2021 purchase orders, identify their status, print vendor details, review PO approval mapping, copy purchase orders to create new requests, view the order history, print, and if necessary, cancel an order or create a change order. WebProcure provides users the ability to sort and filter orders by a variety of PO attributes.	
	Users access a receiving list to enter order receipt information	
	WebProcure provides users with multiple way to create an invoice. Invoices can be created by buyers on behalf of a vendor incorporating

	one or more purchase orders. Alternatively, invoices can be created by the vendor via the secure portal incorporating one or more purchase orders. Regardless of who creates the invoice, it will be routed and approved based upon established business rules. Buyers can also create payment vouchers for non-purchase order items or issue credit memos for returns	
PRD 22	Jaspersoft is used for data analytic and reporting	

Catalog Capability

55	The WebProcure catalog shopping experience allows users to easily search hosted catalogs or punch-outs by any number of criteria such keyword, commodity, supplier, manufacturer, part number, contract, etc.	
	The advanced catalog is comprised of two primary elements: end user search manager and catalog manager. With search manager, requesters are able to find and compare goods and services across all suppliers in a unique guided experience, whether within a multi-supplier catalog or on an approved supplier's website.	

Sourcing/Bid Management

64	WebProcure features complete solicitation creation for formal (sealed) and informal (quick quote) requests such as RFPs, RFQs, and ITBs as well as bid evaluation, scoring and award. Dynamic workflow is available at pre-issue, pre-addendum and pre-award phases. Solicitation management supports multi-round evaluations as well as two envelope bid types to separate technical from pricing evaluations.	
	Sealed bids are stored in our lockbox until their official close while informal quotes can be reviewed and awarded at any time.	
	Prior to being finalized, the award recommendation can be routed for approval. Once approved, the award notification can be published to the winner, those not selected, or both.	
	Once published, the award report will appear on the State's public bid board. The solicitation can then be converted either into a contract or a request that will result in a purchase order.	
SRC 12	Reverse auction not available	weakness
SRC 34-35	Tracking changes to document and check in/check out are future versions	weakness
SRC43	Workload assignment is a future version	weakness

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

SRC 83	Third party for audio conference	weakness
SCR 117	Hide name of suppliers if a future version	weakness

Contract Management

80	The WebProcure Contract management solution provides users the ability to create and manage contracts, contract documents, and contract approvals for each organization all within a central repository.	
	Key capabilities of contract management are as follows: • Centralized visibility to all contracts, documents and attachments. • Unlimited contract types. • Templates based on contract type. • Support for contract amendments with version history. • Approval workflow for creation and amendments. • Supports request for amendments for those without permission to edit directly. • Full revision history. • Standard and custom notifications and reminders for both buyer and vendor. • Contract board for posting public contracts. • Supports diversity allocation by dollar or percentage. • Ability to flip a solicitation award automatically into a contract. • Hyperlink to original solicitation for historical reference. • Digital signature ready with DocuSign for both buyer and vendor signature. • Support for master contracts, Contract scorecards for performance evaluation. • Authorization to use applied to lower agencies/departments. • Single click ability to generate a procurement profile of all related documents	

Vendor Performance

91	WebProcure provides a Key Performance Indicators (KPI) framework to collect and manage vendor performance through customer-defined scorecard criteria. The scorecard provides the ability to create and assign KPIs to both vendor and buyer users	
----	--	--

Purchasing/Data Analytics

94	WebProcure provides a robust business analytics platform for users to transform transactional data into interactive reports and dashboards. The solution is delivered with standard reports built from years of experience in working with customers. WebProcure also offers ad-hoc reporting capabilities using a drag and drop report builder as shown below.

Technical Requirements

Availability

99	Our current Recovery Time Objective is less than 8 hours. Our systems can be rolled back to any point in the preceding 30 days with our EMC Recover Point appliance. File level replication and storage has a snapshot every 2 weeks and is saved for 6 months. Database snapshots (deltas) happen daily with two full backups (level 0) every week.	weakness
----	--	----------

Accessibility Requirements

100	WebProcure was designed with Section 508 standards in mind. In support of Web-Based Intranet and Internet Information Applications Standards (section 1194.22), WebProcure enables access for people with vision impairments who depend on external assistive products to access computer-based information.	
-----	--	--

Audit Trail and History

101	WebProcure robust audit engine tracks and records all activities throughout the system, thereby ensuring full transparency into the procurement process. The audit engine logs all user activity including changes at the field level with date and time stamps.	
-----	--	--

Browsers Supported

103	Meets requirements	
-----	--------------------	--

User Accounts and Administration

103	WebProcure provides a hierarchical structure for assigning roles and permissions to multiple organizations and users within each organization. Access is controlled at the top, starting at the enterprise level, where enterprise-level users determine appropriate access levels to a set of agencies and their respective users. Each module has associated roles, permissions, and scope parameters.	
-----	--	--

User Authentication

105	Users authenticate with WebProcure utilizing a username and password or via single sign-on (SSO). Passwords must be at least 8 characters in length, must be a mix of upper-case letters, lower-case letters, numbers,

	and special characters, and must not be the same as any password used within the past five (5) generations. For SSO, we use Ping Identity's Federation Server to connect with the State's authentication service using standard SAML message platform	
--	---	--

Federated Identity Management

107	a single login to access all authorized components.	
-----	---	--

Data Conversion

107	WebProcure has a variety of bulk upload tools to aid in data conversion and the transfer of legacy data. Bulk upload import tools include data related bill to / ship to addresses, contracts, solicitations, and vendors. Bulk upload tools allow our customers to collect or export data from existing data sources and format them into an easy to use Excel file. The Excel file can then be uploaded into WebProcure by a system administrator.	
-----	--	--

Interface and Integration

110	WebProcure is ERP agnostic. It is capable of real-time integration with a variety of external systems and ERPs via our enterprise-integration platform ProcureLINK powered by webMethods. ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange. Data can also be exchanged (import or export) via batch flat files for legacy systems or systems that are not capable of real-time distributed transactions like web services. The data formats that are supported by WebProcure are as follows: • XML (Extensible Markup Language) • CSV (Comma Separated Values) • Tab separate file • Microsoft Excel • xCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library) • EDI (Electronic Data Interchange) WebProcure typically utilizes the following communication conduits for the exchange of the aforementioned data file types: • FTP over secure 3-DES VPN tunnel • Secure FTP or SFTP • SCP or secure copy protocol • Secure HTTP or HTTPS

Office Automation Integration

114	WebProcure provides various locales throughout the system to attach documents, download documents (e.g. solicitations, contracts, orders, invoices), and import and export transaction data then utilize this data in numerous ways including within the reporting module and WebProcure's audit engine. Each of the locales supports Microsoft Office suite products. For example, within the solicitation module, solicitation line items, bid tabulations, and evaluation scores can be exported to Excel for distribution to a wider team or further analysis and then reimported for addition review and analysis. Finally, if necessary, data can be cut and pasted into text fields throughout the system to streamline content creation	
-----	---	--

Mobile Device Support

116	Accessible from mobile device but no App	weakness
-----	--	----------

Mobile Applications

118	Accessible from mobile device but no App	weakness
-----	--	----------

Data Ownership and Access

118	Ownership of any and all data provided by the State whether existing in electronic, magnetic or any other tangible or intangible form that is uploaded, collected, stored, held, hosted, located or utilized within the system is at all times and will always remain vested in the State.	
-----	--	--

Date Retention, Archive and Purge Considerations

118	Proactis does not archive or purge State data	weakness

Disaster Recovery Plan

120	Proactis maintains a comprehensive disaster recovery plan designed to combat any number of eventualities which might interrupt service. WebProcure is hosted in both a primary and secondary data center with full replication between locations and a distance of more than 700 miles between each data center.	
	The Proactis disaster recovery process is regularly tested and audited to ensure compliance with published and audited disaster recovery procedures, and as part of our ISO 27001 certification.	

Solution Environments

120	As part of the SaaS annual services grant, customers are afforded two (2) instances: Production and UAT/Training environments.	
-----	--	--

Solution Technical Architecture

122	WebProcure is a java based application developed for cloud deployment. WebProcure allows for flexible scalability depending on transaction capacity with the ability to scale to each customer's current and future growth rates. Capacity and scalability can be expanded by simply attaching additional hardware to the servers. Proactis monitors both database and server processing capacity on a continual basis. Our applications are scalable, both vertically (add more memory/processing power to the servers running the apps) and horizontally (add more servers to the application).	
-----	---	--

Solution Network Architecture

123	Tier 1 hosting providers with five-level security defenses, including biometric scanning and 24/7 internal and external video. The data centers are more than 500 miles apart. They are compliant with numerous information security standards including SSAE 18 Type II standards which ensures our solution offering demonstrates established control objectives and effectively designed control activities.

Secure Application and Network Environment

128		
-----	--	--

Secure Application and Network Access

Data Security

128	Proactis employs secure data transmission protocols including SSL protocols, public key authentication, signing and encryption in relation to the WebProcure SaaS solution and the solution infrastructure. As a SaaS solution we do not have direct access to Customer systems/networks. Proactis supports modern standard such as TLS 1.2 and TLS 1.3. We allow no non-encrypted traffic to be used in conjunction with our services. Integration data will normally be provided using either in-built web API's, SFTP or site to site VPN connectivity	
-----	---	--

Personally, Identifiable Information Protection

134	Proactis' solutions are designed to require only the minimum personal data necessary to operate the solutions. Given the nature of the solutions offered, Proactis does not require personal data of the type considered to be special categories of personal data (as defined in the GDPR), nor HIPAA data, nor Federal PII. Personal data used in the solutions is akin to that typically presented on a business card.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s): 1 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

	The centerpiece is the development and on-going maintenance of the project management plan (PMP). This plan provides a clear articulation of the overall objectives, scope, and strategy associated with the project effort. It documents the deliverables, key constraints, assumptions, and dependencies that frame the project.	
	Very detail project plan and responsibilities	

Project Implementation Methodology

194	Project Planning Develop and validate a detailed project plan; validate project schedule; commit project resources; formalize project goals; conduct risk assessment and mitigation analysis; kick-off communication; and project cadence. Solution Design Validate that the solution will meet business requirements; identify gaps and resolutions; document functional and technical specifications; administer change management; and ratify the end-state system. Solution Build Creation of technical developments, configuration, processes, and documentation required to support the defined solution; including test plans and supplier onboarding. Test Readiness Validate technical and process solutions which support business requirements, as well as, begin preparation for the training and deployment phases. Solution Deployment Enable solution through technical deployment, end user training, and supplier enablement. Transition Monitor solution as against key performance indices (KPIs); transition project to steady state teams; and document lessons learned	
-----	--	--

Catalog Support Services

200	The overall goal of our catalog enablement team is to initiate catalog use, making it easy for stakeholders to view and order materials online, with less human interaction and with improved accuracy. Together, with stakeholders, we will develop a catalog strategy with the goal of increasing catalog usage and the number of catalogs, year over year, with a goal of increasing spend under contract. In summary, the key on-going functions of the supplier enablement team post-implementation include: • In conjunction with the State, develop an ongoing catalog strategy and define catalog roadmap • Work with suppliers to receive and validate catalog content • Create and load new punch out and hosted catalogs • Perform testing on new catalogs • Maintain existing catalogs • Order

DEPARTMENT/STATE: Purchasing North Dakota State University

	form set up • On-board new suppliers • Provide inbound e-mail and call support • Perform approved maintenance on existing supplier data	
--	---	--

Data Conversion Services

201	See matrix	
	This process allows for the conversion and migration of both meta data such as titles, descriptions, active dates, vendors, contract amounts, etc. as well as any related attachments such as scanned images, insurance certificates, performance bonds, etc. The data migration and conversion tasks are shared between the Proactis implementation team and the customer's subject matter experts, IT staff and data "owners". The matrix below describes the standard distribution of responsibilities:	

Interface/Integration Development Services

202	The majority of the transaction interchanges take place through the integration platform ProcureLINK. ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange. WebProcure is capable of real-time integration with a variety of external systems and ERPs

Training Services

205	Mostly web based training, can conduct on-site training	
	Train the trainer	
	See chart for list of training and how long they take.	
	Suppliers can call us directly for help related to WebProcure. We also provide material to suppliers that contains step-by-step instructions on how to review and respond to bids and purchase orders; how to manage the supplier user profiles; and how to create invoices. Suppliers can also access the following training materials online: • Computer Based Tutorials • Video recordings of instructor lead training sessions	
	For all future releases, a full set of release notes explaining new functionality and enhancements will be made available to our customer's prior to the release date. When there is significant functionality in a release, the State will be offered a training session in addition to the release notes	

Help Desk Services

209	Ongoing help desk support is available for both buyers and suppliers who interact with the State via our solution. Client-facing support is available 24/7 for mission critical items. First level procurement support is available Monday through Friday from 8:00 a.m. to 8:00 p.m. Eastern Standard Time, excluding holidays. All support staff, including Level 2 Development, is located at our US headquarters in Virginia.	
-----	---	--

On-Site System Stabilization Support

211	As part of our standard implementation methodology, specifically the transition phase, Proactis will provide resources as necessary to support a stabilization period of 3 months post project implementation. This resource(s) will monitor and facilitate system setup and configuration changes; issue assessment and resolution; system performance and stability monitoring; and system use assessment

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments: - Response says PROACTIS

Organization Qualifications and Experience – Consulting Firm

1. Overview of the Organization
 - Founded in 1996 with over 1100 clients
 - WebProcure
 -
2. Previous Projects
 - State clients – provided links to some websites
 - Partner projects – State clients
 -
3. Subcontractors
 - Civic Initiatives – CPPO and buyer resources
 -
 -
4. Organizational Chart
 - Suppled org chart
 - Did not supply role names or explain responsibilities for each role
 -
5. Litigation
 - Bidder stated no litigation to report.
 -
 -
6. Financial Viability
 - Submitted annual reports instead

Individual SME Comments: The video that was supplied was very helpful. This response was acceptable except for the vendor stated that section F was not applicable? It would be beneficial if the list of concerns listed were addressed so we could accurately be scored.

Again, I believe the requirements where verification is needed should be requested as this will help improve this suppliers solution. I have given an example below where it stated they could meet the requirement, and then the next requirement which is similar in nature states it is external to the system:

- CONCERN - EPROC-GEN-26 – Line 30 - Tracking admin fees has been a difficult requirement to meet. This response seems too vague to guarantee they can meet the requirement. **Next requirement (below) it was stated admin fees is external to the system, so how can you report on them from the system in this requirement?**
- CONCERN - EPROC-GEN-27 and EPROC-GEN-28 – Lines 31 and 32 - Admin fees invoicing is external to the system.

General Principal and Requirements – Page 5

Key Solution Functionality Elements – Page 5 thru Page 7

- WebProcure is the solution name.
- ProcureLINK is the enterprise-integration tool.
- Modular, role-based solution.
- Provided list of all components on Page 5 of response

User Experience – Page 7 thru Page 9

- All modules integrate with each other.
- Home page can be either personal or organizational dashboards. Can view multiple dashboards from the home page. Page 8
- Wizard-driven functionality when entering data. Page 9

Bidder Best Practices and Roadmap – Page 10

- Deliver releases 6-8 times a year.
- STRENGTH - Provides a Strategic Account Manager (SAM) who will work closely with the state team on business reviews and discuss challenges and efficiencies.

Innovations and Value-Added Features/Services – Page 11 thru Page 17

- Civic Initiatives is a tool used to provide value-added services. Page 11

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 1

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Supports the State in 3 main areas of focus.
- #1 – Acquisition Support Services – Direct support of acquisitions events. Page 12
- #2 – Strategic Procurement Transformation - Find difference between procurement and purchasing
- #3 – Procurement Automation Success – Helps implement procurement automation.
- InstantMarkets is a new generation of bids and contracts search engine.
- Vendors and contractors can search keywords in the bid search engine. Page 15
- Provided example of this functionality in Figure 2 Page 17

Customizations/Extensions – Page 17 thru Page 18

- Expansion of additional capabilities in the areas of platform, templates, and supplemental data fields. Page 17
- Platform (workflow) and templates are mentioned as possible areas of improvement. Page 18

Alternative Funding Models – Page 18

- Here is the response for this section – “Proactis is open to additional funding models and will engage with each potential buyer on an account-by-account basis when specific detail is known.” Page 18

Contract Transition & Flexibility – Page 18

- Here is the response for this section – “Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers. “

Functional Requirements – Page 19

General Functionality – Page 19 thru Page 23 – **Inserted “screen shots” of their RTM response into the narrative response.**

- Supplied table of solution modules available in WebProcure on Page 19
- STRENGTH - EPROC-GEN-3 – Line 7 – Departments can post bids from their departments separately from other departments.
- CONCERN - EPROC-GEN-12 – Line 16 – Search across system for attachments by file name is in development.
- CONCERN - EPROC-GEN-20 – Line 24 - Licensing for supporting version of the commodity code set in the ERP is the responsibility and cost of the state.
- CONCERN - EPROC-GEN-26 – Line 30 - Tracking admin fees has been a difficult requirement to meet. This response seems too vague to guarantee they can meet the requirement. **Next requirement (below) it was stated admin fees is external to the system, so how can you report on them from the system in this requirement?**
- CONCERN - EPROC-GEN-27 and EPROC-GEN-28 – Lines 31 and 32 - Admin fees invoicing is external to the system.
- CONCERN - EPROC-GEN-32 – Line 36 - Our solution supports English and French today. Additional languages can be added at an additional cost per language.
- CONCERN - EPROC-GEN-38 - Line 42 - “Proactis has many different subscription methods depending on customer and situation. Exhibit 3 provides various scenarios that we will address” Not sure what Exhibit 3 is?

Supplier Portal – Page 23 - **Inserted “screen shots” of their RTM response into the narrative response.**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 1

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SPR-18 – Line 22 - The supplier portal does not allow vendors to respond to complaints.
- CONCERN - EPROC-SPR-19 – Line 23 - The supplier portal does not allow vendors to submit administrative fee payments.
- CONCERN - EPROC-SPR-23 -Line 27 - Suppliers do not have the ability to initiate a contract change from the supplier portal.

Supplier Enablement/Management – Page 24 thru Page 30. **Inserted “screen shots” of their RTM response into the narrative response.**

- Vendors can self-register.
- State is notified on new registrations and can approve or reject the record.
- Changes on certain fields in the vendor registration can trigger workflow and needs to be approved.
- Vendors can perform all procurement functions via their portal.
- Module provides supplier performance.
- Listed capabilities of Vendor Management on Page 25
- CONCERN - EPROC-VDR-14 - Line 43 - Supplier users have unique accounts with unique login credentials. Can the system support multiple user accounts?
- CONCERN - EPROC-VDR-23 thru EPROC-VDR-27 -Line 52 thru line 56 - The response is a duplicate for the multiple lines of requirements. It appears this is handled with an integration, but what happens when a vendor is self-registering?
- CONCERN - EPROC-VDR-41 – Line 70 - The requirement states automated email notification, but response states a manual process of searching and then sending email.

Buyer Portal – Page 30. **Inserted “screen shots” of their RTM response into the narrative response**

- Buyer logs on via link or single sign on.
- Landing page can be a personal dashboard specific to a user. Page 30

Need Identification – Page 33 thru Page 35 - **Inserted “screen shots” of their RTM response into the narrative response**

- Provided example of step-by-step procurement path in figure on page 33

Request through Pay – Page 36 thru Page 55. **Inserted “screen shots” of their RTM response into the narrative response**

- Provided list of types of purchase requests.
- Provided list of terms used with a description of each term. Page 36
- Requests can also trigger many other options like3 orders, contracts, or sourcing event. Page 37
- Provided Purchase Order Status & Actions, Page 38 and Order Receipt information. Page 39
- Provided Invoicing information on page 40
- CONCERN - EPROC-PRD-8 – Line 109 – Here is the response when asked about collaboration with other users. “This is a very broad requirement spanning requests for orders, solicitations, contracts, invoices. Further clarity is desired.”
- CONCERN - EPROC-PRD-9 – Line 110 - Combining like item purchase request into a single order is NOT supported.
- CONCERN - EPROC-WRK-5 – Line 170 - Our solution does not currently restrict purchase order creation into a new biennium.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 1

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-WRK-6 – Line 171 - This response does not address the by pass requirement?
- CONCERN - EPROC-WRK-27 – Line 192 - Does not currently support workflow based on request type.
- CONCERN - EPROC-PO-5 – Line 200 - The response does not address the requirement to configure purchase order templates.
- CONCERN - EPROC-PO-9 – Line 204 – “we currently do not support org level field configuration”
- CONCERN - EPROC-PO-15 – Line 210 – Do you support the ability to print versions of orders?
- CONCERN - EPROC-PC-5 -LINE 231 – Does not support ability to limit spend on a PCard.
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 - These requirements are not supported and vendor response is “PCard reconciliation would occur in the ERP”
- CONCERN - EPROC-RC-3 and EPROC-RC-4 – Lines 252 and 253 – Does not support the ability to create a receipt with a PO.
- CONCERN - EPROC-RC-19 – Line 268 – Does not support receipt workflow approvals. Vendor stated this happens at the invoice approval step.
- CONCERN - EPROC-RC-21 – Line 270 – Does not support conversion of PO unit of measure to inventory unit of measure.

