- Customizations/Extensions, pg. 39: NOTE, GEP uses a "Product Advisory Group (PAG)" to get customer feedback on current features, new features and feature enhancements. Should GEP move forward, suggest negotiating to have some part of the post-award ValuePoint Team to be members of this Group to insure that NASPO members have a 'voice' for the roadmap of the system.

Alternative Funding Models

- None offered

Functional Requirements

General Functionality

- Modules included, pg. 46: Spend Analysis, Sourcing/Bid Mgmt, Contract Mgmt, Supplier Mgmt, Item Master, Vendor Master, Reporting/Analytics, Invoice Mgmt, Purchasing, Catalog Mgmt, Guided Buying.

RTM

- WEAKNESS, GEN-3: Suppliers must register to be able to use an RFx link to access a Solicitation Event.
- STRENGTH, GEN-12: System search can search "content with any readable attachments" (e.g. pdf, excel).
- WEAKNESS, GEN-25: All emails generated by the system will have a From email address domain of "gep.com" instead of the State/Entity.
- POTENTIAL WEAKNESS, GEN-35: System does not have a "comment library" feature to store standard comments for use on Transactions.
- WEAKNESS, GEN-38: GEP licensing does not provide for "unlimited licenses for business users and supplier users."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Supplier Portal: does have the functionality.

- GEP Supplier Enablement Team, pg. 50: "will take ownership of onboarding all State/Participating Entity suppliers... at the time of implementation". CLARIFICATION, will this team be responsible for on-going supplier onboarding post-implementation of the system?
- "GEP does not charge the suppliers to transact on our platform" (pg. 50)
- Suppliers have "single login to transact with different States/Participating Entities (pg. 51). So single supplier account to work with all Coupa customers.

RTM

- STRENGTH, SPR-13: Supplier emailed invoices can be OCR scanned to extract metadata and automatically load this into the system.

Supplier Enablement/Management: does have the functionality

- "Pre-Qualified Supplier", pg. 54: CLARIFICATION, are these lists required to be used as the invited supplier list for sourcing events?

RTM

- Meets req'ts

Buyer Portal: does have the functionality

RTM

- Meets req'ts

Need Identification: does have the functionality

- "Central intake form", users provide details on product/service with "category/commodity specific questions/fields". (pg. 62)

RTM

- Meets req'ts.
- STRENGTH, NEED-3: System allows creation of multiple "intake form" capabilities to address different kinds of procurement needs.

Request through Pay: does have the functionality

- pg. 64: CONCERN, "connecting every order to a contract" may mean that the system does not provide means to do non-contract orders in the system.
- pg. 66: Can create purchase orders "without a requisition".
- Services Procurement, pg. 67: STRENGTH, 3 ways to address services procurement
 - o User creates requisition with Milestone line items on a PO.
 - o User creates requisition with Contingent Worker details.
 - o Supplier creates "service entry sheets" with "service line items/rates" from the contract that are "sent for approval".

RTM

- NOTE, there are many req'ts where the response is "yes" and basically repeating the req't without providing details of how the system would do it.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept of standard specification text or attachments associate with specific commodity codes".
- POTENTIAL WEAKNESS, PRD-37: System does not capture "non-contract match" items when purchasing from a State source.
- POTENTIAL WEAKNESS, PRD-37: System does not capture prices for matching State sources when a non-contract item is selected.
- CONCERN, PRD-56: Response is would "like to discuss" in regards to being able to enter "backdated purchase requests".
- POTENTIAL WEAKNESS, PO-16: System only offers "signature image" for electronic signature of the PO.
- NOTE, PC-1: Pcard functionality for the system is not scheduled for release unty Q1-2022.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts in the system without a PO being in the system.

Catalog Capability: does have the functionality

- pg. 69: CONCERN, "catalogs linked with contract" may mean that the system does not support non-contract catalogs.
- pg. 70,
 - o "At the time of implementation, GEP will configure any State/Participating Entity specific punchout catalogs".
 - o "supports level-2 punchouts", suppliers must "expose their APIs to GEP web crawlers".
 - o "Internal Catalogs" that integration with inventory master provides "visibility in on-hand balances/quantity, price to the users".

RTM

- Meets req'ts except, POTENTIAL WEAKNESS, CAT-19: Catalogs cannot have negative values to identify trade-in values.

Sourcing/Bid Management: does have the functionality

- pg. 74, "line sourcing events from opportunities identified through spend analysis".

RTM

- STRENGTH, SRC-29: System allows users to copy/paste from Excel to the price sheet screen.
- POTENTIAL WEAKNESS, SRC-37: Changes to a Solicitation Template may automatically "make specific updates to the sourcing events" where users have used the templates.
- POTENTIAL WEAKNESS, SRC-67: System does not provide a means for suppliers to add themselves to a solicitation bidders list. The buyer must do it manually.
- WEAKNESS, SRC-97: Suppliers cannot withdraw a response once it has been submitted. They must revise their response to say not responding and re-submit to replace their previous response.
- POTENTIAL WEAKNESS, SRC-102: System does not provide a capability for supplies to electronically sign their response. They must sign a printed copy, then scan & attach the document.
- WEAKNESS, SRC-107: System does not provide a way to prevent Suppliers from submitting on-line responses for 'hard copy submission only' Solicitations.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- NOTE, SRC-109: The capability for buyers to enter paper responses on-behalf of Suppliers is not currently a feature but is expected to be available by Award.
- WEAKNESS, SRC-122 & 123: System does not provide a means to define and apply Preferences to response evaluation.
- POTENTIAL WEAKNESS, SRC-148: For cancelled solicitations, any submitted responses will not be locked/encrypted to prevent buyer access and Suppliers cannot withdraw their responses.

Contract Management: does have the functionality

- Pg. 77
 - o Collaborative Authoring", route contract draft internally and externally to suppliers for "review, editing and redlining"
 - o Very comprehensive integration with MS Word with check-out/check-in document control and access clause library from within MS Word.

Video - Strengths

- Contract Wizard method, prompts user for info and system suggests relevant templates then creates draft contract.
- Contract Examiner: loads and scans PDF docs extracting Meta data
- In MS Word editing of contract language redlining user can see list of Clauses from library (Variable Library) that can be added while editing in Word.
- Contract Search from Workbench searches all Contract Metadata and all readable documents.

RTM

- STRENGTH, CNT-8: System has a 'mass' update feature to amend all existing contract to get updated clauses/templates.
- NOTE, CNT-23: Response did not address Contract Authoring however on pg. 77 of the Technical Response this capability is discussed.
- POTENTIAL WEAKNESS, CNT-27: System does not provide a means to restrict access to specific attachments on a Contract.
- POTENTIAL WEAKNESS, CNT-36: System does not provide a means to define default account coding as part of the Contract record that would then be used as default for requisitions/orders from the contract.
- WEAKNESS, CNT-38: To capture Contract subcontractors, resellers, dealers and franchises they must be issued their own contracts in the system.
- WEAKNESS, CNT-41: To capture Contract SWAM certification/participation data each subcontractor must be issued their own contract in the system.

Vendor Performance: does have the functionality

- Pg. 79/80,
 - o Survey questionnaires to users
 - o Initiate performance improvement plans w/ milestones and activities.
 - o Link to Contract obligations to generate "Contract score"
 - o

RTM

- Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Purchasing/Data Analytics: does have the functionality

- pg. 82: CONCERN, "GEP Minerva" cited as providing AI and machine learning but it is not listed in the components included in the proposal (pg. 46).

RTM

- Meets req'ts

Technical Requirements

Availability

Pg. 86: Meets req'ts.

Accessibility Requirements Pg. 88: Meets req'ts for components behind the login, however response did not address compliance of "publicly available" components.

Audit Trail and History

Pg. 90 & TECH-1 thru 5: Meets req'ts

Browsers Supported

Pg. 92: Meets req'ts

User Accounts and Administration

- Pg. 94/95: Meets User Acct/Admin req'ts except response did NOT address req't to be able to delegate Admin role to agencies.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide a 'one account' feature for user that is both a buyer and a supplier. User must have two accounts.

User Authentication & Federated Identity Management

Pg. 97 & TECH-21 thru 25: Meets req'ts.

Data Conversion

Pg. 99-105 & TECH-26 thru 34: Meets req'ts.

- CONCERN, response refers to "item master data management and vendor harmonization services" but does not indicate whether these are included in the proposed scope/pricing.
- CONCERN, pg. 105 figure references "UNSPSC classification". Does this mean that the system only support UNSPSC commodity codes?

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Interface and Integration

Pg. 107-109: Meets req'ts except for real time integration.

- NOTE, pg. 108 of proposal assumes that the State/Entity will provide Middleware for integration.

RTM

- GAP, TECH-35: System does not provide real-time integration capabilities. Can be "Near Real time and Batch file-based transfers".

Office Automation Integration

Pg. 111 & TECH-61: Meets req'ts.

Mobile Device Support & Mobile Applications

Pg. 113/114 & TECH-62: Meets req'ts

- Pg. 113: STRENGTH, includes both iOS and Android apps which allow approving orders, requisition and invoices, service confirmation, view dashboards, access catalogs, and create requisitions. Apps support "biometric authentication".

Data Ownership and Access

No response provided. This section is missing from the proposal.

Date Retention, Archive and Purge Considerations

Pg. 116 & TECH-63: Meets req'ts.

Disaster Recovery Plan

Pg. 118: WEAKNESS, the proposal did not provide details regarding GEP's Disaster Recovery plan as required.

Solution Environments

Pg. 120: WEAKNESS, the UAT environment is to be used as the Training environment. The required separate training environment is not provided.

RTM

- WEAKNESS, TECH-64 thru 67: A separate Training environment is not provided.

Solution Technical Architecture

Pg. 122/123: Meets req'ts.

Solution Network Architecture

Pg. 125-127: Meets req'ts

System Development Methodology

Pg. 129-132: Discussion/information is not indepth but does present high level of the requested information. Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Service Level Agreement

Pg. 134 & GEP Appendix 1-SLA Standard doc: Not comprehensive or good protections for States/Entities

- Support services are only available to State/Entity "Designated Support Contacts" (pg. 1)
- Only service level warranty is "System Availability" at 99.8% avail, 7days/24 hours (pg. 2)
- Service Credits=% of monthly fees... must fall below SL for "three (3) consecutive calendar months" (pg. 2)
- Severity Levels: Sev 1 & 2 are about complete unavailability of entire system or a major feature. Issues around functionality on specific types of transactions (button not visible) or with a specific transaction are Sev 3. SLA does not indicate who sets the Severity. (pg. 3).
- Response Times: most critical State issues will be Sev 3 and response times are not good.
 - o Sev 1: Initial response - 1 hr, Workaround - 1 business day, Fixed – 10 business days
 - o Sev 2: Initial response - 4 hrs, Workaround - 1 business day, Fixed – 20 business days
 - o Sev 3: Initial response - 1 business day, Workaround - 10 business days, Fixed – 45 business days

Security Requirements

Cloud Security Alliance (CSA) Compliance

Pg. 136: Meets req'ts. Completed a CAIQ

Security and Privacy Controls

Pg. 139: Did not indicate level of compliance with NIST 800-53 as req'd however system is "modelled as per ISO 27001" which is international standard on security management systems.

Security Certifications

Pg. 141: Meets req'ts

Annual Security Plan

Pg. 144/145: Response did not "describe the Security Plan" but instead described their security practices and provided copy of their internal "Information Security Policy".

Secure Application and Network Environment

Pg. 147/148: Details are not comprehensive but does meet req'ts.

Secure Application and Network Access

Pg. 149/150 & SEC-1 thru SEC-5: Meets req'ts.

Data Security

Pg. 153/154: Meets req'ts.

Personally Identifiable Information Protection

Pg. 156: Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- CONCERN, GEP's definition of PII did not include Tax ID and may not match each State's/Entities' definition of PII.

Security/Privacy Issue Occurrence & PII Data Actual/Attempted Access or Disclosure

Pg. 158: Does not meet. WEAKNESS, GEP will not comply with the notification/communication req'ts specified in the RFP. Only commits to report/notify "customers within 4 hours of an incident/breach".

Security Breach Reporting

Pg. 160: Meets req'ts. Will not provide initial response within req'd 2 hours but will provide detailed notification will be within 4 hours instead of the req'd 24 hours.

Implementation Services Requirements

Project Management & Project Implementation Methodology

Pgs. 163-183:

- *Detailed Implementation Tasks*, pg. 164:
 - o CONCERN, feels like GEP expectation is little or no special setup for client. OOTB and GEP std setup is expected to fit the client.
 - o WEAKNESS,
 - Req't Gathering & Solutioning: don't see Integration
 - Cutover & GO Live: OCM communications is not happening until cutover phase. Too late for good OCM.
 - Hyper Care: waiting to establish Help Desk and do FAQs until after Go-Live is late, should be earlier.
- *Multiple Workstreams*, pg. 165:
 - o Interfaces Development: CONCERN, chart is showing that the State/Entity must lead SIT testing. This should be GEP led.
 - o Supplier Enablement: CONCERN, chart shows GEP as lead on "Set up Catalogs", need to determine if they are actually creating catalog files and see if there are any assumed limits on the number of catalogs/punchouts.
- *Organizational Chart*, pg. 166: NOTE, unusual to have an org chart that shows Contractor Leads reporting to State/Entity Leads.
- *Timelines*, pg. 167-
 - o Upstream/Downstream separation is good.
 - o Large:
 - Overall timeline of 18 months to final Go-Live is too aggressive. Should be something like 24 months.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
- 4 months for Deploy/Training (1.5 months Upstream, 2.5 months Downstream) is too short for 12,500 State/Entity users. **NOTE: this is same amount of time as the Medium timeline.**
- Medium:
 - Overall timeline of 15 months to final Go-Live should be 18-20 months
 - Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
 - 4 months for Deploy/Training (1.5 months Upstream, 2.5 months Downstream) is too short for 7,000 State/Entity users.
- Small:
 - Overall timeline of 12 months to final Go-Live should be 16-18 months
 - Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
 - 3 months for Deploy/Training (1 month Upstream, 2 months Downstream) is too short for 5,000 State/Entity users.
- *GEP Team*, pg. 171: Generally good however WEAKNESS in that the OCM role definitions (Change Lead/Change Analyst) indicate that they are only planners so the State would be doing all OCM *activities*.
- *Roles/Responsibilities*, pg. 175-178:
 - CONCERN, need more details but proposal indicates State/Entity will "own change management with the suppliers".
 - WEAKNESS,
 - Change management work only focuses on "communication" and State is responsible for execution.
 - Hypercare references "enhanced support" and "configuration support" but there are no details on what "support" means, what will they do and what will the State have to do.
 - Training documents, identified as being updated/published during Hypercare but should be done earlier as part of Training.
- *Lessons*, pg. 179: adequate
- *Challenges/Risks*, pg. 180/181: good examples but WEAKNESS in that user adoption and supplier on-boarding areas were not included.
- *Change Control Methodology*, pg. 182: CONCERN, need to confirm that the Change Control Board (CCB) is set up so that the State/Entity is the decision maker regarding changes requests.

Catalog Support Services

Pg. 185-190:

- pg. 190: NOTE: State/Entity is to provide "catalog data" to GEP.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

STRENGTH, post go-live

- o GEP will "monitor catalog utilization and "engage" State/Entity category managers.
- o GEP will review/assess "free text" purchases to identify new potential catalogs.

Data Conversion Services

Pg. 192-198: WEAKNESS, response focused on Data Management type services and only provided minimal information (pg. 196) on Data Conversion approach.

Interface/Integration Development Services

Pg. 200-202: Meets req'ts.

Organizational Change Management (OCM Services)

Pg. 204-213: Conceptually the OCM approach is insightful however the actual Services offered only provide assessments, strategy/plan development, and monitoring/measuring change. OCM execution is 'hands off' with work being done by State/Entity staff.

-

Training Services

Pg. 215-217: Train the trainer approach. Response did not provide the level of detail req'd but was sufficient to meet the req'ts.

- Unclear on whether GEP or State/Entity is to prepare end user training materials. Pg. 215 says "Trainers" will prepare the "training content" however pg. 217 states "GEP to develop all technology related training materials".
- pg. 217: GEP to train "Super users", State/Entity to train "end users". GEP "can provide support" for key end user training sessions.

Help Desk Services

Pg. 219-225 & IMPL-1 thru IMPL-5: Meets req'ts.

- POTENTIAL WEAKNESS (pg. 223), the reference to "user" having visibility and getting update on may mean the State Help Desk person or State Admin since the diagram on pg. 222 only shows those individuals interacting with the GEP Help Desk.
- Pg. 224, See notes regarding SLA in Technical Requirements for issues/concerns around Severity Levels and Response Times.

On-Site System Stabilization Support

Pg. 227: Response did not provide sufficient detail on the below points to be certain they have met the req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 1

DATE: 11/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Response did not commit to provide on-site resources.
- Response refers to providing "minute data changes" (meaning small?) and providing Config Support to State/Entity System Admin. Need to lock down that they would be doing all of the config work during the Hypercare period and not making the State do it.
- Support Team section refers to "On call support" and "Mass support" without providing details on what these mean/include.

Managed Services Requirements

Solution Support

- Pg. 231-236 & MNGD-1: Meets req'ts.

Organizational Change Management (OCM Services)

- Pg. 238-249: As noted in Implementation Services, conceptually the OCM approach is insightful however the actual Services offered only provide assessments, strategy/plan development, and monitoring/measuring change. OCM execution is 'hands off' with work being done by State/Entity staff.

Training Services

- Pg. 251: See notes from Implementation Services req'ts.

Catalog Support Services

- Pg. 253: See notes from Implementation Services req'ts.

Help Desk Services

- Pg. 255: See notes from Implementation Services req'ts.

Transition Out Assistance Services

- Pg. 257-258: CONCERN, the GEP indicates a 4-6 month timeline (pg. 258) but the RFP req't allows for 1 year. Need to insure that any agreement doesn't restrict States/Entities to less than 1 year.

Other Available Services

- Pg. 260: See notes from Innovations/Value-Added Features/Services

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

GEP – Global eProcure platform - modules in integrated platform.

General Principal and Requirements

- Key Solution Functionality Elements – Required elements provided in integrated tools. Narrative lacked detail. Video demonstrated functionality and user experience. Elements explained on narrative p46.
- User Experience - Integrated functionality.
- Bidder Best Practices and Roadmap
- Innovations and Value-Added Features/Services – Mostly focused on consulting and reports. (Swamped the narrative description of the primary sourced product.)
- Customizations/Extensions – vague description that future customer needs could be developed. Focused on existing SAAS. **EPROC-PRD-56**
- Alternative Funding Models N/A

Functional Requirements

- General Functionality – Only configuration items relate to publishing to state's website.
 - **EPROC-GEN-25** – Notifications will have @gep.com email domain / doesn't integrate to state's domain. Non-compliant. **Needs clarification.**
 - EPROC-GEN-39 – High level of configuration required to set external posted content. No additional cost proposed or problem identified.
- Supplier Portal - EPROC-SMR-19 – high level of integration for admin fee payments with state's portal. Doable.
- Supplier Enablement/Management – All requirements noted as Native to application.
- Buyer Portal – Out of box
- Need Identification – Out of box except for E-PROC-NEED-5 which would configure priority of state contracts/purchase channels.
- Request through Pay — Out of box **EPROC-PRD-11** (recurring purchase function) noted as Medium complexity to set up. **Clarification needed** if this is a configuration or actually out of box.
 - – backdated function. **Needs clarification.** Response notes as out-of-box, but statement does not address role-based authority or the functional requirement of backdated orders
 - **EPROC-PC** – Listed as in development- **Needs clarification** if functionality available.
- Catalog Capability – **EPROC-CAT-38** – Public-facing search without login not available. Can be developed. **Needs clarification** as is listed as Low complexity.
- Sourcing/Bid Management – All requirements listed as out of box or low complexity configurable except **EPROC-SRC-109** bid submissions entered by purchasing staff – currently requires GEP staff

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

to load into back-end. Listed as in development by contract award date. Needs clarification if functionality now exists.

- Contract Management - All listed as out of box except:
 - **EPROC-CNT-20 – Needs clarification.** Response appears to refer to each individual document internal ID not an overall contract number that may be a single document/file or a collection of files depending on structure.
 - **EPROC-CNT-71 and EPRPOC-CNT-72** – Functionality listed as high complexity config. **Needs clarification** if requirement understood. Is there admin fee functionality/invoicing/tracking separate from payment processing?
- Vendor Performance – all listed as out of box.
- Purchasing/Data Analytics – listed as out of box with some config for level 2 punchout search.

Technical Requirements

- Availability – 24x7 SLA 99.8%
- Accessibility Requirements – WCAG 2.1
- Audit Trail and History – Out of box
- Browsers Supported – Edge/Chrome recommended. Native mobile functionality for ipad and android.
- User Accounts and Administration – MS AD. 2MFA. SAML 2.0 for SSO.
 - **EPROC-TECH-12** – requires SSO for buyer/supplier dual accounts single login config. **Conditional compliance.**
 - **EPROC-TECH-24** – 2MFA doesn't autogenerate new password. 6 digit code required for access to password reset. **(acceptable standard but doesn't meet requirement.)**
- User Authentication – Non SSO – upper/lower/number/special char. 5 attempt lockout. 90 day.
- Data Conversion – Multiple dataset approach. Import of migrated data (flat file). Import of ERP live data. Process to harmonize extensive list of fields where data variation is common. (master file cleanup)
 - **EPROC-TECH-30** – Ongoing vendor performance integration is additional cost.
- Interface and Integration – 50 in-house integration experts for ERP connection. (SAP, Oracle, PS etc.) Real-time and scheduled data migration as appropriate for master or transactional (JSON) data. Customer is responsible for SLI integration. GEP will use state-preferred middleware for integration between ERP and GPE.
 - **EPROC-TECH-55** – P-card hosting is planned for 1Q22 – **needs clarification if available.**
- Office Automation Integration – MS Azure-hosted. Word integrates with GEP through plugin allowing redlining of contract document. "Contract Examiner" extracts clauses from scanned PDFs. Price sheets can be edited offline in Excel and loaded back into GEP. Integrates with Outlook for alerts/notifications.
- Mobile Device Support – Dashboards, viewing catalogs, Approvals. Unclear if ordering can be performed in mobile environment. (Secure biometric access.) Unclear if VPN is required to log into mobile environment.
- Mobile Applications
- Data Ownership and Access – After contract termination, customer data returned in mutually acceptable file format; then purged and destroyed. Time period not stated other than with customer agreement.
- Data Retention, Archive and Purge Considerations
- Disaster Recovery Plan – 1 hour RPO. RTO 4 hrs.

- Solution Environments – UAT and Production. UAT environment developed through investigation and requirements gathering. GEP to develop testing scenarios to validate function prior to go-live.
 - Scalable through MS Azure data centers.
 - Automated processes to maintain continuity between UAT and production environments.
 - Mobile – native adaptive UI
- Solution Technical Architecture - .Net built on Azure.
- Solution Network Architecture
- System Development Methodology
- Service Level Agreement – 99.8% system availability. 4-level Severity priority for cases with response times 1 hour, 4 hour, 1 business day 4 business days initial response provided followed by 3-step support timeline for each level to conclusion. (Appendix 1.) 24x5 (M-F) support services assistance via email, online and phone.

Security Requirements

Notes: GEP SMART Application Architecture & Security Overview, SOC 2 and Information Security policy provided in appendices.

- Cloud Security Alliance (CSA) Compliance – Yes. Completed. No answers of concern.
- Security and Privacy Controls
- Security Certifications - datacenters are SSAE16 certified. The datacenters are SOC1 and SOC2 as well as ISO / IEC 27001:2005 certified and hosts data for Fortune 500 as well as Global 2000 companies.
- Annual Security Plan
- Secure Application and Network Environment -
- Secure Application and Network Access – EPROC-SEC-2 – configuration required for concurrent login limitations in conjunction with customer.
- **EPROC-SEC-3** – forced login **not currently available** – would be developed with customer – no extra cost proposed.
- EPROC-SEC-5 – almost real-time snapshots. Daily, weekly and monthly off-site backups. Primary data center VA, Secondary CA.
- Data Security – Azure PAAS.
- Personally Identifiable Information Protection – Lists compliance in narrative.
- Security/Privacy Issue Occurrence – Acceptable response listed in CAIQ.
- PII Data Actual/Attempted Access or Disclosure
- Security Breach Reporting – Notification with 4 hours of occurrence - Narrative.

Implementation Services Requirements - GEP

- Project Management – Detailed org, role description. GEP and state responsibility.
- Project Implementation Methodology – Agile sprints / JIRA tracking
 - 5 stages: Requirements; Development/config; UAT; go-live; hypercare
 - Implementation schedules for small, med, large [provided].
 - Challenge/risk mitigation strategies identified (p180)
- Catalog Support Services – Separate implementations with suppliers for hosted/punchout catalogs by supplier enablement team. Ongoing hosted owned by customer; ongoing punchout.
 - GEP will test punchout catalogs – signoff required from customer and supplier before go-live.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Needs clarification: UNSPSC is referenced in graphics – does GEP support NIGP?
 - Needs clarification: GEP Catalog management services – works with suppliers pre- and post-go-live. Is this a supplied cost option?
- Data Conversion Services – emphasis on understanding data, process standards, data mapping prior to migration.
 - Data standardization – centralized data platform for all systems.
 - Clarification needed: who authorizes decision process for “GEP supplier database” to be the data of record when conflicting data exists or is entered in customer system?
- Interface/Integration Development Services – Defined rules established; standard APIs developed; transaction failure notification monitored by GEP integration team; will be retriggered to correct.
- Organizational Change Management (OCM Services) – Steps designing change process; identified stakeholders and impacted by People, Process, and Technology.
 - Communication and training plans based on stakeholders’ impact.
 - Identify readiness through process; communicate change reasons and processes to drive adoption. Change agent roles: Sponsors, Champions, Agents. (Profile of agents)
- Training Services – Train the trainer; self-study modules powerpoint; quick ref guides; desktop procedures; faqs. Delivered in-person and remotely. Staged training based on role/audience.
 - GEP train superusers; end users trained by customer agency superusers.
 - GEP provide technology documentation; customer agency develop process docs.
 - Needs clarification: No online self-paced training mentioned – is this because of configured toolset that requires training of this type to be developed by the customer?
- Help Desk Services – GEP Success portal – 24x7 – case reporting, knowledge bases.
 - 24x5 helpdesk for customer users. Phone, email and chat. Suppliers by email and phone only.
 - EPROC-IMPL-1 - Needs clarification – new release, product update training through webinars – are these webinars for all GEP or customer-specific?
 - Needs clarification: p222 Best practices support model. Is GEP/State helpdesk staffed by GEP or a combination of GEP and customer staff?
 - EPROC-IMPL-2 – ongoing training provided as needed: who defines as-needed? Are their additional cost thresholds for training? For smaller agency, if train the trainer needs to be performed at future stage in the contract due to staff turnover, is GEP committed to providing this post-implementation or is this a cost option? Needs clarification.
- On-Site System Stabilization Support – agreed hypercare period to handhold initial document creation, complete key issues detected post launch; configuration support; issue cleanup; on-demand supplier support.

Managed Services Requirements

- Solution Support – governance plan for ongoing system support;
 - Specific Director; technical account manager, customer support lead roles in addition to customer support team.
 - Repeated 24x7 system uptime/99.8% SLA. Off-business hour updates; vulnerability and patch policy and practice.
 - EPROC-MNGD-1 – findings reported on “regular basis” – is this quarterly meetings? Needs clarification.
- Organizational Change Management (OCM Services) – Repetitive of implementation slides.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP & KPMG

CATEGORY #(s): 1

DATE: 8/23/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization - GEP

- Global providing “end-to-end procurement and supply chain services” w/ 20+ years “delivering procurement success” (pg. 4)
- “Top-ranked by Gartner, Forrester, IDC, Spend Matters” (pg. 4)
- “Woman and minority-owned enterprise” (pg. 4). Minority Owned cert- Tennessee, Women Owned cert- New Jersey (pg. 10)
- Can provide Full Suite eProcurement solution and “Managed Services” (pg. 6)

2. Previous Projects (pgs. 13/14)

- Overall:
 - i. Higher Education but no State/Local Gov’t examples
 - ii. No Full Suite eProcurement examples
- **Viatrix:** Referred to “Unified direct and indirect buying and accounts payable” but they do not clearly say what GEP modules were implemented. Implies it was the Purchasing and Supplier Management modules. \$40B+ spend, 75K suppliers uploaded. *Not a Full Suite eProcurement implementation.*
- **UCAL:** Appears that GEP S2C (“Spend Analysis, Sourcing, Contract Management, Supplier Management”) and a “public bid site” were implemented. Spend under management increased to \$47.5B, 1K+ sourcing events. *Not a Full Suite eProcurement implementation.*
- **Chevron:** “Unified, mobile-enabled system” but does not say what GEP modules were implemented. Provided Change Management for “users and suppliers”. *Unclear whether this was a Full Suite eProcurement implementation.*
- **LDS Church:** Contract and Supplier Management. “Managed over 8k suppliers and integrated over 25k contracts”. *Not a Full Suite eProcurement implementation.*

3. Subcontractors

- KPMG (pg. 18):
 - i. “over 1,200 dedicated procurement professionals”

**STATE OF MAINE

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- ii. “has successfully delivered the eProcurement solution implementation at notable States and local governments”. It is unclear whether they are saying they have implemented GEP or other eProcurement systems for “States and local governments”.
 - iii. KPMG “featured in Spend Matters’ Top 50 Providers to Know Almanac” and “designated a ‘Leader’ in Gartner’s Magic Quadrant for Business Operations Consulting”.
- 4. Organizational Chart
 - The organization chart is project oriented and does represent all areas of a Full Suite eProcurement implementation. (pg. 22)
 - Proposed Staffing Plan does not address all of the KPMG & GEP elements on the organization chart but is appropriately representative, including the Responsibilities, of the core positions on the organization chart. (pgs. 23/24)
- 5. Litigation
 - No litigation.
- 6. Financial Viability (pgs. 31-33)
 - GEP (NB Ventures, Inc.): No negative categories or risk concerns cited.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

- Single unified platform, pg. 4: "all relevant functionality in a single unified platform:- sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay"

User Experience

- Intuitive User Experience, pg. 8:
STRENGTH
 - o Users can pick which screen will be their landing page
 - o Users can drag/drop, reorder different sections of the screen. System retains changes for next log in.CONCERN: the "pending tasks" list has all tasks, mixing all types of transactions/tasks in a single list that must be filtered or searched. Will likely be too much in a single list for users.
- Mobile, pg. 9: STRENGTH, iOS and Android apps have very robust functionality.

Bidder Best Practices and Roadmap

- Agile Implementation Methodology, pg. 14: STRENGTH, methodology focused on "Progress over perfection" as detailed allows State/Entity to learn from decisions they make for setup configuration and adjust instead of settle.
- Release/Update Cycles, pg. 15: WEAKNESS, for New Releases and Maintenance Releases the State/Entity will only have a release in UAT for one week before it goes to Production.

Innovations and Value-Added Features/Services

All of these services are likely to be only an occasional fit/need for States/Entities. Suggest making sure these are negotiated and moved to be Optional and are not included in the proposal scope/pricing.

- **Organizational Maturity Assessment**, pg. 19-24: CONCERN, Maturity Assessment work is not often needed/desired by States and is very 'heavy'/intensive work (16 weeks minimum).
- **Opportunity Assessment**, pg. 25-28: CONCERN, Opportunity Assessment is another heavy/intensive effort towards recommending Sourcing actions by the State. This is outsourcing

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

the 'strategy' part of Strategic sourcing and it requires a lot of data that is not easily obtained or categorized... so lot of work to gather and then analyze/classify.

- **Market Intelligence**, pg. 30-34: Reports from GEP resources/data to support a State's Strategic Sourcing efforts. This is not likely to be a heavily use resource/service since it would target situations where the State/Entity feels they don't have sufficient insight for a planned sourcing event.
- **Category Management**, pg. 36-37: This appears to be full outsourcing of Strategic Sourcing work.

Customizations/Extensions

- Customizations/Extensions, pg. 39: NOTE, GEP uses a "Product Advisory Group (PAG)" to get customer feedback on current features, new features and feature enhancements. Should GEP move forward, suggest negotiating to have some part of the post-award ValuePoint Team to be members of this Group to insure that NASPO members have a 'voice' for the roadmap of the system.

Alternative Funding Models – pg. 41/42

- Option 1: Fixed Fee plus Transaction fee
 - o Reduce Implementation Costs by 50-75%
 - o 1-3% Admin fee to every purchase order
 - o GEP-KPMG recovers "projected project cost" plus "cost of capital for the deferred collections". Payable "by the vendor community".
 - o NOTE: no discussion of how the fee would be collected.
- Option 2: Value-Based Funding Model
 - o Set up internal program to measure and collect savings that eProcurement generates
 - o NOTE: pg. 42 list examples of potential savings but this funding model would require establishing baseline metrics to be able to measure savings and would require means to obtain the saved dollars from the organizations that realized the savings.

Functional Requirements

General Functionality

- Modules included, pg. 46: Spend Analysis, Sourcing/Bid Mgmt, Contract Mgmt, Supplier Mgmt, Item Master, Vendor Master, Reporting/Analytics, Invoice Mgmt, Purchasing, Catalog Mgmt, Guided Buying.

RTM

- WEAKNESS, GEN-3: Suppliers must register to be able to use an RFx link to access a Solicitation Event.
- STRENGTH, GEN-12: System search can search "content with any readable attachments" (e.g. pdf, excel).
- WEAKNESS, GEN-25: All emails generated by the system will have a From email address domain of "gep.com" instead of the State/Entity.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, GEN-35: System does not have a "comment library" feature to store standard comments for use on Transactions.
- WEAKNESS, GEN-38: GEP licensing does not provide for "unlimited licenses for business users and supplier users.

Supplier Portal: does have the functionality.

- GEP Supplier Enablement Team, pg. 50: "will take ownership of onboarding all State/Participating Entity suppliers... at the time of implementation". CLARIFICATION, will this team be responsible for on-going supplier onboarding post-implementation of the system?
- "GEP does not charge the suppliers to transact on our platform" (pg. 50)
- Suppliers have "single login to transact with different States/Participating Entities (pg. 51). So single supplier account to work with all Coupa customers.

RTM

- STRENGTH, SPR-13: Supplier emailed invoices can be OCR scanned to extract metadata and automatically load this into the system.

Supplier Enablement/Management: does have the functionality

- "Pre-Qualified Supplier", pg. 54: CLARIFICATION, are these lists required to be used as the invited supplier list for sourcing events?

RTM

- Meets req'ts

Buyer Portal: does have the functionality

RTM

- Meets req'ts

Need Identification: does have the functionality

- "Central intake form", users provide details on product/service with "category/commodity specific questions/fields". (pg. 62)

RTM

- Meets req'ts.
- STRENGTH, NEED-3: System allows creation of multiple "intake form" capabilities to address different kinds of procurement needs.

Request through Pay: does have the functionality

- pg. 64: CONCERN, "connecting every order to a contract" may mean that the system does not provide means to do non-contract orders in the system.
- pg. 66: Can create purchase orders "without a requisition".
- Services Procurement, pg. 67: STRENGTH, 3 ways to address services procurement
 - o User creates requisition with Milestone line items on a PO.
 - o User creates requisition with Contingent Worker details.
 - o Supplier creates "service entry sheets" with "service line items/rates" from the contract that are "sent for approval".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- NOTE, there are many req'ts where the response is "yes" and basically repeating the req't without providing details of how the system would do it.
- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept of standard specification text or attachments associate with specific commodity codes".
- POTENTIAL WEAKNESS, PRD-37: System does not capture "non-contract match" items when purchasing from a State source.
- POTENTIAL WEAKNESS, PRD-37: System does not capture prices for matching State sources when a non-contract item is selected.
- CONCERN, PRD-56: Response is would "like to discuss" in regards to being able to enter "backdated purchase requests".
- POTENTIAL WEAKNESS, PO-16: System only offers "signature image" for electronic signature of the PO.
- NOTE, PC-1: Pcard functionality for the system is not scheduled for release until Q1-2022.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts in the system without a PO being in the system.

Catalog Capability: does have the functionality

- pg. 69: CONCERN, "catalogs linked with contract" may mean that the system does not support non-contract catalogs.
- pg. 70,
 - o "At the time of implementation, GEP will configure any State/Participating Entity specific punchout catalogs".
 - o "supports level-2 punchouts", suppliers must "expose their APIs to GEP web crawlers".
 - o "Internal Catalogs" that integration with inventory master provides "visibility in on-hand balances/quantity, price to the users".

RTM

- Meets req'ts except, POTENTIAL WEAKNESS, CAT-19: Catalogs cannot have negative values to identify trade-in values.

Sourcing/Bid Management: does have the functionality

- pg. 74, "line sourcing events from opportunities identified through spend analysis".

RTM

- STRENGTH, SRC-29: System allows users to copy/paste from Excel to the price sheet screen.
- POTENTIAL WEAKNESS, SRC-37: Changes to a Solicitation Template may automatically "make specific updates to the sourcing events" where users have used the templates.
- POTENTIAL WEAKNESS, SRC-67: System does not provide a means for suppliers to add themselves to a solicitation bidders list. The buyer must do it manually.
- WEAKNESS, SRC-97: Suppliers cannot withdraw a response once it has been submitted. They must revise their response to say not responding and re-submit to replace their previous response.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, SRC-102: System does not provide a capability for supplies to electronically sign their response. They must sign a printed copy, then scan & attach the document.
- WEAKNESS, SRC-107: System does not provide a way to prevent Suppliers from submitting on-line responses for 'hard copy submission only' Solicitations.
- NOTE, SRC-109: The capability for buyers to enter paper responses on-behalf of Suppliers is not currently a feature but is expected to be available by Award.
- WEAKNESS, SRC-122 & 123: System does not provide a means to define and apply Preferences to response evaluation.
- POTENTIAL WEAKNESS, SRC-148: For cancelled solicitations, any submitted responses will not be locked/encrypted to prevent buyer access and Suppliers cannot withdraw their responses.

Contract Management: does have the functionality

- Pg. 77
 - o Collaborative Authoring", route contract draft internally and externally to suppliers for "review, editing and redlining"
 - o Very comprehensive integration with MS Word with check-out/check-in document control and access clause library from within MS Word.

Video - Strengths

- Contract Wizard method, prompts user for info and system suggests relevant templates then creates draft contract.
- Contract Examiner: loads and scans PDF docs extracting Meta data
- In MS Word editing of contract language redlining user can see list of Clauses from library (Variable Library) that can be added while editing in Word.
- Contract Search from Workbench searches all Contract Metadata and all readable documents.

RTM

- STRENGTH, CNT-8: System has a 'mass' update feature to amend all existing contract to get updated clauses/templates.
- NOTE, CNT-23: Response did not address Contract Authoring however on pg. 77 of the Technical Response this capability is discussed.
- POTENTIAL WEAKNESS, CNT-27: System does not provide a means to restrict access to specific attachments on a Contract.
- POTENTIAL WEAKNESS, CNT-36: System does not provide a means to define default account coding as part of the Contract record that would then be used as default for requisitions/orders from the contract.
- WEAKNESS, CNT-38: To capture Contract subcontractors, resellers, dealers and franchises they must be issued their own contracts in the system.
- WEAKNESS, CNT-41: To capture Contract SWAM certification/participation data each subcontractor must be issued their own contract in the system.

Vendor Performance: does have the functionality

- Pg. 79/80,
 - o Survey questionnaires to users

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Initiate performance improvement plans w/ milestones and activities.
- Link to Contract obligations to generate "Contract score"
-

RTM

- Meets req'ts.

Purchasing/Data Analytics: does have the functionality

- pg. 82: CONCERN, "GEP Minerva" cited as providing AI and machine learning but it is not listed in the components included in the proposal (pg. 46).

RTM

- Meets req'ts

Technical Requirements

Availability

Pg. 86: Meets req'ts.

Accessibility Requirements Pg. 88: Meets req'ts for components behind the login, however response did not address compliance of "publicly available" components.

Audit Trail and History

Pg. 90 & TECH-1 thru 5: Meets req'ts

Browsers Supported

Pg. 92: Meets req'ts

User Accounts and Administration

- Pg. 94/95: Meets User Acct/Admin req'ts except response did NOT address req't to be able to delegate Admin role to agencies.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide a 'one account' feature for user that is both a buyer and a supplier. User must have two accounts.

User Authentication & Federated Identity Management

Pg. 97 & TECH-21 thru 25: Meets req'ts.

Data Conversion

Pg. 99-105 & TECH-26 thru 34: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- CONCERN, response refers to "item master data management and vendor harmonization services" but does not indicate whether these are included in the proposed scope/pricing.
- CONCERN, pg. 105 figure references "UNSPSC classification". Does this mean that the system only support UNSPSC commodity codes?

Interface and Integration

Pg. 107-109: Meets req'ts except for real time integration.

- NOTE, pg. 108 of proposal assumes that the State/Entity will provide Middleware for integration.

RTM

- GAP, TECH-35: System does not provide real-time integration capabilities. Can be "Near Real time and Batch file-based transfers".

Office Automation Integration

Pg. 111 & TECH-61: Meets req'ts.

Mobile Device Support & Mobile Applications

Pg. 113/114 & TECH-62: Meets req'ts

- Pg. 113: STRENGTH, includes both iOS and Android apps which allow approving orders, requisition and invoices, service confirmation, view dashboards, access catalogs, and create requisitions. Apps support "biometric authentication".

Data Ownership and Access

No response provided. This section is missing from the proposal.

Date Retention, Archive and Purge Considerations

Pg. 116 & TECH-63: Meets req'ts.

Disaster Recovery Plan

Pg. 118: WEAKNESS, the proposal did not provide details regarding GEP's Disaster Recovery plan as required.

Solution Environments

Pg. 120: WEAKNESS, the UAT environment is to be used as the Training environment. The required separate training environment is not provided.

RTM

- WEAKNESS, TECH-64 thru 67: A separate Training environment is not provided.

Solution Technical Architecture

Pg. 122/123: Meets req'ts.

Solution Network Architecture

Pg. 125-127: Meets req'ts

System Development Methodology

Pg. 129-132: Discussion/information is not indepth but does present high level of the requested information. Meets req'ts

Service Level Agreement

Pg. 134 & GEP Appendix 1-SLA Standard doc: Not comprehensive or good protections for States/Entities

- Support services are only available to State/Entity "Designated Support Contacts" (pg. 1)
- Only service level warranty is "System Availability" at 99.8% avail, 7days/24 hours (pg. 2)
- Service Credits=% of monthly fees... must fall below SL for "three (3) consecutive calendar months" (pg. 2)
- Severity Levels: Sev 1 & 2 are about complete unavailability of entire system or a major feature. Issues around functionality on specific types of transactions (button not visible) or with a specific transaction are Sev 3. SLA does not indicate who sets the Severity. (pg. 3).
- Response Times: most critical State issues will be Sev 3 and response times are not good.
 - o Sev 1: Initial response - 1 hr, Workaround - 1 business day, Fixed – 10 business days
 - o Sev 2: Initial response - 4 hrs, Workaround - 1 business day, Fixed – 20 business days
 - o Sev 3: Initial response - 1 business day, Workaround - 10 business days, Fixed – 45 business days

Security Requirements

Cloud Security Alliance (CSA) Compliance

Pg. 136: Meets req'ts. Completed a CAIQ

Security and Privacy Controls

Pg. 139: Did not indicate level of compliance with NIST 800-53 as req'd however system is "modelled as per ISO 27001" which is international standard on security management systems.

Security Certifications

Pg. 141: Meets req'ts

Annual Security Plan

Pg. 144/145: Response did not "describe the Security Plan" but instead described their security practices and provided copy of their internal "Information Security Policy".

Secure Application and Network Environment

Pg. 147/148: Details are not comprehensive but does meet req'ts.

Secure Application and Network Access

Pg. 149/150 & SEC-1 thru SEC-5: Meets req'ts.

Data Security

Pg. 153/154: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

BIDDER NAME: GEP-KPMG
CATEGORY #(s): 1
DATE: 11/11/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Personally Identifiable Information Protection

Pg. 156: Meets req'ts

- CONCERN, GEP's definition of PII did not include Tax ID and may not match each State's/Entities' definition of PII.

Security/Privacy Issue Occurrence & PII Data Actual/Attempted Access or Disclosure

Pg. 158: Does not meet. WEAKNESS, GEP will not comply with the notification/communication req'ts specified in the RFP. Only commits to report/notify "customers within 4 hours of an incident/breach".

Security Breach Reporting

Pg. 160: Meets req'ts. Will not provide initial response within req'd 2 hours but will provide detailed notification will be within 4 hours instead of the req'd 24 hours.

Implementation Services Requirements

Project Management & Project Implementation Methodology

Pgs. 164-194: Meets req'ts.

- Project Mgmt/Implementation approach is mature, comprehensive and fits well for an eProcurement implementation.
- Discussion is at high level with details to be determined based on the actual project requested by a State/Entity.
- Quality Management, pg. 167: WEAKNESS, Lots of high level talk without much detail on what they will put in place to insure/manage quality.
- Deliverables Mgmt, pg. 168: CONCERN, State/Entity will 5 days to review each deliverable and 5 days to review corrected/revised deliverables. This is too short a time for larger deliverables like Design Documents. NEGOTIATION: need to see if the language needs to be changed to not commit States/Entities to this time limit.
- Sample Implementation Plan, Small State Entity, pg. 185: WEAKNESS, plan has 9 months from start to go-live which is too aggressive. Should be 12 months to be realistic.
- Proposed Staffing Plan, pg. 187: Good representation of what is needed and good mix of GEP & KMPG resources.

Catalog Support Services

Pg. 196/197: Meets req'ts

- While the catalog/punchout work described does address the entire process it is simplistic in that it doesn't identify the challenges that will be encountered with many contracts either not having item detail available or the information is in a format (e.g. PDF) that requires manually entry into

STATE OF MAINE INDIVIDUAL SME NOTES

SME DEPARTMENT/STATE: NASPO

templates. Also, the methodology does not identify/address the challenges/risks of obtaining item images and establishing an on-going catalog update practice with individual suppliers.

Data Conversion Services

Pg. 199-204: Meets req'ts

- The services/processes described are mature and demonstrate an understanding of procurement needs for data conversion.

Interface/Integration Development Services

Pg. 206-212: With the changes noted below, the response will meet the req'ts.

- Post-Implementation, pg. 207: CONCERN, response indicates that support will be moved to the State/Entity tech team. Need to NEGOTIATE that maintenance/support for the GEP-KPMG portion of interfaces/integration will be covered by the on-going maintenance support services.
- Assumptions, pg. 209: Last paragraph of assumptions refers to the source system providing an "immediate (synchronous) response" for real-time integrations. "Immediate" is not viable for some integrations so suggest NEGOTIATE to remove the word "immediate" from this paragraph.
- Table of Integrations/Interfaces, pg. 210/211: CONCERN,
 - o #1 Vendor Sync of Payable Vendors, the Type (Batch) and Frequency (Daily) need language added to the Notes to say that these may need to change based on design decisions so live procurements (Solicitation Awards, Contracts, Purchase Orders) are not held up for a day waiting for confirmation from ERP that vendor was successfully created.
 - o #2 Verification of accounting codes, having this be Batch/Daily means that a requisition will have a 1 day delay before the user can move forward with the procurement. Also, the check should be the entire accounting string, not just the "Business Unit" element. Need to have this changed to Real-Time and to be all of the accounting code values.
 - o #3 Requisition & #4 PO, need to remove "immediate" to allow for potential actions that may need to happen within the ERP (e.g. RTM req't TECH-47 Approvals in the ERP) before a response can be returned.
-

Organizational Change Management (OCM Services)

Pg. 214-225: Overall meets req'ts however as noted below the more significant services/tools that are discussed are listed as "Additional". So the OCM included is not as strong as it could be.

- The following req'd OCM deliverables are identified in the graphic on pg. 217 but are not listed in the table of OCM Services on pgs. 218-224: Impact Assessment, Coaching Plan and Resistance Assessment/Mgmt Plan.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- People TRIP, pg. 218: Note, this is a Readiness Assessment service listed separately from the req'd "Readiness Assessment" which they address on pg. 220. This tool is identified with an asterisk meaning it is "Additional" (not included) but pg. 224 it is referred to as a "no cost tool".
- "Additional KPMG recommended services" (bottom of pgs. 218-223): Many of the more valuable tools/services are "Additional" so the included OCM services are actually not extensive. NEGOTIATION, get these to be included at no additional cost.

Training Services

Pg. 227-240: Train the Trainer approach with State training End Users. Very mature and comprehensive approach to training. Meets req'ts.

Help Desk Services

Pg. 242-248 & IMPL-1 thru IMPL-5: Meets req'ts.

- POTENTIAL WEAKNESS, Issue tracking/reporting, pg. 246: Since the diagram on pg. 245 only shows those "Solution Admin" as the ones interacting with the GEP Help Desk, the reference to "Users" having visibility and updates on their issues may mean the State Help Desk or the State Solution Admin persons work interact with the GEP Help Desk instead of the actual end user.
- Issue Prioritization/Resolution Timeframe, pg. 247: See notes regarding SLA in Technical Requirements for issues/concerns around Severity Levels and Response Times.

On-Site System Stabilization Support

Pg. 250 : Minimally meets requirements.

- WEAKNESS,
 - o State/Entity must provide Tier 1 support during Hypercare.
 - o GEP-KPMG will only address defects during Hypercare. They do not commit to address "system setup/configuration changes" or monitor "system performance and stability" as req'd in the RFP.

Managed Services Requirements

Solution Support

- Pg. 254-259 & MNGD-1: Meets req'ts.

Organizational Change Management (OCM Services)

- Pg. 261-272: As noted in Implementation Services, conceptually the OCM approach is insightful however the actual Services offered only provide assessments, strategy/plan development, and monitoring/measuring change. OCM execution is 'hands off' with work being done by State/Entity staff.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Training Services

- Pg. 274-276 Train the trainer approach. Response did not provide the level of detail req'd but was sufficient to meet the req'ts.
- Unclear on whether GEP or State/Entity is to prepare end user training materials. Pg. 274 says "Trainers" will prepare the "training content" however pg. 276 states "GEP to develop all technology related training materials".
- pg. 276: GEP to train "Super users", State/Entity to train "end users". GEP "can provide support" for key end user training sessions.
-

Catalog Support Services

- Pg. 278-283: See notes from Implementation Services req'ts.

Help Desk Services

- Pg. 285: See notes from Implementation Services req'ts.

Transition Out Assistance Services

- Pg. 287/288: CONCERN, the GEP indicates a 4-6 month timeline (pg. 288) but the RFP req't allows for 1 year. Need to insure that any agreement doesn't restrict States/Entities to less than 1 year.

Other Available Services

Pg. 290-302:

- Strategic Sourcing, pg. 290-293: Optional Service. KPMG would provide "strategic sourcing process entails spend analysis, market analysis, demand research, go-to market strategy development, bid document creation, bid evaluation and analysis, supplier negotiations, and contract awards."
- Should-Cost Modeling, pg. 293-298: Optional Service. KPMG would provide cost modeling using "Data Engineering, External Market Data Library, Granular Economic Modeling, Advanced Root Cause Analysis".
- Contract Performance Management, pg. 298-301: Optional Service. KPMG would provide contract management for the State/Entity, identifying contract leakage and taking corrective action.
- Localization Support, pg. 302: Optional Service. KPMG can "help onboard the remaining agencies as a part of the post implementation activities"... "loading data, training end users, and deploying the solution".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Assumptions Pg. 304-310:

- pg. 304: General Assumptions
 - o Separate contracts for GEP & KPMG.
 - o Proposed pricing is "subject to a 5% increase" annually. **WEAKNESS**, need this assumption removed since many States will not allow automatic cost escalation.
- Pg. 305, Project Assumptions: **WEAKNESS**
 - o "Implementation plans provided assume 15 pilot agencies during each implementation. Any additional agencies/localization is out of scope and may be contracted by your organization as a change order."
 - o Decisions have to be "agreed to" by the "close of the Design Phase workshops". This is unrealistic as the State/Entity project team will need time after the workshop to explore some decisions before committing to them.
- Pg. 306, Project Assumptions (con't): **WEAKNESS**, limits set in the scope/pricing
 - o 2 environments (Prod and 1 non-prod)
 - o 3 Supplier Management questionnaires
 - o 5 Contract Templates
 - o 25 configured fields beyond standard GEP fields
- Pg. 307, Project Assumptions (con't): **WEAKNESS**
 - o eProc system is to be "considered the system of record" for supplier information. Need this changed to allow for those States/Entities that must have their Financial system be the "system of record".
 - o State/Entity will provide Tier 1 support during Hypercare. So State/Entity Help Desk must be "operationalized prior to go-live".
 - o KPMG states that "as an accounting firm" they may not be permitted to participate in a NASPO ValuePoint or State administrative fee.
- Pg. 308, Reports/Conversions/Interfaces Assumptions: **CONCERN**, the following limits are low and should be negotiated higher.
 - o GEP-KPMG will produce up to 10 small, 16 medium and 20 reports with 50% provided by configuring Out of the Box reports.
 - o Up to 2 years of data will be converted.
- Pg. 309/310, OCM & Training Assumptions: **CONCERN**
 - o GEP-KPMG expects to load training content into the State/Entity Learning Management System. **WEAKNESS**, not all States/Entities will have a LMS.
 - o On-site/Instructor-led End User training limited to: 20 users for Small State, 30 users for Medium State and 60 users for Large State. Suggest negotiating higher numbers.
 - o TTT training limited to: 20 users for Small State, 30 users for Medium State and 60 users for Large State. "Total duration of this TTT program will not exceed 3 weeks".
WEAKNESS, duration being 3 weeks for all 3 size of State isn't reasonable and the breadth of the functionality being deployed, with all the variations of transactions, will need more time than 3 weeks.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- State/Entity TTTs will deliver “State end user training to the 15 pilot agencies”. **GAP**, this is not consistent with the End User training bullet on pg. 309 which indicates a specific number of end users that GEP-KPMG will train.

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

GEp – Global eProcure platform - modules in integrated platform.

General Principal and Requirements

- Key Solution Functionality Elements – Required elements provided in integrated tools. Narrative lacked detail. Video demonstrated functionality and user experience. Elements explained on narrative p46.
- User Experience - Integrated functionality.
- Bidder Best Practices and Roadmap
- Innovations and Value-Added Features/Services – Mostly focused on consulting and reports. (Swamped the narrative description of the primary sourced product.)
- Customizations/Extensions – vague description that future customer needs could be developed. Focused on existing SAAS. **EPROC-PRD-56**
- Alternative Funding Models **Two options – hybrid fixed fee (e.g. 75% plus 1-3% transaction fee); value-based funding model that would be an unstated “different implementation model” but proposed to fund through savings. Option 2 would need clarification for any state looking to use it. Should not be considered part of pricing evaluation since it is an optional method and based entirely on projections.**

Functional Requirements

- General Functionality – Only configuration items relate to publishing to state's website.
 - **EPROC-GEN-25** – Notifications will have @gep.com email domain / doesn't integrate to state's domain. Non-compliant. **Needs clarification.**
 - EPROC-GEN-39 – High level of configuration required to set external posted content. No additional cost proposed or problem identified.
- Supplier Portal - EPROC-SMR-19 – high level of integration for admin fee payments with state's portal. Doable.
- Supplier Enablement/Management – All requirements noted as Native to application.
- Buyer Portal – Out of box
- Need Identification – Out of box except for E-PROC-NEED-5 which would configure priority of state contracts/purchase channels.
- Request through Pay — Out of box **EPROC-PRD-11** (recurring purchase function) noted as Medium complexity to set up. **Clarification needed** if this is a configuration or actually out of box.
 - – backdated function. **Needs clarification.** Response notes as out-of-box, but statement does not address role-based authority or the functional requirement of backdated orders
 - **EPROC-PC – Listed as in development- Needs clarification** if functionality available.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Catalog Capability – **EPROC-CAT-38** – Public-facing search without login not available. Can be developed. **Needs clarification** as is listed as Low complexity.
- Sourcing/Bid Management – All requirements listed as out of box or low complexity configurable except **EPROC-SRC-109** bid submissions entered by purchasing staff – currently requires GEP staff to load into back-end. Listed as in development by contract award date. Needs clarification if functionality now exists.
- Contract Management - All listed as out of box except:
 - **EPROC-CNT-20 – Needs clarification.** Response appears to refer to each individual document internal ID not an overall contract number that may be a single document/file or a collection of files depending on structure.
 - **EPROC-CNT-71 and EPROC-CNT-72** – Functionality listed as high complexity config. **Needs clarification** if requirement understood. Is there admin fee functionality/invoicing/tracking separate from payment processing?
- Vendor Performance – all listed as out of box.
- Purchasing/Data Analytics – listed as out of box with some config for level 2 punchout search.

Technical Requirements

- Availability – 24x7 SLA 99.8%
- Accessibility Requirements – WCAG 2.1
- Audit Trail and History – Out of box
- Browsers Supported – Edge/Chrome recommended. Native mobile functionality for ipad and android.
- User Accounts and Administration – MS AD. 2MFA. SAML 2.0 for SSO.
 - **EPROC-TECH-12** – requires SSO for buyer/supplier dual accounts single login config. **Conditional compliance.**
 - **EPROC-TECH-24** – 2MFA doesn't autogenerate new password. 6 digit code required for access to password reset. **(acceptable standard but doesn't meet requirement.)**
- User Authentication – Non SSO – upper/lower/number/special char. 5 attempt lockout. 90 day.
- Data Conversion – Multiple dataset approach. Import of migrated data (flat file). Import of ERP live data. Process to harmonize extensive list of fields where data variation is common. (master file cleanup)
 - **EPROC-TECH-30** – Ongoing vendor performance integration is additional cost.
- Interface and Integration – 50 in-house integration experts for ERP connection. (SAP, Oracle, PS etc.) Real-time and scheduled data migration as appropriate for master or transactional (JSON) data. Customer is responsible for SLI integration. GEP will use state-preferred middleware for integration between ERP and GPE.
 - **EPROC-TECH-55** – P-card hosting is planned for 1Q22 – **needs clarification if available.**
- Office Automation Integration – MS Azure-hosted. Word integrates with GEP through plugin allowing redlining of contract document. "Contract Examiner" extracts clauses from scanned PDFs. Price sheets can be edited offline in Excel and loaded back into GEP. Integrates with Outlook for alerts/notifications.
- Mobile Device Support – Dashboards, viewing catalogs, Approvals. Unclear if ordering can be performed in mobile environment. (Secure biometric access.) Unclear if VPN is required to log into mobile environment.
- Mobile Applications

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Data Ownership and Access – After contract termination, customer data returned in mutually acceptable file format; then purged and destroyed. Time period not stated other than with customer agreement.
- Data Retention, Archive and Purge Considerations
- Disaster Recovery Plan – 1 hour RPO. RTO 4 hrs.
- Solution Environments – UAT and Production. UAT environment developed through investigation and requirements gathering. GEP to develop testing scenarios to validate function prior to go-live.
 - Scalable through MS Azure data centers.
 - Automated processes to maintain continuity between UAT and production environments.
 - Mobile – native adaptive UI
- Solution Technical Architecture - .Net built on Azure.
- Solution Network Architecture
- System Development Methodology
- Service Level Agreement – 99.8% system availability. 4-level Severity priority for cases with response times 1 hour, 4 hour, 1 business day 4 business days initial response provided followed by 3-step support timeline for each level to conclusion. (Appendix 1.) 24x5 (M-F) support services assistance via email, online and phone.

Security Requirements

Notes: GEP SMART Application Architecture & Security Overview, SOC 2 and Information Security policy provided in appendices.

- Cloud Security Alliance (CSA) Compliance – Yes. Completed. No answers of concern.
- Security and Privacy Controls
- Security Certifications - datacenters are SSAE16 certified. The datacenters are SOC1 and SOC2 as well as ISO / IEC 27001:2005 certified and hosts data for Fortune 500 as well as Global 2000 companies.
- Annual Security Plan
- Secure Application and Network Environment -
- Secure Application and Network Access – EPROC-SEC-2 – configuration required for concurrent login limitations in conjunction with customer.
- **EPROC-SEC-3** – forced login **not currently available** – would be developed with customer – no extra cost proposed.
- EPROC-SEC-5 – almost real-time snapshots. Daily, weekly and monthly off-site backups. Primary data center VA, Secondary CA.
- Data Security – Azure PAAS.
- Personally Identifiable Information Protection – Lists compliance in narrative.
- Security/Privacy Issue Occurrence – Acceptable response listed in CAIQ.
- PII Data Actual/Attempted Access or Disclosure
- Security Breach Reporting – Notification with 4 hours of occurrence - Narrative.

Implementation Services Requirements – GEP-KPMG

Note: Response in Exhibit 1 not different from GEP solo implementation.

- Project Management – KPMG governance and project management plan detailed from p164 in Section III response. KPMG project manager. Integrates key customer stakeholders in the implementation team. Detailed risk management and issue management processes.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- KPMG-GEP PM may be located at customer site or off-site as agreed; coordinates with customer organization's Project Manager, Contract Administrator and Project Executive Teams.
- Project Implementation Methodology – 5 phases. Vision, validate, construct, deploy, evolve.
 - Use of pre-configured delivery models, training materials and benchmarks to accelerate project. Avoids reinventing the wheel.
 - GEP-KPMG designs test scripts and scenarios with expected outcomes; customer team to test and capture results/report defects.
 - Cutover to production occurs as part of go/no-go prior to full go-live.
 - Post go-live support/hypercare (4 stage severity levels for defect resolution.) Evolve phase.
 - Supplier enablement- start with current/future state identification.
 - Identified org role-based map according to project responsibility: leadership, functional and supplier support; data migration, testing, change mgmt/training, managed services
 - Identifies roles in customer org. including time commitment expected.
- Catalog Support Services – KPMG and customer identify hosted/punchout best fit for each supplier. KPMG does catalog set up with internal users; trains customers on future hosted catalog set up.
- Data Conversion Services – GEP-KPMG team works on data migration strategy, mock and production data extracts, data cleansing, transform/load processes, quality assurance.
 - 9 preliminary datasets identified as likely for conversion with sources data (ERP or external (existing) systems.
 - 9 templates identified for supporting data loads into GEP.
- Interface/Integration Development Services – Restated 5-step deployment Vision, Validate, Construct, Deploy, Evolve for development. Parallel workstreams for GEP-KPMG and customer teams.
 - 10 integrations identified and process outlined including source and destination systems.
 - *GEP-KPMG will design the format, develop, and test interfaces feeding in/out of GEP.*
 - *Your organization will be responsible for mapping the data elements to your systems, developing and testing the interfaces coming into your organization systems and out of your organization systems into the proposed solution's services per the project schedule. Interfaces identified and finalized during Design Phase will be built in collaboration with your IT resources. It is assumed that for any interfaces/integrations to other third-party systems, your organization will provide for the necessary licenses, if applicable.*
- Organizational Change Management (OCM Services) – Detailed KPMG OCMT process outlined (can be scaled back for less complex projects)
 - Proposal lists included projects and additional KPMG services. **Clarification may be needed** to state if proposal complies with RFP requirements without the “additional recommended KPMG services” (Difference between OCMT Strategy and OCMT Plan, for example). Are these additional services included in cost workbook? Should they have been referenced in the Value Added section?
- Training Services – KPMG Targeted learning model. Training the Trainer. – combination of instructor-led classroom/online and webinar. Self-service on-demand web-based training. Quick-ref guides.
 - Role-based training needs assessment; table breakdown of topics.
 - Troubleshooting guides. Developed training becomes property of customer.
 - Separate training plans for Trainers, System admins, help desk, suppliers.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Help Desk Services – GEP Success portal – 24x7 – case reporting, knowledge bases.
 - 24x5 helpdesk for customer users. Phone, email and chat. Suppliers by email and phone only.
 - **EPROC-IMPL-1 - Needs clarification** – new release, product update training through webinars – are these webinars for **all GEP or customer-specific?**
 - **Needs clarification:** p222 Best practices support model. **Is GEP/State helpdesk staffed by GEP or a combination of GEP and customer staff?**
 - **EPROC-IMPL-2** – ongoing training provided as needed: who defines as-needed? Are their additional cost thresholds for training? For smaller agency, if train the trainer needs to be performed at future stage in the contract due to staff turnover, is GEP committed to providing this post-implementation or is this a cost option? **Needs clarification.**
- On-Site System Stabilization Support – Hypercare – 3 months. Monitor rollout; triage and support high-priority tickets; adjust configuration, defects. Focus on end-user adoption; transition to state support team and Ivalua Run team.
 - GEP-KPMG knowledge transfer plan.
-

Managed Services Requirements

- Solution Support – governance plan for ongoing system support;
 - Specific Director; technical account manager, customer support lead roles in addition to customer support team.
 - Repeated 24x7 system uptime/99.8% SLA. Off-business hour updates; vulnerability and patch policy and practice.
 - **EPROC-MNGD-1** – findings reported on “regular basis” – is this quarterly meetings? **Needs clarification.**
- Organizational Change Management (OCM Services) – Repetitive of implementation slides.
 - Success measured – Financial; stakeholder satisfaction; volumetric; internal business processes;
- Training Services – Referenced implementation slides
- Catalog support services. – Referenced implementation slides
- Help Desk Services – Referenced implementation slides
- Transition Out Assistance Services – 4-6 month plan exiting governance and 4 months and supporting change through 6. Knowledge transfer and go-live readiness
- **Other Available Services: KPMG strategic sourcing, Contract Performance Management, Localization.**

Video Demonstrations

- Detailed walk-through of toolset processes.
-

Limiting assumptions that may require clarification for conflict with GEP deployment statements:

- **GEP-KPMG will not be responsible for developing a User Acceptance Test (UAT) Plan or the set of UAT scripts. Client can choose to leverage GEP-KPMG's System Integration Testing (SIT) scripts as a starting point to develop your UAT scripts.**

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Client will provide an issue and incident tracking system to capture and track post-production hypercare tickets. The GEP-KPMG team will work with your organization to provide a list of tracking fields needed to track the types of tickets .
- During hypercare, GEP-KPMG assumes that your organization will perform Tier 1 support addressing the users' questions. GEP-KPMG will act as Tier 2 support providing pointed functional and technical support, and ticket resolution. GEP will act as Tier 3 providing pointed subject matter advice and supporting complex code changes at the product level.
- Client helpdesk will be operationalized prior to go-live for post go-live support.
- Catalog Onboarding / Maintenance Services assumes that the catalogs received from your organization are received in the GEP-KPMG requested format and the service level calculation will start as soon as the last catalog of the loading group is received.
- GEP-KPMG assumes that all helpdesk services will be provided by your organization's helpdesk support team that will be trained by the GEP-KPMG team.
- Client will be responsible for providing a Tier 1 Test Management Tool. All test participants in SIT and UAT will leverage the test management tool e.g. JIRA or Microsoft Azure for test execution and defect tracking & resolution purposes.
- Test Management Tool setup and ongoing activity management will be done by the client and not by GEP-KPMG
- GEP-KPMG assumes up to two (2) years of data to be converted using three (3) mock rounds of data conversion and a final production round of conversion.
- Client will be responsible for reviewing, finalizing, and ultimately distributing the communications to the appropriate audience.
- Client will conduct any required analysis of historic purchasing data, human resources data, or other data in order to effectively create groups and/or distribution lists for the communicating of messages to specific audiences.
- GEP-KPMG will leverage your organization's current Learning Management System and work with its respective administrators to upload training content.
- GEP-KPMG will be responsible for providing onsite (as allowed), instructor-led, computer-based, and hands-on training to up to 20 State end users for a small State, 30 State end users for a medium State, and up to 60 State end users for a large State, to include up to 5 Key Technical Resources, and up to 10 Help Desk Administrators.
- The State end users who attend TTT will be responsible for delivering State end user training to the 15 pilot agencies.
- Client is responsible for providing training development software licenses for Adobe Captivate or Articulate Storyline to the GEP-KPMG team as required.

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Global providing “end-to-end procurement and supply chain services” w/ 20+ years “delivering procurement success” (pg. 4)
- “Top-ranked by Gartner, Forrester, IDC, Spend Matters” (pg. 4)
- “Woman and minority-owned enterprise” (pg. 4). Minority Owned cert- Tennessee, Women Owned cert- New Jersey (pg. 10)
- Can provide Full Suite eProcurement solution and “Managed Services” (pg. 6)

2. Previous Projects

- Overall:
 - i. Higher Education but no State/Local Gov’t examples
 - ii. No Full Suite eProcurement examples
- **Viatrix:** Referred to “Unified direct and indirect buying and accounts payable” but they do not clearly say what GEP modules were implemented. Implies it was the Purchasing and Supplier Management modules. \$40B+ spend, 75K suppliers uploaded. *Not a Full Suite eProcurement implementation.*
- **UCAL:** Appears that GEP S2C (“Spend Analysis, Sourcing, Contract Management, Supplier Management) and a “public bid site” were implemented. Spend under management increased to \$47.5B, 1K+ sourcing events. *Not a Full Suite eProcurement implementation.*
- **Chevron:** “Unified, mobile-enabled system” but does not say what GEP modules were implemented. Provided Change Management for “users and suppliers”. *Unclear whether this was a Full Suite eProcurement implementation:*
- **LDS Church:** Contract and Supplier Management. “Managed over 8k suppliers and integrated over 25k contracts”. *Not a Full Suite eProcurement implementation.*

3. Subcontractors

- Optis Consulting (pg. 19/20)
 - i. Source-to-Pay consultancy. “Solely focused on Source-to-Pay”.

SME DEPARTMENT/STATE: NASPO

- ii. "Specialized team of 'Source-to-Pay Architects' have delivered over 50 transformational projects".
 - iii. "design your future-state in close alignment with the areas in which the solution excels" and "leveraging leading practices"
- 4. Organizational Chart (pgs. 24-26,
 - Provided organization charts for each implementation scenario identified in the Cost Proposal.
 - Organization charts provide sufficient detail to demonstrate that most areas of Full Suite eProcurement implementation are represented.
 - Staffing Plan (pgs. 27-29) present both the Contractor and Participating Entity staffing/responsibilities. Both lists are reflective of the core positions and responsibilities.
- 5. Litigation
 - No litigation.
- 6. Financial Viability (pgs. 35-37)
 - GEP (NB Ventures, Inc.): No negative categories or risk concerns cited.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP-KPMG
CATEGORY #(s): 1
DATE: 11/11/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

- Single unified platform, pg. 4: "all relevant functionality in a single unified platform:- sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay"

User Experience

- Intuitive User Experience, pg. 8:
STRENGTH
 - o Users can pick which screen will be their landing page
 - o Users can drag/drop, reorder different sections of the screen. System retains changes for next log in.CONCERN: the "pending tasks" list has all tasks, mixing all types of transactions/tasks in a single list that must be filtered or searched. Will likely be too much in a single list for users.
- Mobile, pg. 9: STRENGTH, iOS and Android apps have very robust functionality.

Bidder Best Practices and Roadmap

- Agile Implementation Methodology, pg. 14: STRENGTH, methodology focused on "Progress over perfection" as detailed allows State/Entity to learn from decisions they make for setup configuration and adjust instead of settle.
- Release/Update Cycles, pg. 15: WEAKNESS, for New Releases and Maintenance Releases the State/Entity will only have a release in UAT for one week before it goes to Production.

Innovations and Value-Added Features/Services

All of these services are likely to be only an occasional fit/need for States/Entities. Suggest making sure these are negotiated and moved to be Optional and are not included in the proposal scope/pricing.

- **Organizational Maturity Assessment**, pg. 19-24: CONCERN, Maturity Assessment work is not often needed/desired by States and is very 'heavy'/intensive work (16 weeks minimum).
- **Opportunity Assessment**, pg. 25-28: CONCERN, Opportunity Assessment is another heavy/intensive effort towards recommending Sourcing actions by the State. This is outsourcing

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

the 'strategy' part of Strategic sourcing and it requires a lot of data that is not easily obtained or categorized... so lot of work to gather and then analyze/classify.

- **Market Intelligence**, pg. 30-34: Reports from GEP resources/data to support a State's Strategic Sourcing efforts. This is not likely to be a heavily use resource/service since it would target situations where the State/Entity feels they don't have sufficient insight for a planned sourcing event.
- **Category Management**, pg. 36-37: This appears to be full outsourcing of Strategic Sourcing work.

Customizations/Extensions

- Customizations/Extensions, pg. 39: NOTE, GEP uses a "Product Advisory Group (PAG)" to get customer feedback on current features, new features and feature enhancements. Should GEP move forward, suggest negotiating to have some part of the post-award ValuePoint Team to be members of this Group to insure that NASPO members have a 'voice' for the roadmap of the system.

Alternative Funding Models – pg. 41/42

- Option 1: Fixed Fee plus Transaction fee
 - o Reduce Implementation Costs by 50-75%
 - o 1-3% Admin fee to every purchase order
 - o GEP-KPMG recovers "projected project cost" plus "cost of capital for the deferred collections". Payable "by the vendor community".
 - o NOTE: no discussion of how the fee would be collected.
- Option 2: Value-Based Funding Model
 - o Set up internal program to measure and collect savings that eProcurement generates
 - o NOTE: pg. 42 list examples of potential savings but this funding model would require establishing baseline metrics to be able to measure savings and would require means to obtain the saved dollars from the organizations that realized the savings.

Functional Requirements

General Functionality

- Modules included, pg. 46: Spend Analysis, Sourcing/Bid Mgmt, Contract Mgmt, Supplier Mgmt, Item Master, Vendor Master, Reporting/Analytics, Invoice Mgmt, Purchasing, Catalog Mgmt, Guided Buying.

RTM

- WEAKNESS, GEN-3: Suppliers must register to be able to use an RFx link to access a Solicitation Event.
- STRENGTH, GEN-12: System search can search "content with any readable attachments" (e.g. pdf, excel).
- WEAKNESS, GEN-25: All emails generated by the system will have a From email address domain of "gep.com" instead of the State/Entity.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, GEN-35: System does not have a "comment library" feature to store standard comments for use on Transactions.
- WEAKNESS, GEN-38: GEP licensing does not provide for "unlimited licenses for business users and supplier users."

Supplier Portal: does have the functionality.

- GEP Supplier Enablement Team, pg. 50: "will take ownership of onboarding all State/Participating Entity suppliers... at the time of implementation". CLARIFICATION, will this team be responsible for on-going supplier onboarding post-implementation of the system?
- "GEP does not charge the suppliers to transact on our platform" (pg. 50)
- Suppliers have "single login to transact with different States/Participating Entities (pg. 51). So single supplier account to work with all Coupa customers."

RTM

- STRENGTH, SPR-13: Supplier emailed invoices can be OCR scanned to extract metadata and automatically load this into the system.

Supplier Enablement/Management: does have the functionality

- "Pre-Qualified Supplier", pg. 54: CLARIFICATION, are these lists required to be used as the invited supplier list for sourcing events?

RTM

- Meets req'ts

Buyer Portal: does have the functionality

RTM

- Meets req'ts

Need Identification: does have the functionality

- "Central intake form", users provide details on product/service with "category/commodity specific questions/fields". (pg. 62)

RTM

- Meets req'ts.
- STRENGTH, NEED-3: System allows creation of multiple "intake form" capabilities to address different kinds of procurement needs.

Request through Pay: does have the functionality

- pg. 64: CONCERN, "connecting every order to a contract" may mean that the system does not provide means to do non-contract orders in the system.
- pg. 66: Can create purchase orders "without a requisition".
- Services Procurement, pg. 67: STRENGTH, 3 ways to address services procurement
 - o User creates requisition with Milestone line items on a PO.
 - o User creates requisition with Contingent Worker details.
 - o Supplier creates "service entry sheets" with "service line items/rates" from the contract that are "sent for approval".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- NOTE, there are many req'ts where the response is "yes" and basically repeating the req't without providing details of how the system would do it.
- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept of standard specification text or attachments associate with specific commodity codes".
- POTENTIAL WEAKNESS, PRD-37: System does not capture "non-contract match" items when purchasing from a State source.
- POTENTIAL WEAKNESS, PRD-37: System does not capture prices for matching State sources when a non-contract item is selected.
- CONCERN, PRD-56: Response is would "like to discuss" in regards to being able to enter "backdated purchase requests".
- POTENTIAL WEAKNESS, PO-16: System only offers "signature image" for electronic signature of the PO.
- NOTE, PC-1: Pcard functionality for the system is not scheduled for release until Q1-2022.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts in the system without a PO being in the system.

Catalog Capability: does have the functionality

- pg. 69: CONCERN, "catalogs linked with contract" may mean that the system does not support non-contract catalogs.
- pg. 70,
 - o "At the time of implementation, GEP will configure any State/Participating Entity specific punchout catalogs".
 - o "supports level-2 punchouts", suppliers must "expose their APIs to GEP web crawlers".
 - o "Internal Catalogs" that integration with inventory master provides "visibility in on-hand balances/quantity, price to the users".

RTM

- Meets req'ts except, POTENTIAL WEAKNESS, CAT-19: Catalogs cannot have negative values to identify trade-in values.

Sourcing/Bid Management: does have the functionality

- pg. 74, "line sourcing events from opportunities identified through spend analysis".

RTM

- STRENGTH, SRC-29: System allows users to copy/paste from Excel to the price sheet screen.
- POTENTIAL WEAKNESS, SRC-37: Changes to a Solicitation Template may automatically "make specific updates to the sourcing events" where users have used the templates.
- POTENTIAL WEAKNESS, SRC-67: System does not provide a means for suppliers to add themselves to a solicitation bidders list. The buyer must do it manually.
- WEAKNESS, SRC-97: Suppliers cannot withdraw a response once it has been submitted. They must revise their response to say not responding and re-submit to replace their previous response.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, SRC-102: System does not provide a capability for supplies to electronically sign their response. They must sign a printed copy, then scan & attach the document.
- WEAKNESS, SRC-107: System does not provide a way to prevent Suppliers from submitting on-line responses for 'hard copy submission only' Solicitations.
- NOTE, SRC-109: The capability for buyers to enter paper responses on-behalf of Suppliers is not currently a feature but is expected to be available by Award.
- WEAKNESS, SRC-122 & 123: System does not provide a means to define and apply Preferences to response evaluation.
- POTENTIAL WEAKNESS, SRC-148: For cancelled solicitations, any submitted responses will not be locked/encrypted to prevent buyer access and Suppliers cannot withdraw their responses.