Catalog Capability – Page 55 thru Page 64 - **Inserted “screen shots” of their RTM response into the narrative response**

- Can search both hosted and punch-out catalogs with maintenance being the responsibility of the vendor.
- Offers 2 catalog options – Standard and Advanced catalogs
- Search manager capabilities listed on page 56
- Catalog manager helps control vendor catalogs. It also aids the vendor in managing their catalog.
- CONCERN - EPROC-CAT-34 – Line 319 - States the search results for hosted vs.punchout are not similar
- CONCERN - EPROC-CAT-38 – Line 323 – Only the State catalog can be made accessible without a login?

Sourcing/Bid Management – Page 64 thru Page 80 - **Inserted “screen shots” of their RTM response into the narrative response**

- Wizard-like tool is used to set up solicitations – Page 64
- Bids are posted to State’s website
- Have vendor activity report
- Has evaluation capabilities.
- Solicitation Management capabilities listed on Page 67 and 68
- CONCERN - EPROC-SRC-12 – Line 339 - Reverse Auction is offered outside of the system.
- CONCERN - EPROC-SRC-13 and EPROC-SRC-14 – Lines 340 and 341 – A third party solution is required for Surplus Auction and Surplus Sealed Bid.
- CONCERN - EPROC-SRC-28 – Line 355 – The response given here (editing a solicitation) does not address the online collaboration requirement.
- CONCERN - EPROC-SRC-34 and EPROC-SRC-35 – Lines 361 and 362 – These requirements are not currently available and are planned on a future enhancement. (Version control and check in/ out functions
- CONCERN - EPROC-SRC-40 – Line 367 - This response talks about award recommendations but the requirement is asking for solicitation fields?

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 1

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SRC-43 – Line 370 - Workload assignment is a planned future enhancement.
- CONCERN - EPROC-SRC-65 – Line 392 - Does not support elimination of duplicate email addresses.
- CONCERN - EPROC-SRC-75 – Line 402 – Opt out of notifications will require an enhancement to the solution
- CONCERN - EPROC-SRC-82 – Line 409 - The ability to create documents for internal purposes only is not supported but is being considered for a future enhancement
- CONCERN - EPROC-SRC-102 – Line 429 - Response "Suppliers who authenticate to their portal can submit bids" does not address the eSignature requirement
- CONCERN - EPROC-SRC-117 – Line 444 – Ability to hide the name of the suppliers in not currently supported but is planned in a future enhancement.
- CONCERN - EPROC-SRC-130 and EPROC-SRC-131 – Lines 457 and 458 - Does not support online collaboration requirement. Offered a business process suggestion like TEAMS and then upload the file to the solution.
- CONCERN - EPROC-SRC-138 – Line 465 – Response does not state if information can be posted to state website?
- STRENGTH - EPROC-SRC-143 – Line 470 – Ability to perform award reversals and award to another vendor

Contract Management – Page 80 thru Page 91 - **Inserted "screen shots" of their RTM response into the narrative response**

- Listed contract management abilities on Page 80
- Wizard like process to enter contracts. – Figure on page 81
- Contracts are posted to the contract board – Page 82
- Capabilities of Contract Management listed on Page 82
- CONCERN - EPROC-CNT-6 and EPROC-CNT-7 – Lines 486 and 487 – Version control and check in/out capabilities are planned for a future enhancement.
- CONCERN - EPROC-CNT-9 – Line 489 – Identify templates and contracts that have been updated is planned for a future enhancement.
- CONCERN - EPROC-CNT-14 – Line 494 - This response appears to be referencing contract approval and not the esignature process
- CONCERN - EPROC-CNT-16 – Line 496 - This response states price list can be uploaded to supplier profile, but can price file be loaded to the contract as line items?
- CONCERN - EPROC-CNT-38 – Line 518 - This response does not address the ability to have detailed information of subcontractors on the contract record.
- CONCERN - EPROC-CNT-39 – Line 519 - Subcontractor payments cannot be tracked on a specific contract.
- CONCERN - EPROC-CNT-40 – Line 520 – This response shows this vendor is not clear on the requirement. This is asking for process to track spend on contracts.
- CONCERN - EPROC-CNT-41 – Line 521 – Vendor is not clear that SWAM is Small, Women-owned or Minority owned.
- CONCERN - EPROC-CNT-72 – Line 552 - Solution does not automatically calculate the admin fee assessed to a contract.
- CONCERN - EPROC-CNT-85 – Line 565 - This response does not address the ability to imitate an order from a CONTRACT?

Other Available Services

- CONCERN - EPROC-MNGD-1 – Line 4 Tab 7 - Does not currently support third party measurement service.

Video Demonstrations

Proactis Public Sector is named in the video demonstration and the solution name was WebProcure. The videos were presented in sections and I have entered my comments per section in the notes below.

Solution introduction – Web based system using roles and permissions for access. The system is a one platform system with access to each of the modules. Has across the solution search functionality from the help “home” page. Provides tutorials on this page where the user can learn how the functionality works by the system showing you and then the user can try it. Support contact information is supplied on this page.

Public Components and Supplier Management – Used the State of Missouri and the State of Rhode Island as examples in this section. Showed how a vendor can self register. The data in this section is fully customizable. The fields can be set up to validate the data that the vendor enters. Uses the “now or later” functionality to help vendors complete parts of the registration at a later time. Record gets submitted to workflow for approval. Has a bid board and contract board link from the registration landing page. Contracts and bids compiled in the solution are automatically displayed on the vendor page. On the

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 1

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

buyers side, the user can create or view invitations and can manage or view vendors records. System checks for duplicate vendor records. Offers supplier score cards

Solicitations – Has formal and informal bid types. No limit on the types of solicitations and each type has different sections. Bids sections include header, requirements, questionnaire, attachments, item specs, suppliers and summary. Category section denotes which vendors get added to the bid. Templates are compiled and the information is brought into the bid based on the bid type. The user can pick and choose what sections of the template applies to the bid. Bid goes through the approval stage and approver will receive email. You can also create a solicitation from a request that goes through the approval process. Showed the process that a vendor needs to complete in order to submit a response. Award process can be by item or can create evaluation teams. CAN REVERSE the bid award! Can generate a contract from the solicitation.

Contracts – Can create new or contracts from a bid. Supports master contract functionality. Sections offered are Header, Notifications, Contract Clauses, Catalog Items, Attachments and Authorization. Has the ability to use templates for the contract type. Can add custom fields and make them required. Can use custom notifications and pull from the library. Clauses can be added from the library and can set up to edit or not to edit them. Can submit contract into approval workflow. Supports eSignature but did NOT show that process.

REQ PO – This section talks about the request and purchase order process. It starts by searching for an item and view the search results which can be configured by the State. Request gets flipped to a PO and user can attach accounting codes. Can add custom fields and submit to approval workflow. User can look at their orders they placed. Orders can be sent to vendors in many ways. User can do a receipt against the purchase order. Vendors receive emails about all orders and can collaborate with the State.

Invoicing – 2 ways to create invoices, the buy side, or the supply side. Vendors can create a invoice from a PO. User can create an invoice on behalf of the vendor. The invoice section contains header, invoice items, attachments, invoice matching and summary sections. Can import invoices and can create credit memos and invoice vouchers.

Reporting Dashboards – Data analytics is this part of the solution. Can create personal or organization dashboards. Can create your own reports or create those already set up in the system. Has drag and drop functionality. Can use charts which helps with visual data. Can schedule and export reports.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: PeriscopeHoldings

CATEGORY #(s): 1

DATE: 8/25/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2001
 - “ePro” – Periscope’s eProcurement solution.
 - Affiliated with NIGP
2. Previous Projects
 - 5 projects listed. All States. All fit well into Category 1
 - State of Arkansas. Implemented ePro and interfaced with SAP
 - State of Oregon. Implemented ePro
 - State of Illinois. Implemented ePro and interfaced with SAP
 - Commonwealth of Massachusetts. Implemented ePro
 - State of New Jersey. Implemented ePro and interfaced with CGI
3. Subcontractors
 - The vendor states they perform prime on 100% of their projects, but can sub-contract with companies such as CGI, Accenture, PCG, Deloitte, Civic Initiatives, Guidehouse, and more.
4. Organizational Chart
 - Yes, the org. chart is provided, but **the job descriptions are not.**
5. Litigation
 - The vendor states they do not have any.
6. Financial Viability
 - Provided audited summary.

Individual Comments:

Overall/General

- Solution is called Periscope EPro
- SaaS solution and COTS.
- One Stop Shop. Modular in nature. Can implement one or all modules.
- Page 60 "ePro™ was created as an enterprise-class, end-to-end public procurement solution by public procurement professionals."
- Page 116 "AWS is Periscope's strategic partner for hosting services."

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 2 - 27

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls "baked in" (See APSM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a "catalog of catalogs" like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single point of entry: Yes – both suppliers and agency users have single point of entry. Also supports SSO.
- Smart Routing: yes, can also create rule based fields.
- Compliance: Yes – worked with public sector agencies for past 20 years so able to meet and build in.
- Portal: Yes – Supplier portal workbench and a separate single portal for agency user s to manage.
- Open Marketplace Environment: Yes – Unlimited number of catalogs and can add all type (punchout, open market, internal contract catalogs)
- Integration: Yes many – page 7
- Workflow: Yes. Well explained
- Document Management: Yes pg 26
- Reporting: Yes. Pg 27
- Configurable: yes pg 27
- Transparency: Yes, meets requirements. Page 27

2. User Experience – p. page 28 - 37

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- Initial screen: Yes, allows users to personalize through Homepage/dashboards – users can individualize their dashboard.
- Intuitive: Yes, Clean look with a left navigation bar for quick access and a regular and an advanced Search option.
- Wizard driven: Yes, page 31 *“Periscope ePro provides guided user processes and functionalities based on role, organization, and record type.”*
- Portal: Yes, page 31 *“The six colored boxes on the Homepage change based on the user's role and display the number of documents for each status that requires the user's attention and/or action. These boxes highlight the document statuses that are most important to the user based on his/her role.”*
- Mobile use: yes, can support mobile use.
- Workload Mngt: Yes, page 35 *“ePro enables authorized users to access procurement records (requisitions, bid solicitations, purchase orders, etc.) and reassign them to another user within the organization, department, or location.”*
- Role Based functionality: Yes, page 35 – *“Periscope ePro provides standard roles (department user, basic purchaser, accounts payable, auditor, super users, and multiple administrative roles) with the ability to assign unique privileges to each user. The role and privilege within the assigned organization and department will define the actions a user may take in the procurement process. Roles and privileges will enable users to create and maintain documents, conduct audits with view-only rights, complete approvals, participate in evaluations, and more. Multi-organization access is granted to users as part of their overall user profile. This access is granted by Internal Administrators, a role that provides administrative privileges across all organizations.”*

3. Bidder Best Practices and Roadmap – p. page 38 - 45

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits, and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- Provide Enhancements...: Yes. Very focused on Govt.
- Solution latest Technologies: System is highly configurable. – page 38 *“and during the implementation process, we will ensure that the system administrator(s) are comfortable making changes. We implement with client sustainability in mind so that a client does not have to come back to us for most modifications. However, at times we realize enhancements are necessary. Periscope is accustomed to providing product enhancements to meet new legislation or new business initiatives”*
- Use Agile methodology
- Updates Timely: Page 39 – 4 new releases a year.
- 3-year Roadmap: Design a roadmap around user's business needs. They have a fully thought-out roadmap!

4. Innovations and Value-Added Features/Services – p. page 46 - 53

In addition to the stated requirementGEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Periscope is offering the following optional innovation and value-add services (Services are explained on pages 46-53):
 - Periscope Supplier Network (PSN) & S2G Supplier Experience
 - ePro™ For Locals
 - Periscope Reconciler
 - Payment Gateway within ePro
 - Sustainability - Ecovadis
 - Grants Management
 - NIGP Consulting Services
 - Strategic Sourcing
 - Equity Diversity and Inclusion
 - SAP Experts - Phoenix Team
 - Procurated

5. Customizations/Extensions – p. page 54

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck, or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate, or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade, or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- Agile method which allows for enhancements to be applied at a rapid pace.
- Will sit down with customer and discuss. The roadmap is published 1 year ahead of schedule so State may align with their needs

6. Alternative Funding Models – p. pages 55 - 57

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.
 - Periscope mostly explains how if you apply their entire solution where and with what modules you will save money, efficiency, etc.
 - They also offer an administrative fee collection process. (Page 57)

7. Contract Transition and Flexibility – p. page 58

- Yes, Periscope answers this with: *"Periscope will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions. Ultimately, we let our clients determine what the best path forward is for them. We have transitioned clients from one contract vehicle to another without any issues or interruption in service."*

B. Functional Requirements: pages 61 – 99

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. **General Functionality.** Tab 2, GEN-1 through GEN-40 and - p. 61
 - a. 2- N "Not Available"
 - b. 2 - Extreme
 - **Gen 6** (Purchase/Data Analytics must integrate with the State data warehouse and State BI reporting tool; to provide access to all transaction...) - **Doesn't meet requirement.** *"This functionality is on the future roadmap for Periscope."*
 - **Gen 31** (The eProcurement Solution should provide the capability to translate web and application pages into foreign languages including but not limited to Spanish, French, Chinese, German, Russian, Japanese, Italian) - **Doesn't meet requirement.** *"Periscope ePro does not provide translation capabilities, but is open to language exploration, as needed."*
 - Rest of GEN requirements are met.
2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 23 and pages 61-62
 - a. All "A" and "L"
 - Meets all of the SPR requirements.
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 62-63
 - a. 7-"INT-Integration/interface"
 - b. 7 – Medium
 - **VDR 3** – Marked as "A" but will require Integration. **CLARIFY.**
 - **VDR 19 – 27:** Integration marked on many of these for tax, SOS etc.
 - Meets rest of requirements.
4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 64
 - a. 1-BP "Business Process", 1-"INT-Integration/interface"
 - **BPRT 12:** (Search capability for - Performance metrics information (e.g. On-time delivery)) – **Doesn't meet requirement.** *"Search capabilities do not currently include supplier performance data as a search criterion, as our supplier Performance module allows each customer to configure performance criteria and rating approaches differently. However, supplier performance data is visible from the supplier profile listed in the search results and can be utilized in the Business Intelligence tool"*
 - Meets rest of requirements.
5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 64-65
 - a. All "A" and "L"
 - Meets all of the SPR requirements.
6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 65-72
 - a. 20 - N "Not Available", 2 - BP "Business Process", 2 -"INT-Integration/interface"
 - b. 5 – Medium, 19 - High
 - **PRD 11:** (The eProcurement Request Development functionality should provide the ability for end users to configure a standard purchase request for recurring purchases with the option to establish an automatic schedule to submit the purchase request for processing.). **Doesn't meet requirement.** *"ePro does not currently support this functionality. We will consider this as part of our Product Roadmap for future enhancement."*
 - **PRD 59:** (The eProcurement Request Development functionality should provide the functionality to alert users when a date (e.g., Delivery date, bid open date) is selected that is a non-work day. To support this, include details of calendar functionality.). **Doesn't meet requirement.** *" This functionality is not supported in ePro. Periscope will consider it for future enhancements as part of our product roadmap. When selecting a date within the transactions, a visual calendar is displayed enabling users to see weekends and weekdays being selected. "*

- **WRK 10:** (The eProcurement Workflow Management functionality must record the specific user that provided the approval and if the approval rule was Role based, then remove the pending approval action from the accounts of all other users in the same approval group.) **Doesn't meet requirement.** " *Approvers are not able to perform this action...only Creator can initiate this process.* "
 - **WRK 13:** (The eProcurement Workflow Management approvals functionality should be configurable to allow approvers to either approve or deny a request in total or by individual line items with approved items going forward.) **Doesn't meet requirement.** " *The functionality to approve at a line-item level is not supported in ePro and has not been identified by our other state and local government customers as a necessity. Periscope will consider it for future enhancements as part of our product roadmap.* "
 - **PC 8 - 21** (Pcard functionalities). **Doesn't meet requirement.** " *Pcard reconciliation capabilities are not supported. Periscope is open to evaluating this need and determining if can fit into our product development roadmap. We are also open to a 3rd party integration if outside solution supports it.* "
 - **RC 3 and 4** (Recording receipts for POs not in solution and associate to the receipt of PO at a later time). **Doesn't meet requirement.** " *On the outset, this request is not best practice and we would strongly discourage allowing receipts without a PO. A receipt must be linked to a Purchase Order within the solution. Periscope would be interested in a use case to determine if this is something we are willing to put on our product roadmap.* "
 - **INV 8** (The eProcurement Invoicing functionality should provide the capability to send an email notification to a supplier with comments and relevant attachments for rejected invoices. For electronic invoices, rejection transaction should be transmitted to the supplier.). **Doesn't meet requirement.** " *This functionality is not supported in ePro. Periscope will consider it for future enhancements as part of our product roadmap.* "
 - Meets rest of requirements.
- 7. Catalog Capability -** Tab 3, CAT-1 through CAT-40 and - p. 73-75
- **CAT 19** – marked as "A", but states " *ePro Marketplace currently does not supports the ability to enter negative line items for things such as trade ins, credits, etc. However, negative line items may be added to a requisition, purchase order and invoice.* " **Doesn't meet requirement.**
 - Meets rest of requirements.
- 8. Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 76-87
- a. 1 - N "Not Available", 2 – C – "Customize", 1 - BP "Business Process"
 - b. 2 – Medium, 1 - High
- **SRC 4** – **Doesn't meet requirement.** EPro does not support a Two Step ITB.
 - **SRC 13** – **Doesn't meet requirement.** EPro does have some auction functionality but not specific surplus auction.
 - **SRC 14** – **Doesn't meet requirement.** EPro does have some auction functionality but not specific surplus sealed bid.
 - **SRC 144** – Partially meets requirement.
 - Meets rest of requirements.
- 9. Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 87 - 91
- a. 2 - BP "Business Process"
 - b. 1 - High
- **CNT30** – **Workaround needed.**
 - Meets rest of requirements.
- 10. Vendor Performance** Tab 3, VPE-1 through VPE-25 and - p. 91
- Meets all VPE 1 - 25 requirements.
- 11. Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37 and - p. 92 - 99
- a. 1-N "not Available"
 - b. 1 - High
- **PDA 37:** (The eProcurement Purchasing/Data Analytics functionality should have the ability for fixed price, item type contracts to compare contract items to non-contract items available in the eProcurement marketplace for price analysis.). **Doesn't meet requirement** " *ePro does not currently support this requirement, but we are very interested in further exploring the specific use*

cases for this functionality and identifying an innovative solution. Periscope looks forward to working with the State to develop a mutually agreed upon solution for this requirement. “

- Meets rest of requirements.

C. Technical Requirements: pages 100 - 144

1. Availability. pages 100

The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Periscope directs us to their SLA for days/times. It's important to note for Negotiations (should they take place) that Periscope wants their Implementation, ongoing support, and operations to be governed by their standard SLA's, but will consider in negotiation.
- Looking at their SLA attachment – 99.9 %.

2. Accessibility Requirements. Page 100

The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.

- Yes, meets requirements.

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 100

- **Tech 4** (Procurement Solution must provide for an authorized user to override approval rules) – Not available – Doesn't meet requirement; however, they mark it as available in the software. **CLARIFY**
- **Tech 5** (The eProcurement Solution should provide a user transaction history across all entities, delineated by entity ID) . They can customize; however, they mark it as available in the software. **CLARIFY**
- Rest of requirements met.

4. Browsers Supported - p. 101

- Yes, meets requirements.
- Page 101 – “ Our products and all their features are designed to be browser and operating system agnostic and work best on all the latest manufactures' supported browsers. Thus, it will look and function the same if the user is on a Windows, Android, Apple, or another device; and with Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari browsers.”

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 102 - 103

a. 1-N “Not Available”, 1-BP “Business Process”

b. 1 – Medium, 1 - High

- SuperUser Roles (page 102):
 - Organization Administrator
 - Internal Admin.
 - Vendor Admin.
 - Accounts Payable Superusers
 - Department Access Superusers
 - Basic Purchaser (BP Supervisor)
- Standard User Roles (page 102):
 - Basic Purchaser / Buyer
 - Audit inquiry Role
 - Department Access
 - Accounts Payable
 - Supplier
- Can also create roles for users (Market place User Roles (page 103)
- Tech 12 (The eProcurement Solution should provide capability for entities that have both buying and supplier accounts to have dual sign-on via one account) – Periscope does not meet this

- requirement *“Periscope does not support this. A government agency may have Seller and Buyer accounts BUT they are separated by unique login information and access”*
- Tech 16: Marked as “A” in the system, but the answer alludes to customizing They can customize; however, they mark it as available in the software. **CLARIFY.**
 - Tech 18 – BP – Periscope doesn’t send emails, but does log information. Requirement not met.
 - Rest of Tech requirements met.
6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25 and - p. 104
- Tech 25 (The eProcurement Solution should provide capability to automate acceptance and tracking of end user 'acceptable use' agreements and provide electronic notice to users to "renew/reaccept" on a scheduled basis (e.g. annually, bi-annually) as part of the login process). *“Periscope does not support this and would consider it as a future enhancement”*: Not available – Doesn’t meet requirement; however, they mark it as available in the software. **CLARIFY**
 - Rest of requirements met.
 - Page 104. *“Periscope SSO is based on SAML 2.0 specifications. SAML 2.0 is supported by several well-known IdPs listed below that can be used to set up SSO with ePro™. Other SAML-based IdPs can also be used but have not been tested and verified by Periscope. Some of our successful SSO integrations include:*
 - • Active Directory Federation Services (ADFS) 2.0 and 3.0
 - • OneLogin
 - • Okta
 - • Auth0
 - • Salesforce.”
7. **Federated Identity Management** – p. 105
- Page 105. *“Periscope SSO is based on SAML 2.0 specifications. SAML 2.0 is supported by several well-known IdPs listed below that can be used to set up SSO with ePro™. Other SAML-based IdPs can also be used but have not been tested and verified by Periscope. Some of our successful SSO integrations include:*
 - • Active Directory Federation Services (ADFS) 2.0 and 3.0
 - • OneLogin
 - • Okta
 - • Auth0
 - • Salesforce.”
8. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 105
- a. 9 - Extreme
- All are marked at an extreme level of complexity, but they are also marked at already “A” available. Most all can be done, but Periscope highly recommends against. See Tech26 response – *“Periscope provides tools to convert data from legacy systems, and has done so with other clients. However, we strongly advise against wholesale conversion of legacy data, as implementation of a new eProcurement solution is an opportunity to start fresh. Data conversion of unnecessary data simply clogs the new system in many cases. Our recommendations for what data should/shouldn’t be migrated are outlined below.”*
 - This may give an impression of Periscope not being well versed in data conversion.
9. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 106
- a. 1-INT-“integration/Interface”,
- b. 26 - Extreme
- Concern: Again – all these (TECH 35 – 60) are marked as extreme level of complexity which gives an impression of Periscope not being well versed in data conversion. **CLARIFY** – was this intentional because much of the requirements seem to be able to be met?
 - Tech 50 – Partially meets requirement
10. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 109
- TECH 61 – *“ePro supports document formats created in Microsoft Word, Microsoft Excel, and Microsoft PowerPoint”*
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met.
11. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 111

- TECH 62 – “ePro and its modules (Marketplace) are built to be screen size responsive and can be utilized on all devices that can access a browser and internet.”
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met
12. **Mobile Applications** - p. 111
- Yes, meets requirements
13. **Data Ownership and Access** - p. 112 - 114
- Can't find anything on State owning the data – doesn't meet requirement. They did discuss ways to access the data.
14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 114
- Page 114 – “Periscope’s ePro solution, by default, maintains information in perpetuity. However, Periscope can configure it to meet State-specific retention policies.”
 - TECH 63 – “ePro provides the ability to archive data from a production environment while keeping the data available for reporting on historical data.”
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met.
15. **Disaster Recovery Plan** - p. 115
- Yes, has a full plan.
16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 116
- a. 2- Extreme
- **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met
 - AWS is Periscope’s strategic partner for hosting services.
 - 3 environments are deployed - UAT, Training, and Production – Partially meets requirement missing development.
17. **Solution Technical Architecture** - p. 117 - 125
- Meets the requirements for what they gave us in their statements such as adhering to NIST 800-53 standards, SOC II, and PCI-DSS Audits; however, Periscope will not provide technical network information without a non-disclosure agreement.
18. **Solution Network Architecture** - p. 126
- Meets requirements
 - Amazon Web Services (AWS) hosted
 - Each ePro client segregated in their own virtual private clouds to ensure absolute isolation between clients.
 - All system interoperability between Periscope and clients is executed via HTTPS and TLS 1.2.
 - Failover availability in separate zones on the opposite side of the country.
 - Databases solely US based cloud storage and separate from other databases
19. **System Development Methodology** - p. 126
- Yes. Meets Requirements.
20. **Service Level Agreement** - p. 130 - 144
- Page 130 – Periscope states: “Periscope’s implementation and ongoing support and operations will be governed by Periscope’s standard SLAs, provided as part of our proposal, to align the State’s SaaS offering with those provided to all other customers. Periscope is willing to negotiate the addition of certain elements with the State if awarded this RFP.”
 - I do not see where they addressed the State/NASPO SLA – did not meet this portion of the requirement.
- D. **Security Requirements:** p. pages 145 - 155
1. **Cloud Security Alliance (CSA) Compliance**
 - Didn’t provide either report. Doesn’t meet requirement.
 2. **Security and Privacy Controls** nothing to add.
 3. **Security Certifications** nothing to add.
 4. **Annual Security Plan** nothing to add.
 5. **Secure Application and Network Environment** nothing to add.
 6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-5.

- SEC 5 and 8 - Do not meet requirement(s)
 - Meets remaining requirements.
7. **Data Security** – nothing to add.
 8. **Personally Identifiable Information Protection** – nothing to add.
 9. **Security/Privacy Issue Occurrence** – nothing to add.
 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
 11. **Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements: 156 - 207

1. **Project Management**
 - They layout PM responsibilities.
 - All their PM's are PMP certified with public sector experience. They give names and bios of possible PM's.
 - Standard PM process.
 - Meets requirements
2. **Project Implementation Methodology** p. 177 - 186
 - Meets requirements
 - 4 phases: Project Setup/Analysis, exploration/design, system implementation/configuration, and postimplementation go live and support.
3. **Catalog Support Services** p. 187
 - Yes. Will tackle onboarding current Contracts first. Then communicate with suppliers.
 - Suppliers can use Periscope's supplier enablement team to assist them throughout life of the Contract with the State. **CLARIFY – is there a cost to the provider or state.**
 - 4 different types of catalogs that are handled differently – page 188 – 189
 - Hosted catalog
 - Internal catalog
 - Punchout catalog
 - Integration to the online retail marketplace
4. **Data Conversion Services** p. 190
 - Work with State to create a data migration plan. A typical plan includes:
 - • Supplier data
 - • Contract header data
 - • Contract items (descriptions, pricing, unit of measure, etc.)
 - • Organizational data, including agencies and departments
 - • Departmental bill to/ship to addresses
 - • User data, including role assignments
 - It looks like the State is responsible for data cleansing and extracting.
5. **Interface/Integration Development Services** p. 191 - 192
 - Yes – can integrate across multiple financial systems
 - Page 192 – *“The State will be responsible for providing technical resources with expertise on the financial and other State systems. These resources will use the XML produced by the Periscope ePro™ Integration module and process it in such a way as to post data into the receiving system. Periscope will work with those resources to confirm the design and to test the resulting functionality.”*
6. **Organizational Change Management (OCM Services)** p. 192 - 205
 - Meets requirements.
 - Discusses / explains typical OCM fundamentals.
 - A big plus - Page 193 *“Periscope uses Prosci's ADKARR Model of individual change to support, supplement and reinforce our OCM approach.”*
7. **Training Services** – p. 198 - 203
 - Yes, meets requirements.
 - A very impressive Training plan to include:
 - Micro-learning videos
 - E-Learning & Simulations

- Virtual instructor-led training
- Instructor-led training

8. Help Desk Services - Tab 6 IMPL 1 – 5 and – p. 204 - 207

- IMPL 1 – 5 Meets all requirements
- IMPL 5 - Periscope utilizes Zendesk to support tickets submitted by the State.

9. On-Site System Stabilization Support – p. 207

- Yes, Meets requirements.

F. Managed Services Requirements: page 208 - 248

1. Solution Support

- Releases are at scheduled times throughout the year.
- Allow twenty days to test before deployment and can submit issues to the Zendesk. **_Unsure if this is standard time or if more time should be allowed.**
- Meets Requirements

2. Organizational Change Management (OCM Services)

- Yes, meets requirements. Same as OCM notes above.

3. Training Services

- Yes. A very impressive Training plan to include:
 - Micro-learning videos
 - E-Learning & Simulations
 - Virtual instructor-led training
 - Instructor-led training

4. Catalog Support Services

- Yes, meets requirements. Refer to implementation section of OCM services page 187.

5. Help Desk Services

- Yes, meets requirements. Refer to implementation section of OCM services page 204.

6. Transition Out Assistance Services

- Yes, they will work with the customer based upon the agreed upon SOW.

G. Other Available Services: RTM: Tab 7 MNGD-1. Page 248

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- MNGD1: Application performance - near real time.
- MNGD1: Use an external **solution (Pingdom, one of the top services available)** to monitor average response time from across the United States 24 hours a day.
- **Note: Keep subcontractor in mind for negotiation purposes.**
- For further services they refer us back to the Value-add services section which has: Periscope is offering the following optional innovation and value-add services (Services are explained on pages 46-53):
 - Periscope Supplier Network (PSN) & S2G Supplier Experience
 - ePro™ For Locals
 - Periscope Reconciler
 - Payment Gateway within ePro
 - Sustainability - Ecovadis
 - Grants Management
 - NIGP Consulting Services
 - Strategic Sourcing
 - Equity Diversity and Inclusion
 - SAP Experts - Phoenix Team
 - Procurated

H. Video Demonstrations: Page 249

- 43-minute demo. Well done and addressed the full system beginning to end.
- Serve 8 states and over 1,000 locals
- Understand that every Government Entity is unique.

- Nice look to dashboard
- Like how can view mine or others as a master role (example State Procurement Office) Will help us help them.
- Bolded sections are state defined fields.
- Can compare products / suppliers

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (Periscope Holdings)

CATEGORY #(s): 1

DATE: (09/22/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- ePro™, Periscope's proprietary eProcurement solution (SaaS)
- public portal- find suppliers, view current solicitations and state contracts, expirations and spend against those contracts
- tool that central procurement, agency end-users, and local governments use - while providing appropriate controls
- affiliated with the National Institute of Governmental Purchasing
- Periscope Supplier Network
- Winner of the NASPO Bronze Cronin Award
-

2. Previous Projects

- State of Arkansas – ARBuy - vendor management, solicitations, CLM, and Marketplace.
- State of Oregon - OregonBuys - full Procure-to-Pay functionality including requisitions, solicitations, purchase orders, contracts, vendor management, receiving, invoice matching/processing integrates with State financial system FMS supporting budget validation, vendor/supplier management, invoice/receiving and payment processing
- State of Illinois - BidBuy eProcurement - requisition, bid/solicitation, catalog, Supplier Punchout shopping and purchase order, change order, extension, and amendment functions
- Commonwealth of Massachusetts – COMMBUYS - Supplier Registration and Supplier Enablement with an integration to the State's Department of Revenue taxation system Sourcing; Contract Management; Catalog searching; Catalog Ordering; Requisitions; Purchase Orders; Business Intelligence Enhanced Business Intelligence
- State of New Jersey - requisitions, solicitations, purchase orders, contracts, vendor management, receiving, invoice matching/processing, integrating to the State financial system

3. Subcontractors

- CGI for this project due to ERP affiliation with Maine
- Accenture, PCG, Guidehouse, Deloitte, Civic Initiatives used elsewhere

4. Organizational Chart

- Combined state and Periscope Org chart specific to project
- Roles not defined
-

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **PERISCOPE EPRO** (by Periscope) developed modules, built within ePro for a seamless connection, but also designed to function as a "stand-alone" solution. Single point of entry smart routing rule based fields to direct users to the appropriate module, compliance portal open marketplace environment integration with multiple ERP's like CGI, Ellucian, B2G now, work day, ASAP, ecovadis, Tyler technologies, new world systems, sun gard, Oracle, PeopleSoft.

User Experience Allows user personalization of their initial screen based on their needs or use of the Solution. Home page and dashboards search feature on central search bar, advanced search, guided process and functionality based on role organization and record type, status action boxes, recent documents, alerts and notifications, mobile access, workload management, role based functionality.

Bidder Best Practices and Roadmap government focus: 100%. an agile development framework. schedule allows 4 new releases a year with sprints, In 2020 we further developed enhancements in a PCI compliant P-card vault, improved integration with a Contract Lifecycle Management module, and delivered a new ePro module called Reconciler - a supplier report and fee payment portal. 2021 road map goals; enhanced catalog loading and shopping enhanced supplier fee administration, enhanced business intelligence. Road map focus areas beyond 2021; predictive intelligence, guided buying, enhanced user experience, and Self-funded Experience

Innovations and Value-Added Features/Services

- Periscope Supplier Network (PSN) & S2G Supplier Experience
- ePro™ For Locals
- Periscope Reconciler
- Payment Gateway within ePro
- Sustainability – Ecovadis
- Grants Management
- NIGP Consulting Services
- Strategic Sourcing
- Equity Diversity and Inclusion
- SAP Experts - Phoenix Team
- Procurated **Pricing TBD based on level of desired integration.**

Customizations/Extensions Periscope will sit down with the customer and understand their business needs, and first see if there are processor methodologies in the current toolset that may provide the best outcome. If a new enhancement is the best solution, Periscope will provide a quote and timeline to add the request in the next available release. Also, we will work with the customer to lay out a change management plan in which to implement best practice procedures within their organization to successfully incorporate the new functionality.

DEPARTMENT/STATE: Maine

Alternative Funding Models **Periscope** (risk-sharing of convenience fees), also referred to as a self-funded approach, would allow the State to obtain the new eProcurement system at no cost
Contract Transition and Flexibility **Periscope** will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions. Ultimately, we let our clients determine what the best path forward is for them. We have transitioned clients from one contract vehicle to another without any issues or interruption in service.

Functional Requirements

General Functionality - 1 N/A on translation, 39 Out of the box

Supplier Portal – 23 out of the box

Supplier Enablement/Management 7 INT w/med LOE, and 36 out of the box.

Buyer Portal 1- biz process w/low LOE, 1 INT w/low LOE, 14 OOBX.

Need Identification 7 OOBX

Request through Pay 2 biz process w/med LOE, 2 INT w/low and med LOE, 2 N/A, 56 OOBX – **Purch Req**, 2 N/A approver override, and line-item veto, 26 out of the box for **Wrkflw mgt**, 29 OOBX for **PO gen and mgt**, 13 N/A (wow), 7 out of box for **Pcard**, 2 N/A, 19 OOBX for **Receiving**, 1 N/A rejected invoice notification, 10 out of the box for **invoicing**.

Catalog Capability 40 OOBX

Sourcing/Bid Management 1 biz process w/low LOE, 2 custom w/med LOE, 2 N/A 2 step ITB and hiding supplier name, 1 3rd party w/low LOE, 145 OOBX

Contract Management 2 biz process w/low LOE, and 88 OOBX

Vendor Performance 1 N/A and 24 OOBX

Purchasing/Data Analytics 1 N/A and 36 OOBX

Technical Requirements

Availability **see SLA**

Accessibility Requirements We provide regularly updated accessibility compliance certification through our Voluntary Product Assessment Template (VPATs). With new feature releases, our software is tested for web accessibility standards with the Rehabilitation Act Federal ICT Accessibility / Section 508, W3C Accessibility Initiative, and WCAG 2.1 Level AA (which exceeds Section 508's standards). Our Quality Assurance program utilizes both the WAVE and ANDI toolsets, along with randomized keyboard testing.

Audit Trail and History **Auditing Event Tracking**

- User ID
- Date/time of change
- Information that was changed
- Outcome of an event
- NIST 800-53 (Rev 4) security-related events
- Other information the State requires can be developed

Additional Administrator Capabilities include:

- Ability to set inclusion or exclusion of events based on policy and operating requirements
- Export logs in text format based on UTC
- Generate reports based on ranges of dates and times
- Audit data only accessible by authorized users •
- No deletion or modifications permissions
- Logs reporting user access errors and exceptions
- Workflow consents are tracked as well as any changes

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Periscope
CATEGORY #(s): 1
DATE: 12/28/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Browsers Supported Windows, Android, Apple, or another device; and with Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari browsers.

User Accounts and Administration Role based; super user, standard user, marketplace user, agency user, supplier user

User Authentication • Active Directory Federation Services (ADFS) 2.0 and 3.0 • OneLogin • Okta • Auth0 • Salesforce

Minimum Password Length At least 7 characters

Maximum Password Length At least 7 characters

Enforce Alphanumeric Passwords Enabled always

User Password Lifetime Days 90 days or less (maximum)

Password Reuse Prevention 4 times or less

Maximum Login Attempts before Lockout 6 attempts or less

Lockout Period 30 minutes or more

Federated Identity Management– see user authentication above

Data Conversion our approach focuses on migrating **ONLY** that data necessary to support core business functions in the new system at go-live. **Historical data should be accessed outside** of the new eProcurement system (e.g., in a data warehouse, etc.).

Interface and Integration ERP's such as Oracle, CGI, SAP, and PeopleSoft

Office Automation Integration Microsoft Office suite of products (.docx, xlsx, pptx, etc. – and previous versions) are considered a standard for business automation and used for digital transformation. also accept Adobe products and other standard transformation file formats such as RTF, JPG, XML, & CSV for uploading, attaching, and linking for business documentation.

Mobile Device Support Periscope utilizes responsive web design rather than unique applications for each device type. **Would have to see it.** iOS, Android, etc.

Mobile Applications look and function the same if the user is on a Windows, Android, Apple, or other devices; and with Google Chrome, Firefox, Microsoft Edge, or Apple Safari browsers.

Data Ownership and Access Not clear whether the state owns the data or not. What makes our offering different is that we deliver using the powerful concepts of domains and topics. Domains and Topics are the layers that hide the complexities of a relational database structure of tables, rows, and columns. The process of creating domains using the BI domain builder maps the technical representation of purchasing data for example and creates a 'wrapper' with documentation in business language that an end-user can understand. End-users can then access this business 'wrapper' (domain) to get at the data they need the most. It is through this mechanism that our BI offering delivers on ad hoc functionality. The **following diagram (where?)** provides a visual of this 'abstraction layer that takes the inherent technical nature of a database schema and simplifies for the delivery of ad-hoc reporting. Published domains come with standard system language.

Date Retention, Archive and Purge Considerations Periscope's ePro solution, by default, maintains information in perpetuity. However, Periscope can configure it to meet State-specific retention policies.

Disaster Recovery Plan Periscope's Contingency Plans and Disaster Recovery Plans (CP / DRP) are designed to mitigate the risk of system and service unavailability by providing written solutions for the prompt and effective continuation or resumption of mission-critical services in the event of an incident or disaster. During the Notification and Activation Phase, initial actions are taken to detect and assess the damage inflicted by a disruption to the Periscope Platform. Based on the assessment of the event, the CP / DRP may be activated by the Disaster Recovery Team. Also, **AWS** has independently audited disaster recovery and business continuity plans for **AWS** headquarters & support services.

Solution Environments Production, Training, and UAT

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Periscope
CATEGORY #(s): 1
DATE: 12/28/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Solution Technical Architecture Periscope ePro strictly adheres to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits. Periscope solutions are hosted with Amazon Web Services (AWS) with each ePro client segregated in their own virtual private clouds to ensure absolute isolation between clients. All system interoperability between Periscope and our clients is executed via HTTPS and TLS 1.2. All Buy Speed™ modules are written with Java technology. ePro™ supports both SOAP and REST web service formats and easily integrates with many standard systems.

Solution Network Architecture described in part above in solution tech archit.

System Development Methodology Agile Software Development Framework as the standard for all development efforts.

1. Project Initiation/Definition–Discovery, Estimation, SOW, High level Requirements
2. Risk Assessment
3. Functional User Requirements (User Stories)
4. Technical and Architectural Systems Design
5. System Programming or Customized Off the Shelf (COTS) Software Development/Acquisition
6. Quality Assurance
7. Documentation and Training
8. Systems Testing and Acceptance
9. Installation
10. Maintenance / Application Sunset

Service Level Agreement Periscope's implementation and ongoing support and operations will be governed by Periscope's standard SLAs, provided as part of our proposal, to align the State's SaaS offering with those provided to all other customers. Periscope is willing to negotiate the addition of certain elements with the State if awarded this RFP. Severity levels and credits.

Security Requirements

Cloud Security Alliance (CSA) Compliance adhere to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits. We are confident that the control families in the CAIQ are already addressed by these audits.

Security and Privacy Controls Our solutions capture data and content for the procurement space. As such it has elected to follow the NIST methodology to develop and put in place NIST best practices as it relates to a process and technical controls. Periscope performs an annual FISMA compliance audit administered by an independent third party to ensure that we maintain the appropriate security posture for a medium categorized offering. The audit confirmed that the hosting environment satisfied the required technical controls as specified within NIST 800-53 revision 4 for a moderately categorized SaaS solution.

Security Certifications

certified FISMA, SOC II-Type II, and PCI-DSS compliant.

Secure Application and Network Environment Periscope Platform is architected as a 3-tier application with a clear separation between the web, application, and database layers. The application layer will only accept requests through the web tier over specific protocols and ports. In addition, when hosted, Periscope secures the environment to ensure that perimeter devices such as firewalls and IDS are configured correctly to allow only recognized and valid connections. Our Tier III data center provides for a completely redundant and continually operating facility that has a 99.9% uptime track record. It is a carrier-neutral environment with 24 / 7 security and engineering staff.

Secure Application and Network Access ePro is hosted with AWS. Access to the system is restricted via VPN authentication, AWS Identity management, and ssh keys. Application access is secured with SSL (port 443) certificates supplied by the customer or issued through AWS route 53. No customer Hypervisor

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Periscope
CATEGORY #(s): 1
DATE: 12/28/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

settings are in place. Virtualization is controlled with Terraform and is version controlled. The system is scanned for vulnerabilities by Rapid7 and patched as available. Meraki IDS is in place to detect and mitigate external threats to the network., Being hosted in AWS, physical access is limited to AWS personal as outlined in the following link. <https://aws.amazon.com/compliance/data-center/controls/> As our clients are hosted in AWS, we leverage Cloud trail <https://aws.amazon.com/cloudtrail/> This gives visibility into API calls and console access logging each transaction and associating it to a specific user. System access logs are maintained and reviewed for tracking users, IP, time, and exact commands that are executed. All employees are vetted with background and reference checks.