Contract Management: does have the functionality

- Pg. 77
 - o Collaborative Authoring", route contract draft internally and externally to suppliers for "review, editing and redlining"
 - o Very comprehensive integration with MS Word with check-out/check-in document control and access clause library from within MS Word.

Video - Strengths

- Contract Wizard method, prompts user for info and system suggests relevant templates then creates draft contract.
- Contract Examiner: loads and scans PDF docs extracting Meta data
- In MS Word editing of contract language redlining user can see list of Clauses from library (Variable Library) that can be added while editing in Word.
- Contract Search from Workbench searches all Contract Metadata and all readable documents.

RTM

- STRENGTH, CNT-8: System has a 'mass' update feature to amend all existing contract to get updated clauses/templates.
- NOTE, CNT-23: Response did not address Contract Authoring however on pg. 77 of the Technical Response this capability is discussed.
- POTENTIAL WEAKNESS, CNT-27: System does not provide a means to restrict access to specific attachments on a Contract.
- POTENTIAL WEAKNESS, CNT-36: System does not provide a means to define default account coding as part of the Contract record that would then be used as default for requisitions/orders from the contract.
- WEAKNESS, CNT-38: To capture Contract subcontractors, resellers, dealers and franchises they must be issued their own contracts in the system.
- WEAKNESS, CNT-41: To capture Contract SWAM certification/participation data each subcontractor must be issued their own contract in the system.

Vendor Performance: does have the functionality

- Pg. 79/80,
 - o Survey questionnaires to users

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Initiate performance improvement plans w/ milestones and activities.
- Link to Contract obligations to generate "Contract score"
-

RTM

- Meets req'ts.

Purchasing/Data Analytics: does have the functionality

- pg. 82: CONCERN, "GEP Minerva" cited as providing AI and machine learning but it is not listed in the components included in the proposal (pg. 46).

RTM

- Meets req'ts

Technical Requirements

Availability

Pg. 86: Meets req'ts.

Accessibility Requirements Pg. 88: Meets req'ts for components behind the login, however response did not address compliance of "publicly available" components.

Audit Trail and History

Pg. 90 & TECH-1 thru 5: Meets req'ts

Browsers Supported

Pg. 92: Meets req'ts

User Accounts and Administration

- Pg. 94/95: Meets User Acct/Admin req'ts except response did NOT address req't to be able to delegate Admin role to agencies.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide a 'one account' feature for user that is both a buyer and a supplier. User must have two accounts.

User Authentication & Federated Identity Management

Pg. 97 & TECH-21 thru 25: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Data Conversion

Pg. 99-103 & TECH-26 thru 34: Cannot confirm that req'ts are met due to conflicting information between Technical Proposal and RTM.

- CONCERN, pg. 101, Solicitations is not included in the list of potential transactions to be loaded.
- NOTE, pg. 102, State/Entity is to do data extract from source systems and data cleansing. Optis will do data cleansing for an additional cost.

RTM

- TECH-26 thru 34 all identify "GEP Software Implementation services" as providing the Data Conversion services but the Technical Proposal identifies Optis as the provider. GEP/Optis did not revise these RTM req'ts to reflect Optis role.

Interface and Integration

Pg. 105-116 & TECH-35 thru 60: Generally, meets req'ts but with concerns. Discussion was generic with no clear references to the GEP system in regards to their approach to interfaces/integration. Also, there are concerns about the real-time integration limits and conflicting information regarding the potential of the system to do real-time (see below).

- pg. 107: WEAKNESS, API real-time integration is limited to "50 lines in one request". There will be larger transactions that have more than 50 lines and splitting these transactions up by 50 line increments may cause problems with SAP.

RTM

- GAP, TECH-35: The technical proposal (pg. 107) indicates that "real-time" integration is available however the response to TECH-35 indicates that the system does not provide real-time integration capabilities. Can be "Near Real time and Batch file-based transfers".

Office Automation Integration

Pg. 118 & TECH-61: Meets req'ts.

Mobile Device Support & Mobile Applications

Pg. 120/121 & TECH-62: Meets req'ts

- Pg. 120: STRENGTH, includes both iOS and Android apps which allow approving orders, requisition and invoices, service confirmation, view dashboards, access catalogs, and create requisitions. Apps support "biometric authentication".

Data Ownership and Access

No response provided. This section is missing from the proposal.

Date Retention, Archive and Purge Considerations

Pg. 123 & TECH-63: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Disaster Recovery Plan

Pg. 125: WEAKNESS, the proposal did not provide details regarding GEP's Disaster Recovery plan as required.

Solution Environments

Pg. 127: WEAKNESS, the UAT environment is to be used as the Training environment. The required separate training environment is not provided.

RTM

- WEAKNESS, TECH-64 thru 67: A separate Training environment is not provided.

Solution Technical Architecture

Pg. 129/130: Meets req'ts.

Solution Network Architecture

Pg. 132-134: Meets req'ts

System Development Methodology

Pg. 136-139: Discussion/information is not indepth but does present high level of the requested information. Meets req'ts

Service Level Agreement

Pg. 141 & GEP Appendix 1-SLA Standard doc: Not comprehensive or good protections for States/Entities

- Support services are only available to State/Entity "Designated Support Contacts" (pg. 1)
- Only service level warranty is "System Availability" at 99.8% avail, 7days/24 hours (pg. 2)
- Service Credits=% of monthly fees... must fall below SL for "three (3) consecutive calendar months" (pg. 2)
- Severity Levels: Sev 1 & 2 are about complete unavailability of entire system or a major feature. Issues around functionality on specific types of transactions (button not visible) or with a specific transaction are Sev 3. SLA does not indicate who sets the Severity. (pg. 3).
- Response Times: most critical State issues will be Sev 3 and response times are not good.
 - o Sev 1: Initial response - 1 hr, Workaround - 1 business day, Fixed - 10 business days
 - o Sev 2: Initial response - 4 hrs, Workaround - 1 business day, Fixed - 20 business days
 - o Sev 3: Initial response - 1 business day, Workaround - 10 business days, Fixed - 45 business days

Security Requirements

Cloud Security Alliance (CSA) Compliance

Pg. 144: Meets req'ts. Completed a CAIQ

Security and Privacy Controls

Pg. 146: Did not indicate level of compliance with NIST 800-53 as req'd however system is "modelled as per ISO 27001" which is international standard on security management systems.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP-KPMG
CATEGORY #(s): 1
DATE: 11/11/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Security Certifications

Pg. 148: Meets req'ts

Annual Security Plan

Pg. 150/151: Response did not "describe the Security Plan" but instead described their security practices and provided copy of their internal "Information Security Policy".

Secure Application and Network Environment

Pg. 154/155: Details are not comprehensive but does meet req'ts.

Secure Application and Network Access

Pg. 157/158 & SEC-1 thru SEC-5: Meets req'ts.

Data Security

Pg. 160/161: Meets req'ts.

Personally Identifiable Information Protection

Pg. 163: Meets req'ts

- CONCERN, GEP's definition of PII did not include Tax ID and may not match each State's/Entities' definition of PII.

Security/Privacy Issue Occurrence & PII Data Actual/Attempted Access or Disclosure

Pg. 165: Does not meet. WEAKNESS, GEP will not comply with the notification/communication req'ts specified in the RFP. Only commits to report/notify "customers within 4 hours of an incident/breach".

Security Breach Reporting

Pg. 167: Meets req'ts. Will not provide initial response within req'd 2 hours but will provide detailed notification will be within 4 hours instead of the req'd 24 hours.

Implementation Services Requirements

Project Management

Pgs. 170-202: Meets req'ts. Response does demonstrate thorough Project Management practices and comprehensive approach in their Project Implementation Methodology, however CONCERN is that it isn't written to specifically address a GEP implementation. It is generic for all "source-to-pay solutions" that they implement.

- CONCERN, pg. 181, the red level triggers at 80% for SPI and CPI leaves a gap that is not good for a State/Entity. A 20% behind schedule or a 20% overrun is too much. NEGOTIATION, suggest that Red should be when below 85 or 90 instead.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Project schedule doesn't go Red unless they are less than 80% of where the schedule says they should be.
- Project budget doesn't go Red unless the value for work performed to-date is less than 80% of the cost that it should be.
- Implementation Plans: Good that the recognized that there are "short term" and "long term" approaches to implementation and RACIs. However, the amount of time allocated is too short in each size of State example with the Large State long term being the closes to what is commonly seen. NOTE: need CLARIFICATION to know what schedule was assumed for the Cost Workbook.
 - Small State, pg. 182/183,
 - shows deploying 7 to 12 months, too short. Should be 16-18 months.
 - Design/Build for Source/Contract & Supplier Mgmt is 1.5-2 months and 2.25-2.75 months for P2P & Spend Analytics.
 - Project Staffing, Fig. 12, pg. 184,
 - Shows "Optis QA Board Investment by Optis", NEGOTIATIONS, need to make sure that the State/Entity would not be paying for these Optis resources.
 - Does not have the Optis role of "Spend Analysis Functional Lead" that is shown for Large State (Fig. 18, pg. 190).
 - Medium State, pg. 185/186,
 - shows 10-16 months, too short. Should be 18-20 months.
 - Design/Build for Source/Contract & Supplier Mgmt is 1.5-4 months and 2.75-6 months for P2P & Spend Analytics.
 - Project Staffing, Fig. 15, Pg. 187,
 - Staffing drops an Optis "P2P Lead" and "Change Advisor" that were shown for a Small State project (pg. 184, Fig. 12).
 - Does not have the Optis role of "Spend Analysis Functional Lead" that is shown for Large State (Fig. 18, pg. 190).
 - Note that the "GEP Resources" are the same as with Small State, would have expected more GEP resources.
 - Staffing adds a "Steering Committee" and also has the "Optis QA Board". NEGOTIATIONS, need to make sure that the State/Entity would not be paying for these Optis resources.
 - Large State, pg. 188/189,
 - shows 12 – 21 months. Should be 24 months.
 - Design/Build for Source/Contract & Supplier Mgmt is 1.25-4 months and 5-8 months for P2P & Spend Analytics.
 - Project Staffing, Fig. 18, pg. 190,
 - There are not OCM resources identified. The "Change Advisor" that was shows for a Small State project (pg. 184, Fig. 12) is missing.
 - Note that the "GEP Resources" only have 1 additional resource (Integration Developer 2) from what the Small & Medium State show, would have expected more GEP resources.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Deliverables/Activities, pg. 191-198
 - o CONCERN, on pg. 192 they identify Workshops for “Design (discovery)” but have not identified any Design/Configuration deliverables.
 - o CONCERN, there is no deliverable for Interface/Integration design.
- Staffing Plan, pg. 199/200:
 - o The list of key staff includes “Change Lead” which is missing from the staffing shown for with the Medium (pg. 187) and Large (pg. 190) State implementation plans.
 - o NOTE, there is not a dedicated person for Training. Training is an additional duty of the Change Lead.
- Entity Staffing Plan, pg. 201: Does include the primary roles that are expected for a State/Entity.
- Project Governance, pg. 202: The approach is adequate.

Project Implementation Methodology

Pg. 203-216: Overall the methodology is strong/mature with the following callouts. Meets req'ts.

- Phase 3, pg. 205: CONCERN, the list of what happens in this phase does not include making adjustments to the Design/Configuration as the State/Entity experiences the decisions they made.
- Module Level Approach, pg. 206:
- GAP, the Sourcing/Contract/Supplier Mgmt/Spend Analysis stabilization period says "one month" but the Implementation Plan Gantt charts and the RFP show/call for 3 months.
- Test Phases, pg. 209: CONCERN, there is not 'Performance Testing' included in the Optis test phases.
- Test defect severity levels, pg. 210: STRENGTH, the severity definitions fit well from a business impact with the intent of the RFP SLA.

Catalog Support Services

Pg. 218-225: Meets most req'ts, however they do not provide services for the “creation of hosted catalogs” and some of the enablement & setup work is to be done by the State/Entity (see below).

- pg. 218: CONCERN, for initial implementation Optis expects Suppliers to submit catalogs instead of getting initial catalogs loaded by Optis or even the State/Entity staff.
- Engage/Enable, pg. 222/223: WEAKNESS, Optis' only role is to provide communication templates. Actual Enablement tasks are performed by the State/Entity ("Client Resources") or the "Supplier Resources" (which is not Optis)
- pg. 224: WEAKNESS, State/Entity ("Entity Resources") are expected to “setup punchout details” and “upload UNSPSC” codes in the system, Optis does not do this work.

Data Conversion Services

Pg. 227: Cannot confirm that req'ts are met due to conflicting information between Technical Proposal and RTM. See comments/notes under Data Conversion in Technical Req'ts section above.

Interface/Integration Development Services

Pg. 229: Generally, meets req'ts but with concerns. See comments/notes under Integration in Technical Req'ts section above.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Organizational Change Management (OCM Services)

Pg. 231-248: Generally, meets req'ts however details on how OCM activities will be performed are missing.

- OCM Activities (pg. 233-237) identifies a good set of what needs to be done but with few details in this section about how the activities will be done.
- Coaching Plan (pg. 239), their "Elevate Framework" appears to provide a good approach that is incorporated into Proj Implementation activities.
- Resistance Assessment/Mgmt Plan (pg. 240), does not provide very much detail and only provided "Winning Conditions" perspectives which are generic.
- Journey Maps & From-To Analysis (pg. 243/244) show good approaches.
- Knowledge transfer & Sustainment Transition Plan (pg. 245-247) are comprehensive.
-

Training Services

Pg. 250-257: Meets req'ts however detail provided is limited and there are limitations on the sessions/materials provided (see below)

- Pg. 256, WEAKNESS, Train-the-trainer approach
 - o "three collective hands-on training sessions". Too few training sessions to get State/Entity trainers competent in the system to conduct training.
 - o State/Entity is to "build the additional" training materials identified after the 3 training sessions. Optis will build these for additional cost ("additional scope").

Help Desk Services

Pg. 259-267 & IMPL-1 thru IMPL-5: Does not meet req'ts. Proposal has State/Entity to providing the Help Desk. Optis providing costs extra. The Transition Plan from Optis to State/Entity resources is very weak. See below.

Recommend NEGOTIATING in Model 2 or at least negotiating an Optional Fixed Cost for Model 2 for States/Entities but also negotiate the quantities up.

- In all Models GEP provides Tier 3 support which should already be included in the licensing/maintenance costs. So use this information to help in any negotiations for Model 2 and 3.
- Model 1, pg. 260, WEAKNESS, State/Entity provides Tier 1/Tier 2 support but Optis expects issues to escalate from Tier 1 to System Administrators instead of SME staff.
- Model 2, pg. 261/262:
 - o Tier 1 support provided by State/Entity Help Desk
 - o Tier 2 support provided by Optis, including "Continuous Improvement Program" services
 - o Tier 3 support provided by GEP

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Continuous Improvement Program (pg. 262), includes valuable services but value is limited because the quantities provided are low
 - *Release Mgmt* - "2-3 Releases/year"
 - *Platform Enhancement* – "Up to 400 hours/year"
 - *Supplier Enablement* – limited to just "managed strategy and category "Wave Plan" with "advisory on communications/escalations"
 - *Buying Content Enablement* (aka Catalogs) – "Up to 20 hosted and 5 punch-out catalogs/year"
 - *Requisition Enhancements* – "Up to 5 new/amended intake forms/year"
 - *Success Planning* – "annual refresh of Success Plan"
 - *Program Reporting* – "4 reports & workshops"
 - *Improvement Plans* – "tailored recommendations", "delivered 4 times/year" in workshops
- Model 2 SLAs, pg. 265: WEAKNESS, Help Desk SLA is very weak.
 - the SLA definitions are not provided and may not be the same as documented under the Project Implementation Methodology section (pg. 210).
 - Response times are different from what is documented on pg. 210 for each Severity Level.
 - No commitment on Resolution response time, only provides "Workaround target".
- Help Desk Transition, pg. 267: WEAKNESS, the approach and 11 weeks in the plan are not sufficient to have a State/Entity Help Desk fully ready to provide Tier 1 & Tier 2 buyer & supplier support (Model 1).

On-Site System Stabilization Support

Pg. 269-271 : Meets req'ts.

- CONCERN, pg. 269, the list of "responsibilities" for the Optis team do not clearly commit them to perform the tasks req'd by the RFP for these support services.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-KPMG

CATEGORY #(s): 1

DATE: 11/11/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Managed Services Requirements – RFP did not require Offerors to provide these services. *NOTE: we will need to see what was included in the Cost Workbooks and negotiate fixed Optional prices for these services.*

Solution Support

Pg. 275-259 & MNGD-1: Does not meet req'ts. Only provided Help Desk support services in response to the req'ts which does not address all of the req'ts of this section.

Organizational Change Management (OCM Services)

Pg. 277: Generally meets req'ts. See notes for OCM in Implementation Services Requirements section above.

Training Services

Pg. 279: Meets req'ts however detail provided is limited and there are limitations on the sessions/materials provided. See notes for Training in Implementation Services Requirements section above. NOTE: the response in this part of the proposal begins "If Optis is to be included in the implementation of the solution" and then references their response under Implementation Requirements. So, the rest of the written response in this Managed Services section does not apply.

Catalog Support Services

Pg. 281: Meets most req'ts. See notes for Catalog Services in Implementation Services req't's section above.

Help Desk Services

Pg. 283: Does not meet req'ts. See notes for Help Desk Services in Implementation Services req't's section above.

Transition Out Assistance Services

Pg. 285-287: Meets req'ts.

Other Available Services

Pg. 289-291:

- Focus, pg. 289: Service for selecting software solutions. Includes:
 - o Strategy and Business Case
 - o Maturity Assessment
 - o Selected Software
 - o Systems Architecture
 - o Implementation Roadmap
 - o ROI and Benefits Realization Plan
- Launch, pg. 290: Software Implementation Services. NOTE, this appears to be the services being proposed for the Implementation Req'ts. Includes:
 - o Implementation Plan
 - o Design Documentation

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

GEP – Global eProcure platform - modules in integrated platform.

General Principal and Requirements

- Key Solution Functionality Elements – Required elements provided in integrated tools. Narrative lacked detail. Video demonstrated functionality and user experience. Elements explained on narrative p46.
- User Experience - Integrated functionality.
- Bidder Best Practices and Roadmap
- Innovations and Value-Added Features/Services – Mostly focused on consulting and reports. (Swamped the narrative description of the primary sourced product.)
- Customizations/Extensions – vague description that future customer needs could be developed. Focused on existing SAAS. **EPROC-PRD-56**
- Alternative Funding Models: N/A

Functional Requirements

- General Functionality – Only configuration items relate to publishing to state's website.
 - **EPROC-GEN-25** – Notifications will have @gep.com email domain / doesn't integrate to state's domain. Non-compliant. **Needs clarification.**
 - EPROC-GEN-39 – High level of configuration required to set external posted content. No additional cost proposed or problem identified.
- Supplier Portal - EPROC-SMR-19 – high level of integration for admin fee payments with state's portal. Doable.
- Supplier Enablement/Management – All requirements noted as Native to application.
- Buyer Portal – Out of box
- Need Identification – Out of box except for E-PROC-NEED-5 which would configure priority of state contracts/purchase channels.
- Request through Pay — Out of box **EPROC-PRD-11** (recurring purchase function) noted as Medium complexity to set up. **Clarification needed** if this is a configuration or actually out of box.
 - – backdated function. **Needs clarification.** Response notes as out-of-box, but statement does not address role-based authority or the functional requirement of backdated orders
 - **EPROC-PC** – Listed as in development- **Needs clarification** if functionality available.
- Catalog Capability – **EPROC-CAT-38** – Public-facing search without login not available. Can be developed. **Needs clarification** as is listed as Low complexity.
- Sourcing/Bid Management – All requirements listed as out of box or low complexity configurable except **EPROC-SRC-109** bid submissions entered by purchasing staff – currently requires GEP staff

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-Optis

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

to load into back-end. Listed as in development by contract award date. Needs clarification if functionality now exists.

- Contract Management - All listed as out of box except:
 - **EPROC-CNT-20 – Needs clarification.** Response appears to refer to each individual document internal ID not an overall contract number that may be a single document/file or a collection of files depending on structure.
 - **EPROC-CNT-71 and EPRPOC-CNT-72** – Functionality listed as high complexity config. **Needs clarification** if requirement understood. Is there admin fee functionality/invoicing/tracking separate from payment processing?
- Vendor Performance – all listed as out of box.
- Purchasing/Data Analytics – listed as out of box with some config for level 2 punchout search.

Technical Requirements

- Availability – 24x7 SLA 99.8%
- Accessibility Requirements – WCAG 2.1
- Audit Trail and History – Out of box
- Browsers Supported – Edge/Chrome recommended. Native mobile functionality for ipad and android.
- User Accounts and Administration – MS AD. 2MFA. SAML 2.0 for SSO.
 - **EPROC-TECH-12** – requires SSO for buyer/supplier dual accounts single login config. **Conditional compliance.**
 - **EPROC-TECH-24** – 2MFA doesn't autogenerate new password. 6 digit code required for access to password reset. **(acceptable standard but doesn't meet requirement.)**
- User Authentication – Non SSO – upper/lower/number/special char. 5 attempt lockout. 90 day.
- Data Conversion – **Two-stage data process. Bulk upload of existing data; Delta load of data changed since initial load prior to go-live.**
 - **Data cleanup to be performed by** customer unless outsourced to Optis for additional cost.
 - **Optis will assist in cleaned data testing; has identified risks to data migration success and high level mitigation strategy.**
 - **EPROC-TECH-30** – Ongoing vendor performance integration is additional cost.
- Interface and Integration – **Optis focus appears to be on Source2Pay piece.**
 - **Integration planning – Optis and customer; build is customer; test and deploy is Optis & customer. Integration options are flat file or API – pros/cons offered.**
 - **Optis will use middleware for migration rather than direct GEP to customer platform – provides justification. Needs clarification if middleware is separate customer procurement or provided through GEP-Optis license.**
 - **EPROC-TECH-55** – P-card hosting is planned for 1Q22 – **needs clarification if available.**
- Office Automation Integration – MS Azure-hosted. Word integrates with GEP through plugin allowing redlining of contract document. "Contract Examiner" extracts clauses from scanned PDFs. Price sheets can be edited offline in Excel and loaded back into GEP. Integrates with Outlook for alerts/notifications.
- Mobile Device Support – Dashboards, viewing catalogs, Approvals. Unclear if ordering can be performed in mobile environment. (Secure biometric access.) Unclear if VPN is required to log into mobile environment.
- Mobile Applications

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-Optis

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Data Ownership and Access – After contract termination, customer data returned in mutually acceptable file format; then purged and destroyed. Time period not stated other than with customer agreement.
- Data Retention, Archive and Purge Considerations
- Disaster Recovery Plan – 1 hour RPO. RTO 4 hrs.
- Solution Environments – UAT and Production. UAT environment developed through investigation and requirements gathering. GEP to develop testing scenarios to validate function prior to go-live.
 - Scalable through MS Azure data centers.
 - Automated processes to maintain continuity between UAT and production environments.
 - Mobile – native adaptive UI
- Solution Technical Architecture - .Net built on Azure.
- Solution Network Architecture
- System Development Methodology
- Service Level Agreement – 99.8% system availability. 4-level Severity priority for cases with response times 1 hour, 4 hour, 1 business day 4 business days initial response provided followed by 3-step support timeline for each level to conclusion. (Appendix 1.) 24x5 (M-F) support services assistance via email, online and phone.

Security Requirements

Notes: GEP SMART Application Architecture & Security Overview, SOC 2 and Information Security policy provided in appendices.

- Cloud Security Alliance (CSA) Compliance – Yes. Completed. No answers of concern.
- Security and Privacy Controls
- Security Certifications - datacenters are SSAE16 certified. The datacenters are SOC1 and SOC2 as well as ISO / IEC 27001:2005 certified and hosts data for Fortune 500 as well as Global 2000 companies.
- Annual Security Plan
- Secure Application and Network Environment -
- Secure Application and Network Access – EPROC-SEC-2 – configuration required for concurrent login limitations in conjunction with customer.
- **EPROC-SEC-3** – forced login **not currently available** – would be developed with customer – no extra cost proposed.
- EPROC-SEC-5 – almost real-time snapshots. Daily, weekly and monthly off-site backups. Primary data center VA, Secondary CA.
- Data Security – Azure PAAS.
- Personally Identifiable Information Protection – Lists compliance in narrative.
- Security/Privacy Issue Occurrence – Acceptable response listed in CAIQ.
- PII Data Actual/Attempted Access or Disclosure
- Security Breach Reporting – Notification with 4 hours of occurrence - Narrative.

Implementation Services Requirements – GEP-Optis

Note: Response in Exhibit 1 not different from GEP solo implementation.

- Project Management – Optis governance and project management plan detailed from p170 in Section III response. Optis project manager controls scope, schedule, cost management. Changes to remedy schedule issues joint decisions including no change.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-Optis

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Hybrid waterfall-agile approach. In-person or remote project delivery to be determined with customer; hypercare following go-live.
 - Quality management approach. Includes Project manager, functional lead, technical lead.
 - Defined key performance indicators to measure progress and success. Earned Value is measure of project achieved to date aligned with planned progress. Measures with actual cost to establish progress grade.
 - Provided timelines for small, medium, large-state implementation, along with roles/numbers of personnel appropriate.
 - Two phases – pre and post implementation.
 - Staffing plan for Optis and customer entity with equivalent roles. Needs clarification – Is all GEP configuration performed by Optis? Who forms the “core delivery team?” (p202)
- Project Implementation Methodology – Multiple workstreams for different modules built in parallel. Identifies audience to participate in design.
 - 5 project testing phases: prep; functional unit testing, systems integration testing, user acceptance; smoke.
 - 4-step severity level for project implementation issues. Highest severity (showstopper) 8 hours to analyze – 16 to fix. (Others: Critical, non-Critical, Accept.)
 - Risk management plan includes risk registry and weekly updates.
- Catalog Support Services – 4-step supplier assessment and engagement process.
 - Clarification needed – p218 – states catalogs submitted through Ivalua supplier portal.
 - Note: Optis SEED methodology seems more geared to private sector supplier augmentation rather than public sector competitive procurement.
 - 3 options for streamlined A/P invoicing based on volume.
 - Note: Logic for choosing hosted catalogs vs. punchout uses very low threshold of 100 line items. For public procurement, this is a low number to give up catalog control to the supplier.
 - Needs clarification: Contracts may not permit dynamic changes without approvals. What are punchout approvals proposed by Optis?
 - Definitions for catalog – categories are Procurement Team and Supplier responsibilities. Unclear if Optis (or GEP) performs catalog preparation steps during implementation for legacy data or if all responsibility is with customer/supplier.
- Data Conversion Services – Two-stage data process. Bulk upload of existing data; Delta load of data changed since initial load prior to go-live.
 - Data cleanup to be performed by customer unless outsourced to Optis for additional cost.
 - Optis will assist in cleaned data testing; has identified risks to data migration success and high level mitigation strategy.
- Interface/Integration Development Services – Optis focus appears to be on Source2Pay piece.
 - Integration planning – Optis and customer; build is customer; test and deploy is Optis & customer. Integration options are flat file or API – pros/cons offered.
 - Optis will use middleware for migration rather than direct GEP to customer platform – provides justification. Needs clarification if middleware is separate customer procurement or provided through GEP-Optis license.
- Organizational Change Management (OCM Services) – 4-stage change management model.
 - Main OCM plan (p238) focused on project team, doesn't incorporate the mentioned communications to wider stakeholder group.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP-Optis

CATEGORY #(s) 1:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Plan for organizational change if needed, create urgency, momentum and environment for quick decisions. Commitment to project completion/success.
 - From/To analysis – current system will become new system.
 - Note: Minimal focus on eprocurement – Source2Pay referenced.
- Training Services – 70/20/10 approach. 10% classroom; 20% application case studies; 70% job-related experiences using resources.
 - Tailored training plan during development to provide for implementation at cutover.
 - Combination of power user guide, screen-shot step-by-step, quick ref guides. Distributed by email and intranet.
 - Customer can request training videos recorded from non-production environment. P 256. Needs clarification. Included cost or additional?
 - Train the trainer for end users. Details not provided for number of staff.
- Help Desk Services – GEP Success portal – 24x7 – case reporting, knowledge bases.
 - Optis offers 3 options: 1. Customer managed help desk; 2. Optis + GEP help desk 24/5; 3. Optis + GEP outsourced 24/7. Needs clarification options 2 and 3 – how are different from GEP offering -what is cost? 4-level severity response 8-8.
 - EPROC-IMPL-1 - Needs clarification – new release, product update training through webinars – are these webinars for all GEP or customer-specific?
 - Needs clarification: p222 Best practices support model. Is GEP/State helpdesk staffed by GEP or a combination of GEP and customer staff?
 - EPROC-IMPL-2 – ongoing training provided as needed: who defines as-needed? Are their additional cost thresholds for training? For smaller agency, if train the trainer needs to be performed at future stage in the contract due to staff turnover, is GEP committed to providing this post-implementation or is this a cost option? Needs clarification.
- On-Site System Stabilization Support – 90-day hypercare; bug resolution; implement approved enhancements; facilitate daily scrum between Optis-GEP-client if needed.

Managed Services Requirements

- Solution Support – Optis Referenced implementation slides.
 - GEP or Optis? EPROC-MNGD-1 – findings reported on “regular basis” – is this quarterly meetings? Needs clarification.
- Organizational Change Management (OCM Services) – Referenced implementation slides.
- Training Services – Referenced implementation slides.
- Catalog support services. – Referenced implementation slides.
- Help Desk Services – Referenced implementation slides.
- Transition Out Assistance Services – 30-week month plan exiting governance with risk identification.
- Other Available Services: Focus – strategy and software selection, Launch – implementation (seems to repeat proposal), Perform – improvement during ongoing use.

Video Demonstrations

- Detailed walk-through of toolset processes.
-

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 8/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Clients include “many governments and agencies, to Fortune 100 organizations”. (pg. 4)
- “IBM has the highest number of Ariba certified professionals across all Ariba partners”. (pg. 5)
- Numerous project health checks by “IBM account executive” identify “what is working well” and “actions for improvement”. (pg. 5).
- Collaborates with SAP Ariba in “bi-weekly call” on “in-flight projects” and “open issues”. (pg. 5)
- Certifications: Including SOC 1/2/3, ISO 9001, GDPR, FedRAMP. (pg. 6)
- Project Management methodology: “Seven Keys Framework” to “assess, measure, manage and report on the health of a project”. (pg. 6/7)

2. Previous Projects

- **Lilly:** Ariba “Sourcing, Contracts, SLP, Guided Buying, Procurement Operations Desk, Spot Buy, Self-Service RFx, Dynamic Discounting”. Regional deployment strategy with overlapping timelines” for Buying/Invoicing. “Global deployment of Sourcing, Contracts, and SLP”. (pg. 8)
- **Pfizer:** Ariba “Guided Buying, Invoice Management, Supplier Management, Sourcing, Contracts Management” and integration. Transitioned from Ariba On-Premise to Ariba cloud. Cleansed/rationalized supplier data. “Enabled ~2,400 suppliers” and transitioned/trained “~65,000 users across 65 countries”. (pg. 9) *Was a Full Suite eprocurement implementation.*
- **Lumen:** Ariba “Guided Buying, Invoice Management, Procurement Operations Desk, Sourcing, Contracts, SLP”. “Transitioned from SAP ECC SRM solution” and developed custom mappings/integration. *Most of a Full Suite eProcurement implementation.*
- **IBM:** Ariba Sourcing, Contracts and Supplier Lifecycle Performance” globally in 9 months. Cleansed/rationalized “500K suppliers”. “Migrated 173K contract records and 1 million attachments”. (pg. 10) *Not Full Suite eProcurement implementation.*

3. Subcontractors

- No subcontractors.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 8/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

4. Organizational Chart

- Did not submit a project specific organization chart. Only identified “IBM executives that will comprise our Account Team and Delivery team leaders”.

5. Litigation

- No specific information provided on litigation but did note that “IBM is involved in a variety of ongoing claims, demands, suits, investigations, and proceedings that arise from time to time in the ordinary course of its business.”

6. Financial Viability (pgs. 15-38)

- Failure Score: Moderate risk due to payment issues, open liens (5 Tax) and UCC filings. (pg. 15 & 18). However, review of the list (pgs. 29-32) could not determine if liens/UCC filings were associated with any Ariba projects.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements, pg. 3/4

- SAP Ariba as the solution
- "subscription includes system maintenance, automatic upgrades, base product enhancements and application of service packs.
- Compliance: response described complying with Security standards, not address 'baking in' business rules.
- Transparency: response described "internal visibility" but did not address "public" transparency

User Experience, pg. 4-7

- "Custom intake forms" with "built in workflow", to give Wizard experience
- "Each module has configurable dashboards". "Users can create multiple dashboards".
- "Admins can also create role-based dashboards that would automatically be assigned to any users"
- "SAP Ariba also provides mobile procurement tools/mobile app": Requisition, Requisition tracking/approval, & Task completion/tracking/management.

Bidder Best Practices and Roadmap, pg. 7/8

- Quarterly Release: Feb, May , Aug & Nov
- Monthly Feature Deliveries: optional, no-impact release. Changes "virtually invisible to the end users".
- Production quality metrics tracked for improvement needs.
- Road Map: available on-line, **BUT wasn't able to access it. Need a Log On.**

Innovations and Value-Added Features/Services, pg. 8-10

- SAP FieldGlass:
 - o SAP Fieldglass External Talent Management automates the entire process of procuring and managing flexible labor, from requisition through invoice and payment.
 - o "SAP Fieldglass Services Procurement can handle the management of a variety of Statement of Work (SOW) engagements including projects, offshore/offsite, independent contractors, managed programs, business services and Business Process Outsourcing (BPO) models".
 - o "SAP Fieldglass Worker Profile Management enables companies to track and manage all non-traditional workers who are not tied to a job posting or Statement of Work (SOW)."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- SAP Ariba Supplier Risk Management: "lets the State tailor risk views and alerts to state's business, to each supplier relationship, and to the State's role. The State can also segment suppliers based on risk exposure."

Customizations/Extensions, pg. 11-14

- "it is IBM's assessment that the requirements can be met with just Configurations. Customizations are not necessary at this time."
- Any Customizations needed would require contracting separately with a "SAP Ariba Partner application extension partners" separately from the proposal (pg. 12)

Alternative Funding Models, pg. 14/15

- Proposal is
 - o that "Participating Entities will incur a monthly usage-based subscription cost after initial implementation and stabilization".
 - o "no upfront Capital cost for Hardware or Software Infrastructure"
- IBM could "modify our cost proposal with a custom payment plan".

Functional Requirements

General Functionality, pg. 16-18

- "Ariba is a role-based solution"
 - o SAP Ariba Buying & Invoicing (including Guided Buying)
 - o SAP Ariba Sourcing
 - o SAP Ariba Contracts
 - o SAP Ariba Supplier Lifecycle & Performance Management
 - o SAP Ariba Network
 - o SAP Fieldglass
- "A super user will be granted broader access to the solution by assigning multiple roles" to access functionality across the solution and "provide administration capabilities across the solution or for specific functional areas".
- "Guided Buying is the exception, which is designed for casual users to procure with a consumer like user experience".
- CONCERN, by default the system has built in use of the UNSPSC code set. Since Ariba is a SaaS (shared instance) State/Entities with a different commodity code standard will have to adapt to UNSPSC codes in some areas of the system where a crosswalk to their commodity codes will cannot be incorporated.
- SAP Ariba Business Network is a B2B network ("dynamic, digital marketplace") transacting "business commerce between more than 3.6 million" companies.
- Public Access to Data, pg. 40: WEAKNESS, Public posting of any data in the solution to a State/Entity "public website" requires use of "a set of APIs" to create integrations to post the information. This work is not included in the proposed solution.

RTM

- WEAKNESS, GEN-4: User must manually post copy of a solicitation to a State's public website.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, GEN-5: To post Contracts on the public website, integration would be put in place to put a "link" on the website that would go to the Contract BUT only "licensed users" would be able to use the link to see the Contract.
- Five req'ts need Clarification, remainder meet the other GEN req'ts

Supplier Portal, pg. 19-24

- Ariba Business Network (aka Ariba Network, Ariba Supplier Network)
 - o Single supplier account to transact with all Ariba customers, "supplier unified seller experience"
 - o State/Entity can choose to only access "their preferred suppliers" or all suppliers that are members of the Network.
- Ariba "Supplier Enablement Services" for the Network are included
 - o "will be responsible for most of the enablement process", onboarding
 - o The services will 'scale' up to meet "the State's volume" of suppliers
 - o Sends request for suppliers to confirm/accept relationship on the Network
 - o Provide phone support for registration "and conduct change management"
 - o Provide training on invoice submission
 - o Provide an Account Manager to State/Entity to "support suppliers and increase project engagement"
 - o Send "go-live letters" to inform suppliers when the State/Entity is going to start doing "electronic transactions"
- Supplier Portal functionality across all customers, not specific to a State/Entity using Ariba
 - o Consolidated order dashboard
 - o Order task reminders and rules-based order routing
 - o Access to Ariba Discovery public solicitation posting (postings by all Ariba customers)
 - o Contract collaboration/redlining
 - o Self-service hosted catalog creation as CIF, cXML and Excel files
 - o Self-service Punchout setup, separate setup for each Ariba customer
 - o Dashboard to manage catalog activity
 - o Option to have "public catalogs on the SAP Ariba Spot Buy Catalog solution" (similar to putting catalog in Amazon but only accessible by Ariba customers).
 - o Invoice create/submission to Ariba customers via PO-Flip or electronically from Suppliers internal system (cXML, EDI, CSV). With option to create non-PO invoices.
 - o Self-service Administration to define Supplier user roles and users
 - o Link multiple registration accounts to a Parent account
 - o Mobile app for access to orders, invoices, notifications, order/invoice graphs and can "confirm customer orders".

RTM

- WEAKNESS, SPR-18: System does not provide a means to handle complaints about a vendor.
- One req'ts need Clarification, remainder meet the other SPR req'ts

Supplier Enablement/Management, pg. 24-25

- SAP Supplier Enablement Team will "design and develop the most effective enablement strategy" based on their "profile, PO and invoice volume, and spend". Segment the "State's vendor master data to effectively target/onboard suppliers in tiered waves".

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Provides IRS TIN/Name "verification capabilities"
- For the Ariba Network, offers suppliers "user guides, FAQs, technical documentation, and free online seminars".
- Can have "account specific information" via a "supplier information portal embedded in the Ariba Network".

RTM

- NOTE, VDR-1: Registration is for the Ariba Network and uses a "supplier profile questionnaire" to capture State/Entity specific registration data.
- WEAKNESS, VDR-11: The Ariba Network captures UNSPSC codes with registration. State/Entity would have to add to the 'questionnaire' a selector for other Commodity Code taxonomy's (e.g. NIGP codes) with registration.
- NOTE, VDR-19: Response does not address the req't to validate IRT TIN/Name but in the Technical Proposal (pg. 25) it does indicate that this verification is available.
- WEAKNESS, VDR-20: Address validation is for "format" only. System does not use anything to confirm that the address is good.
- WEAKNESS, VDR-23: Debarment/watch list verification is an "add-on", not included in the offering.
- Three req'ts need verification, remainder meet the other VDR req'ts.

Buyer Portal, pg. 26-28: Generally meets req'ts, with these caveats.

- Casual/Power Users, pg. 26/27: CONCERN,
 - o Running "pre-packaged reports" is listed for Power Users, not Casual Users.
 - o "Post solicitations" is listed for Power Users, so it may be that Casual Users won't be able to do 3 Bids/Buy (aka Quick Quote) functionality (see PRD-36 & SRC-11 references).

RTM

- Six req'ts need Clarification, remainder meet the other BPRT req'ts.

Need Identification, pg. 28-30: Generally meets req'ts, with these caveats.

- Guided Buying, pg. 29: NOTE, Ariba concept for Guided Buying appears to be a Landing Page once the user logs in that provides a variety of options with titles that tries to 'Guide' the user based on what they are trying to do. So it's really up to the user to figure out which 'path' to take from the Landing Page.

RTM

- Response to all NEED req'ts is same "Standard Functionality" and is a "generally available feature"

Request through Pay, pg. 31-32: Generally meets req'ts, with these caveats.

- pg. 31/32: Ariba Buying/Invoicing module provides
 - o Requisition, PO generation with Order delivery to Suppliers and Supplier Invoice submission via Ariba Business Network.
 - o Approval workflow is on the Requisition, Change Order, Receipts and Invoices with in-tool/email/mobile approvals.
 - o Suppliers can send order confirmation, advanced ship notice and invoices via their acct on the Ariba Business Network.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- NOTE, PRD-4: The system defines "Groups" instead of 'Roles' to control what a user "can see and do within the system".
- WEAKNESS, PRD-6: System does not provide an automated means to control whether combining purchase for multiple Fiscal Years are allowed on a Requisition/Order.
- STRENGTH, PRD-11: System has the capability for Suppliers to invoice against a Contract instead of a PO.
- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept" for standard specifications.
- WEAKNESS, PRD-15: Attachments throughout the system have individual size limits of 100MB per attachment.
- POTENTIAL WEAKNESS, PRD-23: System does not have a requisition feature for the user to enter a discount percentage that is automatically applied to the requisition pricing. However, can automatically apply a discount that is recorded on an associated contract record.
- STRENGTH, PRD-24: Input forms can have a workflow defined for the individual form.
- STRENGTH, PRD-33: Suppliers can set up their Ariba Network account to route Change Orders differently than original Orders.
- POTENTIAL WEAKNESS, PRD-37: System does not identify matching state source items to non-contract items or save matching items for later analysis.
- POTENTIAL WEAKNESS, PRD-39: System does not identify matching state source items to retail/commercial market items or save matching items for later analysis.
- POTENTIAL WEAKNESS, PRD-53: System does not provide a means for users to enter 'speed codes' that "automatically map/populate" other accounting fields.
- WEAKNESS, PRD-56: The system does not provide a means to enter 'back dated' requisitions/orders. So system will not be able to allow recording of purchases done outside the system.
- POTENTIAL WEAKNESS, PRD-62: System does not provide a means to specify a payment method "other than invoicing" on the purchase request.
- POTENTIAL WEAKNESS, WRK-10: For an authorized Approver to be able to over-ride/bypass to make a purchase request bypass any steps they have to manually remove each step from the workflow. There is no automation available for this.
- POTENTIAL WEAKNESS, WRK-13: Approvers cannot approve/deny by line item. To only approve part of the line items the Approver must delete the line items they want to deny.
- WEAKNESS, WRK-14: When an Approver edits a purchase request the workflow cannot be re-triggered to start again at the beginning.
- POTENTIAL WEAKNESS, PO-2: System does not have the capability to split a Requisition into separate POs for different Fiscal Years, holding the future Fiscal Year POs.
- WEAKNESS, PO-5: System does not provide the capability to have Agency/Organization specific PO templates.
- WEAKNESS, PO-15: The system cannot provide an internal and supplier printed version of an order. Though it can be customized, there is only one print format for an order.
- POTENTIAL WEAKNESS, PO-16: There is not eSignature functionality available for Orders.
- POTENTIAL WEAKNESS, PO-24: The system does not notify "reviewers, approvers" when a PO has been cancelled.
- POTENTIAL WEAKNESS, PO-27: Orders cannot be created with out create a Requisition.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, PO-28: Orders cannot be created from a Contract directly, must create a Requisition from the Contract.
- POTENTIAL WEAKNESS, PO-29: System does not provide a means to specify payment method, other than invoicing, on the PO.
- POTENTIAL WEAKNESS, PC-3: System does not provide a means to prevent Pcard use based on the type of a Purchase Request.
- WEAKNESS, PC-6: System does not provide a means for a user to enter/maintain their own Pcard information. Must have a Pcard Administrator manage this for users.
- STRENGTH, PC-8: Pcard reconciliation capabilities are comprehensive.
- WEAKNESS, PC-9: System does not have a means for users to record "non-purchase order Pcard transactions" as part of reconciliation.
- POTENTIAL WEAKNESS, PC-16: System does not provide a Pcard transaction integration to the Finance system for budget/funds verification and to encumber funds.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts without a corresponding PO in the system.
- POTENTIAL WEAKNESS, RC-4: Receipts cannot be recorded in the system and later associate it to a PO.
- WEAKNESS, RC-16: System does not have Receiving tolerances capability. Tolerances are defined on Invoicing.
- POTENTIAL WEAKNESS, INV-2: System does not provide a means to control which Agencies/Entities that a Vendor may submit electronic invoices for. The only control available is to control which Vendors are able to submit electronic invoices.
- STRENGTH, INV-8: System provides a "messaging feature" on Orders and Invoices to communicate with the Vendor.
- Nine req'ts need Clarification because the responses were incomplete.

Catalog Capability, pg. 32-33: Generally meets req'ts, with these caveats.

- Ariba Spot Buy catalog solution, pg. 33:
 - o NOTE, Ariba Spot Buy is NOT the equivalent to 3-Bids/Buy (Quick Quote). It is shopping "non-sourced" catalogs in a marketplace that Ariba has available through their Business Network where member suppliers can offer catalogs to sell to Ariba buying customers. Similar to accessing/shopping Amazon.
 - o WEAKNESS, to shop Spot Buy, users have to do a second Search after they have searched the State/Entity catalogs.

RTM

- WEAKNESS, CAT-6: System has a limit of 5000 catalogs.
- WEAKNESS, CAT-7: System has a limit of 500,000 catalog items in a catalog.
- WEAKNESS, CAT-10: System does not provide the capability to have catalog items that provide instructions to users without pricing.
- POTENTIAL WEAKNESS, CAT-11: System does not provide a means
- WEAKNESS, CAT-12: System does not provide catalog capabilities for configurable products or services.
- WEAKNESS, CAT-13: System does not have catalog capability to have pre-configured items with ability to substitute optional components.
- WEAKNESS, CAT-19: System does not allow for negative dollar value catalog items.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Four req'ts need Clarification because the responses were incomplete

Sourcing/Bid Management, pg. 33-36: Generally meets req'ts, with these caveats.

- pg. 34: Public posting of the solicitation would only be on the Ariba Network "Discovery" website, which has all Ariba customer solicitations. As noted in the response to SRC-52 & 76, an integration would have to be created (not included) using the "Ariba Discovery API" to post on a State/Entity public website.
- Project Mgmt, pg. 35: STRENGTH, system provides "project management" feature of defining Phases/Tasks that users are "required to complete as part of the solicitation".

RTM

- POTENTIAL WEAKNESS, SRC-16: System does not have a specific solicitation type for "Invitation for Qualified Products".
- CONCERN, SRC-23: The reference to access being "based on user licenses" may mean that the sourcing module is licensed separately from other modules. Need to look closely at the Cost Workbook.
- STRENGTH, SRC-28: The messaging feature seems to be a very strong fit to the collaboration requirement.
- WEAKNESS, SRC-35: The system does not provide "check-in/out capabilities for the repository.
- WEAKNESS, SRC-37: System does not provide a means to update documents, terms/conditions, specifications and have Templates that include them be automatically updated.
- WEAKNESS, SRC-38: System does not provide a means to identify templates that include documents, terms/conditions, specifications that have been updated.
- CONCERN, SRC-40: The statement "SAP Ariba will maintain the header data fields on behalf of the State..." implies that the State will not have Admin access to make configuration changes to the system.
- WEAKNESS, SRC-52: To post Solicitations on a State/Entity public website an integration would have to be created (not included) using the "Ariba Discovery API". The only public posting included is what would be viewable on the Ariba Network "Discovery" website that has all Ariba customer solicitations.
- CONCERN, SRC-53: The limit of loading 9 attachments at a time may be a frustrating user experience if they have to load more than 9 documents.
- POTENTIAL WEAKNESS, SRC-54: OOTB the system utilizes UNSPSC codes. It may not directly support NIGP codes.
- POTENTIAL STRENGTH, SRC-56: The capability to "assign a weight to graders on a grader by grader basis".
- WEAKNESS, SRC-63: Solicitations are ""limited to 100 supplier participants"" and to do more you have to set up ""different events"".
-
- CONCERN, SRC-63: The ""100 supplier participants"" limit ""to ensure maximum performance"" may mean that the system can't handle larger numbers of participants. May be a technical limit."
- WEAKNESS, SRC-76: As noted with SRC-52, OOTB the system does not provide a means to post solicitations to a State/Entity public website. Users must "manually post" or have programming done to build an integration using APIs
- WEAKNESS, SRC-81: As noted with SRC-52, OOTB the system does not provide a means to post solicitation amendments to a State/Entity public website. Users must "manually post" or have programming done to build an integration using APIs

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, SRC-84: The "message board" can be copied on emails to post the email content into the message board automatically.
- WEAKNESS, SRC-88: The system can workflow full set of Q&A as a "tracking document" but does not support the specific details of this requirement.
- WEAKNESS, SRC-102: The sourcing module utilizes acct login as the esignature on solicitations. However they can do customization to provide DocuSign or Adobe eSign services with bids.
- CONCERN, SRC-118: The system does not have a designed means to capture subcontract data as part of vendor responses. Workaround is to attempt to use "RFx questions, lots and/or line items".
- CONCERN, SRC-120: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.
- CONCERN, SRC-125: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.
- WEAKNESS, SRC-129: Attachments sizes are limited to 100MB each.
- WEAKNESS, SRC-136: The system does not provide means to award directly to a purchase order. You must create a Contract and then do a release from the contract to create a PO.
- CONCERN, SRC-142: If re-seller and delivery locations are captured using "questions" then concerned how this information would be available for placing orders against the contract.
- Eleven req'ts need Clarification because the responses were incomplete.

Contract Management, pg. 36-38: Generally meets req'ts, with these caveats.

- No specific detail provided in the Technical Proposal other than to say that the system provides "two components of the contract lifecycle", Contract Management and Contract Administration.

RTM

- "STRENGTH, CNT-2:
 - o "redlined versions of a contract either using the application or... Microsoft Word"
 - o "new Word document" providing a "version-to-version compare"
 - o "final set of documents" to be published "automatically consolidates the selected documents to a final PDF version"
- POTENTIAL WEAKNESS, CNT-7: System does not provide a check-in/check-out feature for maintenance of standard documents/templates
- POTENTIAL WEAKNESS, CNT-8: System does not provide a means to automatically update templates that include standard documents where those document standards have been updated.
- POTENTIAL WEAKNESS, CNT-9: System does not provide a means to identify templates that include standard documents where the standard has been updated.
- WEAKNESS, CNT-10: System limits attachment size to 100MB.
- NEGOTIATION, CNT-12: Suggest negotiating in the integration with DocuSign or Adobe Sign (State/Entity choice of which) to be included in the proposed scope/cost.
- NOTE, CNT-23: Contract document authorized is provided. See the response to CNT-2 provides more details on the creation of contract documents.
- NOTE: see response to CNT-2 for more details on MS Office and Adobe PDF with creating contract documents.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL STRENGTH, CNT-26: Feature in "upcoming release of AI/ML" will give recommended approvals based on history and "automatically include additional review/approval" when modifications are made to contracts.
- WEAKNESS, CNT-38: Attachments must be used to capture subcontractor information.
- WEAKNESS, CNT-45: System does not provide a means to make the "electronic procurement file" for a contract publicly viewable.
- STRENGTH, CNT-46: The "full text search" of uploaded documents is a significant feature.
- WEAKNESS, CNT-51 thru 62, 65 & 66: System does not provide an OOTB means to post contracts, amendments or alerts to a State/Entity public website. Must either have users manually post on the website or have programming done to integrate using APIs to push information to the public website.
- Six req'ts need Clarification because the responses were incomplete.

Vendor Performance, pg. 38-41: Generally meets req'ts, with these caveats.

- No specific detail provided in the Technical Proposal except general info on pg. 40:
 - o System provides "performance surveys" and "KPI based vendor performance scorecards".
 - o Multiple charts available to display "supplier performance data".
- Not clear whether there is a Contract specific performance assessment/survey feature.
-

RTM

- No specific details provided but based on details provided in the Technical proposal and the Video demo the req'ts were addressed.

Purchasing/Data Analytics, pg. 41-43: Meets req'ts.

- Pg. 41/42:
 - o "report can be displayed as a chart or graph (line, bar, pie, donut, etc.) and added to the user's personal dashboard. "
 - o Creating new reports via "3-step report creation wizard"
 - o Charts have dynamic "drill down"
 - o Provides "Parameter-based reports", "Scheduled reports" and can have "visual alerts and grades".
- pg. 43: STRENGTH, report personalization by users. "pre-packaged reports can be modified" by the user and "added to their dashboard".

RTM

- Meets req's.
- One req't need Clarification because the responses were incomplete.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: IBM
CATEGORY #(s): 1
DATE: 11/16/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Technical Requirements

Availability, pg. 44: Does not fully meet req'ts

- System "offers a 99.5% system availability" instead of the req'd "100% availability between peak use hours".

Accessibility Requirements, pg. 44/45: Does not fully meet req'ts

- Response did not provide any specific details on accessibility of the individual solution components proposed. Only stated that
 - o In developing software SAP targets "Web Content Accessibility Guidelines Level A and AA and EN 301 549"
 - o "across its product portfolio, solutions are not fully optimized for accessibility"

Audit Trail and History, pg. 45/46 & TECH-1 thru 5: Meets req'ts

- "This audit trail tracks system-wide configuration changes to keep track of what changes were made and which user made them."
- One req'ts needs Clarification because response did not address full req't.

Browsers Supported, pg. 46: Meets req'ts, however the response did not address the bulleted req'ts regarding additional browsers supported, browser tracking, system testing w/multiple browsers and notice posting for older browsers.

User Accounts and Administration, pg. 46-48 & TECH-6 thru 10: Overall meets req'ts however as noted below for the RTM, there are a couple Potential Weaknesses & several req'ts that where the response did not address the req't.

- "Access to data and functionality within the modules is based on roles and permissions that determine which features of the solution a user can see and work with, and what data the user can access."
- "roles can be mapped to other roles"
- "Users can inherit roles"

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide "dual sign on" where one login can be both a buyer and supplier.
- POTENTIAL WEAKNESS, TECH-16: "System can't automatically" deactivate users after a period of inactivity. Admins must manually monitor activity and manually deactivate users.
- Five req'ts need Clarification because they did not address the req'ts

User Authentication, pg. 48/49 & TECH-21 thru 25: Meets req'ts except for State/Entity password policy.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Two possible authentication methods: "Regular user authentication" (Ariba system login/password) or "Single Sign-On" ("log into their corporate network")
- Password policy: Single Sign-On uses whatever is in place with the State/Entity system. Ariba login policy is standard. WEAKNESS, not configurable to meet a State/Entity policy. Ariba standard is:
 - o case-sensitivity between 8 and 16 characters in length. Passwords can include any Latin characters and punctuation marks and must include at least one numeral between the first and last character. They must also include at least one letter.
 - o Passwords must be changed "at least every 180 days"
- 2 factor authentication is available.

RTM

- WEAKNESS, TECH-23: Password policy is standard across Ariba clients and is not configurable to meet a State/Entity password policy that is different.

Federated Identity Management, pg. 49/50: Meets req'ts

- Two types: Identity Provider (IdP) Initiated and Service Provider (SP) Initiated

Data Conversion, pg. 50 & TECH-26 thru 34: Does not meet.

- Technical proposal details did not address data conversion. Instead discussed their implementation methodology and staffing plans.

RTM

- Responses to all RTM req't did not address what was req'd. Instead integration to external systems with Ariba and export of data from Ariba was described.

Interface and Integration, pg. 50 & TECH-35 thru 60: Overall, solution has robust interface/integration capabilities. However, as noted for RTM req'ts below and in the review of the Interface/Integration section under Interface/Integration Developments Services section (pg. 97) there are significant CONCERNS that multiple of the RTM req'd Finance System integration points are not considered "Standard", so not clear that the system is capable of those integrations. Also, on pg. 97 the response states that "Integration Development is not included in the costs", so need to NEGOTIATE integration costs into the Fixed Price Scenarios.

- Real-time and/or batch integration
 - o HTTPS using CSV interface
 - o SAP Web services
 - o REST APIs

RTM

- POTENTIAL WEAKNESS, TECH-26: While this req't is for Data Conversion, the response states "Legacy integration is provided as an extra cost and is priced with an associated Statement of Work (SOW)." So integration work included in the Cost Workbook fixed price section is not a 'fixed price'.
- Six req'ts require Clarification because the responses did not address the req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: IBM
CATEGORY #(s): 1

SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Office Automation Integration, pg. 51 & TECH-61: Meets req's

Mobile Device Support, pg. 52/53 & TECH-62: Meets req'ts.

Mobile Applications, pg. 53/54: Meets req'ts.

- System includes a Mobile App for iOS and Android.
- App Functional features
 - o Create requisition w/ catalog search and access to Spot Buy marketplace
 - o Pin requisitions for later viewing
 - o Requisition Approval, Tracking, Viewing
 - o Access to Ariba Exchange User Community
 - o iOS access to Supplier 360 degree reports
- App Security features
 - o App activation code
 - o App PIN to login
 - o Touch ID for iOS instead of Pin
 - o Fingerprint recognition support instead of PIN
 - o App timeout
 - o Data encryption
 - o Jailbreak and rooting detection option to force the app to close if detected

Data Ownership and Access, pg. 54: Meets req'ts.

Date Retention, Archive and Purge Considerations, pg. 54/55 & TECH-63: Meets Data Retention however does not have Archive capabilities.

RTM

- WEAKNESS, TECH-63: System does not provide an archive capability. State/Entity can only delete/purge transactions instead.

Disaster Recovery Plan, pg. 55: Meets req'ts.

Solution Environments, pg. 56 & TECH-64 thru 68: Does not meet req'ts. Separate Development and Training environments are not provided. The Test environment will be used for IBM setup/testing and State/Entity UAT testing and training.

- By default only Test (aka Sandbox) and Production environments are provided. Additional environments for "an additional charge".

RTM

- Two req'ts need Clarification because they did not address the req'ts .

Solution Technical Architecture, pg. 56: Partially meets.

- Response did not provide the req'd
 - o Technical architectures diagrams
 - o Description of development tools/languages/techniques

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Identify network architectures components shared among customers & dedicated to a State/Entity
- pg. 57: **WEAKNESS**, both Test and Production environments are "updated at the same time" for service packs and major releases. SAP Ariba does not provide for UAT prior to Production release.

Solution Network Architecture, pg. 57-59: Meets req'ts however details on the web -hosting center (e.g. power, HVAC, floor space, etc.) were not provided.

System Development Methodology, pg. 59/60: Meets req'ts though the details provided were very high level.

Service Level Agreement, pg. 61: Partially meets.

- Response did not indicate that they had reviewed and whether they complied with the SLA in the RFP.
- Proposal File 6- SAP Ariba SLA: The Ariba SLA is only for System Availability which is committed to be at 99.5%. No other SLA areas are included.

Security Requirements

Cloud Security Alliance (CSA) Compliance, pg. 61: Meets req'ts.

Security and Privacy Controls, pg. 61/62: Meets req'ts through SOC compliance

- SAP Ariba is officially not certified NIST 800-53. Ariba uses SOC guidelines.
- Ariba is audited/certified for ISE 3402 DOC1 Type II, SOC2 compliance every 6 months
- SOC 3 report issued annually.
- Hosting facility is audited for compliance to SSAE 16 SOC1 TYPE II, SOC2 Type II

Security Certifications, pg. 62: Meets all req'ts except HIPPA (see note below)

- Is Level 1 PCI DSS certified
- Complies with VISA USA Cardholder Information security Program (CISP) and MasterCard Site Data Protection (SDP) Program
- **POTENTIAL WEAKNESS**, "Ariba is not designed to handle HIPAA data". "Ariba does not support storing HIPAA/PII/Personal data".

Annual Security Plan, pg. 64/65: Could not assess. Response did not address the req't to describe their Security Plan. Stated that their "annual security plan are internal facing documents" and they do not "attach SOC reports with RFP responses".

Secure Application and Network Environment, pg. 65-69: Meets req'ts. Security protections are comprehensive.

Secure Application and Network Access, pg. 69-72: Meets req'ts. Security controls are comprehensive

- Did not address

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Protocols used for import/export of data and relevant interoperability/portability standards
- Changes made to any hypervisor

Data Security, pg. 72-75: Meets req'ts

Personally Identifiable Information Protection, pg. 76: Does not meet req'ts.

- pg. 76: WEAKNESS, SAP Ariba policy/practices (covered in more detail under Data Security) indicate that the solution "does not support storing HIPAA/PII/Personal data. For example SSN, Personal Banking information, etc.". This does not fit the business req'ts for Supplier registration where the business uses a SSN and Personal Banking (e.g. LLCs). This is a conflict.

Security/Privacy Issue Occurrence, pg. 77/78: Meets intent however there are Gaps (see notes below)

- Issue management practices are similar to what has been required in the RFP however they are focused internally with SAP determining what involvement with customers is necessary and they do not commit to the specific communication/notification timelines req'd in the RFP.

PII Data Actual/Attempted Access or Disclosure, pg. 78: Response is same as the Security/Privacy Occurrence above.

Security Breach Reporting, pg. 79: Response is same as the Security/Privacy Occurrence above.

Implementation Services Requirements

Project Management, pg. 79-85: Meets req'ts however there are concerns regarding timeline example and the Governance structure as noted below.

- Fig. 25a "Indicative Implementation Timeline"
 - Does not say if it is for any of the Cost Workbook scenarios, but it is too short for any of them. CLARIFICATION, need to know what timeline is assumed/built-into the costing for each Scenario.
 - WEAKNESS, Integration work is not called out as a work area .
- Governance model/responsibilities, Fig. 24 pg. 80/81: Generally Fig. 24 represents a viable, though high level, "Team Structure" except for CONCERN about the value of the IBM "Procurement Advisory Council" to providing "lessons learned" from their "global" experience which are not likely to be relevant. Also concerned that pricing has included this Council.
- IBM Resources/Responsibilities, pg. 84: Very high level but does address key areas.
- State/Entity Staffing, pg 84/85: High level list but does address typical roles and responsibilities.
- OCM staffing (IBM pg. 84 and State/Entity pg. 85): WEAKNESS, IBM to only provide "guidance", State/Entity Change Mgmt Team is to "develop and execute change management strategy and plans".

Project Implementation Methodology, pg. 85-90: In general the methodology is a fit to the req'ts however there are some specific areas of concern that should be addressed.

- IBM IMPACT approach, pg. 86: STRENGTH,
 - Having example Ariba processes (BlueworksLive) and a live Ariba demonstration system will expedite design workshops.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Having "playback of complex end-to-end processes during the Explore and Realize sprints" will help the State/Entity staff better understand and confirm the decisions they are asked to make in the design workshops.
- Adoption of Standard Ariba, pg. 87: CONCERN, the IBM assumption is that 80-90% of "standard capabilities in Ariba" will be adopted. Majority of Ariba customers are Private Sector with small number in Public Sector, so very concerned that "standard" Ariba is Private Sector oriented.
- UAT Testing, pg. 87: STRENGTH, IBM will "managed the UAT testing process and co-facilitate UAT" instead of making UAT the sole responsibility of the State/Entity.
- Project Change Control, pg. 88: WEAKNESS, as stated IBM's position is that between phases they have the capability (authority) to "reassess and potentially adjust scope, schedule and charges" and that they will only "proceed with work on the subsequent phase(s) once the State has provided written agreement of such PCR(s)". This is too broad and needs to be tightened up so a State/Entity can't be held up if they don't agree with PCRs.
- Deliverable Acceptance Procedure, pg. 89: WEAKNESS, a single standard for the number of days the State/Entity has to "verify conformance" of a deliverable (5 business days) and approve/deny a deliverable (10 days) will be too short for many of the complex/large deliverables (e.g. Design documents). This language needs to be NEGOTIATED to be a default with the ability for the State/Entity to specify a longer period if necessary.
- Escalation Procedure, pg. 89: WEAKNESS, setting a standard of 3 business days for every issue is not realistic because some issues may be more complex and require more time. Also, personal schedules may not fit for individuals responsible for escalation to react that quickly.
- Business Readiness, pg. 89/90:
 - STRENGTH, readiness assessments will be done "early" to establish a baseline and again at "discrete intervals" and "prior to go-live". Having multiple rounds of assessment should help identify problem areas early.
 - CONCERN, the term "discrete intervals" is arbitrary. Suggest getting more specific language as to how many additional assessments will be provided.

Catalog Support Services, pg. 90-92: Partially meets.

- pg. 92: WEAKNESS, IBM focus is on Supplier enablement (getting them registered on Ariba Network) with catalog services primarily being on monitoring catalog/punchout work by State/Suppliers.
 - Response did address providing services to create catalogs, identify/setup retail marketplaces (e.g. Amazon) or training State/Entity staff in catalog mgmt roles.
 - Ariba has a Supplier Enablement Team that is available to help suppliers get catalogs they create loaded and setup punchout connections.
 - IBM will add one person to help this Team to help the State/Entity "identify key catalog candidates" and meet/track weekly supplier progress on catalogs/punchouts.

Data Conversion Services, pg. 93-97: Meets req'ts. Tool/approach very strong.

- pg. 93: NEGOTIATION, response states "a data conversion assessment is required to provide a firm estimate". So need to determine what is included in the Cost Estimate. There may not be any costs included for Data Conversion.
- Pg. 94:

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s): 1

DATE: 11/16/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, the EnterpriseHUB (EHUB) tool/approach is comprehensive and includes a "Transform" component that would automate getting State/Entity data to be compatible with Ariba. Also, the approach is iterative instead of single pass.
- CONCERN, the described services/tools appears to primarily designed for use with ERP systems, not clear if they have used this with Ariba before.

Interface/Integration Development Services, pg. 97: May not meet req'ts.

- pg. 93: NEGOTIATION, response states "an interface and integration development assessment is required to provide a firm estimate". Also, "Integration Development is not included in the costs". So need to get cost included for each of the Scenarios as part of the Fixed Costs.
- Standard Integrations, pg. 98:
 - CONCERN, the list of standard integrations does not include many of the RTM req'd integrations (TECH-41 thru 58). For example: Requisition, Funds/Budget check, Inventory update/check, Financial Approvals, and Receipts.
 - Response states "non-standard integrations require mappings to hook into standard Ariba integration specs". So CONCERN is that either the system cannot be integrated at all expected points or there will be additional costs.

Organizational Change Management (OCM Services), pg. 98-102: Meets req'ts. Comprehensive and mature OCM services are available.

- Pg. 99, IBM's "Digital Change" methodology has "been ranked by IDC (2015, 2017, 2019) as a "Leader in Worldwide Organizational Consulting Services".

Training Services, pg. 102-104: Partially meets.

- Response discusses preparing training materials and conducting training but did not address the req'd Training Assessment or preparation of a Training Plan. Also did not include the req'd example of a Training Plan or Training Materials.

Help Desk Services, pg. 104/105 & IMPL-1 thru 5: Partially meets req'ts.

Response for this section is covered under Managed Services. See notes there. See below for RTM notes.

- NOTE, IMPL-2: Training of "end users" is not included in the proposed scope/pricing "because assumptions on the number of users has not been provided". "Train-the-trainer services are included".

On-Site System Stabilization Support, pg. 105/106: Partially meets req'ts.

- WEAKNESS, IBM Hypercare support only focuses on addressing Defects, providing "support" to training and "engage users to provide first line of support". Does not provide the req'd support for "system setup/config changes", "system performance/stability monitoring/adjustment" and "system use assessment".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: IBM
CATEGORY #(s): 1
DATE: 11/16/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Managed Services Requirements

Solution Support, pg. 106-112: Meets req'ts.

Technical environment req'ts are addressed/provided as part of the SAP Ariba SaaS multi-tenant subscription. IBM is proposing to provide the other req'd support services

- Pg. 108: "SAP Ariba subscription includes system maintenance, automatic upgrades, baseline product enhancements and application of service packs. SAP Ariba's subscribers automatically receive these upgrades."
- Pg. 109: "IBM proposes to use a Design-Build-Manage approach to transition services from Implementation team to Managed Services team."
- IBM Team size, pg. 111: CONCERN, the IBM team size for Solution Support services are based on a "fixed number of monthly tickets" so costs could increase significantly if the assumed "fixed number of monthly tickets" is exceeded.

Organizational Change Management, pg. 112/113: Meets req'ts. Notes for OCM in Implementation Services section.

Training Services, pg. 113: Meets req'ts. "IBM can provide additional training" (post implementation) "using rates established in the rate card".

Catalog Support Services, pg. 113: Partially meets req'ts.

- IBM is not proposing Catalog Support Services.
- Pg. 113: SAP Ariba Support Team will provide suppliers with "catalog enablement" in helping Suppliers to load hosted catalogs or give them guidance when they set up their Punchout credentials. Otherwise the SAP Ariba Support team "will only be responsible for triaging any technical issues regarding catalog loading or activation".

Help Desk Services, pg. 114: Meets req'ts.

- Pg. 112: IBM Service Desk "will also provide Monitoring services and assist with incorporating minor changes like Workflow, Catalog based on available team capacity"
- "IBM will establish Tier 2 Service Desk for SAP Ariba modules and functions implemented by IBM. IBM will establish Tier 2 Service Desk for SAP Ariba modules and functions implemented by IBM". State/Entity is to provide Tier 1 Help Desk support.
- "will use the State's ITSM" (ticketing system)
- "IBM can provide IBM's ITSM tool (price not included in IBM's solution at this time)"

Transition Out Assistance Services, pg. 115/116: Partially meets.

Response did not address the specific req'd items from the RFP in this section however they did commit to provide "transition services to another vendor or the State's in-house team".

Other Available Services, pg. 116: "IBM provides consulting, implementation and managed services is almost all industries and across leading technologies."

Individual Evaluator Comments:

SAP Ariba – subscription-based SaaS offering. No software, hardware or software costs.

Included system maintenance, automatic upgrades, base product enhancements (needs clarification as to scope - How configurable by state customer?)

Master Agreement T&Cs heavily redlined

General Principal and Requirements

- Key Solution Functionality Elements (Modules not clearly named in narrative compared to functional spreadsheet.)
 - Entry point is Ariba Guided Buying
 - SAP portal for applications, analytics (cloud/on-prem)
 - SAP Ariba Business Network – B2B network digital marketplace, invoicing, supply chain planning; Spot Buy catalog solution.
- User Experience – focus on integration of applications; configurable dashboards for specific user needs or user groups/roles that can be configured by admin. Mobile app available
For searching ordering, approvals, task monitoring.
- Bidder Best Practices and Roadmap
 - Quarterly enhancement/fix releases centrally deployed.
 - Monthly “feature” delivery – states customers don’t need preparation for these. “virtually invisible” delivery to end users.
 - SAP tracks production quality metrics supporting future releases.
 - Road map linked showed ideas for new features – not specific to this response.
Government sector e-procurement is not called out in the road map.
 - SAP Best Practices Center – access to solutions expert and can offer guidance — **Needs clarification is this is included in standard license** and extent of services.
- Innovations and Value-Added Features/Services – No cost access to APIs or developer portal,
 - SAP Fieldglass – Temporary workforce recruitment and management – additional cost
 - SAP Ariba Supplier Risk – risk management to see supplier metrics and assessment. – additional cost
- Customizations/Extensions – IBM states SAP Ariba is configuration for state and not customized. System enhancements are released systemwide to customers on baseline configuration.
 - SAP Ariba Partner Apps NOT included in this proposal. Multiple examples listed on p14.
- Alternative Funding Models – IBM Global Financial strategy with specific payment solutions are option – not included in proposal cost.

Functional Requirements

- General Functionality

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- **EPROC-GEN-48 – Needs clarification.** If the SaaS license is configured correctly, are there limitations to access? It is listed as NA.
 - Guided buying – allows purchases from contracts and spot purchases.
 - Role-based access for all individual users; superuser functionality for administration and cross-functional work.
- Supplier Portal. Ariba Business Network is entry point. (Uses multiple modules to meet requirements.)
 - Option for state access to own suppliers or broader SAP supplier database.
 - Supplier enablement services are part of the offering for supplier onboarding.
 - Ariba access for one customer converts to Ariba access for other customers; 100k+ suppliers active on Ariba.
 - *Support for CIF, cXML, and Excel e-catalogs, plus integration of online commerce storefronts via the Punch-Out feature*
 - **EPROC-SPR-18 – Needs clarification.** Describes supplier complaint communication as “Business Process outside the tool” – is vendor-agency communication a feature within the portal?
- Supplier Enablement/Management – Supplier data validation requires interface – medium complexity.
 - EPROC-VDR-18-28 – validates format-only natively.
 - Narrative repeated much of the Supplier portal features.
- Buyer Portal – Offers 2 primary entry points designed for casual user or power user. Casual user gets guided buying experience, can submit requests. Power user enters via dashboard, gets more self-service approach including buying, solicitation development, vendor management, report generation.
- Need Identification – Stated as standard functionality using the Guided Buying tool.
- Request through Pay – Most requirements defined as standard functionality.
 - EPROC-PRD-48 – notes preferred limits to integrations. Using flat files to maintain currency.
 - **EPROC-PC-6 – Needs clarification. Listed as not supported in comments, but marked A.**
 - EPROC-RC-1 – services parameters can be defined to mark as received; goods can be entered received in variety of ways listed.
- Catalog Capability – Hosted and punchout available.
 - **EPROC-CAT-6 & -7 Needs clarification.** Listed as A, but limitations cited. 500,000 items per catalog; 5,000 catalogs per system. This would likely be in excess of catalogs needed by states, but the item threshold would not reach the limit for MRO vendor catalogs, for example. Does 5,000 catalogs include expired or inactive catalogs; can one vendor have multiple catalogs archived and not count against the total?
 - **EPROC-CAT-11- needs clarification. Comments are circular – say to see CAT-11. (possibly means CAT-8 custom forms).**
 - EPROC-CAT-19 – negative values supported requirement not met.
 - Spot Buy purchasing for non-contract items supported. Question for states if this curated buying environment meets state law requirements for open procurement — Needs clarification – what is the cost for suppliers/benefit to SAP if non-contract purchases conducted through this route?
 - **EPROC-CAT-40 – needs clarification.** IBM states standard functionality. Other SAP vendors say it can't be done.
 -
- Sourcing/Bid Management – claimed out of box functionality on common procurement types, 50% reduction in solicitation cycle time, savings.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Solicitation development using templates inside Ariba Sourcing.
 - Customer has ability to create/modify templates to state's needs.
 - EPROC-SRC-39 and EPROC-CNT-20 – state-assigned solicitation ID is additional configured field – native assigned not configurable.
 - **EPROC-SRC-41 – needs clarification** – are Acrobat files supported?
 - EPROC-SRC-52 & -70 – file size capped at 100 MB. Not compliant with “any size”
 - **EPROC-SRC-76 and -138 and -147 – SAP can't post to state's site – no integration proposed. Needs clarification as not compliant.**
 - **EPROC-SRC-109 – bids can't be publicly displayed – not fully compliant. Needs clarification if bids not displayed are only those uploaded by proxy or all bids.**
- Contract Management - integrated CM and Contract Administration functionality. Contract award can flow directly into contract authoring. Compliance and auditing through platform. Ongoing supplier communication through platform capturing performance measures through contract closeout.
 - Visibility through contract life through dashboards.
 - *P38: The proposed solution can house contracts from local government, authorities, and higher education entities. Their contracts may be integrated/loaded into the solution in mass and/or as completed. Loading externally negotiated contracts into the solution and coupling them with other procurement documentation will allow the State to store procurement files in a single place.*
 - EPROC-CNT-7 – history tab tracks changes in contract made in the portal.
 - **EPROC-CNT-12 – needs clarification** – do DocuSign, Adobe Sign integrations come included or require state's own license?
 - EPROC-CNT-32 – 100MB file size limitation for files uploaded to contract file in Ariba cloud.
 - **EPROC-CNT-45 – Needs clarification.** No public-facing publishing of contract file with redactions. Not compliant.
 - **EPROC-CNT-51-62 – No public posting via automation. Not compliant.**
 - **EPROC-CNT- 65-66 – not compliant due to posting requirement.**
- Vendor Performance – Cloud-based vendor data model; supplier 360- review; supplier scorecards based on KPIs.
 - Action-based corrective action plans can be managed through the platform.
 - EPROC-VPE-25 – 100MB file size limitation.
- Purchasing/Data Analytics – 3-step report creation wizard; data filtering within Ariba tool rather than having to export data out to Excel to pivot/manipulate.
 - Pre-packaged or ad-hoc reports.
 - EPROC-PDA-35 – data can be classified in customer taxonomy, e.g. NIGP, or in Ariba's own UNSPSC-derived taxonomy.

Technical Requirements

- Availability – 99.5% uptime. Linked service agreement document details backup retention periods for Prod and non-prod environments based on frequency of full-backup iteration – databases are monthly/quarterly/annual ranging 6 months to 5 years; file services are monthly and daily backups with alternate location backup.
 - 4 stage incident reaction time. Highest severity response within 20 minutes/4 hour completion, through to one day for lowest severity reaction. Definitions of severity levels provided. Failure to meet SLA can result in customer credit request and authorization.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Accessibility Requirements – WCAG 2.0 and WCAG 2.1 cited on the SAP accessibility page for design standards; narrative states Ariba is not fully accessible, no reference to Section 508 compliance initiative.
- Audit Trail and History– System logs maintained inside customer environment for the contract life. Viewable by customer's admin. History tab logs system changes performed by customers.
 - **EPROC-TECH-3-5 – Needs clarification.** Unclear why these responses marked as INT.
- Browsers Supported – All common browsers.
- User Accounts and Administration – 5 standard roles. Administrator, Catalog Manager, Full Access (non-admin), Purchasing Manager, Vendor Manager. Single point of integration. User setup through user interface or flat file. Delegation privileges are native.
 - **EPROC-TECH-16 – Needs clarification.** Doesn't meet requirement for automatic deactivation of accounts after 6 months.
 - **EPROC-TECH-17 – Needs clarification** – Non-SSO password change required at 180 days. This doesn't comply with the 90-day change password standard for Texas based on NITS standards – is this a configurable setting to shorten the reset requirement or will SAP update the standard?
 - **EPROC-TECH-20 – Needs clarification.** The response lists password standards for SAP customers and is **not responsive** to searchable reference source and definition of user roles etc.
- User Authentication – ADFS and SAML 2.0 supported for SSO.
 - See note on EPROC-TECH-17.
 - **EPROC-TECH-24 – needs clarification** about new password auto generation. Not responsive.
- Federated Identity Management. IDP or SP federation.
- Data Conversion – SAP Activate Methodology for rapid migration through Delivery team with responsibility for data validity, functional and technical expertise to coordinated with customer org.
 - EPROC-TECH-27. Detailed explanation of import and export to state backend systems/ERP through flat files or Ariba Open Protocol/
- Interface and Integration – Medium-complexity requirements.
 - real-time or batch integration options available.
 - *HTTPS using a CSV interface (Batch integration, and depending on the data volume this can be scheduled to run frequently to achieve near real-time integration)*
 - *SOAP Web services that use an XML payload (Real-time integration suitable for transactional data)*
 - *REST APIs (supports both synchronous & asynchronous calls)*
 - EPROC-TECH-38 – master data recommended batch export options. Transactional data optional for real time or batch.
- Office Automation Integration – available; CSV imports/exports.
- Mobile Device Support – site is built for mobile responsiveness. P. 53 lists components with mobile functionality including shopping cart, approvals, viewing reqs. Supplier 360 reports available to view on Airba ios app.
- Mobile Applications – ios and Android supported. Touch ID, App pin, fingerprint recognition options for access.
- Data Ownership and Access – Ownership always customer, but SAP Ariba retains copies of data for life of contract only.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROCH-TECH-63 – data purge can be set for automated action or manual.
- Date Retention, Archive and Purge Considerations
- Disaster Recovery Plan – Data centers in regional pairs.
 - URLs will continue to work if failover. Cloud Engineering Services move area within RTO; after switch, secondary becomes the new primary.
 - Customer will receive email from SAP notifying of unplanned down time. Expectation for communication not stated in narrative.
- Solution Environments – Sandbox environment allows customer to review changes prior to deployment. (No separate UAT. Customer controls schedule for deployment. Third environment available for additional cost. Needs clarification: Is Sandbox and Test considered by SAP/IBM as same environment?
- Solution Technical Architecture – Ariba hosted. Regular service updates. Three options for data transfer: batch file; web services including additional cost middleware; cloud integration.
- Solution Network Architecture – SAP Ariba has its own data center and servers. Web, application and data tiers are segregated. Data will be hosted in North American data center.
- System Development Methodology – Agile scrum implementation of Product Lifecycle Methodology.
- Service Level Agreement – SLA attachment referenced on p62 not provided in Eval packet.

Security Requirements (This section is common with LSI submission)

- Cloud Security Alliance (CSA) Compliance – CAIQ 3.0.1 supplied.
 - MOS-15 – Clarification needed – How are changes to mobile operating systems, patches performed if not SAP change management processes? No comments provided.
- Security and Privacy Controls – P63: *SAP Ariba is audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 every six months. A SOC 3 report is issued annually. Upon completion of the audit, an attestation letter is issued, stating our compliance. In addition, our primary hosting facility (Equinix) infrastructure is audited for compliance with SSAE 16 SOC1 Type II, SOC 2 Type II.*
- Security Certifications . See previous entry.
 - PCI Service Level 1 compliant;
 - compliance with the Visa USA Cardholder Information Security Program (CISP) and MasterCard Site Data Protection (SDP) program
 - Not HIPPA certified – limited relevance for procurement
 - Fedramp certified; various ISO best practice certifications listed – p65..
- Annual Security Plan – No SOC plan provided
 - Needs clarification. P63 SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines. Does will SAP intend to become compliant with NIST requirement?
- Secure Application and Network Environment – 24/7 system monitoring. Firewall separation of SAP corporate with customer cloud.
 - Only SAP authorized staff using SAP authorized computers in data centers.
 - 2FA authentication for SAP staff entering cloud environment.
 - Exception-based authorization for Cloud Engineering to access specific customer cloud instances.
 - P68 *Data disposal practices are aligned with the NIST 800-88 standards for clearing, sanitizing, and data destruction to prevent data remanence prior to retiring or allowing storage media outside of our security envelope.*
- Secure Application and Network Access

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-SEC-2 - *Concurrent login is available. SAP Ariba allows for 2 concurrent session for the same user so that mobile and desktop (e.g. report generation) can be used. However, security measures are in place to detect concurrent logins from multiple IP addresses.*
 - Data at rest and in transit encrypted.
 - Detailed descriptions of security provisions provided for hardware and physical premises.
- Data Security – Stated in narrative. P75-76. SAP has DPA setting out terms. **No NIST standards referenced as proposed in RFP.**
- **Personally Identifiable Information Protection – Needs clarification for responsiveness.** P.77 *SAP Ariba are not designed to handle HIPAA data. Our solutions are designed Business to business transaction, and SAP Ariba does not support storing HIPAA/PII/Personal data. For example: SSN, Personal Banking information etc.*
- Security/Privacy Issue Occurrence – Scenario described. Full process documentation stated to be confidential.
- PII Data Actual/Attempted Access or Disclosure – As previous entry.
- Security Breach Reporting – As previous entry.

Implementation Services Requirements

- Project Management – 3 tiered governance model: State-IBM-SAP
 - 5 levels. Exec Steering; Advisory Council (IBM); PMO; Core project teams and SMEs; Cross Project Teams
 - 4-stage delivery model: Prepare; Explore; Realize; Deploy.
 - High level org chart positioning SAP, State and IBM project personnel. IBM roles defined, and required state roles.
- Project Implementation Methodology - Ascend for Ariba” implementation – hybrid-Agile.
 - Start with pre-defined Ariba environment.
 - P88 *core of our methodology is the Quad A concept, where business requirements and processes are segregated into four main categories (Adopt, Adjust, Add, or Abstain) to indicate the relative degree of fit and enablement work required to satisfy The State’s requirements*
 - IBM promotes adoption of Ariba native design – configure not customize. 3-step process for approval of deviations from standard.
 - IBM responsible for system testing – development, facilitating, repair.
 - Deliverable acceptance gives 5-day period for state to accept or report defects. 10-day window deems accepted.
- Catalog Support Services – IBM supplies supplier assessment SME to work with state; determine existing vendors already in Ariba, plan to onboard other required suppliers. Goal to minimize post launch supplier support need. IBM active in development of ongoing resources for suppliers – FAQs, training materials.
 - **P93 – Needs clarification.** Is state/supplier reliable for working to perfect catalogs or does IBM have catalog development staff who will perform validation and loads?
 - **P93 – Needs clarification** Narrative describes UNSPSC code validation; for NIGP states, is NIGP validation by IBM available?
- Data Conversion Services – standardize and simplify.
 - IBM EnterpriseHUB for data standardization. State staff to sign off on data validity prior to migration in Agile process.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- **Note:** The narrative proposal seemed to specifically address an existing data setup (perhaps Maine's current platform) reference SAP 4.6c. It also referenced an ERP system (not eprocurement) and did not seem entirely responsive.
- Interface/Integration Development Services – high level process provided only – IBM did not include this in cost proposal.
- Organizational Change Management (OCM Services) – IBM Digital Change
 - Identifies change agents.
 - 5-phase plan: Prepare; Explore; Realize; Deploy; Sustain.
 - P102 *IBM recommends focusing the OCM effort on 5 major areas: Change Impacts, Communications, Change Network/Readiness, Training, and User Experience.*
 - IBM U-Perform tool to assess readiness for change.
- Training Services – training docs based on previously developed materials in SAP EnableNow (appears to be a cost option). If EnableNow not employed for state training, IBM will export materials to other media, FAQs, training guides etc.
 - IBM identifies as consulting partner to help the state establish training. Can offer “train the trainer” of superusers.
 - Training content offered in PowerPoint.
 - **Note:** As with Data Conversion Services above, this training entry appears to not be wholly responsive and is perhaps adapted from another response. It reference “WalkMe” which is not referenced in the RFP.
- Help Desk Services
 - **EPROC-IMPL-1-5 – No response provided.**
 - **Narrative p106 lists Help Desk as described in Section F1 – no additional information.**
- On-Site System Stabilization Support
 - 3-months of hypercare to assist with defect/issue classification and resolution.
 - Knowledge transfer to state staff to support the Ariba modules.

Managed Services Requirements

- Solution Support
 - **EPROC-MNGD-1 – No response provided.**
 - P 109-110 – IBM identified list of post-support tasks that could be supported by IBM Managed Services solution.
 - Managed Services team would engage during the implementation phase of the project for knowledge transfer to understand state's system specifics, needs. IBM team located off-site at IBM.
 - Governance model would be agreed;
 - KPIs and appropriate sprint management using t-shirt size ticketing approach for ongoing system support by managed services team. IBM Incident Ticketing Support System cost not included; **needs clarification – would IBM Managed Services team use state-licensed JIRA system or other option?**
 - Three-tier Managed Services help desk would be: Tier 1 – State; Tier 2 – IBM; Tier 3 – SAP.
- Organizational Change Management (OCM Services) – Referenced OCM from Implementation – not included in proposal cost.
- Training Services - Additional training beyond what is described in implementation – on-site/virtual would be additional cost.

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

Organization Qualifications and Experience

Solution proposed is SAP Ariba. "selecting SAP Ariba for the eProcurement solution, the selection of the Equinix Cloud Exchange (ECX) Fabric Platform to provide the virtual network backbone " (pg. 9)

1. Overview of the Organization

- IBM (pg. 4)
 - i. IBM Infrastructure Services will be providing services for projects.
 - ii. Services include: "managed services, IT Infrastructure Services for hybrid cloud, enterprise application management, business resiliency, network, digital workplace, and technology support".
- Kyndryl
 - i. "will be launched later in 2021 as a spin off company founded from IBM Infrastructure Services", so it may not exist yet. (pg. 5)
 - ii. Will have 90,000 employees, 4,600 global customers. (pg. 5)
 - iii. "Kyndryl team brings to the State of Maine and NASPO is our infrastructure services capability to design and deliver unique solutions to help create an agile, resilient organization through hybrid multicloud digital transformation." (pg. 7)

2. Previous Projects

- **PayPal Giving Fund:** (pg. 9)
 - i. "migrated PPGF's ERP platform to SAP S/4HANA Cloud".
 - ii. Not a Full Suite eProcurement implementation project.
- **Shared Services Canada:** (pg. 9/10)
 - i. "Experis has provided IBM with a team of 100+ data center resources providing technical support for SSC's Enterprise Command Centre (ECC) which encompasses a wide variety of platforms and applications in order to manage the complex environment of SSC".
 - ii. This example is Managed Services, not a Full Suite eProcurement implementation project.
- **Santander Group:** (pg. 10)

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: IBM-Kyndryl

CATEGORY #(s): 1

DATE: 10/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- i. “Experis, has delivered SAP and Ariba implementations for medium and large sized global customers”. “One of our success stories is Santander”.
 - ii. Not clear whether this was a Full Suite eProcurement implementation project or only a portion of the Ariba solution.
3. Subcontractors (pg. 12-14)
 - Not clear what role each of the Subcontractors would have for an eProcurement project.
 - Amic Brown
 - i. “focuses on specific technology areas associated with Cloud, SAP and Business Insights & Analytics.”
 - ii. “provides a full range of SAP and Analytics consultancy services to support all SAP technology implementations.”
 - iii. “helps customers migrate their SAP solutions from on-premise to cloud, ECC to S/4HANA and BW to BW/4HANA.”
 - iv. SAP implementer, not Ariba.
 - ManpowerGroup
 - i. “family of brands—Experis, Jefferson Wells, Manpower, and Talent Solutions”
 - ii. “provide staffing and other contingent workforce solutions to state and local governmental agencies”
 - iii. No specific staffing or experience with Ariba implementations noted.
 - Experis
 - i. “IT professional resourcing and managed services”
 - ii. “empowers organizations across the full lifecycle of technology adoption, providing flexible solutions that adapt to their needs”
 - iii. This is the only company that had Previous Project experience cited with Ariba.
 - Jefferson Wells
 - i. “delivers solutions and experienced talent to solve emerging challenges in Risk & Compliance, Finance & Accounting, Tax Services, and Business Optimization.”
 - ii. No specific experience with Ariba implementations noted.
4. Organizational Chart
 - Org chart is for an implementation project, identifying positions in the key project areas.
 - Did not include any details or job descriptions for any of the positions.
 - Did not provide any information regarding staffing a State would need for a project.
5. Litigation
 - No specific information provided on litigation but did note that “IBM is involved in a variety of ongoing claims, demands, suits, investigations, and proceedings that arise from time to time in the ordinary course of its business.”
6. Financial Viability (pgs. 15-38)
 - Overall: Low-Moderate business risk.
 - Failure Score: Moderate risk

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- IBM new spinoff company Kyndryl to deploy SAP Ariba
- Proposal states "new company" has 30 years in infrastructure business.
- Source to pay. Supplier management.
- Impact for Ariba solution.
- Unclear what Kyndryl's role is or why it is being spun out of IBM to deploy Ariba.
- SAP Ariba is full service ERP includes e-procurement options.

2. Previous Projects

- Private sector – Paypal Giving Fund – deployed SAP ERP cloud
- Public sector - Canadian government – shared services. – Experis deployment data centers. Not clear procurement toolset.
- Private sector (banking) – Santander. Experis (Manpower Group) SAP Ariba implementation.
-
-

3. Subcontractors

- Amick Brown – SAP implementation service, post go-live support.
- Manpower group – staffing services for IT projects extensive state and local government. (Includes Manpower, Experis and Jefferson Wells).
-

4. Organizational Chart

- Role map org chart. Identifies subcontractor contact (incomplete). No detail.

5. Litigation

- IBM faces claims but not material in 3 prior years.
-
-

6. Financial Viability

- IBM – low risk
-
-

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- "Infosys Public Services (Infosys) has partnered with SAP and Ernst & Young LLP (EY)"
- "full implementation experience for modern governments such as the Florida State Board of Administration & Public Services and Procurement Canada" (pg. 5, 11)
- "process design methodology anchored in the use of our proprietary "Collaboration Hub" approach that accelerates consensus building across disparate stakeholder groups." (pg. 6)
- "we have experienced resources and functional/process experts in eProcurement, who have delivered e-Procurement implementations of similar size and complexity to engage with the State." (pg. 6)
- "Over a decade of experience with over 100+ Ariba project implementations at the world's largest public and private sector organizations (including Fortune 500 Companies)." (pg. 9)
- "a team experienced through 100+ SAP Ariba and public sector technology deployments." (pg. 11)
- "Early ROI with UpStream and DownStream modules implementation in parallel. UpStream modules like Source to Contract go live within 6 months and DownStream modules Procure to Pay in parallel and within 9 months from start of the program" (pg. 11)
- "EY's large scale procurement transformation experience together with Infosys' implementation and managed services expertise" (pg. 12)
- Infosys Public Services "helps federal, state and local, provincial, municipal, and government organizations renew existing systems and build new capabilities". 11+ years in business. (pg. 13)
- "Gartner has placed Infosys in the LEADERS QUADRANT for SAP Implementation Services worldwide" (pg. 15)
- "Forrester recognizes Infosys as one of the top, largest global, SAP Service Providers" (pg. 15)
- "Infosys has a mature SAP ARIBA practice with over 250 consultants that have completed +80 engagements for 25+ clients over the last 20+ years." (pg. 15)
- "extensive experience across all ARIBA major releases - 7.0.2, 7.0.4, 7.0.6, 7.1a, 8.2.2, ASM 4 all the way up to 9R1 and ARIBA On Demand source-to-pay modules (ARIBA 10S2, 12S2 and 13S2, 14S2 and the latest CI versions)" (pg. 15)

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): 1

DATE: 8/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “services in all areas including Consulting, Implementation, Maintenance, integration with external system or ERPs across all modules of Ariba Spend Management suite” (pg. 15)
- Figure 3 **does not** list any U.S. State or Local Gov’t “representative” Ariba engagements.
-

2. Previous Projects

- **Public Services and Procurement Canada:** Ariba “e-sourcing, contract lifecycle management, spend analysis, supplier relationship management and e-purchasing through catalogues”, Public portal, Azure Identity/Credential/Access management services and Service Desk services. Partnered with Ernst & Young and SAP for implementation. 2018-2023 contract. *Full Suite eProcurement implementation.* (pg. 17)
- **Eversource Energy:** Infosys implemented Ariba Sourcing, Contracts, Supplier Information/Performance Management, Catalogs, Spend Visibility and Commerce Automation/Dynamic Discounting. 2015-2017 contract. *Full Suite eProcurement implementation.* (pg. 18)
- **Zoetis Inc.:** Infosys implemented Ariba Sourcing, Supplier lifecycle performance, Buying, Guided buying, Cloud Integration Gateway, Fieldglass and Supply Chain collaboration. *Not a Full Suite eProcurement implementation.* (pg. 20)
- **Chicago Public Schools:** Ernst & Young provided “assistance” with Category management, project management and change management. March – Nov. 2016 (pg. 21)
- **California Dept of Healthcare Services:** SAP “deployed the complete SAP Ariba procurement platform”. *Full Suite eProcurement implementation.* (pg. 22)

3. Subcontractors

- **Ernst & Young LLP:** (pg. 23/24)
 - i. Ariba SAP practice, “last three years, EY has completed Ariba implementations for 19 clients (62 modules) averaging 60,000 employees (or citizens) and \$5–6 billion in indirect spend in 37 countries”.
 - ii. Won SAP Ariba NA Services Partner Pinnacle award
 - iii. “Leader position in Gartner’s Magic Quadrant and IDC MarketScape for SAP Implementation Services”.
 - iv. Deployed Ariba to “more than 100 organizations”
 - v. 900K+ users enabled/trained
 - vi. \$85B+ spend enabled in Ariba deployments
 - vii. Ariba public engagements include New York Power Authority and Gov’ts of Canada, Ontario, & Toronto.
- **SAP:** (pg. 27/28)
 - i. SAP serves over 400K customers in over 180 countries
 - ii. Will provide “advisory services” to Infosys

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s): 1

DATE: 8/24/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- iii. "SAP Ariba SMEs will take part in the business requirements analysis, to perform assessments along with Infosys on how the requirements can be met and identify potential risks and mitigations actions" and "will also take part in key design planning activities and functional and technical design workshops".
- **Allied Digital Services LLC:** (pg. 29)
 - i. No mention of this company in the Overview of the Organization section.
 - ii. Based on the description of this company as a subcontractor it appears that they will be providing a role of some sort as a Help/Service Desk.
 - iii. "currently handle over 2.5 million contacts per year for End User Support globally.
 - iv. "our processes to ensure customer satisfaction with 99.9% SLA adherence."
- 4. Organizational Chart
 - Did provide both State and Contractor organization charts for an engagement/project.
 - While project oriented, the org charts only provide high level detail of the core areas of work without staffing detail.
 - Table 3, Infosys Team & Table 4, State Team: the details documented do fit the typical areas of work that would be needed for an implementation.
- 5. Litigation
 - No litigation.
- 6. Financial Viability
 - The provided D&B Summary Page provided shows a summary rating of "Low" risk. (pg. 35).
 - Audit reports for both Infosys show that they are profitable (pgs. 36-51)

Individual SME Comments:

General Comments

- Proposal references State of Maine specifically for the scope being put forward. Either through Clarification or Negotiation need to change these references to be 'Participating Entity' so the proposal is not only for the State of Maine. (Example on pg. 14)
- Attachments throughout the system are limited to 100MB in size each.

Our Understanding

- Table 2, pg. 12/13. NOTE: the
 - o Large State
 - 50 weeks = 12.5 months
 - Sourcing: 2-3 Project templates, 2-3 RFx templates
 - Contracts: 2-3 Project templates
 - Customer Fields/Extensions: 15-20 fields
 - Integrations: 40-50 "touch points"
 - Conversion: ~5k contracts Open PO's, ~60k supplier
 - Help Desk: ~1250 contacts/month
 - o Medium State
 - 47 weeks = 11.75 months
 - Sourcing: 1-2 Project templates, 1-2 RFx templates
 - Contracts: 1-2 Project templates
 - Customer Fields/Extensions: 5-15 fields
 - Integrations: 40-50 "touch points"
 - Conversion: ~3k contracts Open PO's, ~50k supplier
 - Help Desk: ~700 contacts/month
 - o Small State
 - 46 weeks = 11.5 months
 - Sourcing: 1 Project templates, 1 RFx templates
 - Contracts: 1 Project templates
 - Customer Fields/Extensions: <5 fields
 - Integrations: 40-50 "touch points"
 - Conversion: ~2k contracts Open PO's, ~40k supplier
 - Help Desk: ~500 contacts/month
 - o All of the assumed metrics for each State scenario is too low for the project that was defined in the Cost Workbook. So the Fixed price costs and timelines will need to be negotiated to realistic values to be able to evaluate costs and especially if costs are to be

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- compared between proposals. Also, if they proceed to award then needs good fixed prices for each scenario to be a good starting point for a State/Entity.
- Table 3, Technology In-Scope, pg. 13: Risk that this table is not tied to the specific req'ts of the RTM or other req'ts in the RFP. Suggest getting a statement added that the tech provided will be whatever is necessary to meet the req'ts stipulated in the RFP and RTM.
 - Table 4 Optional Scope Items, pg. 13/14:
 - o Identity/Access Mgmt & SAP Fieldglass: need to negotiate the pricing into Scope for the percent off list pricing.
 - o Transparency Portal: need to get this included in scope as the means to meet the Sourcing, Contract Mgmt and Reports public posting RTM req'ts.
 - Out of Scope, pg. 14/15: "upgrades or business transformations activities": need to get clear definition of what "activities" means so a State/Entity is not going to have to pay extra to get future upgrades of any component/tool (SAP or Infosys).
 - Key Assumptions, pg. 15:
 - o 2nd Bullet: "global delivery model is assumed", need a definition of this "model" to determine whether there are any issues.
 - o 7th Bullet: deliverable review/approval times are too short as default values and are not realistic for large deliverables (e.g. Design docs).
 - o 8th Bullet: "Customizations will only be performed within the restriction of SaaS". NOTE, there are 27 Functional and 9 Technical req'ts in RTM identified as "Customization" in the Availability Codes column (F). CLARIFICATION, need to confirm that these RTM identified customizations can be accomplished "within the restriction of SaaS".
 - o 10th Bullet: requires acceptance of EULA for "relevant software vendors". Need to identify/include these EULAs in the proposal so they can be assessed before this statement could be agreed to.
 -

General Principal and Requirements

Key Solution Functionality Elements - pg. 16-22

- Proposed Solution (Table 5, pg. 16-20)
 - o SAP Ariba Solution
 - o Oracle Integration Cloud (OIC): NOTE- "Alternatively, we can leverage the State's existing middleware tool". Need to know a costs adjustment for using a State/Entity tool instead of the OIC. (pg. 16)
 - o Service Now
 - o Optional: Cloud Based Portal Solution (transparency portal, Drupal CMS), ICAM (user att admin/security tool)
- Single Point of Entry: Ariba application is front door
- Smart routing: Ariba landing page with tiles is their "Guided Buying"
- Compliance: Business rules in questionnaires, templates, workflow, mandatory fields/data entry and contract compliance. Tech compliance with HTTPS, file scans and encryption.
- Portal: Ariba application for Buyers, Ariba Business Network for Suppliers
- Open Marketplace Environment: SAP Ariba Spot Buy to buy non-sourced goods. (Catalogs outside State/Entity contracts/catalogs)
- Integration: Options are HTTPS w/CSV batch interface, SOAP Web Services & REST APIs

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Workflow: Ariba with “pre-configured workflows based on best practices” and “workflow builder” to modify, build, test and deploy workflows.
- Document Management: Contract authoring and Ariba tool to “create, store and manage all transactional documents”.
- Reporting, Dashboards, and Data Visualization: Ariba standard dashboards and “Power Users” can configure/personalize their dashboards. WEAKNESS, only Power Users can have personalized dashboards.
- Configurable: “Solution is highly configurable”
- Transparency: RFX’s “can be made available to SAP Ariba Network/Discovery for public” access. Optional InfoSys Transparency Portal for “public announcement, RFP’s & awarded supplier information”. **CONCERN**, how will public posting of Contracts be addressed?

User Experience - pg. 23

- Dashboard personalization, however as noted above this is only available for “Power Users”.
- Intuitive Navigation: “solution follows latest principles of design”....“fast and ergonomic user experience”. (pg. 23)
- Wizard-driven Capabilities: user landing page provides tiles that navigate to “multiple buying channels” to guide users (“Guided Buying”). (pg. 23)
- User work Management: “user work assignment and re-assignment” through “pre-configured business rules” in “forms, templates and workflows”. (pg. 24)
- Work-Orders can be imported to create requisitions. (pg. 24)
- Mobile Access (pg. 24): Mobile apps to
 - o Track and act on sourcing and contract tasks
 - o Get notified when a sourcing or contracting task is assigned, or when a task initiated is acted upon
 - o Shop and order from company’s catalog
 - o Track and approve requisitions
- Workload Mgmt: "Approval Role Assignments" to re-assign work to another user. Change ownership of "Requisition, Receipt, Invoice, Contract Request, Advance Payment, Service Sheet and PCard charge reconciliation". NOTE: Solicitations and Contracts were not included in this list. (pg. 25)
- Role-Based functionality: Super-User can have "administration capabilities" across the solution or for specific functional areas". (pg. 25)
-

Bidder Best Practices and Roadmap - pg. 25

- New Features/Tools: State/Entity gets these as part of scheduled/automatic upgrades-releases.
- Timely Updates: releases are done Quarterly (Feb, May, Aug, Nov)
- Monthly Feature Deliveries, pg. 26:
 - o "Major products may have an optional, no-impact release" monthly. NOTE: optional doesn't mean that a State/Entity has an option to take these releases. Optional here means that Ariba has the option to do a "Feature Delivery" release each month.
 - o CONCERN, monthly delivery releases are not going to have sufficient time for a State/Entity to assess the changes for impact. Response states "you should not need to prepare for or act on the" release. "delivery should be virtually invisible to the end users".
-

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- SAP Ariba Best Practices Center : NOTE: unclear whether this "Center" is included in the proposed costs. (pg. 26)
- Roadmap (Fig. 6, pg. 27): The roadmap is high level list of "four technologies" that they indicate "will extend core procurement solutions across secure cloud architectures". Did not submit the req'd 3-year product roadmap.
- Benchmarked Performance Metrics, Fig. 8, pg. 28:
 - o STRENGTH, the metrics identified would be effective to track for a State/Entity.
 - o WEAKNESS,
 - The benchmarks appear to be across all customers ("industry") and not Public Sector specific.
 - The metrics listed do not include Vendor Enablement, Sourcing or Contract Administration areas of the system.
- Extensible/API Strategy: (pg. 29)
 - o Ariba is delivered as "an extensible solution". "extend it as required to meet the unique business requirements"
 - o Infosys plans to include a graphical visualization of "budget consumption" when purchase requisitions are created. They indicate that this is a "critical requirement for the public section".

Innovations and Value-Added Features/Services - pg. 29-33

- SAP Fieldglass (optional, pg. 347): Vendor Management System (VMS) for "external workforce and services procurement". Contingent workers. CLARIFICATION, how is Fieldglass integrated with Ariba for Requisitioning, Quoting, Ordering and Vendor accounts?
- Ariba Spend Analysis (optional, pg. 347): component to "identify and prioritize sourcing opportunities".
- ICAM (optional, pg. 19): using "Saviynt's Identity Governance and Administration product" to administer user accounts/logins when a State/Entity does not have a SAML-compliant user management system. NOTE, per pg. 121, "Saviynt will be deployed on Maine specific Microsoft Azure tenant", so a State/Entity must have a MS Azure tenant to be able to use ICAM offering.
- Transparency Portal (optional, pg.): Drupal Content Management System based portal for public access to "public announcements, bids and proposals".
- Celonis Process Mining (pg. 31, identified as optional on pg. 347): assess "business processes" to "uncover inefficiencies, bottlenecks, and compliance violations". Identifies "high volume of price change", "manual errors in 3 way match", "long tail spend", "maverick buying", "unfavorable supplier contracts". NOTE: it is not clear how the identified assessments would obtain Ariba data and whether Infosys's perspective/definition of the assessments would match Public Sector perspectives/needs.
- Power Approver (pg. 32, identified as optional on pg. 347): This is an Infosys "customized mobile app" that brings "approval requests" from multiple systems, not just Ariba. Would require integration/interface work for each external system.
- Other Tool/Accelerators (pg. 32/33):
 - o Best Practices: 50+ "end-to-end process flow diagrams" based on Infosys experience. Used as "blueprint for process and functional design" workshops.
 - o Kits/Deliverable Templates: pre-existing models/docs to initiate/manage work in each phase.
-

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Customizations/Extensions - pg. 34

- CONCERN/CLARIFICATION:
 - o Infosys did not address the req't that customizations/extensions "must become part of the Bidder's base electronic procurement product(s)".
 - o "For those Customizations/Extensions that require SaaS product vendor's involvement"... "requests can be submitted". Is the SaaS vendor in this statement SAP Ariba? Is the work with the SaaS vendor for the customizations/extensions referenced here included in the proposed scope/cost? (pg. 34/35)

Alternative Funding Models - pg. 35

- "Levy per usage fees" for transactions.
- "Fees can be levies for suppliers as well as for buying agencies".
- Infosys "has not used this kind of model specifically for the eProcurement solution in the past"

Contract Transition and Flexibility - pg. 35

- NOTE, response discussed transitioning the Master Services Agreement from Maine to another State, not transitioning any current eProcurement contract Infosys might have with a State/Entity to this agreement.

Functional Requirements 36-65 29 pgs.

General Functionality - pg. 36-38

- Fig. 12, pg. 38: "diagram below illustrates and summarizes the core components of our proposed solution". NOTE: the diagram is showing Acquia and MS Azure/Saviynt as core components however these are identified as OPTIONAL throughout the proposal. So they cannot actually be "core components".

RTM

- WEAKNESS, GEN-20: The supplier side (Ariba Network) of the solution only uses UNSPSC commodity codes.
- POTENTIAL WEAKNESS, GEN-38: Ariba licensing is "based on number of users and volume of transactions". So "unlimited licenses" is not being offered.
- Six req'ts will need clarification because the response did not address the full req't.

Supplier Portal - pg. 38-42

- "proposing the Ariba Network a part of 'SAP Business Network (SBN)'"
- "supports self-service supplier registration and maintenance, onboarding, solicitation / bid management, contract lifecycle management, and e-procurement and payables (PO, OC, ASN, Inv. etc.)" with all of their customers from single account on SBN.
- A State/Entity "existing supplier community may already be deeply familiar with the SBN"
- State/Entity solicitations "publicly posted" on Ariba Discovery portion of the SBN (pg. 40)
- Option for Suppliers to put their catalogs into the SAP Ariba Spot Buy catalog solution. (pg. 40)
- "Flexible e-invoice options, including: (pg. 40)
 - o Multi-document and multi-level invoicing with the PO-Flip feature to easily "flip" POs, ASNs, and goods receipts—or specific line items from them—into invoices
 - o Non-PO invoicing
 - o System-to-system invoicing via cXML, EDI, and CSV upload"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "iOS and Android mobile" app
 - o At-a-glance updates of orders and invoices with access to details, line items, attachments, and history.
 - o Configurable, real-time push notifications about orders and invoices that need your attention.
 - o The ability to confirm customer orders on-the-go.
 - o Powerful search capability to access 12 months of orders and invoices.
 - o Intuitive graphs for insights on customer order trends and invoices awaiting approval and payment.
 - o The ability to pin orders and invoices to your desktop computer for easy access.
 - o Easy login with your fingerprint or saved username.

RTM

- WEAKNESS, SPR-9: The proposed solution "does not make award information available to general public". A State/Entity would have to add the Optional Custom (Transparency) Portal to have Awards publicly posted.

- One req't will need clarification because the response did not address the full req't.

Supplier Enablement/Management - pg. 42-44

- "The SAP Ariba Supplier Lifecycle and Performance (SLP) solution along with the SAP Business Network (SBN) (aka Supplier Portal)"
- "SLP's approach includes duplicate detection (deduping) and segmentation of vendor master data to effectively target and onboard suppliers in tiered waves that align with priorities and objectives." (pg. 43)
- SAP Ariba "will support the State with Supplier enablement strategy and plan" (pg. 42)
- Registration can have "automated verification capabilities for IRS TIN/Name" with D&B integration. (pg. 42 & 44)
- SAP Ariba provides "supplier training and support, including user guides, FAQs, technical documentation, and free online seminars that explain the basics of using Ariba Network." (pg. 43)
- State/Entity can send an 'invite to register' request which emails the supplier or Suppliers can submit an "external request" to a State/Entity asking to "do business" with them. Suppliers do an initial registration into the SAP Business Network (aka Ariba Network) and then the State/Entity sends "one or more external registration questionnaires" to the Supplier to capture State/Entity specific registration information. (pg. 43)
- From their SBN/Ariba Network account, Suppliers can receive POs from customers, submit invoices to customers, create/publish catalogs to customers or the Spot Buy system, find sourcing opportunities and submit responses with any Ariba customer from Ariba Discovery. (pg. 43)
- Can identify suppliers with a "preferred category status" based on "commodity/commodities, region and (optionally) department combination". Can use this status when inviting Suppliers to a sourcing event. (pg. 44)

RTM

- NOTE, VDR-1: Registration is for the Ariba Network and uses a "supplier profile questionnaire" to capture State/Entity specific registration data.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, VDR-11: The Ariba Network captures UNSPSC codes with registration. State/Entity would have to add a "Registration template" to capture other Commodity Code taxonomies (e.g. NIGP codes) with registration.
- WEAKNESS, VDR-20: Address validation is for "format" only. System does not use anything to confirm that the address is good.
- CONCERN, VDR-23: Infosys/Ariba are assuming that a Participating Entity's debarment information will be available in D&B which is not likely.
- POTENTIAL WEAKNESS, VDR-40: System does not have a means for a Supplier to sign-up to be notified when a contract will be re-solicited
- Four req'ts will need clarification because the response did not address the full req't.

Buyer Portal - pg. 44-46

- "SAP Ariba Buying and Invoicing (B&I) solution which also includes Guided Buying provide functionality that acts as a personalized single point of entry ('front door') to initiate the full life cycle of procurement activities for Participating Entity users." (pg. 44)
- "Ariba "Front Door" with Guided Buying landing page enables all casual users to land in the application and view a dashboard with relevant tiles." (pg. 44/45) Casual Users may:
 - o Leverage Need Identification support
 - o Purchase via State of Maine Contracts, Catalogs, Open Marketplace
 - o Complete forms (solicitation request, contract request, supplier request, complaint to vendor, etc.)
 - o Be linked to other relevant solutions (Service Now, Travel & Expense, etc.)
- Power Users have a "configurable dashboard to view the status of critical tasks, to-dos/inbox, and manage the processes they are responsible for". (pg. 44/45). Power Users may:
 - o Power Users may:
 - o Configure dashboards
 - o Leverage pre-packaged reports
 - o Create ad hoc reports
 - o Manage and review supplier records, solicitations, contracts, and other documents stored in the solution
 - o Create notification tasks within the appropriate process to communicate internally and externally
 - o Post solicitations/opportunities
- "Based on the business role, each user is assigned with groups that grant access to perform specific activities in SAP Ariba." (pg. 45)

RTM

- Four req'ts will need clarification because the response did not address the full req't.

Need Identification - pg. 46-49

- "SAP Ariba Guided buying (GB) provides functionality for a user to initiate any type of procurement action with configurable business rules". "Guided Buying has tiles which are dedicated to a specific purpose and based on the URL configuration, the user is taken to desired page". (pg. 46)
- System allows for "department specific landing pages and tiles". (pg. 49)
- "If user is not certain what action to take, they may leverage a decision tree/policy via the "Need Guidance" tile in the upper left. The actions available to the user are configurable". (pg. 48)

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- Meets req'ts

Request through Pay - pg. 49-51

- "SAP Ariba Buying and Invoicing module will provide the Request through Pay services".
- create requisition for Goods/ Services by referring to the Contracts, Catalog, or non-catalog items as well for single/ multiple suppliers.
- approval workflow is highly configurable
- functionality to set-up static catalogs and punch-out catalog
- "Spot Buy capability of SAP Ariba is a new business-to-business marketplace" where Suppliers post catalogs and any Ariba customer can shop them in addition to the State/Entity specific catalogs loaded into the "Buying and Invoicing" module. If Spot Buy is enabled, State/Entity users catalog search results can bring back both State/Entity catalog matches as well as Spot Buy catalog matches. POTENTIAL STRENGTH (pg. 49/50)
- "Ariba provides a robust approval rule management process through a web-based interface". "Approvers are notified of a required approval via email, on screen notification, mobile application notification, and to do lists." (pg. 50)
- "Ariba Network functions as a hub to receive order documents and send (route) them to suppliers for review and order processing" based on Suppliers choice of how they want to receive the orders. (pg. 50)
- Suppliers can submit invoices from their Ariba Network account. "Ariba allows for both 2-way (PO/Invoice) and 3-way match (PO/receipt/Invoice)." (pg. 50)
- "PCard can either be assigned to an individual or can act as a ghosted card". (pg. 50)
- Requisitions can reference contracts created for professional services and get "attributes of the contracts like the accounting details" transferred to the requisition/order. (pg. 51)

RTM

- WEAKNESS, PRD-6: System does not provide an automated means to control whether combining purchase for multiple Fiscal Years are allowed on a Requisition/Order.
- POTENTIAL WEAKNESS, PRD-11: System does not provide purchase requests with automatic release for recurring purchases. System instead has "auto-release contracts" for these types of situations.
- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept" for standard specifications.
- POTENTIAL WEAKNESS, PRD-14: System does not copy attachments when copying a Requisition. Users have to "manually attach the document to the copied requisition".
- WEAKNESS, PRD-15: Attachments throughout the system have individual size limits of 100MB per attachment.
- STRENGTH, PRD-24: Input forms can have a workflow defined for the individual form.
- POTENTIAL WEAKNESS, PRD-37: System does not identify matching state source items to non-contract items or save matching items for later analysis.
- POTENTIAL WEAKNESS, PRD-39: System does not save matching state source items to retail/commercial market items for later analysis.
- POTENTIAL WEAKNESS, PRD-53: System does not provide a means for users to enter 'speed codes' that "automatically map/populate" other accounting fields.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, PRD-56: The system does not provide a means to enter 'back dated' requisitions/orders. So system will not be able to allow recording of purchases done outside the system.
- POTENTIAL WEAKNESS, PRD-62: System does not provide a means to specify a payment method "other than invoicing" on the purchase request.
- POTENTIAL WEAKNESS, WRK-10: For an authorized Approver to be able to over-ride/bypass to make a purchase request bypass any steps they have to manually remove each step from the workflow. There is no automation available for this.
- WEAKNESS, WRK-12: Approval attachments size is limited to 100MB each.
- POTENTIAL WEAKNESS, WRK-13: Approvers cannot approve/deny by line item. To only approve part of the line items the Approver must delete the line items they want to deny.
- POTENTIAL WEAKNESS, PO-2: System does not have the capability to split a Requisition into separate POs for different Fiscal Years, holding the future Fiscal Year POs.
- WEAKNESS, PO-5: System does not provide the capability to have Agency/Organization specific PO templates.
- POTENTIAL WEAKNESS, PO-6: PO number formats are not configurable by/for the State.
- POTENTIAL WEAKNESS, PO-16: There is not eSignature functionality available for Orders.
- POTENTIAL WEAKNESS, PO-24: The system does not notify "reviewers, approvers" when a PO has been cancelled.
- POTENTIAL WEAKNESS, PO-27: Orders cannot be created with out create a Requisition.
- POTENTIAL WEAKNESS, PO-28: Orders cannot be created from a Contract directly, must create a Requisition from the Contract.
- POTENTIAL WEAKNESS, PC-3: System does not provide a means to prevent Pcard use based on the type of a Purchase Request.
- WEAKNESS, PC-6: System does not provide a means for a user to enter/maintain their own Pcard information. Must have a Pcard Administrator manage this for users.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts without a corresponding PO in the system.
- POTENTIAL WEAKNESS, RC-4: Receipts cannot be recorded in the system and later associate it to a PO.
- POTENTIAL WEAKNESS, RC-21: The system does not provide a means to convert PO unit of measure to an inventory UOM on receipts.
- POTENTIAL WEAKNESS, INV-2: System does not provide a means to control which Agencies/Entities that a Vendor may submit electronic invoices for. The only control available is to control which Vendors are able to submit electronic invoices by ordering method.
- STRENGTH, INV-8: System provides a "messaging feature" on Orders and Invoices to communicate with the Vendor.
- Five req'ts will need clarification because the response did not address the full req't.

Catalog Capability - pg. 51

- "Catalog content can be hosted within the system or made available by 'punching out' to the supplier's shopping website".
- "Level 1 Punchout (Site and Aisle/category level) as well as Level 2 Punchout (Aisle, Shelf and Item level for cross-Punchout search experience) are supported."
- CONCERN, contract catalog content is updated by "amending the contract workspace" which creates a new version of the contract. So anytime a contract catalog needs an update, an amendment to the contract must created whether there was a contractual need to or not. (pg. 51)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Suppliers or a State/Entity authorized user can load catalogs and catalog updates. (pg. 51/52)
- State/Entity can have define a catalog approval process that includes a tool to “compare the new catalog with the old catalog”. (pg. 52)
- Spot Buy has it’s own “business rules” and workflow. (pg. 52). CONCERN, the system may require setup/maintenance of business rules that are common for Contract Catalog purchases and Spot Buy purchases as duplicate rules/workflows for the two types of purchases?
 - o CONCERN, pg. 53: “The Spot Buy Catalog tab currently displays filtered content from the eBay marketplace.” So it isn’t clear whether currently a State/Entity could only use Spot Buy for eBay purchases.
- CONCERN, the commodity code standard for Ariba Network catalogs/punchouts is the UNSPSC codes. There is no information regarding how a different commodity code taxonomy would be supported. (pg. 54)

RTM

- WEAKNESS, CAT-6: System has a limit of 5000 catalogs.
- WEAKNESS, CAT-7: System has a limit of 500,000 catalog items in a catalog.
- NOTE, CAT-8: The response to CAT-13 describes a "Partial" catalog item which would meet this CAT-8 req't.
- NOTE, CAT-11: the response for this req'ts was described in the response to CAT-10.
- WEAKNESS, CAT-12: System does not provide catalog capabilities for configurable products or services.
- "WEAKNESS, CAT-13: System does not have catalog capability to have pre-configured items with ability to substitute optional components.
 - o The "Partial Items" approach would require users to know all of the options available and the associated pricing so they could enter "values for certain missing fields".
- WEAKNESS, CAT-19: System does not allow for negative dollar value catalog items.
- POTENTIAL WEAKNESS, CAT-40: Contracts that have dealers/resellers cannot have a single catalog for all dealers/resellers. Each will have a separate catalog.
- One req't will need clarification because the response did not address the full req't.

Sourcing/Bid Management - pg. 54-58:

- Ariba Strategic Sourcing tool supports “direct and indirect materials as well as services”.
- States/Entities can have access not only to their registered suppliers but also to Ariba Networks “global network of suppliers”.
- “can be configured for quick quotes” and “3 bids and a buy”. (pg. 55)
- Sourcing template can act as a checklist that includes “a series of phases and tasks the user must complete in order to successfully conduct the solicitation”. (pg. 55)
- “Two (and multi) Step ITBs can be set up within an event in order to evaluate different parts of a bid or a proposal.” Example, technical proposal evaluated then pricing. (pg. 55)
- Sourcing templates can be unique to an organization. (pg. 56)
- “Solicitation Project Management”, system allows creation of Phases/Tasks as part of a solicitation. (pg. 56) STRENGTH
- Solicitations are posted on the Ariba Discovery public site. APIs have to be used/setup to post on a State/Entity website. NOTE, this API does not appear to be included in the proposed scope/pricing.
- Alternate bid options: (pg. 57/58)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o "Supplier Bundles: Allows participants to submit discounted pricing based on bundles of items they create.
 - o 2. Volume Tiers - Allows participants to create volume tier structures with pricing at each of the volume tier levels.
 - o 3. Alternative Pricing - Allows participants to submit different values for the terms included in an item and adjust their price accordingly"
- System has option to define/use "Scenario Optimization" feature to "create numerous constraint-based award business scenarios". (pg. 58)

RTM

- POTENTIAL WEAKNESS, SRC-16: System does not have a specific solicitation type for "Invitation for Qualified Products".
- CONCERN, SRC-23: The reference to access being "based on user licenses" may mean that the sourcing module is licensed separately from other modules. Need to look closely at the Cost Workbook.
- STRENGTH, SRC-28: The messaging feature seems to be a very strong fit to the collaboration requirement.
- WEAKNESS, SRC-35: The system does not provide "check-in/out capabilities for the repository.
- WEAKNESS, SRC-37: System does not provide a means to update documents, terms/conditions, specifications and have Templates that include them be automatically updated.
- WEAKNESS, SRC-38: System does not provide a means to identify templates that include documents, terms/conditions, specifications that have been updated.
- CONCERN, SRC-40: The statement "SAP Ariba will maintain the header data fields on behalf of the State..." implies that the State will not have Admin access to make configuration changes to the system.
- WEAKNESS, SRC-52: To post Solicitations on a State/Entity public website an integration would have to be created using the "Ariba Discovery API". OOTB, the only public posting included is what would be viewable on the Ariba Network "Discovery" website that has all Ariba customer solicitations.
- CONCERN, SRC-53: The limit of loading 9 attachments at a time may be a frustrating user experience if they have to load more than 9 documents.
- WEAKNESS, SRC-63: Solicitations are ""limited to 100 supplier participants"" and to do more you have to set up ""different events"".
-
- CONCERN, SRC-63: The ""100 supplier participants"" limit ""to ensure maximum performance"" may mean that the system can't handle larger numbers of participants. May be a technical limit."
- WEAKNESS, SRC-67: Suppliers cannot add themselves to a solicitation supplier list. Only the Buyer can add suppliers to the list.
- WEAKNESS, SRC-88: The system can workflow full set of Q&A as a "tracking document" but does not support the specific details of this requirement.
- CONCERN, SRC-118: The system does not have a designed means to capture subcontract data as part of vendor responses. Workaround is to attempt to use "RFx questions, lots and/or line items".
- CONCERN, SRC-120: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.
- CONCERN, SRC-125: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, SRC-129: Attachments sizes are limited to 100MB each.
- WEAKNESS, SRC-136: The system does not provide means to award directly to a purchase order. You must create a Contract and then do a release from the contract to create a PO.
- CONCERN, SRC-142: If re-seller and delivery locations are captured using "questions" then concerned how this information would be available for placing orders against the contract.
- Eleven req'ts will need clarification because the response did not address the full req't.

Contract Management - pg. 58

- "SAP Ariba Strategic Sourcing (Product) encompasses the Contract Management module"
- "has the ability to structure the contract hierarchy as master and sub-agreements."
- "The Ariba Contract Workspace is the legal document between the supplier and buyer agreed-upon the terms & conditions, pricing, discounts & rebates" (pg. 58)
- "Contract Workspaces can be used as the simple repository documents as well as the spend accumulators." (pg. 60)
- Contract templates can include "set of documents, To-do tasks, approval tasks, Members of the project, groups involved in the project". Templates can be organization specific. (pg. 59)
- "Using version control, one can check out a contract document to edit it. No other user can edit the contract document while it is checked out." (pg. 59)
- "To perform the administrative changes on the document, we can leverage the administrative amendment, which does not require any approvals." (pg. 59)
- System can integrated DocuSign for eSignature. NOTE: this is "an add-on feature". (pg. 60)
- "Ariba Contract Compliance has the ability to track the accumulated spend. Orders/releases against contracts", "orders/releases against contracts". CONCERN, "Contract Compliance must be integrated with Contract Workspace to leverage this functionality". It is not clear whether this is an OOTB integration or some special work setup. Also, since Workspace and Compliance are separate tools in the system, then concerned whether the user will have to do additional setup for the Compliance piece to work with Workspace.. (pg. 60)
- Contract approval workflow can be pre-configured and approvals can be done in the system or using the iOS/Android mobile apps. (pg. 61)
- Contracts can have defined tasks that "can be assigned to owners and can have a notification profile that will send email notification to users when tasks are pending, active, overdue, and completed". (pg. 61/62)

RTM

- POTENTIAL WEAKNESS, CNT-8: System does not provide a means to automatically update templates that include standard documents where those document standards have been updated.
- POTENTIAL WEAKNESS, CNT-9: System does not provide a means to identify templates that include standard documents where the standard has been updated.
- WEAKNESS, CNT-10: The total size of all attachments on a contract is limited to 2GB.
- NEGOTIATION, CNT-12: Suggest negotiating in the integration with DocuSign or Adobe Sign (State/Entity choice of which) to be included in the proposed scope/cost.
- POTENTIAL STRENGTH, CNT-26: Feature in "upcoming release of AI/ML" will give recommended approvals based on history and "automatically include additional review/approval" when modifications are made to contracts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, CNT-28: System does not provide a means to establish contracts "with pool of suppliers". Must have individual, unrelated contracts and send SOW's manual to desired contractors.
- WEAKNESS, CNT-38: Attachments must be used to capture subcontractor information. And attachments are limited to 100MB in size each.
- WEAKNESS, CNT-45: OOTB the system does not provide a means to make the "electronic procurement file" for a contract publicly viewable. An integration using existing API must be built.
- STRENGTH, CNT-46: The "full text search" of uploaded documents is a significant feature.
- WEAKNESS, CNT-51 thru 62, 65 & 66: System does not provide an OOTB means to post contracts, amendments or alerts to a State/Entity public website. Must either have users manually post on the website or have programming done to integrate using APIs to push information to the public website.
- Five req'ts will need clarification because the response did not address the full req't.

Vendor Performance - pg. 63-64:

- SAP Ariba Supplier Performance Management (SPM) measures supplier performance.
- Surveys measure supplier performance by collecting input from stakeholders.
- Scorecards show "overall score for suppliers" where score is "typically based on data about a supplier for a specified evaluation period and key performance indicators (KPIs)".
- Can measure "on-time delivery based on order need-by vs. receipt dates, Other measurements include, order accuracy based on ordered vs. received/rejected quantities, pricing accuracy based on order vs. invoice prices, contract milestone completion, customer surveys, capture/storage of any vendor performance complaints, SLAs and associated damages/remedies, vendor eProcurement fees invoiced, and payments made".
- "surveys enable you to record responses from multiple participants, including suppliers." Surveys can collect "qualitative data" and "quantitative data" about a supplier.
- "If a contract is created against Vendor(s) then we can track performance of a vendor from that particular contract" (pg. 64)
- "track vendor performance of individual statements of work that are completed from a master agreement". (pg. 64)

RTM

- NOTE, VPE-14: Response to VPE-22 does indicate that the system can capture vendor performance for a specific Contract.
- POTENTIAL WEAKNESS, VPE-20: System does not have a means to identify when "contract items are ordered without using the contract number".
- POTENTIAL WEAKNESS, VPE-23 & 24: The system does not have automated notifications when a "contractor does not meet the performance criteria". Manual tasks have to be planned/setup on the Contract to address specific issues or check on performance status.
- Two req'ts will need clarification because the response did not address the full req't.

Purchasing/Data Analytics - pg. 64-65:

- "Ariba Strategic Sourcing/Ariba B&I has the capability of reporting" Ariba Strategic Sourcing/Ariba B&I has the capability of reporting"
- "Ariba has a set of over 250 pre-packaged reports".

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Additional reports can be created by modifying pre-packaged reports or creating new analytical reports"
- Reports can be scheduled to run by "date, time and frequency"
- Ad-hoc Reports: Users can "create personalized reports and save under the personal workspace. Only authorized users can access personalized reports". (pg. 65). CONCERN, based on this response and RTM PDA-22 response, concerned that ad-hoc reports cannot be built & published for other users to access/use. It appears these ad-hoc reports may only be accessible by the individual creating the report.
- "The spend analysis tool is built on the hierarchical logic" which provides "drill down" to details. (pg. 65)

RTM

- CONCERN, PDA-35: Using an commodity code taxonomy other than UNSPSC requires that taxonomy to be "mapped to the UNSPSC-delivered classifications".
- One req'ts will need clarification because the response did not address the full req't.

Technical Requirements – 65-120 55 pgs

Availability - pg. 65-68: Does not fully meet req't of 100% availability

- "Infosys runs redundant copies of all critical software subsystems including application services" with automatic failover.
- "connected to the internet with two different ISPs"
- Table 8, pg. 67
 - o SAP Ariba Solution: 99.5% availability
 - o Oracle Integration Cloud: 99.5% availability
 - o Cloud Based Portal Solution: 99.5% availability
 - o ICAM: 99.5% availability
 - o ServiceNow: 99.8% availability

Accessibility Requirements - pg.68: Does not fully meet req'ts.

- Solutions proposed "are currently not fully optimized for accessibility". Each "product has undergone a WCAG 2.0 assessment and at this time most criteria at Level A and AA are either supported or supported with exceptions".
- "working toward WCAG 2.0 Level AA", includes addressing Section 508 of Workforce Rehabilitation Act"
- "The optional Transparency Portal solution" is "WCAG 2.0 Level AA compliant".

Audit Trail and History - pg.68-70 & TECH-1 thru 5: Meets req'ts

- Ariba
 - o "specific logging takes place that is viewable by the customer, document owners and users with specific permissions."
 - o "this information can be accessed under the History tab of the transaction document and by running the reports"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Configuration changes, master data changes, and changes related to transactions are recorded for audit purposes. Our solution will use the audit service provided by SAP Ariba to store and retrieve audit information."
- ICAM
 - "Saviynt provides comprehensive logging and monitoring"
 - "system captures action, timestamp, comments/ business justification in Saviynt database for auditing and compliance purposes."
 - "Saviynt also supports versioning of entities (rules, roles etc.)..." closely track the changes and impact."
 - "Saviynt also offers Role vs. Actual, Request vs. Actual reports"

Browsers Supported - pg.70/71: Meets req'ts. However response did not address req't to post a notice when non-compliant browsers are used.

- NOTE, the "optional custom portal solution" is not certified for the req'd Firefox browser.

User Accounts and Administration - pg.71-78 & TECH-6 thru 20: Meets req'ts.

- Ariba Solutions
 - "State End Users and Solution Administrators will be managed by the State's preferred IAM solution".
 - NOTE, States/Entities will not have Administrator access to manage Supplier accounts. These will be managed by "SAP Ariba Network directly" ("Ariba network administrators, SAP Ariba strategic sourcing and supplier management solutions administrators and SAP Ariba procurement solutions administrators").
 - "Access to data and functionality within the modules is based on roles and permissions that determine which features of the solution a user can see and work with, and what data the user can access."
 - "roles can be mapped to other roles"
 - "Users can inherit roles" (pg. 72)
 - "User, Group, Role and Permission objects can be managed from the provided UI or populated from a variety of sources, such as corporate systems and/or flat files."
 - Admin Delegation, pg. 72/73: WEAKNESS, response addressed delegating transaction approval authority. Did not address the req't to delegate Admin functionality.
 - pg. 73: the reference to "Ariba strategic sourcing and supplier management solutions administrators" and "procurement solutions administrators" appear to be SAP Ariba staff, not State/Entity staff.
- Optional ICAM Solution: Can be used to administer/manage Ariba user accounts and will handle the "roles segregation and mapping" required by Ariba.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide "dual sign on" where one login can be both a buyer and supplier.
- WEAKNESS, TECH-13: The only concept of "Super User" in the Ariba system is an Administrator and that user will not have the req'd "access to "any other user transactions" to "create, update, delete".
- POTENTIAL WEAKNESS, TECH-16: "System can't automatically" deactivate users after a period of inactivity. Admins must manually monitor activity and manually deactivate users.
- 4 RTM req't responses did not fully address the req't and will need clarification.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

User Authentication - pg. 78-83 & TECH-21 thru 25: Meets req'ts except for State/Entity password policy for complexity which is standard for Ariba.

- Ariba
 - o User Authentication options
 - "Regular user authentication" (Ariba username/password)
 - "Single Sign-On. Users log into their corporate network" which has SSO set up with Ariba.
 - "Federated Single Sign-On: SAP Ariba solutions can also be integrated with 3rd Party Identity Access Management solution" if they use "SAML based authentication or ADFS"
 - o "SAP Ariba can enable multifactor authentication for both individual users and user groups" but only for "accounts that do not use corporate authentication with single sign-on".
 - o Ariba password policy
 - "case-sensitivity between 12 and 32 characters in length" for State/Entity users and "case-sensitivity between 8 and 16 characters in length" for Supplier users (TECH-23).
 - "can include any Latin characters and punctuation marks and must include at least one numeral between the first and last character. They must also include at least one letter."
 - "require users to change passwords at least every 180 days."
 - "out-of-the-box prior password parameter is that no one password can be reused for four password change cycles. This count can be customized to be more or less than four if needed."
 - "Lock out occurs after five failed attempts to log in. Once logged in, session timeout occurs at 120 idle minutes. Both of these parameters cannot be customized."
- Optional ICAM: Can "provide all of the user authentication requirements".

RTM

- WEAKNESS, TECH-23: Password policy is standard across Ariba clients and is not configurable to meet a State/Entity password policy that is different.
- NOTE, TECH-24: RTM response does not address the req'ts for "auto-generate user passwords" however the Technical Proposal doc does address this on bottom of pg. 79 "Ariba Administrator generates temporary passwords for new users and sends new users an email message with instructions for logging in. New users are immediately taken through the password reset process when they log in for the first time"

Federated Identity Management - pg. 83-85: Meets req'ts. States/Entities "will have the option to choose the IAM solution as in State of Maine's existing IAM or the proposed optional ICAM solution by Infosys".

Data Conversion - pg. 85-91 & TECH-26 thru 34: Meets req'ts using Infosys NIA ETL tool ("Artificial Intelligence platform that collects and aggregates data and then automates repetitive business/IT

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

processes” and has “multiple data adapters like Oracle, Postgres, SQL server and others to connect/ingest data”). The NIA tool and Infosys processes for data conversion are a STRENGTH.

However the below “Out of Scope” statement from page 14 regarding “data migration” conflicts with the response in this section and on the RTM req’ts regarding data conversion in that pg. 14 indicates that the State/Entity must do all of the work described as being done by the Infosys NIA tool and the State must provide extracted data in the Ariba “upload-able format” whereas this section requires “CSV/Excel format”.

- Pg. 14: “To support data migration, legacy data extraction, transformation, cleansing and enrichment are assumed to be the State of Maine’s responsibility. The State of Maine will provide data in upload-able format as per defined by Ariba. Our conversion team will support this process and will also be responsible for the automated translation and loading of cleansed data into the target Ariba platform.”
- Pg. 85-88, data conversion process
 - o Plan: “project team will conduct a review to understand the minimum acceptable data requirements to operate Source to Pay business functions”. Will result in a “strategy document
 - o Analyze Source Data: “evaluation of data quality, performing data profiling, identify problem areas, errors and priority of the data requirements.”
 - o Data Mapping: from legacy to Ariba fields
 - o Development: setting up transformation/filter rules
 - o Data Load: from NIA tool to Ariba. 3 complete data mock runs and 2 dry runs before Go-Live.
 - o Validate: Data Comparison, Technical Reconciliation, Business Reconciliation and Front End Testing (Unit, System and User Acceptance testing)
- Pg. 90: “Infosys will use tools to accelerate the data cleansing and conversion activities”

Interface and Integration - pg. 92-95 & TECH-35 thru 60: STRENGTH in meeting req’ts with mature middleware tool. However note that

- Pg. 92: “Infosys has proposed the Oracle Integration Cloud (OIC) as the middleware to provide real-time and batch integration capabilities”
 - o “has an lightweight agent which connects to on-premise Systems.”
 - o “has inbuilt Ariba & PeopleSoft adapters for making quick & reliable connections” with State/Entity applications
 - o has “Auto scale up, provisioning, back-up, upgrades, and patch updates”
 - o “Loosely coupled”
 - o “supports SOAP, REST, DB, JMS, FTP, File integrations” (pg. 95)
- Pg. 94, Security: “SSL 256-bit encryption”, “WS-Security” and “Digital certificate authentication”

RTM

- Fourteen req’ts require Clarification because the response did not specifically indicate that the req’d integration with the Finance system will be provided. CONCERN, in the Interfaces/Integration section of Implementation Services Requirements there is a list of identified “Transaction Data Interfaces” (Table 57, pg. 273/274) that does not include
 - o Requisitions (TECH-41)
 - o Funds/budget availability checking (TECH-42)

SME DEPARTMENT/STATE: NASPO

- Inventory update and checking (TECH-43)
- Status data on procurement and financial transactions (TECH-51)

Office Automation Integration - pg. 95/96 & TECH-61: Meets req'ts.

- Desktop File Sync, pg. 95: STRENGTH, "automates the uploading & downloading of files from and to SAP Ariba Strategic sourcing solutions" and "check document version compatibility".
- Excel workbooks to "create or update large-sized requisitions
- "sample Microsoft Excel spreadsheets as starting points for creating new contract requests"
- Catalogs uploaded/updated in Ariba format excel files
- "Export summary of the tasks and phases in a project" to Excel
- "Export a bid history report to Excel"
- Export to Excel for "bid comparison" with "pricing conditions". Contains two sheets, "Overview Sheet" and "Bid Comparison" sheet.
- All "free-text" fields in allow copy/paste.

Mobile Device Support - pg. 96/97 & TECH-62: Meets req'ts.

- TECH-62 response indicates that the Ariba application is "designed with browser/mobile responsiveness" and "dynamically adjusts to the device being used".
- Solution also has two mobile apps, Ariba Procurement mobile app and Ariba Supplier app.

Mobile Applications - pg. 96/97: Meets req'ts. STRENGTH, has separate mobile apps for Buyers and Suppliers.

- App functionalities
 - Shopping Cart: create requisition with catalog search and access to Spot Buy feature
 - Requisition Approval & Tracking
 - Watcher viewing Requisitions
 - Approver viewing details/attachments of requisitions recently approved/denied
 - Read/Comment on articles on the Ariba Exchange User Community
 - Touch ID Support for iOS Devices
 - Supplier 360 degree performance report viewing on iOS devices
 - Pin Requisition documents on app dashboard
- App Security
 - App activation code before the app will communicate with the servers
 - App PIN, 6-digit PIN to login to the app
 - Touch ID Support as option instead of using PIN
 - App timeout after 5 minutes inactivity
 - Data encrypted in transmission and stored on the device
 - Certificate pinning to insure the app is communicating only with the correct servers
 - Jailbreak and rooting detection option to force the app to close if detected
 - Data removal automatically if the device is deactivated

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Data Ownership and Access - pg. 97-98: Meets req'ts.

Date Retention, Archive and Purge Considerations - pg. 98 & TECH-63: Partially meets Data Retention however does not have Archive capabilities. NOTE: Ariba data retention is as per Ariba's standard. If a State/Entity has a different data retention policy then they will need to extract and purge transactions from the system.

RTM

- WEAKNESS, TECH-63: System does not provide an archive capability. State/Entity can only delete/purge transactions instead.

Disaster Recovery Plan - pg. 98-103: Meets req'ts.

- "run disaster recovery (DR) simulations and exercises once a year."
- "DR exercise will be conducted during a weekend and will be using a combination of the test environment and production environment, to make sure that business operations are not interrupted."
- "formal DR Exercise plan will be created"
- "SAP Ariba solutions are deployed in regional data center pairs so, in the event of a failover, the data will remain within the region. Failover from one site to another has a design goal for its recovery time objective (RTO) to not exceed four hours. The design goal for the recovery point objective (RPO) is five minutes."
- "SAP Ariba solutions use a documented system recovery plan that outlines the approach and steps for recovering the applications."
- "Disaster Recovery (DR) services for Oracle Cloud Services are intended to provide service restoration capability in the event of a major disaster, as declared by Oracle."
- "ServiceNow's customer DR is documented in its Information System Contingency Plan (ISCP), which covers its data center environments, and includes all customer environments"

Solution Environments - pg. 103 & TECH-64 thru 68: Does not meet req'ts. Separate Development and Training environments are not provided for the Ariba system.

- WEAKNESS, Ariba system will only have Test and Production environments. The Test Environment will be used for "development, testing and training".
- OIC and the optional ICAM & OIC will have separate environments for Development, Test, Training and Production.
- NOTE: response to TECH-64 (3 environments) conflicts with the response on pg. 103 (2 environments) regarding the number of provided environments.
- Responses to TECH-64 thru 67 did not provide complete response to the req'ts.

Solution Technical Architecture - pg. 103-112: Meets req'ts

- Ariba is a "SAAS platform which segregates each customer" data. "The software's data model keeps the different customers' data strictly separate".
- Ariba is architected "for multi-tenancy" where each customer uses the same application but "configuration metadata allows each customer to have their own look and feel".

Solution Network Architecture - pg. 112-118: Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Ariba "solution implements an n-tier network architecture that physically segments Web, application, and data tiers." "communication protocols used between the systems are TCP/IP-based."
- "Ariba solutions maintain diverse redundant connections to the Internet through top-tier carriers. These are configured using BGP (Border Gateway Protocol) for redundancy."
- "Infosys will provision SAP instances in the US region which has a data center in the eastern US (VA)."

System Development Methodology - pg. 118-120: Meets req'ts.

- "Ariba leverages a secure software development cycle (Secure SDC) that is aligned with ISO 27034 principles."
- "leverage an extensive automation test suite, built on Selenium"
- "Quality assurance program" is "part of the common Product Lifecycle Methodology".
- "The documented systems development methodology describes the change initiation, software development, change documentation, and approval processes."

Service Level Agreement - pg. 120 & SLA doc: Partially meets req'ts.

- They are willing to accept the RFP SLA with some negotiations on each SLA. *"would like to have the option to negotiate the terms and values associated with each SLA during the contract negotiation phase"* (pg. 2, SLA document)

Security Requirements 120-193 73 pgs.

Cloud Security Alliance (CSA) Compliance - pg. 120-124: Meets req'ts.

Security and Privacy Controls - pg. 124-135: Meets req'ts through compliance with ISO27001, SOC2 Type 2.

- Pg. 120, "Proposed cloud solutions are compliant" with NIST 800-53 requirements.
- Pg. 124,
 - o "Infosys will inherit FEDRAMP/NIST compliance from the cloud service providers and configure customer specific controls as applicable for the eProcurement solution."
 - o "the core procurement solution component is still in the process of being certified for FEDRAMP/NIST. However, has undergone various other compliance assessments like ISO27001, SOC2 Type 2 which have similar security controls/ requirements as that of NIST 800-53."
 - o "is audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 every six months and a SOC 3 report is issued annually."
- "Infosys as an organization, is aligned and certified to ISO 27001:2013 standard and is assessed for SSAE 18 SOC 1 Type II by an independent third party."

Security Certifications - pg. 135-143: Meets except for HIPPA for SAP Ariba.

- Infosys Public Services, pg. 136
 - o CMMi Level 5 certified
 - o ISO 27001:2013 standard certified

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o PCI DSS compliance will be 'discussed and mutually agreed' for the timeframe when compliance would be achieved. "Cost for the certification, implementation of controls & procurement of additional tools" would be "borne by the Customer".
 - o "Infosys will ensure" the "compliance requirements of HIPAA by the implementing appropriate Technical, Physical and Administrative safeguards".
- Ernst & Young, pg. 138
 - o "has obtained and maintains the ISO/IEC 27001 certificate.
- SAP, pg. 139
 - o "has held an ISO 9001 certificate. We are also certified according to ISO 27001, ISO 22301, and BS 10012."
 - o Audited for "compliance with ISAE 3402 SOC1 Type II, SOC2 every six months"
 - o "SOC 3 report is issued annually"
 - o "our primary hosting facility (Equinix) infrastructure is audited for compliance with SSAE 16 SOC1 Type II, SOC 2 Type II."
 - o Is Level 1 PCI DSS certified
 - o Complies with VISA USA Cardholder Information security Program (CISP) and MasterCard Site Data Protection (SDP) Program
 - o POTENTIAL WEAKNESS, "Ariba is not designed to handle HIPAA data". "Ariba does not support storing HIPAA/PII/Personal data".
- Oracle Cloud Infrastructure, pg. 142/142
 - o Cloud Security Alliance Security Trust Assurance and Risk
 - o ISO 9001: Quality Management Systems
 - o ISO/IEC 27001: Information Security Management Systems
 - o Payment Card Industry Data Security Standard
 - o System and Organization Controls 2 SOC2
 - o HITRUST CSF
 - o FedRAMP
 - o HIPAA

Annual Security Plan - pg. 143-147: Meets req'ts.

Secure Application and Network Environment - pg. 147-156: Meets req'ts. Very comprehensive for all proposed solution components (Ariba, OIC, etc.).

Secure Application and Network Access - pg. 156-164 & SEC-1 thru 5: Meets req'ts for the proposed solution components (Ariba, OIC, ServiceNow) as well as the optional component.

Data Security - pg.164-175: Meets req'ts for the proposed solution components as well as the optional component.

Personally Identifiable Information Protection - pg. 176-184: Meets req'ts even though SAP policy has declared that Ariba is prohibited from "processing sensitive personal data" and there will in fact be PII data for situations like Social Security number with some Suppliers. This is addressed by Infosys statement on pg. 176 that they will address any PII situations that the State identifies.

- CONCERN, Infosys expects that "on personal information" will be captured in the system, no PII data. However, Tax Id for some Suppliers will be a Social Security number which does need to be protected as PII. Also, there are circumstances where Purchase Orders may include PII such

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

as when ordering medical services for specific inmates at a Correction Facility. NOTE: Infosys does state that if there are PII elements that need to be stored/processed then they “will work with the state or participating entities to identify such data collection and processing requirements and identify any additional privacy/security controls that need to be enforced.” (pg. 176)

- SAP Ariba is GDPR compliant” (182)
- WEAKNESS, in the response to the Data Security section, it states that “Ariba Data Policy and Privacy Statement prohibits use of the solutions for processing sensitive personal data” (pg. 173)
- “Additional solution components such as Oracle cloud integration (OCI), ServiceNow, Portal (Acquia) and Identity and Credentials Management do not collect any personal information like Ariba. However, user tracking information (IP address, location), cookies and email address, first name, Last Name (in case of identity credentials management, ServiceNow -is required for creation of user profile) is collected.” (pg. 183)

Security/Privacy Issue Occurrence - pg. 184-186: Meets intent but there are Gaps with the notification timelines/expectations in the RFP.

- As a multi-tenant SaaS, Ariba policies, processes and practices for handling Security/Privacy Issue occurrences are the same for all customers. They do not have State/Entity specific practices. So WEAKNESS is that the RFP required notification times are not met.

PII Data Actual/Attempted Access or Disclosure - pg. 186-189: Meets intent but there are Gaps with the notification timelines/expectations in the RFP.

- Once an incident is identified IPS team members will support State/Entity “in its execution of the State Data Breach Protocol by facilitating State’s adherence to US privacy laws”. (pg. 186)
- WEAKNESS, Fig. 57 pg. 186: The timeline before ‘State Privacy Team’ is notified (Step 3) could be up to 96 business days.
- STRENGTH, pg. 186/187: Infosys has had SAP Ariba agree to “additional terms” where Infosys will be notified of any breach within 24 hours and if Personal Information is involved
 - o Submit to Infosys a preliminary report within 36 hours
 - o Submit a detailed report within 7 working days
 - o Provide full identity/credit restoration services to each individual impacted and include cyber-insurance coverage for any identity theft
 - o Notify Infosys of corrective actions to prevent recurrence
 - o Pay for costs associated with the data breach
- Oracle will notify Infosys within 24 hours of a breach
- MS Azure will notify Infosys within 72 hours
- ServiceNow will notify Infosys “without undue delay”
- Acquia (Transparency Portal) will notify Infosys “without undue delay”

Security Breach Reporting - pg. 189-192: Meets intent but there are Gaps with the notification timelines/expectations in the RFP.

- “Infosys will notify the State/Entity “within 2 hours” of when InfoSys is notified by it’s “cloud Service Providers”. NOTE, this could be as much as 26 hours of the occurrence since Ariba has up to 24 hours to notify Infosys (pg. 186).
- Reporting practices/timelines is the same as documented for the previous section (PII Data Actual/Attempted Access or Disclosure).

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Implementation Services Requirements 193-300 107 pgs.

Project Management - pg. 193-228: Meets req'ts however there is significant concern regarding the implementation plan timelines. NOTE: see the more detailed timeline notes from the OUR UNDERSTANDING section, pg. 12/13 above.

- Pg. 200, timeline examples are too aggressive for the scope of the 3 scenarios
 - o Large: full system is live in 9.5 months.
 - o Medium: full system is live in 9.75 months
 - o Small: full system is live in 9.5 months
 - o There isn't sufficient time in these plans to execute the work detailed for OCM and Training in Implementation Services (pgs. 274 & 283)
- Bidders staffing plan: the response provided high level Organization Chart (Fig. 66, pg. 201) depicting "Roles" and high level description of key role responsibilities (Table 36, pg. 201-204 & Table 42, pg 219-226)
- Infosys Proposed Organization Role Descriptions (Table 36, pg. 201/202)
 - o Program Leadership: NEGOTIATIONS, suggest that there should be no costs to Participating Entities for the Infosys executive sponsor as they are not actually part of delivering the system/service.
 - o EY Account Executive: question the specific value/benefit that this individual would bring to a project. NEGOTIATIONS, suggest negotiating this role out of the scope/costs. If Infosys has done Ariba implementations in the past then don't see why this EY person would be needed.
 - o Portal: if this position is for the Transparency Portal then the cost for this position needs to be part of the Optional costs since the tool is optional. Also note that the work listed for this position includes "integration" and "API" work but Infosys has claimed that the Transparency Portal is an existing application so this integration/API work with Ariba should already be in place.
 - o Org Change: NOTE that the work/role for Infosys change management is about putting together Plans and providing an oversight/management role during execution but not doing execution itself. There is a great deal more described in the OCM section of Implementation Services Req'ts (pg. 274-283). NEGOTIATIONS, need to firm up what specific OCM activities/work is included in the proposed scope/pricing.
- Appropriate State roles were identified (Table 37, pg. 204/205)
- Program Audit/Monitoring Support, pg. 213: CONCERN, this "audit support" role may be an overhead that is staffed to heavily for an eProcurement project. NEGOTIATION, suggest getting insight into the staffing planned and costed with the proposed scope/costs to see if this needs to be scaled back or at least made optional.
- Typical Deliverables were identified (Table 40, pg. 214-217)
- Staffing, pg. 217/281: CONCERN, for small States Infosys would have a "Shared Project Manager", not dedicated.
- Governance: "3-Tier governance framework" (pg. 227/228)

Project Implementation Methodology - pg. 228- 264: Meets req'ts however would note that there is significant complexity in the approach that has the potential to be scaled back and should reduce costs. Also, note that the proposed timelines (pg. 200) do not allow for extensive Sprint/Scrum Team efforts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Infosys IDEA-Activate which is an extension of SAP Activate methodology with “pre-configured templates” (pg. 228/229, 231)
- Design/Build/Test done in multiple sprints.
- STRENGTH, Infosys will bring a “preconfigured system with associated Ariba process and documentation” as a starting point”. (pg. 229)
- “Focus design efforts on differentiated processes” instead of standard processes (Fig. 81,pg. 230)
- Design & Sprints are done by “Scrum Teams” (pg. 233/234).
- RACI Matrix (Table 45, pg. 237): NOTE, Infosys indicates that they will deliver 25% of “End-User Training”.
- CONCERN, Infosys assumes that 70% of processes will be Standard and 30% “Differentiating” processes. (Explore Phase table, pg. 240)
- Explore Phase: “Process Design” Sprint (pg. 242): STRENGTH, Infosys will have a “pre-configured demo environment” for use in design sessions. However, need to know if this is pre-configured for Public Sector or from their Private Sector experience.
- Testing, “tests for standard processes are automated”. “Most of the effort in the end-to-end testing will be spent on differentiated processes” (pg. 247)
- “Infosys proposes to follow an industry standard software testing life cycle (STLC)” (pg. 250-
- STRENGTH, “Security testing” is a specific type of testing in their methodology (pg. 253)
- Major releases (pg. 258): CONCERN, on pg. 199 it was indicated that implementations would be done in two major releases however on this page it indicates “five major releases”.
- Change Management & Procedure, pg. 261: CONCERN, the definition of “Changes” is broad enough that doing adjustments to setup/configuration may always be considered a contractual change instead of an adjustment or correction to the design.

Catalog Support Services - pg. 264-266: Partially meets. The Services do not include support for a contracts assessment or creation of catalogs, and the on/off-boarding services are minimal.

- The “Ariba implementation team”
 - o sets up validation rules that are applied when a catalog is uploaded or when a punchout is set up by a Supplier.
 - o “analyzes hosted catalogs “to ensure it contains the correct items, approve them and activate it”. CONCERN, the Ariba Implementation Team is not likely to know enough about a contract to be able to validate it as having “correct items”. This should be the Participating Entity instead.
- Spot Buy is the means that “commercial retail online marketplaces” would be made available in the system. (pg. 265/266)
- As described here, the On/Off-Boarding support provided by Infosys/Ariba is only to do catalog validation and making the catalog/punchout available for shopping in the Ariba system. (pg. 266)

Data Conversion Services - pg. 266-270: Partially meets. It is unclear whether Infosys is offering to provide “needs assessment” in their data conversion services. They do not provide “data cleansing” services.

- Needs Assessment (pg. 267): response did not say they would provide the req’d “conversion needs assessment”.
- Data Cleansing: Table 54 RACI Matrix (pg. 268) indicates that the State/Entity would be responsible for data cleansing. So Infosys data conversion services does not include this.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, the NIA ETL tool provides a repeatable, automated process to transform legacy data into Ariba formats required for loading into Ariba. NIA tool supports having “real-time data” streaming from source/legacy systems and “can be used for monthly or quarterly refresh purposes” (pg. 269). So this tool could be used for more than just to meet the data conversion needs for initial implementation.

Interface/Integration Development Services - pg. 270-274: Meets req'ts for the services req'd however suggest that NEGOTIATION get Tables 56 and 57 for “identified interfaces” removed so these services are not exclusive to these specific interface/integration points.

Organizational Change Management (OCM Services) - pg. 274-283: Meets req'ts. However, based the OCM role identified/described for the Infosys Team (Table 36, pg. 203) it appears that the ‘execution’ parts of these OCM services described may not be included in the proposed scope/pricing.

- OCM Strategy development: will “build a comprehensive and effective change strategy” (pg. 276)
- Will “continuously engage government leaders” using the “EY Real-Time Collaborator Tool” (pg. 277)
- Will have a “Leadership Coaching plan” (pg. 277)
- Will product Stakeholder analysis and “conduct readiness and impact assessments” (pg. 279)
- Will develop a “communication strategy and plan” with “key messages, audience and timing”. (pg. 279)
- Will “leverage a change impact assessment template” (pg. 280)
- Will “share operating models and organization design leading practices” to collaborate with State on future state. (pg. 280)
- “Change readiness assessments will be conducted, as required, throughout design and testing phases” (pg. 280)
- Will “work with the State to co-develop metrics” to measure “business adoption” with “visual dashboards and scorecards to track adoption” which is “key to conduct a resistance assessment” (pg. 282/283)

Training Services - pg. 283-289: Meets req'ts however Table 58 has gaps that imply that they did not identify all of the specific training that will need to be provided to each User Group.