Data Security The Periscope data classification system is based on the concept of the need to know. Personally Identifiable Information Protection Periscope Solutions do not have PII information as a part of its data set.

Security/Privacy Issue Occurrence Our service level agreements are designed to accommodate the handling of all issues, including Security and Privacy Issues. **Responded to this as if a system outage occurred.**

PII Data Actual/Attempted Access or Disclosure Periscope Solutions do not have PII information as a part of its data set.

Security Breach Reporting Our service level agreements are designed to accommodate the handling of all issues, including Security and Privacy Issues. **Responded to this as if a system outage occurred.**

Implementation Services Requirements

Project Management **PERISCOPE** project management approach begins with a shared understand and shared goals. If we get that piece right, we have significantly improved the project's potential for exceeding expectations. Implementation plan , project deliverables , phase one project set up in process analysis, phase two exploration and design, phase three system implementation and configuration, phase four go live and go live support. Staffing plan; Project director project manager business lead technical lead organizational change manager hosting and infrastructure team supplier enabled enablement and marketplace onboarding customer success and support team

Project Implementation Methodology **same as above with a business process inventory added.**

Catalog Support Services primary and initial focus will be on suppliers that have a statewide contract and then shift to other suppliers doing business with the state wishing to do so.

- Supplier categorization and prioritization
- Marketing and communication
- Registration
- Marketplace catalog uploads and/or punchout enablement
- Ongoing guidance and support

Data Conversion Services approach focuses on migrating only that data necessary to support core business functions in the new system at go-live. Historical data should be accessed outside of the new eProcurement system (e.g., in a data warehouse, etc.).

Interface/Integration Development Services **Periscope** designed to support the unique integration needs of state governments, particularly as it relates to the need to provide integration capabilities to multiple financial systems. Interface needs, interface design, interface configuration and unit test.

Organizational Change Management (OCM Services **Periscope** OCM approach is focused on the organizational change management elements of communication, stakeholder engagement, and resistance management. The objective is to provide key stakeholders with the information and tools needed to successfully transition to the new ways of working. Engage stakeholders, communicate vision, highlight benefits, various channels, repeat messages, preferred senders, manage resistance, monitor and measure.

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Training Services **Periscope** training approach and program has been developed so that it can be delivered in multiple formats. This approach caters to the different learning needs and requirements of impacted employees. Microlearning videos, elearning and simulations, virtual instructor LED training, and instructor LED training.

Help Desk Services

- Online support portal and ticketing system to report and track issues: Available 24 hours a day, 7 days a week; monitored during Business Hours (Monday-Friday 8am - 7pm Eastern excluding Periscope holidays);
- Ability to contact call center to report technical and functional issues during Business Hours;
- An easily accessible frequently asked question list and a technical and functional team available during Business Hours;
- Non-Business Hours response to tickets reported as Severity Level One issues;
- Ability to review responses to and update issues in the Online Support Portal;
- Ability to access online functional help tools such as quick reference guides and online video tutorials; and
- Ability to view all functional issues reported by the Customer in the Online Support Portal.

On-Site System Stabilization Support **Periscope** will provide a sufficient, appropriate combination of on-site and remote resources to support the State for ninety (90) days after the final, full implementation

Managed Services Requirements

Solution Support **Appears to be a repeat of implementation section.**

Organizational Change Management (OCM Services **Appears to be a repeat of implementation section.**

Training Services **Appears to be a repeat of implementation section with exception of a training plan example.**

Help Desk Services **Appears to be a repeat of implementation section.**

Transition Out Assistance Services In the event that a customer transitions away from our solutions, Periscope stands ready to assist in order to provide an effective transition. Our experience is that such a transition can take various forms and require different levels of involvement: some customers require simply a copy of their data, whereas other customers have requested additional services to assist with data translation to a new vendor. As such, Periscope works with each customer to identify needs, scope accordingly, and develop a specific SOW for the delivery of identified services.

Other Available Resources Other available services are included in Periscope's Innovation, Value-Add Section. Periscope is offering the following optional innovation and value-add services:

- Periscope Supplier Network (PSN) & S2G Supplier Experience
- ePro™ For Locals
- Periscope Reconciler
- Payment Gateway within ePro
- Sustainability – Ecovadis
- Grants Management
- NIGP Consulting Services
- Strategic Sourcing
- Equity Diversity and Inclusion
- SAP Experts - Phoenix Team
- Procurated

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Video Demonstrations

- Landing page based on role
- Workflows
- Note section to collaborate internally
- Bid lockbox
- Contract templates
- Rate suppliers with Procurated
- Email from app to external suppliers
- Digital signature – DocuSign and Adobesign
- Shopping card for pcards
- Biz intelligence reporting

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1-Full Solution

DATE: 8/23/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- 8 states, 1000 cities as clients
- Work with buyer and supplier
- Ensure buyers receive the right bids. May be beneficial, but may also be a liability should an anticipated vendor not get notification
- Proprietary Solutions
- Supplier Network may be a conflict of interest if contracts are competitively bid
- Product is "ePro"
-

2. Previous Projects

- Large Client list provided; many cities, municipalities
- Good examples of results from their solution, not fiscal results though
- Some examples are full solutions, others partial
- Focus on revenue generating model; not all states utilize administrative fees

3. Subcontractors

- CGI is systems integrator (project manager?)
- Identified numerous subcontractors but only spoke with any description to CGI (Accenture, PCG, Guidehouse, Deloitte, Civic Initiatives, and more)
-
-

4. Organizational Chart

- Org Chart evenly distributes between state resources and vendor
- Lacking description what each role responsibility
-

5. Litigation

- None
-
-

6. Financial Viability

- Revenue almost entirely based on subscription model
-
-

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/9/22

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Individual SME Comments:

General Principal and Requirements

- Periscope platform presented
- POSITIVE-single sign on
- NEGATIVE-Very small font, difficult to read
- QUESTIONING- Is solution customizable
- NEGATIVE-redefining terms such as clouds and blanket detract
- POSITIVE-Good showing different ERPs can integrate into
- QUESTIONING-White paper regarding PeopleSoft integration provided excessive information but was good to see.
- POSITIVE-Screen personalization is good
- POSITIVE-State Action boxes are a nice function
- QUESTIONING-Does supplier network create a barrier to entry?
- NEGATIVE-concerned about periscope additional income model with suppliers accessing other bids as potential conflict of interest
- QUESTIONING-If locals can use ePro at no additional cost, that alludes that other vendors are required to pay for access. If so, it is an absolute deviation from open and accessible bid opportunities.
- QUESTIONING-Periscope annual SaaS fee for reconciler seems to demonstrate a significant fee-based structure imposed to users for Periscope's solution
- NEGATIVE-is ECOVadis as a third party is at another additional cost, this time to both suppliers and clients
- NEGATIVE-Consulting services is yet another additional cost.
- QUESTIONING-How does Procured compared to Periscope which seems duplicative

Functional Requirements

- POSITIVE- developed for procurement initially
- QUESTIONING-Periscope has the term "ePro" trademarked?
- QUESTIONING-How are informal transactions addressed if Suppliers not awarded a formal contract
- POSITIVE-Level 2 punchouts identified
- INTERESTING-Reverse auction functionality
- POSITIVE-Notification of intent to award and non-award is a time saving function
- INTERESTING-Brief description of protest process is interesting but would need to know more
- QUESTIONING-Are contract negotiations versions retained in system throughout process?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Cat 1 Full Solution, Stage 2 Proposed Services

DATE: 1/9/22

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Technical Requirements

- QUESTIONING-no reliability percentage provided
- POSITIVE-Roles are preferred to control access to system
- NEGATIVE-Periscope places data migration almost completely on customer
- POSITIVE-Good description of various reports available
- NEGATIVE-Disaster declaration suspends SLA, when services may be needed the most, Periscope may not be available

Security Requirements

- NEGATIVE-Disaster declaration suspends SLA, when services may be needed the most, Periscope may not be available

Implementation Services Requirements

- Project Management is SCRUM
- POSITIVE-Thorough description of project management approach

Managed Services Requirements

- INTERESTING-No names on resumes
- Training seems more heavily invested in online than in-person

Video Demonstrations

- Only public sector, 8 states
- Integrate to ERP solutions
- Modular, can stand alone
- Supplier Data is customizable
- Bids and solicitations detailed options
- Workflow approvals are good before being publicly viewable
- Can bids be locked as sealed until a certain date and time
- Contract templates, collaborate internally or external edits
- Can send email from the solution
- Changes versioned for audit
- The interface is basic but professional looking, blocky
- Diversity attributes showing in the shopping results is good
- Complex catalog support is a good functionality
- Purchase orders is attentive to details, workflows are good
- Integration for payment the pulls back status is good
- Reporting is good, ad hoc is a good option, dashboard that are customizable
- PO list has very small text and lots of white space
- Integration is very generalized as described- basic steps applicable to any implementation
- Good mention of training, generalized discussion

Individual SME Comments:

Overall

General Principal and Requirements

Key Solution Functionality Elements

2-27	Both the supplier community and agency users have a single point of entry	
	A rules engine that electronically guides users down the appropriate procurement pathway.	
	Compliance -our solutions have evolved to changing processes, regulations, and technology demands. A	
	Periscope delivers what we call State eProcurement "Clouds". This cloud is truly a single portal that seamlessly connects each and every part of the procurement lifecycle for both buyers and suppliers. Buyers have the ability to track every single process and click directly to associated documents and historical information for each procurement phase	
	Marketplace enables an unlimited number of catalogs (punchouts level 1 and 2, external cooperative contracts, hosted catalogs loaded by the Supplier or State and other agencies publicly sourced and publicly shared catalogs) to be stored.	
	Periscope has provided proven integrations to State systems across our different customers and customer needs	
	Authorized users, typically an Organization Administrator manage approval workflow configurations. This role restricts their privileges to only their own agency. If a transaction triggers both an inherited (statewide or multi-org) approval workflow and a local workflow rule (meaning both apply based on their rules), then the transaction document would need to go through both approval paths. However, it should be noted that local government/co-op members are typically set up as "standalone organizations". That means that they do not inherit statewide approval paths from the State. Therefore, those approval workflows "inherited" by state agencies do not apply to standalone organizations. Users can be added to an approval path for special routing, and users can proxy to other users for vacation/absentee situations. Approval paths can be inherited and can be grouped logically to work conditionally and together. Users with administrative authority can edit approval paths.	
	provides an enterprise-level procurement solution enabling automated processes and a central location to store all records and documents. Based on

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

	State / Agency defined business processes, ePro can automate steps guiding users through procurement activities. T	
	provides reports and dashboards using data collected throughout the procurement process. Every field within ePro, including State Defined Fields, may be used when creating published reports, ad-hoc reports, and dashboards.	
	we offer extensive configurability through our solution to support unique processes and needs	

User Experience

28-37	Allows user personalization of their initial screen based on their needs or use of the Solution	
	Users can personalize dashboards in several ways: • They can select their individual dashboard from among a list of published dashboards. • An administrator can select default dashboards for each role type. • Users with ad hoc report creation privileges can build their own custom dashboards and leverage them on their ePro™ user homepage.	
	The left navigation bar provides access to your documents by type (e.g., purchase orders)	
	Controlled procurement processes guide a user through the electronic steps/milestone of the ePro solution. Processes such as supplier registration, transaction creation to completion, approval paths, etc. ensure process protection	
	The six colored boxes on the Homepage change based on the user's role and display the number of documents for each status that requires the user's attention and/or action. These boxes highlight the document statuses that are most important to the user based on his/her role.	
	ePro has been designed to support mobile use delivering different screen size options	
	ePro enables authorized users to access procurement records (requisitions, bid solicitations, purchase orders, etc.) and reassign them to another user within the organization, department, or location.	

Bidder Best Practices and Roadmap

38-45	We work on an agile development framework with sprints, to ensure our customers receive enhancements in a timely manner.	
	Our current schedule allows 4 new releases a year	
	before the final production release. In this manner, the customer knows exactly what will be available to them, and provide any feedback required before going into production.

DEPARTMENT/STATE: Purchasing North Dakota State University

Innovations and Value-Added Features/Services

46-53	Periscope is offering the following optional innovation and value-add services: • Periscope Supplier Network (PSN) & S2G Supplier Experience • ePro™ For Locals • Periscope Reconciler • Payment Gateway within ePro • Sustainability - Ecovadis • Grants Management • NIGP Consulting Services • Strategic Sourcing • Equity Diversity and Inclusion • SAP Experts - Phoenix Team • Procurated	
	Who can use these services?	concern

Customizations/Extensions

54	If a new enhancement is the best solution, Periscope will provide a quote and timeline to add the request in the next available release. Also, we will work with the customer to lay out a change management plan in which to implement best practice procedures within their organization to successfully incorporate the new functionality.	
----	---	--

Alternative Funding Models

55	Periscope has developed a range of proven subscription, licensing, financing, and delivery options, including perpetual license with annual support, financing of a perpetual license, Software-as-a-Service (SaaS), and risk-sharing of convenience fees and revenue generated by the eProcurement solution. This last option (risk-sharing of convenience fees), also referred to as a self-funded approach, would allow the State to obtain the new eProcurement system at no cost and would provide a plethora of additional services that states typically do not have the resources for	
----	---	--

Contract Transition and Flexibility

58	Periscope will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions	
----	---	--

Functional Requirements

Individual SME Comments: *The video supplied with this vendors response provided a high-level explanation of how the system operates. I found it very similar in nature to what I am used to seeing in a system.*

I can tell in this response that this vendor does have experience in working with State governments. I think that the "concerns" addressed in my notes are things that should be addressed, and those requirements listed as possible "enhancements" should be implemented. Some of the requirement responses did not "fully" address the entire requirement.

They supplied extensive information in the Implementation and Managed Services section of their response, but I did find that most of the information in these 2 sections are the same.

- SSO for entry. Both the supplier and the user log in from the same page
- State can enter user defined fields to help navigate where the user needs to be.
- Meets "baked in" requirement.
- Access for both the buying and supplier users by using the same portal.
- Can configure landing page dashboards
- Listed what buyers and suppliers can manage on PDF Page 18
- Meets open marketplace requirements like search across catalogs.
- Can compare prices that are a result of a search
- Included a sample ePro/Peoplesoft Integration Whitepaper on PDF Page 21 thru PDF Page 38
- Meets the requirements of the workflow – PDF Page 39
- Meets the requirements of document storage PDF Page 26 – 27
- Meets the reporting requirements - PDF Page 40
- Meets the configurable requirements – PDF Page 40
- Meets the transparency requirements – PDF Page 40

User Experience – PDF Page 41 thru Page 51

- Solution can configure homepage/dashboards – PDF Page 41
- Can do dashboards by role and user can do individual dashboards. Users with correct permissions such as ad hoc reporting can build dashboards as well
- Guides users with left navigation bar.
- Offers central search bar at the top of the landing page.
- Advanced search is also available – PDF Page 43
- Guided buying is used by the State of Nevada.
- Status Action Boxes on dashboards and last documents can be displayed – PDF Page 45
- Has reminder functionality on the toolbar

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 1

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Can access via mobile and provides workload management. PDF Page 48
- Role based functionality – PDF Page 48 and 49

Practices and Roadmap – PDF Page 51 thru Page 59

- 100% of focus is on government. PDF Page 51 paragraph one
- State of Nevada example is how the ability to provide enhancements. PDF Page 51
- Periscope Products are for Government – PDF Page 51 middle of page
- 2021 Release Timeline – PDF Page 52
- Can participate on Customer Advisory Board, product team travels the US to gain system issues, and they study procurement trends to obtain feedback.
- Provided 2021 Roadmap Goals - PDF Page 52 and 53
- Product direction based on 5 major procurement questions. PDF Page 53
- Provided roadmap for the next 3 years. PDF Page 53
- Roadmap design. PDF Page 54
- Roadmap goals. PDF Page 55

Innovations and Value-Added Features/Services – PDF Page 59 thru Page 67

- Provided list of optional innovations on PDF Page 59
- Explained details related to each of the services.
- Periscope Supplier Network is offered at no cost.
- S2G Supplier Registration Process – PDF Page 61
- Periscope Reconciler – PDF Page 62. Allows a tool to manage administrative fees.
- Grants Management – PDF Page 65

Customizations/Extensions – PDF Page 67

- Development follows the Agile method, enhancements applied at a rapid pace. PDF Page 67
- Customers benefits from this approach on PDF Page 67 at end of page

Alternative Funding Models – PDF Page 68 thru Page 69 – **MARKED CONFIDENTIAL**

- Self-funded model provides the added benefits listed on PDF Page 68 - 69
- One funding model will provide resources to manage areas listed on PDF Page 69 thru page 70

Contract Transition and Flexibility – PDF Page 71

- Will provide best contract options. Have transitioned clients without interruption in service.

Functional Requirements – PDF Page 72

- Provided ePro Solution chart on PDF Page 72
- Accomplishes procurement transformation on PDF Page 73

General Functionality – PDF Page 74

- SaaS solution with unlimited users.
- CONCERN - EPROC-GEN-6 – Tab 2 Line 10 - integrate with State data warehouse is not currently supported.
- CONCERN - EPROC-GEN-12 – Tab 2 line 16 - Only mentions searching attachments in CLM? Can you search attachments in reqs, orders, solicitations, etc?
- CONCERN - EPROC-GEN-15 – Tab 2 Line 19 - This response states forms can be printed. Can you print reqs, Purchase orders, solicitations, etc?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 1

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-GEN-22 – Tab 2 Line 22 - This response addresses the keyword search for commodity codes, but what about keyword search for all components?
- CONCERN - EPROC-GEN-32 – Tab 2 line 32 - Does not currently support translating into foreign languages
- CONCERN - EPROC-GEN-35 -Tab 2 Line 39 - **This response does not address the library requirement?**

Supplier Portal – PDF Page 74

- Portal is for suppliers to maintain many business tasks and requirements.

Supplier Enablement/Management – PDF Page 75

- These services are offered in Periscope's alternative funding model.
- Suppliers can self-maintain the data within their portal
- Offers a pre-qualified supplier list
- Typically, data is loaded into ePro from the data in the ERP.
- CONCERN - EPROC-VDR-15 – Tab 3 Line 44 - Only checks duplicate registration on SSN or EIN?

Buyer Portal - PDF Page 76

- Homepage allows buyer to all sections of the solution that require attention.
- Can update their user profile, view alerts and access other features from the homepage.
- Screen shot of buyers' portal on PDF Page 77
- CONCERN - EPROC-BPRT-3 – Tab 3 line 77 - This response is for requirement BPRT-4? We need to know if user has access to their profile information?
- CONCERN - EPROC-BPRT-9 – Tab 3 line 83 - The response does not address the secure link to an external individual.
- CONCERN - EPROC-BPRT-12 – Tab 3 Line 86 - Supplier performance cannot be access using the search feature.

Need Identification - PDF Page 77

- The need starts with the creation of a requisition which can then determine the procurement method.
- Can add custom fields that can help drive the workflow approvals.

Request through Pay - PDF Page 78 thru Page 85

- Sample request through pay table is offered on PDF Page 79
- Fig 4.7 Request to Pay Graphic on PDF Page 79
- Fig 4.8 Marketplace Workflow on PDF Page 80
- Market place shopping across all the catalogs. PDF Page 80
- Can prioritize what catalogs users need to utilize and compare search results.
- Fig 4.10 is the Periscope's Marketplace. PDF Page 81
- Workflow and approvals are configurable
- Orders go to Pos and then can create a receipt on that order.
- Solution offers Invoicing and other Payment options with configurable workflows.
- PCards can be used for placing orders. PDF Page 84

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 1

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Solution offers invoice matching and credit memos functionality along with subcontractor payment tracking.
- ePro Integration module is offered and explained on PDF Page 85
- CONCERN - EPROC-PRD-11 – Tab 3 Line 112 - Currently does not support standard purchase request for recurring purchases.
- CONCERN - EPROC-PRD-59 – Tab 3 Line 160 – Alerting users when a non-work date is selected is not currently supported.
- CONCERN - EPROC-WRK-10 – Tab 3 line 175 – Allow authorized approvers to override/bypass workflow is not currently supported.
- CONCERN - EPROC-WRK-13 – Tab 3 Line 178 – Allowing users to either approve or deny a request is not supported. Will consider this in future enhancements.
- CONCERN - EPROC-PO-16 – Tab 3 Line 211 - Does not support electronic signatures on approved orders.
- CONCERN - EPROC-PC-8 thru EPROC-PC-19 – Tab 3 Lines 234 thru 245 – These requirements are tied to credit card reconciliation which is NOT supported.
- CONCERN - EPROC-PC-21 – Tab 3 Line 247 - The ability to assign another user as a "proxy" to perform reconciliations actions on a Pcard in not supported.
- CONCERN - EPROC-RC-3 – Tab 3 Line 252 – Does not support recording receipts for POs not in the system
- CONCERN - EPROC-RC-4 – Tab 3 Line 253 – Does not support recording receipts without a reference to a purchase order.
- CONCERN - EPROC-RC-20 – Tab 3 Line 269 - The data provided from the ASN does not auto populate in the receiving screens
- CONCERN - EPROC-INV-8 – Tab 3 Line 280 – Does not support the ability to send an email to a supplier containing information about a rejected invoice.