- Project Implementation Methodology, RACI, Table 44, pg. 237: Infosys indicates that they will deliver 25% of “End-User Training”.
- User Group Training, Train-the-Trainers, Table 58 pg. 284:
 - o WEAKNESS, Train-the-Trainers are only trained for requisitions/orders. There is no training identified on the other modules/features of the system (e.g. Supplier management, Sourcing, Contracts, Invoicing).
 - o WEAKNESS, System Admins only have “Viewing, opening and closing tenders” identified as the training they will receive. Admin training is not listed.

Help Desk Services - pg. 289-300 & IMPL-1 thru 5: ADSL strongly meets the req'ts. NOTE: response to Managed Services Help Desk section indicates that ADSL has “familiarity” with “SAP Ariba, however there is specific concern that they do not already have significant experience/skills with the Ariba/Ariba Network solution that has been proposed.

- Allied Digital IT Services LLC (ADSL) is to provide the Help Desk Services as a subcontractor for Infosys Public Services (IPS). Pg. 289

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- SLAs, pg. 290: There are several references to Help Desk SLAs in this section but the specific SLAs and targets have not been provided.
- Service Delivery Parameters (Table 59, pg. 290/291): CONCERNS,
 - o "Number of Users supported": the 5,000 - 12,500 count does not indicate whether this includes both State/Entity users and Supplier users.
 - o The "Service Desk Coverage" is 24*7 but there is only an entry in this table for "Business Hours Team". There is no mention of the Team that would support 'non-Business Hours'.
- ADSL "Highly trained and certified agents" (pg. 291): there is no indication whether the ADSL agents have training, experience or skills with Ariba.
- Gov't of Canada experience, pg. 292: CONCERN, the Infosys IPS Service Desk is noted on this page as having extensive experience providing Ariba and Procurement Help Desk support (Tier 1 & 2) for Canada (GC) Public Services and Procurement Canada but there is nothing to indicate that ADSL has similar experience. In fact, the last sentence in this section states that IPS will work with ADSL to share their "experience/expertise in establishing the procurement desk".
- Performance Metrics Dashboard (Fig. 114, pg. 297): CONCERN, the caption text states "Reporting is reliance on leveraging your ITSM to provide these reports". The proposed ITSM is the ServiceNow tool from Infosys, so concerned that the State/Entity ITSM system is required to be able to produce reports?
- Service Desk Operating Model (Fig. 115, pg. 298): Infosys & ADSL will provide Tier 1, 2 & 3 support.
- ADSL "Performance metrics tracking and reporting": STRENGTH, the listed metrics/reports demonstrate a very mature Help Desk operation. (pg. 300)

RTM

- IMPL-1: CONCERN, "Drupal" has been identified as the tool to provide Supplier "Help functionality" however in the Technical Proposal Drupal is referred to only as the tool that would be used to provide the Optional Transparency Portal.

On-Site System Stabilization Support - pg. 300-303:

- Pg. 260/261 describes Hypercare but only discusses handling "trouble tickets", providing training and monitoring key performance indicators. Does not address setup/configuration changes or system use assessment.
- STRENGTH, Knowledge Transfer approach from Hypercare to Managed Services teams (pg. 301-303)

Managed Services Requirements 303-345 42 pgs.

Solution Support - pg. 303- 338 & MNGD-1: Partially meets req'ts.

- General Public support, pg. 305: CONCERN, Infosys is planning to provide support to the "public" regarding "publicly posted tenders or other open data". NEGOTIATIONS, suggest that this role should not be with a Contractor.
- Software/Equipment Testing, Participating Entity Testing & 3rd Party Notifications req'ts: Responses (pg. 306-308) described the UAT process for initial implementation and did not address the req'ts.
- "As eProcurement is a Cloud-based procurement solution, vendors for Cloud software, including SAP and ServiceNow, have the primary responsibility to ensure that there are no service disruptions for their Cloud applications." (pg. 309)
- SAP Ariba "Service Continuity" and "Redundancy" (pg. 311/312) are extensive.
- Identify issues that may impact the Participating Entity environment/operations req't: Response (pg. 313-316) described Infosys Risk Management practices during implementation. Did not address post-implementation identification of issues from monitoring the environment/operations.
- Reviews on performance/issues and use of the Solution req'ts: Response focused on communications/meetings practices during implementation (pg. 317-320) but did finally address the req't started on pg. 321.
- System use/capacity monitoring req't: Response did not address the req't to monitor the system to determine when capacity increases are needed. Response instead addressed security and other unrelated topics. (pg. 324-333). However elsewhere in the proposal it was identified that SAP Ariba monitors capacity and has scalable environments to adjust to any need for increases. (pg. 43, Ariba SLP, "scales easily", pg. 65, Ariba SaaS, "scalable to a large number of customers, because the number of servers and instances on the back-end can be increased or decreased as necessary to match demand, without requiring additional re-architecting of the application")
- Manage security functions (Admin of access/passwords & related security controls) req't: Response did not address the req't and instead described the login/password functionalities of the system and how permissions/groups are established/managed in the system. (pg. 333-338)

Organizational Change Management (OCM Services) - pg. 338-340: Minimally meets OCM req'ts.

Only provides updates to communications/training materials and "scope/impact outlines" for future system changes.

- "During delivery of managed services, we will work with each State of Maine to ensure that communications and training are updated when required to continue to support user adoption." (pg. 338)
- "Personas" will be "maintained during the managed services period" and when there are system changes "impacts to user groups, internal and external, are identified". (pg. 339)
- "To ensure that users are kept abreast of updates and new releases associated with the solution, update and new release scope/impact outlines will be created and provided to the State of Maine to support creation of stakeholder communications using the applicable State of Maine channels and media." (pg. 340)

Training Services - pg. 340: Meets req'ts. See notes in Implementation Services.

Catalog Support Services – pg. 340/341: Meets req'ts.

Help Desk Services - pg. 341: Meets req'ts, however concerns about how well ADSL will become SAP Ariba skilled.

INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: InfoSys

CATEGORY #(s): 1

DATE: 11/27/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- ADSL would provide the services for post-implementation Help Desk.
- WEAKNESS, ADSL currently only has “familiarity” with SAP Ariba. Infosys is planning to add an Ariba experienced person (Service Desk Governance Lead) to the ADSL staff their Service Desk during implementation/steady-state phases to transition knowledge, update “FAQs and KB articles” and act as “liaison between help desk T1 and other support teams”, including “SAP Ariba”.

Transition Out Assistance Services - pg. 341-346: Meets reqt's.

Other Available Services - pg. 346-348

- Notes for Celonis Process Mining, Power Approver, SAP Field Glass & Spend Analysis additional services are covered in the Innovation/Value Add section.
- IT and ERP Strategy Services
 - o “Infosys can help our clients in establishing and executing their Business and IT strategies and roadmaps.”
 - o “System Integration Services”, “building and enabling integrations among different platforms and difference applications”.
- IVS Services: “independent verification services”
- Business Process Management (BPM) Services: “end-to-end outsourcing services provider for Business Process Managements, such as Customer Services, Human Capital Management, Financials, Procurement, etc.”

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts - Statewide Procurement Division, Texas

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Infosys to deploy SAP Ariba
 - Partner with Ernst and Young and SAP.
 - Identified possible project risks.
 -
2. Previous Projects
 - Public sector – expansive includes sourcing/CM
 - Private sector – extensive.
 -
3. Subcontractors
 - E&Y
 - SAP
 -
4. Organizational Chart
 - High level org chart and detailed role description.
 -
5. Litigation
 -
 -
 -
6. Financial Viability
 -

Individual Evaluator Comments:

SAP Ariba - SAAS

Detailed high level understanding of requirements demonstrated, providing long checklist of concepts and components.

Infosys-Ernst&Young- SAP Ariba alliance approach.

General Principal and Requirements

- Key Solution Functionality Elements - clear table of Ariba software components
 - Ariba Network (suppliers); Ariba Supplier Lifecycle and Performance Management; Ariba Sourcing; Ariba Contract; SAP Ariba Buying and Invoicing;
 - plus Oracle Integration Cloud middleware, ICAM for identity management (optional), and ServiceNow
- User Experience
 - Supplier Portal – SAP Ariba Business Network – single entry point for supplier facing functions.
 - Buyer portal – SAP Ariba Buying and Sourcing – procurement processes, guided buying.
 - Notes optional **Infosys transparency portal (p21) needs clarification for added cost.** Can integrate with SAP Ariba native portal to be used for public facing announcements, bids and proposals
 - Spot Buy for procurement from catalogs or non-catalog spot purchases.
 - User work management inside portal.
 - Role-based functionality.
 - Mobile capable.
- Bidder Best Practices and Roadmap
 - Quarterly releases. – advance communication.
 - Monthly feature deliveries (no user impact)
 - SAP Ariba Best Practices Center – flexible, as-needed support tailored to customer; single, named point of contact; best practices; claimed faster ROI.
 - Product roadmap identified: machine learning, predictive analytics, blockchain and internet of things, and human engagement and augmented senses.
 - Increase supplier engagement;
 - KPIs for cost reduction.
 - Infosys will help benchmark existing processes and set target levels for eprocurement project.
 - Use SAP Ariba native solution and extend only when needed – Example the Transparency Portal (drupal-based for public posting.)
- Innovations and Value-Added Features/Services

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- SAP Fieldglass – Temporary workforce recruitment and management – additional cost
 - SAP Ariba Spend Analysis
 - ICAM – identity management (Fedramp compliant) – Azure Active Directory. SO to cloud and on-prem applications.
 - Transparency portal (see previous)
 - Celonis Process Mining
 - Power Approver
 - Source to Pay Best Practices 50+ processes already mapped and used as reference for discussions. (Notes this is part of the project as a value add – clarify this is no-cost.)
- Customizations/Extensions – emphasis on native Ariba. Infosys support customizations would not invalidate Ariba warranty; Infosys would notify Maine of change management impacts; customizations to be completed during implementation period or added to post-launch roadmap.
- Alternative Funding Models – potential for user fee funded. Would need to engage SAP to determine viability.

Functional Requirements

- General Functionality – integrated modules give value-drive approach; ease of access to information for suppliers.
 - 5 component areas in hybrid cloud: Portal Solution; Services Solution; Middleware; Identity management; Security; Helpdesk
 - EPROC-GEN-3 and -5– API will provide publishing solicitation, eval notices, awards, contract info to state website.
 - EPROC-GEN-38 – Not unlimited. state user licenses based on state contract; supplier licenses no cost.
- Supplier Portal
 - EPROC-SPR-9 – SAP doesn't natively publish solicitation results/contracts. Infosys portal integration meets spec. High level of complexity to initiate.
 - EPROC-SPR-23 – *Ariba allows creation of Negotiation Tasks which include features that enable the task owner to incorporate document changes from the negotiating parties, negotiation tasks are primarily intended to manage long-term tasks associated with contract negotiations with multiple rounds and to capture notes or comments related to each round.*
 - *P39 Entry-level connectivity options such as Web UI, fax, scanning, e-mail, and CSV upload. Support for a consumer driven buying experience through direct integration of back-end systems using cXML, EDI, or SAP Ariba Integration Adapters.*
 - Solicitation response via interface or upload; contract redlining on Ariba network or email.
 - *P40 Supplier Support includes 24x7 self-service training tutorials and documentation. Access to phone and chat-based support is also available during normal business hours.*
 -
- Supplier Enablement/Management
 - *P42 SLP solution supports a full onboarding process, which includes a supplier request prior to an actual registration. This supplier request can be internal or externally initiated, typically consists of the basic information required to determine if adding the new supplier is appropriate.*
 - Infosys will assess and advice if supplier enablement service required – not part of proposal. P42

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P41 *Supplier education: We offer extensive materials for supplier training and support, including user guides, FAQs, technical documentation, and free online seminars that explain the basics of using Ariba Network. We can also deliver your account specific information*
 - P41 *help desk provides 24x7 application-related customer support and issue resolution.*
 - D&B integration available in Ariba Supplier Lifecycle and Performance
 - Preferred supplier management tool
 - EPROC-VDR-40 – Workaround for supplier email notification – Not completely responsive.
- Buyer Portal - Offers 2 primary entry points designed for casual user or power user. Casual user gets guided buying experience, can submit requests. Power user enters via dashboard, gets more self-service approach including buying, solicitation development, vendor management, report generation.
 - EPROC-BPRT-10-11 – Customization required for licensing and certifications in vendor search. Other fields prescribed are standard. Needs clarification – customization or configuration?
- Need Identification - Stated as standard functionality using the Guided Buying tool.
- Request through Pay – Catalogs drive spend to current contracts; POs to suppliers through ABN; spot buy access. Attachments to reqs permitted.
 - EPROC-PRD-3 – ERP integration option for funds approvals.
 - EPROC-PRD-5 – Configure field for state assigned contract number
 - EPROC-PRD-62 and EPROC-PO-29 – Customization to set payments at header level; SAP native sets payments to supplier level.
 - EPROC-PO-11 – SAP native limitation to 100MB attachments
 - EPROC-PO-16 – clarification needed – Signatures on POs – Infosys says not native function.
 - EPROC-RC-21 – UOM defined by PO – not convertible to inventory unit UOM for receipt entry.
- Catalog Capability – Hosted, punchout, Spotbuy
 - P51 *Process for loading, approving/activating catalog content for internally managed and externally created and managed catalogs. There are 3 channels that catalogs can be updated from: Loaded directly by customer via CSV or CIF format eProcurement Solutions and Services Infosys Public Services; Loaded by Administrator acting as the catalog management service to the State of Maine user; Self- loaded by the supplier via the SAP Business Network.*
 - P53 – needs clarification UNSPSC versions should be agreed upon. Is NIGP or other taxonomy available?
 - P53 – needs clarification – Supplier and State responsibilities bulleted. Video stated that Infosyst would manage catalog process.
 - EPROC-CAT-6 & -7 Needs clarification. Listed as A, but limitations cited. 500,000 items per catalog; 5,000 catalogs per system. This would likely be in excess of catalogs needed by states, but the item threshold would not reach the limit for MRO vendor catalogs, for example. Does 5,000 catalogs include expired or inactive catalogs; can one vendor have multiple catalogs archived and not count against the total?
 - EPROC-CAT-19 – negative values supported requirement not met.
 - EPROC-CAT-38 – compliance with public facing catalog requires generic password – not completely open-facing. Needs clarification – is view-only an available role?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-CAT-40 needs clarification – reports catalog type ID not possible. This differs from other SAP vendor that says it is standard function.
- Sourcing/Bid Management - claimed out of box functionality on common procurement types, 50% reduction in solicitation cycle time, savings.
 - Solicitation development using templates inside Ariba Sourcing.
 - Checklists can be added.
 - Customer has ability to create/modify templates to state's needs.
 - Solicitation attachments posted on Business Network.
 - Primary and alternate bid options can be submitted by supplier.
 - Bid responses can be evaluated in UI or exported.
 - No awards can be reopened (no new approvals) or copied to new event (approvals).
 - Native integration to Ariba Contract Management for contract creation.
 - EPROC-SRC-67 – non-registered suppliers can be added to supplier list by buyer, but not self-register.
 - EPROC-SRC-73, -138, -147– Special API required to publish solicitation on public website and other actions.
 - EPROC-SRC-155 – Alert published to public website, not full solicitation. Needs clarification on alert process. – Where does Infosys Transparency portal fit in?
- Contract Management - integrated CM and Contract Administration functionality. Contract award can flow directly into contract authoring. Compliance and auditing through platform. Ongoing supplier communication through platform capturing performance measures through contract closeout.
 - P62 supplier access to contracts requires integration. The State of Maine may configure the solution to allow suppliers to access their *contracts via the SAP Ariba network. Data updates for revenue sharing and/or subcontract payments can be completed by the supplier via response to a notification task. Our approach for making the procurement file and associated attachments publicly viewable is to integrate to State of Maine's solicitation public posing site. We would utilize an API built specifically for this use case.*
 - P61 *Digital contract approval routing is determined by customer rules that are either systematically applied or have been added based on criteria specified by the project team.*
 - EPROC-CNT-12 – signatures are DocuSign integration.
 - P60 *Ariba Contract Compliance has the ability to track the accumulated spend. Orders/releases against contracts can be aggregated against the contract for spend tracking and analysis purposes.*
 - P60 *Ariba Contract Life Cycle Management has the ability to maintain the pricing terms with an excel template. The contents for the contract line-item documents are specified in a pricing terms excel document, which SAP Ariba converts to a line item document.*
 - EPROC-CNT-41 – High complexity customization to develop reports for SBWM certification. Needs clarification – config or custom?
 - EPROC-CNT-43 – High complexity customization to develop access for supplier contract viewing and reporting. Needs clarification – config or custom?
 - EPROC-NT51-62 – Several required data posting and filtering capabilities reported as Customizations.
 - EPROC-CNT-64 – C.H. – no OOTB classifies the contracts with catalog hosted or punch out system.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Vendor Performance - Cloud-based vendor data model; supplier 360- review; supplier scorecards based on KPIs.
 - All requirements listed as A or BP.
- Purchasing/Data Analytics - 3-step report creation wizard; data filtering within Ariba tool rather than having to export data out to Excel to pivot/manipulate.
 - Pre-packaged or ad-hoc reports.
- - EPROC-PDA-35 - *SAP Ariba can support two reporting taxonomies. Supported taxonomies such as UNSPSC, the Ariba Classification taxonomy, and a customer-specific, custom taxonomy.*
 -

Technical Requirements

- Availability – core of proposal is scalable Ariba SAAS solution. P67 *SAP Ariba uses replication technologies to copy data between data centers within a region. Application of these technologies protects against data loss from a disaster effecting a single site. Infosys runs redundant copies of all critical software subsystems including application services, enabling automatic fail-over in the event of an error so that there is no disruption of service. 99.5% to 99.95% across components.*
- Accessibility Requirements
 - P68 *SAP is committed to delivering software solutions that are accessible to individuals with disabilities and to that end, working towards meeting WCAG 2.0 Level AA. This includes addressing the Electronic and Information Technology Accessibility Standards described in Section 508 of the Workforce Rehabilitation Act.*
 - P68 *optional Transparency Portal solution provided by Infosys proposed is WCAG 2.0 Level AA compliant.*
 - P71 *Audit logs are typically retained online for one year and then archived for six more years.*
- Audit Trail and History – Audit logs considered customer date. All Reqs standard setup. A.
 - P68 *SAP Ariba can export up to 10,000 audit log entries to a Microsoft Excel file.*
 - P70 *Saviynt Enterprise Identity Cloud (EIC) provides extensive logging of activity in support of a secure information ecosystem. EIC captures every transaction performed by users, privileged users, and administrators, and all data is available for review with out of the box reports and is supported by the analytics module for ad-hoc reporting.*
- Browsers Supported – Common browsers supported.
- User Accounts and Administration – Roles identified for account management.
 - EPROC-TECH-6 Predefined roles with option for additional custom roles.
 - **EPROC-TECH-16 – Needs clarification**. Doesn't meet requirement for automatic deactivation of accounts after 6 months.
 - **EPROC-TECH-24 – needs clarification** about new password auto generation. Not responsive, though Table 12 indicates generated password expiration periods.
- User Authentication – p71 *Supplier Users will be managed by SAP Ariba Network directly, whereas State End Users and Solution Administrators will be managed by the State's preferred IAM solution.*
 - Ariba – native SAML SSO integration
 - Optional ICAM Microsoft Azure-based authentication.
- Data Conversion – Customized and high complexity.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-TECH-27-33 (NIA ETL tool) - *SAP Ariba supports the data transfer through two basic methods 1) Flat file transfer (CSV Files) 2) Web services. The static data can be transferred using the basic flat file transfer and the real time data or transactional data is transferred using the web-services. Master data files are transferred using the file channel. Transactional data is transferred using the web-services. Batch downloads is also supported by the Integration tool kit. HTTPs Post protocol used by the Ariba ITK.*
 - P86 Ariba out-of-the-box fields will be used as the base for data mapping. *The advantages of the approach are that it encourages usage of OOB functionality, only relevant fields based on new process and system will be mapped and it will help drive decision to eliminate /purge unwanted data. The high-level steps will be as follows: The team will prepare a list of all relevant Ariba fields plus additional fields based on the process. State and Infosys will map legacy fields to Ariba.*
 - Tables 13,14, 15 identify responsibilities during data phase; schedule of processes, including RACI matrix. Clear plan.
- Interface and Integration – p92 Infosys has proposed the Oracle Integration Cloud (OIC) as the middleware to provide real-time and batch integration capabilities.
 - EPROC-TECH-35 - *These standard integration options across our solution portfolio are:*
 - a) Master data integration is done primarily in batch mode, HTTPS using CSV files (Batch integration, and depending on the data volume this can be scheduled to run frequently to achieve near real-time integration)*
 - b) SOAP Web services that use an XML payload (Real-time integration suitable for transactional data)*
 - c) REST APIs (supports both synchronous & asynchronous calls)**All of these integration methods are based on SSL 256 bit encryption and support various authentication methods such as WS-Security, basic and digital certificate authentication as standard. Our customers can opt for two or more or all the options to help achieve the desired level of integration.*
- Office Automation Integration – Detailed integration explanation. Native.
 - P96 *Using the user Interface, customers with the proper access can import data into Ariba or Export out of Ariba in CSV format.*
- Mobile Device Support – site is built for mobile responsiveness. Components with mobile functionality including shopping cart, approvals, viewing reqs. Supplier 360 reports available to view on Airba ios app.
- Mobile Applications – ios and Android supported. Touch ID, App pin, fingerprint recognition options for access.
- Data Ownership and Access - Ownership always customer, but SAP Ariba retains copies of data for life of contract only.
- Date Retention, Archive and Purge Considerations – p98 *Data retention is governed by the active contract. SAP retains your data on the service for the duration of the subscription term and any subsequent renewal term, subject to legal requirements imposed on auction site operators. During this time, you may download your data using the functionality within the application, in order to meet your specific retention requirements.*
- Disaster Recovery Plan – Annual DR exercise planned with Infosys support team and customer personnel.
 - P99 – core SAP Ariba disaster recovery process documented. Failover, notification and backup steps.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P100 – Oracle cloud disaster recovery process documented.
 - P101 – Servicenow and ICAM processes documented.
 - P102 – Customer Transparency portal (Aquis) documented.
- Solution Environments – p103 *proposed solution will have the following environments (Development, Testing and Production) provisioned using SaaS (SAP, ServiceNow) and PaaS (ICAM, OIC, Portal)*
 - *SAP Ariba by default provides the production and testing environments. Development, testing and training of procurement processes are carried out in SAP Ariba Test environments. See Table 18.*
 - *EPROC-TECH-64-67 - Standard license includes 3 environment (Dev, Test/Training, Production) with a 4th (dedicated for training) to be added if needed. Test environment can be used for training during the UAT phase where configurations will be identical to production. State can use Dev environment for development purpose and testing new functionalities.*
- Solution Technical Architecture – Solution has Ariba and non-Ariba components, but seamless transition promised by Infosys. All access for state users behind single designated authentication process. P108-112 provides detailed description of functionality in Ariba, Oracle, Acquia and Servicenow layers.
 - *P112 The end-to-end accountability for all aspects including ServiceNow platform, implementation, maintenance and support lies with Infosys. ESM Café has preconfigured processes incident, problem, change, knowledge, self service and service request management.*
- Solution Network Architecture – P112 - *Hybrid Cloud based architecture with the core solution platform as SAP Ariba.* P113. - *access points enabled through the public internet using an HTTP channel. Our proposed solution provides a separate access point for production and non-production environments.*
 - Data will always be hosted in the U.S.
 - Table 25 provides Data Center hosts for the 5 components -- all located in Va.
 - P118 *three components—authentication, encryption, and integrity—are key to securing the overlay network infrastructure.*
 - *Authentication - The solution ensures that only authentic devices can send traffic to one another*
 - *Encryption - All communication between each pair of devices is automatically secure, eliminating the overhead involved in securing the links*
 - *Integrity - No group keys or key server issues are involved in securing the infrastructure*
- System Development Methodology – Solution testing. Infosys automation test suite built in Selenium.
 - *P119 Prepared test scenarios and test scripts are thoroughly reviewed by the Test lead and then to be approved by the State*
 - 4 levels - Unit testing, functional testing system integration testing, user acceptance testing. Plus performance testing.
 - Configuration/change management process documented. Final CAB approval needed.
- Service Level Agreement –
 - Model SLA acknowledged all components – reserved right to negotiate some SLAs during final award negotiation.

Security Requirements

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Cloud Security Alliance (CSA) Compliance - CAIQ or similar documents noted for all proposed components except Saviynt. Not part of my packet.
- Security and Privacy Controls
 - **P120** *The proposed cloud solutions are compliant with the security requirements detailed in the RFP, primarily the CSA CCM requirements and NIST 800-53 requirements. Needs clarification. IBM specifically said SAP Ariba is not NIST 800-53 compliant. Also see next bullet for p124.*
 - *P124 core procurement solution component is still in the process of being certified for FEDRAMP/NIST. However, has undergone various other compliance assessments like ISO27001, SOC2 Type 2 which have similar security controls/ requirements as that of NIST 800-53. As part of the certification, SAP Ariba is audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 every six months and a SOC 3 report is issued annually.*
 - *P125 Infosys as an organization, is aligned and certified to ISO 27001:2013 standard and is assessed for SSAE 18 SOC 1 Type II by an independent third party. Any other compliance requirements (such as HIPAA, FISMA, CJIS, PCI, etc.) would be subject to applicability for Infosys facilities and location from where support services delivered. Infosys has the required capabilities to be compliant to this regulation at an account level.*
 - *Table 29 details security controls, physical security, risk assessments.*
 - *P135 Any personal data obtained from the client for during the tenure of the contract shall not be retained and will be destroyed or returned, as required by the client, when the agreed retention period lapses unless legal requirements need longer retention.*
- Security Certifications
 - *P136 Infosys as an organization is aligned and certified to ISO 27001:2013 standard., Infosys Limited as an organization is assessed for SSAE 18 SOC 1 Type II*
 - *P140 SAP Ariba is audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 every six months. A SOC 3 report is issued annually. Upon completion of the audit, an attestation letter is issued, stating our compliance. In addition, our primary hosting facility (Equinix) infrastructure is audited for compliance with SSAE 16 SOC1 Type II, SOC 2 Type II.*
 - *SEE P141 TABLE 30 for vendor certification list. Ariba, Servicenow, Azure, OCI, Acquia, Saviynt.*
- Annual Security Plan – Detailed security plan to be developed for award. Examples provided including accelerators in place to support security planning.
 - *P144 - All cloud vendors [in the proposal] have established security policies and validated through SOC2 or FEDRAMP certification.*
 - *P146 - Infosys will assign a dedicated Security Lead/Officer with expertise in managing implementation and maintaining information security plan. He will work closely with State of Maine's security organization, SaaS vendors, and State of Maine Project team to ensure that proposed solution once fully integrated and operational is compliant with NIST 800-53. Security Lead will be responsible in establishing and executing IT security plan for State of Maine and develop a RACI (Responsible, Accountable, Consulted, Informed) Model was discussed with all Information Security) stakeholders and agreed for seamless Cyber Security Management.*

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Secure Application and Network Environment – 24/7 system monitoring. Firewall separation of SAP corporate with customer cloud.
 - Only SAP authorized staff using SAP authorized computers in data centers.
 - 2FA authentication for SAP staff entering cloud environment.
 - Exception-based authorization for Cloud Engineering to access specific customer cloud instances.
 - *P151 Saviynt deploys the service into the cloud using Amazon Web Services or Azure Cloud Services as a hosting provider and has the ability to select country and region where the solution is deployed.*
 - Also details provided for Oracle, ServiceNow and Acquia.
- Secure Application and Network Access – All requirements EPROC-SEC listed as out of box. A.
 - Data at rest and in transit encrypted.
 - Detailed descriptions of security provisions provided for hardware and physical premises for Ariba. Higher level descriptions for other platform integrations.
- Data Security P164 *Infosys proposed procurement solution leverages individual cloud service providers Data security process to act as a base for an overall data security Program.*
 - *P164 ISG validation team also performs compliance assessments to check whether the system is built as per the hardening guidelines prior to the release into production environment.*
 - P168 – Infosys will perform initial risk assessment and continuous risk management.
 - Descriptions provided for each platform's encryption methodology.
- Personally Identifiable Information Protection – P176 *proposed procurement solution is intended to capture very minimal sensitive personally identifiable information which is not available through other public sources.*
 - *Infosys, being a data processor, processes personal information only for providing services to the client, as documented in the services agreements. Personal data will not be used for any purpose other than that specified by Maine or participating entity*
 - *Access to personal data will be provided to Infosys personnel only on a need to know basis. Periodic access reviews are performed by the project team to ensure that access available to personnel is commensurate to their responsibilities in the project.*
 - P180 – Detailed description of SAP protection measures for PII.
- Security/Privacy Issue Occurrence
 - P184 *Infosys will report to the State of Maine any security and privacy issue, pertaining to client PII, security breaches etc. promptly upon its discovery. All privacy incidents identified by Infosys are reported to the Infosys' Data Privacy Office, which determines the next steps after an assessment of the incident.*
- PII Data Actual/Attempted Access or Disclosure – Notications to Infosys range from 12 hours for Ariba, 24 hours for Oracle, 72 hours for Azure. No stated timeframe in process for Servicenow or Acquia (although PII less likely IMO for these components.)
- Security Breach Reporting – Detailed description of each software components reporting steps.
 - P189 *Infosys will follow comprehensive Security Incident/Breach Management Response Framework and work closely with its SaaS/PaaS Service Provider (partner like SAP Ariba, Oracle and Acquia) to provide the beach notification and Analysis Services for Incident Response. Infosys will notify State of Maine within 2 hours of the Security Breach/Incident is notified to Infosys by individuals, cloud Service Providers.*
 - Based on severity, Ariba notification ranges 1-24 hours. (Figure 59)

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P192 – Infosys 9-elements for breach report to state.

Implementation Services Requirements

- Project Management – 5 key tasks: Integrated program planning and management; integrated risk and issue management; quality management; status reporting and communications; staffing/resource management.
 - Table 34 identifies key tasks
 - P196 – strategy provided to streamline and accelerate key tasks using standard templates, processes, industry expertise, streamlined governance (based on prior govt projects.) *Infosys' PMO will also closely work with the Training and OCM teams for completing user trainings and ensuring a smooth go-live.*
- Project Implementation Methodology – Infosys IMPACT program methodology. Structured planning workshop with state PMs and leads to develop 7/14/21 action plan (p197) Confirm scope. Jointly understand factors that could materially affect implementation.
 - P199 *To ensure smooth transitions for the business and allow sufficient time for training, each plan has two releases. Each plan has two releases:*
 - 1. *Release 1: Consists of Supplier management, Sourcing and Contract Management implementation*
 - 2. *Release 2: Consists of Buying and Invoicing implementation.*
 - Large, medium, small implementation schedules presented. 4 phases: Prepare; Explore; Realize; Deploy (SAP Ariba common approach)
 - Org chart showing state roles/implementer roles. Includes Ernst & Young Account Exec in Leadership and SASP in Delivery Assurance project advisor, solution architects, module SMEs;– primarily Infosys personnel. State team includes ERP functional support and IT representatives for integrations (bi-directional)
 - P206 *Including SAP Services as part of this delivery will ensure SAP as the product vendor has a stake in the success of this important procurement transformational progress for all participating entities.*
 - Weekly/monthly/quarterly status reporting.
 - Risk management through IDEA-Activate (Infosys) methodology. Six-stage risk and issue life cycle.
 - Onboarding and offboarding process for state's program management and technical resources (p212 – figure 73) *Infosys will support team members by sponsoring any needed certifications and provide continual mentoring.*
 - Quality Management framework and accelerator process. (Six Sigma, PMI, ISO principals)
 - Table 40 p214 – Outline of project deliverables by phase (Prepare; Explore; Realize; Deploy) *Note: Fig 82 SAP Activate merges Explore and Realize, adds Run as last phase.*
 - Definitions provided for key positions/roles. P221-6
 - P. 229 – IDEA-Activate Methodology explained. *Needs clarification – does this overlay SAP Ariba methodology – is the different named phases (5 in activate; 4 Ariba) confusing?*
 - Figure 81 (p230) states advantages for Infosys approach including accelerated design, leveraging prior experiences for risk reduction, shorter implementation.
 - Hybrid-agile methodology. Small scrum teams 6-10.
 - Extremely detailed delivery narrative continues through p264.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Infosys

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Catalog Support Services p265-266
 - Hosted catalogs – parameters set by Ariba team; suppliers submit catalogs; implementation reviews for quality/approves; sets view parameters. **Clarify Infosys vs State membership on implementation team here**
 - Punchout – validation rules provided to supplier; supplier creates catalog/website for punchout; validation conducted against rules. **Clarify Infosys and state roles.**
 - **Clarify if Infosys provides on/offboard on suppliers during implementation or is this state's role during implementation.**
 - Training provided to state catalog managers.
- Data Conversion Services – Infosys Nia ETL AI platform collects and aggregates organizational data – automates repetitive process. Supports web interface for data workflows; uses library of extractors, loaders, transformers and filters. Proprietary 99.99% accuracy claim. Can provide ongoing maintenance.
 - RACI matrix – p268.
 - 5 stage data migration methodology; iterative process working through different disparate data categories (suppliers, contracts, open POs) therefore multiple releases.
 - Data normalization is goal.
- Interface/Integration Development Services – Existing approach for integration development would be deployed.
 - Table 55 outlines activities and deliverables.
 - Tables 56 and 57 categories Master Data and Transactional Data integrations anticipated.
- Organizational Change Management (OCM Services) – Process engages leadership and stakeholders. Detailed philosophy and process.
 - Emphasis on communication. Segments stakeholders by group; change impact matrix for People, Processes, Technology and Policy.
 - Training and Knowledge transfer key to success. Key tents: listening and engagement; delivery and interaction; content retention. P 282.
- Training Services
 - P283 - *Training Needs Assessment: We will apply our training strategy to each of the user groups identified below to determine the most optimal training curriculum and plan for each:*
 - *End Users*
 - *Train-the-trainers*
 - *Suppliers*
 - *System administrators*
 - *State of Maine Help Desk Staff*
 - Definitions for user group needs in Table 58.
 - Employee engagement strategy 20% structured courses,; 30% other learning; 50% experience
 - Onboard – role descriptions; function and technical training – web and instructor-led; role execution job shadowing – system documentation; supervised role execution – proficiency scorecards; post-go live support – command center.
 - Other resources – community forums, Snagit short videos digital quick ref guides; on demand recorded training webinars – self-guided.

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Implementation will coordinate training content, instructor-led training, pilot test training materials, capture feedback.
 - P289
 - *Identify knowledge owners, selecting agency stakeholders to own each of the knowledge objects. Determine who from the agency will own the objects identified for transition. This is where we will leverage our knowledge of the State of Maine's organization, Subject Matter Experts (SME), and project leadership to ensure appropriate owners are identified.*
 - *Select enablers, using our digital learning tools and Knowledge Capture platform to transition knowledge. Select the enablers, establish a joint team including State of Maine personnel and project team members to coach stakeholders, identify SMEs and train the trainers, and focus on on-the-job training.*
 - *Identify metrics, creating sustained momentum to measure the success of our collective efforts.*
 -
- Help Desk Services p290. *IPS has partnered with Allied Digital IT Services LLC (ADSL) to provide Help Desk Services for the State of Maine. Under this agreement ADSL will function as a sub-contractor under the IPS consortium umbrella with IPS providing the governance and vendor management function.*
 - ADSL ISO 20000 certified. 99.9%SLA adherence
 - Detailed assumptions for help desk provided.
 - **P 292** – Help Desk location and staffing- focus on staffing; **location not addressed. Needs clarified.** P298 – references ADSL staff locally based – what is local? Figure 115 references Global Service desk. P299 – ADSL routes based on skills and develops environment SMEs.
 - P298 – describes process for help desk (level 1) support.
 - RACI provided for helpdesk responsibilities – state and vendor. Table 60.
 - Performance metrics proposed or Help Desk ADSL.
 - ESM Café- Servicenow implementation proposal. Efficient navigation; self-help.
 - P200 – ADSL would participate in 180 termination assistance migrating to future system.
- On-Site System Stabilization Support - 90-day hypercare. War room managed by Infosys to answer end user queries. provide functional guidance; triage defects.
 - P301 *During the Hypercare, Infosys Onsite and Offshore consultants who have been part of the core implementation team will be available for post Go-Live support activities and the key staff shall be retained in the team for this period.*
 - After 90 days, transitions to Managed Services team – some project team transfers for transition and knowledge retention.
 - Knowledge transfer is project-long process.

Managed Services Requirements

- Solution Support
 - EPROC-MNGD-1 *SAP Ariba product vendor monitors eProcurement Solution to ensure high availability, response time average. Customers also have access to a Cloud Health Monitoring report for their SaaS tenant upon purchase of Preferred Care subscription.*
 - Support is final step of project.
 - P304-305 *Team Infosys will offer targeted support to key user groups, including:*

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *Procurement Community: Supporting sourcing, contract management and catalogue management users.*
 - *State of Maine Buyer Community: Providing support as needed for users making purchases on a sporadic basis.*
 - *Supplier Community: Providing support to both existing and potential future suppliers.*
 - *General Public: Support the public who may wish to know about a publicly posted tender or other open data.*
- Organizational Change Management (OCM Services) – Change management process described.
 - P306 Change Control Board referenced (CCB) – needs clarification if Infosys has role in this change process – membership/support/technical.
 - P. 308 – references Panaya CloudQualitySuite tool for ongoing UAT. Needs clarification – is this a value add included in purchase price, or recommended add on?
 - Service continuity dependent on cloud vendors in project. P311 describes SAP approach.
- P 324 – email notifications to internal and external customers – using either state’s bulk service or Infosys will implement system.
 - Describes risk management principles achieved through ongoing monitoring.
 - Continuous service model.
 - Training Services – updates will be provided reflecting system changes. (Infosys)
- Catalog support services. – ongoing support – manage hosted catalogs; post with state approval. Life cycle catalog management for hosted and punchout. – Definitions of functions.
 - The Infosys Managed services team will provide the following services to support setup and configuration of hosted catalogs: - Roles
 1. *Monitor status of catalogs uploaded by suppliers and notify State of Maine of any errors.*
 2. *Push catalogs uploaded by suppliers to the State of Maine identified catalog approvers via the system.*
 3. *Activate approved catalogs.*
 4. *Make activated catalogs visible to end users.*
 5. *Setup catalog views to restrict visibility of catalogs.*
 6. *Setup key words and equivalent words*
 7. *If the suppliers do not have the capability or technical proficiency to manage their own catalogs, the managed services team will convert supplier’s catalog content to a format acceptable by the solution and load the files.*
 8. *Deactivate catalogs upon request. 1. Support the State of Maine in verifying connectivity with supplier’s punchout site.*
 2. *Product vendor (SAP Ariba) supports the supplier’s efforts of establishing connectivity between State of Maine’s procurement solution and supplier’s punchout site.*
 - P340 *The following additional services are provided by the managed services team:*
 1. *Support the State of Maine in verifying connectivity with supplier’s punchout site.*
 2. *Product vendor (SAP Ariba) supports the supplier’s efforts of establishing connectivity between State of Maine’s procurement solution and supplier’s punchout site.*
- Help Desk Services – Provided by IPS in conjunction with ADSL establish metrics.
- Transition Out Assistance Services – will be provided if needed.
 - Methodology provided.

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 3/4)

- Founded in 2000
- "Over the last two years Ivalua continued to invest and focus on the public sector by establishing a dedicated Public Sector Practice and fully dedicated team."
- Public Sector team includes "Product Development staff" to "enhance current solution to support public sector" and "develop new products".
- "We view our investment and focus on the Public Sector" to "ensuring our Public Sector customers achieve their goals and objectives"
- Gartner Magic Quadrant
 - i. Sourcing Applications: 2015, 2017, 2018
 - ii. Procure-to-Pay: 2019, 2020
- Forrester Leader
 - i. Supplier Risk/Perf Mgmt: 2018
 - ii. E-Procurement: 2019
 - iii. Source to Contract: 2019
- World Procurement Awards "Best P2P Solutions Specialist Provider": 2019, 2020

2. Previous Projects

- City of New York: "Full-suite Ivalua implementation", "SRM, eSourcing, Contracts & Catalogs, eProcurement, Invoicing and Business Intelligence". Included SSO and Supplier integration with finance system. (pg. 5)
- State of Maryland: "Ivalua's complete platform", "1.) Public Portal, 2.) Supplier Management, 3.) Solicitation to Bid Management, 4.) Strategy & Analytics, 5.) Contract Management, 6.) Procurement, and 7.) Invoicing". "Stood-up within 4.5 months". (pg. 5/6)
- State of Ohio: "Initial deployment" to "12 early adopter agencies" of full suite with "21 key integration points". Maintaining the solution for 130 State Agencies, 24 Cabinet Agencies and 12 Early Adopter Agencies. (pg. 6)
- State of Alabama: "Selected Ivalua's Source to Pay solution because of the flexibility of configuration, and the reporting and dashboard functionality". (pg. 7)
- Los Angeles Dept of Water/Power: "First phases of the project were implementing the Solicitation and Supplier Information Management solution which is part of the Ivalua full Source to Pay platform". (pg. 7)

3. Subcontractors

- No subcontractors.
-
-

4. Organizational Chart

- Organization chart does represent an implementation project and includes both State and Contractor positions. Though generic it does reflect core/key positions.

5. Litigation

- No litigation.

6. Financial Viability

- D&B report not provided. RFP required "3 most recent" Financial Statements but Ivalua only provided 2018 & 2019 reports. Don't know if 2020 hasn't been completed but do note that the 2018 report does show 2017 values (noted below).
- **2017:** "Net Income" shows positive 1.192M euros (pg. 20). "Closing cash position" was 29.599M euros (pg. 22)
- **2018:** "Net Income" shows loss of 870K euros (pg. 20). "Closing cash position" was 31.405M euros (pg. 22)
- **2019:** "Net Income" shows loss of 7.615M euros (pg. 29). "Closing cash position" was 74.829M euros (pg. 31)

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements, pg. 3-7 :

- Single Point of Entry: "has a single landing page when a user logs in. At this point user/profile-specific content is displayed." (pg. 3/4)
- Smart Routing: "Workflow routing is attached to any object in the system". "determine the workflow routing based on business rules for each object." (pg. 4)
- Compliance: "lvalua understands that each organization has their own procurement code they must follow". System has the "flexibility to tailor the solution to meet the needs of individual public organizations" with a "robust configuration layer that allows organizations to add new fields, tailor business rules, add alerts, and managed workflow for your organization". (pg. 5)
- Portal: "they will have one place to manage all their activity and actions throughout the procurement lifecycle". "configurable homepage dashboards, users will be able to quickly see and take action on pending tasks. They will also have the ability to personalize this page to meet their needs". "collaboration tools such as internal blogs, discussion forums, and comments through the process". (pg. 5)
- Open Marketplace Environment: "find it no matter if it is from an internal catalog or an external supplier catalog". "accommodates hosted catalogs (catalogs managed by the organization), punchout catalogs (catalogs managed by retail sites)". "powerful search 360 functionality" which allows "search hosted and punchout catalogs side by side". (pg. 5)
- Integration: "robust integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on.". "multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.)". "includes hundreds of data mapping formats and standard integration templates". (pg. 5/6)
- Workflow: "workflow allows for easy work queue / process management and rule-based assignments.". "Client administrators are given latitude within the tool to adjust approval thresholds and approval assignments without needing to configure". (pg. 7)
- "over 50 different controls per workflow step including even the specific notification methods and addressees and "callback" support that can be used to invoke scripted actions like integration web services calls or cross-workflow signaling ". (pg. 7)
- Document Management: "functionality based on a common data model and a unified code base across all source-to-pay solutions". "consistent access to every data element, workflow element, supplier record, document management, UI functionality, and automation component."
- Reporting: "have an analytics layer across all our solution areas (source-to-pay) with numerous out of the box reports and dashboards as well as easy capabilities for users to create their own

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

reports / dashboard". "users can save their personal reports within their own dashboard as well as share with others, as necessary." (pg. 7)

- Configurable: "Coding is not required to make changes to tailor the solution to meet the needs of each client." Create new fields, Change field names, Add tooltips/watermarks/regex, Conditional logic on fields, Mandatory fields, Tailored workflows, contract templates, standard documents. (pg. 6/7)
- Transparency: "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution". "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution."

User Experience, pg. 7/8 : - Response did not address "Wizard-driven capabilities", "Mobile access/use" or "Workload management" to re-assign work.

- "Homepages are unique per profile, but also can be configured by the individual user." "includes quick links and shortcuts to frequently used objects."
- "access their pending workflow tasks directly from their home screen"
- "Each user is given one or multiple roles in the system which is tied to a series of authorizations. These authorizations will dictate what the users can see and do within the solution."
- "Users can also mass reassign their workflow tasks to other users using the delegate function"
- "Users or administrators can also set-up out of office forwarding for users."

Bidder Best Practices and Roadmap, pg. 8-11 : Did not address "constantly assess and recommend opportunities to reduce costs".

- New Releases: "Major Software Product releases are delivered by the Ivalua R&D division twice a year." "Multi-instance SaaS, "client to decide which major version to choose" and "when to upgrade". "Activable Features which enables customers to take advantage of new innovations in their versions without needing to upgrade"
- Latest Technologies: "specific standards that our platform should adhere to for a specific industry, for example, we achieved the security status of being FedRAMP Ready due to our work in the US Public Sector". "leverage advanced technologies such as machine learning, natural language processing (NLP) and more."
- Timely Updates: "Once a customer decides to schedule an upgrade, together with a dedicated upgrade support team, the customer success manager, and our R&D team, we work to ensure that upgrades happen in the timeframe laid out."
- Alternate Approaches: "we have built up significant in-house knowledge on best practices within the public sector". "During the implementation phase, Ivalua together with our partner community will always be there to guide customers towards better, more effective solutions, processes, and approaches, based on our experience." "customers themselves have a high degree of ownership over the solution, to be able to make changes and evolve as needed, without having to rely on us or our partners".
- Roadmap: "We have a dedicated Public Sector team that interfaces with R&D to ensure necessary and innovative Public Sector requirements and functionality are prominently featured on the roadmap.". "Key areas of investment are focused on":
 - o Enhance Mobile experience: Already have "Progressive Web Apps" for "workflow actions, notifications/alerts and more capabilities". "year to improve and enhance this around contracts, invoicing, supplier mobile capabilities. "
 - o Invoice/Payments: "Enabling the ability to execute payments within Ivalua"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- AI powered Contract Lifecycle Mgmt: “leveraging AI” for a “more guided, collaborative, and intelligent experience”.
- Supplier Risk/Performance: add new features to existing capabilities.
- Security: Already FedRAMP. “evaluate additional threats and standards (like StateRAMP) to ensure...pursuing the appropriate certifications”

Innovations and Value-Added Features/Services, pg. 11-13:

- Help Desk, pg11/12: Level 1 help desk for suppliers/internal users. CONCERN, response refers to Help Desk as “not contemplated in the RFP” however there are specific req’ts for this in Implementation Services and Managed Services.
- Advanced Services Procurement, pg 12: Contingent labor purchasing. “external labor with an efficient engagement and follow-up channel”. “Talent channels... selection process”. “compliance with policies/legislation... secure re-engagement process”. “full visibility of service quality... full visibility of service quality”. Monitor through “alerts, timesheet, and milestone approvals.”
 - Service profile RFx types
 - Configurable profile seniority
 - Configurable working duration
 - Work assignment
 - Time/Material purchase request
 - Timesheet receiving (hours, days, percentage)
- Expenses, pg. 12/13: “Expense Stream handles the flow of claims and their images into the Payables team”
- Vendor Master Management (VMM), pg. 13) “capture, cleanse and maintain clean and accurate supplier master data” “solution can integrate with various ERPs to consume, aggregate and cleanse data using smart deduplication and merge capabilities before redeploying the pristine and accurate data back to those systems.” **NOTE:** unclear how this VMM is different from the ‘in-scope’ Vendor Enablement and vendor integration work req’d in the RFP.

Customizations/Extensions, pg. 13/14:

- “Ivalua SaaS platform relies on configuration, not custom code”
- “Ivalua does not make coding customizations specific to individual clients; all coding changes on the Ivalua platform are part of their release cycle and are by definition part of the baseline product”
- “Ivalua maintains a copy of the organization’s Ivalua instance.” “upgrades are first applied to that solution, then will be tested, and released, and are subject to the entire cycle of testing, approvals, and quality assurance that is part of our Software Development Life Cycle (SDLC).”

Alternative Funding Models, pg. 14:

- “not proposing an alternative funding model at this time”. “open to discussion”

Contract Transition and Flexibility, pg. 14:

- “willing to enter into good faith discussions with Participating Entities that wish to explore transitioning their current contract “

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Functional Requirements

General Functionality, pg. 15/16:

- "Source-to-Pay suite in the market which includes Public Portal, Supplier Risk & Performance Management, Sourcing, Contract Management and P2P processes, standard integrations and extensive system administration and reporting capabilities"
- **NOTE:** see detailed notes for Service Level Agreement req'ts. The Ivalua Service Level Agreement sets a limit on the total storage for attached documents ("user-uploaded files") which includes all attachments to Requisitions, Orders, Receipts, Invoices, Vendor Accounts, Vendor Improvement Plans, Solicitations, Solicitation Responses, Contracts... all records in the system. This limit is either 500GB or 1 TB depending on the "Service Level" in the contract. **NEGOTIATIONS:** suggest getting both the Services Level set in the Master Agreement for all potential Participating Entities AND getting the storage level increased.

RTM

- "POTENTIAL WEAKNESS, GEN-15: Transaction print formats are based on "the layout of the screen" and to have "additional templates" for printing format requires "additional effort".

Supplier Portal, pg. 16-18:

- "free supplier portal where suppliers may perform self-registration and other activities with their customers"
- "have unlimited suppliers with unlimited users registered to do business"
- "register with basic information such as their tax identification number, email address, and company name to establish an account" then they "will have access to their supplier portal" to "manage all their activity with the organization from an integrated location"
 - o Manage their account information, user roles & users
 - o Submit contract usage reports
 - o Respond to sourcing events
 - o Manage/redline contracts
 - o Upload catalogs
 - o View orders
 - o Create advanced shipping notices
 - o Create invoices
 - o View their performance
 - o Collaborate on improvement plans

RTM

- Meets req'ts
- One req't needs clarification.

Supplier Enablement/Management, pg. 18-25:

- **NOTE,** registration is a two step process. Create basic account for one user, then that Admin user needs to log into the system to set up user roles, other users and complete the rest of their registration information that will be needed to create a supplier record in the finance system and award Contracts/POs to the supplier. Primary capabilities of a Basic registration allows them to managed their account and bid.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "conditional logic can be utilized to tailor the registration page to specific information required by type – such as US vs. non-US"
- "Fields captured through the registration process will be tailored to your needs"
- "submits their registration it is processed through an automated workflow". "workflow process and acceptance/rejection criteria will be established by each client"
- STRENGTH: "onboarding progress tracker" provides "quick view into the remaining items required to complete their activation" (pg. 20)
- Integrations "to external systems in batch processes or in real-time to verify profile information or bring in data from external sources"
- Can "maintain and store documents within their profile"(account). "organization can specify specific documents that are required by the supplier to complete their enrollment" (pg. 21)
- "system can track expiration dates of the documents and trigger reminders to both internal and supplier users when those documents are nearing their expiration" (pg. 22)
- "internal users will also be able to manage the supplier's information, activity, risk, as well as their performance" (pg. 24)
- Suppliers update their accounts by submitting a 'Change Request' (pg. 24)
 - o Change requests are auditable/trackable down to the field level
 - o Can be routed to the workflow for internal approval

RTM

- WEAKNESS, VDR-15: Duplicate registrations are not prevented at the time of registration. They are identified as part of workflow, if auto rejected, vendor is notified after the fact, not while completing the registration. Otherwise the State must resolve the duplicate.
- POTENTIAL WEAKNESS, VDR-19, 20 & 24-27: State will have to license the 3rd party system for validating IRS TIN/Name.
- POTENTIAL WEAKNESS, VDR-39: Response seems to indicate a "score carding" feature which may not provide the automated performance reporting on the metrics identified in this requirement.
- Two req'ts need clarification.

Buyer Portal, pg. 25/26:

- "Once the user login they will be directed to their homepage" which has dashboard that is unique to the user based on their role.
- "users can also add new aspects to their homepage or rearrange the webparts on the screen"
- Users are "given one or multiple roles" which has "authorizations" that "dictate what the user can see and do".
- Users also assigned a "perimeter, which corresponds to the agencies/departments/division they support and/or the commodities they support" which will "further limit the user's view into on seeing or editing objects".

RTM

- STRENGTH, BPRT-4: The capability to for users to be able to "change the layout and reports" on their dashboard is a significant benefit to users.
- One req't needs clarification.

Need Identification, pg. 26/27:

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "provides users the ability to initiate any procurement action from a single spot through the platform."
- "provides a powerful and flexible workflow engine that not only invokes approval flows, but also provides the ability to invoke processes" that "invoke business processes allows procurement policies and regulations to become part of workflow"
- "will guide the end user to begin any type of procurement activity by clearly identifying and outlining the process and steps that need to be taken"

RTM

- Meets req'ts
- Two req'ts need clarification.

Request through Pay, pg. 27-33: NOTE, response did not address the req't for "access to external retail marketplace products".

- "All purchases within the lvalua solution will begin from a purchase request within the tool"
- "Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions"
- STRENGTH: purchase requests include an "Internal blog to communicate with stakeholders" (pg. 28)
- Workflow (pg. 29)
 - o "uses a combination of algorithms and user approval to navigate through the approvals". "define conditional logic to determine when and who should be approving each requisition"
 - o "can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases"
 - o "can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase"
- "order is transmitted to the supplier through their email, including a PDF version of the order. It can also be extracted and printed". NOTE: Tech Proposal did not address electronic order transmission (EDI/cXML) however this capability was acknowledged in RTM PO-17.
- "Receipts can be created in multiple ways, from a purchase order, from scratch, or from a supplier entered Advanced Shipping Notice". Receipts can be workflowed for review/approval. (pg. 30/31)
- Invoices
 - o "Invoices can be created by PO flip, from scratch, EDI/cXML transmission, OCR capability". (pg. 31)
 - o Invoices are workflowed for review/approval. (pg. 32)
 - o "system will automatically calculate the three-way match based on ordered, received, and invoiced amount, and will display alerts" (pg. 32)
 - o "flexible to accommodate 2-way match if specific commodities do not require a receipt in order to be paid." CONCERN, it may be that 2-way match is decided based on a commodity code which could be too general to fit the situations a State/Entity needs to have supported.
- "Once the invoice is fully reviewed and approved, it will trigger an integration to the ERP for payment". "will push an ok-to-pay file to the ERP"

RTM

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, PRD-7: Purchase requests with a future release date for the Purchase Order required a manual step to release the PO once the date has passed, it is not automated.
- STRENGTH, PRD-8: The capability to communicate/collaborate with other users "under the request document".
- POTENTIAL WEAKNESS, PRD-13: There is no automated functionality that will include text or attachments based on a commodity or other field value.
- STRENGTH, PRD-19: The State will have access to "Ivalua's Design Mode, Workflow Engine and Alerts & Notification toolbox" which will provide the State with self-service capabilities for configuration.
- STRENGTH, WRK-1: The workflow functionality provides both routing rules and approval rules in the single rules engines. Also allows you to build SQL statements to address complex scenarios.
- STRENGTH, WRK-2: The "whiteboard-like" user interface to design workflows.
- STRENGTH, WRK-6: The capability to "include SQL to route requisitions" is significant capability to address exceptions such as the need to have "by-pass conditions".
- STRENGTH, WRK-15: The capability to set up "specific messages" for each step.
- STRENGTH, WRK-22: "State can add fields to be auditable" provides additional flexibility to meet any changes in State audit needs.
- WEAKNESS, PO-15: System does not have the capability to have two versions of a printed purchase order.
- POTENTIAL WEAKNESS, PO-17: eFax of orders "is not currently supported".
- NOTE: Ivalua did not understand that the functionality desired is not the same as bank administration of user Pcards.
- "POTENTIAL WEAKNESS, PC-8: Pcard reconciliation currently can only be provided ""as a customized solution"" with Ivalua's expense module which is not included.
- STRENGTH, RC-17: Fixed asset receiving fields can be available for only "certain types of goods" instead of having to be on the users' receiving screen when they are entering any type of receipt.
- STRENGTH, RC-18: Creation of an "exception" to document an receipt issue and include give "corrective actions".
- Ten req'ts need clarification.

Catalog Capability, pg. 33-35: NOTE, Technical Proposal response did not address the req'ts to "provide access" to "external internet retail or commercial markets of goods/services" or access to "non-contract Suppliers offering goods and services".

- System supports both "internal and external (punchout) catalogs".
- "view catalogs are limited to the user's organization scope" (pg. 33) NOTE: scope = combination of Role/Authorizations/Perimeter/Commodity restrictions assigned to a user.
- Suppliers can "self-service" manage their catalogs by uploading them to the system. Done via excel templates. After upload "system does an automated format check". (pg. 34)
- "routed through an approval process for an internal user to validate" with "side-by-side comparison of old vs. new pricing" (pg. 34)
- "internal users can also upload catalogs on a supplier's behalf"
- "Search 360" (pg. 35)
 - o "predictive and fuzzy search capabilities"
 - o "can also search any field"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “item tags” to “provide visual indicators” on search results to “identify preferred, discounted, or emergency items”. Tags can be ‘prioritized’.
- “has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal lvalua catalog”

RTM

- STRENGTH, CAT-24: The capability to route catalogs for approval based more than a user having a role as catalog approver or buyer responsible for a contract. Specifically, can route based on "region, cost center, commodity types, etc."
- STRENGTH, CAT-34: The Search 360 functionality will automatically search punchouts sites as well as hosted catalogs to present both results. Otherwise the user has to search Hosted Catalogs in the system and then go to each punchout individually to do their search.
- No req'ts need clarification.

Sourcing/Bid Management, pg. 36-44:

- “solicitation (BPM) type which drives which tabs and parts of the solicitation process are required.” (pg. 36)
- “can accommodate a range of solicitation methods, from very simple quick quote events to multi-phase RFPs with multiple envelopes”. (pg. 36)
- “Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities” and “can be added by searching the supplier database”. (pg. 36/37)
- Documents Tab: can have unlimited number of attachments, “standard organization documents” and “solicitation owner can upload” docs.
- STRENGTH: “Documents can have workflows associated with them and accommodate versioning.” (pg. 37)
- “Bids are protected through lvalua’s sealed bid functionality” (PG. 38)
- Questionnaires: (pg. 38/39)
 - “questionnaire capability, non-price components can be captured from the supplier”.
 - “Templates can be used”
 - “ability to make a question required, the option to add a comment or attachment to clarify the answer, or to allows more than one response to a question. Conditional logic can also be added to questions to create if-then statements that will determine the visibility of questions based on previous responses.”
- Pricing grids (“item grid”) can have templates to be “automatically applied to the event”. Columns on the grid can be “internal” (only State/Entity user can see) or “external” (Supplier can see). (pg. 39)
- Solicitations have “workflow to approve and release”. Once approved “user can manually send out the solicitation or have it released automatically at the opening date and time”. (pg. 40)
- Public Portal: (pg. 40)
 - “public portal allows users without an account to view open and close solicitation, active contracts and facilitate the submission of public facing forms if needed.”
 - “lvalua can also integrate to the organization’s website for posting of events.”
 - “public view of the solicitation includes all attributes of the solicitation including general information, documents, questionnaires, and price lists. In addition, the public solicitation page can also post bid tabulations and award posting once the bid due date and time has been reached and an award has been made.”

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Responding:
 - o Suppliers can "craft their response within the system or can download the entire solicitation to a zip file to view and response offline if needed." (pg. 41)
 - o Supplier options: "create proposal from scratch, copy forward a previously submitted proposal, cancel a proposal in progress, withdraw a proposal" (pg. 42)
- Analyze and award: (pg. 43)
 - o "view side by side comparisons of items and qualitative information for two or more suppliers."
 - o "can also select 'award strategies' which will apply a selected algorithm to create the award"
 - o "review their savings tracking that is based on the target and reference price"
 - o Awards have workflow/approvals capability. (pg. 44)

RTM

- STRENGTH, SRC-28: The Discussion Forum feature allowing messaging to "private or public" with "chat in real-time" for auctions.
- POTENTIAL WEAKNESS, SRC-25: No check-in/check-out capabilities for "documents, Terms/conditions and templates".
- STRENGTH, SRC-48: "drag-and-drop capabilities" as the user interface for creating workflows is more effective than other, more common options.
- WEAKNESS, SRC-66: System does not provide a means for a user to add "un-registered Vendors" to the "generated Vendor list" of a solicitation.
- POTENTIAL WEAKNESS, SRC-68: System does not support eFax.
- POTENTIAL WEAKNESS, SRC-76: The system does not OOTB provide capabilities to post to the "State's public procurement website".
- "POTENTIAL WEAKNESS, SRC-80: System does not have functionality to require vendors to provide ""basic"" information when downloading a solicitation document from the public website. Also, eFax is not supported."
- POTENTIAL WEAKNESS, SRC-83: System does not have a means to 'conduct pre-response/pre-proposal conferences'. Users would have to provide a link to a external webinar system that is not part of the eProcurement system.
- WEAKNESS, SRC-105: System does not provide notifications to vendors when submitting a response to a "set-aside solicitation and they are not a certified MBE".
- Seven req'ts need clarification.

Contract Management, pg. 44-48:

- "contract record within lvalua captures all aspects of contract information, documentation, activity, and performance within the single record." (pg. 45)
- "system will automatically trigger reminders when the contract is nearing expiration" (pg. 45)
- "Different contract types can determine what field requirements, workflow, and alerts are relevant to the contract being created." (pg. 45)
- Contract documents: (pg. 46/47)
 - o "documents tab captures all documentation associated with the contract through attachments".
 - o "document has a 'type' associated with it that can categorize the documents"
 - o "alerts can be triggered to the user if documentation is missing from the contract record or is nearing expiration"

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH: “has a built-in authoring tool that will allow users to write and redline contracts directly in the Ivalua solution”. “Redlines are tracked from user to user with the ability to compare previous versions of the contract side by side”. “offers a native integration to Microsoft Word, so users redline in the Word can sync their version back to Ivalua”. With “workflow capability, the “authored document can be passed back and forth between users to facilitate redlines, versioning, and approvals”.
- “any subcontractors and distributors that are being used by the prime supplier on the event”.
- “system can also trigger a subcontractor report to prime suppliers “ (pg. 47/48)
- “accommodates a standard integration with multiple eSignature tools, including DocuSign, Adobe Sign, and Universign.” (pg. 48)

RTM

- POTENTIAL WEAKNESS, CNT-7: System only has check-in/check-out capabilities for "documents authored within Microsoft word". Does not provide this for other documents or templates.
- STRENGTH, CNT-25: Authoring contract documents with MS Word is a significant capability.
- STRENGTH, CNT-50: The history feature capturing "at the clause level" is a significant additional feature.
- WEAKNESS, CNT-51 through CNT-63: The Ivalua "Public Contract Browse" feature cannot be modified to meet State needs/req'ts without "Ivalue security review or custom code".
- Three req'ts need clarification.

Vendor Performance, pg. 49/50:

- “users can create performance assessments against their suppliers or contracts.”
- “can trigger alerts to users if a supplier is consistently performing poorly.”
- “Templates for performance criteria are stored within Ivalua for users to respond to questions related to the supplier’s performance”. Weights for each question determine a total score.
- “Completed performance evaluations can be routed through a workflow if additional review or approval is needed”
- “ability to track exceptions and collaborate with suppliers to address these exceptions”
- “exception documents the issue or non-conformance and the severity, tied to the triggering event”
- “supplier is notified of the exception, allowing them to respond and actively manage any corrective action associated with the exception”
- “workflow to manage each step of the process” of exception management. “workflow can guide end users to collect documents and collaborate with the supplier to mitigate the identified issue.”
- Improvement Plans: (pg. 50)
 - “creating tasks that will lead to overall supplier improvement”
 - “typically tied to an exception”
 - “consist of a list of tasks that can be created from a template or individually”
 - “Each task is assigned to a user with assigned due dates for both internal tasks and supplier actions”
 - “Suppliers can access their improvement plans and update the status of their tasks”

RTM

- WEAKNESS, VPE-2 thru 12: System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data.
- Three req'ts need clarification.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Purchasing/Data Analytics, pg. 51-54:

- "three different types of reporting with the lvalua solution, ranging from simple excel extracts to data visualization dashboards" (pg. 51)
- "Importing data from an external system can be accommodated."
- "over 100 out of the box reports" "that can be filtered and drilled down"
- Super users can configure additional reports
- Ad Hoc Reporting: (pg. 51)
 - o "Any browse page within lvalua can become a report"
 - o "search and filter on any criteria" and "export their results into excel for a quick report"
- Queries: (pg. 51/52)
 - o "Excel based reports that are run via SQL statements in lvalua's reporting module"
 - o "can combine data from multiple modules within a single report as well as conduct calculations"
 - o "parameters can be set up so users can filter the view of the data before extraction"
- Analysis Reports: (pg. 52/53)
 - o "provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users"
 - o "drill down on source data and apply filters to get a comprehensive view of data"
 - o "users can easily create their own dashboards or rearrange existing ones."
 - o Standard reports "can also be embedded" within dashboards.
 - o "New analysis can be built by using a template or by using an analysis builder"

RTM

- STRENGTH, PDA-1: The spend analysis and PBI modules described is more robust than expected and provides some capabilities beyond what was required.
- WEAKNESS, PDA-32: The system reporting tool does not have a means to publish reports on an "internal or public website". Can only make reports available within the system itself.
- Four req'ts need clarification.

Technical Requirements

Availability, pg. 55: Meets req'ts.

- "accessible 24 hours a day, 7 days a week"
- "guarantee by Hosting SLA an uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours"
- "co-locates its production and DR system in state-of-the-art data centers" "with fully redundant subsystems and compartmentalized security zones"
- "data centers have: Uninterruptible Power Supply (UPS, Diesel Generator); Redundant heating ventilation air conditioning and all components are fully fault-tolerant including uplinks, storage, chillers, HVAC systems, etc. Everything is dual powered."

Accessibility Requirements, pg. 55: Does not meet. NOTE: response indicates that work is underway to become compliant but no information was provided to indicate when.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "accessibility audit and compliance are broken into 3 manageable areas, corresponding to very distinct user typologies (internal, external, and anonymous),"
- "Ivalua has completed VPATs which can be provided upon request."

Audit Trail and History, pg. 56 & TECH-1 thru 5: Meets req'ts.

- "provides robust audit and logging capabilities"
- User logged on... "all actions and activities are registered, logged and time stamped."
- Every transaction "is part of this logging effort"
- Fields have an "auditable checkbox" to mark that the field to have an audit trail.
- "audit train can be produced in reports"
- "approval history shows who validated/ actioned the previous steps and who will validate the current step"
- "mail history frame shows the history of notifications/ emails"

RTM

- Meets req'ts
- One req't needs clarification.

Browsers Supported, pg. 56/57:

- "Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari."
- IE: all still supported by MS. MS Edge, Chrome, Firefox: last 3 major releases
- Response did not address req't to support "any browser that is ranked as more than 10% of web traffic"

User Accounts and Administration, pg. 57 & TECH-6 thru 20: Partially meets. Response did not address the req't to be able to delegate "administration responsibilities" of "specific functions and organizations" and did not properly respond to TECH-20.

- Access to "application pages and functions are controlled by profiles, authorization, and perimeters."
- "a user has access to data and can transact across a certain region or other logical portion of the enterprise" or "a user has access to certain features and functionality" "or a combination of both."
- "User roles and user access to Ivalua Solution are defined in the application through the administration components" by "application administrator(s)".
- Option to "limit data access of business objects on a per user basis" which would allow restrictions for situations like "only access PO of the organization" that the user belongs to.
- response did not address the req't to be able to delegate "administration responsibilities" of "specific functions and organizations".

RTM

- Meets all req'ts except TECH-20 where the response did not address the actual req't to provide searchable access to all of the roles, permissions and privileges setup/available in the system. Instead response described the capability to search among all User Profiles.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Three req's need clarification.

User Authentication, pg. 57/58 & TECH-21 thru 25: Partially meets. Response did not address req'ts for Federation and Identify Proofing.

- "supports multiple authentication schemes including:
 - o Login / password authentication
 - o Single Sign On (SSO) SAML 2 Web based authentication standard
 - o Two-factor authentication
 - o Reverse Proxy / IIS Agent based authentication (CA Single Sign On, formerly CA Site Minder)"
- "password rules are fully customizable"

RTM

- Meets req'ts.

Federated Identity Management, pg. 58: Meets req'ts.

- "Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers."
- "only require one ID and password to access the full solution, with support for auto-provisioning of roles and permissions"

Data Conversion, pg. 58/59 TECH-26 thru 34: Partially meets req'ts, see comments for TECH-28 &30. However CONCERN, the Technical proposal does not include "historical transactional data conversions" in the standard scope/costs for a project. Proposal is to determine scope/costs "as part of the implementation".

- "will conduct a data assessment to determine the data requirements
- will be established identifying the data conversion scope for the project
- "For historical transactional data conversions, a further assessment will be performed to determine the requirements, project scope, effort, and cost required to perform these conversions
- "will perform the data conversions which will include a methodology to perform several iterations of conversion in small batches to test and validate the data, along with monitoring of performance and quality before the actual production conversion takes place

RTM

- POTENTIAL WEAKNESS, TECH-28: System does not provide an automated means to load/convert active solicitations from an existing system.
- POTENTIAL WEAKNESS, TECH-30: System does not provide an automated means to load/convert Vendor performance data from an existing system.

Interface and Integration, pg. 59/60 & TECH-35 thru 60:

- Integration strategies include unidirectional or bidirectional data flows using batch, asynchronous or synchronous interfaces.
- integration module includes comprehensive format definitions, rules-based transformations, and validated loading of data.

RTM

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Meets req'ts except TECH-60 where response did not address the req't to have "automated failure recovery".
- Two req'ts need clarification.

Office Automation Integration, pg. 60/61 & TECH-61: Meets req'ts

- supports all file types as attachments
- Excel support across the sourcing process
- reporting tools natively export to MS Word, MS Excel, and PDF.
- contract tool we can import MS Word documents and break them into clauses
- contract data can be exported into Word or PDF formats

Mobile Device Support, pg. 61 & TECH-62: Meets req'ts.

- "is a fully responsive HTML application"

RTM

- Meets req't.

Mobile Applications, pg. 61 : Does not meet.

- POTENTIAL WEAKNESS, system does not have a Mobile App. Relies on the system being a "fully responsive" application for use on mobile devices to give access to the entire system.

Data Ownership and Access, pg. 61: Meets req'ts

- Customer is "data owner and data controller"
- Customers can "directly export data using features available" in the system

Date Retention, Archive and Purge Considerations, pg. 61/62 & TECH-63:

- "lvalua does not delete or modify customer data, unless requested by the customer to do so
- "deployment allows the implementation project teams to configure when and what frequency to run the offline archiving functionality

RTM

- Meets req't.

Disaster Recovery Plan, pg. 62/63 :

- "has established a Business Continuity (BC) and Disaster Recovery (DR) Program
- "plan is reviewed and approved by the management annually
- "Program is based on ISO/IEC 22301 standard framework
- "Disaster Recovery Plan is based on a fully duplicated and hot-standby infrastructure".
"Replicated web servers & application servers, replicated database backups and redundant support service"
- "contingency plan includes": " Geographically separate sites, different hosting/internet service providers, recovery site service level equal to primary site.
- "Maximum recovery time can be as low as 4 hours **with the Platinum package**". CONCERN, need to lock in the "package" so there is a specific commitment to recovery time included in proposal and potential contract.
- "DRP plan is tested at least once a year
- Incident Response program "reviewed and approved by the management annually".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Customer notifications of breaches “within seventy-two (72) hours – unless a shorter time is specified in the contract”. NOTE, suggest making sure that the breach notification time limits in any agreement are at least negotiated/locked-in or req’d to meet the notification req’ts specified later in this Security Req’ts section of the RFP.

Solution Environments, pg. 63 & TECH-64 thru 68: Partially meets. Training environment is not included. Need to NEGOTIATE to have Training environment include at no additional cost.

- “Each client will be provided at least 3 environments”
- “can also support the need for a training or other additional environments. All of these “extra” environments may come with additional maintenance fees”

RTM

- POTENTIAL WEAKNESS, TECH-65: Only the “acceptance environment” is “integrated” for testing. The Training environment does have integration.
- One req’ts needs clarification.

Solution Technical Architecture, pg. 63-65: Meets req’ts except response did not provide the req’d information to describe development tools, languages and techniques “used in developing application modules”.

Solution Network Architecture, pg. 65-67: Meets req’ts except response did not address req’ts to provide a diagram of the network architecture.

System Development Methodology, pg. 67/68: Partially meets req’ts.

- Did identify Development Methodology as “based on Agile methodology” and state that they “embeds Quality Assurance into the ongoing development process”. However, response discussed the implementation work to configure, test, launch and manage configuration changes for a customer but did not address the req’d detail regarding the following in context of the system development practices they follow with building their software solution:
 - o Testing processes/tools/methods
 - o Stress testing
 - o QA assurance program
 - o Config/Change Mgmt for application development.

Service Level Agreement, pg. 68: Response did not “review and indicate compliance” with the RFP SLA document.

- “lvalua offers its own standards and choices between service levels”
- “RTO/RPO and other infrastructure add-on services can be flexibly added.”
- “guarantees by Hosting SLA an uptime of 99.8% outside of scheduled maintenance”
- lvalua SLA doc
 - o No SLAs for implementation period
 - o Service Credits cannot exceed “25% of the Monthly Fees”
 - o “Uptime” definition used in the Availability formula is not ‘really’ defined.
 - o Part of failing to meet SLA is “Customer was negatively impacted” which is specifically (“i.e.”) defined as “attempted to log into or access the Cloud Service and failed”. So the only concept of down is if the entire system is not available for users to log into. Doesn’t matter whether the functionality is working or not once logged in.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Service Credits can only be applied to “future Professional Services Fees”, which is not defined, and they expire in 12 months.
- Attachment A of the SLA shows 3 Service Levels which sets both the associated SLA response times but also sets a limit on the “Allocated Storage” which is the limit across the entire system for how much storage is allowed for any type of “user-uploaded files” which includes all attachments to Requisitions, Orders, Receipts, Invoices, Vendor Accounts, Vendor Improvement Plans, Solicitations, Solicitation Responses, Contracts... all records in the system.

Security Requirements

Cloud Security Alliance (CSA) Compliance, pg. 69: Meets req't to complete CAIQ.

Security and Privacy Controls, pg. 69: Partially meets.

- WEAKNESS, lvalua is not currently in compliance with NIST (SP) 800-53. However they are "currently in the process of validating" to this standards at "Moderate" risk controls.

Security Certifications, pg. 69-70: Meets req'ts. However, note that they are not "currently audited for PCI-DSS compliance" but do have cardholder data controls in place "in accordance with the PCI-DSS standards. Also note that they are "FedRAMP ready".

Annual Security Plan, pg. 70-76: Generally meets req'ts however discussed most req'ts at a high level instead of providing detail.

- POTENTIAL WEAKNESS, Annual Security Plan, Encryption Data At Rest, pg. 73: Encrypting data at rest MAY NOT be part of their standard offering. Their HSM module/tool for this is a "paying option". CONFLICT/NOTE: in the Encryption section it states that "Data at-rest and in-transit is encrypted" however in the 2nd paragraph of this section it refers to "HSM-based encryption for data at rest" as a "value-added service (paying option)". So how can data at rest be encrypted as a standard for the Solution but yet be a "paying option"?

Secure Application and Network Environment, pg. 76-79: Meets req'ts though the detail provided was not comprehensive for the RFP listed req'd topics though some were addressed in previous Security sections of the response.

Secure Application and Network Access, pg. 79-82 & SEC-1 thru 5: Meets req'ts in RFP doc but has weakness in regards to some of the RTM Security req'ts.

RTM

- POTENTIAL WEAKNESS, SEC-1: System can track usage by user account, not device.
- WEAKNESS, SEC-3: System does not provide an admin capability to "force logout/end specific user sessions". Only has an auto logout feature to force all actives users out of the system.
- POTENTIAL WEAKNESS, SEC-4: System does not use "persistent cookies".

Data Security, pg. 82-85: Meets req'ts. NOTE, Risk Mgmt discussed in Annual Security Plan section on pg. 76.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Personally Identifiable Information Protection, pg. 85/86: Meets req'ts, however did not discuss compliance specifically for "Federal PII" requirements.

Security/Privacy Issue Occurrence, pg. 86: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

PII Data Actual/Attempted Access or Disclosure, pg. 86/87: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

Security Breach Reporting, pg. 87: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

Implementation Services Requirements

Project Management, pg. 88-90: Partially meets req'ts. Overall, details were high level without sufficient detail to fully assess the project management methodology/approach. Response did not address

- implementation plan development
- deliverable management
- risk assessment/mitigation
- issue management
- Bidder's staff responsibilities.

Project Implementation Methodology, pg. 88-90: Partially meets.

- Fig. 69, pg. 89: WEAKNESS, Functional teams has too few Ivalua resources whereas the State/Entity resources are more extensive. Implies that the State/Entity will be carrying more work than the Ivalua team. For the Functional Team would expect to have an Ivalua Lead, Testing Lead/Analyst, Configuration specialist.
- Deliverables, pg. 90: WEAKNESS, would expect to see Risk Register, Issues Management and Test Management/Tracking deliverables.
- Fig. 70, Typical Project Steps, pg. 90: The provided example of an implementation plan is too generic to assess.

Catalog Support Services, pg. 91/92: Partially meets.

- WEAKNESS, Ivalua does not provide catalog support services. Response discussed at a very high level the process of suppliers creating catalogs, supplier or state loading catalogs and state approving catalogs.
- Did say they have "partners" who can provide the req'd catalog services but the services are not included in the scope/pricing.

Data Conversion Services, pg. 92: Partially meets.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 1

DATE: 12/3/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, Ivalua does not provide Data Conversion Services. They provide "partners" that they could have do the work but this isn't included in the proposed scope/pricing.

Interface/Integration Development Services, pg. 92: Partially meets.

WEAKNESS, Ivalua does not provide Data Conversion Services. They provide "partners" that they could have do the work but this isn't included in the proposed scope/pricing.

Organizational Change Management (OCM Services) , pg. 93/94: Partially meets.

Details provided were very high level and CLARIFICATION,

- response did not address Impact Assessment, Coaching Plan, and Resistance Assessment/Management plan.
- what all of these OCM services are included as part of the proposed implementation scope/pricing? Note that Fig. 69 identifies specific Ivalua OCM and training resources without details of scope/work included or responsibilities.

Training Services, pg. 95/96: Partially meets.

Details provided were very high level and

- response did not address training needs assessment, developing a training plan or provide the req'd "example Training Plan".
- what all of these Training services are included as part of the proposed implementation scope/pricing? Note that Fig. 69 identifies specific Ivalua OCM and training resources without details of scope/work included or responsibilities.

Help Desk Services, pg. 96-98 & IMPL-1 thru 5: 96-98: Partially meets. WEAKNESS, proposal only includes Level 3 Help Desk support but only to the "Customer Administrator". not to the req'd "users and Suppliers". Support for users/Suppliers is "optional" for additional costs.

RTM

- WEAKNESS, IMPL-4: Ivalua Help Desk does not provide a "live chat feature".
- POTENTIAL WEAKNESS, IMPL-5: Proposal does not provide/support integration between their ticketing system and a State/Entity ticketing system.
- One req'ts needs clarification.

On-Site System Stabilization Support, pg. 98: Meets req'ts.

Managed Services Requirements

Solution Support, pg. 99-102 & MNGD-1: Partially meets. Response did not address:

- Provide reviews of Solution use to make recommendations/suggestions.
- Maintains an e-mail listing for 3rd party components.
- "level of hosting", pg.100: response indicates that the SLA response times are "depending on the level of hosting" but the proposal does not indicate what level is being included in the proposal.

RTM

- Meets req't.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: lvalua
CATEGORY #(s): 1
DATE: 12/3/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Organizational Change Management (OCM Services) , pg. 102/103: Does not meet req'ts.
WEAKNESS, lvalua is not including OCM services as part of "ongoing / managed services".

Training Services, pg. 103: Does not meet req'ts.
WEAKNESS, lvalua is not including Training services as part of "ongoing / managed services".

Help Desk Services, pg. 103/104: Meets req'ts.
NOTE: in Implementation Services lvalua is only offering Level 3 support however here in Managed Services they are offering Level 1. Need to make sure that this Level 1 support is included in the proposed scope/cost.

Transition Out Assistance Services, pg. 104/105: Partially meets req'ts.
Response did not address req'ts to be discussed

- provide assistance to transition to another party
- information to the number and function of Contractor personnel
- transfer data, information, deliverables, work products, documentation, etc.
- identify dependencies
- assist in designing plans
- submit a transition plan

Other Available Services

- No additional services identified. Response just discussed their "in-house development tool called Aware".

Individual Evaluator Comments:

Ivalua - Unified Business platform.

General Principal and Requirements

- Key Solution Functionality Elements – fully integrated system. Start from single landing page; homogenous look and feel between modules. Single data ecosystem.
 - P5 Ivalua has extensive experience in delivering procurement solutions for State & Local organizations. As we work with our customers, we have continued to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding
 - Subcontractor Reporting
 - Cooperative Reporting
 - Portal entry – single login, configurable dashboards. Collaboration tools – blogs, forums, comments.
 - Open marketplace - hosted catalogs; punchout catalogs (side-by-side hosted and punchout searches; off catalog searches.
 - P5 Integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on. Likewise, Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.
 - Workflow, Document Management, Configurable (p6 example list), Public portal – transparency.
- User Experience – login routes to homepage unique to user, role and tasks.
 - One or more roles guide the user experience.
 - No cost for suppliers to access portal to submit bids.
 - P7 search capability is accessed directly from the home screen for users to be able to start searching the catalog, or to create new requests.
 - P7 access pending workflow tasks directly from home screen
 - P9 Users or administrators can also set-up out of office forwarding for users. This will delegate all workflow tasks assigned to that user within a defined time period to another user or group of users.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Bidder Best Practices and Roadmap
 - Major releases delivered 2 times per year.
 - Recommends major updates 18 months for best product maintenance
 - Fedramp ready
 - Public sector longtime focused; best practices developer for public sector tailored solution.
 - Roadmap is 60% customer-sourced.
 - Roadmap – web apps; invoicing and payment execution inside Ivalua; contract lifecycle management using AI; supplier risk and performance; StateRamp; enhanced clause libraries; collaborative authoring.
- Innovations and Value-Added Features/Services
 - P11 Ivalua Help Desk as alternative to state-operated. Level 1 with 0-% tickets solved within 1 hour. Level 2 redirect. (Cost item)
 - P12 Advanced Services procurement. (Cost item)
 - Vendor Master Management – supplier data (Cost item)
 - Adoption of ERP specific source schema tables to support bidirectional master data integration
 - Use of a supplier cleansing workbench for merging and deduplicating records from multiple source systems
- Customizations/Extensions – Configuration not custom code.
 - Coding changes part of release cycle.
 - Users have flexibility to deploy releases. Reduces risk of automated upgrades-prompted problems.
- Alternative Funding Models – Not proposed.
- Contract transition. Existing customers may discuss contract transition with Ivalua. GFE not guarantee.

Functional Requirements

- General Functionality
- Six modules integrated: Supplier Risk & Performance; Solicitations & Bid Management; Contract Management;
 - *P16 Master data throughout the solution for selection of organizations, commodity codes, units of measure,*
 - *Single platform manages the end-to-end solicitation and purchasing process for the organization, suppliers, and political subdivisions*
 - *EPROC-GEN-3 - Posting to Ivalua's native site does not require any integration. Ivalua can also integrate to state's websites or other sites, as needed. Our recommended approach is using Ivalua's public portal and putting a link within the State's website, to leverage the simplicity of standard functionality while easily allowing access for users from the State's website.*
 - *EPROC-GEN-39 - Throughout each implementation, Ivalua works with organizations to identify any additional information outside of standard that should be available on the public portal. Document posting can be controlled at the individual document level or by document type (Ex. confidential documents not made public). Authorized users will be able to modify the document types made public.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Supplier Portal – P17 *free supplier portal where suppliers may perform self-registration and other activities with their customers. Ivalua supplier registration & information management capabilities allows to quickly and easily onboard suppliers for RFPs, orders and invoices, and push data to ERP or other relevant system*
 - *Supplier features:*
 - *Managing their supplier information and users*
 - *Submitting reports for cooperative contract usage*
 - *Responding to sourcing events*
 - *Managing/redlining contracts*
 - *Uploading catalogs*
 - *Viewing orders*
 - *Creating advanced shipping notices*
 - *Creating invoices*
 - *Viewing their performance*
 - *Collaborating on improvement plans*
 - **EPROC-SPR-14 Needs clarification** *ERP financial data is integrated into the system as standard throughout the Procure to pay process. Additional fields can be captured through integration. Is this integration included in the price or required to be developed on customer ERP side?*
 - *EPROC-SPR-19 Administrative fee payments will be submitted through a third party payment provider. Ivalua can offer a close integration to the third party provider to track payment within the system*
- Supplier Enablement/Management- p18 *Supplier activation within Ivalua takes place in two parts. The first is a public facing registration page that allows any new supplier to create an account within the system. The second is the 'full enrollment' process, where the supplier can login and collect additional information required to be fully onboarded with the organization and to do business. The registration page can be found by accessing the public facing homepage of Ivalua. Potential suppliers can access the portal 24 hours a day, 7 days a week, 365 days a year. The Ivalua supplier portal is 100% free for the suppliers, no setup and/ or transaction fees.*
 - **EPROC-CDR-18 to -27 – Third party integration to validate supplier data. Needs clarification – Ivalua supplies or customer supplies?**
 - *EPROC-VDR-32 Ivalua segregates organizations – workflow can't pass between organizations.*
 - **EPROC-VDR-40 – Needs clarification** *(vendor email signup) – is this a Customization as marked or a Configuration as stated in comments?*
 - **P 20** *The supplier submits their registration it is processed through an automated workflow that will automatically accept or reject the registration based on system conditions, such as a duplicate check. The workflow process and acceptance/rejection criteria will be established by each client. If the supplier's registration is approved, they will receive an email notification informing them that their account has been created, and they can login using their username and password that were established on the registration page. Needs clarification – is approval following automated step or is there manual intervention by Ivalua or State?*
 - *P21 – documents can be stored in profile for use in response and contract management.*
 - *P24 – supplier self-service for account maintenance then routes to internal user for approval; can sent updates to ERP.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Buyer Portal – Internal users log in via username/paw or SSO.
 - P25 Alternatively, **suppliers** can login via SSO with their organization. **Needs clarification** – is this a typo as this is buyer portal response? Is there an SSO supported for suppliers?
 - P26 User role or roles tied to authorizations. Perimeter can limit visibility into certain departments' data or permissions.
 - EPROC-BPRT-8 – Daily summary of notifications not available.
- Need Identification – P27 *Options from home page: Create a Needs Request form; Create a Purchase Request - contract, non-contract, punch-out, non-catalog products, or for the procurement of services; Complete an Exemption Request; Create a sourcing event; Gather quotes; Create a Contract.*
 - **EPROC-Need-3 – Needs clarification** – Why is guided buying listed as a C? Is there not standard or configurable workflow?
- Request through Pay – starts with requisition; routes for budget; moves to sourcing event. Fully integrated process through requestion, purchase order, receipt and approval.
 - P32 – multiple methods of receipt input: PO; from scratch; EDI/cXML; OCR.
 - Integrates to ERP to trigger and record payment.
 - **EPROC-PC-1 thru -9 – Needs clarification** – status of pcard development.
 - EPROC-RC-21 – UOM conversion to set inventory as different from PO is configurable.
- Catalog Capability – items from multiple suppliers can be on the same PO.
 - CXML punchout; unlimited items; unlimited catalogs
 - Spot bid functionality EPROC-CAT-11
 - Supplier uploaded catalogs routes for approval to internal user.
 - P35 Ivalua also has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal Ivalua catalog. This will provide the user with a single place to conduct a search, instead of having to punch out to the external catalog first.
- Sourcing/Bid Management – All RTM listed sourcing methods supported as standard or configurable.
 - P36 – Suppliers added to tab for solicitation notification in supplier tab manually; suppliers can be searched by any field in supplier database. (This will include supplier record details – contacts, performance, documents.)
 - P37 Documents tab can host unlimited attachments, e.g. T&Cs; workflows for documents and versioning; standardize for agency.
 - Sealed bid management blocks access by internal users until bid due date; time stamp on screen for auditability.
 - Pricing collected in system, p39; Templates permitted; modifications, new fields can be created; system calculates price savings against reference prices if included
 - Public portal for posting – recommendation to host solicitation on Ivalua, link with basic information from state or other sites to minimize integration effort.
 - **P39 – Needs clarification.** Public sourcing events allow any user without an account to view and respond to event within the Ivalua sourcing solution. How is user data captured and ongoing communication facilitated without a confirmed account? See EPROC-SRC-66 If these suppliers choose to respond they will be required to make an account in the system.
 - P43 During active solicitation, internal users can see activity of suppliers including participation, as well as email notifications received; Sealed bids content protected until closing date.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P44 Contract creation starts with award notifications and carries over solicitation/response fields to avoid duplicate re-entry of data.
 - **EPROC-SRC-35 – Needs clarification.** *This can be accomplished via configuration. For editing via Ivalua's Microsoft word authoring - **check-in/check-out is supported out of the box, but not for attachments only.** What does "not for attachments only" mean?*
 - EPROC-SRC-48 *Workflows can be designed by administrators using drag-and-drop capabilities. It is easy to develop tasks for human approval, or routing decisions based on business rules or factors such as threshold amounts*
Configuration will be required to ensure the workflow meets the needs of each organization
 - **EPROC-SRC-68 – Needs clarification** – Is eFax a roadmap item or does Ivalua plan to not support?
 - EPROC-SRC-76 – Posting all solicitation documents to state's public website is customization with high complexity. See earlier not for simpler recommended process.
 - EPROC-SRC-83 – No integrated video conference. Third party link can be inserted. Attachment can be uploaded.
 - EPROC-SRC-102 – Ivalua native plugins for third-party electronic signatures.
- Contract Management
 - P45 *The contract record within Ivalua captures all aspects of contract information, documentation, activity, and performance within the single record.*
The header tab of the contract captures the basic information about the contract brought over from the solicitation as well as manages any dates associated with the contract. Based on the dates that are set-up in the header of the contract, the system will automatically trigger reminders when the contract is nearing expiration.
 - Document management. P46 Within the document management capability, Ivalua has a built-in authoring tool that will allow users to write and redline contracts directly in the Ivalua solution. *All organization contract templates and clauses will be stored within the system that can then be easily pulled into the contract document. Legal users will have the ability to import or edit templates and clauses, when needed. Redlines are tracked from user to user with the ability to compare previous versions of the contract side by side. Ivalua also offers a native integration to Microsoft Word, so users redline in the Word can sync their version back to Ivalua.*
 - P47 Through the third parties tab, Ivalua can capture any subcontractors and distributors that are being used by the prime supplier on the event. They can define who the subcontractor is, their M/WBE status, as well as the amount of percentage of the total contract value the supplier is responsible for.
 - P48 system can also trigger a subcontractor report to prime suppliers. This allows them to report how much has been paid to their defined subcontractors in that period. The report is then routed through a workflow for approval.
 - EPROC-CNT-72 – Fee comparison. Marked as C, but comments say configuration. Is this code?
- Vendor Performance P49 *performance information is maintained within the supplier's profile for reporting, as well as can trigger alerts to users if a supplier is consistently performing poorly.*
 - Templates for performance assessments. Vendor score. *As evaluators respond to the supplier assessments, they will be able to add comments and attachments, where needed.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Improvement plans can be set up as collaboration tool to create tasks aimed at supplier improvement. Supplier and Internal user can both access.
- Purchasing/Data Analytics – 100 out of the box reports; ad hoc reports; SQL queries.
 - Analysis reports with data visualizations.
 - Three RTM requirements depending on completion of the Pcard functionality.

Technical Requirements

- Availability – 99.8% uptime. Monthly scheduled maintenance.
 - Service credit 5% for <99/8% increasing through levels to max of 25% for <85%. Credits applied against future prof. serv. Fees. No refunds unless <90 on contract.
- Accessibility Requirements – P55 *Ivalua is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance. Ivalua is committed to being Section 508-compliant (against WCAG 2.0 Level AA requirements) as soon as possible across all application pages.*
- Audit Trail and History – P56 *While a user is logged on, all actions and activities are registered, logged and time stamped. Every transaction created, every status change, every movement through to the next step in a workflow, every addition or deletion of a data item of any kind is part of this logging effort.*
- Browsers Supported – Common browsers – last 3 major releases; Explorer – only MS-supported.
- User Accounts and Administration – Role-based administration to access permitted sections of Ivalua environment.
 - User Authentication – Supported: Login / password authentication; Single Sign On (SSO) SAML 2 Web based authentication standard; Two-factor authentication; Reverse Proxy / IIS Agent based authentication (CA Single Sign On, formerly CA Site Minder)
- Federated Identity Management: SAML 2.0 protocols for Single Sign On. Single login for entire platform.
- Data Conversion - P59 *As part of the implementation, we will conduct a data assessment to determine the data requirements for the project and the Participating Entity. Based on this, a data strategy will be established identifying the data conversion scope for the project. Once the data strategy is completed, Ivalua and Participating Entity resources will leverage Ivalua's which are an open part of our User Interface to perform data transfers.*
 - *Once the Participating Entity has reviewed the approach and impact to the project scope, effort, timeline, and cost and signed off on the scope, a combination of Ivalua and Participating Entity resources will perform the data conversions.*
 - *EPROC-TECH – Date conversion legacy data supported except for Solicitation data in State's system and Vendor performance data.*
- Interface and Integration – P59 Synchronous and Asynchronous data transfers supported. Multiple communication protocols and data formats, including flat files, JSON, XML, cXML, OCI, IDOC (SAP)
 -
- Office Automation Integration – All file types supported as attachment.
 - Excel support across sourcing process.
 - Reporting tools natively export to Word, Excel and PDF
 - Contract tool imports Word documents.
 - Contract data can export Word and Pdf.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Mobile Device Support – P61 *Ivalua is a fully responsive HTML application; screens adjust to devices, e.g., on when using Ivalua on a mobile device the screen menus change for PC layout to Mobile-friendly layout.*
- Mobile Applications – Mobile solution runs on Webkit-enabled browser; no separate app.
- Data Ownership and Access – P61 *Customers remain the data owner and data controller of all data they place into their Ivalua instance and should apply access controls to restrict access to data within their instances based on their own requirements and needs, in accordance with their access control, data retention and data classification policies.*
Internally, Ivalua has its own data classification policy. All customer data is classified as Confidential and access to the environment where customer data is stored is limited to a small number of individuals on a need-to-know basis.
- Date Retention, Archive and Purge Considerations – P62 *Ivalua does not delete or modify customer data, unless requested by the customer to do so, and only processes data in accordance with its contractual obligations and the customer's configuration of their instance(s).*
- Disaster Recovery Plan – P62 *Ivalua BC and DR Program is based on ISO/IEC 22301 standard framework*
 - Documented backup and recovery procedures
 - Crisis/incident management procedures
 - Stakeholder communication processes
 - Replicated Web server and Application server; replicated database backups; redundant support services; contingency plan for hosting and ISP.
 - P63 *Ivalua notifies impacted customers of data breaches which Ivalua becomes aware of without undue delay, but within seventy-two (72) hours - unless a shorter time is specified in the contract*
- Solution Environments – Minimum 3 environments – Dev, Acc (test), Prod.
 - Training environment available. – add fee.
- Solution Technical Architecture – All customers environments isolated in enterprise grade cloud architecture. End users access Ivalua from web browser – no client software installation required. – 64-bit MS stack. Plus open standards REST, JavaScript, HTML, XML and JSON.
 - Database layer on servers in non-internet routable network segment – requests not made directly to database tier; only issue from customer's instance.
 - No commingling of customer data.
- Solution Network Architecture – All RTMs standard functionality.
 - P66 *Intrusion Detection System and Intrusion Prevention system (IDS/IPS), monitors and blocks malicious traffic or attack on network traffic traversing the device.*
 - *systems log unexpected network activity (volume of traffic, protocol anomaly, signature-based attack) and notify Ivalua IT staff in real time via emails and text messages.*
 - P67 *Equinix DC3 Data Center - Ashburn, VA (Primary, DR); CH3 Data Center - Elk Grove, IL (Primary, DR)*
 - *Ivalua also guarantees a Hosting SLA (hit response time, uptime) and can share a monthly report with the client upon request.*
- System Development Methodology - P67 *secure-SDLC policy and procedures that ensure security-related functions are covered during the development life cycle from design to implementation to testing. New features are evaluated for their security impact during the design phase, regular code reviews (peers and SAST tools) are conducted internally during the implementation phase and tested for effectiveness during the QA process.*

- *Ivalua's development process is based on the Agile methodology with its iterative approach to software development and assessment. This embeds Quality Assurance directly into the ongoing development process.*
 - *P68 Configuration Management Program for its Cloud services in accordance with NIST Security-Focused Configuration Management of Information Systems guidelines. Ivalua applies Security-focused Configuration Management for establishing baselines and for tracking, controlling, and managing many aspects of the secure lifecycle of all information system resources, configurations, and processes.*
 - *All application changes/updates are at the customer request and control, and they will be performed either behind the scenes (for minor updates) or through scheduled downtime (for major updates). Customers typically enforce their own change management process.*
- **Service Level Agreement** – Sample attached. 99.8% uptime. Monthly scheduled maintenance.
 - *Service credit 5% for <99/8% increasing through levels to max of 25% for <85%.Credits applied against future prof. serv. Fees. No refunds unless <90 on contract.*

Security Requirements

- **Cloud Security Alliance (CSA) Compliance** – CAIQ 3.0.1 provided (No unusual.)
 - *IAM-02.7 Ivalua doesn't share internal security metrics with customers. The termination control is tested as part of the SOC control and SOC report is provided to the customers upon request.*
- **Security and Privacy Controls-** **P69 Needs clarification** Ivalua is currently in the process of validating controls and safeguards against NIST SP 800-53 Revision 4 "Moderate" risk controls for FISMA compliance with our Commercial Cloud. **Is this complete?**
- **Security Certifications** - *Ivalua has implemented an Information Security Management System (ISMS) in accordance with ISO/IEC 27001. Ivalua is annually audited SSAE-18 SOC1 and SOC2 (US) and ISAE-3402 (Europe). Ivalua is also annually audited HIPAA and complies with business associates' requirements of the Privacy, Security, and Breach Notification Rules.*
 - *P70 Ivalua is not currently audited for PCI-DSS compliance. However, Ivalua has safeguards and security controls in place to protect cardholder data in accordance with the PCI-DSS standards and is leveraging its Hardware Security Module (HSM) infrastructure to manage cryptographic keys used to secure cardholder data.*
 - *Ivalua is FedRAMP Ready with our GovCloud and listed on the FedRAMP Marketplace.*
- **Annual Security Plan** – *P71 Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE-3402 (Europe).*
 - *Ivalua enforces the principle of least privilege across the entire organization. Role-based access control at directory and application levels and firewall rules are used to manage access.*
 - *Only users with the appropriate profile can load a page or execute a function. It is also possible to limit the data access of business objects on a per user basis.*
 - *Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers. Our model creates a very distinct boundary between the data of each client.*
 - *Ivalua invests a large number of resources to get itself audited by a 3rd party auditor against the SOC and HIPAA security frameworks. Every year it produces a report that is shared with its customers, upon request.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *5-stage incident response: Preparation; Detection and analysis; containment, eradication and recovery; post-incident activity; communication.*
 - *Ivalua applies a single data classification to all customer data it hosts. Ivalua does not inspect or monitor its customers' data and has no ability to understand how any data may have been classified by individual customers.*
 - *Ivalua has implemented numerous privacy and security practices to ensure Ivalua compliance with the GDPR.*
- Secure Application and Network Environment – Equipment hardened; proactive network security. See architecture above.
 - P77 Data at-rest and in-transit is encrypted using the industry-standard AES 256-bit encryption. Ivalua Cloud infrastructure where client data are stored, processed, and transmitted:
 - The web traffic between the end-users and the servers is encrypted using TLS (HTTPS). Ivalua SSL X.509 CA certificates are generated with RSA 2048 key size and SHA-256.
 - P78 *In Ivalua's infrastructure, managed devices (switches, routers, firewalls) and services communicate their activity logs to two different servers, located in two geographically distant data centers.*
 - *While a user is logged on, all actions and activities are registered, logged and time stamped. Every transaction created, every status change, every movement through to the next step in a workflow, every addition or deletion of a data item of any kind is part of this logging effort. As a result, the system can produce a detailed audit trail of exactly who did what, where and when. This audit trail can be produced in reports on a real-time basis.*
 - DLP strategy includes an administrative policy around removable media and data loss prevention.
- Secure Application and Network Access
 - P81 *Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances. This model enables higher instance availability.*
- Data Security – See above. All narrative in this section has been stated in other areas.
- Personally Identifiable Information Protection – P85 *Ivalua has implemented numerous privacy and security practices to ensure Ivalua compliance with the GDPR.*
 - *Customers may configure access to PII such that customer-defined roles have access to PII within the Ivalua platform. When providing customer support, Ivalua may have access to PII data.*
 - *Ivalua is also annually audited for HIPAA and complies with business associates' requirements of the Privacy, Security, and Breach Notification Rules.*
- Security/Privacy Issue Occurrence - *reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours.*
- PII Data Actual/Attempted Access or Disclosure – See previous
- Security Breach Reporting – See previous

Implementation Services Requirements

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Project Management – Semi-Agile approach: MOBILIZE; EXPLORE/DESIGN; BUILD/CONFIGURATION; TEST; DEPLOY/GO-LIVE; RUN
 - P88 *Ivalua will support project management activities for Project Planning, Tracking and Reporting.*
 - P89 Detailed expectations of customer personnel resources and time commitment.
 - P90 – Sample project plan provided.
- Project Implementation Methodology – P91 *based on the principles of rapid deployment and prototyping*
 - *End-users are involved in both mockup and configuration of their system. This accelerates their understanding of what is possible and allows them to refine their requirements to what is most needed*
 - *During the Build phase of a project, each configuration change (driven by the requirements collected during the design phase) is unit tested by the configurator. Once the Build phase is over, and before User Acceptance Testing starts, our Quality Assurance team reviews and tests the entire application build to make sure that all the pieces come together without defects, and as per the approved design.*
 - *Code changes are extremely limited (and restricted to Ivalua certified engineers only), submitted to validation internally, and if approved, will have to go through a peer code-review process before being delivered on a client' environment*
- Catalog Support Services – Two phases. Suppliers or buyer load catalogs; Data approved by buyers.
 - **Needs clarification –** Does Ivalua provide implementation support?
 - P 92 *In the event that our customer requires additional catalog support services, Ivalua can leverage our partner ecosystem to provide these services including:*
 - *Providing assessments to identify and prioritize contracts as potential for hosted catalog or punchout;*
 - *Creation of hosted catalogs;*
 - *Setup/configuration of punchout sites;*
 - *Identification and setup of commercial retail online marketplaces;*
 - *On/off-boarding of Suppliers to prepare them to manage catalog content; and*
 - *Training customer staff to assume catalog/punchout management roles.*
- Data Conversion Services – **Needs clarification – p92** *does Ivalua provide data conversion assistance during implementation?*
- Interface/Integration Development Services
 - P93 *The approach is to map Participating Entity's data to Ivalua data. Specific interfaces are configured (no coding), the configuration of interfaces is part of the integration toolbox resulting in micro integration workflows supporting open protocols and data formats. The approach is to select one of the predefined integration templates appropriate for the business object, map the data items, configure the protocols and data format.*
 - *Ivalua will assign an Integration Lead to work with Participating Entity's team to perform a technical assessment to identify all required interfaces and integrations.*
 - *Ivalua project methodology, design, configuration, testing, and implementation of the interfaces and integrations will be performed.*
- Organizational Change Management (OCM Services) - P94 *change management and custom training services, including Change Management and Custom Training development (Instructor led training, Train-the-trainer, Web-based recording, and Quick Reference Guides (QRGs)).*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 1:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Leadership/Stakeholder Engagement; Change Impact Assessment; Change Readiness; Training (Web-based, Instructor-led; Instructor guides for trainers; training exercises; quick ref guides; simulations) Streamlined communications strategy.
- Training Services
 - Robust e-learning program for customers, partners and staff to learn at own pace – Ivalua Academy with Ivalua Certification.
 - Key User training; Administrator Training; Technical training – multiday on the Standard Ivalua platform (not configured instances.)
 - Custom-training: Web-based, Instructor-led; Instructor guides for trainers; training exercises; quick ref guides; simulations
- Help Desk Services – SaaS subscription includes Technical support level 3 for standard product and configured customer applications. Responsibility – maintenance releases, defect requests, product questions.
 - Optional: Help-desks for End users (level 1), suppliers (level1) , Administrators configuration support. – Phone, Email
 - Level 2 redirect if needs. 90% resolution within 1 hour.
 - EPROC_IMPL-3 and -4 – No live chat available.
 - EPROC_IMPL-5 – Ivalua Extranet ticket system can be viewed by customer, but does not integrate to customer's ticket help system.
 - Needs clarification: Do registered suppliers/registering suppliers have access to Ivalua helpdesks without state paying for additional helpdesk, or is state accepting all supplier support role? F4 indicates additional catalog support services not anticipated beyond go-live.
- On-site stabilization. Hypercare – 3 months. Monitor rollout; triage and support high-priority tickets; adjust configuration, defects. Focus on end-user adoption; transition to state support team and Ivalua Run team.

Managed Services Requirements

- Solution Support – Repeat of description of infrastructure, SLA and environments.
 - SDLC policy and development and testing plans for rollout explained.
 - Testing has 4 levels: Manual tests and code reviews; load and performance testing; functional testing; regression and automated testing.
 - Repeat of contracted level 3 support and optional level 1 supports.
- Organizational Change Management (OCM Services) – P 103 See implementation. Additional OCM not anticipated.
- Training Services P 103 See implementation. Additional OCM not anticipated.
- Catalog support services. P 103 See implementation. Additional OCM not anticipated.
- Help Desk Services – Needs clarification: Is this helpdesk in F5 the added cost Level 1 help Desk?
- Transition Out Assistance Services
 - *P105_ Upon termination of the contract, Ivalua retains processed data and files for a limited period of time in accordance with the contract. We then delete the client online files (skipping the file trash). When the physical servers are terminated, media is destroyed, except for encrypted data in archived storage (which is destroyed in accordance with Ivalua's data retention schedule). Ivalua follows NIST 800-88 Media Sanitization guidelines.*
 - Ivalua to work with customer on transition needs – no specific commitment. Customers can self-extract or request Ivalua help to extract data.

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 4-

- KPMG LLP is the US firm of the KPMG global organization with 40K+ professionals with "1,200 dedicated procurement professionals" the "bring the state and local government domain knowledge".
- Have "successfully delivered the proposed Ivalua solution to the States of Arizona, Ohio, Alabama, Vermont" and local governments included "City of New York, Caltrans, Teachers Retirement System of Texas".
- "Featured in Spend Matters' Top 50 Providers to Know Almanac".
- "Designated as a 'Leader' in Gartner's Magic Quadrant for Business Operations Consulting".
- Services support "targeted improvements as well as implementing full-scale procurement transformation solutions".
- "Have particular depth in helping optimize 'Source-to-Pay' processes".
- "Have delivered 300+ cloud eProcurement projects" implementation"
- 400+ Source-to-Pay assessments and efficiency improvement projects completed"
- "Lessons learned" from "Ohio, Arizona, Alabama, Vermont and others will be leveraged"
- "KPMG and Ivalua have been working together since 2013".
- "Powered Enterprise approach" delivers "on Day One an out-of-the-box, preconfigured solution based on a leading business practice target" which "can help accelerate the transformation and change process".

2. Previous Projects

- **State of Ohio:** (pg. 12-14)
 - i. Source-to-Pay implementation, "supplier management, catalogs, sourcing, quote management, contract authoring and management, purchasing, invoice management, expense management, savings tracking, and spend analytics".
Full Suite eProcurement implementation.
 - ii. Batch Interfaces and Realtime /Integrations with PeopleSoft: Org Structure, Users, Chart of Accounts, Thresholds, Controlling Board, UOM, Payment Methods/Terms, Commodity Code, SSO, Addersses, Suppliers, Contracts, eSignature, Catalogs, Budget Validation, Purchase Orders, Change Orders and Invoices.
 - iii. 3 releases: eMarketplace/Supplier Management, Procure-to-Pay, and Source-to-Contract. Conversions: 50K users, 4K Orgs, 150K Suppliers, 2K Addresses,

1.5K Contracts and 30 Catalogs. Project started 9/7/2018, R1 Go-Live 12/17/2018, R2 Go-Live: 12/4/2019 and R3 Go-Live:

- iv. Train-the-Trainer approach with “25+ instructor-led courses” delivered “both onsite and virtually” and provided webinars. Provided user manuals, job aids, interactive web-based training courses and microlearning videos. 11/2/2020.

- **State of Arizona:** (pg. 13)
 - i. Source-to-Pay... *Full Suite eProcurement implementation.*
 - ii. “35+ Integrations/Interfaces” with CGI Advantage for Vendor, Requisitions, Purchase Orders, Receipts, Invoices, Master Data and Inventory.
 - iii. Project dates: Nov 2017 to Feb 2019
- **State of Alabama:** (pg. 13/14)
 - i. Source-to-Pay... *Full Suite eProcurement implementation.*
 - ii. “50+ Integrations/Interfaces” with CGI Advantage for Suppliers, Chart of Accounts, Budget Validation, Purchase Orders and Invoices.
 - iii. Migrated 15K+ suppliers and 1.5K+ contracts.
 - iv. Created “localization template to bring additional agencies and state entities onto the Ivalua platform”.
 - v. Project dates: March 2020, on-going. Go-Live June 2021.
- **Teachers Retirement System of Texas:** (pg. 14/15)
 - i. Source-to-Pay implementation, Supplier Mgmt, Purchase Request/intake, Sourcing, Contract Authoring/Mgmt, KPMG cognitive contract mgmt tool, Purchase/Change Order, Invoicing, Payment and Reporting.
 - ii. Inbound/Outbound interfaces with PeopleSoft: Contracts, Supplier, Account codes, Fund, Depts, PCA, Budget, Invoice OK to pay, Payment info, Users, SSO, DocuSign and auditing.
 - iii. Train-the-Trainer sessions: instructor-led, web-based with quick ref guides.
 - iv. Project dates: Sept 2020 to April 2021, Go-Live Jan 2021
- **CalTrans:** (pg. 15)
 - i. Supplier and Contract management mentioned but full list of Ivalua modules that were implemented not listed .
 - ii. Migrated contracts
 - iii. Train-the-Trainer w/quick ref. guides.
 - iv. Project dates: Sept 2020 to April 2021, Go-Live Jan 2021

3. Subcontractors

- **Ivalua:** (pg. 17)
 - i. First Source-to-Pay SaaS client in 2006
 - ii. “First wave of U.S. clients beginning in 2013”.
 - iii. Ivalua Professional Services will be a subcontractor to KPMG to implement the Ivalua integrated solution”.
 - iv. KPMG will lead project implementation. Ivalua will “provide platform-level engineering support”.

4. Organizational Chart

- Org chart does reflect a project implementation with State, KPMG and Ivalua roles identified. While high level, the chart does reflect the core/key roles. (pg. 19)
- The Role/Responsibilities table identifies the primary responsibilities for only the KPMG resources. Does not address Ivalua or State positions. (pg. 20-22).

5. Litigation

- "Have not pending litigation that would materially affect the firm's operations or our ability to perform services for you".
- "KPMG is not aware of any significant issues relating to client contracts, or any terminations of those contracts, which would interfere with KPMG's ability to successfully perform the services contemplated".

6. Financial Viability

- Total revenue for fiscal year ending Sept. 2020 was "\$9.6 billion"
- KPMG's outstanding debt rating by the National Association of Insurance Commissioners is "NAIC-1", the "highest credit quality ranking on the NAIC ratings scale".
- Only provided 2 of the 3 required recent year Audit reports.

Individual SME Comments:

KPMG Exceptions to Maser Agreement, pg. 193-221: Need review by Maine and NASPO ValuePoint

- 31 exceptions to Maine T&Cs
- 28 exceptions to the NASPO ValuePoint T&Cs
- Added terms for Help Desk and Managed Services:
 - o Definitions
 - o Provider Services Personnel
 - o Term and Termination
 - o Disclaimer and Limitation of Liability
 - o Indemnification
 - o Cooperation; Use of information and State Materials.

KPMG Assumptions, pg. 180-187:

- **General**, pg. 181/182
 - o 1st bullet: Participating Entities will "contract directly with the eProcurement Solution provider for the software licenses and with KPMG for implementation services". CONCERN, this may not be possible with some States or other Participating Entities based on their laws.
 - o 4th bullet: pricing is "subject to five percent year-over-year increase". CONCERN, not all Participating Entities can agree to an automatic price increase. In some cases they may need to use a Term/Condition for price increases based on an index instead. NEGOTIATION, suggest negotiating this.
 - o 7th bullet: "KPMG assumes up to 25% travel". NOTE, pricing reflects this amount of travel expense. NEGOTIATION, suggest having a means to reduce costs if a particular project does not need this much KPMG travel.
 - o 14th bullet: WEAKNESS... KPMG "may not be permitted to participate in a NASPO ValuePoint Administrative Fee or a State imposed administrative fee under this contract"
- **Project Related**, pg. 182-184
 - o 1st bullet: Fixed prices assume implementation periods of Small State=12 months, Medium State=15 months & Large State=24 months. CONCERN, this may make the prices between proposals not be comparable. Also, the time period for Small and Medium is too short.
 - o 2nd bullet: "Implementation plans provided assume 15 pilot agencies during each implementation. Any additional agencies/localization is out of scope and may be contracted by your organization as a change order." CONCERN, it is unrealistic to have

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

assumed the same number of agencies for each size of State. So the pricing is not realistic and also not going to be comparable to other proposals.

- 9th bullet: “any modifications to the out of the box functionality requiring custom code” is limited to only situations where there are “statutory requirements”. CONCERN, there may be RFP/RTM req’ts that end up requiring “custom code” so suggest getting this language modified to include any changes necessary to comply with RFP/RTM req’ts. NOTE, this assumption is repeated under reports (10th bullet, pg. 186)
- 13th bullet: “Client will procure five environments”. CONCERN, on pg. 63, Solution Environments” it refers to 3 environments. Need to CLARIFY what is included in the pricing.
- 15th bullet” “up to three supplier management questionnaires” will be configured. NEGOTIATION, suggest getting this number increased to five for Medium and Large State implementations.
- 16th bullet: “will configure up to five contract templates”. NEGOTIATION, suggest getting this number increased to ten for Medium and Large State implementations.
- 17th bullet: “maximum of 25 configured fields”. NEGOTIATION, suggest getting this number increased to 50 for Medium and Large State implementations.
- 19th bullet: “eProcurement system is considered the system of record for eProcurement supplier information”. CONCERN, some Participating Entities may have to have the Finance System be the system of record, depends on the implementation. Suggest NEGOTIATING to strike this assumption.
- 24th bullet: “During hypercare” the Participating Entity will “perform Tier 1 support”. “KPMG will act as Tier 2 support” and Ivalua “will act as Tier 3 support”. NOTE, need to check this against the narrative regarding Implementation Services HELP DESK.

- **Help Desk/Managed Services** (pg. 184-185)

- 1st bullet: Participating Entities will be limited to 25 users that can submit tickets to the KPMG Service Desk. NEGOTIATIONS, suggest increasing this number for Medium and Large States.
- 3rd bullet: On-going help desk services assumes that the Participating Entity will provide “Tier 1 support”. NOTE, need to check this against the narrative regarding Managed Services HELP DESK.
- 6th bullet: “assumes approximately 1% of the users will call/day with an average call duration lasting between 10 to 20 minutes”. CONCERN, what about support for Suppliers? Are the considered “users”?
- 7th bullet: “20 to 35 calls/analyst/day is assumed (8:00 AM to 5:00 pm local time)”. CONCERN, unclear how this metric fits with the “1% of the users” in the previous bullet. Also, what is meant by “local time”? Also, same question as previous bullet regarding Suppliers.
- 9th bullet: End-user support numbers. WEAKNESS
 - the “Total end-users” count does not match the Cost Workbook req’ts.
 - The “At Go-live” numbers are too low
 - “Ramp-up” numbers based on quarters along with the implementation plan months in the Projects assumptions means Large doesn’t get to 8000 users until end of 3rd year of implementation and just past 2 years for Medium and Small. This is not realistic.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- 10th bullet: WEAKNESS, Supplier support numbers for “Total Suppliers” should be 50,000 for each size State according to the Cost Workbook req’ts. Also the numbers are too low for “At Go-live”.
- 13TH bullet: SLA metrics.
 - KPMG is only agreeing to two of the 10 Production SLAs, Catalog Onboarding/Maintenance and External Sources Onboarding.
 - KPMG is not agreeing to any of the Implementation SLAs
 - Ivalua is responsible any other SLAs and according to the Service Level Agreement section (pg. 67) they have their own “hosting and maintenance SLA”.
 -
- **Reports/Conversion/Interfaces**, pg. 185/186
 - 1st bullet: Limits the number of reports for each size of State. NEGOTIATION, suggest increasing to at least twice the listed numbers.
 - 16th bullet, pg.186: “only active suppliers, purchase orders, and contracts will be converted/moved”. NOTE, this conflicts with Implementation Req’ts Data Conversion Services, pg. 118-120, which states the “preliminary recommendation of the data conversions based on the req’ts state in the RFP” includes In-process Requisitions, Approve Requisitions, Purchase Orders Transactions, Solicitation Data, Contract Data, Vendor Performance Data, User Account Data, Chart of Accounts Data and Historical Spend Data.
 - 10TH BULLET: “any modifications to the out of the box functionality requiring custom code” is limited to only situations where there are “statutory requirements”. CONCERN, there may be RFP/RTM req’ts that end up requiring “custom code” so suggest getting this language modified to include any changes necessary to comply with RFP/RTM reqts.
- **OCM/Training**, pg. 186/187
 - 4th bullet: Client required to do “analysis of historic purchasing data...” NEED TO CHECK OCM SECTION TO SEE IF THIS ANALYSIS IS INCLUDED.
 - 5TH bullet: KPMG will leverage your organization’s current Learning Management System”. CONCERN, there will be some Participating Entities that do not have LMS’s. What will the impact be?
 - 7th bullet: Limits the number of “Client end users”, “Key Technical Resources” and “Help Desk Administrators” to be trained. NEGOTIATIONS, suggest that getting these numbers increased.
 - 8th bullet: TTT is limited to not “exceed three weeks”. WEAKNESS, this is too short a timeframe to learn the entire system and it will not fit into a phased implementation where training is divided among the phases.

General Principal and Requirements *(note parts 1-5 narrative are same as Ivalua proposal)*

Key Solution Functionality Elements, pg. 2-5 :

- Single Point of Entry: “has a single landing page when a user logs in. At this point user/profile-specific content is displayed.” (pg. 2)
- Smart Routing: “Workflow routing is attached to any object in the system”. “determine the workflow routing based on business rules for each object.” (pg. 2/3)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Compliance: "Ivalua understands that each organization has their own procurement code they must follow". System has the "flexibility to tailor the solution to meet the needs of individual public organizations" with a "robust configuration layer that allows organizations to add new fields, tailor business rules, add alerts, and managed workflow for your organization". (pg. 3)
- Portal: "they will have one place to manage all their activity and actions throughout the procurement lifecycle". "configurable homepage dashboards, users will be able to quickly see and take action on pending tasks. They will also have the ability to personalize this page to meet their needs". "collaboration tools such as internal blogs, discussion forums, and comments through the process". (pg. 3)
- Open Marketplace Environment: "find it no matter if it is from an internal catalog or an external supplier catalog". "accommodates hosted catalogs (catalogs managed by the organization), punchout catalogs (catalogs managed by retail sites)". "powerful search 360 functionality" which allows "search hosted and punchout catalogs side by side". (pg. 4)
- Integration: "robust integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on.". "multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.)". "includes hundreds of data mapping formats and standard integration templates". (pg. 4)
- Workflow: "workflow allows for easy work queue / process management and rule-based assignments.". "Client administrators are given latitude within the tool to adjust approval thresholds and approval assignments without needing to configure". (pg. 4)
- "over 50 different controls per workflow step including even the specific notification methods and addressees and "callback" support that can be used to invoke scripted actions like integration web services calls or cross-workflow signaling ". (pg. 4)
- Document Management: "functionality based on a common data model and a unified code base across all source-to-pay solutions". "consistent access to every data element, workflow element, supplier record, document management, UI functionality, and automation component."
- Reporting: "have an analytics layer across all our solution areas (source-to-pay) with numerous out of the box reports and dashboards as well as easy capabilities for users to create their own reports / dashboard". "users can save their personal reports within their own dashboard as well as share with others, as necessary." (pg. 5)
- Configurable: "Coding is not required to make changes to tailor the solution to meet the needs of each client." Create new fields, Change field names, Add tooltips/watermarks/regex, Conditional logic on fields, Mandatory fields, Tailored workflows, contract templates, standard documents. (pg. 5)
- Transparency: "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution". "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution." (pg. 5)

User Experience, pg. 6/7 : - Response did not address "Wizard-driven capabilities", "Mobile access/use" or "Workload management" to re-assign work.

- "Homepages are unique per profile, but also can be configured by the individual user." "includes quick links and shortcuts to frequently used objects."
- "access their pending workflow tasks directly from their home screen"
- "Each user is given one or multiple roles in the system which is tied to a series of authorizations. These authorizations will dictate what the users can see and do within the solution."

- "Users can also mass reassign their workflow tasks to other users using the delegate function"
- "Users or administrators can also set-up out of office forwarding for users."

Bidder Best Practices and Roadmap, pg. 7-9 : Did not address "constantly assess and recommend opportunities to reduce costs".

- New Releases: "Major Software Product releases are delivered by the Ivalua R&D division twice a year." "Multi-instance SaaS, "client to decide which major version to choose" and "when to upgrade". "Activable Features which enables customers to take advantage of new innovations in their versions without needing to upgrade"
- Latest Technologies: "specific standards that our platform should adhere to for a specific industry, for example, we achieved the security status of being FedRAMP Ready due to our work in the US Public Sector". "leverage advanced technologies such as machine learning, natural language processing (NLP) and more."
- Timely Updates: "Once a customer decides to schedule an upgrade, together with a dedicated upgrade support team, the customer success manager, and our R&D team, we work to ensure that upgrades happen in the timeframe laid out."
- Alternate Approaches: "we have built up significant in-house knowledge on best practices within the public sector". "During the implementation phase, Ivalua together with our partner community will always be there to guide customers towards better, more effective solutions, processes, and approaches, based on our experience." "customers themselves have a high degree of ownership over the solution, to be able to make changes and evolve as needed, without having to rely on us or our partners".
- Roadmap: "We have a dedicated Public Sector team that interfaces with R&D to ensure necessary and innovative Public Sector requirements and functionality are prominently featured on the roadmap.". "Key areas of investment are focused on":
 - o Enhance Mobile experience: Already have "Progressive Web Apps" for "workflow actions, notifications/alerts and more capabilities". "year to improve and enhance this around contracts, invoicing, supplier mobile capabilities. "
 - o Invoice/Payments: "Enabling the ability to execute payments within Ivalua"
 - o AI powered Contract Lifecycle Mgmt: "leveraging AI" for a "more guided, collaborative, and intelligent experience".
 - o Supplier Risk/Performance: add new features to existing capabilities.
 - o Security: Already FedRAMP. "evaluate additional threats and standards (like StateRAMP) to ensure...pursuing the appropriate certifications"

Innovations and Value-Added Features/Services, pg. 9-11:

- Help Desk, pg11/12: Level 1 help desk for suppliers/internal users. CONCERN, response refers to Help Desk as "not contemplated in the RFP" however there are specific req'ts for this in Implementation Services and Managed Services.
- Advanced Services Procurement, pg 12: Contingent labor purchasing. "external labor with an efficient engagement and follow-up channel". "Talent channels... selection process". "compliance with policies/legislation... secure re-engagement process". "full visibility of service quality... full visibility of service quality". Monitor through "alerts, timesheet, and milestone approvals."
 - o Service profile RFx types
 - o Configurable profile seniority
 - o Configurable working duration

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o Work assignment
 - o Time/Material purchase request
 - o Timesheet receiving (hours, days, percentage)
- Expenses, pg. 10: "Expense Stream handles the flow of claims and their images into the Payables team"
- Vendor Master Management (VMM), pg. 11) "capture, cleanse and maintain clean and accurate supplier master data" "solution can integrate with various ERPs to consume, aggregate and cleanse data using smart deduplication and merge capabilities before redeploying the pristine and accurate data back to those systems." **NOTE:** unclear how this VMM is different from the 'in-scope' Vendor Enablement and vendor integration work req'd in the RFP.

Customizations/Extensions, pg. 11:

- "Ivalua SaaS platform relies on configuration, not custom code"
- "Ivalua does not make coding customizations specific to individual clients; all coding changes on the Ivalua platform are part of their release cycle and are by definition part of the baseline product"
- "Ivalua maintains a copy of the organization's Ivalua instance." "upgrades are first applied to that solution, then will be tested, and released, and are subject to the entire cycle of testing, approvals, and quality assurance that is part of our Software Development Life Cycle (SDLC)."

Alternative Funding Models, pg. 11/12 :

- "numbers below are representational only". "additional due diligence with each participating entity... to discuss actual ranges".
- **Options 1 Hybrid Fixed Fee plus transaction-based funding model**
 - o "Participating Entity pay a reduced fixed fee and finance a portion of the program cost through a transaction fee-based funding model"
 - o "Fixed Fee payment reduced 50-75%". "fees would be decreased from our original estimate, by an amount to be agreed"
 - o Transaction Fee of 1-3%" added to "every purchase order processed"
 - o "KPMG would need to recover not only the proposed project cost, but, in addition the cost of capital for the deferred collections"
- **Option 2 Value-Based Funding Model** - NOTE this model is about the Participating Entity identifying internal savings and taking these savings from the organizations that experienced them as funds to pay for the system.
 - o "self-funding or value-based funding model with limited cost to the State"
 - o "would eliminate the initial State funding of the program". "would require a different implementation roadmap focused on delivering value rapidly"
 - o "savings that can be leveraged to create a source of funding"

Contract Transition and Flexibility, pg. 13:

- "we will work with the participating entity to assess the above and other factors and mutually agree to transition"

Functional Requirements - *(note this entire section and the RTM are the same as the Ivalua proposal)*

General Functionality, pg. 15:

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Source-to-Pay suite in the market which includes Public Portal, Supplier Risk & Performance Management, Sourcing, Contract Management and P2P processes, standard integrations and extensive system administration and reporting capabilities"

RTM

- "POTENTIAL WEAKNESS, GEN-15: Transaction print formats are based on "the layout of the screen" and to have "additional templates" for printing format requires "additional effort".

Supplier Portal, pg. 15/16:

- "free supplier portal where suppliers may perform self-registration and other activities with their customers"
- "have unlimited suppliers with unlimited users registered to do business"
- "register with basic information such as their tax identification number, email address, and company name to establish an account" then they "will have access to their supplier portal" to "manage all their activity with the organization from an integrated location"
 - o Manage their account information, user roles & users
 - o Submit contract usage reports
 - o Respond to sourcing events
 - o Manage/redline contracts
 - o Upload catalogs
 - o View orders
 - o Create advanced shipping notices
 - o Create invoices
 - o View their performance
 - o Collaborate on improvement plans

RTM

- Meets req'ts
- One req't needs clarification.

Supplier Enablement/Management, pg. 17-23:

- NOTE, registration is a two step process. Create basic account for one user, then that Admin user needs to log into the system to set up user roles, other users and complete the rest of their registration information that will be needed to create a supplier record in the finance system and award Contracts/POs to the supplier. Primary capabilities of a Basic registration allows them to managed their account and bid.
- "conditional logic can be utilized to tailor the registration page to specific information required by type – such as US vs. non-US"
- "Fields captured through the registration process will be tailored to your needs"
- "submits their registration it is processed through an automated workflow". "workflow process and acceptance/rejection criteria will be established by each client"
- STRENGTH: "onboarding progress tracker" provides "quick view into the remaining items required to complete their activation" (pg. 19)
- Integrations "to external systems in batch processes or in real-time to verify profile information or bring in data from external sources"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Can "maintain and store documents within their profile"(account). "organization can specify specific documents that are required by the supplier to complete their enrollment" (pg. 20)
- "system can track expiration dates of the documents and trigger reminders to both internal and supplier users when those documents are nearing their expiration" (pg. 20)
- "internal users will also be able to manage the supplier's information, activity, risk, as well as their performance" (pg. 22)
- Suppliers update their accounts by submitting a 'Change Request' (pg. 23)
 - o Change requests are auditable/trackable down to the field level
 - o Can be routed to the workflow for internal approval

RTM

- WEAKNESS, VDR-15: Duplicate registrations are not prevented at the time of registration. They are identified as part of workflow, if auto rejected, vendor is notified after the fact, not while completing the registration. Otherwise the State must resolve the duplicate.
- POTENTIAL WEAKNESS, VDR-19, 20 & 24-27: State will have to license the 3rd party system for validating IRS TIN/Name.
- POTENTIAL WEAKNESS, VDR-39: Response seems to indicate a "score carding" feature which may not provide the automated performance reporting on the metrics identified in this requirement.
- Two req'ts need clarification.

Buyer Portal, pg. 23-26:

- "Once the user login they will be directed to their homepage" which has dashboard that is unique to the user based on their role.
- "users can also add new aspects to their homepage or rearrange the webparts on the screen"
- Users are "given one or multiple roles" which has "authorizations" that "dictate what the user can see and do".
- Users also assigned a "perimeter, which corresponds to the agencies/departments/division they support and/or the commodities they support" which will "further limit the user's view into on seeing or editing objects".

RTM

- STRENGTH, BPRT-4: The capability to for users to be able to "change the layout and reports" on their dashboard is a significant benefit to users.
- One req't needs clarification.

Need Identification, pg. 26:

- "provides users the ability to initiate any procurement action from a single spot through the platform."
- "provides a powerful and flexible workflow engine that not only invokes approval flows, but also provides the ability to invoke processes" that "invoke business processes allows procurement policies and regulations to become part of workflow"
- "will guide the end user to begin any type of procurement activity by clearly identifying and outlining the process and steps that need to be taken"

RTM

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Meets req'ts
- Two req'ts need clarification.

Request through Pay, pg. 27-30: NOTE, response did not address the req't for "access to external retail marketplace products".

- "All purchases within the Ivalua solution will begin from a purchase request within the tool"
- "Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions"
- STRENGTH: purchase requests include an "Internal blog to communicate with stakeholders" (pg. 26)
- Workflow (pg. 27)
 - o "uses a combination of algorithms and user approval to navigate through the approvals". "define conditional logic to determine when and who should be approving each requisition"
 - o "can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases"
 - o "can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase"
- "order is transmitted to the supplier through their email, including a PDF version of the order. It can also be extracted and printed". NOTE: Tech Proposal did not address electronic order transmission (EDI/cXML) however this capability was acknowledged in RTM PO-17.
- "Receipts can be created in multiple ways, from a purchase order, from scratch, or from a supplier entered Advanced Shipping Notice". Receipts can be workflowed for review/approval. (pg. 28/29)
- Invoices
 - o "Invoices can be created by PO flip, from scratch, EDI/cXML transmission, OCR capability". (pg. 29)
 - o Invoices are workflowed for review/approval. (pg. 30)
 - o "system will automatically calculate the three-way match based on ordered, received, and invoiced amount, and will display alerts" (pg. 30)
 - o "flexible to accommodate 2-way match if specific commodities do not require a receipt in order to be paid." CONCERN, it may be that 2-way match is decided based on a commodity code which could be too general to fit the situations a State/Entity needs to have supported.
- "Once the invoice is fully reviewed and approved, it will trigger an integration to the ERP for payment". "will push an ok-to-pay file to the ERP"

RTM

- WEAKNESS, PRD-7: Purchase requests with a future release date for the Purchase Order required a manual step to release the PO once the date has passed, it is not automated.
- STRENGTH, PRD-8: The capability to communicate/collaborate with other users "under the request document".
- POTENTIAL WEAKNESS, PRD-13: There is no automated functionality that will include text or attachments based on a commodity or other field value.
- STRENGTH, PRD-19: The State will have access to "Ivalua's Design Mode, Workflow Engine and Alerts & Notification toolbox" which will provide the State with self-service capabilities for configuration.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, WRK-1: The workflow functionality provides both routing rules and approval rules in the single rules engines. Also allows you to build SQL statements to address complex scenarios.
- STRENGTH, WRK-2: The "whiteboard-like" user interface to design workflows.
- STRENGTH, WRK-6: The capability to "include SQL to route requisitions" is significant capability to address exceptions such as the need to have "by-pass conditions".
- STRENGTH, WRK-15: The capability to set up "specific messages" for each step.
- STRENGTH, WRK-22: "State can add fields to be auditable" provides additional flexibility to meet any changes in State audit needs.
- WEAKNESS, PO-15: System does not have the capability to have two versions of a printed purchase order.
- POTENTIAL WEAKNESS, PO-17: eFax of orders "is not currently supported".
- NOTE: Ivalua did not understand that the functionality desired is not the same as bank administration of user Pcards.
- "POTENTIAL WEAKNESS, PC-8: Pcard reconciliation currently can only be provided ""as a customized solution"" with Ivalua's expense module which is not included.
- STRENGTH, RC-17: Fixed asset receiving fields can be available for only "certain types of goods" instead of having to be on the users' receiving screen when they are entering any type of receipt.
- STRENGTH, RC-18: Creation of an "exception" to document an receipt issue and include give "corrective actions".
- Ten req'ts need clarification.

Catalog Capability, pg. 31-33: NOTE, Technical Proposal response did not address the req'ts to "provide access" to "external internet retail or commercial markets of goods/services" or access to "non-contract Suppliers offering goods and services".

- System supports both "internal and external (punchout) catalogs".
- "view catalogs are limited to the user's organization scope" (pg. 31) NOTE: scope = combination of Role/Authorizations/Perimeter/Commodity restrictions assigned to a user.
- Suppliers can "self-service" manage their catalogs by uploading them to the system. Done via excel templates. After upload "system does an automated format check". (pg. 31)
- "routed through an approval process for an internal user to validate" with "side-by-side comparison of old vs. new pricing" (pg. 31)
- "internal users can also upload catalogs on a supplier's behalf"
- "Search 360" (pg. 32)
 - o "predictive and fuzzy search capabilities"
 - o "can also search any field"
 - o "item tags" to "provide visual indicators" on search results to "identify preferred, discounted, or emergency items". Tags can be 'prioritized'.
 - o "has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal Ivalua catalog"

RTM

- STRENGTH, CAT-24: The capability to route catalogs for approval based more than a user having a role as catalog approver or buyer responsible for a contract. Specifically, can route based on "region, cost center, commodity types, etc."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, CAT-34: The Search 360 functionality will automatically search punchouts sites as well as hosted catalogs to present both results. Otherwise the user has to search Hosted Catalogs in the system and then go to each punchout individually to do their search.
- No req'ts need clarification.

Sourcing/Bid Management, pg. 33-42:

- "solicitation (BPM) type which drives which tabs and parts of the solicitation process are required." (pg. 33)
- "can accommodate a range of solicitation methods, from very simple quick quote events to multi-phase RFPs with multiple envelopes". (pg. 33)
- "Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities" and "can be added by searching the supplier database". (pg. 34)
- Documents Tab: can have unlimited number of attachments, "standard organization documents" and "solicitation owner can upload" docs.
- STRENGTH: "Documents can have workflows associated with them and accommodate versioning." (pg. 36)
- "Bids are protected through lvalua's sealed bid functionality" (pg. 36)
- Questionnaires: (pg. 36/37)
 - o "questionnaire capability, non-price components can be captured from the supplier".
 - o "Templates can be used"
 - o "ability to make a question required, the option to add a comment or attachment to clarify the answer, or to allows more than one response to a question. Conditional logic can also be added to questions to create if-then statements that will determine the visibility of questions based on previous responses."
- Pricing grids ("item grid") can have templates to be "automatically applied to the event". Columns on the grid can be "internal" (only State/Entity user can see) or "external" (Supplier can see). (pg. 37)
- Solicitations have "workflow to approve and release". Once approved "user can manually send out the solicitation or have it released automatically at the opening date and time". (pg. 37/38)
- Public Portal: (pg. 38/39)
 - o "public portal allows users without an account to view open and close solicitation, active contracts and facilitate the submission of public facing forms if needed."
 - o "lvalua can also integrate to the organization's website for posting of events."
 - o "public view of the solicitation includes all attributes of the solicitation including general information, documents, questionnaires, and price lists. In addition, the public solicitation page can also post bid tabulations and award posting once the bid due date and time has been reached and an award has been made."
- Responding:
 - o Suppliers can "craft their response within the system or can download the entire solicitation to a zip file to view and response offline if needed." (pg. 39)
 - o Supplier options: "create proposal from scratch, copy forward a previously submitted proposal, cancel a proposal in progress, withdraw a proposal" (pg. 40)
- Analyze and award: (pg. 41)
 - o "view side by side comparisons of items and qualitative information for two or more suppliers."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “can also select ‘award strategies’ which will apply a selected algorithm to create the award”
- “review their savings tracking that is based on the target and reference price”
- Awards have workflow/approvals capability. (pg. 42)

RTM

- STRENGTH, SRC-28: The Discussion Forum feature allowing messaging to "private or public" with "chat in real-time" for auctions.
- POTENTIAL WEAKNESS, SRC-25: No check-in/check-out capabilities for "documents, Terms/conditions and templates".
- STRENGTH, SRC-48: "drag-and-drop capabilities" as the user interface for creating workflows is more effective than other, more common options.
- WEAKNESS, SRC-66: System does not provide a means for a user to add "un-registered Vendors" to the "generated Vendor list" of a solicitation.
- POTENTIAL WEAKNESS, SRC-68: System does not support eFax.
- POTENTIAL WEAKNESS, SRC-76: The system does not OOTB provide capabilities to post to the "State's public procurement website".
- "POTENTIAL WEAKNESS, SRC-80: System does not have functionality to require vendors to provide ""basic"" information when downloading a solicitation document from the public website. Also, eFax is not supported."
- POTENTIAL WEAKNESS, SRC-83: System does not have a means to 'conduct pre-response/pre-proposal conferences'. Users would have to provide a link to a external webinar system that is not part of the eProcurement system.
- WEAKNESS, SRC-105: System does not provide notifications to vendors when submitting a response to a "set-aside solicitation and they are not a certified MBE".
- Seven req'ts need clarification.

Contract Management, pg. 43-46:

- “contract record within lvalua captures all aspects of contract information, documentation, activity, and performance within the single record.” (pg. 43)
- “system will automatically trigger reminders when the contract is nearing expiration” (pg. 43)
- “Different contract types can determine what field requirements, workflow, and alerts are relevant to the contract being created.” (pg. 43)
- Contract documents: (pg. 44)
 - “documents tab captures all documentation associated with the contract through attachments”.
 - “document has a ‘type’ associated with it that can categorize the documents”
 - “alerts can be triggered to the user if documentation is missing from the contract record or is nearing expiration”
 - STRENGTH: “has a built-in authoring tool that will allow users to write and redline contracts directly in the lvalua solution”. “Redlines are tracked from user to user with the ability to compare previous versions of the contract side by side”. “offers a native integration to Microsoft Word, so users redline in the Word can sync their version back to lvalua”. With “workflow capability, the “authored document can be passed back and forth between users to facilitate redlines, versioning, and approvals”.
- “any subcontractors and distributors that are being used by the prime supplier on the event”. “system can also trigger a subcontractor report to prime suppliers “ (pg. 45)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "accommodates a standard integration with multiple eSignature tools, including DocuSign, Adobe Sign, and Universign." (pg. 45)

RTM

- POTENTIAL WEAKNESS, CNT-7: System only has check-in/check-out capabilities for "documents authored within Microsoft word". Does not provide this for other documents or templates.
- STRENGTH, CNT-25: Authoring contract documents with MS Word is a significant capability.
- STRENGTH, CNT-50: The history feature capturing "at the clause level" is a significant additional feature.
- WEAKNESS, CNT-51 through CNT-63: The Ivalua "Public Contract Browse" feature cannot be modified to meet State needs/req'ts without "Ivalue security review or custom code".
- Three req'ts need clarification.

Vendor Performance, pg. 46/47:

- "users can create performance assessments against their suppliers or contracts."
- "can trigger alerts to users if a supplier is consistently performing poorly."
- "Templates for performance criteria are stored within Ivalua for users to respond to questions related to the supplier's performance". Weights for each question determine a total score.
- "Completed performance evaluations can be routed through a workflow if additional review or approval is needed"
- "ability to track exceptions and collaborate with suppliers to address these exceptions"
- "exception documents the issue or non-conformance and the severity, tied to the triggering event"
- "supplier is notified of the exception, allowing them to respond and actively manage any corrective action associated with the exception"
- "workflow to manage each step of the process" of exception management. "workflow can guide end users to collect documents and collaborate with the supplier to mitigate the identified issue."
- Improvement Plans: (pg. 47)
 - o "creating tasks that will lead to overall supplier improvement"
 - o "typically tied to an exception"
 - o "consist of a list of tasks that can be created from a template or individually"
 - o "Each task is assigned to a user with assigned due dates for both internal tasks and supplier actions"
 - o "Suppliers can access their improvement plans and update the status of their tasks"

RTM

- WEAKNESS, VPE-2 thru 12: System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data.
- Three req'ts need clarification.

Purchasing/Data Analytics, pg. 48-51:

- "three different types of reporting with the Ivalua solution, ranging from simple excel extracts to data visualization dashboards" (pg. 48)
- "Importing data from an external system can be accommodated."
- "over 100 out of the box reports" "that can be filtered and drilled down"
- Super users can configure additional reports
- Ad Hoc Reporting: (pg. 48)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o "Any browse page within Ivalua can become a report"
 - o "search and filter on any criteria" and "export their results into excel for a quick report"
- Queries: (pg. 48)
 - o "Excel based reports that are run via SQL statements in Ivalua's reporting module"
 - o "can combine data from multiple modules within a single report as well as conduct calculations"
 - o "parameters can be set up so users can filter the view of the data before extraction"
- Analysis Reports: (pg. 49-51)
 - o "provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users"
 - o "drill down on source data and apply filters to get a comprehensive view of data"
 - o "users can easily create their own dashboards or rearrange existing ones."
 - o Standard reports "can also be embedded" within dashboards.
 - o "New analysis can be built by using a template or by using an analysis builder"

RTM

- STRENGTH, PDA-1: The spend analysis and PBI modules described is more robust than expected and provides some capabilities beyond what was required.
- WEAKNESS, PDA-32: The system reporting tool does not have a means to publish reports on an "internal or public website". Can only make reports available within the system itself.
- Four req'ts need clarification.

Technical Requirements – NOTE: Except for the SLA section, responses to this section are the same as was submitted in Ivalua proposal.

Availability, pg. 53: Meets req'ts.

- "accessible 24 hours a day, 7 days a week"
- "guarantee by Hosting SLA an uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours"
- "co-locates its production and DR system in state-of-the-art data centers" "with fully redundant subsystems and compartmentalized security zones"
- "data centers have: Uninterruptible Power Supply (UPS, Diesel Generator); Redundant heating ventilation air conditioning and all components are fully fault-tolerant including uplinks, storage, chillers, HVAC systems, etc. Everything is dual powered."

Accessibility Requirements, pg. 53: Does not meet. NOTE: response indicates that work is underway to become compliant but no information was provided to indicate when.

- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "accessibility audit and compliance are broken into 3 manageable areas, corresponding to very distinct user typologies (internal, external, and anonymous),"
- "Ivalua has completed VPATs which can be provided upon request."

Audit Trail and History, pg. 53/54 & TECH-1 thru 5: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "provides robust audit and logging capabilities"
- User logged on... "all actions and activities are registered, logged and time stamped."
- Every transaction "is part of this logging effort"
- Fields have an "auditable checkbox" to mark that the field to have an audit trail.
- "audit train can be produced in reports"
- "approval history shows who validated/ actioned the previous steps and who will validate the current step"
- "mail history frame shows the history of notifications/ emails"

RTM

- Meets req'ts
- One req't needs clarification.

Browsers Supported, pg. 54:

- "Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari."
- IE: all still supported by MS. MS Edge, Chrome, Firefox: last 3 major releases
- Response did not address req't to support "any browser that is ranked as more than 10% of web traffic"

User Accounts and Administration, pg. 54-57 & TECH-6 thru 20: Partially meets. Response did not address the req't to be able to delegate "administration responsibilities" of "specific functions and organizations" and did not properly respond to TECH-20.

- "User roles and user access to Ivalua Solution are defined in the application through the administration components" by "application administrator(s)".
- Access to "application pages and functions are controlled by profiles, authorization, and perimeters."
- "a user has access to data and can transact across a certain region or other logical portion of the enterprise" or "a user has access to certain features and functionality" "or a combination of both."
- Option to "limit data access of business objects on a per user basis" which would allow restrictions for situations like "only access PO of the organization" that the user belongs to.
- "permissions can be controlled at the module, page, tab, and even field level for view and edit rights"

User Authentication, pg. 57/58 & TECH-21 thru 25: Partially meets. Response did not address req'ts for Identify Proofing.

- "supports multiple authentication schemes including:
 - o Login / password authentication
 - o Single Sign On (SSO) SAML 2 Web based authentication standard
 - o Two-factor authentication
 - o Reverse Proxy / IIS Agent based authentication (CA Single Sign On, formerly CA Site Minder)"
- "can configure password policies to meet State policies"

RTM

- Meets req'ts.

SME DEPARTMENT/STATE: NASPO

Federated Identity Management, pg. 58: Meets req'ts.

- "Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers."
- "only require one ID and password to access the full solution, with support for auto-provisioning of roles and permissions"

Data Conversion, pg. 59 & TECH-26 thru 34: Partially meets req'ts, see comments for TECH-28 & 30.

- "Ivalua EAI/ETL module" to "perform data import, transformation and load the source data into the system"
- "do not use third-party services"
- Will "provide tools" for "data transfer and data cleansing" including "Supplier Cleansing Workbench"
- "includes data transformation and business logic"
- "data conversion dry runs will be limited to three cycles"
- Participating Entity "will be responsible for extracting the data from its current systems and any external third-party systems into an Ivalua defined format"

RTM

- POTENTIAL WEAKNESS, TECH-28: System does not provide an automated means to load/convert active solicitations from an existing system.
- POTENTIAL WEAKNESS, TECH-30: System does not provide an automated means to load/convert Vendor performance data from an existing system.

Interface and Integration, pg. 59-61 & TECH-35 thru 60: Meets req'ts.

- "enterprise-class integration tools... work with all back-end systems, regardless of how many instances or different system types" (pg. 59)
- "has strong integration capabilities with a variety of ERPs including PeopleSoft, CGI Advantage, Oracle and SAP, among others" (pg. 60)
- "includes unidirectional or bidirectional data flows" using batch, asynchronous or synchronous interfaces. (pg. 60)
- integration module includes comprehensive format definitions, rules-based transformations, and validated loading of data. (pg. 60/61)

RTM

- Meets req'ts except TECH-60 where response did not address the req't to have "automated failure recovery".
- Two req'ts need clarification.

Office Automation Integration, pg. 61 & TECH-61: Meets req'ts

- supports all file types as attachments
- Excel support across the sourcing process
- reporting tools natively export to MS Word, MS Excel, and PDF.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- contract tool we can import MS Word documents and break them into clauses
- contract data can be exported into Word or PDF formats

Mobile Device Support, pg. 61 & TECH-62: Meets req'ts.

- "is a fully responsive HTML application"

RTM

- Meets req't.

Mobile Applications, pg. 61 : Does not meet req'ts.

- POTENTIAL WEAKNESS, system does not have a Mobile App. Relies on the system being a "fully responsive" application for use on mobile devices to give access to the entire system.

Data Ownership and Access, pg. 62: Meets req'ts

- Customer is "data owner and data controller"
- Customers can "directly export data using features available" in the system

Date Retention, Archive and Purge Considerations, pg. 62 & TECH-63: Meets req'ts

- "Ivalua does not delete or modify customer data, unless requested by the customer to do so
- "deployment allows the implementation project teams to configure when and what frequency to run the offline archiving functionality

RTM

- Meets req't.

Disaster Recovery Plan, pg. 62/63 : Meets req'ts.

- "has established a Business Continuity (BC) and Disaster Recovery (DR) Program
- "plan is reviewed and approved by the management annually
- "Program is based on ISO/IEC 22301 standard framework
- "Disaster Recovery Plan is based on a fully duplicated and hot-standby infrastructure".
"Replicated web servers & application servers, replicated database backups and redundant support service"
- "contingency plan includes": " Geographically separate sites, different hosting/internet service providers, recovery site service level equal to primary site.
- "Maximum recovery time can be as low as 4 hours **with the Platinum package**". CONCERN, need to lock in the "package" so there is a specific commitment to recovery time included in proposal and potential contract.
- "DRP plan is tested at least once a year
- Incident Response program "reviewed and approved by the management annually".
- Customer notifications of breaches "within seventy-two (72) hours – unless a shorter time is specified in the contract". NOTE, suggest making sure that the breach notification time limits in

any agreement are at least negotiated/locked-in or req'd to meet the notification req'ts specified later in this Security Req'ts section of the RFP.

Solution Environments, pg. 63 & TECH-64 thru 68: Partially meets. Training environment is not included. Need to NEGOTIATE to have Training environment include at no additional cost.

- "Each client will be provided at least 3 environments"
- "can also support the need for a training or other additional environments. All of these "extra" environments may come with additional maintenance fees"

RTM

- POTENTIAL WEAKNESS, TECH-65: Only the "acceptance environment" is "integrated" for testing. The Training environment does have integration.
- One req'ts needs clarification.

Solution Technical Architecture, pg. 63-65: Meets req'ts except response did not provide the req'd information to describe development tools, languages, and techniques "used in developing application modules".

Solution Network Architecture, pg. 65/66: Meets req'ts except response did not address req'ts to provide a diagram of the network architecture.

System Development Methodology, pg. 66/67: Partially meets req'ts.

- Did identify Development Methodology as "based on Agile methodology" and state that they "embeds Quality Assurance into the ongoing development process". However, response discussed the implementation work to configure, test, launch and manage configuration changes for a customer but did not address the req'd detail regarding the following in context of the system development practices they follow with building their software solution:
 - o Testing processes/tools/methods
 - o Stress testing
 - o QA assurance program
 - o Config/Change Mgmt for application development.

Service Level Agreement, pg. 67:

- KPMG
 - o In the Help Desk/Managed Services assumptions (pg. 185) KPMG only agrees to be accountable for two Production SLAs, Catalog Onboarding/Maintenance and External Sources Onboarding.
 - o In their list of Exceptions (pg. 192) they've taken exceptions with the RFP SLA
- Ivalua: "for hosting and maintenance, Ivalua offers its own" SLA which I did not find included in the proposal documents. We will need to clarify what SLA responsibilities KPMG is agreeing to and what Ivalua will be responsible for.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Security Requirements – NOTE: responses to this section are the same as was submitted for Ivalua proposal

Cloud Security Alliance (CSA) Compliance, pg. 69: Meets req't to complete CAIQ.

Security and Privacy Controls, pg. 69: Partially meets.

- WEAKNESS, Ivalua is not currently in compliance with NIST (SP) 800-53. However they are "currently in the process of validating" to this standards at "Moderate" risk controls.

Security Certifications, pg. 69: Meets req'ts. However, note that they are not "currently audited for PCI-DSS compliance" but do have cardholder data controls in place "in accordance with the PCI-DSS standards. Also note that they are "FedRAMP ready".

Annual Security Plan, pg. 69-74: Generally meets req'ts however discussed most req'ts at a high level instead of providing detail.

- "currently in the process of validating controls and safeguards against NIST SP 800-53"
- POTENTIAL WEAKNESS, Annual Security Plan, Encryption Data At Rest, pg. 71: Encrypting data at rest MAY NOT be part of their standard offering. Their HSM module/tool for this is a "paying option". CONFLICT/NOTE: in the Encryption section it states that "Data at-rest and in-transit is encrypted" however in the 2nd paragraph of this section it refers to "HSM-based encryption for data at rest" as a "value-added service (paying option)". So how can data at rest be encrypted as a standard for the Solution but yet be a "paying option"?

Secure Application and Network Environment, pg. 77-76: Meets req'ts though the detail provided was not comprehensive for the RFP listed req'd topics though some were addressed in previous Security sections of the response.

Secure Application and Network Access, pg. 77-79 & SEC-1 thru 5: Meets req'ts in RFP doc but has weakness in regards to some of the RTM Security req'ts.

RTM

- POTENTIAL WEAKNESS, SEC-1: System can track usage by user account, not device.
- WEAKNESS, SEC-3: System does not provide an admin capability to "force logout/end specific user sessions". Only has an auto logout feature to force all actives users out of the system.
- POTENTIAL WEAKNESS, SEC-4: System does not use "persistent cookies".

Data Security, pg. 79-81: Meets req'ts. NOTE, Risk Mgmt discussed in Annual Security Plan section on pg. 76.

Personally Identifiable Information Protection, pg. 81/86: Meets req'ts, however did not discuss compliance specifically for "Federal PII" requirements and did take two Exceptions (pg. 190) asking to revise two req'ts:

- "Upon request by the Participating Entity, promptly destroy...all PII received from the Participating Entity": added a statement that allows them to "retain a copy" to "comply with its contractual obligations and applicable professional standards".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Cooperate with... Participating Entity to monitor Bidder's compliance...": changed to "Provide commercially reasonable cooperation" and changed "monitor" to "confirm".

Security/Privacy Issue Occurrence, pg. 81 & Exceptions pg. 190: Does not meet and the response on pg. 81 conflicts with the Exception response regarding this req't..

- The response language on pg. 81 indicates notification response time of 72 hours however in the Exceptions the requirement has been re-written for all of the notification timing and added "material" and "where technically and reasonably feasible" language.

PII Data Actual/Attempted Access or Disclosure, pg. 81 & Exceptions pg. 190191: Partially meets.

- The Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.
- Exception has language changes
 - o "Fully cooperate with the Participating Entity in estimating..." req't: Removed the "fully" and "the consequences of" language from the req't.
 - o "In the case of a Disclosure" req't:
 - Changed "cooperate full with the Participating Entity to notify the effected persons" to "provide commercially reasonable cooperation to the Participating Entity in connection with the Participating Entity's notification to the effected persons"
 - Changed "Bidder must cooperate fully with all government regulatory agencies" to "Bidder must provide commercially reasonable cooperation to Participating Entity in connections with requests from government regulatory agencies..." and added "related to a Disclosure" to the end of the req't.

Security Breach Reporting, pg. 81 & Exceptions pg. 191: Does not meet and the response on pg. 81 conflicts with the Exception response regarding this req't..

- The response language on pg. 81 indicates notification response time of 72 hours however in the Exceptions the requirement has been re-written for all of the notification timing and made significant language changes to the req't.. NOTE, other than the notification timing conflict, the language changes appear to still fit the intent of the original req't.