Catalog Capability - PDF Page 86 thru Page 88

- Has one search capability with no limit of catalogs to be loaded.
- Lists of capabilities on PDF Page 87
- Listed benefits of their Marketplace – PDF Page 87
- Offers multiple options for establishing catalogs – PDF Page 88
- CONCERN - EPROC-CAT-19 – Tab 3 line 304 - Concern - Does not currently support negative dollar value as it is only available on Req, PO, or invoice

Sourcing/Bid Management - PDF Page 89 thru Page 100

- Listed states that have implemented this solution. PDF Page 89
- All solicitation documents are linked together in the system.
- Screenshot of managing a solicitation on PDF Page 90
- Has bid document management listed on PDF Page 91
- Integrated with Periscope Supplier Network
- Offers special solicitation types frequently used by state government. PDF Page 92 - 93
- Notification for solicitations PDF Page 94
- Suppliers can send responses and they can be evaluated in the system. PDF Page 96
- Awards can be made in system and can create a contract or one time PO. PDF Page 99
- Bulk notifications. PDF Page 100
- CONCERN - EPROC-SRC-4 – Tab 3 Line 331 - System does not support Two-Step ITB

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 1

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SRC-83 – Tab 3 Line 410 – Does not support web conferencing capabilities
- CONCERN - EPROC-SRC-102 – Tab 3 Line 429 - Does not support eSignature of a submitted response.
- CONCERN - EPROC-SRC-117 – Tab 3 Line 444 - Does not support the ability to hide name of suppliers from evaluators.
- CONCERN - EPROC-SRC-133 – Tab 3 Line 460 - The buyer needs to be an approver in a workflow step to be notified of an approver step?
- CONCERN - EPROC-SRC-138 – Tab 3 line 465 - Response addresses supplier receiving email about notification of award, but requirement is for posting award results to website.
- CONCERN - EPROC-SRC-140 – Tab 3 Line 467 - Response does not address if notifications contain that supplier was disqualified? Only states email lists awarded suppliers?
- CONCERN - EPROC-SRC-141 – Tab 3 line 468 - Response addresses multiple distributors, but requirement is asking if a non-award notification is sent?
- CONCERN - EPROC-SRC-143 - Tab 3 Line 470 - Response addresses the awarded contract or PO. The requirement is asking if the SOLICITATION can be cancelled and awarded to a different supplier.
- CONCERN - EPROC-SRC-146 – Tab 3 Line 473 - Responses does not state if a non-award email is sent?
- CONCERN - EPROC-SRC-147 – Tab 3 Line 474 - Response addresses the re-solicitation of information, but does not address the ability to post notice?

Contract Management - PDF Page 100 thru Page 104

- Contract Management workflow figure on PDF Page 100
- Offers contract creation, clause library and reporting functions.
- Contract Workflow and archival capabilities.
- Can track spend on contracts. PDF Page 103 – Financial Management
- Offers amendments process, eSignature, and the ability to define contract supplier fees. PDF Page 103
- CONCERN - EPROC-CNT-9 – Tab 3 Line 489 - Response does not address if system identifies if templates and contracts have been updated?
- CONCERN - EPROC-CNT-21 – Tab 3 Line 501 - Response does not address if system has user defined contract fields or error warnings?

Vendor Performance - PDF Page 104

- Based on “ticket” functionality sent to the supplier.

Purchasing/Data Analytics - PDF Page 105 thru Page 113

- Business Intelligence Solution is the solution name.
- Used to analyze the purchase data
- Offers numerous benefits listed on PDF Page 105
- Offers Analytical Reporting
- Spend Analysis Reports are included and listed on PDF Page 105-106
- Cycle Time reports and listed on PDF Page 106
- Offers Workload Management, Contract Usage, Financial Management, Supplier, Ad Hoc Reporting
- The solution also offers dashboards as a reporting tool. PDF Page 108

- Meets requirements

Other Available Services – PDF Page 119 thru Page 127

- Once the scope of work is established for additional offerings, Periscope can develop accurate costs.

Video Demonstrations

This solution can be implemented in a full solution or can be done by module. The video is broken up into the categories that are listed below.

Public Facing Side of Application – Suppliers register here and can log in from this page. State users also log in here and the landing page has the options available to the user based on the roles and permissions assigned to them. Has left side icon navigation to gain access to correct module.

Requisition process is the starting point and the result of this could be a solicitation or a purchase order. Information carries from the requisition to the solicitation. Build the bid, submit to workflow, add suppliers and post electronically. Solution offers tabs across the top of the screen when building a bid. Suppliers can open FORMS associated with the bid and fill them out as part of their response. Workflow is based on the criteria that is entered by the state. Can evaluate the bid response in the system.

Contract Management – Can have contract tied to bid. This solution offers building the document, review rounds, and eSignature application. Solution has access tabs across the top of the application. Also provides different “statuses” of contracts. Can send out the contract to multiple parties right from the contract record. Can perform amendments and renewals.

Marketplace – List of all catalogs including, state catalogs, and punch out catalogs. The system provides a search across all catalog functionality. Can refine the search results and then can compare items. Orders start with requisition, then the approval process. It transitions into a PO and then gets sent to the supplier. The system that can use the receipts process where the user can receive the items in the system. An approval process can be implemented and then it goes to the invoicing process. The invoice will be finalized, and workflow can then be applied.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 1

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Reporting – User can access “canned” reports or authorized users can build ad hoc reports. The solution also offers dashboard reporting as well. Can use a workflow dashboard to track workload.

Reconciler Tool – This can be used to help track the spend on contracts. It allows to set up a percentage fee and can use fee exclusions applied to certain lines items. The system allows the vendor to log into his portal and see what fees they are responsible for from the supplier portal. They can pay the admin fees or any other fees and can select multiple payment options.

S2G Tool – This is a tool that allows the supplier to interact with the state governments. Bids, catalog management, and sales reports are some examples.

The last part of the video provided information on implementation services.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Very broad statements, marketing in nature
 - Identify full category suite of contract lifecycle
 - Promotes blockchain; currently not well understood technology for state procurement risk
 - Unclear if Sysoft has established its capacity to perform
2. Previous Projects
 - Projects are not at full state complexity level
 - Lacking description of application or successes
 -
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - Just provided the Board of Directors. No reference to team to manage projects
 - Lack of identifying any employees
 - No position descriptions
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Moderate Risk
 - moderate risk category
 -

SME DEPARTMENT/STATE: NASPO

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 7-13)

- Deployment in Public Sector limited to 2 Agencies in Massachusetts and a few small Gov't customers.
- Staff assigned doesn't give a sense that there is deep experience working with public procurement outside of Massachusetts.
- NOTE: pg. 20 of the Solutions/Services shows that their "eProcurement Software" is only sourcing. They do not list anything for Request-to-Pay functionality. **NOTE:** this company might prove to be a better fit in Category 2, but they are not in Category 2.

2. Previous Projects (pg. 14-18): Note, no State projects provided.

- Projects show developing and deploying applications with their Autocene platform. Does not demonstrate deploying a Full Suite eProcurement solution with any of the previous projects and only in Massachusetts are there examples of projects related to procurement.
- **Mass DCAMM:** a database/application to capture/manage M/W/Vet architecture firms. Not a Full Suite eProcurement system/deployment. Screenshots/text on pg. 24 indicates that the tool is doing some sort of solicitation definition/posting for projects.
- **Mass DCAMM:** another portal/database of contractors. Not a Full Suite eProcurement system/deployment.
- **Superior Court CA:** Juror applications. Not a Full Suite eProcurement system/deployment.
- **City of San Jose OEA:** some text cut off hidden behind the screenshots but was able to highlight then copy/paste the hidden text. Project automated "10 different compliance processes w/ integration to existing Oracle CPMS system and included dashboards/reports. Not a Full Suite eProcurement system/deployment.

3. Subcontractors (pg. 19)

- No subcontractors

4. Organizational Chart (pg. 19)

- Org chart doesn't give any real insight to the company other than it shows that they are primarily a software development company. Does not "include the project being proposed" as required by the RFP.

Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Has customers of proposed solution in "public and private sector industries". (pg. 3 & 44)
- Company has a comprehensive management and support approach for projects/customers, "customer-centric management process". (pgs. 3, 5/6)
 - i. Article on pg. 6 indicates the company had "inception in 2014"
- Based on solution description and experience, *concerned that this proposal may be a better fit for Category 2 instead of 1, but they are not in Category 2..*

2. Previous Projects: Note, no State or Local Gov't projects provided.

- **Dept of Veteran Affairs OIT** (pg. 7, 13):
 - i. Project appears to be in progress rather than completed ("are rolling out", "will enhance", "will help")
 - ii. Scope is for a Marketplace to "identify and select the right IT solutions and contractors".
 - iii. Reference (pg. 13) shows Contract Dates of Sept 2016-March 2017, so may not be an active engagement. Also shows that scope was for "electronic market research that had weighted scores and included sandboxes" and "platform implementation, Training and Ongoing support".
 - iv. *Not a Full eProcurement Suite implementation.*
- **Dept of Veteran Affairs OSDBU**, (pg. 8-10, 13):
 - i. This is *NOT an example of a Previous Project*. It is an example of a "SOW issued by VA OSDBU" using the proposed solution
 - ii. However, it does imply that OSDBU is using some aspect of the Sambuq sourcing component.
 - iii. Reference (pg. 13) shows Contract Dates of June 2017 – Dec 2017, so may not be an active engagement. Also shows that scope was for "electronic procurements that weighted scores and included sandboxes" and "platform implementation, Training and Ongoing support".
 - iv. *Not a Full eProcurement Suite implementation.*
- **Public Consulting Group** for Florida and New Hampshire (pg. 11, 13):
 - i. Private Sector company that has Florida and New Hampshire projects

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: B2BEnable

CATEGORY #(s): 1

DATE: 8/19/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- ii. Sambuq is used to “administer and analyze surveys” to “PCG “State and Local Customers”.
 - iii. Reference (pg. 13) shows Contract Dates of Feb 2019 – April 2019, so may not be an active engagement. Also shows that scope was for “electronic assessments for the Child Welfare Applications” with “weighted scores” that PCG had as projects for Florida and New Hampshire.
 - iv. *Not a Full Suite eProcurement implementation.*
- **Gov’t of Australia Digital Transformation Agency-CMP** (pg. 12, 14):
 - i. Information provided does not indicate how long the solution has been in place.
 - ii. Scope is for “cloud marketplace” for sellers to provide “cloud computing solutions and associated services”.
 - iii. Reference (pg. 14) shows that the project started in Dec 2020 and is on-going. Also shows that the scope is for a “cloud marketplace include cloud offerings”.
 - iv. *Not a Full Suite eProcurement implementation.*
- 3. Subcontractors
 - No subcontractors
- 4. Organizational Chart
 - Organization Chart is more of a company org chart and does not “include the project being proposed” as required by the RFP.
 - SME position does not describe having procurement expertise/experience.
- 5. Litigation
 - No litigation.
- 6. Financial Viability
 - “Low Risk” in all categories except “Financial Stress”
 - Financial Stress at “Moderate”, “Limited time in business” note is a concern.

Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 6/7)
 - Deloitte serves “44 US States and D.C.”
 - “Deloitte has been serving the Public Sector for over 50 years”
 - “ALM Intelligence's best in class in for Management Systems and Enabling Tools for Procurement Operations Consulting in 2020”
 - “Deloitte is the right partner because we offer a well-informed point of view based on a successful track record of implementing contract management solutions across the nation.”
 - Concern that this proposal is for “contract management accelerators” which may not be a Full Suite eProcurement solution (Category 1). *It may be that this should be a Category 2 proposal.*
2. Previous Projects
 - **Air Force Contracting Information Technology** (pg. 8):
 - i. Deloitte implemented “Appian planform to migrate 4000+ contracting users”.
 - ii. *Not a Full Suite eProcurement implementation.*
 - **Defense Information System Agency** (pg. 9):
 - i. “Deloitte partnered with Appian to develop and deliver the IDEAS application”
 1. “handles transactions from purchase request receipt and creation through contract closeout.”
 2. “managers both DISA's telecom acquisition process and traditional contracting process”
 3. “manages all aspects of procurement work from pre-award to award and post-award activities”
 4. “replaced 12 separate legacy systems”
 - ii. “Deloitte provided functional experts, testers, and designers to support”
 - iii. “Deloitte provides 24x7 system support”
 - iv. *Unclear whether this is a Full Suite eProcurement implementation.*
 - **Texas Department of Public Safety** (pg. 9/10):
 - i. Deloitte implemented Appian “as the primary Contract Management System”
 1. “Contract Library Management”
 2. “Contract Administration”
 3. “Contract Compliance Functionality”

**STATE OF MAINE

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

4. "Reporting"

ii. Not a Full Suite eProcurement implementation.

- **United States Department of Veteran Affairs** (pg. 10):

- i. Deloitte "developed two tools on Semantic Open Source Software" platform.
 - 1. Performed ETL procedures to load files/data sources into "a centralized repository" and provide "custom, role-drive workflow"
- ii. Deloitte "developed the Supply Technical & Evaluation Procurement" tool to manage/evaluate supplier quote sheets.
- iii. Deloitte "developed the National COVID Response Tool" to submit requests, managers approve requests and track procurements for supplies and inbound warehouse shipments.
- iv. "custom reporting and data analytics capabilities"
- v. "credentialing and 2-Factor Authentication"
- vi. *Not an Appian implementation. Not a Full Suite eProcurement implementation.*

- **Navy Program Executive Office for Enterprise Information Systems** (pg. 10):

- i. Deloitte "developed a solution based on Appian-based acquisition solution".
- ii. "Requirements to Award Process Tool", "implementation of COTS software" for "Navy's NEST Ordering Tools".
- iii. "Resource Planning Tool", "will provide the ability to managed the spend plan using structured data hierarchy and central data repository, workflows, and reports".
- iv. "Vendor Simulator", "developed a tool in Appian to enable internal simulated" system integration testing for "inbound and outbound XML transmission".
- v. *Not a Full Suite eProcurement implementation.*

3. Subcontractors

- Appian (pg. 11)

- i. Capabilities "to achieve true digital transformation"
- ii. "Build Apps"
- iii. "No-code integration to connect" across "databases, cloud services and legacy systems"
- iv. Application development environment/company. *Does not list any eProcurement solutions/tools.*

4. Organizational Chart (pg. 12 – 16)

- Org chart is focused on the Project as required by the RFP.
- Includes "Procurement Subject Matter Expert(s)"
- "SCRUM" focus, Appian Designer ("Programmer/Developer", pg. 14) and Implementation Lead ("Provides the methodology/approach to building the solution", pg. 15) *imply that the proposed solution has a development aspect to the solution and may not be COTS.*

5. Litigation

- "In the past five (5) years, there have been no judgments against Deloitte Consulting, and we have been involved in three (3) such legal actions brought against Deloitte"

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 8/20/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Coupa is “highly recognized by leading Industry Analysts including Gartner, Forrester, and Spend Matters” and “serve over 2,000 companies and agencies around the world providing visibility on end to end source to procure processes” (pg. 2)
- Deloitte has “more than 12,000 practioners within our Public sector practice” and “more than 10 years of teaming with Coupa” (pg. 8)
- “Deloitte is Coupa’s leading system implementation partner” (pg. 8)
- Coupa implementation, our undisputed leadership position is proven with over \$60+ billion from Deloitte clients going through Coupa with 380+ Coupa practitioners (pg. 9)
- ALM Rated IN top quadrant for Sourcing/Procurement and Communications/OCM consulting (pgs. 9 & 10).

2. Previous Projects: Note, no State or Local Gov’t projects provided.

- **USPS** (pg. 11):
 - i. Deloitte implementation of Coupa eBuy+ (P2P capabilities).
 - ii. Post go-live (may not have been Deloitte effort) “USPS onboarded 65,000+ USPS employees to adopt a state of art procurement platform that includes 130+ catalogues and processes \$10B spend annually.”
 - iii. *Does not appear to have been a Full Suite eProcurement implementation.*
- **American Red Cross** (pg. 11/12):
 - i. “Deloitte team implemented Coupa’s source-to-pay technology and standardized processes” for \$535M spend.
 - ii. Post go-live (this may not have been Deloitte effort) “this helped the Red Cross achieve 78% contract compliance” in four months” and “increase early pay discount opportunities by 46%”.
 - iii. *Does not appear to have been a Full Suite eProcurement implementation.*
- **Brandeis University** (pg. 12):
 - i. Deloitte implemented “Coupa as a Procure to Order (P2O) solution”.
 - ii. Replaced “current marketplace solution” and “provided the capability to onboard new suppliers”.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 8/20/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

iii. *Not a Full Suite eProcurement implementation.*

- Molex Electronic Solutions (pg. 12/13): Deloitte implemented “a comprehensive S2P system” with “Coupa, SAP, MuleSoft”. “21 integrations”, 3 “robotic process automation” developments and “70+ hosted and punchout catalogs”. *Not clear if the S2P was the full Coupa suite being proposed or only a portion of it.*
- American Airlines (pg. 13): Deloitte “worked closely with American”, does not say that Deloitte implemented Coupa. Description seems to be a consulting engagement to leverage Coupa not implement it. *Not a Full Suite eProcurement implementation.*

3. Subcontractors

- Coupa: Customers “have used the platform to bring more than \$2.3 Trillion of cumulative spend under management, which we estimate has resulted in more than \$26 billion of customer savings to date” (pg. 14). NOTE: Figure 5 list of “Deloitte Coupa Clients” does not include any State or Local gov’ts.

4. Organizational Chart

- Organization chart is oriented on the scope of the RFP; “we have developed a recommended resourcing model to include practitioners with Coupa-specific experience, extensive knowledge of the source to procurement lifecycle and past experience serving various public sector clients”. (pg. 16)
- Figure 7 shows both a Leads and Analyst positions for each workstream as well as the Integration and OCM areas. (pgs. 17/18)

5. Litigation

- “In the past five (5) years, there have been no judgments against Deloitte Consulting, and we have been involved in three (3) such legal actions brought against Deloitte Consulting”. The 3 legal actions did not involve eProcurement implementations and were all “dismissed”. (pg. 19)

6. Financial Viability

- “Low Risk” in all categories except “Financial Stress”
- Financial Stress, “Moderate Risk”. May be due to the 11 UCC Filings by the State of Delaware.

A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

Overall/General

- Coupa is a Full Suite solution
- Technical proposal reads as if Coupa is the Prime and Deloitte is the sub, with Coupa doing most of the work to implement. (see PDF pgs. 27-28) and Supplier Enablement (PDF pgs. 36-38).
- They cut/paste answer from SC RTM into this RTM, so some responses have been pasted into the wrong row (see SRC-42 thru 47). Also see SRC-90 where the reference "SC" for South Carolina.
- System has file attachment size limit of 100MB across all areas of the system.

General Principal and Requirements

Key Solution Functionality Elements

- Routing, PDF pg. 14: STRENGTH, Coupa search checking catalogs, forms, Coupa Open Buy (punchout items), Policies & punchout site names. This is very comprehensive functionality.
- Compliance, "buying policies", PDF pg. 14: CONCERN, unclear whether "policies" means an actual policy document/text or if it is a rule (e.g. SQL statement) written into the application.
- Open Marketplace, PDF pg. 15-16: CONCERN, Coupa Open Buy (Open Marketplace) is a feature giving access to Amazon Business and Catalogs/Punchouts outside of State loaded/controlled content. Pg. 16 bullet refers to "Control access" but need to determine whether this is granular enough to meet State restrictions. Also note last sentence of 5th paragraph (pg. 15) refers to using "commodity-based workflows" to prevent purchase of items that don't comply with rules. Concerned whether the rules can be specific enough to capture restricted purchases.
- Integration, PDF pg. 16:
 - o Open Architecture
 - o Support all ERP systems
 - o Use industry standards with sFTP and REST-based APIs.
- Workflow, PDF pg. 16/17: STRENGTH, "can have a flag on the requisition escalating approval to a different approval chain".
- Reporting/Dashboards/Visualization, PDF pg. 17-18:
 - o NOTE: this functionality is "included in the subscription to Coupa, at no additional cost". Need to make sure that the Cost Workbook does not show costs for this.
 - o Coupa Analytics is for "advanced analytics" and is "additional purchase". NEED TO Negotiate this module into the scope if awarded.
- Configurable, PDF pg. 18: STRENGTH, "no Coupa or third-party services needed to configure our system after implementation".

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

User Experience

- Mobile Optimization, PDF pg. 20: STRENGTH, mobile app "included at not additional charge".
- Workload Mgmt Functionality, PDF pg. 20: STRENGTH, system has specific "User Reassignment feature" to reassign tasks/docs to other users.
- Role-Based Functionality, Content Groups, PDF pg. 21: CONCERN, Access to contracts is done with Content Groups. So to allow specific Agencies to have access will have to create Content Groups for every Agency and associate users to that Group. Not as efficient for setup/admin as just authorizing Agencies to use a Contract.