Implementation Services Requirements

Project Management, pg. 83-101: Meets req'ts except for need to negotiate to change/remove the deliverable review/approval timelines. *NOTE: same as KPMG-GEP proposal*

- "leverage our Program and Project Management (PPM) Methodology"
- "will implement an integrated Project Management Office (PMO)"
- PMO Tasks: OK
- Scope Management (pg. 84): OK includes defining "formal change control"
- Schedule Management (pg. 84/85): OK
- Budget Management (pg. 86): OK
- Quality Management (pg. 86/87): OK except for issue on review/approval times should be changed during Negotiations.
 - o "before starting project activities" will "work with you to define...each deliverable"
 - o "submit deliverables... based on submission timelines specified"
 - o WEAKNESS (top pg. 87): "As a standard practice, we propose that your organization have five business days to review each submitted deliverable and provide comments". For corrected/resubmitted Deliverables, "expect your organization's approval or additional clarification...within five business days". This time is insufficient for large deliverables such as Design Documents.
- Resource Management (pg. 87): OK
- Communications Management, including Status Reporting (pg. 87/88): OK
- Risk Management (pg. 88/89): OK
- Issue Management (pg. 89-91): OK
- Project Manager Profile (pg. 91): OK
- Sample Implementation Plan (pg. 92): WEAKNESS, plan is for "small State entity" and has 9 months from start to go-live which is too aggressive. Should be 12 months to be realistic.
- Sample Bidder Staffing Plan (pg. 92-95): OK Good representation of what is needed.
- Sample Entity Staffing Plan (pg.95-100): OK
- Project Governance Model (pg. 100-101): OK

Project Implementation Methodology, pg. 101-112: . Meets req'ts. *NOTE: same as KPMG-GEP proposal*

Catalog Support Services, pg. 112-115 : Meets req'ts, though need a CLARIFICATION to confirm that they have committed to set up "commercial retail online marketplaces" where the Participating Entity does not have a contract.

- Suppliers "able to manage catalogs in a self-service manner by uploading their own catalogs"
- "internal users can also upload catalogs on a supplier's behalf"
- KPMG (pg. 114):
 - o "will execute a spend analysis to match spend categories to the platform buying channels". "takes a methodical approach in identifying the correct suppliers fit for punch-out and hosted catalogs"
 - o "obtain historical data for the last 2 years along with contract data to assess and prioritize" for "hosted or punchout catalogs"
 - o "will propose a Content Enablement Strategy and finalize the suppliers to move forward with in Ivalua"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Will “begin outreach to suppliers”
- “will begin the setup and configuration of punch-out catalog within Ivalua, setup the online marketplaces”. “will begin to complete the appropriate hosted catalog templates to upload into the system”. “will engage State users to test the catalogs”
- “will train the State to manage punch-out catalogs and suppliers to manage hosted catalogs”
- will train “State users on setting up new punch-out and hosted catalogs” and train to “identify additional vendors to enable”.

Data Conversion Services, pg. 115-123: PROBLEM

- “will automate the various steps” using “Ivalua ETL/EAI module and using internal accelerators”.
- “Ivalua ETL module” to “perform data import, transformation and load”.
- CONCERN... Recommended Data Conversions, pg. 118-120: The list on these pages conflicts with the Assumptions section (16th bullet, pg.186) states that “only active suppliers, purchase orders, and contracts will be converted/moved”.
- OPTIONAL, Cognitive Contract Management (CCM): tool that will “read and ingest documents such as contracts, price lists, and catalogs” to extract/load contract metadata from “enterprise 125state-wide, and local applications and databases”.

Interface/Integration Development Services, pg. :

- “have experience integrating Ivalua with leading financial and ERP systems” including SAP, PeopleSoft, CGI Advantage, among others”
- Experience “deploying a combination of batch and real-time”
- EVOLVE, Post-Implementation, pg. : CONCERN, response indicates that support will be moved to the State/Entity tech team. Need to NEGOTIATE that maintenance/support for the KPMG portion of interfaces/integration will be covered by the on-going maintenance support services.
- Paragraph just before “System Integrations & Interfaces table, pg. 126: refers to “real-time integrations getting from the source system an “immediate (synchronous) response”. “Immediate” is not viable for some integrations so suggest NEGOTIATE to remove the word “immediate” from this paragraph.
- Table of System Integrations/Interfaces, pg. 126-128: CONCERN,
 - #1 Vendor Sync: identifies this as “Batch” and “Daily”. Need language added to the Notes to say that these may need to change based on design decisions so live procurements (Solicitation Awards, Contracts, Purchase Orders) are not held up for a day waiting for confirmation from ERP that vendor was successfully created.
 - #2 Verification of accounting codes: having this be Batch/Daily means that a requisition will have a 1 day delay before the user can move forward with the procurement. Need to have this changed to Real-Time and to be all of the accounting code values.
 - #3 Requisition & #4 P: need to remove “immediate” to allow for potential actions that may need to happen within the ERP (e.g. RTM req’t TECH-47 Approvals in the ERP) before a response can be returned.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Organizational Change Management (OCM Services) , pg. 128-138: Overall meets req'ts however as noted below the more significant services/tools that are discussed are listed as "Additional". So the OCM included is not as strong as it could be.

- The following req'd OCM deliverables are identified in the graphic on pg. 131 but are not listed in the table of OCM Services on pgs. 131-136: Coaching Plan and Resistance Assessment/Mgmt Plan.
- People TRIP, pg. 132: Note, this is a Readiness Assessment service listed separately from the req'd "Readiness Assessment" which they address on pg. 133. This tool is identified with an asterisk meaning it is "Additional" (not included) but pg. 136 it is referred to as a "no cost tool".
- "Additional KPMG recommended services" (bottom of pgs. 131-136): Many of the more valuable tools/services are "Additional" so the included OCM services are actually not extensive. NEGOTIATION, get these to be included at no additional cost.

Training Services, pg. 138-148: Meets req'ts. Train the Trainer approach with State training End Users. Very mature and comprehensive approach to training.

-

Help Desk Services, pg. 148/149 & IMPL-1 thru 5: Meets req'ts.

- Tier 1 is to be provided by the "Client"
- Tier 2 is to be provided by KPMG
- Tier 3 is to be provided by Ivalua or Client, depending on whether the issue is with the Ivalua system or the Client-side integration/interface.
- "would assign anywhere between five and ten FTEs" with the "capacity to expand up to thirty FTEs, as needed"
- "uses ServiceNow cloud-based platform"
- "we've included help desk support for the initial six months post go-live". NOTE: but this is not Tier 1 support.

RTM

- Meets req'ts.

On-Site System Stabilization Support, pg. 150-152: Does not meet req'ts. Services will only "address defects and transition to steady state run and operate mode"..

- "design documents will not be updated due to defects"
- "KPMG can provide Tier 1/Level 1 support as well if desired and contracted by your organization". NEGOTIATION, suggest locking down an Optional price for KPMG to provide Tier 1 support for the 3 month period.
- Response did not address providing
 - o System setup/configuration changes
 - o Monitoring system performance/stability
 - o System use assessment

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 1

DATE: 12/14/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Managed Services Requirements

Solution Support, pg. 154-158 & MNGD-1: Generally meets req'ts however response did not specifically speak to providing the services for "all Production and non-Production environments" as req'd in the RFP.

- "KPMG's Powered Evolution services help sustain your investment"
- Includes (pg. 165)
 - o Triaging functional issues
 - o Assisting with the usage and navigation of features and functions
 - o Troubleshooting technical issues
 - o Assisting with data quality efforts
 - o Coordinating with third-party support organizations to resolve incidents
 - o Ivalua update support and planning
 - o Regression testing
 - o Maintaining configuration documentation
 - o Maintaining standard operating procedures
 - o Report writing
 - o Data load support
 - o Configuration changes
 - o Uptaking new functionality
 - o Governance
 - o Management reporting
 - o Change management (of system changes)
- Enrichment (pg. 165): CONCERN, Enhancements (80hrs or less/deploy in one month) are included but Large Enhancements (>80 hrs) are "considered separate project" (additional costs).
- Configuration Changes (pg. 157): CONCERN, only configuration changes "which require 5 days or less effort" are included in the scope of services. CLARIFICATION, how will configuration changes that require more than 5 days be addressed?
- Service Levels (pg. 157/158):
 - o CONCERN/NEGOTIATE, SLAs do not include response time commitments
 - o STRENGTH, the "Priority/Severity" descriptions are comparable, from business perspective, to those in the RFP SLA. NOTE: the response for the Technical Requirements, Service Level Agreement section does not include this, or any other, definition of Priority/Severity. NEGOTIATION, need to confirm that KPMG is accepting the definitions in the RFP SLA definition for the two SLAs they've agree to follow.

Organizational Change Management (OCM Services) , pg. 159-160: Meets req'ts.

Training Services, pg. 160-162 : Meets req'ts.

Catalog Support Services, pg. 162: Meets req'ts.

Help Desk Services, pg. 162-163: Partially meets req'ts. It is unclear whether KPMG would provide Tier 1 support or if the Participating Entity must provide that level. Note that in the Support Services section on pg. 155 the Table list "Base Services" refers to L2 and L3 support which implies that the Participating Entity is providing L1 (Tier 1) support.

Transition Out Assistance Services, pg. 163-165: Tasks/work meets req'ts however the timeline of 10 weeks does not meet the RFP req'd timing of continuing "for a period of up to six (6) months".

Other Available Services - pg. 167-175: *NOTE: same as KPMG-GEP proposal*

- Strategic Sourcing, pg. 167-170: Optional Service. KPMG would provide "strategic sourcing process entails spend analysis, market analysis, demand research, go-to market strategy development, bid document creation, bid evaluation and analysis, supplier negotiations, and contract awards."
- Should-Cost Modeling, pg. 170-173: Optional Service. KPMG would provide cost modeling using "Data Engineering, External Market Data Library, Granular Economic Modeling, Advanced Root Cause Analysis".
- Contract Performance Management (CPM), pg. 173-175: Optional Service. KPMG would provide contract management for the State/Entity, identifying contract leakage and taking corrective action.
- Localization Support, pg. 175: Optional Service. KPMG can "help onboard the remaining agencies as a part of the post implementation activities"... "loading data, training end users, and deploying the solution".

Individual Evaluator Comments:

Ivalua - Unified Business platform.

General Principal and Requirements

- Key Solution Functionality Elements – fully integrated system. Start from single landing page; homogenous look and feel between modules. Single data ecosystem.
 - P5 Ivalua has extensive experience in delivering procurement solutions for State & Local organizations. As we work with our customers, we have continued to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding
 - Subcontractor Reporting
 - Cooperative Reporting
 - Portal entry – single login, configurable dashboards. Collaboration tools – blogs, forums, comments.
 - Open marketplace - hosted catalogs; punchout catalogs (side-by-side hosted and punchout searches; off catalog searches.
 - P5 Integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on. Likewise, Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.
 - Workflow, Document Management, Configurable (p6 example list), Public portal – transparency.
- User Experience – login routes to homepage unique to user, role and tasks.
 - One or more roles guide the user experience.
 - No cost for suppliers to access portal to submit bids.
 - P7 search capability is accessed directly from the home screen for users to be able to start searching the catalog, or to create new requests.
 - P7 access pending workflow tasks directly from home screen
 - P9 Users or administrators can also set-up out of office forwarding for users. This will delegate all workflow tasks assigned to that user within a defined time period to another user or group of users.

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Bidder Best Practices and Roadmap
 - Major releases delivered 2 times per year.
 - Recommends major updates 18 months for best product maintenance
 - Fedramp ready
 - Public sector longtime focused; best practices developer for public sector tailored solution.
 - Roadmap is 60% customer-sourced.
 - Roadmap – web apps; invoicing and payment execution inside Ivalua; contract lifecycle management using AI; supplier risk and performance; StateRamp; enhanced clause libraries; collaborative authoring.
- Innovations and Value-Added Features/Services
 - P11 Ivalua Help Desk as alternative to state-operated. Level 1 with 0-% tickets solved within 1 hour. Level 2 redirect. (Cost item)
 - P12 Advanced Services procurement. (Cost item)
 - Vendor Master Management – supplier data (Cost item)
 - Adoption of ERP specific source schema tables to support bidirectional master data integration
 - Use of a supplier cleansing workbench for merging and deduplicating records from multiple source systems
- Customizations/Extensions – Configuration not custom code.
 - Coding changes part of release cycle.
 - Users have flexibility to deploy releases. Reduces risk of automated upgrades-prompted problems.
- Alternative Funding Models – Two options – hybrid fixed fee (e.g. 75% plus 1-3% transaction fee); value-based funding model that would be an unstated “different implementation model” but proposed to fund through savings. Option 2 would need clarification for any state looking to use it. Should not be considered part of pricing evaluation since it is an optional method and based entirely on projections.
- Contract transition. Existing customers may discuss contract transition with Ivalua. GFE not guarantee.

Functional Requirements

- General Functionality
- Six modules integrated: Supplier Risk & Performance; Solicitations & Bid Management; Contract Management;
 - *P16 Master data throughout the solution for selection of organizations, commodity codes, units of measure,*
 - *Single platform manages the end-to-end solicitation and purchasing process for the organization, suppliers, and political subdivisions*
 - *EPROC-GEN-3 - Posting to Ivalua's native site does not require any integration. Ivalua can also integrate to state's websites or other sites, as needed. Our recommended approach is using Ivalua's public portal and putting a link within the State's website, to leverage the simplicity of standard functionality while easily allowing access for users from the State's website.*
 - *EPROC-GEN-39 - Throughout each implementation, Ivalua works with organizations to identify any additional information outside of standard that should be available on the*

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

public portal. Document posting can be controlled at the individual document level or by document type (Ex. confidential documents not made public). Authorized users will be able to modify the document types made public.

- Supplier Portal – P17 *free supplier portal where suppliers may perform self-registration and other activities with their customers. Ivalua supplier registration & information management capabilities allows to quickly and easily onboard suppliers for RFPs, orders and invoices, and push data to ERP or other relevant system*
 - *Supplier features:*
 - *Managing their supplier information and users*
 - *Submitting reports for cooperative contract usage*
 - *Responding to sourcing events*
 - *Managing/redlining contracts*
 - *Uploading catalogs*
 - *Viewing orders*
 - *Creating advanced shipping notices*
 - *Creating invoices*
 - *Viewing their performance*
 - *Collaborating on improvement plans*
 - **EPROC-SPR-14 Needs clarification** *ERP financial data is integrated into the system as standard throughout the Procure to pay process. Additional fields can be captured through integration. Is this integration included in the price or required to be developed on customer ERP side?*
 - *EPROC-SPR-19 Administrative fee payments will be submitted through a third party payment provider. Ivalua can offer a close integration to the third party provider to track payment within the system*
- Supplier Enablement/Management- p18 *Supplier activation within Ivalua takes place in two parts. The first is a public facing registration page that allows any new supplier to create an account within the system. The second is the 'full enrollment' process, where the supplier can login and collect additional information required to be fully onboarded with the organization and to do business. The registration page can be found by accessing the public facing homepage of Ivalua. Potential suppliers can access the portal 24 hours a day, 7 days a week, 365 days a year. The Ivalua supplier portal is 100% free for the suppliers, no setup and/or transaction fees.*
 - **EPROC-CDR-18 to -27** – *Third party integration to validate supplier data. Needs clarification – Ivalua supplies or customer supplies?*
 - *EPROC-VDR-32 Ivalua segregates organizations – workflow can't pass between organizations.*
 - **EPROC-VDR-40 – Needs clarification** *(vendor email signup) – is this a Customization as marked or a Configuration as stated in comments?*
 - **P 20** *The supplier submits their registration it is processed through an automated workflow that will automatically accept or reject the registration based on system conditions, such as a duplicate check. The workflow process and acceptance/rejection criteria will be established by each client. If the supplier's registration is approved, they will receive an email notification informing them that their account has been created, and they can login using their username and password that were established on the registration page. Needs clarification – is approval following automated step or is there manual intervention by Ivalua or State?*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P21 – documents can be stored in profile for use in response and contract management.
 - P24 – supplier self-service for account maintenance then routes to internal user for approval; can sent updates to ERP.
- Buyer Portal – Internal users log in via username/paw or SSO.
 - P25 Alternatively, **suppliers** can login via SSO with their organization. **Needs clarification** – is this a typo as this is buyer portal response? Is there an SSO supported for suppliers?
 - P26 User role or roles tied to authorizations. Perimeter can limit visibility into certain departments' data or permissions.
 - EPROC-BPRT-8 – Daily summary of notifications not available.
- Need Identification – P27 *Options from home page: Create a Needs Request form; Create a Purchase Request - contract, non-contract, punch-out, non-catalog products, or for the procurement of services; Complete an Exemption Request; Create a sourcing event; Gather quotes; Create a Contract.*
 - **EPROC-Need-3 – Needs clarification** – Why is guided buying listed as a C? Is there not standard or configurable workflow?
- Request through Pay – starts with requisition; routes for budget; moves to sourcing event. Fully integrated process through requisition, purchase order, receipt and approval.
 - P32 – multiple methods of receipt input: PO; from scratch; EDI/cXML; OCR.
 - Integrates to ERP to trigger and record payment.
 - **EPROC-PC-1 thru -9 – Needs clarification** – status of pcard development.
 - EPROC-RC-21 – UOM conversion to set inventory as different from PO is configurable.
- Catalog Capability – items from multiple suppliers can be on the same PO.
 - CXML punchout; unlimited items; unlimited catalogs
 - Spot bid functionality EPROC-CAT-11
 - Supplier uploaded catalogs routes for approval to internal user.
 - P35 Ivalua also has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal Ivalua catalog. This will provide the user with a single place to conduct a search, instead of having to punch out to the external catalog first.
- Sourcing/Bid Management – All RTM listed sourcing methods supported as standard or configurable.
 - P36 – Suppliers added to tab for solicitation notification in supplier tab manually; suppliers can be searched by any field in supplier database. (This will include supplier record details – contacts, performance, documents.)
 - P37 Documents tab can host unlimited attachments, e.g. T&Cs; workflows for documents and versioning; standardize for agency.
 - Sealed bid management blocks access by internal users until bid due date; time stamp on screen for auditability.
 - Pricing collected in system, p39; Templates permitted; modifications, new fields can be created; system calculates price savings against reference prices if included
 - Public portal for posting – recommendation to host solicitation on Ivalua, link with basic information from state or other sites to minimize integration effort.
 - **P39 – Needs clarification.** *Public sourcing events allow **any user without an account** to view and **respond to event** within the Ivalua sourcing solution. How is user data captured and ongoing communication facilitated without a confirmed account? See EPROC-SRC-66 **If these suppliers choose to respond they will be required to make an account in the system.***

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P43 During active solicitation, internal users can see activity of suppliers including participation, as well as email notifications received; Sealed bids content protected until closing date.
- P44 Contract creation starts with award notifications and carries over solicitation/response fields to avoid duplicate re-entry of data.
- **EPROC-SRC-35 – Needs clarification.** *This can be accomplished via configuration. For editing via Ivalua's Microsoft word authoring - check-in/check-out is supported out of the box, but not for attachments only. What does “not for attachments only” mean?*
- EPROC-SRC-48 *Workflows can be designed by administrators using drag-and-drop capabilities. It is easy to develop tasks for human approval, or routing decisions based on business rules or factors such as threshold amounts*
Configuration will be required to ensure the workflow meets the needs of each organization
- **EPROC-SRC-68 – Needs clarification** – Is eFax a roadmap item or does Ivalua plan to not support?
- EPROC-SRC-76 – *Posting all solicitation documents to state's public website is customization with high complexity. See earlier not for simpler recommended process.*
- EPROC-SRC-83 – No integrated video conference. Third party link can be inserted. Attachment can be uploaded.
- EPROC-SRC-102 – Ivalua native plugins for third-party electronic signatures.
- Contract Management
 - P45 *The contract record within Ivalua captures all aspects of contract information, documentation, activity, and performance within the single record.*
The header tab of the contract captures the basic information about the contract brought over from the solicitation as well as manages any dates associated with the contract. Based on the dates that are set-up in the header of the contract, the system will automatically trigger reminders when the contract is nearing expiration.
 - Document management. P46 *Within the document management capability, Ivalua has a built-in authoring tool that will allow users to write and redline contracts directly in the Ivalua solution. All organization contract templates and clauses will be stored within the system that can then be easily pulled into the contract document. Legal users will have the ability to import or edit templates and clauses, when needed. Redlines are tracked from user to user with the ability to compare previous versions of the contract side by side. Ivalua also offers a native integration to Microsoft Word, so users redline in the Word can sync their version back to Ivalua.*
 - P47 *Through the third parties tab, Ivalua can capture any subcontractors and distributors that are being used by the prime supplier on the event. They can define who the subcontractor is, their M/WBE status, as well as the amount of percentage of the total contract value the supplier is responsible for.*
 - P48 *system can also trigger a subcontractor report to prime suppliers. This allows them to report how much has been paid to their defined subcontractors in that period. The report is then routed through a workflow for approval.*
 - EPROC-CNT-72 – Fee comparison. Marked as C, but comments say configuration. Is this code?
- Vendor Performance P49 *performance information is maintained within the supplier's profile for reporting, as well as can trigger alerts to users if a supplier is consistently performing poorly.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Templates for performance assessments. Vendor score. *As evaluators respond to the supplier assessments, they will be able to add comments and attachments, where needed.*
 - Improvement plans can be set up as collaboration tool to create tasks aimed at supplier improvement. Supplier and Internal user can both access.
- Purchasing/Data Analytics – 100 out of the box reports; ad hoc reports; SQL queries.
 - Analysis reports with data visualizations.
 - Three RTM requirements depending on completion of the Pcard functionality.

Technical Requirements

- Availability – 99.8% uptime. Monthly scheduled maintenance.
 - Service credit 5% for <99/8% increasing through levels to max of 25% for <85%. Credits applied against future prof. serv. Fees. No refunds unless <90 on contract.
- Accessibility Requirements – P55 *Ivalua is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance. Ivalua is committed to being Section 508-compliant (against WCAG 2.0 Level AA requirements) as soon as possible across all application pages.*
- Audit Trail and History – P56 *While a user is logged on, all actions and activities are registered, logged and time stamped. Every transaction created, every status change, every movement through to the next step in a workflow, every addition or deletion of a data item of any kind is part of this logging effort.*
- Browsers Supported – Common browsers – last 3 major releases; Explorer – only MS-supported.
- User Accounts and Administration – Role-based administration to access permitted sections of Ivalua environment.
 - User Authentication – Supported: Login / password authentication; Single Sign On (SSO) SAML 2 Web based authentication standard; Two-factor authentication; Reverse Proxy / IIS Agent based authentication (CA Single Sign On, formerly CA Site Minder)
- Federated Identity Management: SAML 2.0 protocols for Single Sign On. Single login for entire platform.
- Data Conversion – P61 Uses integrated Ivalua ETL (Extract/Transform/Load) utility.
 - KPMG-Ivalua team work with customer to define common data model and data to be exported. Three cycles of dry conversion data runs. Customer responsible for validated exported legacy data. Conversion will be executed multiple times during dev and UAT before Prod.
 - *EPROC-TECH* – Date conversion legacy data supported except for Solicitation data in State's system and Vendor performance data.
- Interface and Integration – P59 Synchronous and Asynchronous data transfers supported. Multiple communication protocols and data formats, including flat files, JSON, XML, cXML, OCI, IDOC (SAP)
 -
- Office Automation Integration – All file types supported as attachment.
 - Excel support across sourcing process.
 - Reporting tools natively export to Word, Excel and PDF
 - Contract tool imports Word documents.
 - Contract data can export Word and Pdf.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Mobile Device Support – P61 *Ivalua is a fully responsive HTML application; screens adjust to devices, e.g., on when using Ivalua on a mobile device the screen menus change for PC layout to Mobile-friendly layout.*
- Mobile Applications – Mobile solution runs on Webkit-enabled browser; no separate app.
- Data Ownership and Access – P61 *Customers remain the data owner and data controller of all data they place into their Ivalua instance and should apply access controls to restrict access to data within their instances based on their own requirements and needs, in accordance with their access control, data retention and data classification policies.*
Internally, Ivalua has its own data classification policy. All customer data is classified as Confidential and access to the environment where customer data is stored is limited to a small number of individuals on a need-to-know basis.
- Date Retention, Archive and Purge Considerations – P62 *Ivalua does not delete or modify customer data, unless requested by the customer to do so, and only processes data in accordance with its contractual obligations and the customer's configuration of their instance(s).*
- Disaster Recovery Plan – P62 *Ivalua BC and DR Program is based on ISO/IEC 22301 standard framework*
 - Documented backup and recovery procedures
 - Crisis/incident management procedures
 - Stakeholder communication processes
 - Replicated Web server and Application server; replicated database backups; redundant support services; contingency plan for hosting and ISP.
 - P63 *Ivalua notifies impacted customers of data breaches which Ivalua becomes aware of without undue delay, but within seventy-two (72) hours - unless a shorter time is specified in the contract*
- Solution Environments – Minimum 3 environments – Dev, Acc (test), Prod.
 - Training environment available. – add fee.
- Solution Technical Architecture – All customers environments isolated in enterprise grade cloud architecture. End users access Ivalua from web browser – no client software installation required. – 64-bit MS stack. Plus open standards REST, JavaScript, HTML, XML and JSON.
 - Database layer on servers in non-internet routable network segment – requests not made directly to database tier; only issue from customer's instance.
 - No commingling of customer data.
- Solution Network Architecture – All RTMs standard functionality.
 - P66 *Intrusion Detection System and Intrusion Prevention system (IDS/IPS), monitors and blocks malicious traffic or attack on network traffic traversing the device.*
 - *systems log unexpected network activity (volume of traffic, protocol anomaly, signature-based attack) and notify Ivalua IT staff in real time via emails and text messages.*
 - P67 *Equinix DC3 Data Center - Ashburn, VA (Primary, DR); CH3 Data Center - Elk Grove, IL (Primary, DR)*
 - *Ivalua also guarantees a Hosting SLA (hit response time, uptime) and can share a monthly report with the client upon request.*
- System Development Methodology - P67 *secure-SDLC policy and procedures that ensure security-related functions are covered during the development life cycle from design to implementation to testing. New features are evaluated for their security impact during the design phase, regular code reviews (peers and SAST tools) are conducted internally during the implementation phase and tested for effectiveness during the QA process.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *Ivalua's development process is based on the Agile methodology with its iterative approach to software development and assessment. This embeds Quality Assurance directly into the ongoing development process.*
 - *P68 Configuration Management Program for its Cloud services in accordance with NIST Security-Focused Configuration Management of Information Systems guidelines. Ivalua applies Security-focused Configuration Management for establishing baselines and for tracking, controlling, and managing many aspects of the secure lifecycle of all information system resources, configurations, and processes.*
 - *All application changes/updates are at the customer request and control, and they will be performed either behind the scenes (for minor updates) or through scheduled downtime (for major updates). Customers typically enforce their own change management process.*
- **Service Level Agreement** – Sample attached. 99.8% uptime. Monthly scheduled maintenance.
 - *Service credit 5% for <99/8% increasing through levels to max of 25% for <85%.Credits applied against future prof. serv. Fees. No refunds unless <90 on contract.*

Security Requirements

- **Cloud Security Alliance (CSA) Compliance** – CAIQ 3.0.1 provided (No unusual.)
 - *IAM-02.7 Ivalua doesn't share internal security metrics with customers. The termination control is tested as part of the SOC control and SOC report is provided to the customers upon request.*
- **Security and Privacy Controls-** **P69 Needs clarification** Ivalua is currently in the process of validating controls and safeguards against NIST SP 800-53 Revision 4 "Moderate" risk controls for FISMA compliance with our Commercial Cloud. **Is this complete?**
- **Security Certifications** - *Ivalua has implemented an Information Security Management System (ISMS) in accordance with ISO/IEC 27001. Ivalua is annually audited SSAE-18 SOC1 and SOC2 (US) and ISAE-3402 (Europe). Ivalua is also annually audited HIPAA and complies with business associates' requirements of the Privacy, Security, and Breach Notification Rules.*
 - *P70 Ivalua is not currently audited for PCI-DSS compliance. However, Ivalua has safeguards and security controls in place to protect cardholder data in accordance with the PCI-DSS standards and is leveraging its Hardware Security Module (HSM) infrastructure to manage cryptographic keys used to secure cardholder data.*
 - *Ivalua is FedRAMP Ready with our GovCloud and listed on the FedRAMP Marketplace.*
- **Annual Security Plan** – *P71 Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE-3402 (Europe).*
 - *Ivalua enforces the principle of least privilege across the entire organization. Role-based access control at directory and application levels and firewall rules are used to manage access.*
 - *Only users with the appropriate profile can load a page or execute a function. It is also possible to limit the data access of business objects on a per user basis.*
 - *Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers. Our model creates a very distinct boundary between the data of each client.*
 - *Ivalua invests a large number of resources to get itself audited by a 3rd party auditor against the SOC and HIPAA security frameworks. Every year it produces a report that is shared with its customers, upon request.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *5-stage incident response: Preparation; Detection and analysis; containment, eradication and recovery; post-incident activity; communication.*
 - *Ivalua applies a single data classification to all customer data it hosts. Ivalua does not inspect or monitor its customers' data and has no ability to understand how any data may have been classified by individual customers.*
 - *Ivalua has implemented numerous privacy and security practices to ensure Ivalua compliance with the GDPR.*
- Secure Application and Network Environment – Equipment hardened; proactive network security. See architecture above.
 - P77 Data at-rest and in-transit is encrypted using the industry-standard AES 256-bit encryption. Ivalua Cloud infrastructure where client data are stored, processed, and transmitted:
 - The web traffic between the end-users and the servers is encrypted using TLS (HTTPS). Ivalua SSL X.509 CA certificates are generated with RSA 2048 key size and SHA-256.
 - P78 *In Ivalua's infrastructure, managed devices (switches, routers, firewalls) and services communicate their activity logs to two different servers, located in two geographically distant data centers.*
 - *While a user is logged on, all actions and activities are registered, logged and time stamped. Every transaction created, every status change, every movement through to the next step in a workflow, every addition or deletion of a data item of any kind is part of this logging effort. As a result, the system can produce a detailed audit trail of exactly who did what, where and when. This audit trail can be produced in reports on a real-time basis.*
 - DLP strategy includes an administrative policy around removable media and data loss prevention.
- Secure Application and Network Access
 - P81 *Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances. This model enables higher instance availability.*
- Data Security – See above. All narrative in this section has been stated in other areas.
- Personally Identifiable Information Protection – P85 *Ivalua has implemented numerous privacy and security practices to ensure Ivalua compliance with the GDPR.*
 - *Customers may configure access to PII such that customer-defined roles have access to PII within the Ivalua platform. When providing customer support, Ivalua may have access to PII data.*
 - *Ivalua is also annually audited for HIPAA and complies with business associates' requirements of the Privacy, Security, and Breach Notification Rules.*
- Security/Privacy Issue Occurrence - *reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours.*
- PII Data Actual/Attempted Access or Disclosure – See previous
- Security Breach Reporting – See previous

Implementation Services Requirements

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Project Management – KPMG governance and project management plan detailed from p84 in Section III response. KPMG project manager. Integrates key customer stakeholders in the implementation team. Detailed risk management and issue management processes.
- Project Implementation Methodology – 5 phases. Vision, validate, construct, deploy, evolve.
 - Use of pre-configured delivery models, training materials and benchmarks to accelerate project. Avoids reinventing the wheel.
 - P109 Test scripts to be developed in collaboration with customer organizations. Note that in assumptions on p185: KPMG not responsible for developing UAT test plan or UAT scripts.
 - Cutover to production occurs as part of go/no-go prior to full go-live.
 - Post go-live support/hypercare (4 stage severity levels for defect resolution.) Evolve phase.
 - Supplier enablement- start with current/future state identification.
 - Identified org role-based map according to project responsibility: leadership, functional and supplier support; data migration, testing, change mgmt/training, managed services
 - Identifies roles in customer org. including time commitment expected.
- Catalog Support Services – KPMG and customer identify hosted/punchout best fit for each supplier.
 - KPMG does catalog set up with internal users; Vision – 2 years spend data to assess; Validate contracts; Publish punchout and hosted catalogs prior to go-live; construct – configure punchout – setup online marketplace. KPMG engage state users to test catalogs and validate. trains customers on future hosted and punchout catalog set up.
- Data Conversion Services –KPMG works with state on data migration strategy, defining data conversion, mock and production data extracts, data cleansing, transform/load processes, quality assurance.
 - Uses Ivalua ETL/ETA module. Phases: Extract; Transform and Load; Data Reconciliation.
 - 9 preliminary datasets identified as likely for conversion with sources data (ERP or external (existing) systems.
 - P123 Optional Cognitive Contract Management (CCM) KPG platform to read and ingest documents including contracts, price lists and catalogs.
- Interface/Integration Development Services
- Restated 5-step deployment Vision, Validate, Construct, Deploy, Evolve for development. Parallel workstreams for GEP-KPMG and customer teams.
 - 10 integrations identified and process outlined including source and destination systems.
 - KPMG will design the format, develop, and test interfaces feeding in/out of Ivalua.
 - P127 Your organization will be responsible for mapping the data elements to your systems, developing and testing the interfaces coming into your organization systems and out of your organization systems into the proposed solution's services per the project schedule. Interfaces identified and finalized during Design Phase will be built in collaboration with your IT resources. It is assumed that for any interfaces/integrations to other third-party systems, your organization will provide for the necessary licenses, if applicable
 - Middleware solution or adapter will management integration between Ivalua, ERP, other apps.
- Organizational Change Management (OCM Services) – Detailed KPMG OCMT process outlined (can be scaled back for less complex projects)

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Proposal lists included projects and additional KPMG services. Clarification may be needed to state if proposal complies with RFP requirements without the “additional recommended KPMG services” (Difference between OCMT Strategy and OCMT Plan, for example). Are these additional services included in cost workbook? Should they have been referenced in the Value Added section?
- Training Services – KPMG Targeted learning model. Training the Trainer. – combination of instructor-led classroom/online and webinar. Self-service on-demand web-based training. Quick-ref guides.
 - Role-based training needs assessment; table breakdown of topics.
 - Troubleshooting guides. Developed training becomes property of customer.
 - Separate training plans for Trainers, System admins, help desk, suppliers.
- Help Desk Services – P150 KPMG provides Help Desk/Service Desk as part of managed services framework during the implementation. Trains state help desk staff on specific deployment.
 - Augments existing Help Desk by providing case management support for state’s power users via tickets submitted to KPMG’s ServiceNow system. Tickets to:
 - Tier 1 (client org)
 - Tier 2 – KPMG
 - Tier 3 – Ivalua or client IT as applicable.
 - KPMG subcontractor can provide Tier 1. (Needs clarification of optional cost.)
 - Help desk support is included for six months after go-live. Transition to state’s help desk, includes training and knowledge transfer.
 - EPROC_IMPL-3 and -4 – No live chat available.
 - EPROC_IMPL-5 – Ivalua Extranet ticket system can be viewed by customer, but does not integrate to customer’s ticket help system.
- On-site stabilization. Hypercare – 3 months. Monitor rollout; triage and support high-priority tickets; adjust configuration, defects. Focus on end-user adoption; transition to state support team and Ivalua Run team.
 - KPMG knowledge transfer plan
 - Quality gates with exit criteria to help stabilize system during hypercare for longer term managed services transition to steady state operations. 1. Pre-contracting and contacting; 2. Initiation and planning exit; 3. Execute and test exit; 4. Implement and stabilize exit.
 - P185 Assumptions – Assume Tier 1 support during hypercare is performed by customer; KPMG acts as Tier 2 support. Ivalua acts as Tier 3 support.

Managed Services Requirements

- Solution Support – P156 “Powered Evolution Services”: governance; base services; enrichment.
 - Identify support and escalation standards, performance category, issue severity level with descriptions.
- Repeat of description of infrastructure, SLA and environments.
 - SDLC policy and development and testing plans for rollout explained.
 - Testing has 4 levels: Manual tests and code reviews; load and performance testing; functional testing; regression and automated testing.
 - Repeat of contracted level 3 support and optional level 1 supports.
- Organizational Change Management (OCM Services) – P161 – OCMT (referenced in implementation – for areas that are needing to be additionally supported).
 - Focus on 1. Service delivery; 2. Service quality.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG (Ivalua implementation)

CATEGORY #(s) 1:

DATE: 1/16/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Stakeholder analysis/assessment.
 - Surveys to identify metrics.
 - Communication plan - engage change agent network to review software updates
- Training Services Service Center change monitoring Process – maintain current content.
 - Examples of training modalities: Email; team huddles; quick ref guides; micro-learning videos; eLearning; Instructor-led or Virtual live learning; office hours.
- Catalog support services. **P164** Proposal to refine and maintain existing catalogs, determine new catalogs as hosted or punchout; setup and configure punchout catalogs; publish hosted and punchout catalogs. **Needs clarification – is this in proposal cost or optional cost service?**
- Help Desk Services – case management support for state's power users via tickets submitted to KPBG's ServiceNow system. Tickets to:
 - Tier 1 (client org)
 - Tier 2 – KPMG
 - Tier 3 – Ivalua or client IT as applicable.
 - P186 – 25 ServiceNow licenses provided for power users.
- Transition out - P105KPMG team manages and oversees tasks to remove client users from system and information. In client environment, KPMG execute protocols to ensure KPMG personnel offboard.
 - Phased approach – formal toll gates act as check points to align clients and all parties. Three toll gates with processes totaling up to 10 weeks.
- Other Available Services: KPMG strategic sourcing, Contract Performance Management, Localization.

Video Demonstrations

- Major elements of Ivalua system and scenarios demonstrated.
- Clean system with consistent look and feel.

Other notes on Assumptions – p185

- Client procures 5 environments: 1 prod; 4 non-prod.
- All suppliers register directly in the solution
- KPMG configure 5 contract templates in contracting module
- Maximum of 25 configured fields
- KPMG not responsible for developing UAT test plan or UAT scripts.
- P188 Only active suppliers, POs and contracts converted.; Active solicitations completed in legacy system.
- P188 KPMG will use client's existing LMS.
- P188-189 Proposed training approach assumes Small=20; Medium=30; Large = 60 plus 5 Tech and 10 help desk for on-site end user training not to exceed 3 weeks; KPMG develops training materials.
- KPMG responsible for user documentation and on-demand electronic user materials.
- Client responsible for providing training development software licenses for Adobe Captivate or Articulate storyline to KPMG as requested.

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- LSI Consulting has provided product design, training design and delivery, organizational change management, and implementation consulting services for SAP customers since the establishment of SAP Public Services Inc.
- LSI has over 1,200 full-time employees,
- Supplier Relationship Management and Procurement (Ariba)
- LSI has developed a national practice across our Public Sector clients including State of Nevada, State of Arkansas, Commonwealth of Pennsylvania, San Diego County, San Bernardino County, Price George County, Clark County, Collier County, Houston Independent School District, City of San Diego, City of Palo Alto, Colorado Department of Transportation, Sedgewick County, Hawaii Department of Transportation, Port of San Diego, and many more which can be best reflected in the
- most recent Ariba implementations at County of San Diego and Sempra amongst others.
- LSi has significant experience implementing SAP ERP solutions but may not have done as much with the proposed full SAP Ariba suite of tools.

2. Previous Projects

- LSI has extensive list of Public Sector and Higher Education clients, though the list (pg. 8) does not specify what SAP solutions were implemented for each.
- **San Diego County** (pg. 9): LSI implemented Ariba Supplier Lifecycle and Contracting modules with integration to Oracle Financials. Also created Single Sign-On software. *Not a Full Suite eProcurement implementation.*
- **University of Kentucky** (pg. 10): LSI implemented SAP HCM, Finance, SAP Student Lifecycle Management, BW, SRM/PPS 7.0, Analytics and Ariba Contracts. *Not a Full Suite eProcurement implementation.*
- **Sempra Energy** (pg. 11): LSI implemented Ariba Contract Management with integration to their existing ERP with Microsoft Dynamics and Active Directory. *Not a Full Suite eProcurement implementation.*
- **City of San Diego** (pg. 12):
 - i. City implemented the "SAP Ariba procurement platform. City manages "buying, contracting, digital purchasing, increased spend visibility and more with SAP Ariba". LSI was not listed as being part of the project.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): 1

DATE: 8/25/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- **Washington D.C.** (pg. 13):
 - i. The District has been an Ariba On-Premise user and is now looking to transition to Ariba in the cloud. LSI is not listed as being part of the project.
 - **California Dept of Healthcare Services** (pg. 13):
 - i. "DHCS has deployed the complete SAP Ariba procurement platform, including strategic sourcing and buying & invoicing solutions". LSI was not listed as being part of the project.
3. Subcontractors
- No subcontractors
4. Organizational Chart
- Org chart does reflect an implementation project with high LSI positions identified. State positions are not identified, just listed as "State Team Project SMEs & Project Stakeholders" however the Role/Responsibility table does identify State positions/roles needed. (pg. 14)
 - Role/Responsibility table does identify the appropriate responsibilities for core/key staff (pg. 15-21)
5. Litigation
- No litigation.
6. Financial Viability
- All areas except Financial Stress rated at Low or Low-Moderate risk. (pg. 24)
 - Financial Stress (pg. 26): Moderate Risk, due to "low proportion of satisfactory payment experiences to total payment experiences".
 - One Tax Lien from South Carolina Dept of Employment and Workforce and five open UCC Filings. However, details are not clear as to the situation, circumstances or whether these are related to the proposed solution.

Individual SME Comments:

Exceptions, pg. 142145:

- LSI takes exception to 7 of the NASPO T&Cs.

General Principal and Requirements – pg. 48-21

Key Solution Functionality Elements, pg. 8-10:

- SAP Ariba is the solution
- Single Point of Entry: "AP Ariba Guided Buying serving as the single point of entry for all procurement-related requests."
- Smart routing: "Ariba includes a highly configurable workflow engine"
- Compliance: "SAP S/4HANA for product compliance, you can manage regulations, track registrations and substance volumes, classify products, and create compliance documents, as well as package, transport, and store hazardous materials properly with accurate labeling."
- Portal: "SAP Portal product portfolio". Available
 - o as "SAP Enterprise Portal (on-premise)
 - o on SAP BTP as SAP cloud Portal service
 - o (portal-like) sap Launchpad serviceCLARIFICATION, need to identify which is being offered.
- Open Marketplace environment: "SAP Ariba Business Network (SBN)". Customers choose to have access to all suppliers on the network or "only to their preferred suppliers". Also have "Spot Buy catalog solution" for "end users to find and buy non-sourced goods".
- Integration: "SAP's holistic integration approach"
- Workflow: "SAP Business Workflow enables the design and execution of business processes"
- Document Management: "SAP Ariba Contract Management module can track, manage, and store documents".
- Reporting, dashboards and data visualization: "SAP Ariba is delivered with native reporting and analytics, including numerous pre-packaged reports."
- Configurable: "configurable workflows to document templates" with "the flexibility to reflect state-wide or agency-specific rule-sets and processes"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Transparency: "Vendor Portal" and "The offering includes a customer specific deployment of a Transparency Portal. This portal is scoped to meet each entities specifications by giving the organization the ability to surface procurement activity and information to public stakeholders including solicitations, contracts, supplier information and purchasing reporting data." (pg. 10)

User Experience, pg. 10-12:

- "design to deliver a fast and ergonomic user experience minimizing end user training"
- "has configurable dashboards to meet each of the different type of user's needs."
- "SAP Ariba also provides mobile procurement tools to review and approve requisitions"

Bidder Best Practices and Roadmap, pg. 12/13:

- Quarterly Release: Feb, May, Aug & Nov
- Monthly Feature Deliveries: optional, no-impact release. Changes "virtually invisible to the end users".
- Production quality metrics tracked for improvement needs.

Innovations and Value-Added Features/Services, pg. 13-16:

- SAP FieldGlass:
 - o SAP Fieldglass External Talent Management automates the entire process of procuring and managing flexible labor, from requisition through invoice and payment.
 - o "SAP Fieldglass Services Procurement can handle the management of a variety of Statement of Work (SOW) engagements including projects, offshore/offsite, independent contractors, managed programs, business services and Business Process Outsourcing (BPO) models".
 - o "SAP Fieldglass Worker Profile Management enables companies to track and manage all non-traditional workers who are not tied to a job posting or Statement of Work (SOW)."
- SAP Ariba Supplier Risk Management: "lets the State tailor risk views and alerts to state's business, to each supplier relationship, and to the State's role. The State can also segment suppliers based on risk exposure."

Customizations/Extensions, pg. 17 : System does not allow customizations but can have "extensions" added outside of the scope of the contract by other "partner" contractors.

- "SAP Ariba application extension partners can create and deliver applications that augment SAP Ariba solutions" (NOTE: these are companies that can create additional functionality from what is being proposed).

Alternative Funding Models, pg. 20 : Response did not offer any alternative funding models. Instead promoted the SAP Fieldglass application.

Contract Transition and Flexibility, pg. 20 :

- "LSI possesses an extremely high level of flexibility to transition from a state's current contract to a new contract or amendment"

Functional Requirements – pg. 22-46 [Note, narrative same as IBM proposal](#)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

General Functionality, pg. 22-24: Meets req'ts.

- "Ariba is a role-based solution"
- SAP Ariba Buying & Invoicing (including Guided Buying)
- SAP Ariba Sourcing
- SAP Ariba Contracts
- SAP Ariba Supplier Lifecycle & Performance Management
- SAP Ariba Network
- SAP Fieldglass
- "A super user will be granted broader access to the solution by assigning multiple roles" to access functionality across the solution and "provide administration capabilities across the solution or for specific functional areas".
- "Guided Buying is the exception, which is designed for casual users to procure with a consumer like user experience".
- CONCERN, by default the system has built in use of the UNSPSC code set. Since Ariba is a SaaS (shared instance) State/Entities with a different commodity code standard will have to adapt to UNSPSC codes in some areas of the system where a crosswalk to their commodity codes will cannot be incorporated.
- SAP Ariba Business Network is a B2B network ("dynamic, digital marketplace") transacting "business commerce between more than 3.6 million" companies.

RTM

- WEAKNESS, GEN-4: User must manually post copy of a solicitation to a State's public website.
- WEAKNESS, GEN-5: To post Contracts on the public website, integration would be put in place to put a "link" on the website that would go to the Contract BUT only "licensed users" would be able to use the link to see the Contract.

Supplier Portal, pg. 24-30: Generally meets req'ts, however no details provided for public RTM req'ts (see RTM notes).

- Ariba Business Network (aka Ariba Network, Ariba Supplier Network)
 - o Single supplier account to transact with all Ariba customers, "supplier unified seller experience"
 - o State/Entity can choose to only access "their preferred suppliers" or all suppliers that are members of the Network.
- Ariba "Supplier Enablement Services" for the Network are included
 - o "will be responsible for most of the enablement process", onboarding
 - o The services will 'scale' up to meet "the State's volume" of suppliers
 - o Sends request for suppliers to confirm/accept relationship on the Network
 - o Provide phone support for registration "and conduct change management"
 - o Provide training on invoice submission
 - o Provide an Account Manager to State/Entity to "support suppliers and increase project engagement"
 - o Send "go-live letters" to inform suppliers when the State/Entity is going to start doing "electronic transactions"
- Supplier Portal functionality across all customers, not specific to a State/Entity using Ariba
 - o Consolidated order dashboard
 - o Order task reminders and rules-based order routing

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o Access to Ariba Discovery public solicitation posting (postings by all Ariba customers)
- o Contract collaboration/redlining
- o Self-service hosted catalog creation as CIF, cXML and Excel files
- o Self-service Punchout setup, separate setup for each Ariba customer
- o Dashboard to manage catalog activity
- o Option to have "public catalogs on the SAP Ariba Spot Buy Catalog solution" (similar to putting catalog in Amazon but only accessible by Ariba customers).
- o Invoice create/submission to Ariba customers via PO-Flip or electronically from Suppliers internal system (cXML, EDI, CSV). With option to create non-PO invoices.
- o Self-service Administration to define Supplier user roles and users
- o Link multiple registration accounts to a Parent account
- o Mobile app for access to orders, invoices, notifications, order/invoice graphs and can "confirm customer orders".

RTM

- CONCERN, SPR-9 & 10: Response does not provide details and there is conflicting responses in the Technical Proposal referring to a Transparency Portal (pg. 10), Ariba Discovery (pg. 38) and using Ariba APIs to "exposed data" (pg. 40).
- CONCERN, SPR-18: Response only stated "Partner". No detailed response provided for req'ts to allow suppliers to respond to a performance complaint/issue.
- CONCERN, SPR-19: Response stated "Not supported - Partner". No detailed response provided for req'ts to allow suppliers to submit Admin fee payments.
- SPR-12 needs clarification, response did not address the full req't.

Supplier Enablement/Management, pg. 30 : Generally meets req'ts.

- SAP Supplier Enablement Team will "design and develop the most effective enablement strategy" based on their "profile, PO and invoice volume, and spend". Segment the "State's vendor master data to effectively target/onboard suppliers in tiered waves".
- Provides IRS TIN/Name "verification capabilities"
- For the Ariba Network, offers suppliers "user guides, FAQs, technical documentation, and free online seminars".
- Can have "account specific information" via a "supplier information portal embedded in the Ariba Network".

RTM

- NOTE, VDR-1: Registration is for the Ariba Network and uses a "supplier profile questionnaire" to capture State/Entity specific registration data.
- WEAKNESS, VDR-11: The Ariba Network captures UNSPSC codes with registration. State/Entity would have to add to the 'questionnaire' a selector for other Commodity Code taxonomies (e.g. NIGP codes) with registration.
- NOTE, VDR-19: Response does not address the req't to validate IRT TIN/Name but in the Technical Proposal (pg. 25) it does indicate that this verification is available.
- WEAKNESS, VDR-20: Address validation is for "format" only. System does not use anything to confirm that the address is good.
- WEAKNESS, VDR-23: Debarment/watch list verification is an "add-on", not included in the offering.
- Four req'ts need clarification, response did not address the full req't.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Buyer Portal, pg. 31-34: Meets req'ts.

- Casual/Power Users, pg. 26/27: CONCERN,
 - o Running "pre-packaged reports" is listed for Power Users, not Casual Users.
 - o "Post solicitations" is listed for Power Users, so it may be that Casual Users won't be able to do 3 Bids/Buy (aka Quick Quote) functionality (see PRD-36 & SRC-11 references).

RTM

- Meets req'ts except 3 req'ts that need clarification, response did not address the full req't..

Need Identification, pg. 34/35 :

- Guided Buying, pg. 29: NOTE, Ariba concept for Guided Buying appears to be a Landing Page once the user logs in that provides a variety of options with titles that tries to 'Guide' the user based on what they are trying to do. So it's really up to the user to figure out which 'path' to take from the Landing Page.

RTM

- Meets req'ts.

Request through Pay, pg. 36: Generally meets req'ts.

- pg. 31/32: Ariba Buying/Invoicing module provides
 - o Requisition, PO generation with Order delivery to Suppliers and Supplier Invoice submission via Ariba Business Network.
 - o Approval workflow is on the Requisition, Change Order, Receipts and Invoices with in-tool/email/mobile approvals.
 - o Suppliers can send order confirmation, advanced ship notice and invoices via their acct on the Ariba Business Network.

RTM

- WEAKNESS, PRD-6: System does not provide an automated means to control whether combining purchase for multiple Fiscal Years are allowed on a Requisition/Order.
- STRENGTH, PRD-11: System has the capability for Suppliers to invoice against a Contract instead of a PO.
- "POTENTIAL WEAKNESS, PRD-13:
 - System does not provide a "library concept" for standard specifications.
 - Attachments size is limited to 100MB each."
- WEAKNESS, PRD-15: Attachments throughout the system have individual size limits of 100MB per attachment.
- POTENTIAL WEAKNESS, PRD-23: System does not have a requisition feature for the user to enter a discount percentage that is automatically applied to the requisition pricing. However, can automatically apply a discount that is recorded on an associated contract record.
- STRENGTH, PRD-24: Input forms can have a workflow defined for the individual form.
- STRENGTH, PRD-33: Suppliers can set up their Ariba Network account to route Change Orders differently than original Orders.
- POTENTIAL WEAKNESS, PRD-37: System does not identify matching state source items to non-contract items or save matching items for later analysis.
- POTENTIAL WEAKNESS, PRD-39: System does not identify matching state source items to retail/commercial market items or save matching items for later analysis.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, PRD-53: System does not provide a means for users to enter 'speed codes' that "automatically map/populate" other accounting fields.
- WEAKNESS, PRD-56: The system does not provide a means to enter 'back dated' requisitions/orders. So system will not be able to allow recording of purchases done outside the system.
- POTENTIAL WEAKNESS, PRD-62: System does not provide a means to specify a payment method "other than invoicing" on the purchase request.
- POTENTIAL WEAKNESS, WRK-10: For an authorized Approver to be able to over-ride/bypass to make a purchase request bypass any steps they have to manually remove each step from the workflow. There is no automation available for this.
- POTENTIAL WEAKNESS, WRK-12: Attachments size is limited to 100MB each.
- POTENTIAL WEAKNESS, WRK-13: Approvers cannot approve/deny by line item. To only approve part of the line items the Approver must delete the line items they want to deny.
- WEAKNESS, WRK-14: When an Approver edits a purchase request the workflow cannot be re-triggered to start again at the beginning.
- POTENTIAL WEAKNESS, PO-2: System does not have the capability to split a Requisition into separate POs for different Fiscal Years, holding the future Fiscal Year POs.
- WEAKNESS, PO-5: System does not provide the capability to have Agency/Organization specific PO templates.
- WEAKNESS, PO-15: The system cannot provide an internal and supplier printed version of an order. Though it can be customized, there is only one print format for an order.
- POTENTIAL WEAKNESS, PO-16: There is not eSignature functionality available for Orders.
- POTENTIAL WEAKNESS, PO-17: Attachments size is limited to 100MB each.
- POTENTIAL WEAKNESS, PO-24: The system does not notify "reviewers, approvers" when a PO has been cancelled.
- POTENTIAL WEAKNESS, PO-27: Orders cannot be created with out create a Requisition.
- POTENTIAL WEAKNESS, PO-28: Orders cannot be created from a Contract directly, must create a Requisition from the Contract.
- POTENTIAL WEAKNESS, PO-29: System does not provide a means to specify payment method, other than invoicing, on the PO.
- POTENTIAL WEAKNESS, PC-3: System does not provide a means to prevent Pcard use based on the type of a Purchase Request.
- WEAKNESS, PC-6: System does not provide a means for a user to enter/maintain their own Pcard information. Must have a Pcard Administrator manage this for users.
- STRENGTH, PC-8: Pcard reconciliation capabilities are comprehensive.
- WEAKNESS, PC-9: System does not have a means for users to record "non-purchase order Pcard transactions" as part of reconciliation.
- POTENTIAL WEAKNESS, PC-16: System does not provide a Pcard transaction integration to the Finance system for budget/funds verification and to encumber funds.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts without a corresponding PO in the system.
- POTENTIAL WEAKNESS, RC-4: Receipts cannot be recorded in the system and later associate it to a PO.
- WEAKNESS, RC-16: System does not have Receiving tolerances capability. Tolerances are defined on Invoicing.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, INV-2: System does not provide a means to control which Agencies/Entities that a Vendor may submit electronic invoices for. The only control available is to control which Vendors are able to submit electronic invoices.
- STRENGTH, INV-8: System provides a "messaging feature" on Orders and Invoices to communicate with the Vendor.
- Ten req'ts need clarification, response did not address the full req't.

Catalog Capability, pg. 36 : Generally meets req'ts, with these caveats.

- Ariba Spot Buy catalog solution, pg. 33:
 - o NOTE, Ariba Spot Buy is NOT the equivalent to 3-Bids/Buy (Quick Quote). It is shopping "non-sourced" catalogs in a marketplace that Ariba has available through their Business Network where member suppliers can offer catalogs to sell to Ariba buying customers. Similar to accessing/shopping Amazon.
 - o WEAKNESS, to shop Spot Buy, users have to do a second Search after they have searched the State/Entity catalogs.

RTM

- WEAKNESS, CAT-6: System has a limit of 5000 catalogs.
- WEAKNESS, CAT-7: System has a limit of 500,000 catalog items in a catalog.
- WEAKNESS, CAT-10: System does not provide the capability to have catalog items that provide instructions to users without pricing.
- POTENTIAL WEAKNESS, CAT-11: System does not provide a means
- WEAKNESS, CAT-12: System does not provide catalog capabilities for configurable products or services.
- WEAKNESS, CAT-13: System does not have catalog capability to have pre-configured items with ability to substitute optional components.
- WEAKNESS, CAT-19: System does not allow for negative dollar value catalog items.
- Three req'ts need clarification, response did not address the full req't.

Sourcing/Bid Management, pg. 37-40: Generally meets req'ts, with these caveats.

- pg. 38: Public posting of the solicitation would only be on the Ariba Network "Discovery" website, which has all Ariba customer solicitations. As noted in the response to SRC-52 & 76, an integration would have to be created (not included) using the "Ariba Discovery API" to post on a State/Entity public website.
 - o CONCERN, conflicting answers for public posting
 - o Transparency Portal section, pg. 10: states that "the offering includes a customer specific deployment of a Transparency Portal. This portal is scoped to meet each entities specifications by giving the organization the ability to surface procurement activity and information to public stakeholders including solicitations, contracts, supplier information and purchasing reporting data". Response on pg. 38 only mentions Ariba Discovery.
 - o ALSO, on pg. 40 there is a reference to "Public Access to Data" in the Vendor Performance area which refers to APIs that could be used to "expose data to the public via a public website".
- Project Mgmt, pg. 39: STRENGTH, system provides "project management" feature of defining Phases/Tasks that users are "required to complete as part of the solicitation".

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

RTM

- POTENTIAL WEAKNESS, SRC-16: System does not have a specific solicitation type for "Invitation for Qualified Products".
- CONCERN, SRC-23: The reference to access being "based on user licenses" may mean that the sourcing module is licensed separately from other modules. Need to look closely at the Cost Workbook.
- STRENGTH, SRC-28: The messaging feature seems to be a very strong fit to the collaboration requirement.
- WEAKNESS, SRC-35: The system does not provide "check-in/out capabilities for the repository.
- WEAKNESS, SRC-37: System does not provide a means to update documents, terms/conditions, specifications and have Templates that include them be automatically updated.
- WEAKNESS, SRC-38: System does not provide a means to identify templates that include documents, terms/conditions, specifications that have been updated.
- CONCERN, SRC-40: The statement "SAP Ariba will maintain the header data fields on behalf of the State..." implies that the State will not have Admin access to make configuration changes to the system.
- CONCERN, SRC-52, 76, 81, 90, 138 & 147: Response conflicts with responses in the Technical Proposal referring to a Transparency Portal (pg. 10), Ariba Discovery (pg. 38) and using Ariba APIs to "exposed data" (pg. 40).
- CONCERN, SRC-53: The limit of loading 9 attachments at a time may be a frustrating user experience if they have to load more than 9 documents.
- POTENTIAL WEAKNESS, SRC-54: OOTB the system utilizes UNSPSC codes. It may not directly support NIGP codes.
- POTENTIAL STRENGTH, SRC-56: The capability to "assign a weight to graders on a grader by grader basis".
- "WEAKNESS, SRC-63: Solicitations are ""limited to 100 supplier participants"" and to do more you have to set up ""different events"".
-
- CONCERN, SRC-63: The ""100 supplier participants"" limit ""to ensure maximum performance"" may mean that the system can't handle larger numbers of participants. May be a technical limit."
- POTENTIAL WEAKNESS, SRC-64: System does not provide a means for Suppliers to sign up to be notified when a sourcing event for an existing Contract is being issued.
- POTENTIAL WEAKNESS, SRC-67: System does not provide a means for un-registered suppliers to add themselves to a solicitation supplier list.
- STRENGTH, SRC-84: The "message board" can be copied on emails to post the email content into the message board automatically.
- WEAKNESS, SRC-88: The system can workflow full set of Q&A as a "tracking document" but does not support the specific details of this requirement.
- WEAKNESS, SRC-102: The sourcing module utilizes acct login as the esignature on solicitations. However they can do customization to provide DocuSign or Adobe eSign services with bids.
- CONCERN, SRC-118: The system does not have a designed means to capture subcontract data as part of vendor responses. Workaround is to attempt to use "RFx questions, lots and/or line items".
- CONCERN, SRC-120: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.

SME DEPARTMENT/STATE: NASPO

- CONCERN, SRC-125: If the report means that the user has to leave the Solicitation record/screen to run a report then this approach is likely to be frustrating to the user.
- WEAKNESS, SRC-129: Attachments sizes are limited to 100MB each.
- WEAKNESS, SRC-136: The system does not provide means to award directly to a purchase order. You must create a Contract and then do a release from the contract to create a PO.
- CONCERN, SRC-142: If re-seller and delivery locations are captured using "questions" then concerned how this information would be available for placing orders against the contract.
- Ten req'ts need clarification, response did not address the full req't.

Contract Management, pg. 40/41: : Generally meets req'ts, with these caveats.

- No specific detail provided in the Technical Proposal other than to say that the system provides "two components of the contract lifecycle", Contract Management and Contract Administration.

RTM

- "STRENGTH, CNT-2:
 - "redlined versions of a contract either using the application or... Microsoft Word"
 - "new Word document" providing a "version-to-version compare"
 - "final set of documents" to be published "automatically consolidates the selected documents to a final PDF version"
- POTENTIAL WEAKNESS, CNT-7: System does not provide a check-in/check-out feature for maintenance of standard documents/templates
- POTENTIAL WEAKNESS, CNT-8: System does not provide a means to automatically update templates that include standard documents where those document standards have been updated.
- POTENTIAL WEAKNESS, CNT-9: System does not provide a means to identify templates that include standard documents where the standard has been updated.
- WEAKNESS, CNT-10: System limits attachment size to 100MB.
- NEGOTIATION, CNT-12: Suggest negotiating in the integration with DocuSign or Adobe Sign (State/Entity choice of which) to be included in the proposed scope/cost.
- NOTE, CNT-23: Contract document authored is provided. See the response to CNT-2 provides more details on the creation of contract documents.
- NOTE: see response to CNT-2 for more details on MS Office and Adobe PDF with creating contract documents.
- POTENTIAL STRENGTH, CNT-26: Feature in "upcoming release of AI/ML" will give recommended approvals based on history and "automatically include additional review/approval" when modifications are made to contracts.
- WEAKNESS, CNT-38: Attachments must be used to capture subcontractor information.
- CONCERN, CNT-45, 51-62: Response conflicts with responses in the Technical Proposal referring to a Transparency Portal (pg. 10), Ariba Discovery (pg. 38) and using Ariba APIs to "exposed data" (pg. 40).
- STRENGTH, CNT-46: The "full text search" of uploaded documents is a significant feature.
- Six req'ts need clarification, response did not address the full req't.

Vendor Performance, pg. 42-44: Generally meets req'ts, with these caveats.

- No specific detail provided in the Technical Proposal except general info on pg. 40:

- System provides "performance surveys" and "KPI based vendor performance scorecards".
- Multiple charts available to display "supplier performance data".
- Not clear whether there is a Contract specific performance assessment/survey feature.
- Public Access to Data, pg. 43: WEAKNESS, Public posting of any data in the solution to a State/Entity "public website" requires use of "a set of APIs" to create integrations to post the information. This work is not included in the proposed solution.

RTM

- Meets req'ts

Purchasing/Data Analytics, pg. 44 : : Meets req'ts.

- Pg. 44/45:
 - "report can be displayed as a chart or graph (line, bar, pie, donut, etc.) and added to the user's personal dashboard. "
 - Creating new reports via "3-step report creation wizard"
 - Charts have dynamic "drill down"
 - Provides "Parameter-based reports", "Scheduled reports" and can have "visual alerts and grades".
- pg. 45: STRENGTH, report personalization by users. "pre-packaged reports can be modified" by the user and "added to their dashboard".

RTM

- Meets req'ts except for PDA-17 which needs clarification, response did not address the full req't..

Technical Requirements – pg. 47-59

Availability, pg. 47: Partially meets req'ts.

- SAP Cloud Services SLA states "99.5% System Availability Percentage during each Month" based on "Total Minutes in the Month" that "are measured 24 at 7 days a week".

Accessibility Requirements, pg. 47: Partially meets req'ts.

- "target Web Content Accessibility Guidelines Level A and AA and EN 301 549"
- "solutions are not fully optimized for accessibility"

Audit Trail and History, pg. 48 & TECH-1 thru 5: Meets req'ts.

Browsers Supported, pg. 48: Partially meets req'ts. Response did not address these req'ts.

- Support any browser ranked as more than 10% of web traffic
- Track browsers used to access the Solution
- Solution testing with multiple browsers
- Contain a notice if solution is accessed with an unsupported browser.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

User Accounts and Administration, pg. 48/49 & TECH-6 thru 20: Overall meets req'ts however as noted below for the RTM, there are a couple Potential Weaknesses & several req'ts that where the response did not address the req't.

- Access is "based on roles and permissions"
- "permissions for a user is derived from the roles mapped to that user and the groups the user"
- "can inherit roles and their associated permissions by being a member of a group"
- "User, Group, Role and Permission objects can be managed from the provided UI or populated from a variety of sources, such as corporate systems and/or flat files"

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide "dual sign on" where one login can be both a buyer and supplier.
- WEAKNESS, TECH-13: The only concept of "Super User" in the Ariba system is an Administrator and that user will not have the req'd "access to "any other user transactions" to "create, update, delete".
- POTENTIAL WEAKNESS, TECH-16: "System can't automatically" deactivate users after a period of inactivity. Admins must manually monitor activity and manually deactivate users.

User Authorization, pg. 49 TECH-21 thru 25: Meets req'ts except for State/Entity password policy for complexity which is standard for Ariba.

- Two possible authentication methods: "Regular user authentication" (Ariba system login/password) or "Single Sign-On" ("log into their corporate network")
- "may activate 2 factor authentications if they use SAML based authentication or ADFS"
- Password policy: Single Sign-On uses whatever is in place with the State/Entity system. Ariba login policy is standard. WEAKNESS, not configurable to meet a State/Entity policy. Ariba standard is:
- case-sensitivity between 8 and 16 characters in length. Passwords can include any Latin characters and punctuation marks and must include at least one numeral between the first and last character. They must also include at least one letter.
- Passwords much be changed "at least every 180 days"

RTM

- POTENTIAL WEAKNESS, TECH-23: Password policy is standard across Ariba clients and is not configurable to meet a State/Entity password policy that is different.

Federated Identity Management, pg. 50 : Meets req'ts.

Data Conversion, pg. 50 & TECH-26 thru 34: Does not meet.

- Technical proposal details did not address data conversion. Instead discussed their implementation methodology and staffing plans.

RTM

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Responses to all RTM req't did not address what was req'd. Instead integration to external systems with Ariba and export of data from Ariba was described.

Interface and Integration, pg. 51 & TECH-35 thru 60: Overall meets req'ts however need clarification, response did not address the full req't. 17 RTM req'ts to confirm specific integration points.

- "integrate with all the major ERP systems. We provide flexible integration support for Oracle, PeopleSoft, AS400 and SAP. Given our flexible EAI infrastructure, we have also mapped out applications to Salesforce, Lawson, GEAC and a multitude of custom developed legacy systems."
- Real-time and/or batch integration
 - o HTTPS using CSV interface
 - o SAP Web services
 - o REST APIs
- "are based on SSL 256 bit encryption and support various authentication methods such as WS-Security, basic and digital certificate authentication as standard."

RTM

- Seventeen req'ts did not address the specific integration points required with the Finance system.

Office Automation Integration, pg. 51 & TECH-61: Meets req'ts

Mobile Device Support, pg. 52 & TECH-62: Response described mobile app and did not address whether the Solution can be accessed from mobile devices.

Mobile Applications, pg. 52 : Meets req'ts

- Details on app functionality are described in the Mobile Device Support section.

Data Ownership and Access, pg. 54 : Meets req'ts.

Date Retention, Archive and Purge Considerations, pg. 54 & TECH-63: Partially meets Data Retention however does not have Archive capabilities.

RTM

- WEAKNESS, TECH-63: System does not provide an archive capability. State/Entity can only delete/purge transactions instead.

Disaster Recovery Plan, pg. 54: Meets req'ts.

Solution Environments, pg. 55 & TECH-64 thru 68: Does not meet req'ts. Separate Development and Training environments are not provided. The Test environment will be used for initial configuration and setup. Additional environments for "an additional charge".

RTM

- Four req'ts need clarification, response did not address the full req't. because they did not address the req'ts .

INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Solution Technical Architecture, pg. 55-57: Partially meets req'ts. Response did not provide the required "technical architecture diagrams"

Solution Network Architecture, pg. 57/58: Meets req'ts however details on the web -hosting center (e.g. power, HVAC, floor space, etc.) were not provided.

System Development Methodology, pg. 58/59: Meets req'ts.

Service Level Agreement, pg. 59: Partially meets.

- Response did not indicate that they had reviewed and whether they complied with the SLA in the RFP.
- The SAP Cloud Services SLA is only for System Availability which is committed to be at 99.5%. No other SLA areas are included.

Security Requirements – pg. 60-72 *Note: Responses in this section are same as IBM proposal*

Cloud Security Alliance (CSA) Compliance, pg. 60: Meets req'ts.

Security and Privacy Controls, pg. 60 : Meets req'ts through SOC compliance

- SAP Ariba is officially not certified NIST 800-53. Ariba uses SOC guidelines.
- Ariba is audited/certified for ISE 3402 DOC1 Type II, SOC2 compliance every 6 months
- SOC 3 report issued annually.
- Hosting facility is audited for compliance to SSAE 16 SOC1 TYPE II, SOC2 Type II

Security Certifications, pg. 60-62: Meets all req'ts except HIPPA (see note below)

- Is Level 1 PCI DSS certified
- Complies with VISA USA Cardholder Information security Program (CISP) and MasterCard Site Data Protection (SDP) Program
- POTENTIAL WEAKNESS, "Ariba is not designed to handle HIPAA data". "Ariba does not support storing HIPAA/PII/Personal data".

Annual Security Plan, pg. 62: Could not assess. Response did not address the req't to describe their Security Plan. Stated that their "annual security plan are internal facing documents" and they do not "attach SOC reports with RFP responses".

Secure Application and Network Environment, pg. 62-66: : Meets req'ts. Security protections are comprehensive.

Secure Application and Network Access, pg. 66-68 & SEC-1 thru 5: Meets req'ts. Security controls are comprehensive

- Response did not address:
 - o Protocols used for import/export of data and relevant interoperability/portability standards
 - o Changes made to any hypervisor

Data Security, pg. 68-71: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Personally Identifiable Information Protection, pg. 71: : Does not meet req'ts.

- WEAKNESS, SAP Ariba policy/practices (covered in more detail under Data Security) indicate that the solution "does not support storing HIPAA/PII/Personal data. For example SSN, Personal Banking information, etc.". This does not fit the business req'ts for Supplier registration where the business uses a SSN and Personal Banking (e.g. LLCs). This is a conflict.

Security/Privacy Issue Occurrence, pg. 71/72: Meets intent however there are Gaps (see notes below)

- Issue management practices are similar to what has been required in the RFP however they are focused internally with SAP determining what involvement with customers is necessary and they do not commit to the specific communication/notification timelines req'd in the RFP.

PII Data Actual/Attempted Access or Disclosure, pg. 72: Response is same as the Security/Privacy Occurrence above.

Security Breach Reporting, pg. 72 : Response is same as the Security/Privacy Occurrence above.

Implementation Services Requirements – pg. 73-126

Project Management, pg. 73-75: Generally meets req'ts. Response is high level and did not provide the details listed below.

- "leadership provided by the Program Sponsor, Engagement Lead and Project Manager".
NEGOTIATION, suggest that cost workbook should not include costs for the Program Sponsor and Engagement Lead as they are not direct resources delivering a project.
- Response in this section did not include
 - o Bidders staffing plan w/key positions, roles and responsibilities
 - o Participating Entity required staffing, roles, skills and responsibilities
- NOTE, the req'd example implementation plan & typical project deliverables are detailed in the Project Implementation Methodology section.

Project Implementation Methodology, pg. 75 : Meets req'ts.

- "use the SAP Activate Cloud methodology"
- is lean and fast, while at the same time incorporating the iterative and agile approach where it makes sense
- "has four phases for the implementation project lifecycle: Prepare, Explore, Realize, and Deploy"
- "are four Quality Gates, also called Q-Gates, executed during the implementation" to confirm "deliverables meet the req'ts and... project can continue".

Catalog Support Services, pg. 94 : Partially meets. Service does not provide assessment of contracts and does not create hosted catalogs.

- "We perform cleansing; the supplier is responsible for uploading catalogs on the Ariba Network"
- SAP Ariba catalog management service includes "Supplier Road Mapping, Project Management, Electronic Catalog Enablement, Catalog Maintenance, PunchOut Catalog Enablement, Punch-Out Catalog Maintenance, and State & Supplier Helpdesk Support."
- POTENTIAL WEAKNESS, last sentence in section: "Enablement of Punch Out catalogs are available as an optional item for additional charges." So this part of the "includes" list in

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

previous bullet is only included at an extra cost. NEGOTIATION, need to get this setup/enableness of Punch Out catalogs included in the scope/pricing for situations where a supplier cannot do it for themselves.

Data Conversion Services, pg. 94-98: Meets req'ts.

- "six activities"... Strategy, Analyze, Design, Build, Test/Implement, Deploy

Interface/Integration Development Services, pg. 98/99: Meets req'ts.

- "we develop an **Interface Strategy document**"

Organizational Change Management (OCM Services), pg. 99-109: Meets req'ts. Comprehensive and mature methodology.

Training Services, pg. 109-117: Meets req'ts. Comprehensive and mature practices.

- LSI trains "Project implementation team" on "LSI's template of the implemented system"
- Project team can also attend SAP Ariba Virtual Live Classroom sessions
 - o CONCERN, there is a limit for SAP courses of "one student may attend an open session" of a course. "Additional core team training for more than one (1) Customer attendee may be purchased separately". CLARIFICATION, need to know if only one Core Team person can take these SAP Ariba courses or is it one at a time. NEGOTIATION, need to get additional seats in the training so the Core Team can get the training done quickly to be ready for Design sessions.
- End User training is "train-the-trainer". LSI will train the State trainers.

Help Desk Services, pg.117 & IMPL-1 thru 5: Meets req'ts however as noted with CONCERN below, it is not clear what level of service is being offered.

- Pg. 58: "Subscription includes system maintenance, automatic upgrades, enhancements and application of service packs, Level 1- 3 help desk support, professional services and best practices built directly into the application."
- After go-live & hyper-care support, LSI will provide Application Management Services (AMS). "AMS include development, implementation, integration, testing, maintenance and support (technical), and help desk services". "also includes application monitoring as well as back-up and recovery of applications and interfaces" (pg. 117)
- "Application Helpdesk support covers Level II Application Critical Support, and Level III Application Enhancement Support," (pg. 119).
- State to provide Level 1 support and only the Level 1 users will have access to submit tickets to LSI helpdesk. (pg. 119)
- Incident priorities and response times are reasonable and comparable to the intent of the RFP SLA. (pg. 120/121)
- CONCERN, pg. 122: "Support Models can range from full time onsite to a pool-of-hours model allowing clients to access expert consultants without the need to bring on full-time resources". Need clarification, response did not address the full req't. to know what specifically has been included in the proposed scope/pricing.

RTM

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 1

DATE: 12/15/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Meets req'ts.

On-Site System Stabilization Support, pg. 126 : Does not meet req'ts. Response shows very little responsibility on LSI and does not address support req'ts for setup/config changes, system performance/stability monitoring, and coordinate documentation.

- "Run Hypercare Phase" purpose is "to support the users" and "restore/maintain stability of business operations". (pg. 126)
- Team will "run reports.. to review data entered by various user groups". Any group identified as "not entering data" will be investigated to identify the reasons and offer assistance. (pg. 126)
- Issues "are logged and assigned to the appropriate member of the State helpdesk for resolution" (NOTE, not assigned to LSI Hypercare staff). Issues that can't be resolved are assigned to State Project Team (State members and "consultants")
- "quality review of the project is performed to identify lessons learned"

Managed Services Requirements – pg. 127

Solution Support, pg. 127-130 & MNGD-1: Meets req'ts

- "Customers automatically receive patches and upgrades"
- "We deploy and manage the infrastructure"
- "Subscriptions include system maintenance, automatic upgrades, enhancements and application of services packs, helpdesk support, professional services". Also includes "help diagnose, troubleshoot, and resolve functional and technical problems for users". (pg. 127)
- LSI's SAP ARIBA Support State Size Offerings table, pg. 128: CONCERN
 - o the number of hours for each type of support per quarter & month are too low
 - o the "Small" state priority response times are different from Medium and Large but should be the same because the criticality to a State is the same regardless of size.
 - o Small and Medium do not get Level 3 supportNEGOTIATION, need to get these values improved/increased.

RTM

- POTENTIAL WEAKNESS, MNGD-1: SAP uses internal monitoring tools instead of an "independent" service.

Organizational Change Management (OCM Services) , pg. 130: Based on the response, it is unclear what OCM services are being made available. If they are the same as described in the Implementation Req'ts section, then this Meets Req'ts.

Training Services, pg. 130: Meets req'ts.

Catalog Support Services, pg. 130: Based on the response, it is unclear what Catalog Support services are being made available. If they are the same as described in the Implementation Req'ts section, then this Partially Meets Req'ts.

Help Desk Services, pg. 130 : Meets req'ts.

Individual Evaluator Comments:

SAP Ariba - Unified Business platform. End-to-end procurement process.
Labyrinth Consulting (LSI); 30 Ariba deployments.

P6 LSI's Proprietary GovOne Accelerator - LSI Consulting has created the GovOne solution for State and Local Government organizations, utilizing SAP's Public Sector business application software. GovOne is our flexible, pre-templated accelerator that provides preconfigured system options and controls, and basic accounting, budgeting and procurement structures.

General Principal and Requirements

- Key Solution Functionality Elements – Guided Buying (state's approved suppliers.)
 - Single-point of Entry; Smart Routing, compliance with SAP S/4HANA, SAP portal for on-prem or cloud deployments, Contract Management module, reporting, configurable.
 - Vendor portal – SAP Business Technology platform.
 - P10 *The offering includes a customer specific deployment of a Transparency Portal. This portal is scoped to meet each entities specifications by giving the organization the ability to surface procurement activity and information to public stakeholders including solicitations, contracts, supplier information and purchasing reporting data.*
- User Experience – focus on Guided Buying module and mobile procurement tools.
 - SAP Ariba Best Practices Center – flexible, as-needed support tailored to customer; single, named point of contact; best practices; claimed faster ROI.
- Bidder Best Practices and Roadmap – Standard Ariba quarterly release and monthly feature deliveries.
 - Product roadmap identified
 - Ariba network. Ariba Spot Buy
- Innovations and Value-Added Features/Services
 - SAP Fieldglass
 - AP Ariba Supplier Risk Management
- Customizations/Extensions –
 - Spotline (chatbot)
 - Seal Software (analytics for risk control)
 - Cloud Trade(PDF invoicing)
 - Keelvar Sourcing – optimizer to run, analyze and award events, bidirectional data.
 - Cordis – procure-to-pay integration with Oracle ERP;
 - P-18-20 – long list of extensions.
- Alternative Funding Models – P20. Listed SAP Fieldglass for external workforce strategy. Non-responsive to e-procurement requirements.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Contract transition: LSI Partner Managed Cloud offering allows contract relationship to be software and incremental services. Responsiveness to RFP question not immediately clear.