Bidder Best Practices and Roadmap

- Solution Releases, PDF pg. 21: CONCERN, "auto-update train"
 - o States will be required to take new releases and cannot control when they take them.
 - o "updates for the current version every two weeks"
 - o "major releases 3 times/year"
 - o Daily updates, "Coupa will update both sandbox and production instances at the same time".
- Use of Latest Technology, PDF pg. 22: STRENGTHs AI capabilities that stand out
 - o Fraudulent Spend Detection
 - o Contingent Worker Resume Matching
 - o Spend Data Classification

CONCERN, the list of "AI/Machine Learning" references what appears to be several different modules (e.g. Risk Insights, Supplier Insights). Need to make sure these are included in the proposed scope/pricing.
- Alternative Best Practices, PDF pg. 23: Deloitte "IndustryPrints, which contain industry-specific, enterprise-wide business models". CONCERN whether this implementation practice will fit Public Procurement and if not, will Deloitte's practice of using it cause difficulties in implementation since it is their standard practice.
- Cost Reduction, Deloitte's Procurement Central Delivery Model, PDF pg. 24-25: CONCERN, this appears to be an outsourcing service where State let's Deloitte do the sourcing for them. Need to see if they have incorporated it into the proposed scope. This was not part of the RFP scope.

Innovations and Value-Added Features/Services

- PDF pg. 26-27: The Application Managed Services, Help Desk Services and Supplier Enablement Services will be of value to some States/Entities. Suggest negotiating these into an award if Deloitte/Coupa move forward.

Customizations/Extensions

- PDF pg. 27: NOTE: "functionality is delivered either OOTB or using standard configuration". Need to look at **RTM** to confirm that they did not respond that anything required customization.

Alternative Funding Models

- PDF pg. 28-29:
 - o 1. Supplier Funding: Deloitte gets a transaction fee, uncapped.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- 2. Value Based Funding: Deloitte does sourcing for the State/Entity with base fees, risk fees and performance fees.
- 3. Working Capital Funding: State/Entity charges "user fees" to "agencies and constituents" into catalogs & contracts.

Contract Transition and Flexibility

- PDF pr. 32: NOTE, Deloitte misunderstood the RFP scope here. They assumed that this is to transition existing contracts into the NASPO Master Agreement/PA. Did not understand that this RFP reqt was for transitioning contracts into the eProc system.

Functional Requirements

General Functionality

- PDF PG. 35: Coupa Cloud is hosted on AWS.

RTM

- WEAKNESS, GEN-3: Public posting of Solicitations to State's website is not included. Must set up an API integration. Also NOTE that the Technical proposal references "Deloitte's Robot Process Automation (RPA) bot library" as a means to automate "public posting". But this Deloitte feature is not identified as included in the proposal.
- WEAKNESS, GEN-5: Public posting of Contracts to State's website is not included. Must set up an API integration.
- POTENTIAL WEAKNESS, GEN-10: While the "advanced searches on any data element" does make every field searchable it does not make the basic "keyword search" look at every field and the response did not address whether the State could alter the 'keyword search' logic to look at additional fields.
- WEAKNESS, GEN-11: Attachments are limited to 100MB in size.
- WEAKNESS, GEN-15: System does not provide in-application Print of transactions other than 'screen print'. Users would have to export to Excel/CSV to print.
- CONCERN, GEN-16: The response describing that "all components of the Coupa application" share "the same user interface and home page", concern how much the State will be able to revise main application/navigation screens (not transaction screens) and the home page to be South Carolina specific.
- POTENTIAL WEAKNESS, GEN-21: Response seems to be saying that the State would be responsible to maintain the set of commodity codes that will be used in the system. However, the last sentence of the response to GEN-23 saying that "commodity codes can be pulled directly from the ERP... using a standard integration..." seems to be saying that Coupa could automate commodity code updates by pulling from VISION.
- WEAKNESS, GEN-23: The State will not be able to choose which vendor name field would be used throughout the system.
- WEAKNESS, GEN-25: Outbound emails from the System will show a Coupa "from" email domain, not a State email address. This may cause problems with situations like getting 'black listed' for sending out broadcast emails like solicitation notifications and some vendors may not realize that the State is contacting them with System emails.
- WEAKNESS, GEN-27: This response did not address the requirement but the response to GEN-28 does state that the system does not create invoices.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, GEN-28: Admin fee tracking would be done on the Vendor account record. Should be the vendors' contract record instead.
- POTENTIAL WEAKNESS, GEN-34: System only provides future/effective dating on "certain objects".
- POTENTIAL WEAKNESS, GEN-35: System does not provide a "comments library" for standardized comments, however can define "drop down options of standard content" for comment fields.
- WEAKNESS, GEN-38: Coupa is a "subscription based solution with a limited number of users". Need to negotiate this to unlimited users if possible.

Supplier Portal

- PDF pg. 35: Supplier accounts in Coupa are shared across all Coupa customers. The Supplier Portal is a standard/common portal across all Coupa customers.

RTM

- POTENTIAL STRENGTH, SPR-1: "Coupa Supplier Network", State/Entity suppliers may have access to business with other Coupa clients from their State/Entity eProcurement account.
- WEAKNESS, SPR-5: Vendor notifications will NOT be viewable/presented to the vendor when they are in their account. They only get them by email.
- CONCERN, SPR-6: Not clear what the response means with "would not be visible" on the CSP in regards to this req't to allow vendors access to solicitations. But it may mean that suppliers can only access invited solicitations from their CSP account. NOTE: response to BPRT-1 implies that they can "request" access from their CSP account.
- CONCERN, SPR-7: The CSP "common page" may not provide a means to only present State/Entity solicitations or have State/Entity branding.
- TECH-10, GAP: Response did not address the req't for 'least privilege' control of assigned roles.
- NOTE, SPR14: Deloitte/Coupa didn't understand that this req't was to integrate with the State/Entity financial system to obtain/present data from the ERP.
- WEAKNESS, SPR-15: Suppliers will only have access to "their historic data" for analysis, not historic data across the entire system.
- NOTE SPR-19: Deloitte/Coupa did not understand that the requirement was for suppliers to be able to submit admin fee payments to the State.

Supplier Enablement/Management

- PDF pg. 35: CONCERN, "We never charge supplier fees" however in Supplier Portal section (PDF pg. 36) there is the statement "suppliers gain access to a low-cost, high-volume order channel". This sounds like there is a cost to Suppliers to be part of the Coupa Supplier Network.
- PDF pg. 37: STRENGTH, as part of free Coupa Supplier Portal/Network "manage catalog content, retrieve customer orders, create advance shipping notices, and create and manage invoices".
- PDF pg. 37: STRENGTH, Coupa Supplier & Catalog Enablement Accelerator toolkit. Based on our implementation experiences over many clients, this toolkit prepares your implementation team with a process overview for enabling suppliers in Coupa, a methodology for selecting which suppliers to enable, factors to consider when deciding on catalog type for each supplier, and steps to follow when enabling those suppliers.
- PDF pg. 3: STRENGTH, Support Health dashboard provides single view across risk, performance, external feeds and scorecards.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- STRENGTH, VDR-1: Option to have the email Suppliers receive include a table of all solicitations they've been invited to in a single email, instead of separate emails, with individual links to each solicitation.
- POTENTIAL WEAKNESS, VDR-3 through 11: Supplier registration may be generic/standard and not modifiable to meet State specific needs. May have to use the RPM form to capture any information that the standard OBN registration does not capture/require.
- CONCERN, VDR-15: The process of approved RPM data going to ERP and after that "record is then imported back into Coupa as a new supplier". This sounds like the supplier won't exist in the Coupa modules until ERP sends it back to Coupa. What if the State process is to only have suppliers sent to ERP if they are to be paid.... how would a supplier for bidding only get active in Coupa?
- POTENTIAL WEAKNESS, VDR-30: Based on the response, it appears that the State cannot create supplier accounts. Also, State can only maintain the data captured by the RPM, not the data in the OBN registration.
- WEAKNESS, VDR-33: System does not have an "automated means" for suppliers to get their User ID or reset their password. They complete a form and a "customer admin team" person must do the work.
- POTENTIAL STRENGTH, VDR-39: The "Supplier Health dashboard" that displays "transactional performance" may automatically present the performance on the metrics listed in this requirement.
- WEAKNESS, VDR-40: System does not provide a means for suppliers to "sign up for e-mail notification when a specific contract is to be re-solicited".

Buyer Portal

- PDF pg. 39: STRENGTH, you can add logos, branded color, configure home page content.

RTM

- STRENGTH, BPRT-4: The capability to configure "personalized dashboards" by "the user's role".
- POTENTIAL WEAKNESS, BPRT-7: Response here seems to say that the system notifications/alerts are not provided as "on-screen in the portal" when they login. However the response to CAT-39 discusses an "Announcements" feature the seems to be what was required with BPRT-7.

Need Identification

- PDF ppg. 40: STRENGTH, "configurable forms" that can ask for more detail about catalog items or gather info for non-catalog items. Forms can be specific to a group of users ("content groups").
- PDF pg. 40: POTENTIAL STRENGTH, Coupa Open Buy feature provides access to supplier punchouts from suppliers in the Coupa Supplier Network that are not registered with the State. PDF pg. 47: "Open Buy is not an online marketplace and depends on existing pre-negotiated contracts with customer punchout suppliers." **NOTE/CONCEN: the "pre-negotiated contracts" seem to be contracts with Coupa, not the State or other Coupa customers.**

RTM

- No issues on individual req'ts.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Request through Pay

- PDF pg. 41/42: POTENTIAL WEAKNESS, Coupa expect to do budget checking by loading budget data from ERP into Coupa instead of integrating for the check to the ERP.
- PDF pg. 41: STRENGTH, Coupa's "full-service contingent workforce management" (CCW) functionality is to support services purchasing is not a common feature in the industry. NOTE: on PDF pg. 44 there is a tool called "Maestro", that is an "add-on", which is described as being for "complex services". Need to see if this "CCW" tool is the same thing to determine what is/isn't in scope for services procurement.
- PDF pg. 44: CONCERN/NEGOTIATIONS, THE "Coupa Services Maestro" tool for "complex services" is NOT included in the proposal and is available as "add-on". Suggest negotiating this 'in'.
- Invoicing: Meets all **RTM** req'ts.

RTM

- WEAKNESS, BPRT-15: System does not provide the specific required functionality of "manually" initiating "broadcast email notifications". You have to set notifications up by "tasks or reminders".
- CONCERN, PRD-2: Based on the details about the various Coupa modules (Exhibit A doc), there is a separate module for Goods vs. Complex services. So users may not be able to put goods and services on the same Requisition.
- CONCERN, PRD-4: Regarding "Content Groups" and associating each contract to "specific content groups", this may mean that a Contract Officer will have to create a Content Group outside/separate from setting up the Contract instead of setting it up directly inside the contract.
- WEAKNESS, PRD-8: System approach to "standard collaboration" of using "Tags" does not meet the requirement of collaboration among 'users needing the same product/service'.
- POTENTIAL WEAKNESS, PRD-10: System appears to not provide capability to have "State standard and Agency/organization specific templates purchase requests". Appears that all templates are available to all organizations.
- WEAKNESS, PRD-11: System does not support a purchase request with an "automatic schedule".
- POTENTIAL WEAKNESS, PRD-12: System may not have the capability to include "standard" or "state agency/organization specific terms and conditions" on purchase requests and resulting purchase orders.
- WEAKNESS, PRD-13: Requisition attachmentse are limited to a size of 100MB.
- STRENGTH, PRD-15: System allows you to control who internally can access files attached to a requisition.
- POTENTION STRENGTH, PRD-18: The "@mention" feature "enabling customers to bring other people into the conversation".
- WEAKNESS, PRD-19: System does not provide a means to have "State Agency/organization specific purchase request fields". All fields are 'Statewide'.
- WEAKNESS, PRD-23: System does not provide a means for a user to enter/apply a discount to a line item on a requisition. Discounted values must be pre-determined/stored on the Contract or the catalog.
- WEAKNESS, WRK-6: System does not provide means to define approval "by-pass" rules. System only provides a manual means for a "permissioned user" to by-pass other approvals.
- **WEAKNESS, WRK-7: System does not provide a means to do "Parallel approvals". So "mutiple-path" workflows are not supported.**

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, PO-2: The capability for a PR to create "pending orders" for future fiscal years.
- WEAKNESS, PO-5: System does not provide for multiple PO templates to provide "state standard and state agencies/organization specific" templates. Custom fields to address all agency/org needs to into one PO template.
- WEAKNESS, PO-8: Terms and Conditions on a PO would have to be done as a manual attachment.
- POTENTIAL WEAKNESS, PO-16: System does not support DocuSign on POs, does support it on Contracts. Uses "final approvals" as the electronic signature.
- STRENGTH, PO-18: The "Liquid" tool that allows control the "layout and look-and-feel" of POs.
- WEAKNESS, PO-19: Change Orders cannot be initiated by changing the Purchase Request/Requisition. Can only change Orders.
- STRENGTH, PO-25: The system provides a "Soft Close" and "Fully Close" feature that may give the State significant flexibilities.
- POTENTIAL WEAKNESS, PO-27 & PO-28: System may not provide a means to create an order without creating a requisition.
- NOTE, RC-3: While response does not indicate that the req't to record receipts without a PO is met, the response to RC-4 does indicate that it is supported.
- "STRENGTH, RC-10:
 - o The functionality for returns is strong.
 - o System provides some form of Credit Memo capability.4"
- WEAKNESS, RC-21: System does not provide a means to "convert" PO unit of measure to an "inventory unit of measure".

Catalog Capability

- PDF pg. 47: NOTE, "Coupa's Advantage Suppliers" are the suppliers that Coupa has "negotiated savings" and provide punchouts in Open Buy.

RTM

- POTENTIAL WEAKNESS, CAT-7: The limit of 1 million line items may impact some of the State's very large suppliers who cannot or are not currently providing Punchout sites.
- NOTE, CAT-13: Coupa did not appear to understand the requirement.
- STRENGTH, CAT-15: The pricing options available are comprehensive with some options beyond what was required.
- WEAKNESS, CAT-17: System does not provide catalog item images. Must put links in the item description for users to navigate to.
- WEAKNESS, CAT-20: System does not provide a means to use Punchouts to get quotes.
- STRENGTH, CAT-24: The capability for suppliers to ""load catalogs into Coupa via EDI"" would allow suppliers to automate submission and loading of hosted catalogs.
-
- CONCERN, CAT-24: the response to CAT-2 indicates that a ""catalog manager"" will do catalog approving however CAT-2 response indicates that ""a Buyer"" would approve catalogs"". It is not clear who will be reviewing/approving catalogs."
- WEAKNESS, CAT-28: The system does not provide end users with an "onscreen listing/organization of catalogs".
- WEAKNESS, CAT-33: Catalog search results can only prioritize "certain suppliers". System does not have capability to prioritize specific contracts.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- CONCERN, CAT-34: Setting up punchout catalogs as "punch-in" catalogs may only work if the punch-out suppliers modify their respective website. So the value may be limited since those punchout suppliers are usually reluctant to take on this work.
- WEAKNESS, CAT-38: The system does not provide a means for catalogs to be searched without logging into the system.

Sourcing/Bid Management

- PDF pg. 47: CONCERN, it is not clear what is being proposed from Deloitte with the reference to their "bot library" for public posting of solicitations on the State website. NOTE that SPR-7 indicates that "Events that are flagged to be publicly available are listed on a common page in the Coupa Supplier Portal (CSP)" which is Coupa's common (across all customers) public posting location.
- PDF pg. 48: STRENGTH, system provides means to "identify opportunities for new sourcing events" by finding where same items/services are being purchased across the State/Entity.
- PDF pg. 48: STRENGTH, the capability to define projects and 'link events' to projects'.

RTM

- "POTENTIAL STRENGTH, SRC-2: The system ""recommends new savings opportunities"" from ""ongoing transactional spend".
- CONCERN (SRC-2): Response refers to this module as a "new application", so concerned that it may not be mature yet."
- STRENGTH, SRC-12: System provides "Dutch Auctions" capability in addition to reverse auction.
- POTENTIAL WEAKNESS, SRC-28: The "message board" is specifically for communication with suppliers, not "solicitation participants". The "@mention" feature in "the comments field" is not described as if it's a collaboration tool but simply a notification tool instead.
- WEAKNESS, SRC-33: Standard T&Cs would have to be in an attachment rather than a library or template concept.
- WEAKNESS, SRC-35: System does not provide check-in/check-out capability for documents, T&Cs or templates.
- CONCERN, SRC-36: The use of solicitation templates to have a set of specifications seems like a workaround. If you needed the same specification on different solicitation types then you might have to create multiple templates for every combination of specification and solicitation type.
- POTENTIAL WEAKNESS, SRC-37: System does not provide an option to automatically update sourcing templates when standard documents, terms/conditions or specifications are associated with the template and when the standard version is modified.
- WEAKNESS, SRC-41: MS Office and Adobe Acrobat would be used outside the system to author solicitation documents and then have to be manually added to the Solicitation in the system.
- NOTE, SRC-43: Response does not address the requirement to allow reassignment of work, however the response to SRC-44 seems to be for this req't.
- NOTE, SRC-44: Response does not address the requirement to allow reassignment of work, however the response to SRC-45 seems to be for this req't.
- POTENTIAL WEAKNESS, SRC-47: Solicitations themselves do not have workflow/approval capabilities. Response seems to require adding extra work to the sourcing process by creating "a

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Form which contains the information need to make the assessment" and that form is workflowed/approved.

- WEAKNESS, SRC-49: System only provides "sequential approval" capability, parallel approvals not supported.
- WEAKNESS, SRC-52: File size limit of 100MB.
- POTENTIAL WEAKNESS, SRC-76: The response seems to indicate that the State would be responsible for setting up a manual process to post the Coupa "public-facing URL" on the State's website. Response to SRC-54 that refers to a system provided link that provides access to an "Event information tab" may mean that the "public-facing URL" might not give access to the full solicitation details/documents.
- POTENTIAL WEAKNESS, SRC-78: Coupa OOTB does not have means to publicly post alerts on the States' website.
- WEAKNESS, SRC-80: System does not have the capability to "gather basic Vendor information" when they download or view the public posting of a solicitation
- WEAKNESS, SRC-81: The system will not provide a means to post amendments to the State's public procurement website. So even though there will be a "public-facing URL" (see SRC-76) that the State could place on it's website, there isn't anything provided additionally by the System that the State could post to indicate that an amendment had been issued.
- "CONCERN, SRC-83: Will the pre-bidding period"" functionality conflict with State procurement practices? Pre-bidding status allows suppliers to ""fill out questionnaires"" and ""send an initial response"".
- Also see SRC-98."
- WEAKNESS, SRC-89: System does not provide a means to load Excel file of Q&A as a means of entry. Can only make the Exel file an attachment.
- WEAKNESS, SRC-90: The system does not provide an OOTB capability to publicly "post all questions and answers".
- POTENTIAL STRENGTH, SRC-111: The capability to assign Evaluators "specific sections or documents" to review.
- WEAKNESS, SRC-112: Publishing a "list of participating suppliers" is a manual process to create the list and to publish it too.
- WEAKNESS, SRC-117: System does not allow hiding of vendor names from Evaluators.
- NOTE, SRC-120: Response did not address the requirement to be able to export "response" data, only discussed exporting scores. However, response to SRC-125 does indicate that they can be "exported".
- WEAKNESS, SRC-129: Attachment file size limit of 100MB.
- WEAKNESS, SRC-130: System does not provide a "collaboration or meeting function" for evaluation panel members.
- WEAKNESS, SRC-131: System does not provide a "collaboration or meeting function" for Buyer, Agencies and Mangarers.
- POTENTIAL WEAKNESS, SRC-135: Response seems to be saying that you cannot award the same lines or lots or all to multiple Suppliers.
- WEAKNESS, SRC-138: The only reference to this "implementation partner" concept is the "bot library" feature that Deloitte that is mentioned, without detail, in the Tech Proposal, PDF pg. 47
- WEAKNESS, SRC-139: System does not provide any form of Award notification to any Suppliers. Buyer will have to do this manually, outside the system.
- WEAKNESS, SRC-140: System will not send notification to disqualified suppliers. Buyer has to do this outside the system.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, SRC-129: System will not send notification to non-award suppliers. Buyer has to do this outside the system.
- WEAKNESS, SRC-144: System does not provide a means to email notification to Agency representatives about an Award.
- WEAKNESS, SRC-145: System does not provide a means to email notification to non-awarded vendors about an Award.
- WEAKNESS, SRC-146: System does not provide a means to email notification to non-awarded vendors about an Award.
- WEAKNESS, SRC-147: The only reference to this "implementation partner" concept is the "bot library" feature that Deloitte that is mentioned, without detail, in the Tech Proposal, PDF pg. 47
- POTENTIAL WEAKNESS, SRC-148: System does not "lock and encrypt" responses for cancelled solicitations.
- WEAKNESS, SRC-150: The list of available (OOTB) user alerts about "actions to be taken on a solicitation" is limited.

Contract Management

- PDF pg. 50: STRENGTH, the capability to define projects and link contracts to projects.
- PDF pg. 50: NOTE, the 'feature' described of suppliers collaborating on contract authoring is actually being done outside the system by download/upload of MS Word documents that are worked outside of the system.