Functional Requirements

- General Functionality – Ariba integrated applications. Facilitates occasional and frequent buyers.
 - SAP Ariba Buying& Invoicing
 - SAP Ariba Sourcing
 - SAP Ariba Contracts
 - SAP Ariba Supplier Lifecycle & Performance Management
 - SAP Ariba Network
 - SAP Fieldglass
 - *P23 customers can achieve zero-touch processing and invoicing, eliminating once more non-value added work for AP, Finance, Invoice managers, etc.*
 - *P23 Data is categorized consistently within the solution leveraging a common data model inclusive of suppliers, commodity codes (UNSPSC), Agencies/Organizations, users, etc. Data created as a result of system utilization is available for analysis within the user interface via SAP Ariba's native reporting and analysis engine.*
 - *SAP Ariba supports importing data from external systems.*
 - Most EPROC-GEN requirements listed as Standard functionality. Integrations usually not described.
 - **EPROC_GEN-3, -5 Award posting integration needed. Needs clarification – Is integration added cost? What integration is proposed?**
- Supplier Portal – Supplier Business Network.
 - **P26 Supplier enablement services are included in our offering. This reduces the level of effort/resources required from the State to enable suppliers on the SBN. Our team of 700+ enablement experts will be responsible for most of the enablement process. We also offer flexible partner onboarding: it is simple for ALL types of suppliers, big and small, integrated and portal. Needs clarification – is this SAP or LSI?**
 - **EPROC-SPR-7 – Needs clarification what integration is proposed?**
 - **EPROC-SPR-18, -19 Needs clarification** Comments say “Partner, not supported, but availability listed as A. What is the solution?”
 - **P27 Publicly posted solicitations via Ariba Discovery and the State's Public site Needs clarification. Is this included integration to post direct to state site**
 - Catalog support – hosted and punchout
 - Spot Buy catalog solution
 - Mobile app – rapid request fulfillment; at a glance update to orders, 12 month invoice and order searches.
- Supplier Enablement/Management
 - *P31 Customized enablement strategy: Use our team's expertise to help you design and develop the most effective enablement strategy for your suppliers based on their profile, purchase order (PO) and invoice volume, and spend. Our approach includes duplicate detection (deduping) and segmentation of your vendor master data to effectively target and onboard suppliers in tiered waves that align with your priorities and objectives.*
 - *P31 Supplier education: user guides, FAQs, technical documentation, and free online seminars that explain the basics of using Ariba Network. We can also*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

deliver your account specific information to suppliers through a supplier information portal embedded in Ariba Network.

- **EPROC-VDR-40** – Stated as out of box and configurable; other Ariba bidders were non-responsive on this requirement or partial function claimed. **Needs clarification.**
- Buyer Portal - Offers 2 primary entry points designed for casual user or power user. Casual user gets guided buying experience, can submit requests. Power user enters via dashboard, gets more self-service approach including buying, solicitation development, vendor management, report generation.
- Need Identification – Ariba Guided Buying function
 - Functions stated as supported.
- Request through Pay – Native SAP Ariba Buying and Invoicing module for state ide; invoices to suppliers through Ariba Business Network portal.
 - *P36 Purchase orders will be sent to suppliers via the SAP Ariba Business Network. Subsequent change orders will be routed to suppliers via the Ariba Network as well. Change orders will be subject to a configurable workflow. Leveraging the Ariba Network suppliers can create an order confirmation, advance ship notice and invoice. All of which is accomplished electronically to streamline the source to settle process.*
 - 100MB limit on attachments throughout the portal.
 - **EPROC-PRD-28** – Custom form can be created for special considerations such as trade-in. Is this considered a customization or native functionality? If negative numbers not accepted, how would this be handled? **Needs clarification.**
 - **EPROC-PRD-48 – Needs clarification.** Does LSI proposal encourage native functionality for loading values cited or is this assumed to be an integration. Entry is marked A.
 - **EPROC-PRD-62 and PRO-29 – Needs clarification.** Requirement is for header level; response is that supplier level is common. Non-responsive as presented.
 - **EPROC-PO-16 – clarification needed** – Signatures on POs – LSI says not available in comments, but marked A.
 - EPROC-RC-21 – UOM defined by PO – not convertible to inventory unit UOM for receipt entry.
 - **Note: There are multiple responses in this Requirement set where configurable is stated but the Availability is marked A not CF.**
- Catalog Capability – p36 *With SAP Ariba Catalog, suppliers can upload all their content using a single, simple user interface. And with recently launched, innovative capabilities, they have enterprise-grade content management tools to define, validate, and enrich catalog content. By creating catalog rules to cleanse and enrich the data, you'll be assured of compliant, error-free catalogs while you monitor content quality with your new dashboard reports.* No notes on hands-on customer-side hosted catalog management.
 - **EPROC-CAT-6 & -7 Needs clarification.** Listed as A, but limitations cited. 500,000 items per catalog; 5,000 catalogs per system. This would likely be in excess of catalogs needed by states, but the item threshold would not reach the limit for MRO vendor catalogs, for example. Does 5,000 catalogs include expired or inactive catalogs; can one vendor have multiple catalogs archived and not count against the total?
 - **EPROC-CAT-11- needs clarification. Comments are circular – say to see CAT-11. (possibly means CAT-8 custom forms).**
 - EPROC-CAT-19 – negative values supported requirement not met.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Sourcing/Bid Management - claimed out of box functionality on common procurement types, 50% reduction in solicitation cycle time, savings.
 - Solicitation development using templates inside Ariba Sourcing.
 - P38 *The solution also supports other critical components of the solicitation process including addendums, amendments, Q&A, supplier notifications, supplier communications, internal communications, document management, etc. SAP Ariba Sourcing is natively integrated to SAP Ariba Contract Management and this will allow the State to create state-wide Contracts, Agency-specific contracts, Project-specific/one-time contracts, or Purchase Orders. P39 Proposals are received electronically and are automatically available for comparison side by side within the user interface (unless configured otherwise including envelope and sealed bids). Users may score/grade responses leveraging delivered functionality. Upon completion, side by side comparison by score, price, etc. can be done quickly and easily.*
 - EPROC-SRC-67 – suppliers have to register to postings. Not public facing – non responsive. Needs clarification.
 - EPROC-SRC-73 – is posting to state's website included in standard functionality? Needs clarification. See SRC-77 and -78.
 - EPROC-SRC-107 – needs clarification. Does surrogate bid meet requirement for posting?
- Contract Management
 - P40 *With SAP Ariba Contract Management, the State can connect directly with suppliers when creating, negotiating, executing, and managing the ongoing administration of contracts. SAP Ariba Contract Management is natively integrated with Sourcing which allows the creation of a contract directly from the solicitation award. The resulting contract will be stored in a central repository and can be published to SAP Ariba Buying and Invoicing.*
- Vendor Performance- Cloud-based vendor data model; supplier 360- review; supplier scorecards based on KPIs.
 - P43 - *The State may leverage a set of APIs delivered as part of the SAP Ariba platform to expose data to the public via a public website. Data captured as part of the supplier management process supported by SAP Ariba Supplier Lifecycle and Performance is available via API. Data can be formatted and combined with other data sources and displayed on a public website to meet FOIA requirements.*
 - P44. Supplier surveys can capture stakeholder responses and compile performance score.
- Purchasing/Data Analytics - 3-step report creation wizard; data filtering within Ariba tool rather than having to export data out to Excel to pivot/manipulate.
 - Pre-packaged or ad-hoc reports.
 - EPROC-PDA-35 - *SAP Ariba can support two reporting taxonomies. Supported taxonomies such as UNSPSC, the Ariba Classification taxonomy, and a customer-specific, custom taxonomy.*

Technical Requirements

- Availability— 99.5% uptime. Linked service agreement document provides definitions of credit, maintenance windows, availability calculation etc.
- Accessibility Requirements

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P47 *Accessibility at SAP refers to the possibility for everyone, including and especially people who are differently-abled, to access and use technology and information products. SAP ensures the implementation of user-interface (UI) accessibility features for Products via our SAP Accessibility standard.*
 - P47 *When developing software, SAP's product teams target Web Content Accessibility Guidelines Level A and AA and EN 301 549. **While SAP continues to implement and develop accessibility features across its product portfolio, solutions are not fully optimized for accessibility.***
- Audit Trail and History – p48 *Specific logging takes place that is viewable by the customer administrator or their designee. Audit logs produced through use of the solution are considered customer data and are maintained within the customer's instance of the database. These logs are retained so long as the customer has an active contract. Also see EPROC-TECH-1.*
- Browsers Supported - Common browsers supported
- User Accounts and Administration
 - P48 *Access to data and functionality within the modules is based on roles and permissions that determine which features of the solution a user can see and work with, and what data the user can access. The set of permissions for a user is derived from the roles mapped to that user and the groups the user may be a member of. Permissions are mapped to roles and then roles can be mapped to other roles, to users and/or to groups.*
 - *The solution also provides a single point of integration and administration for users and user profiles, organizations, groups and group memberships, roles and permission mappings.*
 - *This common data is shared and synchronized across modules automatically. The User, Group, Role and Permission objects can be managed from the provided UI or populated from a variety of sources, such as corporate systems and/or flat files.*
 - EPROC-TECH-10 *Least privilege: For customer users, this is a customer complementary control consideration due to the fact that the customer administrator manages user access and role assignment.*
 - **EPROC-TECH-12 Needs clarification.** Listed as A, but comments say Dual SignOn via one account is not support.
 - **EPROC-TECH-16 – Needs clarification.** Doesn't meet requirement for automatic deactivation of accounts after 6 months.
- User Authentication
 - P49 *Username and password from login page or Single Sign-on from corporate network permitted.*
 - 2FA available for SAML-Based authentication.
 - **EPROC-TECH-24 – needs clarification** about new password auto generation. Not responsive.
- Federated Identity Management – See previous answer.
- Data Conversion - SAP Activate Methodology for accelerated migration through Delivery team with responsibility for project management, functional and technical expertise, OCM and training to coordinated with customer org.
 - EPROC-Tech-27 – detailed description of master data integration and Transaction Data integration.
- Interface and Integration – P51 *SAP Ariba applications integrate with all the major ERP systems. We provide flexible integration support for Oracle, PeopleSoft, AS400 and SAP. Given our flexible EAI*

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

infrastructure, we have also mapped out applications to Salesforce, Lawson, GEAC and a multitude of custom developed legacy systems.

- P51 - *These standard integration options across our solution portfolio are:*
 - a) Master data integration is done primarily in batch mode, HTTPS using CSV files (Batch integration, and depending on the data volume this can be scheduled to run frequently to achieve near real-time integration)*
 - b) SOAP Web services that use an XML payload (Real-time integration suitable for transactional data)*
 - c) REST APIs (supports both synchronous & asynchronous calls)**All of these integration methods are based on SSL 256 bit encryption and support various authentication methods such as WS-Security, basic and digital certificate authentication as standard. Our customers can opt for two or more or all the options to help achieve the desired level of integration.*
 - *Uses Ariba Open APIs.*
 - *Sample interface plan document supplied – generic – no specific interfaces included.*
- **Office Automation Integration – EPROC-TECH-61**
 - *Support of Excel format for data uploads and downloads. For example, SAP Ariba Sourcing is designed to allow Excel uploads for market designs.*
 - *Support of Excel templates for analysis and reporting:*
 - *Microsoft Outlook – SAP Ariba Sourcing and Contracts can export tasks within projects to Microsoft Outlook.*
 - *Word – SAP Ariba Contracts provides sophisticated contract authoring capabilities using Microsoft Word documents. SAP Ariba Contracts offers bi-directional integration with Microsoft Word to assemble contracts and templates from a clause library, and then to detect changes to contract documents, including automated flagging of alterations to clauses, and support for clause substitution from pre-approved clause libraries.*
- **Mobile Device Support** – *site is built for mobile responsiveness. Components with mobile functionality including shopping cart, approvals, viewing reqs. Supplier 360 reports available to view on Airba ios app.*
- **Mobile Applications** – *ios and Android supported. Touch ID, App pin, fingerprint recognition options for access.*
- **Data Ownership and Access** – *p54 The customer owns the data; they can extract the data at point of time during the throughout subscription. Tools to download the data. For example: User Interface (Import CSV), API's.*
- **Date Retention, Archive and Purge Considerations** – *p54 Data retention is governed by the active contract. We retain your data on the service for the duration of the subscription term and any subsequent renewal term.*
 - *EPROC-TECH-63 - Customer is in complete control of data deletion and purging which can be manual or automated via integration.*
- **Disaster Recovery Plan - Data centers in regional pairs.**
 - *URLs will continue to work if failover. Cloud Engineering Services move area within RTO; after switch, secondary becomes the new primary.*
 - *Customer will receive email from SAP notifying of unplanned down time. Expectation for communication not stated in narrative.*

BIDDER NAME: LSI Consulting

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Solution Environments – p55 *Customers receive two environments by default: production and test. The test environment is used for initial configuration and setup. The production environment is used for production. Additional environment is available for an additional charge.*
- Solution Technical Architecture – p56 *SAP Ariba applications uses cXML language for the document exchange between SAP Ariba Network and Ariba Modules.*
 - *See Data Conversion for integration to external systems.*
 - *P57 The software's data model keeps customers' data separated. Customer data is isolated via realms. Each individual customer is assigned a distinct realm to identify and store their data.*
- Solution Network Architecture – p57 *The system is powered by high-performance servers and utilizes a network infrastructure designed for scalability, reliability, and security. The SAP Ariba Operations team is constantly monitoring and maintaining the systems.*
- **P58 Needs clarification** *SAP Ariba solution is available only as a SaaS multi-tenant model hosted by us. Who is us — SAP or LSI?*
 - *Our solutions are offered and delivered in a true subscription-based model and shared service (multi-tenant) offering. There is no software to install, no hardware to buy, no maintenance or support costs and no need to hire consultants or tech specialists to run the system.*
 - *Subscription includes system maintenance, automatic upgrades, enhancements and application of service packs, Level 1- 3 help desk support, professional services and best practices built directly into the application.*
 - *Data will be hosted in North American data center.*
- System Development Methodology - Agile scrum implementation of Product Lifecycle Methodology.
- **P58 Ariba leverages a Secure Software Development cycle (Secure SDC) that is aligned with ISO 27034 principles. This includes:**
 - Secure code (OWASP Top Ten) training to engineers*
 - Code review by peers before build cycles*
 - Static and dynamic code analysis, with load testing for resiliency*
 - Reviews and approvals at multiple phases for meeting security criteria prior to release to production.*
- Service Level Agreement – one page SLA attached. Referenced above.

Security Requirements (This section is common with IBM submission)

- Cloud Security Alliance (CSA) Compliance = CAIQ 3.0.1 supplied.
 - **MOS-15 – Clarification needed** – How are changes to mobile operating systems, patches performed if not SAP change management processes? No comments provided.
- **Security and Privacy Controls - Needs clarification.** P60 SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines. **Does will SAP intend to become compliant with NIST requirement?**
- *SAP Ariba is audited and certified by independent third-party auditor PricewaterhouseCoopers (PwC) for compliance with ISAE 3402 SOC1 Type II, SOC2 every six months. A SOC 3 report is issued annually. Upon completion of the audit, an attestation letter is issued, stating our compliance. In addition, our primary hosting facility (Equinix) infrastructure is audited for compliance with SSAE 16 SOC1 Type II, SOC 2 Type II.*
- Security Certifications . See previous entry.
 - PCI Service Level 1 compliant;

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- compliance with the Visa USA Cardholder Information Security Program (CISP) and MasterCard Site Data Protection (SDP) program
 - Not HIPPA certified – limited relevance for procurement
- Annual Security Plan – p62 – states plan is internal document. Gives links to request SAP SOC reports. Not included with response.
- Secure Application and Network Environment - 24/7 system monitoring. Firewall separation of SAP corporate with customer cloud.
 - Only SAP authorized staff using SAP authorized computers in data centers.
 - 2FA authentication for SAP staff entering cloud environment.
 - Exception-based authorization for Cloud Engineering to access specific customer cloud instances.
 - P64 *Data disposal practices are aligned with the NIST 800-88 standards for clearing, sanitizing, and data destruction to prevent data remanence prior to retiring or allowing storage media outside of our security envelope.*
- Secure Application and Network Access
 - EPROC-SEC-2 - *Concurrent login is available. SAP Ariba allows for 2 concurrent session for the same user so that mobile and desktop (e.g. report generation) can be used. However, security measures are in place to detect concurrent logins from multiple IP addresses.*
 - Data at rest and in transit encrypted.
 - Detailed descriptions of security provisions provided for hardware and physical premises.
- Data Security – Stated in narrative. P69-70. SAP has DPA setting out terms. **No NIST standards referenced as proposed in RFP.**
- **Personally Identifiable Information Protection – Needs clarification for responsiveness.** P.71 *SAP Ariba are not designed to handle HIPAA data. Our solutions are designed Business to business transaction, and SAP Ariba does not support storing HIPAA/PII/Personal data. For example: SSN, Personal Banking information etc.*
- Security/Privacy Issue Occurrence – Scenario described. Full process documentation stated to be confidential.
- PII Data Actual/Attempted Access or Disclosure – As previous entry.
- Security Breach Reporting – As previous entry.

Implementation Services Requirements

- Project Management Leadership are Engagement Lead and Project Manager – Operational responsibilities, and Program Sponsor – strategic. (p73)
 - PMO defines scope, finalizes resources; implements toolset for risk and issue management; establishes communication protocols; RTM framework and prepares kickoff presentation to communicate standards and expectations.
 - Kickoff - *Joint PMO and led by the program executives from LSI and the State to reinforce the “one voice” concept of leadership*
 - *LSI and the State maintain primary responsibility for their own project team members. The team leads are responsible for coaching/mentoring under-performing resources and providing training as appropriate.*
 - State responsible for establishing issue management repository: *expectation at each project that the State establishes a project repository (i.e. MS Teams, Slack, SharePoint,*

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Shared Drive, Google Drive, DropBox) as a platform to manage project issues and documentation of resolution. This repository will provide detailed logging of issues, defects and a robust reporting system based on configurable project scope, categorization, and nomenclature. Guidelines will be established for what constitutes an issue, for severity level classification, and escalation procedures. All team members will have access to the issues database; project managers are expected to review issues regularly and review aging open issues for possible escalation. Additionally, the project repository is a customer-provided and customer-maintained site that utilized by both LSI and customer project team members during a project.

- *Project repository site is front loaded with LSI's pre-configured implementation accelerator templates, strategies, organizational structure, and additional project documentation*
 - *Project requirements traceability matrix provides the framework for managing solution scope and quality throughout the project.*
- Project Implementation Methodology - SAP Activate Cloud methodology follows Agile principles.
 - 4-stage delivery model: Prepare; Explore; Realize; Deploy.
 - P76 Quality Gates are performed to confirm that all stakeholders of the implementation project agree that specific deliverables meet the requirements and consequently that the project can continue. Project. Verification; Solution Acceptance; Readiness Acceptance; Go-live.
 - Sample Phase plan demonstrating task descriptions and responsibilities. P79-81.
 - P85 - Realize Phase Sprint 1
 - LSI consultants will perform unit testing of standard transactions and updating the unit test log. LSI Project Manager shall prepare the Unit Test Summary Report; **State** Project Manager is responsible for review and feedback prior to presentation to executive leadership.*
 - State** is responsible for definition and development of test cases, test scenarios and test scripts representing the comprehensive success criteria for this test phase. LSI shall assist with test case and scenario definition and script preparation.*
 - *LSI Training Lead is responsible for the overall training plan; **State** Training Lead is responsible for providing appropriate schedules for end user training delivery, train-the-trainer candidates, and attendee lists.*
 - *Note: This suggests lean LSI project team with heavier participation from state team than some implementers that will design and lead testing phases.*
- Catalog Support Services – *Needs clarification as to involvement*, if any, of LSI personnel in catalog implementation phase. Are SAP staff engaged?
 - ***P94** - SAP Ariba brings to the table specialized Catalog Management services as part of the software subscription to help the State manage their catalog content throughout the State's time using the software.*
 - *SAP catalog management services manage enabled (hosted) catalogs and punchout catalogs. We perform cleansing; the supplier is responsible for uploading catalogs on the Ariba Network. SAP Ariba catalog management services manage the enabled catalogs including validation, cleansing, catalog activation and any subsequent refreshes.*
 - *Enablement of Punch Out catalogs are available as an optional item for additional charges.*

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Data Conversion Services – Six phase plan. Strategy; Analyze; Design; Build; Test/Implement; Deploy.
 - Minimize data from legacy system.
 - P96 *SAP systems, due to their tight integration, require a very high degree of referential integrity in data being converted. Typical data not converted include inactive vendors and customers, paid invoices, journal entries, requisitions and purchase orders.*
 - P97 *A preliminary analysis is made to determine whether a standard SAP solution exists for the data conversion or whether a custom solution must be built. In addition to this analysis, the best tool is identified for the data conversion, for example, using SAP's Migration Cockpit,*
 - *LSI will be responsible for the design, building, and testing of the programs that read these flat files, as-is, and upload the data to SAP. LSI will rely on State experts to participate in this process by validating the loaded data*
- Interface/Integration Development Services - *LSI will recommend, design and deploy interfaces based on the best practices and the latest tools available with the SAP environment.* P98
 - Interface Strategy Document – LSI designs – includes general architecture of current and future landscapes, file transfer, process of interface design and implementation – evolving document. Sample provided.
- Organizational Change Management (OCM Services) – Note: one of the most detailed parts of the proposal.
 - Change readiness assessment. (4 weeks) Understand leadership alignment; evaluate communications processes; understand stakeholders and influencers.
 - Framework - Leadership Alignment model: collective actions; make decisions; identify solutions; validate common understanding; reality check (internal and external); identify gaps.
 - Factors outlined that determine change impacts (p104)
 - Identify business readiness – workforce preparation. Roles: Business readiness Lead; Change Agent; Superuser; Coordinator.
- Training Services
- P 109 *Training is divided into two different but critical areas: 1. Project Team Training 2. End User Training*
 - *Functional project team receives the training it needs to conduct the Explore phase using the same system that is being implemented.*
 - *In addition to the LSI provided project team training, SAP Ariba services can provide project team training. Training seats can only be used towards attendance in our Virtual Live Classroom (VLC) public sessions. In many cases, it's recommended the project team participate in the SAP Ariba services training first and then attend the LSI project team training.*
 - P111 *Training for end-users is developed and delivered as a part of the implementation project and modeled after the train-the-trainer methods.*
 - *Training development methodology, LSI Perform. 5 phases – planning through delivery.*
 - *Instructor Led Training – with students working on the system*
 - *Small group sessions for audience sizes up to 8 – coaching/training/ classroom or on the job.*
 - *Generic Ariba guides also proposed. (LSI not proposing to customize for customer.)*
- Help Desk Services – Note: Like OCM, also one of most detailed parts of proposal.

CATEGORY #(s) 1:

DATE: 1/13/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- After go-live and hypercare, LSI will perform post-implementation support, SAP Application management support.
 - P117 *These services include ensuring systems are up and performing as per SLA, backups are performed regularly, then also perform any additional services not handled directly by the State basis team, e.g., from the list: troubleshoot any system crashes, recover databases if necessary, applying operating system and database patches as needed, transports, SAP application monitoring, day to day Basis support, security, applying OSS notes.*
 - P117 For consideration will also be SAP HR legal patch applications, and SAP Support packs. Needs clarification “For consideration” means what?
 - EPROC-IMPL1 – separate online support sites for Buyers and Suppliers. Needs clarification – Is this SAP license helpdesk or LSI provided as seemed to be stated on p117?
 - EPROC-IMPL-2 Training and documentation available from LSI to State Help Deks.
 - EPROC-IMPL-3 and -4 – Needs clarification – where is Chatbot hosted? Unnamed solution separate from Ariba support listed in EPROC-1?
 - P119-120 – Three tier support levels proposed. Level 1 – All users; Level II – Limited to identified personnel; Level III – Enhancement Support. Separate cost? Retainer hours referenced – not seen pricing yet.
 - 4-level Priority response time table with small, medium, large state response SLAs.
 - AMS staffing – platinum level consultants with 10+years experience.
 - P125-125 Responsibility matrix for support. SAP/LSI/State
- On-Site System Stabilization Support – 3 month hypercare
 - P126 *purpose of this phase is to support the users as they adapt to the new business processes and to restore/maintain stability of business operations*
 - Defect correct; quality review of projects to determine enhancements, future support needs, verify contract compliance.

Managed Services Requirements

- Solution Support
 - EPROC-MNGD-1 Needs clarification – Is the response SAP’s response that they conduct the monitoring rather than an LSI response? Should this be an LSI response? Is the benchmark measurement reported back to state customer?
 - P127 – LSI Ariba customers run latest versions.
 - P127 As part of the Cloud subscription, our solution provides Customer Support services to help diagnose, troubleshoot, and resolve functional and technical problems for users. LSI’s customer service staff can be contacted via phone (toll free), email or Web from Monday-Friday, 24/5.
 - Different Support offerings based on Small/Medium/Large states.
 - P129 *Unscheduled Outage*
LSI will maintain email listings for each business and service owner of the eProcurement solution including third party Solution components. In the event of an outage, LSI will promptly notify the appropriate contacts of such outage and restoration of service in accordance with what was agreed upon in the contract.
P130 LSI Solution Support security responsibilities include:
 - User Management Security

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- “Specialized team of ‘Source-to-Pay Architects’ have delivered over 50 transformation programs for entities and clients of various sizes and industries”.
- Implementation Partner with
 - i. GEP since 2020
 - ii. Ivalua since 2018
 - iii. Coupa since 2015
 - iv. Ariba since 2011
- Concerned that this section is not speaking of a proposed solution for Category 1.

2. Previous Projects

- Projects do not indicate Optis specific role. Also, these projects are demonstrating multiple eProcurement solutions but cannot tell which solution is being proposed for Category 1.
- Los Angeles Dept of Water & Power: July 2021, Ivalua full suite.
- Suffolk County, New York: Ivalua full suite, project doesn't start until Sept 2021.
- Transmountain: Jan 2020, Ivalua full suite.
- TransLink: June 2017, Ariba full suite.
- BC Hydro: March 2016, Ariba but does not indicate if full suite.
- ICBC: June 2016, consulting project, readiness assessment and future state requirements.
- Telus: July 2021, Ivalua Guided Buying. Not full suite.
- Parkland Fuel Corporation: July 2021, Ivalua full suite.
- Teck: Ivalua Sourcing & Contracts Mgmt. Not full suite. Project doesn't start until Sept 2021.
- Covenant: Sept 2020, Ivalua full suite.
- Navistar: July 2020, Ivalua full suite.
- Swissport: April 2019, Ivalua Procure-to-Pay. Not full suite.
- Maxim Healthcare Services: Nov 2017, Ivalua Procure-to-Pay. Not full suite.
- CIBC: Coupa, “pre-implementation software selection support”.
- Give & Go: July 2021, Coupa Procure-to-Pay & Expenses. Not full suite.
- T. Row Price: April 2021, Coupa Contract Mgmt, Projects & Spend Analytics. Not full suite.

Individual SME Comments:

Integrated system – currently used by Missouri and Rhode Island. (WebProcure)

General Principal and Requirements

- Key Solution Functionality Elements – COTS system – designed for public sector.
 - P5 Real-time integration capable with external systems and ERPS using ProcureLINK
 - Users are assigned roles and permissions to determine access.
 - Modular implementation – gives flexibility.
 - Customizable vendor registration process.
 - Solicitation mgmt.; Contract mgmt.; Catalog mgmt.; Request mgmt..Order Mgmt; Invoice mgmt.; Analytics and Reporting; supplier portal; public components.
- User Experience – single point of entry for new transactions.
 - Home page with dashboards designated by user or org.
 - Notifications for task reminders on every page user button
 - Responsive web design natively formats for tablet and smartphone (no separate app)
- Bidder Best Practices and Roadmap – lean-Agile approach to software dev. 6-8 releases per year.
 - Review current and future business practices during implementation.
 - Strategic account manager – conduct business reviews through contract
- Innovations and Value-Added Features/Services
 - Civic Initiatives value-added services. (Acquisition Support; Strategic Procurement Transformation; Procurement Automation)
 - Proactis: For suppliers: InstantMarkets – search engine for intelligently searching solicitation packets. Sources from entity including federal government sites.- Proactis proposes including InstantMarkets in the deployment.
- Customizations/Extensions – configurable without complex coding.
 - Platform, template and supplemental data fields.
 - Registration template is fully customizable by the state.
 - Unlimited line items to requisitions
- Alternative Funding Models – Open to this. No specifics.
- Contract transition – Will allow customers to transition to better terms in PA if benefitis them.

Functional Requirements

- General Functionality – Modular installation: Vendor Management; Solicitation Management; Contract Management; Procurement; Invoice Management; Reporting & Analytics
 -
 - EPROC-GEN-3 - State can deploy any number of bid boards for its primary as well as sub-agencies. For example, DAFS may deploy its own version showing all bids across

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

the State, while other departments can deploy their own versions to only show those bids from their departments

- EPROC-GEN-20 – Can match commodity code being used by State ERP. (State pays license cost). Needs clarification at time of contract – is state buying license or allocating any sets to Proactis, or is this a state use-only cost.
- EPROC-GEN-27 and -28 – State admin fee management and billing is not available – would required third party integration.
- EPROC-GEN-32 – Only English and French currently supported. Additional languages would be cost option.
- Supplier Portal – No narrative – requirements pasted into File 3 only.
 - EPROC-SPR-18 – No vendor complaint communication tool
 - EPROC-SPR-19 – no native functionality to accept payments (can use paypal as T/P)
 - EPROC-SPR-23 – No supplier request method for contract changes in tool
- Supplier Enablement/Management. – Vendors register in Webprocure – self-service with ability to require fields including NIGP or UNSPSC for complete registration.
 - P24 – state notified of new registrants and can approve, reject or set vendor to “pending”. Pending vendors can submit bids but not receive awards.
 - P24 – Vendors responses/bids submitted through vendor portal; answer questions, submit documents; digitally sign.
 - P24 *Key Performance Indicators (KPI) framework to collect and manage supplier performance criteria. The KPI scorecard provides the ability to create and assign KPIs to both vendor and buyer users. Authorized users can create scorecards composed of performance assessment questions.*
 - P25 – ACH Banking Management listed as key feature. Needs clarification – is this for data transfer to ERP only or is there ACH payment functionality?
 - EPROC-VDR – certain fields require integrations to validate.
 - EPROC-VDR-28 – Field can be added for state solicitation ID if different from system-generated identifier.
- Buyer Portal – login from state’s website or stat’s authentication service. Buyer home page tailored to ser. – Other RTMs – standard functionality.
- Need Identification – From home page, modules can be selected for specific need – bid solicitation or purchase request via catalog, punchout etc. Pre-defined approvals workflow follows.
 - EPROC-NEED-5 – Inventory levels require a vendor integration.
- Request through Pay – Multiple types of purchase requests can be generated — catalog, round trip punchout, off-catalog (spot buy.) Templates can be made from existing requests p36
 - P37 Approvals triggered in workflow; Admins can set up users, roles and workflows. Different approval workflows can exist with rule order guiding the process.
 - Status of workflows can be monitored in WebProcure.
 - Orders sent to vendors via portal or integrations via XML, EDI, email or fax.
 - Order receipt can be entered with comments and attachments.
 - Invoices can be created by buyers with multiple POs; vendors can create invoices through portal. Buyers can create payment vouchers or issue credit memos.
 - EPROC-PRD-19 – Supplemental fields for Purchase Requests are custom development.
 - EPROC-PRD-32 – Sales tax is assigned based on location. Tax on specific items would be custom deliverable.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-PRD-46-48 – Integrations required for accounts data and codes from state's system. Needs clarification. Has Proactis got developed APIs for common ERPs that could be integrated?
 - EPROC-PO-9 – Field validation at org/enterprise level not line level.
 - EPROC-CT-19 – Negative dollar values handled with credit memos.
- Catalog Capability – Search hosted or punchouts by keyword, commodity code, supplier, manufacturer, part number.
 - P56 Advanced catalog – end user search manager and catalog manager.
 - P56 *Catalog manager solves the problems associated with catalog creation and ongoing maintenance.* Vendors can be active participants in catalog creation, state retains control.
 - Only buyer-approved supplier content is available in search manager.
 - P57 *For the State, catalog manager helps to control, administer and release vendor catalogs. Buyers are provided with detailed information regarding catalog updates and changes in the form of a diffing report. Based on this information, buyers can verify, accept or reject line items changes and/or the associated terms.*
 - Automated catalog approval thresholds can be set.
 - Vendors can: upload content – CSV XLS, XML online or via FTP; validate content based on state check routines
- Sourcing/Bid Management
 - P64 *Solicitation management supports multi-round evaluations as well as two envelope bid types to separate technical from pricing evaluations. The State can automatically add vendors to the bid, deselect vendors, or add new vendors to the list. Solicitations are automatically posted to the State's bid board once an event is active*
 - Solicitation board has direct links to social media.
 - Posting to public sites automatically managed through webprocure
 - Unlimited solicitation types
 - P65 *The commodity code selected during creation not only automatically suggests all registered vendors that provide such goods or services, but also notifies them via email and within the portal when the bid starts.*
 - P66 *State can collaborate with vendors via the Q&A center where vendors can post questions anonymously, review responses, and view bulletin board messages from the State.*
 - P67 *solicitation can then be converted either into a contract or a request that will result in a purchase order. See other features bulleted on p67*
 - EPROC-SRC-12-14 Reverse Auction / Surplus Auction and Sealed Bids – third party integration
 - EPROC-SRC-34-45 (CNT-6 and -7)– Version control and document check-in, check-out – future integrations
 - EPROC-SRC-117 – hiding supplier names – future enhancement
 - EPROC-SRC-83 – No integrated video conference. Third party link can be inserted. Attachment can be uploaded.
- Contract Management – create and manage contracts; track contract spend; establish open market contracts for punchouts; create contracts from template; associate catalogs to contracts; digital signature.
 - P81-83 *Once solicitations created from a master contract are issued, evaluated, awarded, and finalized, purchase orders can be created and released against the resultant contract.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *Ability to flip a solicitation award automatically into a contract.*
 - *Hyperlink to original solicitation for historical reference.*
 - *Supports diversity allocation by dollar or percentage.*
 - *Contract scorecards for performance evaluation.*
- Vendor Performance – p91 *WebProcure provides a Key Performance Indicators (KPI) framework to collect and manage vendor performance through customer-defined scorecard criteria. The scorecard provides the ability to create and assign KPIs to both vendor and buyer users.*
 - *EPROC-VPE-10 Vendor eProcurement fees invoiced and payments made: Reporting can be used to track these metrics and associated with KPI values. Payment data for administrative fees would be external to our solution.*
- Purchasing/Data Analytics – P94 Standard and adhoc reporting.
 - *P94 Crosstab views consolidate data in a similar fashion to PivotTables, allowing a user to select a measured value and drill down into the data which roll up into the summary metrics.*
 - *All RTMS except EPROC-PDA-34 – standard functionality.*

Technical Requirements

- Availability – P99 – detailed description of data center ops.
 - *Recovery Time Objective is less than 8 hours. Needs clarification – RTO 6 hours on p128*
 - *Our systems can be rolled back to any point in the preceding 30 days with our EMC Recover Point appliance.*
 - *File level replication and storage has a snapshot every 2 weeks and is saved for 6 months.*
 - *Database snapshots (deltas) happen daily with two full backups (level 0) every week.*
 - *Needs clarification – what is the uptime SLA?*
- Accessibility Requirements – P100 *WebProcure was designed with Section 508 standards in mind. In support of Web-Based Intranet and Internet Information Applications Standards (section 1194.22), WebProcure enables access for people with vision impairments who depend on external assistive products to access computer-based information. – Needs clarification – Is the system actually compliant with an accessibility standard?*
- Audit Trail and History – P101 *The audit engine logs all user activity including changes at the field level with date and time stamps. WebProcure's automated audit tool also provides a manual audit feature to capture events like phone calls and emails, which occur outside of the system.*
- Browsers Supported – Chrome, Firefox, Edge, Safari; Not IE.
- User Accounts and Administration – Hierarchical structure for roles and permission. Enterprise-level users determine access for their agencies, agencies for their users.
 - *Workflows can accommodate existing and new multilevel orgs. Admins can assign individual approvers or group.*
- User Authentication – Username/password or SSO.
 - *Password standards, lockout, security questions – acceptable.*
 - *Webprocure passwords can be administered by state administrators.*
 - *EPROC_Tech-25 – future enhancement. (Automate acceptance of end user acceptable use agreements requiring scheduled renewal.)*
- Federated Identity Management – SAML for SSO. User provision module and functionality access based on roles and permissions; one login for all modules.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Data Conversion –
 - P107 *Bulk upload tools allow our customers to collect or export data from existing data sources and format them into an easy to use Excel file.*
 - *The Excel file can then be uploaded into WebProcure by a system administrator. Proactis will perform the initial data upload into WebProcure as part of our implementation services, but these utilities will also be available to the State for future use.*
 - All data conversions are initially performed in the stage/test environment , and then in production once review and testing is complete. These tasks are shared between the implementation team and the State subject matter experts, IT staff and data owners. See matrix on p107.
 - EPROC-TECH-30 – vendor needs clarification about connection with ERP. Vendor Performance data may be handled through integration rather than upload.
- Interface and Integration – ERP agnostic. Real time or batch data transfer.
 - Formats; XML, CSV, tab separate, Excel, xCML and xCBL or EDI.
 - *ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange.*
- Office Automation Integration – data can imported, exported or attached. Microsoft office supported.
- Mobile Device Support – Web responsive framework; Mobile devices not recommended as primary toolset.
 - P116 *Currently, there are no apps required to access any of the WebProcure modules*
- Mobile Applications – See previous.
- Data Ownership and Access - *Ownership of any and all data provided by the State whether existing in electronic, magnetic or any other tangible or intangible form that is uploaded, collected, stored, held, hosted, located or utilized within the system is at all times and will always remain vested in the State.*
- Date Retention, Archive and Purge Considerations – P119 *The State has access within numerous areas of the solution to download its data on demand without cost.*
 - EPROC-TECH-63 - *Our solution archives records and keeps them online for historical access. Unless specified in an executed agreement, Proactis will not purge data from our solution.*
- Disaster Recovery Plan – P120 *Proactis maintains a comprehensive disaster recovery plan designed to combat any number of eventualities which might interrupt service. WebProcure is hosted in both a primary and secondary data center with full replication between locations and a distance of more than 700 miles between each data center.*
 - *The Proactis disaster recovery process is regularly tested and audited to ensure compliance with published and audited disaster recovery procedures, and as part of our ISO 27001 certification.*
- Solution Environments – 2 environments: Production and UAT/Traning.
 - *software development team maintains additional development and QA instances. However, the development and QA instances are not customer accessible.*
- Solution Technical Architecture – Java-based cloud environment. Scaleable – vertically and horizontally.
 - P122 *peak usage reaches 75-80% utilization, additional servers are added to handle the load. All of these servers are load balanced using redundant Cisco ACE Load Balancers.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Disk space can be added dynamically for data growth as the storage resides on an external EMC Storage Area Network (SAN).

- Solution Network Architecture – U.S. – based hosting. – redundant data centers 500 miles apart.
 - Detailed description of data center capabilities.
 - *Aggressive internal intrusion and threat detection.*
 - *Continuous 24x7x365 monitoring by experienced security personnel.*
- System Development Methodology – P125 Proactis uses an Agile methodology for all software development.
- All customer requirements implemented by the development team begin their lifecycle as ideas entered on our customer portal. A product owner will take those ideas and expand them into a more detailed requirement.
- *P125 Customers get an opportunity to review the updates in our UAT environments. The product owner collects any feedback for internal review.*
- Service Level Agreement – To be agreed with PA.

Security Requirements

- Cloud Security Alliance (CSA) Compliance - supplied
- Security and Privacy Controls
- Security Certifications _ *Proactis has developed, implemented and maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards which encompass many of the NIST SP 800-53 requirements.*
- Annual Security Plan – P127 *Proactis has developed, implemented and maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards which encompass many of the NIST SP 800-53 requirements.*
 - *Proactis has developed, implemented and maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards which encompass many of the NIST SP 800-53*
- Secure Application and Network Environment – **P 128** *Proactis has developed, implemented and maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards*
 - *Proactis utilizes two factor authentication for some internal systems and some SaaS solutions. At the current time, two factor authentication is not utilized in the WebProcure solution, however, personally identifiable information is minimally contained within the product and the Client can control the information contained within the product.*
 - *Proactis replicates data across a secure data connection between our primary and secondary data centers utilizing block level duplication on our SAN solution, and has a recovery point objective (RPO) of 30 minutes and a recovery time objective (RTO) of no more than six hours which support our business continuity plan. **Needs clarification – RTO was listed as less than 8 hours on p99. Which is more accurate?***
- Secure Application and Network Access – p129 *Proactis supports modern standard such as TLS 1.2 and TLS 1.3.*
 - *We allow no non-encrypted traffic to be used in conjunction with our services. Integration data will normally be provided using either in-built-in web APIs, SFTP or site to site VPN connectivity.*
 - *Proactis implements protocols such as logical separation; least access privilege controls; employee background checks and confidentiality agreements; and fault logging to assist in achieving its security goal.*

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *key administrative information within the system is retained for the life-cycle of the customer.*
 - *Server log files are maintained for a minimum of 6 months including security and application logs.*
 - *EPROC-SEC-5 Our solution incorporates full redundancy within the data centers as well as fail-over redundancy to a secondary data center.*
- *Personally Identifiable Information Protection – p134 Proactis does not require personal data of the type considered to be special categories of personal data (as defined in the GDPR), nor HIPAA data, nor Federal PII. Personal data used in the solutions is akin to that typically presented on a business card.*
 - *Any personal data processed in the Hosted Environments is only done so in accordance with client contracts and in alignment with applicable data privacy legislation.*
- *Security/Privacy Issue Occurrence – P135 Customers will be notified about security or privacy issues which involve their particular solution and/or service as soon as reasonably possible after Proactis has confirmed a security or privacy event has occurred. Needs clarification. What does Proactis determine reasonable. Has Proactis previously established an SLA for this type of response notification?*
 - *P135. – additional discovery of communications type and method.*
- *PII Data Actual/Attempted Access or Disclosure – See previous entry.*
- *Security Breach Reporting – See previous entry.*

Implementation Services Requirements

- *Project Management – Phased project life cycle. Measured by tailored deliverable development and incremental reviews.*
 - *Systematic approach that incorporates comprehensive documentation and progress analyzes to minimize redundancy, ensure traceability of requirements and effectively managed risk.*
 - *Integrated team approach of Proactis and client team.*
 - *P137 Proactis ensures active involvement by the client in the detailed planning phase in order for us to identify the skills needed to develop a detailed understanding of the project requirements, design requirements, testing parameters, and training needs, as well as ensuring effective transfer of knowledge.*
 - *Project Planning – includes risk management, comms and requirements, data conversion plans, test plan and training plan. All project records will be stored and maintained in the Proactis Wiki, a web-based, secure collaboration platform.*
 - *Project Tracking, Oversight*
 - *Change Control/Configuration Management*
 - *Communication Management*
 - *Issues Management - Issue management begins when someone suggests a matter should come to the attention of the project management team. Management may conclude the matter is not a concern, but more often decides otherwise... allows for escalation of an issue to a risk.*
- P145 Issues will be logged in a tracking database and reviewed by project management for completeness, relevance, and duplication. At any time a client would be able to review a list of issues and run various reports to check on progress or gather additional information about an issue.*

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Document Management
 - Schedule Management
 - Subcontractor Management - *subcontractor management methodology focuses on establishing strong partnerships with Proactis' subcontractors. To establish and maintain effective business relations, we feel clear expectations and accountabilities must be defined upfront. See p149-150 for Proactis subcontractor management.*
 - Project workplan and RACI matrix guide project timeline and responsibilities for Proactis and State.
 - Resumes provided for Civic Initiatives subcontractors to Proactis and Proactis staff.
- Project Implementation Methodology –
 - P193 *Our methodology utilizes iterative and agile methods for delivery, and structured risk and change management for the project management.*
 - *Our product development organization utilizes highly optimized Kanban methodology enabling consistent delivery of products meeting customers' demands on time while continuously adapting to change on a weekly basis.*
 - *Methodology: Project Planning; Solution Design; Solution Build; Test Readiness; Solution Deployment; Transition.*
 - *Test readiness – Needs Clarification – P197 – Is all testing scripted and performed by state or does Proactis team have testing roles and at what stage of implementation?*
- Catalog Support Services – p199 *our catalog enablement team will provide the services necessary for the initial launch of the marketplace. These services include the creation, loading, management, and maintenance of hosted catalogs and punchout sites.*
 - *Supplier and spend assessment to identify and prioritize contracts as potential for hosted or punchout catalog*
 - *Conversion plan for catalog data (i.e. contract line item or legacy catalogs)*
 - *Creation of hosted catalogs*
 - *Setup/configuration of punchout sites*
 - *On-boarding and training of suppliers to prepare them to manage catalog content*
 - *Training of State support staff to assume catalog management duties*
 - *Post-implementation. Proactis can continue to monitor and expand the catalog environment with additional suppliers, products and services as needed. Our support team is capable identifying and building new content through review of new contracts or solicitation awards.*
 - *P200 The overall goal of our catalog enablement team is to initiate catalog use, making it easy for stakeholders to view and order materials online, with less human interaction and with improved accuracy.*
- Data Conversion Services – p201 *Proactis will perform the initial data upload into WebProcure as part of our implementation services. Additionally these same utilities will be available directly to our customers for future use.*
 - *The data migration and conversion tasks are shared between the Proactis implementation team and the customer's subject matter experts, IT staff and data "owners". – See matrix for responsibilities.*
- Interface/Integration Development Services – p202 *The majority of the transaction interchanges take place through the integration platform ProcureLINK. ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data*

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s) 1:

DATE: 1/17/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

interchange. WebProcure is capable of real-time integration with a variety of external systems and ERPs.

- P203 ProcureLINK records each action during the down time and subsequent remedial actions once the system is restored which can later be reviewed to ensure all data has been properly accounted for. This functionality ensures that all the integrated data is consistent, accurate and never overlooked.
 - Clarification needed: Since ProcureLink is a Proactis tool, what resources are required from state ERP team to perform an integration; is all coding on the Proactis side?
- Organizational Change Management (OCM Services) – p 203 during implementation, where OCM processes are embedded in tasks related to process design, configuration, report development and of course training.
 - Key Process: managing stakeholders; identifying changes and impacts; planning and executing communication; assessing change readiness; ensuring knowledge acquisition via education and training; ensuring sustainment of an innovation.
- Training Services – p206 informal training begins at the very outset of our projects. Before the initial discovery sessions, all system training documentation will be delivered to the project team for their review.
 - Detailed walkthrough with core team during Discovery. The core team and relevant subject matter experts will receive additional training during the configuration process, and again prior to the user acceptance test.
 - End user training. Specific training approach for all end users which will be tailored to meet the State's needs. Frequently this approach includes predefined training courses based on users' roles and the timing of the rollout.
 - broad based training sessions used to train large numbers of users. We will conduct as many web-based training sessions as is necessary to adequately train the anticipated 100+ users.
 - remote web-based training sessions are the most effective way to deliver end user training to a large number of end-users, but we can also conduct on-site, in-person trainings provided logistical constraints allow. All training exercises will be conducted on a live training environment with State data, which is by far the most effective hands-on learning experience.
 - Train-the-Trainer program has proven to be the most effective method to encourage customer ownership and system usage. To begin to build confidence using WebProcure the identified State internal trainers will participate in training sessions on each module of WebProcure lead by a Proactis head instructor... trainers will receive certification and reference materials so they can schedule and conduct future sessions independent of a Proactis instructor.
 - P207 Continuing with the effort to achieve self-sufficiency, the State will identify system administrators who will be eligible for system administration training designed to allow system administrators to manage and administer the state-wide configuration of the system for the State
 - The State will identify the individuals it chooses to be the state supplier management administrators.
 - P208 Suppliers can call us directly for help related to WebProcure. We also provide material to suppliers that contains step-by-step instructions on how to review and respond to bids and purchase orders; how to manage the supplier user profiles; and how

- to create invoices. Also have access to computer-based tutorials and video recordings of instructor-led training.*
 - o Full release notes explaining new functionality and enhancements is made available prior to release data. Significant functionality changes will come to state via training session*
- *Help Desk Services – P208 Ongoing help desk support is available for both buyers and suppliers who interact with the State via our solution. Client-facing support is available 24/7 for mission critical items. First level procurement support is available Monday through Friday from 8:00 a.m. to 8:00 p.m. Eastern Standard Time, excluding holidays.*
 - o Support is accessible via email, telephone, and our on-line support ticketing system Help Desk.*
 - o Online context sensitive help is available for both the State and its suppliers. Help includes video tutorials that contains step-by-step instructions on how to complete any action in the system.*
 - o EPROC-IMPL-4 – Live chat functionality is in development. Needs clarification – is it ready yet?*
- *On-Site System Stabilization Support – p211 stabilization period of 3 months post project implementation. This resource(s) will monitor and facilitate system setup and configuration changes; issue assessment and resolution; system performance and stability monitoring; and system use assessment.*
 - o EPROC-MNGD-1 – Needs clarification - Is the response indicating third party monitoring could be integrated?*
 - o In addition to the standard support provided, and as previously described, the State will also be assigned a customer operations manager (COM) and strategic account manager (SAM) for the lifecycle of the contract. Our primary goal is to ensure our products and services contribute to rapid return on investment, increased process efficiency, and enhanced strategic decision-making.*

Managed Services Requirements – Proactis listed this section as Not applicable.

- Solution Support
- Organizational Change Management (OCM Services)
- Training Services
- Catalog support services.
- Help Desk Services
- Transition Out Assistance Services

Video Demonstrations

- Micro videos showing overall platform and individual sections.
- Nice demo of “tutorials” in online help. Voiceover training with “show me and try me”.
- Demo Missouri Buys (using WebProcure) and Rhode Island. – Showed instructional docs for suppliers.
- Showed the contract clauses that are optional or mandatory in solicitations and contract modules.

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Public Sector clients: "8 states, 1 US Territory, and over 1,000 cities, counties local agencies, and special districts" (pg. 1)
- Provide "supplier services to ensure vendors are registering with the right commodity codes, receiving the right bids, and can easily enable their catalogs". (pg. 1)
- "Staff consists of former state procurement directors and a host of individuals with combined decades of public policy expertise". (pg. 1)
- In 2019 launched Marketplace, "a shopping environment" that can be "stand-alone" or part of the eProcurement solution. (pg. 4)
- "Periscope holds the exclusive license to maintain, enhance, and market the NIGP Commodity / Services Code". (pg. 4)
- Periscope "manages the NIGP Consulting Program on behalf of NIGP". (pg. 4)
- Periscope Supplier Network "created specifically for the public sector and higher education, connects over 500,000 suppliers... to public sector agencies and organizations". It also supports 90K+ buying organizations that "include cities, counties, state agencies, non-profits and higher education institutions". (pg. 4)
- Periscope "only serves the public sector". "ePro was designed by public sector professionals for public sector purchasing". (pg. 6)
- Periscope implementation approaches: Phased system functionality, Agency on-boarding in waves, Core/Pilot agencies first with remaining agencies on-boarded by the State.
- "Range of prove licdensing, financing, and delivery options": SaaS, Perpetual license w/annual support, Financing of Perpetual Licens, Leasing of Perpetual License, and risk-sharing of admin fees/revenue.
- Has integrated with "mainframe systems, ERP systems, B2G/supplier validation systems and maintenance management systems". (pg. 8)

2. Previous Projects

- **Arkansas:** ePro full suite implementation with integration to State finance system (SAP). Periscope responsible for "Project Governance and Project Management activities". Office of State Procurement live May 2021, remaining departments and local entities "scheduled to be live at the end of this year". (pg. 14)

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 8/25/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- **Oregon:** ePro full suite implementation with integration to State financial system. Periscope performs “overall project management activities” including “coordination of State tasks and responsibilities”. Self-funded model “leveraging an administrative fee for vendors selling to local government through select contracts”. Will rollout to “145 agencies and nearly 800 locals this Summer”. (pg. 14)
 - **Illinois:** ePro implementation except for Contract Management. Includes integration with State finance system (SAP). Implementation began in 2015. (pg. 15)
 - **Massachusetts:** ePro full suite implementation through 3 Phases. Local Gov’t and non-profiles have access “to manage sourcing and catalog-ordering”. (pg. 15)
 - i. 8,296 solicitations in FY17
 - ii. \$358M in FY17 catalog/punchout spend
 - iii. 21,000 suppliers
 - iv. 240,000 buyers
 - v. 15,000 bids managed
 - vi. 970,000 statewide contract catalog items
 - vii. Over \$1B in orders over past 4 years
 - **New Jersey:** ePro full suite implementation began April 2014 with integration to State financial system. (pg. 16)
3. Subcontractors
- “Periscope can sub-contract with companies like CGI, Accenture, PCG, Guidehouse, Deloitte, Civic Initiatives, and more.” (pg. 18)
 - CGI (pg. 18)
 - i. Serve more than 300 state and local government clients.
 - ii. In 2016 signed managed services contract with Maine through 2026.
4. Organizational Chart
- The org chart is a very high level representation of a project implementation. It does represent State and Contractor roles but does not provide any detail. (pg. 20)
5. Litigation
- No litigation.
6. Financial Viability
- 2018-May 2021 Gross Profit and EBITDA show a profit growth each year with a much larger EBITDA for the partial year of 2021 than prior full three years. (pg. 23).

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements, pg. 2-27:

- **Single Point of Entry:** "Both the supplier community and agency users have a single point of entry" (pg. 2)
- **Smart routing:** "can create rule-based fields to route or streamline end-users down the appropriate path based on specified business practices" (pg. 3)
- **Compliance:** "our solutions have evolved to changing processes, regulations, and technology demands" (pg. 5)
- **Portal:** (pg. 5)
 - o "a single portal that seamlessly connects each and every part of the procurement lifecycle for both buyers and suppliers"
 - o "also delivers in-system chat for collaboration."
 - o "Users can configure landing page dashboards providing personalization to the tasks and work that matter to them."
- **Open Marketplace environment:** (pg. 6)
 - o "Marketplace enables an unlimited number of catalogs (punchouts level 1 and 2, external cooperative contracts, hosted catalogs loaded by the Supplier or State and other agencies publicly sourced and publicly shared catalogs)"
 - o "Periscope Marketplace also supports open market suppliers, if desired, to enhance price comparison and potential cost savings."
- **Integration:** "has provided proven integrations to State systems across our different customers and customer needs." (pg. 7)
- **Workflow:** (pg. 26)
 - o "Organization Administrator manage approval workflow configurations"
 - o Provides "inherited (statewide or multi-org) approval workflow" and "local workflow" rules. Local Gov'ts normally setup to not inherit state rules.
 - o "Users can be added to an approval path for special routing"
 - o CONCERN, approvers can "cancel" a transaction (e.g. cancel a Requisition)
- **Document Management:** provides "a central location to store all records and documents." (pg. 26)
- **Reporting, dashboards and data visualization:** "Every field within ePro, including State Defined Fields, may be used when creating published reports, ad-hoc reports, and dashboards." (pg. 27)
- **Configurable:** "extensive configurability through our solution to support unique processes and needs". (pg. 27)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- **Transparency:** (pg. 27)
 - o “Bid Solicitation or Contract is published, ePro will automatically post it publicly through the portal.”
 - o “publicly posted contracts will show all content (not marked as confidential or proprietary) including spend to date.”

User Experience, pg. 28-37:

- “provides a uniform look-and-feel for all users”
- **Dashboards**
 - o Users can “select their individual dashboard from among a list of published dashboards”
 - o “administrator can select default dashboards for each role type”
 - o “Users with ad hoc report creation privileges can build their own custom dashboards”. WEAKNESS, you must give users ad hoc report creation privileges to be able to make their own dashboard.
- **Intuitive Navigation** (pg. 29)
 - o “left navigation bar provides access to your documents by type” (pg. 29)
 - o “Central Search Bar that remains at the top of the page and allows the user to perform a quick search for documents, suppliers, and items.”
- **Wizard-driven:** “also add user-defined fields that may be linked to a guided narrative text informing a user to the appropriate steps and fields to successfully create a new transaction” (pg. 31)
- **Portal that informs:** (pg. 31/32)
 - o “six colored boxes on the Homepage change based on the user’s role and display the number of documents for each status that requires the user’s attention and/or action.”
 - o “displays the five most recent documents the user has accessed”
 - o “alerts provide access to events, reminders, and systems messages”
- **Mobile Access:** “designed to support mobile use delivering different screen size options” (pg. 34)
- **Workload Management:** “proxy and or “mass user replace” features may be utilized to ensure projects continue to flow smoothly.” (pg. 35)
- **Role-Based:** (pg. 35)
 - o “user’s role and privileges will determine available functionality within the solution.”
 - o “users’s role carries through to all organizations they have access to”. CONCERN, users may not be able to have a different role with different organizations that they support.

Bidder Best Practices and Roadmap, pg. 38-45:

- “accustomed to providing product enhancements to meet new legislation or new business initiatives” (pg. 38)
- “current schedule allows 4 new releases a year,” (pg. 39)
- “creating our roadmap, we evaluate both our client and known industry pain points”
- “SupplierWorkbench – the supplier’s best practice to interact with their government customers”

Innovations and Value-Added Features/Services, pg. 46- 53:

- **Periscope Supplier Network**, pg. 46: STRENGTH, the network gives Suppliers access to all Periscope customers, not just the State.
- **ePro For Locals:** (pg. 49)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, Local gov't will have free access to most, but not all, of the eProc functionality.
 - CONCERN, the list of what locals can use does not include full Contract Management and setting up their own Catalogs for Marketplace. CLARIFICATION, need full description of what Locals will NOT have access to.
- **Periscope Reconciler**, (pg. 49): functionality for transaction/admin/convenience fees on contracts
 - Buyers features: control fee rates & pay periods, receive payment automatically, reports, integrated with Periscope ePro
 - Supplier features: manage payment one place for all Periscope customers, review/approve fees, upload additional purchases (outside ePro), pay fees
 - CONCERN, this is an add-on for \$150,000/year and need to consider impact to any RTM req't that identifies Reconciler as means to meet it. NEGOTIATION, need to at least get this price reduced as an Optional component.
- **Payment Gateway**, (pg. 49/50): Partnered with NIC "to collect current contract utilization fees" integrated with Reconciler and can process "credit card, debit card, PayPal, and eCheck (ACH) transactions".
- **Ecovadis**, (pg. 50-52): "helps buyers and suppliers adopt more sustainable practices and reduce the carbon footprint of their activities". Add on cost for \$30k-\$50k/year.
- **Grants Management**, (pg. 52): the included Sourcing Open Enrollment feature allows Grant "respondents to submit proposals without due dates, and the managing buyer/grant administrator can make awards at any time".
- **NIGP Consulting Services** (pg. 52): "Periscope is the exclusive program manager of the NIGP Consulting program". "The cost of NIGP consulting services is dependant on Project Scope"
- **Strategic Sourcing**, (pg. 52/53): "can include a contract portfolio analysis, data analytics, assessment, market analysis, and opportunity assessments with guidance and support in the procurement event execution."
- **Diversity Equity and Inclusion**, (pg. 53): "Periscope solutions accommodate the promotion of Diversity, Equity, and Inclusion (DEI)."
- **SAP Experts – Phoenix Team**, (pg. 53): "We can partner with Phoenix Business Team to assist with SAP integration"
- **Procurated**, (pg. 53): "can integrate to Procurated, the new "Yelp-like" supplier rating system for the public sector ". "Pricing TBD based on level of desired integration"

Customizations/Extensions, pg. 54:

- "If a new enhancement is the best solution, Periscope will provide a quote and timeline to add the request in the next available release."
- "request will be added and available as standard functionality into the product"

Alternative Funding Models, pg. 55-57:

- Periscope has developed a range of proven subscription, licensing, financing, and delivery options, including perpetual license with annual support, financing of a perpetual license, Software-as-a-Service (SaaS), and risk-sharing of convenience fees and revenue generated by the eProcurement solution"
- "can also offer a hybrid of traditional SaaS and self-funded"

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Contract Transition and Flexibility, pg.58: "Periscope will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions."

Functional Requirements

General Functionality, pg. 61 : Overall, meets req'ts.

- Solution created "by public procurement professionals" (pg. 59)
- "all enhancements made to our solutions are specific to government procurement" (pg. 60)
- "AWS (Amazon Web Services), our hosting provider, will dedicate resources to establish and support the hosting infrastructure" (pg. 61)

RTM

- POTENTIAL WEAKNESS, GEN-6: System does not provide integration with a State data warehouse & BI reporting tool
- POTENTIAL WEAKNESS, GEN-12: System only searches attachment titles in the CLM module.
- WEAKNESS, GEN-15: To print procurement transactions will require defining a report in the BI module.
- WEAKNESS, GEN-20: System keeps the "newest version" of Commodity codes, does not keep in sync with the version that is in Finance System.
- POTENTIAL WEAKNESS, GEN-23: State cannot determine which Supplier name field will be used throughout the system.
- CONCERN, GEN-26 & GEN-27: Response refers to "Reconciler module" but this is not included in the "Proposed Tools" column (Column D).
- POTENTIAL WEAKNESS, GEN-32: Solution does not provide foreign language versions of web/application pages.
- POTENTIAL WEAKNESS, GEN-34: System does not support future/effective dating except on Master Blanket PO line items.
- POTENTIAL WEAKNESS, GEN-36: System only has eSignature capabilities with CLM.
- Three req'ts need clarification.

Supplier Portal, pg. 61/62 : Meets req'ts.

- "Through this portal, a supplier may self-maintain their profile, read State posted communications, review and respond to bid opportunities, create and review quote history, receive and acknowledge purchase orders, receive contracts, create and track invoices, maintain catalogs, etc" "Supplier user roles may be assigned to control specialized access"

RTM

- CONCERN, SPR-19: Reconciler module is identified on this requirement as tool to meet it however response says "Periscope offers" and in Technical Proposal Innovation section (pg. 359) it is identified as an "optional" tool. So not clear whether this tool is included in the proposal.
- One req't needs clarification

Supplier Enablement/Management, pg. 62/63: Overall, meets req'ts.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, pg. 63: "having a "history of the EIN/SSN numbers" is an uncommon feature. Most systems require a Vendor to create a new account instead of giving them a way to update their existing account should TIN be accidentally entered wrong or there is a 'real' change to TIN.
- Pre-Qualify Suppliers, pg. 63: POTENTIAL STRENGTH, this feature might be usable to have Suppliers indicate being available for Emergencies.

RTM

- CONCERN, VDR-13: Foreign vendors may be required to have a tax ID number to be able to register in the system.
- NOTE, VDR-23: The "integration to verify debarment status" is not included in the proposed scope/pricing.
- NOTE, VDR-24: The "integration to verify licensure" is not included in the proposed scope/pricing.
- "NOTE, VDR-25:
 - The ""integration to verify tax data"" is not included in the proposed scope/pricing."
- NOTE, VDR-27: The "integration to verify certification of businesses" is not included in the proposed scope/pricing.
- WEAKNESS, VDR-36: System does not have an automated "yearly reminder" notification to vendors to update their account. Instead must set the account to "inactive" with "reason code of Outdated Profile".
- WEAKNESS, VDR-39: System does not automatically "capture relevant vendor performance information/metrics" from the eProcurement components. System has a performance survey ("Evaluation ticket) concept instead.
- WEAKNESS, VDR-40: System does not provide a means for suppliers to "sign up for e-mail notification when a specific contract" is re-solicited.
- Four req'ts needs clarification

Buyer Portal, pg. 64: Meets req'ts.

- "uniform look-and-feel for all users, with a Homepage portal that is designed to provide quick and efficient access to documents that require attention"

RTM

- Meets req't's.
- Three req'ts needs clarification

Need Identification, pg. 64/65: Meets req'ts.

- "Once a Need is Identified and submitted, the ePro approval and workflow engine are triggered."

RTM

- Meets req'ts
- Two req'ts needs clarification

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Request through Pay, pg. 65-72:

- "provides an easy-to-use, guided shopping experience of all State-enabled catalogs for authorized users by allowing the State to configure which catalogs (state contracts, cooperatives, punchouts, Periscope's Open Market Network Catalogs) are displayed and available for purchasing" (pg. 68)
- POTENTIAL STRENGTH, pg. 68: System seems to allow for different catalog prioritization settings for different departments.
- STRENGTH, pg. 68/69: "Organization Administrator" feature allowing agency specific workflow to be managed at agency level.
- "local government/co-op members are typically set up as standalone organizations. That means that they do not inherit statewide approval paths from the State." (pg. 69)
- "can support both central and desktop receipts" (pg. 69)
- "supports manual entry of invoices... as well as eInvoicing and purchase order flip" (pg. 71)
- CONCERN, pg. 71: Data defaulted from the PO to an invoice "cannot be updated by accounts payable staff". This will prevent A/P from being able to adjust values when an invoice is different but correct instead of what the PO has pushed forward.
- STRENGTH, pg. 71/72: The system has credit memo functionality to capture receiving adjustments and can apply these when processing invoices.
- STRENGTH, Subcontractor Payment Tracking, pg. 72: System provides a means for subcontractors to confirm that "they have been paid" on an invoice.

RTM

- WEAKNESS, PRD-8: Requisition collaboration to "solicit demand" is only done across "all State agencies", does not support doing this "within the same Organization or across the multiple organizations".
- WEAKNESS, PRD-11: System does not provide means to set up a "standard purchase request for recurring purchases" with "automatic schedule to submit".
- STRENGTH, PRD-20: The capability to also set defaults based on "location, role, privileges" and to control "drop-down options" as well.
- WEAKNESS, PRD-24: System does not provide a Forms builder capability to "define input forms" that can be "used for entry of items on a Purchase Request".
- STRENGTH, PRD-29: The capability to have "items where the value has been disabled".
- CONCERN, PRD-33: Changes to an order are done as a change to the order, not the requisition. (see response to PRD-33 for additional information).
- STRENGTH, PRD-44: "a based item could be configured or built based on potential add on or removable options"
- WEAKNESS, PRD-52: Accounting field splits cannot be done by Quantity, only by "dollar or percent".
- WEAKNESS, WRK-10: System does not provide a means for "authorized Approvers to override/bypass specific approvals".
- WEAKNESS, WRK-13: System does not provide means to approve at "line-item level".
- WEAKNESS, WRK-14: System does can provide a means for an approver to make requisition, purchase order or solicitation changes that do not, based on rules, re-start approvals.
- WEAKNESS, PO-17: System does not send Purchase Orders by email. Vendors will get email notification to go into the system to "access the purchase order".
- STRENGTH, PO-21: Can "require the Supplier to accept the changes or just to acknowledge receipt of the changes".

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, PC-3: System does not provide a means to specify "unable to use Pcard" on purchase requests, contracts or Vendors.
- POTENTIAL WEAKNESS, PC-5: System does not provide a Pcard Administrator concept. Users must manage Pcards themselves. Need to discuss whether this impacts the State or not.
- POTENTIAL WEAKNESS, PC-8 through PC-20: System does not provide Pcard reconciliation capabilities. Need to discuss whether this impacts the State or not.
- WEAKNESS, RC-16: System does not provide a means to "load Vendor electronic Advance Shipping Notices" into the system.
- POTENTIAL WEAKNESS, INV-8: System does not have the capability to send email notification to a supplier when invoice is rejected.
- NEGOTIATION, INV-11: Need to get the integrating of attached documents to an invoice included in the scope/pricing instead of the "extra" referenced in the response.
- Twelve req'ts needs clarification

Catalog Capability, pg.73-75: Meets req'ts.

- following capabilities are included in Marketplace: (pg. 74)
 - o Unlimited catalogs from the State
 - o Level 1 and Level 2 punchouts
 - o External cooperative contracts
 - o Other publicly sourced contracts provided by suppliers
 - o Automatically displayed price comparison shopping between all types of contracts, including open-market
 - o Supplier enabled/updated catalogs and pricing with automatic administration notification if there is a price change
 - o Multi-catalog capability for the same supplier
 - o Open market / off-contract access to catalogs
 - o Workflow and approvals that can be configured based on specific business unit requirements
 - o Order generation and electronic delivery to vendors
 - o Payment methods including P-Card and purchase orders
 - o Administering and collecting administrative fees
- "our supplier enablement team will also assist suppliers." (pg. 75)

RTM

- POTENTIAL WEAKNESS, CAT-19: Catalogs cannot have negative dollar value items. However, user can free-form a requisition line item to record a negative dollar value item.
- Two req'ts needs clarification

Sourcing/Bid Management, pg.76-87:

- "conduct all types of solicitations, including reverse auctions" (pg. 77)
- "enable RFx documents to be drafted using stored templates and clauses. Once drafted,
- "identified users can collaborate on the RFx document" (pg. 77)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Auto-attached documents can be configured" (pg. 78)
- "Periscope Supplier Network (PSN) database, allowing the State to extend notifications beyond those suppliers who are directly registered in the State's system" (pg. 78)
- Special Bid Types
 - o Solicitation-enabled Contracts: "pre-approved multi-supplier agreements... from which future price quotes/RFRs may be conducted". POs/Contractds from these "are considered releases" against that contract.
 - o Demand Requisition: "ability to poll organizations to assess their needs and aggregate" into a bid.
 - o Reverse Auction
 - o Open and Rolling Enrollment: STRENGTH, "menu of approved suppliers that can be added to on an ongoing basis". "Grant solicitations" is an example of use.
- "Bid amendments can be created within the bid document at any time between when a bid is published (sent) and opened." (PG. 82)
- "compiles supplier responses into a Bid Tabulation document for easy review" (PG. 83)
- "contract manager can request a clarified or "Best and Final" offer from suppliers" (pg. 85)
- "allows each user to enter notes on a bid evaluation summary" (pg. 85)
- "has the ability to tabulate solicitations after solicitation opening and apply preferences based on supplier categories." (pg. 86)
- "support an Intent to Award status" as a "tentative award.... When some agencies have a protest period" (pg. 86)
- Protest Submission/Mgmt, pg. 87: Documents "negotiation records, additional evaluation forms, etc.,"

RTM

- POTENTIAL WEAKNESS, SRC-34: To force cost and technical to not be viewable at the same time user would need to do separate rounds on the solicitations... one for technical and 2nd for cost.
- WEAKNESS, CAT-37: Users cannot return to their search results "once they have selected an item". Users must "conduct a new search".
- POTENTIAL WEAKNESS, SRC-4: System does not support 2-Step Invitation to Bid type solicitations.
- POTENTIAL WEAKNESS, SRC-13 & 14: System does not support Surplus auctions. Will be additional costs to add this capability to the system.
- POTENTIAL WEAKNESS, SRC-22: To force cost and technical to not be viewable at the same time user would need to do separate rounds on the solicitations... one for technical and 2nd for cost.
- WEAKNESS, SRC-28: System does not have a collaboration tool within solicitations. Users would post notes on the solicitation to communicate instead.
- WEAKNESS, SRC-35: System does not provide check-in/out capabilities for content in the solicitation "document repository".
- WEAKNESS, SRC-60: System does not automatically include vENdors "with prior or active contracts/purchase orders" where the commodity code on those transactions is the same codes as on the solicitation.
- WEAKNESS, SRC-64: The system does not provide a means for suppliers to sign up for notification when a contract is to be re-solicited.

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, SRC-65: System does not "eliminate duplicate e-mail addresses" from the vendor list.
- WEAKNESS, SRC-67: A supplier must be registered (have a "profile") to be able to add themselves to a solicitation vendor list. Un-registered vendors cannot add themselves.
- WEAKNESS, SRC-75: System does not provide a means for vendors to "opt out of notifications for a specific solicitation".
- WEAKNESS, SRC-78: System does not have a means to only post an alert about a solicitation. Must post an amendment to be able to post an alert.
- "WEAKNESS, SRC-80: System does not provide a means to ""gather basic information"" from vendors downloading a solicitation from the public procurement website.
- STRENGTH, SRC-80: The capability to add vendors ""with a pending registraiton status"" to solicitation notifications."
- WEAKNESS, SRC-83: System does not have "web-conferencing" capabilities but recorded web-conferencing sessions can be attached.
- POTENTIAL WEAKNESS, SRC-88: System does not provide a means to "workflow vendor questions" to specific users for review/response.
- WEAKNESS, SRC-105: System does not provide alert to unqualified vendor if they try to submit response to MBE set-aside solicitation.
- POTENTIAL WEAKNESS, SRC-117: System cannot hide Supplier names on the Evaluation screen.
- WEAKNESS, SRC-120: System does not provide a means to "export" response/score data. Can be printed.
- POTENTIAL WEAKNESS, SRC-130: System does not have a collaboration tool within solicitations for evaluation panel members.
- WEAKNESS, SRC-131: System does not have a collaboration tool within solicitations for Buyer/Agency representatives. Would have to record notes on the solicitation to capture communications.
- WEAKNESS, SRC-133: System does not "notify the BuyerAnalyst" after each approval of award.
- WEAKNESS, SRC-143: The system does not provide the capability to cancel a fully awarded contract and award to a different supplier.
- WEAKNESS, SRC-146: System does not provide notifications that are specific to non-awarded Vendors.
- POTENTIAL WEAKNESS, SRC-151: System does not provide unit of measure conversion capabilities.
- Twenty req'ts needs clarification

Contract Management, pg. 87-91:

- "has the ability to tabulate solicitations after solicitation opening and apply preferences based on supplier categories." (pg. 88)
- "drafting contract documents (using stored templates and clauses), conducting electronic negotiations, obtaining signatures, creating reports, tracking supplier performance." (pg. 88)
- Contract approvals: "Power users can override the approval workflows as needed" (pg. 89)
- "can configure, monitor, complete, and enforce milestones... workflows or tasks" (pg. 89)
- "supports electronic signatures via DocuSign™" (pg. 90)
- STRENGTH, "user may define the Supplier Fees associated with that contract".

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “may be defined as flat percent across all line items”
- “flat percent with a max fee cap for the payment period”
- “flat fee”
- “auto-calculated fees are then assigned to the supplier to pay using Periscope’s Reconciler module”
- Suppliers “may also add additional spend on a contract that occurred outside ePro”

RTM

- POTENTIAL WEAKNESS, CNT-10: System does not provide capability to define standard specifications and have attached document.
- "NOTE: Response to CNT-25 does indicate that system has MS Word integration for document authoring capabilities.
-
- STRENGTH, CNT-23: ""Versions of a contract document can be compared""."
- POTENTIAL WEAKNESS, CNT-27: System does not have a means to specify access restrictions for specific documents attached to a contract.
- STRENGTH, CNT-32: Readable PDF documents are "searchable".
- WEAKNESS, CNT-34: System does not have controls to limit who can enter backdated contracts.
- WEAKNESS, CNT-66: System does not provide a means to publicly post alert associated with a contract. User must post an attached document to communicate this.
- POTENTIAL STRENGTH, CNT-70: Reconciler module to upload "sales/usage details".
- POTENTIAL STRENGTH, CNT-71: Reconciler module.
- POTENTIAL STRENGTH, CNT-72: Reconciler module.
- STRENGTH, CNT-73: Task functionality to assign contracts for review by "project management and/or project quality office".
- WEAKNESS, CNT-83: System does not "provide data balances" on "remaining contract limits, remaining budgets and applicable thresholds".
- Six req'ts needs clarification

Vendor Performance, pg. 91: NEED TO SEE IF THERE IS A SURVEY FEATURE FOR SUPPLIER PERFORMANCE ACROSS ENTIRE SYSTEM

- WEAKNESS: Performance measuring is only against a contract. “may complete and track Supplier Performance on a contract” (pg. 91)
- Ticket option: State “defines performance issues” in a document that is sent to the supplier and supplier “may respond... defining upcoming actions”
- Contract review: “creates a performance rating for that specific supplier and contract”

RTM

- POTENTIAL WEAKNESS, VPE-12 System does not provide supplier performance reporting from transaction data captured in the system. Can only capture/report on survey inputs.
- NEGOTIATION, VPE-14: OOTB CLM does not include setup contract surveys. This would be an additional cost. Suggest negotiating this to be included as a standard feature without additional cost.
- Two req'ts needs clarification

Purchasing/Data Analytics, pg. 92- : Meets req'ts.

- Reporting tool works from a copy of production data: "Replicated database refers to our standard architecture, where the ePro™ production database is replicated nightly and copied to the BI database" (pg.95)
- STRENGTH, Reports can be made public (pg. 92)
- Standard Reports
 - o Spend Analysis Reports: existing, standard reports of spend by Commodity, On/Off Contract, Supplier, Purchasing Statistics (pg. 92/93)
 - o Cycle Time Reports: for PO, Requisition & Bid (pg. 93)
 - o Workload Management Reports (pg. 93)
 - o Contract usage Reports (pg. 93)
 - o Financial management Reports: Open POs, Received/Not Invoiced, Unpaid Receipts (pg. 93/94)
 - o Supplier Reports (pg. 94)
- Ad Hoc Reports: "ad-hoc reports can then be published to allow end users to run them from within ePro™, or they can be embedded in dashboards" (pg. 94/95)
- Dashboards: (pg. 95)
 - o "any standard or any ad-hoc report to be converted into a dashboard"
 - o "end-user can configure their individual dashboard themselves on their "My Account" screen." WEAKNESS, this capability is limited to "Users with ad hoc report creation privileges" (pg. 28)
 - o "Dashboards can be published for suppliers as well."

RTM

- STRENGTH, PDA-22: ePro BI and Reporting module reports "can be shared publicly".
- No req'ts needs clarification

Technical Requirements - pg. 100-144

Availability, pg. 100: Meets req'ts.

- "Solution will be available 99.99% of the time (excluding scheduled maintenance" (SLA Attachment A, pg. 6 which is pg. 7 of Part 2 doc).

Accessibility Requirements, pg. 100: Meets req'ts.