RTM

- WEAKNESS, CNT-10: System has a limit on the size of attachments of 100MB.
- WEAKNESS, CNT-20: Contracts cannot have the same number as the associated solicitation.
- POTENTIAL STRENGTH, CNT-25: Contract authoring with MS Word. NOTE: response says "is available", so this integration to MS Word may not be included in the pricing.
- WEAKNESS, CNT-27: System does not have the capability to specify which users "are allowed to view" each attached contract documents.
- POTENTIAL WEAKNESS, CNT-28: The system appears to not have a clear capability to establish contracts with a "pool of vendors" where you could then send a SOW and get quotes.
- WEAKNESS, CNT-32: Attachment limit of 100MB.
- WEAKNESS, CNT-34: "does not provide the ability to prevent backdating of a contract". Have to use workflow to catch the situation.
- WEAKNESS, CNT-38: File size limit 100mb.
- POTENTIAL WEAKNESS, CNT-39: Response seems to indicate that the system does not have OOTB functionality for loading subcontractor payment information to a contract.
- GAP, CNT-43: The Technical Proposal section for CLM (PDF pgs. 49/50) do not describe any Deloitte (implementation partner) plans/commitment to "provide the process for releasing contract information/data".
- GAP, CNT-45: The Technical Proposal section for CLM (PDF pgs. 49/50) do not describe any Deloitte (implementation partner) plans/commitment to "provide the process for releasing contract information/data".
- GAP, CNT-64: The Technical Proposal section for CLM (PDF pgs. 49/50) do not describe any Deloitte (implementation partner) plans/commitment to provide "public contract list" functionality or search of the list.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- GAP, CNT-65: The Technical Proposal section for CLM (PDF pgs. 49/50) do not describe any Deloitte (implementation partner) plans/commitment to provide "public contract list" functionality or search of the list.
- WEAKNESS, CNT-66: Posting of contract alerts on the State's procurement website is not supported.
- POTENTIAL WEAKNESS, CNT-85: System does not have the capability to initiate an order directly from a Contract. Users must create a requisition and reference the Contract to be able to create an Order.
- WEAKNESS, CNT-88: The system does not provide a means to have one contract with different pricing for different organizations.

Vendor Performance

- PDF pg. 50: CLARIFICATION, is performance information available for Suppliers on the Open Buy part of the Coupa Network?
- PDF pg. 51: STRENGTH,
 - o the Supplier Health page and associated performance presentation/tracking is very comprehensive.
 - o the functionality includes Cure letter and improvement plan capabilities as part of the vendor performance functionality with the ability to "assigne recommendation-related tasks" both internally and to the supplier.
- PDF pg. 52: STRENGTH, the "Coupa Risk and Performance Management (RPM)" allows the State/Entity to establish KPIs for risk assessment/tracking that are specific to the State/Entity.
- NOTE, VPE-14: Response did not address the req't to be able to "create scorecards, charts and graphs" however the response to VPE-13 does describe "configurable scorecards" and the video demo did show charts and graphs as well.
- POTENTIAL WEAKNESS, VPE-20: System does not have a means to recognize contract items being ordered without referencing the contract number and alert the buyer/analyst responsible for the contract.
- WEAKNESS, VPE-25: System has limit of 100MB per attachment.

Purchasing/Data Analytics

- PDF pg. 53/54: NOTE, the "Coupa Reports" module/tool is "included as a part of its eProcurement platform" but there is also a "Coupa Analytics" tool mentioned (bottom of PDF pg. 54) that provides advanced reporting/analytics that is an "optional add-on" (see PDA-1) but is reference in several RTM responses (e.g GEN-6, CNT-28, VPE-21, PDA-1) that make it seem to be needed. NEGOTIATION, so suggest negotiating this module into the proposal at no additional cost.

RTM

- CONCERN, PDA-1: "Optional Add-On" so it is probably not included in the proposed scope/pricing?
- WEAKNESS, PDA-32: System does not provide any means to publish reports to an external (outside Coupa) website. State would have to do manual processes to take pre-run/scheduled report results and post to the State website.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Technical Requirements

Availability

3rd para, PDF pg. 56:

- Meets req't.
- STRENGTH, Coupa has strong infrastructure with failover/redundant hardware and hardware replicated "in realtime" to another "Availability Zone".

Accessibility Requirements

PDF pg. 57:

- Partially meets req'ts
- "Coupa is also working towards section 508 accessibility requirements"
- Coupa has adopted WCAG v2.0 Level AA and is "continuously applying accessibility requirements in our processes". However currently, "Fully Supports or Partially Supports conformance levels" for P2P and Expense offerings. So partial compliance but may be sufficient for specific State/Entity regulations.

Audit Trail and History

PDF pg. 58: Meets req'ts.

Browsers Supported

PDF pg. 59:

- Meets req'ts
- CONCERN, Coupa only tests the system with IE and Firefox browsers. Chrome, Safari and Edge are not used which are the more commonly used browsers in Public Sector.

User Accounts and Administration

PDF pg. 60:

- Meets User Acct/Admin req'ts except response did NOT address req't to be able to delegate Admin role to agencies.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide a 'one account' feature for user that is both a buyer and a supplier. User must have two accounts.

User Authentication

PDF pg. 61/62:

- Meets all req'ts except 2FA, must rely on States's SSO setup. NOTE: Non-State entities (e.g. Local Gov'ts) would not be likely to be in the States' SSO system.
- STRENGTH, can require Suppliers to do 2FA. Interesting that system can do this for Suppliers but not non-State users in the system.
- NOTE: "P-cards" are identified as part of the "centrally responsible" user profile data. Need to see what the responses are to the **RTM** req'ts on PCard admin.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- POTENTIAL WEAKNESS, TECH-21: System does not provide two factor authentication. Must use the "State's identify management solution" for this. This would not address non-State entity users.
- NOTE, TECH-23: The password rules are standard across all of Coupa and may not fit each State's specific rules/policies.

Federated Identity Management

PDF pg. 63: Meets req'ts

Data Conversion

PDF pg. 63/64:

- Meets req'ts.
- CONCERNS that may need to be negotiated:
- Migration limits of "50,000 supplier accounts and 300 contracts" for a State including it's agencies. However, responses to TECH-27 thru TECH-29 indicates that "All legacy" Reqs, POs, Solicitations and Contracts can be loaded.
- If "integration is in scope", "smaller subset of data" of "up to 500 total records across system configuration areas".

Interface and Integration

PDF pg. 64/65:

- GAP, system does not provide real-time integration capabilities. Can be 'near real-time' based on scheduling. "Coupa's standard integrations run on a polling schedule". Typically "transaction data" is on "an hourly basis."

RTM

- While there are not specific issues for the Integration **RTM** req'ts (TECH-35 thru 60) there are questions on what specific interfaces/integrations are included in the proposal scope/pricing and there are some detailed req'ts which were not fully addressed.

Office Automation Integration

PDF pg. 65: Meets req'ts.

Mobile Device Support

PDF pg. 65: Meets req'ts.

Mobile Applications

PDF pg. 66: Coupa does have a mobile application for iOS and Android. Meets req'ts.

Data Ownership and Access

PDF pg. 66-67: Meets req'ts

- CONCERN (also noted F. Managed Services Reqs, Transition Out Assistance Service, PDF pg. 144), regarding the 60 day period from Contract expiration to get Data from the system. Suggest negotiating this for a longer period to make sure the State/Entity has time to validate that they got all of the data and that it is usable.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Date Retention, Archive and Purge Considerations

PDF pg. 67: Meets req'ts.

Disaster Recovery Plan

PDF pg. 67-68: Meets req'ts.

- NOTE: If this proposal moves forward, suggest requiring submission of the 10 Coupa policies/processes that are referenced for their Disaster Recovery and Business Continuity Plan so there is complete documentation for review by any potential using Entity.
- PDF pg. 68: STRENGTH, extrement robust infrastructure backup/redundancy/recovery capabilities
 - o "application and data is replicated across multiple Availability Zones (AZ) and Regions".
 - o production data replicated across "two different storage arrays"
 - o hard drive snapshop image taken "every hour"
 - o "11 nines" of availability
 - o "System recover" is fully automated.
 - o Server failure, automatic trigger of new compute instance w/software, configuration and connection to primary or backup EBS storage
 - o Primary database failure, "automated redirect" to backup replica.

Solution Environments

PDF pg. 69: GAP, proposal only includes a Production and Sandbox environment. Testing, Training and post-go live configuration work is done in the Sandbox environment.

- Additional environments are available "for an additional charge".
- Should this proposal go forward, suggest Negotiating two additional environments, if needed/desired by the State/Entity, at no extra cost.

RTM

- WEAKNESS, TECH-64 thru TECH 67: Coupa relies on a single "Sandbox" environment to address testing, training and trying new configurations. This is not a 'best practice' in that conflicts between testing and training schedule will occur and the configurations/data brought into the environment for testing is likely to impact Training. ALSO, responses did not address the req't for testing/training to refresh to "remove test and training data and update with relevant production data".

Solution Technical Architecture

PDF pg. 69: Meets req'ts. Strong technical architecture

PDF pg. 70:

- Web Tier: modsecurity, NGINX
- App Tier: Ruby on Rails, phusion
- DB Tier: MySQL
- Hosting/Storage: AWS
- CONCERN (pg. 70), Coupa can "collect unique market benchmarks" from it's multiple tenants. NEGOTIATION, should this proposal move forward suggest making sure that Coupa does not have access to State/Entity data that they shouldn't have access to.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Solution Network Architecture

AWS Hosting Locations, PDF pg. 75-78: Meets req'ts. Strong architecture.

System Development Methodology

PDF pg. 79/80: Meets req'ts. Strong, mature methodologies.

Service Level Agreement

PDF pg. 81: GAP

- "Best effort is made to maintain flexibility with unique customer SLA requirements, Coupa is unable to guarantee full compliance to the Exhibit 2: Model SLA document at this time".
- Coupa SLAs are standard across all their customers. Need to negotiate to have "unique customer SLA requirements".
- NOTE, Coupa uptime SLA won't fail unless entire system is down.
- Severity Level response times are "based on the level of support contracted". The only support level info provided is for "Premium Support" (Fig. 16) and which only commits "Initial Response" and "Query Response" times, not resolution. Also the times are too long for State business operations.

Security Requirements

Cloud Security Alliance (CSA) Compliance

CSA Compliance: Meets req't.

Security and Privacy Controls

PDF pg. 83: Meets RFP req'ts but...

- Coupa uses NIST controls as guidance, and is not fully compliant.
- AWS Cloud (hosting) validated by 3rd party for NIST 800-53.
- Coupa is FedRAMP Moderate Ready, expect full certification by end of 2021.

Security Certifications

PDF pg. 84: Meets RFP req'ts

Coupa Certs

- SSAE 18 Type 11 SOC 1 & SOC 2
- ISO 27001
- TUV Rheinland Cloud Cert
- PCI DSS
- HIPAA ePHI protections provided
- CSA STAR self-assessment

AWS, designed/managed in alignment w/

- SSAE 18 SOC 1, SOC 2 & SOC 3
- FISMA, DIACAP, FedRAMP
- DOD CSM Levels 1-5
- PCI DSS Level 1

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Annual Security Plan

PDF pg. 85-88: Meets RFP req'ts

- "Coupa will comply with the Lead State and Participating Entities' requirements for an Annual Security Plan"
- "Deloitte will work with Coupa to develop the supporting security strategy and security plan".

Secure Application and Network Environment

PDF pg. 89-91: Meets RFP req'ts.

- Very mature security controls for the application and environment.

Secure Application and Network Access

PDF pg. 92/93: Meets RFP req'ts.

- Very mature access controls.

Data Security

PDF pg. 94-96: Meets RFP req'ts

- NOTE, "Use of Customer Data" (PDF pg. 96) by default Coupa can use derived aggregated quantitative data but States/Entities can "choose not to participate".
- NOTE, "Disposal of Customer Data", Coupa deletes customer data 60 days after contract/agreement termination/expiration. Suggest NEGOTIATING an increasing in the number of days, especially in termination cases where 60 days may not be enough time with all of the activity that may be going on with a termination.

Personally Identifiable Information Protection

PDF pg. 97/98:

Meets RFP req'ts

- NOTE, suggest during Negotiations to confirm that any fields added by a State/Entity that are considered PII can be protected.

Security/Privacy Issue Occurrence

PDF pg. 98/99:

Does not meet these specific req'ts but does have a comprehensive practice.

- Notification within 24 hours instead of req'd 2 hour notification
- No commitment to 48 hours present exposure/assessment or 4 calendar day to resolve.
- NOTE, as a SaaS Coupa has a single "Incident Response Plan"/approach for all of it's customers. So not likely to change. If awarded, suggest this section be called out to States/Entities to review for fit to their own specific req'ts.

PII Data Actual/Attempted Access or Disclosure

PDF pg. 100/101:

Does not meet these specific req'ts but does provide protection compliant with HIPAA & GDPR

- Notification within 72 hours instead of req'd 2 hours.
- NOTE, this is another topic that suggest recommending States/Entities review for compliance with their specific requirements.

Security Breach Reporting

PDF pg. 101/102:

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Does not meet these specific req'ts but does have a comprehensive security reporting practice.

- Notification within 72 hours instead of req'd 2 hours.
- NOTE, this is another topic that suggest recommending States/Entities review for compliance with their specific requirements.

Implementation Services Requirements

Project Management

PDF pg. 104:

- Project Mgmt approach is mature.
- Project timelines are unrealistic (too short) for the implementation scenarios (Small, Med, Large). Notice that the Build/Unit Test times include
 - o creating Integrations (see Fig. 25, PDF pg. 114)
 - o conducting multiple Conf Room Pilots (CRPs) and adjusting the design (PDF pg. 116)
- COSTS Assessment, the proposed scenario pricing may be understated if based on these timeline. NEED TO REVIEW ANY COST ASSUMPTIONS.

Project Timeline SMALL, PDF pg. 105:

- overall 36 weeks (9 months) to go-live... too aggressive/short for a Full Suite deployment
 - o 4 weeks for Design across all modules
 - o 10 weeks for Build/Unit Test
 - o 6 weeks for all testing with 3 weeks for UAT across all modules
- Training not called out, but all looks like 3 weeks is allowed before Go-Live.

Project Timeline MEDIUM, PDF pg. 106:

- overall 52 weeks (13 months) to go-live... too aggressive/short for a Full Suite deployment
 - o same 4 weeks for design across all modules as with Small
 - o Build/Unit Test is 12 weeks, which is only 2 weeks longer Small
 - o 13 weeks for all testing with 4 weeks for UAT, which is only 1 week more than Small
- Training not called out, but all looks like 7 weeks is allowed before Go-Live.

Project Timeline LARGE, PDF pg. 106:

- overall 60 weeks (15 months) to go-live... too aggressive/short for a Full Suite deployment
 - o 10 weeks for design across all modules
 - o Build/Unit Test is 15 weeks, only 3 weeks more than Medium and 5 weeks more than Small
 - o 16 weeks for all testing with 4 weeks for UAT, only 3 weeks more than Medium
 - o Training not called out, but all looks like 4 weeks is allowed before Go-Live which is less 3 weeks less than Medium and only 1 week more the Small

Project Org Structure, Fig. 20 &21, PDF pg. 109:

- Proj Team & responsibilities do fit Full Suite implementation.
- COST Assessment/Negotiation ideas
 - o Suggest not letting the Project Executive to be part of the costs for the project. This is Corporate level person without day-to-day project involvement.
 - o Suggest negotiating OCM to be a priced option so States/Entities have the option to use other resources instead of Deloitte staff.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

State/Entity Staff, Fig. 22, PDF pg. 111:

Good list of what a State/Entity should plan to have for project staffing.

Governance Approach, Fig. 23, PDF pg. 112:

NEGOTIATION, need to make sure that the specified Governance structure is not 'required' by Deloitte since this will vary among States/Entities.

Status Reporting, Fig. 24, PDF pg. 112/113:

STRENGTH, the adoption scorecard may be a very effective tool for the State/Entity. Will need to learn more about the metrics, how they are measured and potential to add some specific metrics that a State/Entity may want.

Project Implementation Methodology

PDF pg. 113-119:

Mature implementation methodology however the approach and amount of work identified doesn't align with the example Timelines provided in the previous section.

- "Hybrid agile approach" (pg. 114)
- Utilize "use-cases" from previous implementations (pg. 1140)
- Iterative Build with CRPs (pg. 116)
- "hybrid agile approach to handle testing" (pg. 116)

Iterative Test Types, Fig. 29, PDF pg. 117:

- WEAKNESS, no Performance Testing which has proven to be an issue with a number of State implementations of many systems.
- NEGOTIATION, there are 8 different recommended "test types". Suggest locking in that all test types are included in the proposed costs. Also negotiate adding Performance Testing at no additional cost.

Deploy/Hypercare, PDF pg. 118:

STRENGTH, "Dress rehearsals" for cutover are not a common practice in the industry. This is a good Risk management practice.

Catalog Support Services

Fig. 33, PDF pg. 120: Meets RFP req'ts

- NEGOTIATION, move this to Optional work to allow for situations where the State either does the work themselves or contracts with another outside entity to do the work.

Data Conversion Services

PDF pg. 121: Meets RFP req'ts.

Interface/Integration Development Services

PDF pg. 122-124: Meets RFP req'ts.

- Mature capabilities that offers csv and web call options as scheduled or near-realtime.

Organizational Change Management (OCM Services)

PDF pg. 124-126:

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Meets req'ts at basic level... not enough detail to determine strength. However ALM Intelligence named Deloitte "a global leader in Communications and Change Management Consulting".
- COST ASSESSMENT, suggest looking to having OCM area be set up as Optional for those situations where a State/Entity wants to use other (internal or other 3rd party) resources for OCM. There would still need to be an OCM lead from Deloitte to work with these other resources in that situation.

Training Services

PDF pg. 126-130: Meets RFP req'ts with some additional Strengths.

Training Strategy, PDF pg. 127:

STRENGTH,

- Incorporating looking at existing State/Entity training programs/practices is a good practice to not only potentially leverage them but to also make sure eProc training is coordinated.

Initial Deployment, PDF pg. 128:

CONCERN/NEGOTIATION

- The limits of "10 State staff" and "20 live webinars" for Suppliers are too low to support a Statewide/Entity-wide implementation. Especially for the Medium & Large State scenarios.
- Need to get more into the scope/cost approach without increasing costs.

Training Deliv Methods, PDF pg. 128:

- NOTE, Use of "training channels" is limited to "25% of state's employee counts".
- Need to be certain what is meant by "employee" here to be able to understand what this limit number this translates to.
- NEGOTIATION, if this means to full count of all employees in a State/Entity, then this might be an area for cost reduction if State/Entity needs less than 25%.

Training Format, PDF pg. 129:

STRENGTH,

- "Cohorts/Office Hours" concept is not commonly included in these types of plans and reflects maturity of training approach. NOTE, though is is not clear whether the "trainers" or "SMPs" to staff this would be Deloitte staff or State/Entity staff.

Post Deployment Training Resources, PDF pg. 129:

CONCERN/NEGOTIATIONS

- Proposal limits Functional Training Guides to "two 15-minutes videos or guides". This is not enough to cover all of the functional areas for a Full Suite implementation.

Help Desk Services

PDF pg. 131-134:

- NOTE: Response to this section and the Help Desk section of F. Management Services Req'ts is for Coupa Help Desk support. Deloitte has it's own Help Desk service offering that is documented in Section G. Other Available Services (PDF pg. 149-150)
- State/Entity to provide Level 1 & 2 Help Desk support, Coupa would provide Level 3. (PDF pg. 132). NOTE, Coupa Level 3 is generic/standard Coupa, not the State/Entity specific implementation of Coupa.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Approach/Methodology, PDF pg. 131:

- GAP, the statement that Coupa meets "**RTM**: Tab 6, IMPL-1 through IMPL-5" is not correct.
- IMPL-3 & 4 require live chat tool for all users but the Coupa tool is only for Suppliers
- IMPL-5, the response did not address the req't to integrating Deloitte/Coupa ticketing system with State IT Help Desk system. Response instead talked about the "multi-level support services" that are available.

Coupa's Support Features, PDF pg. 131/132:

WEAKNESS, for State/Entity side Help desk offering is only for Level 3 and only for 10 users can call the Help Desk and they have to be "Coupa certified" users.

Issue Severity Levels, PDF pg. 133:

WEAKNESS

- Issues are "prioritized by the Coupa team", so State/Entity does not get to specify priority
- Severity definitions for 1-4 do not fit the SLA model that was in the RFP.

Customer Satisfaction, PDF pg. 134:

WEAKNESS, no direct measuring or asking of Customer Satisfaction. Coupa uses "renewal rates and add on licenses" and tracking "snapshots" of customer spend metrics to assess customer satisfaction.

RTM

- "IMPL-1, Help Desk Services for ""buying and supplier users"":
 - o STRENGTH: Application screens give users access to ""Ask an Expert community forum"", ""Take a Tour step by step guide"" and ""Coupa Community"".
 - o CONCERN: The provided Help Desk services appear to mostly be 'generic'/common Coupa support, not specific for the State/Entity customer implementation."
- IMPL-2, Response to the req'ts describes standard Coupa training offerings but does not specifically indicate what is included in the Proposal for Help Desk training. However, the Technical Proposal document (Section E. Implementation Req'ts, 7. Training Services, PDF pg. 126-130) does provide details on what is included.
- POTENTIAL WEAKNESS, IMPL-3 & 4: Coupa's "live chat tool" is only for Suppliers. There isn't an equivalent for the State/Entity user side.

On-Site System Stabilization Support

PDF pg. 135/136:

Meets RFP req'ts but suggest NEGOTIATION to identify the number of on-site resources included.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s): 1

DATE: 10/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Managed Services Requirements

Solution Support

PDF pg. 138-142:

- Overall, meets RFP req'ts.
- NOTE: Response to this section is for Coupa Help Desk support. Deloitte has it's own Application Managed Services offering that is documented in Section G. Other Available Services (PDF pg. 148-149)
- Note that support is focused on the shared Coupa SaaS environment and there is not a great deal of focus at the specific Customer level except for Customer Account Managers and Customer Value Managers (PDF PG. 140-141), these positions respond to customer requests for support rather than being proactively dedicated to a customer engagement.

Technical Activities, PDF pg. 141:

- Managed Services does NOT include support for "System integrations and scheduled reporting/ETLs" set up during implementation. These are "maintained by the customer".
- Coupa maintenance windows "can last up to three hours". NEGOTIATIONS, suggest locking down what hours of the day are established for these "three hours".

RTM

- POTENTIAL WEAKNESS, MNGD-1: Coupa does not have an "independent response time measurement service". Coupa self-monitors/reports.

Organizational Change Management (OCM Services)

PDF pg. 142:

Meets RFP req'ts with caveat that Deloitte needs "scope of such OCM services needs" to be able to provide a "targeted OCM plan".

Training Services

PDF pg. 143:

Meets RFP req'ts with caveat that Deloitte needs "a discussion" to "define and develop a training and continuous improvement plan".

Catalog Support Services

PDF pg. 143:

Meets RFP req'ts with caveat that Deloitte needs to "work with the Lead State and Participating entities to choose" the services needed.

Help Desk Services

PDF pg. 143:

Help Desk services offered have issues. See notes from Section E. Implementation Req'ts, 8. Help Desk Services, PDF pg. 131

Transition Out Assistance Services

PDF pg. 144-146: Meets RFP req'ts.

Individual Evaluator Comments:

Coupa - Unified Business platform. SAAS – subscription-based
Full source solution combines multiple Coupa modules

Requirements Traceability Matrix (RTM)

- Single point of entry for modules.
- Detailed RTM provided – complete.
-
-

General Principal and Requirements

- Key Solution Functionality Elements: Browser-based platform. Marketed as configurable by business users without programming requirements / low complexity implementation. General functionalities – most marked as Out of the box. Some exceptions for integrations to stated State Procurement website posting and existing state data warehouse and BI reporting. Purchasing, payment, supplier directory, catalogs, punchout; logistics and inventory control; reporting dashboard and multiple options. Sandbox and Production environments with simultaneous updates for fix/enhancements.
- User Experience. Intuitive UI marketed. Workflows can be structured to match organization's departments, roles, approvals, delegations; guided buying process; "surfacing preferred products and services to alert employees to discounted pricing and advantageous terms."
- Bidder Best Practices and Roadmap
- Innovations and Value-Added Features/Services: Home page content, price comparisons, reviews and "Ask expert" categories(?). AI/Machine learning for fraud spend detection, data classification, search recommendations.
- Customizations/Extensions
- Alternative Funding Models

Functional Requirements

- General Functionality – Clarification question on future dating. Response notes contract docs can be future dated. I don't think future dating of production workflows is a problem.
Lacks comment requirement – notes configurable.
Subscription-based 100% SAAS solution / Integrates with DocuSign and Adobe sign.
Public posting – Coupa provides link to content but doesn't generate direct posted content for a state website.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s) 1:

DATE:

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Real-time transactions, with scheduled imports from external systems at hourly or daily intervals as configured (Note: this is standard third-party approach.)

- Supplier Portal – modules are Coupa Open Business Network, Coupa Platform and Coupa Sourcing (and Coupa LCM for contract modifications); Marked low complexity to configure. COPN allows suppliers to create catalogs (for state's admin approval), receive and process POs, manage invoices, manage punchout. Bid management including notifications of opportunities and submissions through Coupa Sourcing. Sourcing events would be published to Coupa Sourcing.
 - Supplier financial data does not integrate with states ERP live – data be transferred by API or flat file from ERP to Coupa.
 - Vendor complaints is configurable only.
 - ASNs can be entered by suppliers; some integration for automating ASN possible.
- Supplier Enablement/Management. — Native functionality for supplier setup and review in RPM module. Third-party integration (Low) would be needed for automated validation. Configuration by supplier manager for notifications (no code). Native audit reports in UI – others can be configured by Coupa support.
 - Supplier health dashboard for tracking performance.
 - I'm unclear if suppliers can have a master profile that is common to their state customers or if their portal for Maine is the same information in their profile for Washington DC. (file 3 p. 36).
- Buyer Portal – dashboard for buyer. Provides access to required views (Coupa Sourcing and Coupa Platform). System alerts through push notifications. Browser, email mobile app approvals permitted. User profile and workflow for PIA would be configured by implementation partner.
- Need Identification – Rates process as being consumer like. Items available for purchase can be restricted to user level, authority. Approval chains set up based on conditions, authority, cost. (Rated low level configuration.) Available contract parameters managed by business user.
- Request through Pay. (Coupa Procurement module). Pretty significant configuration required here based on state workflows.
 - EPROC-PRD-11 No automated schedule for purchases, but requisitions can be copied and resubmitted. Library Concept of Standard Specs – configurable item. (low)
 - Price discounts during req. Tiered pricing, early pay discount, etc. can be built into contract pricing and automatically applied during the shopping/requisition processes.
 - EPROC-PRD-27 listed as A, but not indicates custom field. (trade-in item values)
 - EPROC-PRD-40 Search functionality could be hindered for punch-out if accurate catalog is not supplied back to Coupa.
 - Centralized and desktop receiving permitted at line or PO level.
- Catalog Capability: Integrated for hosted items. Punchout option search option available with Coupa Open Buy configuration (see above – search quality depends on catalog load to Coupa by vendor); punchout to Amazon Business. XML transfer to punchout and return data.
 - **PROC-CAT-36** response doesn't align with requirement – **needs clarification.**
 - **PROC-CAT-38** – Catalog search without login is **not responsive**. It claims best practice for security, but in public contracts the pricing is not confidential and if segregated from the ordering function, it should not be a security issue.
 - Catalog maximum is 1 million items. (This would require punchout for MRO vendors for example.)

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s) 1:

DATE:

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Sourcing/Bid Management – Capacity for listed sourcing types. Questionnaire driven, or template (Coupa forms). In-flight changes will require manual workflow to update solicitation documents.
 - Routing/Approvals will require configured form.
 - **EPROC-SRC-63:** Module limits notification of an event to 300. This may be insufficient for compliance with state registered bidder list requirements — how can more recipients be accommodated. **Needs clarification.**
 - **EPROC-SRC-117** – not compliant to hide supplier names in the evaluation. **(Can this be waived from requirements?)**
- Contract Management
 - **EPROC-CCNT-72** – No native functionality to calculate and track admin fees. How would fees be invoiced? Offer notes custom data fields to track data only. **Needs clarification.**
- Vendor Performance
- Purchasing/Data Analytics – User configurable. All requests met.

Technical Requirements

- Availability – 99.99% uptime in 2020
- Accessibility Requirements – Not full 508. Working toward compliance. WCAG 2.0
- Audit Trail and History – Native functionality. Permanent record that can be retrieved for audit. Comments can be removed during transactions.
- Browsers Supported – Major browsers used. Not extensions required. Mobile responsive design.
- User Accounts and Administration – Setup and ongoing user management at customer level with Coupa training.
 - **EPROC-TECH-12** – **Not compliant.** Single user accounts-only supported for compliance and access security. **Needs clarification.**
 - **EPROC-TECH-14** – permissioned users can act on behalf of another user; notifications provided of action.
 - Common access credential for all Coupa modules.
- User Authentication – **EPROC-TECH-23:** 8 or 12 character p/w with lockouts and complexity requirements. **Doesn't state special characters, only alpha and numeric. Needs clarification.**
 - Option to require suppliers to use 2MFA for portal access.
- Federated Identity Management - Connects to states 2MFA. LDAP, Microsoft AD. SAML 2.0.
- Data Conversion – Can be performed. Process to be developed with Implementation Partner and Customer.
- Interface and Integration – ERP integration touted as plus – Coupa updated with master files to provide common accurate records rather than duplication.
- Office Automation Integration - Native
- Mobile Device Support. Notes mobile friendly for approvals, expense tracking.
- Mobile Applications – Native browser-based.
- Data Ownership and Access – lead state and PAs own proprietary data. Close of contract – all data provided in CSV during 60-days end of contract; after 60 days Coupa not contractually maintaining data. Certifies data destruction.
- Date Retention, Archive and Purge Considerations - Customer data stored for Coupa contract life. Policies to be established regarding archiving, retention.
- Disaster Recovery Plan – Detailed. Multiple failovers in event of data destruction.
- Solution Environments – Scalable load-based

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Deloitte (Coupa)

CATEGORY #(s) 1:

DATE:

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Sandbox and production environments provided.
 - Ruby on Rails framework; AWS hosted.
- Solution Technical Architecture
- Solution Network Architecture
- System Development Methodology – updates every two weeks; major releases in Jan., May & Sept. Common updates in Sandbox and Production.
- Service Level Agreement – 99.8%. promised. Met based on prior uptime provided. Acceptable 4-level severity SL targets.

Security Requirements

- Cloud Security Alliance (CSA) Compliance – CAIQ questionnaire – detailed response. NIST, FedRamp and ISO 27001 standards. Security compliance training provided for all employees. Annual pen testing (available on request – should be requested during PA process); annual internal audits.
- Security and Privacy Controls
- Security Certifications – See above.
- Annual Security Plan – Detailed in CAIQ and narrative. ISO 27001, FedRAMP, and NIST SP 800-53 standards.
- Secure Application and Network Environment – AWS. Security detailed in CAIG document.
- Secure Application and Network Access – Can provide ISO, SOC2 and third-party audit reports. Recommend for PAs; Coupa staff only access environment via secure VPN.
- Data Security – CAIQ – DSI-05.1 0 Data is sanitized to ensure sensitive data is not exposed outside of production environment during environment cloning.
 - DISI-07 Hardware destructions standards for decommissioning cited. 30 days following termination of agreement.
- Personally Identifiable Information Protection. – Least privilege approach.
- Security/Privacy Issue Occurrence
- PII Data Actual/Attempted Access or Disclosure
- Security Breach Reporting – 24 hours – electronic notification. (Not compliant with 2 hours in RFP.)
- Notes: CAIQ provides detail on standards for Coupa that I find comparable with my experience Texas Comptroller of Public Accounts.

Implementation Services Requirements

- Project Management – Deloitte implement Coupa with Coupa-certified personnel. Detailed org table with PM, End-to-end lead, and specialist leads from components. On-site implementation team.
- Project Implementation Methodology – 5-0stage Hybrid Agile. 36-, 52-, 60-week go-live schedules for small, medium, large. Pyramid 4-tier structure for governance. Steering Committee, Design Authority Committee, Project leadership and PMO, Technical and Functional leads. (p112.) Iterative testing approach during short sprints. 3-month hypercare after deployment for end-user support, defect cure. Transition to managed services long-term.
- Catalog Support Services – Determine hosted/punchout. Open catalog import for end users. Setup retail marketplace and configure punchouts. Onboard suppliers and training PA staff to manage catalogs/punchouts.

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Data Conversion Services – data cleansing by customer prior to migration. Determine conversion scope to needed records not all records.
- Interface/Integration Development Services – Deloitte performs data mapping. Works with customer staff to confirm technical specs. Deloitte configures Coupa design and develops test.
- Organizational Change Management (OCM Services) – Deloitte designs change management program focusing on employee experience and adoption. Focus on stakeholder groups. Communications plan. After onboarding, transition through Managed Services.
- Training Services – Initial deployment is training the trainer for state staff / 20 live webinars for suppliers. Deloitte identifies with staff the early adopters. Videos, reference guides. Trained state trainer delivers initial state and PA training. Virtual training sessions and SEMs. Classroom and virtual training for subset of super users and power end-users. Training materials that become customer property. Self-paced elearning.
- Help Desk Services –
 - Training. ongoing tier 3 help desk business hours; knowledge base and forum.
 - System support – 24x7 technical support. Phone level. Note that 2 or 3 call centers are overseas.
 - Supplier support in 4 offices.
- On-Site System Stabilization Support – 3 month hypercare.

Managed Services Requirements

- Solution Support – Corrective action – as-needed. 3 upgrades per year. Maintenance windows for migrations into production.
- Organizational Change Management (OCM Services) – Not provided in proposal – would be determined in discussion with customer.
- Training Services – Continuous training plan to be developed with customer need. Initial deployment is live training the trainer for customer to provide ongoing live training to configured system; ongoing access to self-paced elearning customerwide **Needs clarification for ongoing supplier training.**
- Catalog support services. – Referenced E3.
- Help Desk Services – Referenced E8.
- Transition Out Assistance Services – Would notify 12 months prior to contract end. Deloitte would work with new contractor, develop contract deliverables and work on data transfer. 90 day transition out plan documented.

Note: Other services detailed Deloitte's Level 0-Level 4 helpdesk. Level 3 is offshore application support that may not be permissible for some states.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: EASiBuy

CATEGORY #(s): 1

DATE: 8/23/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 4)

- Started "in April 2009" as a SaaS for reverse auctions.
- "EASi provides complete bid management" in addition to "all bid management-related services". Concerned that this may not be a Full Suite eProcurement solution and may belong in Category 2 instead.
- "Partnership": Unclear what role these 'partners' would have with EASiBuys. From the Previous Projects it appears that Nextenders has the system that is Full Suite.

2. Previous Projects

- **Overall:**
 - i. EASiBuy - All but one example are Reverse Auction. The State of RI is "Strategic Sourcing Solution" which isn't clear if that's more than reverse auction. *So, no Full Suite eProcurement implementations.*
 - ii. Nextenders: None of the example projects state that they are using the EASiBuys solution. *Only one example is a Full Suite eProcurement implementation.*
 - iii. No examples of EASiBuy working projects with the cited partners.
- **State of Connecticut:** EASiBuy Reverse Auctions with Vendor Pay Model. Contract started June 2018 and have "run 21 events, representing nearly \$44M in contract spend".
- **State of Rhode Island:** EASiBuy Strategic Sourcing Solution. Contracted started Aug 2016. *Not a Full Suite eProcurement implementation.*
- **Hinds County:** EASiBuys, managed Reverse Auctions. Contract started 2010.
- **City of Los Angeles – GSD Supply Service:** EASiBuy Reverse Auction Services and Support with Vendor Pay Model. Contract started June 2016 and have "run more than \$41.6M in contract spend".
- **City of Mesa – Purchasing Division:** EASiBuy as "hosted third-party Reverse Auction Service Provider with Vendor Pay Model. Contract started Nov. 2014 and "has run approximately \$10.8M in contract spend".
- **PPADB on behalf of Botswana:** Nextenders "Supplier Registration, Annual Procurement Plan, ITT Vetting, eBidding, Adjudication, Dispute Resolution, Capacity Building, Asset Disposal, and MIS/Audit Trails". Contract started Feb. 2012 and went live in 2013/2015.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- **MOFED:** Nextenders. Not clear what functionality has been implemented. Does say that system “provides a common interface to all parties” and enforces “user-level access-based privileges. “various modules of the System are work-flow driven”. Contract started Dec. 2013.
 - **Philippines Dept of Budget & Management:** Nextenders. Registration, Procurement Plan, Bid Notice Creation/Posting, Award Notice Creation/Posting, Mobile Apps (Android, iOS), E-Bidding (Sourcing), Reverse Auction, Contract Management, & Dashboards/Analytics. Contract started Dec. 2017.
 - **Haryana – Supplies & Disposal:** Nextenders. eProcurement Portal for tenders. Contract Jan 2014 for 5 years.
 - **Damodar Valley Corporation:** Nextenders. Supplier Registration, Sourcing, Purchase Order, Contract Management, Auction and Catalog Management. Also includes Help Desk support. Contract started April 2014.
 - **Nuclear Power Corp. of India:** Nextenders. Sourcing. Contract started July 2014, new contract awarded March 2018.
 - **India Dept of Atomic Energy:** Nextenders. “Indent Management, eTendering and Purchase Order modules”. Also Help Desk services. Contract started Aug 2016.
3. Subcontractors
- No subcontractors.
4. Organizational Chart
- Significant “Onsite” presence with 19 positions identified as such, so broad project presence working onsite.
 -
5. Litigation
- No litigation
 -
 -
6. Financial Viability
- **EASiBuy** Moderate Risk
 - i. Financial Stress (pg. 20): due to “Low proportion of satisfactory payment experiences”
 - ii. Supplier Evaluation Risk Rating (pg. 20): due to “Limited business activity signals reported in the past 12 months”. This may mean EASiBuys have not had new customer contracts in the past 12 months.

Individual Evaluator Comments: Prime is reverse auction vendor. Question about limitation/potential for offshore implementation, data storage since the full-service system vendor appears to not be implemented within the U.S. based on provided experience or by the prime.

Organization Qualifications and Experience

1. Overview of the Organization
 - Reverse auction platform (EASi)
 - E-procurement is Nextenders not EASi.
2. Previous Projects
 - Public sector – state and federal
 - Full serve e-procurement implementation by partner vendors (subs) in Africa and Asia.
 -
3. Subcontractors
 - Not listed in Subcontractor section. Prior section lists HCA Healthcare / Nextenders (india) Pvt. Ltd.
 -
 -
4. Organizational Chart
 - Position list lacks responsibility details.
 -
 -
5. Litigation

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization - GEP

- Global providing “end-to-end procurement and supply chain services” w/ 20+ years “delivering procurement success” (pg. 4)
- “Top-ranked by Gartner, Forrester, IDC, Spend Matters” (pg. 4)
- “Woman and minority-owned enterprise” (pg. 4). Minority Owned cert- Tennessee, Women Owned cert- New Jersey (pg. 10)
- Can provide Full Suite eProcurement solution and “Managed Services” (pg. 6)

2. Previous Projects (pgs. 13/15)

- Overall:
 - i. Higher Education but no State/Local Gov't examples
- **Viatris:** Referred to “Unified direct and indirect buying and accounts payable” but they do not clearly say what GEP modules were implemented. Implies it was the Purchasing and Supplier Management modules. \$40B+ spend, 75K suppliers uploaded. *Not a Full Suite eProcurement implementation.*
- **UCAL:** Appears that GEP S2C (“Spend Analysis, Sourcing, Contract Management, Supplier Management) and a “public bid site” were implemented. Spend under management increased to \$47.5B, 1K+ sourcing events. *Not a Full Suite eProcurement implementation.*
- **Chevron:** “Unified, mobile-enabled system” but does not say what GEP modules were implemented. Provided Change Management for “users and suppliers”. *Unclear whether this was a Full Suite eProcurement implementation.*
- **LDS Church:** Contract and Supplier Management. “Managed over 8k suppliers and integrated over 25k contracts”. *Not a Full Suite eProcurement implementation.* Subcontractors
- **UMASS:** “Full suite of Source-to-Pay execution tools and process flows”. “Campus-wide Procurement Support desk and portal”. “Highly effective change management and communication plan”. *Appears to be a Full Suite eProcurement implementation however*

commented that there is a “roadmap” of “key capabilities that will be built out over the next 12-24 months after go-live”. So the implementation may not be complete.

3. Subcontractors
 - No subcontractors.
4. Organizational Chart
 - Organization charts provide sufficient detail to demonstrate that most areas of Full Suite eProcurement implementation are represented. (pg. 22)
 - Staffing Plan (pgs. 23-25) present both the Contractor and Participating Entity staffing/responsibilities. Both lists are reflective of the core positions and responsibilities.
5. Litigation
 - No litigation
6. Financial Viability (pgs. 31-33)
 - GEP (NB Ventures, Inc.): No negative categories or risk concerns cited.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

- Single unified platform, pg. 4: "all relevant functionality in a single unified platform:- sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay"

User Experience

- Intuitive User Experience, pg. 8:
STRENGTH
 - o Users can pick which screen will be their landing page
 - o Users can drag/drop, reorder different sections of the screen. System retains changes for next log in.CONCERN: the "pending tasks" list has all tasks, mixing all types of transactions/tasks in a single list that must be filtered or searched. Will likely be too much in a single list for users.
- Mobile, pg. 9: STRENGTH, iOS and Android apps have very robust functionality.

Bidder Best Practices and Roadmap

- Agile Implementation Methodology, pg. 14: STRENGTH, methodology focused on "Progress over perfection" as detailed allows State/Entity to learn from decisions they make for setup configuration and adjust instead of settle.
- Release/Update Cycles, pg. 15: WEAKNESS, for New Releases and Maintenance Releases the State/Entity will only have a release in UAT for one week before it goes to Production.

Innovations and Value-Added Features/Services

All of these services are likely to be only an occasional fit/need for States/Entities. Suggest making sure these are negotiated and moved to be Optional and are not included in the proposal scope/pricing.

- **Organizational Maturity Assessment**, pg. 19-24: CONCERN, Maturity Assessment work is not often needed/desired by States and is very 'heavy'/intensive work (16 weeks minimum).
- **Opportunity Assessment**, pg. 25-28: CONCERN, Opportunity Assessment is another heavy/intensive effort towards recommending Sourcing actions by the State. This is outsourcing

STATE OF MAINE INDIVIDUAL SME NOTES

SME DEPARTMENT/STATE: NASPO

the 'strategy' part of Strategic sourcing and it requires a lot of data that is not easily obtained or categorized... so lot of work to gather and then analyze/classify.

- **Market Intelligence**, pg. 30-34: Reports from GEP resources/data to support a State's Strategic Sourcing efforts. This is not likely to be a heavily use resource/service since it would target situations where the State/Entity feels they don't have sufficient insight for a planned sourcing event.
- **Category Management**, pg. 36-37: This appears to be full outsourcing of Strategic Sourcing work.

Customizations/Extensions