- "We provide regularly updated accessibility compliance certification through our Voluntary Product Assessment Template (VPATs). With new feature releases, our software is tested for web accessibility standards with the Rehabilitation Act Federal ICT Accessibility / Section 508, W3C Accessibility Initiative, and WCAG 2.1 Level AA (which exceeds Section 508's standards)."
- "Our Quality Assurance program utilizes both the WAVE and ANDI toolsets, along with randomized keyboard testing."

Audit Trail and History, pg. 100 TECH-1 thru 5: Partially meets. Response did not address req't to have a "history page other option" accessible "without support from an Administrator".

- "Auditing Event Tracking"

- "The DBMS has configurable row-level DML and DDL audit trails as well providing the ability to track, record, and review"

RTM

- WEAKNESS, TECH-4: System does not provide a means for an authorized user to override approval rules.

Browsers Supported, pg.101: Meets req'ts

- "products and all their features are designed to be browser and operating system agnostic and work best on all the latest manufactures' supported browsers."
- "look and function the same if the user is on a Windows, Android, Apple, or another device; and with Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari browsers."
- "Periscope's goals include supporting browsers that are greater than 10% of market penetration. We manage this by tracking browser types of inbound users."

User Accounts and Administration, pg. 102/103 & TECH-6 thru 20: Meets req'ts

- "provides roles that have clear separations of responsibilities"
- "User accounts may be created by Internal Administrators or Organization Administrators"
- Multiple versions of "SuperUser", "Standard User" and "Marketplace User" roles
- CLARIFICATION, response did not address req't to "describe all capabilities for the definition of additional roles".

RTM

- WEAKNESS, TECH-4: System does not provide a means for an authorized user to override approval rules.
- NOTE, TECH-11: Response did not fully respond to the req'ts however the details in the Tech Proposal (pg. 102) provided detail that met this req't.
- POTENTIAL WEAKNESS, TECH-12: System does not support dual sign-on via one account.
- NOTE, TECH-14: Response did not fully respond to the req'ts however the details in the Tech Proposal (pg. 102) provided detail that met this req't.
- POTENTIAL WEAKNESS, TECH-18: System does not email users when there have been changes to their account.
- Three req'ts need clarification.

User Authentication, pg. 104 TECH-21 thru 25: Partially meets

- ePro™ provides SAML (Security Assertion Markup Language) single sign-on integration
- Active Directory Federation Services (ADFS) 2.0 and 3.0
- provides user security and controls by having group and user-defined solution privileges.
- a profile is secured with 2-factor authentication
- System has default password policy"

RTM

- POTENTIAL WEAKNESS, TECH-25: System does not have functionality to automate acceptance/tracking of acceptable use agreements.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Federated Identity Management, pg. 105: Meets req'ts

- "Periscope SSO is based on SAML 2.0 specifications"
- Successful SSO integrations include "Active Director Federation Services (ADFS) 2.0 and 3.0"

Data Conversion, pg. 105 TECH-26 thru 34: Partially meets req'ts.

- "our approach focuses on migrating ONLY that data necessary to support core business functions in the new system at go-live"
- "in-scope data migration includes the following data elements: *NOTE, the list of included data migration here (pg. 105) does not include "User data/role assignments" which shows as included under Implementation Req'ts/Data Conversion Services (pg. 190)*
 - o Organizational setup, including departmental structures (including 2 levels of organizational hierarchy and bill-to/ship-to addresses)
 - o Active term contracts/Master Blanket POs and related vendor data (to support ordering at go-live)
- WEAKNESS, PG. 105: Supplier migration is not included in proposed scope/pricing. "can provide optional pricing to the State to migrate existing vendors using standard ePro data migration templates and utilities"
- "State is responsible for extracting data into standard ePro templates, data cleansing, and validation/signoff on migrated data before loading in production"

RTM

- POTENTIAL WEAKNESS, TECH-27: Conversion of Requisitions & POs is NOT included in the proposed scope/pricing.
- POTENTIAL WEAKNESS, TECH-28: Conversion of Solicitations is NOT included in the proposed scope/pricing.
- POTENTIAL WEAKNESS, TECH-30: Conversion of Vendor Performance Data is NOT included in the proposed scope/pricing.

Interface and Integration, pg. 106 TECH-35 thru 60: Meets req'ts.

- Periscope has extensive experience with multiple systems, including ERP's such as Oracle, CGI, SAP, and PeopleSoft
- "in the development interfaces, both batch and realtime, ePro's™ Financial System Integration is typically used to create and maintain a customer's supplier records.
- customer and Periscope will determine together at which point in the purchasing process that the agency would like ePro™ to trigger transactions to their financial system
- Accounting Codes may be accepted into ePro™ from the financial system.
- ePro™ provides a high degree of configurability to allow clients to define when integration transactions occur and how those transactions process.
- The ePro™ Financial System Integration uses simple Transaction Validation steps to ensure that all financial transactions and their corresponding records are successful and complete

RTM

- POTENTIAL WEAKNESS, TECH-38: Integration with Secretary of State licensing system is not included in the proposed costs.
- POTENTIAL WEAKNESS, TECH-43: Integration to an inventory system "outside of SAP" will be additional costs.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, TECH-50: The integration functionality does not have integrate receipt data to finance systems.
- Three req'ts need clarification.

Office Automation Integration, pg. 109 & TECH-61: Meets req'ts.

- Microsoft Office suite of products (.docx, xlsx, pptx, etc. – and previous versions) are considered a standard for
- business automation and used for digital transformation.
- also accept Adobe products and other standard transformation file
- formats such as RTF, JPG, XML, & CSV for uploading, attaching, and linking for business documentation
- CLM has
- integration into Microsoft Word for contract redlining between both parties.

RTM

- Meets req't.

Mobile Device Support and Mobile Applications, pg. 111 & TECH-62: Meets Mobile Device Support. Does not meet Mobile Applications.

- Users can utilize the Periscope suite of products on all their devices
- Periscope utilizes responsive web design rather than unique applications for each device type.
- POTENTIAL WEAKNESS, system does not have Mobile Apps.

RTM

- Meets req't

Data Ownership and Access, pg.112-114: Partially meets. Response discussed ways for customer to get copy of data but did not address ownership of the data.

Date Retention, Archive and Purge Considerations, pg. 114 & TECH-63: Meets req'ts.

- Periscope can configure it to
- meet State-specific retention policies.

RTM

- Meets req't.

Disaster Recovery Plan, pg. 115 : Meets req'ts.

- "Periscope's Contingency Plans and Disaster Recovery Plans (CP / DRP) are designed to mitigate the risk of system and service unavailability by providing written solutions for the prompt and effective continuation or resumption of mission-critical services in the event of an incident or disaster."
- "Periscope's Business Continuity Plans have been developed to comply with the compliance requirements, such as those of the Federal Information Security Modernization Act (FISMA), National Institute of Standards and Technology (NIST) 800-53 requirements."

Solution Environments, pg. 116 & TECH-64 thru 68: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- standard environment deployments provide users acceptance (UAT), training, and production environments.
- Our non-production environments can be integrated into the State's lower testing environments to facilitate end-to-end testing.

RTM

- NOTE, TECH-65: Integration with Test and Training environments addressed in the Technical Proposal, pg. 116.
- Meets req'ts.

Solution Technical Architecture, pg. 117-125: Partially meets req'ts. Periscope will not provide technical architecture information without "execution of a non-disclosure agreement".

- BuySpeed™ modules are written with Java technology
- supports both SOAP and REST web service formats

Solution Network Architecture, pg. 126: Partially meets req'ts. Periscope will not provide technical network information without "execution of a non-disclosure agreement".

- "Periscope strictly adheres to the NIST 800-53 standards and is certified annually via a FISMA audit as well as SOC
- II and PCI-DSS audits. All of our architecture and tools, and associated policies and procedures, are examined and
- certified by these audits as being on par with industry best practices.

System Development Methodology, pg. 126 : Meets req'ts.

- Periscope develops and manages a Software Development Life Cycle (SDLC)
 - o "have a role-based access control system to restrict system access privileges"
 - o "there is a separation between non-production and production application environments"
 - o "three operational environments": Development, Test/QA, Production and Training."
 - o Performance testing with "JMeter and automated test scripts"
 - o Quality assurance program
 - o Configuration/Change Management methodologies.

Service Level Agreement, pg. 130-144: Partially meets req'ts.

- Did not provide a review of or accept States' SLA. Provided their Standard SLA but indicated that they are willing to negotiate "addition of certain elements". NOTE: details of their SLA are not bad. Focus is more 'customer/business operations' focused than is common in the industry. Though their Sev 2 definition would have been a Sev 1 with State's SLA.
- WEAKNESS, no Implementation SLAs.
- CONCERN, pg. 134 (pg. 4 of 14 in SLA): The available days/times in SLA states M-F, 6am-7pm MT" but in the Implementation Req'ts, Help Desk section (pg. 204 & 205) it states "M-F, 8AM-7PM ET".
- Attachment A-2, pg. 141 (pg. 11 of 14 in SLA): Positive is that SLA does cover Prod, Training, UAT and Demo environments.
- WEAKNESS, Attach A-2, Sev 2, pg. 142 (pg. 12 of 14 in SLA): The "Events" listed would have been Severity 1 in State SLA.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Periscope
CATEGORY #(s): 1
DATE: 12/16/21
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Security Requirements 145-155 (see Part 2 doc)

Cloud Security Alliance (CSA) Compliance, pg.145: Does not meet req't. Did not provide either the CAIQ or a report "documenting compliance with CCM".

- We strictly adhere to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits. We are confident that the control families in the CAIQ are already addressed by these audits.

Security and Privacy Controls, pg. 145: Meets req'ts.

- "confirmed that the hosting environment satisfied the required technical controls as specified within NIST 800-53 revision 4 for a moderately categorized SaaS solution."

Security Certifications, pg. 145: Partially meets req'ts. Response did not indicate whether they have certifications/credentials for HIPPA, FERPA, CJIS, IRS Publication 1075, NIST SP 800-71 and FIPS 200.

- Periscope is annually audited by a third-party firm and certified FISMA, SOC II-Type II, and PCI-DSS compliant.

Annual Security Plan, pg. 145 : Does not meet req'ts. Periscope will not provide the req'd details without "execution of a non-disclosure agreement".

- "We strictly adhere to NIST 800-53 standards. As a standard part of our operations, we develop an annual security plan based, in part, on findings returned from"
- "Because the security information is sensitive and we have a high desire to protect all of our clients, we will only provide details of our security footprint with the execution of a non-disclosure agreement."

Secure Application and Network Environment, pg. 147: Meets req'ts.

- "Periscope secures the environment to ensure that perimeter devices such as firewalls and IDS are configured correctly to allow only recognized and valid connections"
- Tier III data center provides for a completely redundant and continually operating facility that has a 99.9% uptime track record. It is a carrier-neutral environment with 24 / 7 security and engineering staff."
- "Periscope uses the AWS application firewalls with elastic IPs."
- "Activity login is tracked"
- "All personnel "required to use multi-factor authentication"
- "has clearly defined data classification policies and procedures"
- "utilizes and monitors using Meraki IDS/IPS."
- "Secure data is encrypted at rest and data transfers are only accomplished via secure TLS 1.2 HTTPS protocols"
- "Periscope Platform is architected as a 3-tier application with a clear separation between the web, application, and database layers."
- "Periscope's Business Continuity Plans have been developed to comply with the compliance requirements, such as those of the Federal Information Security Modernization Act (FISMA), National Institute of Standards and Technology (NIST) 800-53 requirements."
- "Access to any client data is highly restricted (principles of least privilege) and monitored."

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "All Periscope computing devices have administrator-controlled anti-virus and system-controlled password protection."

Secure Application and Network Access, pg.150 & SEC-1 thru 5:

- "is hosted with AWS. Access to the system is restricted via VPN authentication, AWS Identity management, and ssh keys. Application access is secured with SSL (port 443) certificates supplied by the customer or issued through AWS route 53."
- "No customer Hypervisor settings are in place"
- "The system is scanned for vulnerabilities by Rapid7 and patched as available."
- "Meraki IDS is in place to detect and mitigate external threats to the network."
- "Being hosted in AWS, physical access is limited to AWS personal"

RTM

- POTENTIAL WEAKNESS, SEC-4: System does not use persistent cookies.

Data Security, pg. 151: Meets req'ts.

- "Adhere to NIST 800-53 standards"
- "certified annually via a FISMA, SOC II and PCI-DSS audits"
- System interoperability executed via HTTPS and TLS 1.2
- Data classification is based on the concept of need to know. "people who have a legitimate business need for the information"
- "controls are in place to authenticate the identity of users"
- "sensitive information is provided only after the written authorization of the Data Owner has been obtained".
- Data disposal, "a method must be used that completely erases all data". For media where data cannot be erased, the media "must be destroyed"

Personally Identifiable Information Protection, pg. 153: Meets req'ts.

- Periscope Solutions do not have PII information as a part of its data set. Should a supplier use their social security
- number as their tax-id the solution encrypts at rest, the tax-id, and any associated data points.

Security/Privacy Issue Occurrence, pg. 153/154: Partially meets req'ts. However the SLA document does specifically identify what Severity level a "security or privacy issue" would be classified as. CLARIFICATION, need Periscope to identify that a security or privacy issue would be classified as Severity 1 for their SLA.

- "Our service level agreements are designed to accommodate the handling of all issues, including Security and Privacy Issues"

PII Data Actual/Attempted Access or Disclosure, pg. 154: Response did not address the req't of responding to PII actual/attempted access. Though Periscope's position is that the "Solution does not have PII information as a part of its' data set" they do acknowledge that a supplier may use their social security number as their tax-id, so a response for that situation should be addressed.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Security Breach Reporting, pg. 154: Partially meets req'ts. However, need Periscope to identify that a Security Breach would be classified as Severity 1 for their SLA.

Implementation Services Requirements – pg. 156-207

Project Management, pg. 156-177: Partially meets req'ts.

- Periscope understands the importance of status reporting, deliverable management, issue management, and risk assessment and mitigation for the delivery of a successful project". "we discuss each of these" during "initial Project Set-Up"
- "The named Project Manager dedicated to the project will not be assigned to other projects during the implementation period."
- "Project Managers are PMP certified and many have public sector experience"
- CONCERN, Fig. 7.2 Sample Implementation Plan does not indicate if it represents a Small, Medium or Large State implementation, however the timeline of being 'live' with all functionality in 12 months is too aggressive. (pg. 157)
 - o 24 Months, System live in 12 months, Wave Rollout 2nd 12 months
 - o Unclear which "End Users" will be going live in months 11/12.
 - o Vendor Registration, live end Month 4... No System Test/UAT, without Integration
 - o Rest of system Big Bang over Months 11-12... No System Test/UAT
 - o Go Live Support, only month 12... does not reflect the req'd 3 month support and isn't providing support for what about adjustments during Rollout?
 - o Interface/integration goes live Months 11-12 but what about Vendor integration when Vendor goes live in Month 4
 - o OCM not included in the project tasks
- Typical PM deliverables: Proj Schedule Baseline, Scope/Change Control Plan, Risk Mgmt Plan/Risk Register, Status report, Payment/Billing Schedule
- Staffing plan (pg. 158-174): looks good
- State Project Support Plan (pg. 175-177) looks good.

Project Implementation Methodology, pg. 177-186: Generally meets req'ts however concerns about the workload on the Participating Entity at Go-Live (see below)

- "the plan is organized in a sequential manner, we have worked with clients to create and implement in a more agile manner than this plan's waterfall layout."
- Four phases: Project Setup/Analysis, Exploration & Design, System Implementation/Configuration, Post Implementation Go Live & Support (pg. 178)
- WEAKNESS, Administrative Data Migration and Data Entry, pg 183: As noted in the Data Conversion section, Periscope methodology only plans to migrate only Contracts and no other transaction data. Also, Supplier data migration is not planned.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- CONCERN, Go-Readiness, Configuration, pg. 184/185: the Participating Entity will be responsible for entry of configuration ("user data, approval paths, etc., customized printing/report features, punchouts, functional options") in the Production environment.

Catalog Support Services, pg. 187-189: Meets req'ts however note that Periscope does not create catalogs for Suppliers/State.

- "Periscope will analyze and consolidate data provided by the State on current suppliers."
- "Periscope will develop a comprehensive communication framework used to manage supplier outreach"
- "Periscope's supplier enablement team works with the supplier to enable their catalog and prepare them for successful, ongoing management of their catalog." (pg. 188)
- "Many suppliers complete this upload process without requiring assistance from Periscope, but our Supplier
- Enablement team conducts online meetings with suppliers to assist and review their catalog setup." Suppliers are expected to create/upload their catalogs. Periscope services does not include creating catalogs.
- Punchout: "Periscope will manage this configuration for the state and engage with
- the appropriate state and supplier resources to test, approve, and promote production." (pg. 189)
- "Periscope's support team will provide ongoing support of the State's suppliers"

Data Conversion Services, pg. 190: Meets req'ts.

- "our approach focuses on migrating only that data
- necessary to support core business functions in the new system at go-live."
- NOTE, the list of included data migration under Technical Req'ts/Data Conversion (pg. 105) does not include "User data/role assignments" which shows as included here.
- "Periscope will work with the State to develop a Data Migration Plan" State is responsible for extracting data into standard ePro™ data migration templates, data cleansing, and validation/signoff of migrated data."

Interface/Integration Development Services, pg. 191/192: Meets req'ts. NOTE: if any integration/interface requires changes from "existing" Periscope "specifications/capabilities" then there will be additional costs.

- POTENTIAL STRENGTH, Integration Module, pg. 72: Periscope has optional services to setup and manage the State's side of integration if needed.
- "Integration module was developed to enable integration across multiple financial systems"
- "our proposal includes services to review our existing integration module specifications and capabilities as described below to determine a fit-gap with the financial system. If they can be leveraged, then enablement is included as part of our project costs. If Periscope needs to accommodate a custom element to support integration to the financial system, we can work with the State to scope any required development to meet such custom elements and determine the impact on project cost and timelines."
- "the analysis phase, we also collect information on the requirements"
- "An Interface Design document will be developed, including specific data definitions, file formats, processing triggers, and processing and update requirements in both systems, using the Periscope ePro™ Standard Integration Module and the output available from it."

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Organizational Change Management (OCM Services), pg. 192-198: Meets req'ts

- "Periscope uses Prosci's ADKAR® Model of individual change". "acting as an assessment tool, providing guidelines for structuring key parts of our change management program, and facilitating important conversations about the change throughout the organization." (pg. 193/194)
- "change management must leverage both an individual change management model and an organizational change management approach." (pg. 194)
- "makes use of an informational project website and an email campaign to effectively communicate messages" (pg. 194)
- Agency Core Teams (pg. 195): "Each agency's core team is comprised of subject matter experts from the functional areas impacted by the system." "Core Team members later become "power users", providing support to the end-users in their agencies".
- Change Liaisons (pg. 195): "make use of departmental change advocates". "will be focused on assisting with the organizational change management activities for their agency
- Change Management Plan (pg. 195): "the communication plan, the sponsorship roadmap, the stakeholder engagement plan, the training plan, and the resistance management plan"
- Sponsorship Roadmap (pg. 197): "Sponsorship Roadmap is to create an actionable plan for preparing and leveraging all the sponsors to promote, gain support for, and drive adoption of the change"
- Stakeholder Engagement Plan (pg. 197): "approach to ensure that individuals or groups impacted by a change and those who can positively affect the overall success of the change are engaged in the change effort".
- Resistance Management Plan (pg. 198): "proactive resistance management and reactive resistance management tactics".

Training Services, pg. 198-203: Meets req'ts. The content in this section is repeated in the Managed Services Training Services section along with the sample Training Plan, see notes there.

Help Desk Services, pg. 204-207 & IMPL-1 thru 5: Meets req'ts.

- Periscope shall provide the following Support Desk services to User:
 - o Online support portal and ticketing system to report and track issues: Available 24 hours a day, 7 days a week; monitored during Business Hours (Monday-Friday 8am - 7pm Eastern excluding Periscope holidays);
 - o Ability to contact call center to report technical and functional issues during Business Hours;
 - o An easily accessible frequently asked question list and a technical and functional team available during Business Hours;
 - o Non-Business Hours response to tickets reported as Severity Level One issues;
 - o Ability to review responses to and update issues in the Online Support Portal;
 - o Ability to access online functional help tools such as quick reference guides and online video tutorials; and
 - o Ability to view all functional issues reported by the Customer in the Online Support Portal.
- "Support Analysts are equipped with industry-standard tools to meet the Support needs, including the Zendesk ITSM, telephone system, chat support and FAQ resources" (pg. 204) "will provide the State with read-only access to the State's instance of the Zendesk ITSM system" (pg. 206)
- "Customer Satisfaction (CSAT) surveys are provided to every user at the end of every ticketing experience." (pg. 206)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): 1

DATE: 12/16/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Tier 1: by State unless alternate funding model accepted. Tier 2 & 3 by Periscope (pg. 206/207)

RTM

-

On-Site System Stabilization Support, pg. 207: Meets req'ts.

- "will enable the system setup and configuration tuning"
- "provide system utilization assessment, shoulder-to-shoulder mentoring of State operations staff, documentation of lessons-learned, resource management, and ongoing identification of opportunities to maximize the value of the e-Procurement solution assets."

Managed Services Requirements – pg. 208-248

Solution Support, pg. 208 & MNGD-1: Meets req'ts. However the Release testing program timing has concerns.

- CONCERN, 20/10/10 Program for releases, pg. 186 & pg. 208: Unless the functionality being testing is small in size, the number of days allocated in this plan is unrealistic.
 - o 20 days for Participating Entity to do UAT
 - o 10 days for Periscope to resolve issues found during UAT
 - o 10 days for Participating Entity to confirm fixes
- Performance metrics "set forth in the SLA", Participating Entity can request a review to the performance metrics "once a year". (8.1.7, pg. 209)

RTM

- MNGD-1: Periscope uses "Pingdom" to "monitor average response time"

Organizational Change Management (OCM Services) , pg. 213-219: Meets req'ts. Content in this section is exacts repeat of Implementation Reqs OCM Services, see notes there.

Training Services, pg. 220-240: Meets req'ts.

- "Using the ADDIE (Analyze, Design, Develop, Implement and Evaluate) Instructional Design Methodology" (pg. 221)
- STRENGTH, Micro-Learning videos (pg. 221): "Micro-learning videos" is a very effective approach to training videos.
- User-based Training Summary Table 8.4 - 9.10, pg. 221-224:
 - o POTENTIAL STRENGTH, the training curricula appear to be comprehensive and good fit for users.
 - o WEAKNESS, curricula are 'generic', not State specific, so State will have to build out companion materials to give State specific guidance.
- "we know that 70% of an individual's competency development comes through assignments (e.g., on-the-job experiences)" (pg. 224)
- "Core Team will have "Core Team Orientation" that "in-depth exploration of all major ePro™ functionality associated with the scope of the project." (pg. 224)
- Additional Training, pg. 224: CONCERN, the "knowledge transfer with key stakeholders" is only to the "Core Team" which is a limited/small number of people. So the issue of addressing "on-the-job experiences" to the broad number of users that will be trained is not going to be sufficiently

It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

Public sector focused only. – Periscope ePro

8 states /1000 locals

Integrate to ERPS and financial systems

Equal opportunity and support local and MWDBEs – integrates to B2Gnow.

Modular standalone or full epro

General Principal and Requirements

- Key Solution Functionality Elements
 - P15 Single point of entry; SSO supported; ePro is transparency portal for posted solicitations and awards; contract spend; state supplier lists.
 - P16 Routing based on business rules; state establishes user-defined fields by enterprise or org. Admin set, not custom.
 - P18 Periscope cloud (instance) is portal to connect all aspects of the process for buyers and suppliers. – In-system chat for collaboration. Supplier side allows registration, bid responses, contract negotiations, PO receipt; invoicing; performance resolution; transaction fee submission.
 - P19 Marketplace catalogs for buying on contract; open-market catalogs;
 - P20 - list of examples ERPs and systems that integrate. (White paper on integration process). P23 *While Periscope Holdings will provide example XML and XSD schema documents for all XML transaction generated by this integration solutions, Periscope Holdings also offers XSLT transformation services, giving this solution additional flexibility in how the XML is formatted in the transaction.*
 - Default is that agency tool handles integration, but Periscope can provide transformation services to convert XML into acceptable format.
- User Experience – P41 Options: user can personalize home screen relevant to role; Admin defaults dashboard to role.
 - Some users will have ability to create ad hoc reports.
 - P42 Intuitive navigation aimed at fewest clicks to completion.
 - Central search bar on all pages; advanced search with field level search config with dropdown and free fields.
 - Guided workflows. (Wizard-drive fields - Nevada)
 - P45 – Color-coded homepage dashboard displays actions required or statuses of workflows. P46 – Alerts and reminders Alarm at top of every page.
 - Mobile access through browser.
 - Managers can track assignments and reassign with org/dept/location. Proxy features available.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P 48 Role-based functionality – *Standard roles are: department user, basic purchaser, accounts payable, auditor, super users, and multiple administrative roles) with the ability to assign unique privileges to each user.*
 - *Multi-organization access is granted to users as part of their overall user profile. This access is granted by Internal Administrators, a role that provides administrative privileges across all organizations.*
- Bidder Best Practices and Roadmap – Configurable – ca make changes through life of application.
 - P51 *ability to track a subcontractor from solicitation through contract utilization*
 - P51 - focus on public sector only, therefore only public approach contracting supported.
 - Agile development. – new features can be configured and phased in after go-live.
 - 2020 – added PCI compliant P-card vault; Added Reconciler to supplier report and payment portal.
 - P53 – ability to compare contracts based on value and sourced credentials.
 - Next steps – Predictive Intelligence, Guided Buying.
 - LMS for end users – appropriate to user group.
 - Roadmap: enterprise customer success; grow supplier network; continued innovation.
 - P55 – Triangle stack from bottom- Business intelligence; supplier fee admin; catalog loading and shopping; ux/ui design.
- Innovations and Value-Added Features/Services
 - Grants management. – deployed by Texas Department of Agriculture - ePro Sourcing variation that has rolling enrollment solicitation .Included as no0cost/value add.
 - NIGP consulting services
 - Strategic Sourcing
 - Diversity inclusion – integration to B2G; integrate to SAP by Phoenix Team; Procured vendor performance integration.
- Customizations/Extensions – P67 *Periscope development methodology follows the Agile method, which allows enhancements to be applied at a rapid pace. All enhancements built into our software are available to every customer. Our roadmap is published year ahead of schedule so customers may align their organization needs with the right tools provided on a scheduled basis.*
- Alternative Funding Models – Self-funded model – See p69. Shared revenue and opens the following:
 - Strategic Sourcing;
 - Supplier Support (tier 1) and enablement; account management; marketing of contracts; train poli-subs; admin fee collection.
- Contract transition – existing clients will determine best contract option for them. Previously have transitioned clients between contracts.

Functional Requirements

- General Functionality – COTS Marketplace – standalone or functional within the ePro system.
 - Can be used by all state agencies and polisubs.
 - Seamless integration of procurement functions: *online supplier registration, requisitions, online solicitations, online bid/quote, reverse auctions, evaluations, and tabulations, purchase order and contract awards, contract and catalog management, a public shopping Marketplace, delivery of orders to vendors, minority participation tracking, receiving, and invoice matching.*
 - Cloud-based SAAS. Hosted on AWS.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P74 *Much of the work performed by Periscope's Hosting and Infrastructure Team will be performed behind the scenes, setting up and supporting the off-site hosting infrastructure for the solution.*
 - ERPOC-GEN-6 – Integration with state data warehouse and State BI reporting – not available – roadmap item.
 - EPROC-GEN-32 – Only English language system available
- Supplier Portal – P75 *Once a supplier has completed their registration and received their unique login information, they may log into their portal. A supplier may self-maintain their profile, read State posted communications, review and respond to bid opportunities, create and review quote history, receive and acknowledge purchase orders, receive contracts, create and track invoices, maintain catalogs, etc.*
- Supplier Enablement/Management – State will onboard suppliers or Periscope can provides as additional offering or in alternative funding model.
 - P76 *State users with roles of Internal Administrator (who have full administrative privileges in the system) or supplier Administrator (whose administrative privileges are limited to supplier data) can manage supplier settings and supplier records in ePro.*
 - P77 *Typically, active suppliers are loaded into ePro using data from the financial/ ERP system at go-live, with a synchronized Alternate ID linking the ePro supplier account to the existing account (as well as a link for each supplier's address). After go-live, supplier data is sent to the financial/ERP system when an award is made to a supplier (the specific timing will be determined with the State as part of integration design).*
 - EPROC-VDR – certain data validations will require integrations. Pricing varies by state's need.
- Buyer Portal – P77 *All buyers will initiate and utilize activities to complete the full life cycle of procurement activities through this portal. ePro allows users to create new procurements, search for existing procurement and purchasing documents, update their user profile, view alerts, and access other system features all from the Homepage.*
- Need Identification - P77 – based on the item being requested, privileges, and configured business rules to route that request through the appropriate steps to facilitate efficient procurement completion.
 - ePro demand aggregation functionality allows for ease of combining all agencies ' needs for the same items and/or services into one solicitation without the redundant work of recreating the line items.
 - P78 *Once a Need is Identified and submitted, the ePro approval and workflow engine are triggered. This provides the ability to easily configure and manage automated approval workflows meeting State business rules and can be based on a range of criteria, including; document type (requisition, solicitation, contract, etc.), dollar amount, organizational unit or department, commodity code (e.g., IT goods/services, vehicles, etc.) and general ledger account code.*
 - EPROC-NEED-5 *ePro supports all types of needs. A user can request items (services and commodities) off contract through catalogs and punch outs. Requisitions can also be placed as RPA, open market, or demand. A solicitation can be created for unique purchases such as a quick quotes, emergency purchase, competition impractical, etc.*
- Request through Pay – claimed request-to-pay cycle time reductions over 40% for state clients.
 - Roles and privileges limit access to areas staff don't need and guide them through procurement steps.
 - Search marketplace catalogs from PC or mobile devices.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- P81 Guided buying process. Hosted catalogs; Punchout level 2; option to add noncontract vendors.
- P82 POs central document for tracking; receipts of good and services can be entered based on quantity or dollar.
- P84 Pcards can be used to pay transactions processed through the system for suppliers that accept it.
- P85 Credit memos can be used to adjust for canceled or returned goods or services.
- P85 Subcontractor payments can be tracked; subs will login to verify their payments to the state.
- P85 Epro can integrate with sending XML files via HTTP or web services delivery to financial systems
- P85 Epro can managed pre-approved multi-supplier agreements – obtaining future price quotes. *POs and contracts generated through Solicitation-Enabled Contracts are considered “releases” against that Solicitation-Enabled Contract (the PO # is the Solicitation-Enabled Contract concatenated with the release number). Spend recorded through those POs and contracts is aggregated and displayed on the Solicitation-Enabled Contract as “Dollars Expended to Date.”*
- PROC-PRD-11 – recurring orders – not part of functionality
- EPROC-PRD-59 – non workdays not specifically highlighted. Weekday/weekend shown.
- EPROC-WRK-10 – override function not available for approvers – only creators have the capability to override or bypass.
- EPROC-WRK-13 – line level approvals not part of functionality.
- EPROC-PC8-21 – Pcard reconciliation not part of functionality.
- **EPROC-RC-3 and -4 – Entering receipts without PO not part of functionality. Periscope asks for use case to determine if it should be. Cites not best practice.**
- EPROC-INV-8 – No email functionality for invoices with comments and attachments.
- Catalog Capability – Marketplace. Claim is contract spend increases of 51% adopting marketplace.
 - All catalogs in one location; no limit to number of catalogs; Periscope will promote catalogs.
 - *P 87Working with our client-partners has afforded us the ability to create a solution that solves many of the issues that*
 - *continue to plague public sector procurement.*
 - *Marketplace is built to provide agencies, users, and suppliers with a streamlined user interface, but with government required*
 - *control. The following capabilities are included in Marketplace:*
 1. *Unlimited catalogs from the State*
 2. *Level 1 and Level 2 punchouts*
 3. *External cooperative contracts*
 4. *Other publicly sourced contracts provided by suppliers*
 5. *Automatically displayed price comparison shopping between all types of contracts, including open-market*
 6. *Supplier enabled/updated catalogs and pricing with automatic administration notification if there is a price*
 - *change*
 - *7. Multi-catalog capability for the same supplier*
 - *8. Open market / off-contract access to catalogs*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- 9. Workflow and approvals that can be configured based on specific business unit requirements
 - 10. Order generation and electronic delivery to vendors
 - 11. Payment methods including P-Card and purchase orders
 - 12. Administering and collecting administrative fees
- P88 Catalog suppliers have numerous methods to connect to the State. They are able to provide Level 1 and Level 2 Punch Out, XML Sync, CSV, or utilize internal catalog management. Our supplier enablement team will be responsible for working with the suppliers to load/enable their catalogs, and we will work with the State's catalog administrator to decide which catalogs to turn on and when.
- Catalogs can be loaded by suppliers, agency personnel or, Periscope. Periscope typically takes on the supplier enablement responsibilities, assisting suppliers.
- punchouts are based on industry-standard cXML.
- Sourcing/Bid Management
 - P89 process. All related documents created during the purchasing cycle are linked, stored in the solution, and searchable, allowing for easy retrieval of information and availability for audit purposes. Documents are routed through the solution based on predetermined approval authority, and the solution automatically tracks and updates the status of individual procurement documents, attachments/templates/forms and processes (with dates and times for changes in status provided) based upon the automatic or manual completion of related documents and events. This linkage provides an inherent method of audit tracking all activity throughout the process and enables a guided procurement process, from initial submission of qualifying docs and price points, through award and contracting activities.
 - P90 modules also enable RFx documents to be drafted using stored templates and clauses. Once drafted, identified users can collaborate on the RFx document (storing all versions for comparison), and finalize it prior to including it on the solicitation to be posted publicly. Posted bids are published on the web to enable public transparency and electronic response by registered suppliers. After the response time has ended, bid responses can be viewed, evaluated, and awarded via the BID tab, which can be sorted by different criteria.
 - P91 integrated into the Periscope Supplier Network (PSN) database, allowing the State to extend notifications beyond those suppliers who are directly registered in the State's system.
 - P93 – unique solicitation types. Solicitation-enabled contracts; Demand Req; Reverse auction exceeding 1k items; open and rolling enrollment.
 - P82 – Open, informal, closed bid options supported. Q&A option through portal.
 - Supplier responses can be encrypted and locked until opening date; vendors can withdraw submitted bids and resubmit prior to opening time.
 - Epro compiles bid tabulation to review. BAFO can be requested through portal. Bid tabulation not public until award completed/PO or contract issued.
 - Intent to award status; multi awards supported.
 - P87 Evaluators can log in to submit individual responses and attachments. *Evaluation committee members, predetermined by the State, may log into a secure scoring/evaluation tool that tabulates individual responses into configurable reports.*
 - Protest submission and management.
 - EPROC-SRC-3 – Two step ITB not supported.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-SRC-83 – No integrated video conference. Third party link can be inserted. Attachment can be uploaded.
 - EPROC-SRC-117 – cost can be hidden from evaluators but not bidders' names.
- Contract Management – P101 *web-based contract management solution that allows users to create, approve, negotiate, execute, manage, retrieve, and report on every contract type and version across the organization.*
 - *Built-in automated workflow and approval paths enable projects to flow seamlessly through drafting, negotiating, maintaining, and closeout. The solution also has electronic signature capability between the State and a supplier.*
 - *solution provides the ability to create contracts from custom templates, providing common language needed to meet legal directives, or any other regulations, standards, and guidelines required. Based on user input, the appropriate clauses are joined together in a contract document wherever they are needed. Clause library available.*
 - Standard and ad hoc reporting. Automated reports to user or groups.
 - Contracts can be archived.
 - Visibility into contract spend. Change order functionality.
 - Supplier fees can be managed from item pricing or ad-onn fee.
 - EPROC-CNT-34 – backdated contracts can be entered. Marked BP.
- Vendor Performance
 - P104 State can define performance issues to be reviewed and responded by supplier; Along with scheduled contract review, supplier performance rating created for supplier profile.
 - EPROC-VPE-20 – Orders for contract items cannot be sent without the contract number in ePro, therefore notifications as stipulated would not be sent.
- Purchasing/Data Analytics – Epro Business Intelligence Solution.
 - Pre-built analytical reports. KPIs.
 - Multiple spend analysis, cycle time, workload management, contract usage and supplier reports bundled. Ad hoc reports available.
 - Dashboards streamline reporting and review.
 - EPROC-PDA-37 – price comparison for contract items and non-contract items in the Marketplace not available.

Technical Requirements

- Availability – sample SLA – 99.99% time outside schedule maintenance. 5% credit of monthly cost if not met.
- Accessibility Requirements – good faith. P113 *With new feature releases, our software is tested for web accessibility standards with the Rehabilitation Act Federal ICT Accessibility / Section 508, W3C Accessibility Initiative, and WCAG 2.1 Level AA (which exceeds Section 508's standards).*
- Audit Trail and History – Robust tracking claimed. Logs: User ID; date//time; changed information; outcome; if NIST800-53; other state-required info. Admin can set permissions to grant deletion or modifications; can export logs; can generate reports.
 - **EPROC-TECH-4 – Marked A** but comments say not part of solution. Override approvals not permitted.
- Browsers Supported – Chrome, Firefox, Edge, Safari – Mac or PC.
- User Accounts and Administration – Combination of Superuser and Standard User roles.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Superuser roles breakdown responsibilities for internal and external, enterprise and agency.
 - Standard users limit access to appropriate modules.
 - Marketplace User Roles. – Agency users for shoppers, admins, approvals; Supplier Users for seller (maintain catalogs) and seller admins (maintain profiles and catalogs).
 - P116 Unlimited user access provided – not seat-based license costs.
 - EPROC-TECH-12 – Dual Buyer and supplier account logins not supported.
 - EPROC-TECH-18 – Email confirmations of account changes not supported. (listed as BP, but this is actually non-compliant functional)
- User Authentication – P117 SSO – SAML (XML-base) – 2.0.
 - ADFS, oneLogin, Okta, Auth0, Salesforce – previously integrated.
 - User security and controls – group and user-defined solution privileges.
 - P17 – passport controls listed.
- Federated Identity Management – See previous.
- Data Conversion – P118 *approach focuses on migrating ONLY that data necessary to support core business functions in the new system at go-live. Historical data should be accessed outside of the new eProcurement system (e.g., in a data warehouse, etc.).*
 - *Best practices recommend that clients work with vendors to create new accounts once ePro goes live, as many times additional data elements are requested beyond what is captured in legacy systems. However, we can provide optional pricing to the State to migrate existing vendors using standard ePro data migration templates and utilities.*
 - *Periscope resources will work with the State to develop a Data Migration Plan, addressing the scope, timing, and validation steps to be used in migrating in-scope data elements.*
 - *P119 The State is responsible for extracting data into standard ePro templates, data cleansing, and validation/signoff on migrated data before loading in production.*
- Interface and Integration - P119 *standard XLM Interface Module to facilitate integrations, as well as the capability for customized integrations*
 - *integration can either create a new supplier record or make updates to an existing record. To update an existing supplier record, updates are passed from ePro to the financial system whenever updates are made to a supplier record within ePro.*
 - *When configuring an agency's integration, the customer and Periscope will determine together at which point in the purchasing process that the agency would like ePro to trigger transactions to their financial system. (automated process.)*
 - *Additional detailed description of transcription integration process and examples of validation messages.*
- Office Automation Integration – Office files are incorporated and can be loaded for procurement activities. – Exports are CSV.
- Mobile Device Support – As noted in general functions, responsive web-based design makes Periscope systems work on iOS and Android tablet and phones.
- Mobile Applications – See previous.
- Data Ownership and Access – Detailed explanation of reporting capabilities and spend reports. Not responsive to Data ownership.
- Date Retention, Archive and Purge Considerations – *P127 Periscope's ePro solution, by default, maintains information in perpetuity. However, Periscope can configure it to meet State-specific retention policies.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- EPROC-TECH-63 ePro provides the ability to archive data from a production environment while keeping the data available for reporting on historical data.
- Disaster Recovery Plan – P128 Initial assessment of damage/disruption may lead to Continuity or Disaster Recovery plans being implemented. (Periscope plans are separate from AWS DRP)
 - Annual failover testing performed.
 - In the event of a disaster declaration, SLAs are suspended until the primary site is restored. Needs clarification – who declares a disaster declaration – a state declaration? If the system is offline, why would SLAs be suspended? For example, if this means a state declaration, the entire state of Texas is under a COVID disaster declaration for nearly 2 years, but that is not impactful for a data center, compared to the Texas storm that caused significant power outages in the state? Shouldn't the data centers have backup plans to ensure continuity?
 - Full disaster recovery is defined as a full loss of critical systems within the primary data center for an extended period of time. The RTO for recovery is 24 hours. Before performing a full failover, executive management and IT meet to determine the extent of the outage and if a full failover must occur. Only authorized Periscope IT and Executive management can approve the execution of a full failover recovery.
 - Periscope Platform is architected as a 3-tier application with a clear separation between the web, application, and database layers.
 - Periscope's Business Continuity Plans have been developed to comply with the compliance requirements, such as those of the Federal Information Security Modernization Act (FISMA), National Institute of Standards and Technology (NIST) 800-53 requirements.
- Solution Environments – P129 Periscope's standard environment deployments provide users acceptance (UAT), training, and production environments.
 - Our non-production environments can be integrated into the State's lower testing environments to facilitate end-to-end testing.
- Solution Technical Architecture – P130 adheres to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits.
 - Periscope solutions are hosted with Amazon Web Services (AWS) with each ePro client segregated in their own virtual private clouds to ensure absolute isolation between clients. All system interoperability between Periscope and our clients is executed via HTTPS and TLS 1.2.
 - supports both SOAP and REST web service formats and easily integrates with many standard systems.
 - does not use open APIs, but we build each integration/interface to the specifications of the client.
- Solution Network Architecture – P139 All databases reside solely in US-based cloud storage and are strictly segregated from any other databases.
 - Periscope applies the principles of least trust in all of our environments.
- System Development Methodology – P139 Periscope develops and manages a Software Development Life Cycle (SDLC) for the organization.
 - SDLC activities and tasks address the following ten activity areas:
 - 1. Project Initiation/Definition – Discovery, Estimation, SOW, High-level Requirements
 - 2. Risk Assessment

 - 7. Documentation and Training
 - 8. Systems Testing and Acceptance
 - 9. Installation
 - 10. Maintenance / Application Sunset
- Service Level Agreement – File3 – Part 2 sample SLA provided **MARKED CONFIDENTIAL**
 - Details issue severity levels. Highest level – Severity 1 addressed 24/365.
 - Scheduled maintenance – 2nd Friday per month during non business hours or mutually agreed time.
 - Disaster Recovery – RPO of no more than 1 hour of lost data. RTO = <24hours.
 - Contractor support desk – 24/7 electronic online support and ticketing. Call center to report issues during business hours; technical and functional team available during business hours.
 - Severity level 1.- response in non-business hours. Response time stated in attachment A - 15 minutes.

Security Requirements

- Cloud Security Alliance (CSA) Compliance
 - P2-16 We strictly adhere to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits
 - CAIQ not provided without NDA.
- Security and Privacy Controls - Periscope performs an annual FISMA compliance audit administered by an independent third party to ensure that we maintain the appropriate security posture for a medium categorized offering. The audit confirmed that the hosting environment satisfied the required technical controls as specified within NIST 800-53 revision 4 for a moderately categorized SaaS solution.
- Security Certifications
 - HIPAA, FERPA, CJIS Security Policy, PCI Data Security Standards (DSS), IRS Publication 1075, FISMA, NIST 800-53, NIST SP 800-171, and FIPS 200 if they apply.
 - Periscope is annually audited by a third-party firm and certified FISMA, SOC II-Type II, and PCI-DSS compliant.
- Annual Security Plan – Repeated NIST 800-53 statement **Plan not provided without NDA.**
- Secure Application and Network Environment – Internal **Plan not provided without NDA.**
 - P2-18
 - Externally: Periscope uses the AWS application firewalls with elastic IPs. Login is established with SSL encryption.
 - Internally: Host to host communication is limited to specific use only.
 - Periscope's Business Continuity Plans have been developed to comply with the compliance requirements, such as those of the Federal Information Security Modernization Act (FISMA), National Institute of Standards and Technology (NIST) 800-53 requirements. Each BCP is maintained on an ongoing basis, with critical processes tested at regular periodic intervals. The BCPs will not only provide for recovery from an

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

interruption of services but also put measures in place to prevent or reduce the likelihood of an interruption.

- Secure Application and Network Access
 - ePro is hosted with AWS. Access to the system is restricted via VPN authentication, AWS Identity management, and ssh keys. Application access is secured with SSL (port 443) certificates supplied by the customer or issued through AWS route 53.
 - No customer Hypervisor settings are in place. Virtualization is controlled with Terraform and its version controlled.
 - EPROC-SEC-1 – Because of browser-based password storage, new user functionality not tracked as new device. N.
 - EPROC-SEC-4 – Persistent cookies not used. N.
- Data Security – See previous.
 - P2-24 Data classifications provided.
- Personally Identifiable Information Protection – P24 No PII in Periscope data. Tax-id and associated data points encrypted.
- Security/Privacy Issue Occurrence -P2-24 *The contractor will notify the Customer any time the Solution is not available as soon as practical, but not more than one hour, after becoming aware of such unavailability.*
 - *4-stage severity level. Level 1 – 15 minute response – 24hr restoration.*
- PII Data Actual/Attempted Access or Disclosure – See previous PII
- Security Breach Reporting – See previous Security occurrence response.

Implementation Services Requirements

- Project Management – P2-27 Shared Ownership/Collaborative decision-making/Sustained focus on project goals/right resources.
 - Dedicated project manager. Details of PM provided with implementation sample timeline.
 - 4 phases: 1. Project setup and process analysis; 2. Exploration and design; 3. system implementation and configuration; 4. Go live and go live support.
 - In addition to the implementation activities and deliverables, Periscope will provide ongoing project management services throughout the life of the project
 - • Project Schedule Baseline; including key milestones and project deliverables
 - • Scope & Change Control Plan
 - • Risk Management Plan & Risk Register
 - • Status Report & Monthly Reporting Templates
 - • Payment/Billing Schedule
 - Staffing: Project Director; PM; business lead; technical lead; organizational change manager; hosting and infrastructure team (supports AWS); Supplier enablement and marketplace onboarding; customer success and (ongoing) Support team.
 - Table of time commitment for each of major staff identified.
 - P2-32 *Periscope will provide on-site support including representatives from the project team (including project manager and functional analyst representation). These resources will assist in monitoring user adoption, resolving issues, and helping the Support Team defined below to resolve issues. Face-to-face contact is imperative for a successful project, however, this approach is not necessary for all stages of implementation. In fact, our experience is that projects are most successful when the project team is onsite just the right amount of time. Post go-live onsite 30 days.*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Project Implementation Methodology
 - P2-48 *plan is organized in a sequential manner, we have worked with clients to create and implement in a more agile manner than this plan's waterfall layout. For example, we often prioritize and accelerate the implementation of certain ePro modules that do not require interfaces with other systems (e.g., supplier registration, Marketplace, solicitations/ awards, etc.) or in cases where integrations will be developed and implemented in subsequent project phases. We have found this approach to be effective in creating momentum and early successes, smoothing workloads, and minimizing risk concentrations.*
 - P2-50 *business process focus is used throughout our implementation to ensure that we are focused on the underlying changes affecting end-users and on the key targets for process and management effectiveness. Our approach is to focus on improving business functions, not just implementing new software.*
 - P2-51 *Core Team Orientation, Periscope leads the State in an in-depth orientation to familiarize the core project team with Periscope ePro.*
 - *training is designed to provide core team members with hands-on experience in system navigation, baseline functions, configuration options, and common uses of the system. The objectives of this orientation are to provide a level of comfort with the system that will allow core team members to identify process improvements that can be realized as part of system implementation, to support configuration and usage decisions, and to identify gaps to be addressed. (orientation include a core team consisting of the project manager(s), future system administrators, and key stakeholders and users who will be affected directly.)*
 - *We will work with the State personnel to gather, format, load, and validate the following data:*
 - • Contract header data
 - • Contract items (descriptions, pricing, unit of measure, etc.)
 - • Organizational data including agencies, departments, users
 - • Departmental bill to/ship to addresses
 - *Periscope will also provide guidance and templates to the State for collecting approval and user data that will support the State's creation of approval paths and user rights.*
 - *Periscope supports the planning phase of user testing by providing the State with guidance and recommendations on the user testing approach, user testing scenarios, and user testing tracking templates. We highly encourage our customers to adopt a user testing approach based on functional scenarios rather than scripts.*
 - *During the user testing process, we work closely with the State to understand, investigate, and respond to testing issues.*
 - ***Needs clarification P2-56 Periscope will provide on-site support for ninety (90) days following system go-live. (P2-32 said on-site staff for 30 days.)***
 - *Team members participating in on-site support will work with the State's support resources to manage the diagnosis and response to user and technical issues. Where necessary, issues will be escalated to Periscope's dedicated support team for analysis and resolution.*
 - *Periscope testing:*
 - *The following test processes are executed on every release:*
 - • Unit Testing

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s) 1:

DATE: 1/18/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- • *Functional Testing*
 - • *Integration Testing*
 - • *Regression Testing*
 - • *Interface Testing*
 - • *Microarchitecture Testing*
 - • *Multitenancy / Multiplatform / Multidevice / Multi-browser testing*
 - • *Private / Public Cloud testing with third-party vendors*
 - • *Compliance / 508 testing*
 - • *Security / Penetration testing*
 - • *Performance / Availability and Scale testing*
- *Releases are issued quarterly, following our 20-10-10 program:*
 - *User Testing – the 20/10/10 Program*
 - • *(20) After deployment to UAT, customers are provided 20 business days to test their business processes across the newly released product features and to gain familiarity before going live.*
 - • *(10) Periscope then resolves issues specific to the release, over the course of 10 business days, deploying a patch to UAT by the end of this period.*
 - • *(10) After the patch is deployed, customers have 10 business days to confirm that the issues identified during the first 20 days in the patch have been resolved.*
 - • *Following the completion of testing, the release is promoted to Production and Training regions.*
- *Catalog Support Services – P2-56 The primary and initial focus will be on suppliers that have a statewide contract and then shift to other suppliers doing business with the state wishing to do so.*
 - *Suppliers will be categorized into distinct groups in order to provide a structured and tailored approach to enablement, based on how those suppliers currently do business with the State. Each supplier category can potentially have a different business relationship with the State, which affects the timing for outreach, how we message them, and the degree of data needed for them.*
 - *P2-59 Periscope will manage a webpage to provide information for potential, new, and existing suppliers. Throughout the initial campaign, the focus of the website will be encouraging supplier registration and participation.*
 - *Periscope will develop materials to provide suppliers with knowledge on how to complete the activities required of them in ePro. Rather than provide a formal, classroom training program, suppliers will be provided with online materials published on the Supplier website. Videos – specific supplier activities; quick ref guides.*
 - *P2-60 Ongoing support: Periscope's support team will provide ongoing support of the State's suppliers. Our supplier enablement team and our support teams combine to serve our supplier users throughout the life of the contract with the State. While suppliers are trained and able to inactivate their catalog offerings and to set parameters on which agencies they allow to use their catalogs, our supplier enablement team can also assist them in turning off published catalogs.*
- *Data Conversion Services – Pretty much the same as Data Conversion description in Functional Requirements.*
 - *Periscope will work with the State to develop a Data Migration Plan; addressing the scope, timing, and validation steps to be used in migrating in-scope data elements. We will also document data requirements for ePro conversion utilities, and develop extract*

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- plans from existing legacy systems. We will develop a plan for gathering such data, loading it into test environments, validating, and preparing for production data loads.*
- Interface/Integration Development Services – P2-62 *During the analysis phase, we also collect information on the requirements associated with any planned interfaces/integrations. Periscope technical analysts will work with the State to review the data flows between Periscope ePro and the financial system.*
 - *The State will be responsible for providing technical resources with expertise on the financial and other State systems.*
- Organizational Change Management (OCM Services)
 - *OCM approach is focused on the organizational change management elements of communication, stakeholder engagement, and resistance management. The objective is to provide key stakeholders with the information and tools needed to successfully transition to the new ways of working.*
 - *Engage early and often; use various channels to communicate messages repeatedly.*
 - *Actively manage resistance. Monitor and measure effectiveness.*
 - *ADKAR is an important element of our structured approach to managing change and we use it to:*
 - *• Develop a change management plan for your employees*
 - *• Diagnose employee resistance to change*
 - *• Develop tactics to address employee resistance to change*
 - *• Help employees' transition through the change process*
 - *We proactively track and manage feedback along the way and when resistance is encountered, we react rapidly and appropriately with resistance management techniques.*
 - *Tailoring the communication activities to the audience needs.*
 - *Change Curve Exit – Awareness; Desire; Knowledge; Ability; Reinforcement.*
 - *The purpose of the Sponsorship Roadmap is to create an actionable plan for preparing and leveraging all the sponsors to promote, gain support for, and drive adoption of the change. As early as possible, Periscope's Change Management Lead will also make recommendations to address any sponsorship gaps that must be addressed for successful adoption of the change.*
 - *Stakeholder engagement plan and Resistance management plan.*
- Training Services *Training plan: training roles; learning approach & tools; learning development methodology; state resources.*
 - *P2-71 Microlearning videos; e-learning & simulations; virtual instructor-led training; classroom training.*
 - *Blended user training approach that allocates training resources to best meet needs and contain costs. That means leveraging technology to deliver training content to many users (through a Learning Management system or other web-based programs).*
- Help Desk Services
 - *Tier 1 Level Support – Provided by Periscope or the State depending on funding model. If the State assumes Tier 1 support responsibilities, Periscope will work with the State to set up a sustainable Help Desk for Tier 1 Level Support by defining support staffing requirements, including the number of resources, identification of training requirements, and definition of roles and responsibilities.*

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *Tier 2 Level Support – Provided by Periscope. Tier 2 Support Analysts have a deep understanding of the ePro solution and are experienced in providing detailed guidance to user stakeholders*
- *Tier 3 Level Support: Periscope will provide Tier 3 Support services in accordance with the State's description. The Tier 3 Support analysts have extensive experience with Periscope's product as well as the implementation and operation in multiple client environments.*

On-Site System Stabilization Support The post-go-live support stabilization team will enable the system setup and configuration tuning as deemed appropriate by the State Stakeholder team.

Managed Services Requirements

- Solution Support
 - Periscope will maintain the performance and availability of the Solution throughout the life of agreement.
 - Anticipated changes are outlined for each release in a series of release notes which are provided to Customers. The first set of release notes are provided to participating entities twenty (20) days prior to a scheduled release being deployed in a Customer's UAT environment of our Release Management Program
- Organizational Change Management (OCM Services) – See OCM description in Implementation.
- Training Services – Separate or does it need to be incorporated in existing state LMS?
 - Sample Training plan provided.
- Catalog support services. – Same as implementation.
- Help Desk Services – 4 phase severity plan.
- Transition Out Assistance Services – See value-added from introduction.

Video Demonstration

- Demoed elements and implementations services.
- Requisition, solicitation, catalogs, POs and Invoicing. Reporting through procurement process.
- CLM contract life cycle; S2G supplier to govt.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Sysoft

CATEGORY #(s): 1

DATE: 8/26/21

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 1)

- Smartprocure system “used by public agencies since 2002”.
- Sysoft provides SaaS “business intelligence and data analytics software services” for Contract management and Supply Chain.
- Has “Certified Information System Auditors (CISA)” engineers.
- Staff have 12-20 years eProcurement expertise/experience. (pg. 2/3)
- “Blockchain methodology” built into the Solution. (pg. 2)

2. Previous Projects

- No State or large implementation projects cited.
- Projects do not provide details beyond listing the functionality that was deployed, so does not provide sufficient insight to assess.
- **City of Norfolk:** Spend Analytics & Contract Management. *Not Full Suite eProcurement implementation.*
- **Hillsborough Community College:** eprocurement, Vendor portal, Proposal Evaluation & Bid Management, Vendor performance Monitoring, and Contract Management. *Full suite.*
- **Saint Paul Public Schools:** eProcurement, Vendor portal, Proposal Evaluation & Bid Management, Vendor performance Monitoring, and Contract Management. *Full suite.*
- **Florida State College at Jacksonville:** eProcurement, Vendor portal, Proposal Evaluation & Bid Management. *Not full suite.*
- **Luzerne County Human Services Division:** Contract Management. *Not full suite.*

3. Subcontractors

- No subcontractors.

4. Organizational Chart

- Org chart does provide detail for assessment and does not appear to be specific to a project implementation.
- Staff (pg. 2) identified
 - i. Sam Adhikair, “CEO”: CISA “with 30+ years of experience”. “Performed extensive research on eProcurement at Stanford University and built the blockchain based architecture” of the solution.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2012.
 - SaaS provider of building procurement products.
2. Previous Projects
 - 4 projects given, the projects meet Category 2.
 - Delaware Health and Social Service. Onboarded Bonfire's sourcing / bid management & Contract management software.
 - Texas Dept. of Transportation. Used Bonfire's Sourcing / bid management to digitize their solicitation and evaluation process.
 - Port Authority of NY and NJ. Used Bonfire's Sourcing / bid management to ensure compliance with public procurement codes.
 - New Mexico DHS. Used Bonfire's Bid management and Sourcing Software to streamline their RFP process.
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart and job descriptions are provided.
5. Litigation
 - Vendor states there are no litigation.
6. Financial Viability
 - DnB provided. Low-moderate risk.

Individual Comments:

Licensing, mainte. Imple, depoy and ongoing operations and support

Overall/General

- Bonfire Platform
- SaaS
- Bonfire does not offer Purchase Orders or Request through Pay workstream solutions.
- Page 24 – “Bonfire’s Sourcing/Bid Management module is the market leading Sourcing/Bid Management platform of choice for 500+ public sector organizations. Bonfire Sourcing/Bid Management contains modules designed to move the State’s entire process online, from pre-solicitation collaboration to post-award reporting. Bonfire makes it easy to centralize and execute all tenders, from simple request for quotes to complex RFPs.”

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 4 - 11

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single Point of Entry: Yes, “portal acts as a central access point at a configurable URL”
- Smart Routing: Yes.
- Compliance: Yes - they feel this is one of their core principles.
- Portal: Yes. “Bonfire portal is a centralized location for all Sourcing and Bid Management”.
- Open Marketplace Environment: No, but in their long term roadmap.
- Integration: Yes, “Bonfire has an Open, RESTful API and can create custom integrations (both batch and realtime)”
- Workflow: Yes, “provides a fully customizable approval process for new inbound requests or solicitations” **NOTE:** “in the current iteration, each approval is not rule/role-based, as each approval is defined by the end user on a case-by-case basis, or templated using our template functionality”
- Document Management: Yes, “allows users to store and manage documents throughout the platform.”

- Reporting, Dashboards & Data Visualization:
- Yes, Bonfire states that Reporting is a key element of their system. They also tout their pulling of spend analysis.
- Configurable: Yes.
- Transparency: Yes.

2. User Experience – p. page 11-13

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

- Personalization: Yes, *“allows users to personalize their initial screen based on their needs or use of the solution.”*
- Intuitive Navigation: Yes.
- Wizard-driven: Yes. System tasks are designed to provide a stepwise creation flow.
- Portal: Yes.
- Mobile access and use: Supports mobile views, but does not have a mobile application.
- Workload Mgmt: Yes. *“Specified users are able to re-assign work to other users”*
- Role-Based: Yes. *“provides an extensive amount of user roles for a variety of different functions”*

3. Bidder Best Practices and Roadmap – p. page 14 - 18

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

- Platform updates every 2 weeks based on Software development Life Cycle
- Latest technologies: Bonfire states they ensure the latest technologies are utilized with a disclaimer of **“where applicable”**
- *“Implementation Specialist and Client Success Manager will continuously assess and recommend opportunities”*
- Bonfire’s company vision is *“Reinvent procurement to better our world.”*
- Roadmap – Yes, have one.

4. Innovations and Value-Added Features/Services – p. page 19

In addition to the stated requirementGEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- Nothing offered here. N/A

5. Customizations/Extensions – p. page 19 - 20

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such

customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- *"As Bonfire is a platform based SaaS tool, customizations/extensions are not built for individual clients as solutions must work for all clients".*

6. Alternative Funding Models – p. page 20

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- *Nothing offered here. N/A*

7. Contract Transition and Flexibility – p. page 21

- *"Bonfire offers custom flexible contracting on an agency by agency basis." This can be done during a client's renewal or during a new contract execution"*

B. Functional Requirements: pages 21 – 24

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The electronic procurement solution **must** be cloud-based with a Software as a Service (SaaS) delivery model

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 21 - 24

 - a. x -“INT-Integration/interface”, 13 – N “Not Available”, 1 – TP “Third Party”, 3 – BP “Business Process” , 2 – ID “In Development”
 - b. 2 – Extreme, 2 - Medium
 - Partially meets req’ts. Solution.
 - SRC 2: *“Bonfire was built and designed to facilitate all type of solicitations within the solution. Bonfire works with 500+ public sector procurement teams today of all sizes and complexities, from small single buyer organizations to large State agencies with hundreds of buyers.”*
 - **SRC 34, 35, 37, and 38 – Not Available.** Version control to track changes, check in / out capabilities, updates to documents t&c’s, and capability to updated templates, solicitations, etc.
 - **SRC 45 - 50 – Not Available.** Doesn’t provide ability to create approval / workflow rules and doesn’t allow for combination of multiple purchase requests at a time, doesn’t provide a rules engine to build approvals off of.
 - **SRC 60 – Not Available.** *“ Bonfire does not automatically generate a registered supplier list based on prior or active contracts. However, Bonfire does provide the ability for the user to create supplier lists based on that information, just not automatically. Bonfire does provide automatic supplier lists or invitations based on commodity code matching. “*
 - **SRC 64 – Not Available.** *“ Bonfire does not automatically generate a registered supplier list based on existing contracts. However, Bonfire does provide the ability for the user to create supplier lists based on that information, just not automatically.”*
 - **SRC 102 – Not Available. – marked as ID.** *“ Bonfire does not currently utilize electronic signatures for suppliers to sign their responses. Electronic signatures are a planned improvement and expected to be available in early 2022.”*
 - **SRC 105 – Not Available. –** *“ Bonfire does not alert of send system messages to a supplier if they attempt to respond to a solicitation and they are not certified. “*
 - Bonfire’s Sourcing / Bid Management capabilities:
 - Bonfire Response
 - Bonfire Intake
 - Online Supplier Self-Registration
 - Internal Supplier Management Dashboard
 - Solicitation Templates and Drafts
 - Solicitation Issuance
 - Supplier Communication and Addenda
 - Receiving and unsealing electronic bid and proposal responses
 - Bonfire approvals
 - Evaluating Bid/ RFP responses
 - BidTables (line-item bids)
 - Questionnaires

- Scorecard Evaluation
 - Multi-category decisions
- Evaluator Permissions and structure
- Award Processing
- Reporting Capabilities
- Bonfire Benchmarking
- Contract Management
- Post Solicitation Contract Management
- Contract Reporting
- Ability of the system to auto-generate contracts
- Contract Template and Types
- Vendor Performance Management

9. Contract Management. Tab 3, CNT-1 through CNT-88

- N/A – matrix not completed.

10. Vendor Performance Tab 3, VPE-1 through VPE-25

- N/A – matrix not completed.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37

- N/A – matrix not completed.

C. Technical Requirements: pages 42 - 68

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Meets Requirements.
- Page 42 – “The Bonfire system is available for access 24 hours a day, 7 days a week, 365 days a year. Software updates and system maintenance are applied outside of Core Business Hours”

- 2. Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*

- Meets Requirements.
- Page 44 – “ The software system and services provided support users with disabilities and is in compliance with Section 508, Federal Rehabilitation Act, and Accessibility for Ontarians with Disabilities Act (AODA) “

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5

- a. 1- “BP-BusinessProcess”
- Yes, meets most requirements.
- Will need a BP for TECH 5.

4. Browsers Supported

- The general web browsers are supported: Internet Explorer 11 or Microsoft Edge (Windows), Google Chrome (Windows & Mac), Mozilla Firefox (Windows & Mac), or Safari (Windows & Mac).”

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20

- a. 1- “BP-BusinessProcess”, 1 – ID “In Development”
- b. 2 – Medium
- Seems to meet requirements

6. User Authentication RTM: Tab 4, TECH-21 through TECH-25

- a. 1- “BP-BusinessProcess”, 1 – N “Not Available”,

- **TECH 25 – Not Available** - *“ The system is a multi-tenant SaaS application. Users are prompted based on type (Buyer or Vendor) to agree to terms. To register and act as Vendor the user will be prompted to accept the Bonfire Vendor and Submission Portal Terms of Service. Buyers will not be prompted as they covered by the Terms and Conditions outlined in the contract between Bonfire and the Buying Agency. “*
 - Rest of requirements met
- 7. Federated Identity Management – Pages 55**
- The system supports and integrates with customer identity provider (IdP) via SAML 2.0 SSO. When integrated with customer IdP, all usernames, passwords, 2FA, policy and additional requirements are defined and centrally managed by the customer.
- 8. Data Conversion** RTM: Tab 4, TECH-26 through TECH-34
- a. 4 -“INT-Integration/interface”, 1- TP “ Third Party
 - b. 6 – Medium
 - Partially meets these requirements – refer to matrix
 - Solicitations need to be imported via Internal Submissions to Projects
 - Page 56 - Contract management import – *“ The system currently provides import services for legacy imports into the Contract Management module. This import is completed during the implementation phase of the Contract Management module and will be facilitated by an Implementation Manager at Bonfire. Legacy data will need to be formatted into a Bonfire provided .xlsx import template for data import. Optionally, if you have documents from a legacy system they can be imported via FTP and a .xlsx Mapping Template “*
- 9. Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60
- a. 3 -“INT-Integration/interface”, 1- “BP-BusinessProcess” , 4 – ID “In Development” , 8 – N “Not Available”
 - b. 5 – Medium, 2 - High
 - **TECH 42 – 46, 49, 55 and 59: Do not meet requirements** – Not available – State *“ Not in scope for the solution”*
 - Partially meets requirements.
- 10. Office Automation Integration** RTM: Tab 4, TECH-61
- The system supports the following file types: csv, pdf, xls, xlsx, ppt, pptx, bmp, gif, jpeg, jpg, jpe, png, tiff, tif, txt, text, rtf, doc, docx, dot, dotx, word, dwg, dwf, dxf, mp3, wav, avi, mov, mp4, mpeg, wmv, zip.
- 11. Mobile Device Support** RTM: Tab 4, TECH-62
- The system is designed to be readable and usable on desktop, laptop, and tablet. The system is supported on Internet Explorer 11 or Microsoft Edge (Windows) , Google Chrome (Windows & Mac), Mozilla Firefox (Windows & Mac), Safari (Windows & Mac)Y
- 12. Mobile Applications** - p. 59
- No, system does not have a mobile application.
- 13. Data Ownership and Access** - p. 59
- Page 59 – *“ All data sent to or stored in the Bonfire system remains the ownership of the Participating Entity. Full details can be found in section 7.2 of our Terms and Conditions in the attached Exhibit "Bonfire Policy Bundle - Fall 2020.zip “*
- 14. Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 62
- *“Records can be archived within the system based on user interaction. Purging of records from the application database is available upon Contract Termination in accordance with our Data Destruction Policies.”*
- 15. Disaster Recovery Plan** - p. 60 - 61
- *Bonfire maintains a formal Disaster Recovery Plan that includes policies and procedures for technological disaster recovery.*
- 16. Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 61
- Minimally meets requirements on environments.
 - the platform is delivered via Software as a Service model and there is only one version available (the current version)
 - SaaS solution .

- *TECH 65: "A sandbox environment can be provided for UAT of system integrations before going live in a production environment."*
- *TECh 68: "The plaform is a a SaaS solution, built on Amazon Webservices with auto-scaling and configuration as code. The system is actively monitored and desingt to scale up an down to meet load requirements."*

17. Solution Technical Architecture - p. 62 - 63

- *"modules are built and hosted on Amazon Web Services (AWS)."*
- *"majority of the system is built using Javascript (Node.JS and React), Python, with some components in PHP which are progressively being migrated to Javascript."*
- *- "system is only accessible by HTTPS and any attempted connection via HTTP is automatically redirected to HTTPS."*

18. Solution Network Architecture - p. 63 - 65

- **AWS**

19. System Development Methodology - p. 65 - 67

-

20. Service Level Agreement - p. 68

- *Didn't address NASPO's Master instead state " These policies and procedures are aligned with the expectations of Exhibit 2. RFP 202102021 Model SLA. In order to provide consistent performance and services to the over 500 agencies across Canada, US, and Europe we require that clients standardize our Terms and Conditions".*

D. Security Requirements: p. pages 69 - 87

1. Cloud Security Alliance (CSA) Compliance

- *CAIQ attached - Spring of 2021.*

2. Security and Privacy Controls – *nothing to add.*

3. Security Certifications – *nothing to add.*

4. Annual Security Plan – *nothing to add.*

5. Secure Application and Network Environment– *nothing to add.*

6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6.

a. 1 – N "Not Available"

b. 1 – High

- *SEC 1 – Not Available – Requirement not met. This comment was off to the side, but nothing in the box. "Gap but plans. IdP stuff"*

- *There are various comments off the side in the matrix – believe they were meant to be internal.*

7. Data Security – *nothing to add.*

8. Personally Identifiable Information Protection – *nothing to add.*

9. Security/Privacy Issue Occurrence – *nothing to add.*

10. PII Data Actual/Attempted Access or Disclosure – *nothing to add.*

11. Security Breach Reporting – *nothing to add.*

E. Implementation Services Requirements: Pages 87 - 118

1. Project Management

- *Bonfire provides the name of who will be the dedicated PM – Nathan Tarr.*
- *Section is very small as they refer to attachments: Bonfire Implementation Plan, Bonfire GANTT Chart, and Project Milestone Plan.*
- *Implementation GANTT chart is only 3 months. That seems very short for an implementation.*

2. Project Implementation Methodology

- *Page 89 - "Bonfire's implementation approach follows a structured classroom-style guided training where users are prompted to follow along with the trainer and is customized to the implementation to ensure greatest adoption of the solution."*
- *Agile methodology.*

3. Catalog Support Services

- **N/A**

4. Data Conversion Services

- Will help State ready data to ensure it is clean and acceptable prior to importing using Bonfire's custom built import tool.
- Would like to know what roles the State plays and what Bonfire plays as help can be a little or a lot.

5. Interface/Integration Development Services

- The Bonfire Platform has been built to support System and Data Integrations through the use of either;
 - Event Webhooks and REST APIs.
 - Flat File Data Transfers (CSV, XML).

6. Organizational Change Management (OCM Services)

- Have an OCM strategy; however, it's more prescriptive and standard rather than working on Change (whether needed, risk, impacts who, etc.).

7. Training Services

- Training is given by implementation team
- Yes, meets requirements.

8. Help Desk Services - Tab 6 IMPL 1 – 5

- IMPL 4 and 5– Not Available – Requirement not met. *"Bonfire does not support live chat. And Bonfire utilizes Zendesk for ticketing competent. Would need to leverage states resources to support intergration."*
- Rest of requirements met..

9. On-Site System Stabilization Support

- Does not meet requirement. Page 118 – *"At this time, Bonfire does not offer or require on-site support. This can be revisited on a case-by-case basis in the future with our professional services team "*

F. Managed Services Requirements:

- Nothing in Bonfire's proposal for these deliverables.

1. Solution Support

2. Organizational Change Management (OCM Services)

3. Training Services

4. Catalog Support Services

5. Help Desk Services

6. Transition Out Assistance Services – p. 105

G. Other Available Services: p page 106: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- MNGD 1 – *"Bonfire utilizes Zendesk Explore and Zendesk Benchmarking for comparison to other tech organizations."*

H. Video Demonstrations:

- Unable to access.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **BONFIRE INTERACTIVE** central access point at a configurable URL. All procurement activities are initiated from this single point of entry. intuitive guided experience to ensure users can configure, build, and run solicitations using the appropriate procurement configurations and setup.

- User access can be controlled at the solicitation or department level to ensure users only have access and visibility to a specific set of solicitations.
- Sealed documents that can only be accessed after being unsealed, with full audit trails of who unsealed them and when.
- Suppliers cannot submit proposals once an opportunity has been closed.
- Evaluators can only access proposal documents once conflict of interest and/or nondisclosures are signed, and the project has been closed.

does not provide an open marketplace environment. Open, RESTful API and can create custom integrations (both batch and Realtime) with existing financial management and other core systems. each approval is not rule/role-based, as each approval is defined by the end user on a case-by-case basis, or templated using our template functionality. allows users to store and manage documents throughout the platform.

- Project Details: Overview of the project dates, highest-ranking supplier, and NDA + COI forms.
- Signature Block: Formatted page where you can have all of the participants sign the report.
- Q + A and discussions: Questions from suppliers and corresponding responses and any internal or supplier discussions.
- Approvals: Sent approvals including response, date and time, and user.
- Submissions: List of the suppliers (Email, Name, Confirmation Codes) that submitted for this project.
- Criteria: List of the criteria (title, points, description) for a particular project.
- Scoring Summary: Submissions and criteria scores.

view information in a chart format or extract the raw data for further offline analysis. Bonfire allows for custom public award statements to be published and the State can determine to share other activity publicly such as a scoring breakdown or bid tabulation.

User Experience Allows users to personalize their initial screen, intuitive user interface that guides users to the appropriate components, no wizard however bonfire embeds help tips support articles and walkthrough videos to assist, the dashboard allows users to visualize user work management. Supports desktop and mobile views. There is no mobile application. Bonfire is not optimized for mobile devices but usable. Detailed user roles and permissions reassignment to other users capable. Now is the time to quit smoking provides extensive user roles for variety of different functions like drafting reviewers approvers evaluators.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire Interactive

CATEGORY #(s): 2

DATE: 12/29/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

User Authentication system supports both built-in authentication and integration with customer identity systems using SAML 2.0. Logging to a centralized logging system preserves audit trail and facilitates investigations.

Federated Identity Management– system supports and integrates with customer identity provider (IdP) via SAML 2.0 SSO. When integrated with customer IdP, all usernames, passwords, 2FA, policy and additional requirements are defined and centrally managed by the customer.

Data Conversion system currently provides import services for legacy imports into the Contract Management module. This import is completed during the implementation phase of the Contract Management module and will be facilitated by an Implementation Manager at Bonfire. Legacy data will need to be formatted into a Bonfire provided .xlsx import template for data import. Optionally, if you have documents from a legacy system they can be imported via FTP and a .xlsx Mapping Template.

Interface and Integration ability to interface on a nightly or real-time basis to support the data inflows and outflows needed with other systems. Given each customer has unique technical and business logic requirements, each integration is approached as a **custom interface** that needs to be **scoped by our professional services team. No standard interfaces to ERP systems mentioned.**

Office Automation Integration Supports numerous file types, however, these appear to be supported via imports or exports. The Microsoft suite does not appear to be integral or native to the solution. This appears to be a manual process.

Mobile Device Support system is designed to be readable and usable on desktop, laptop, and tablet.
Smart phone?

Mobile Applications System does not include a mobile application.

Data Ownership and Access All data sent to or stored in the Bonfire system remains the ownership of the Participating Entity.

Date Retention, Archive and Purge Considerations Records can be archived so you can store within the system based on user interaction with subscription agreement unlimited data storage is provided throughout the contract and you will retain your data so long as you remain a customer . Users have ability to delete data upon termination and export of all your data records via FTP is available . Bonfire will schedule data to be destroyed upon acceptance from the customer.

Disaster Recovery Plan Bonfire maintains a formal Disaster Recovery Plan that includes policies and procedures for technological disaster recovery. Procedures are defined around identification and evaluation of disasters, mitigation of damages, communication, recovery, and post recovery activities with the following goals:

- Minimize interruptions to normal operations.
- Limit the extent of disruption and damage.
- Minimize the economic impact of the interruption.
- Establish alternative means of operation in advance.
- Ensure all staff involved in, and affected by, the disaster recovery plan are aware of the plan and their role in it.
- Provide for smooth and rapid restoration of service.
- Encompass all essential infrastructure elements.
- Review and update the plan periodically and as needed to account for changing circumstances.
- Test the plan periodically to ensure that it can be implemented in the event of an actual disaster and that it is effective.

Solution Environments platform is delivered via Software as a Service model and there is only one version available (the current version) available to Participating Entities. This is provided via an instance in the Production Environment.

Solution Technical Architecture modules are built and hosted on Amazon Web Services (AWS). **primary method for data exchange is through end-user use of the application. programmatic data exchange required is achieved via REST Web-API or Flat File Data Exchange (.CSV, .XML). Could not find pictorial view.**

Solution Network Architecture Bonfire uses a Tier 1 cloud provider to run our operations. We use Amazon Web Services (AWS) data centers that have been certified for ISO, PCI, **SOC**, CSA, FedRAMP, FIPS, NIST, PIPEDA, and more. **Lacks detail**

System Development Methodology Developers are organized into feature teams who work on **2-week sprints** in conjunction with Product Management and Product Design teams. Each sprint the tickets go through:

- grooming
- assignment
- development (features work and automated tests)
- peer review via pull-request
- automated testing
 - Unit Tests
 - Integration Tests
 - Accessibility Tests
 - Security Tests
- acceptance testing

Service Level Agreement service level agreement outlines expectations for several different categories of service:

- System Availability
- System Performance
- Project Implementation Services
- Project & Other Services Levels
- Security Compliance
- Service Request Responsiveness

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed. maintain our systems and applications following industry standards and best practices from CIS, NIST, CSA and OWASP (Open Web Application Security Project).

Security and Privacy Controls Our goal is to exceed NIST 800-53 baseline levels to ensure that our service meets the security requirements of our customers. With our SOC2 Type II certification completed, we are looking towards the future with FedRAMP/StateRAMP certification.

Security Certifications

SOC II-Type II

Annual Security Plan **no annual security plan**

Secure Application and Network Environment repeat of above sections

Secure Application and Network Access All communication between the customer and Bonfire solution, including APIs are encrypted while in-transit using industry-standard HTTPS/TLS(TLS 1.2 or higher) over the Internet, ensuring that all traffic between the customer and Bonfire is secure during transit. All Bonfire public web properties, applicable infrastructure components and applications use TLS, IPSEC and SSH to facilitate the encryption of data in transit over open, public networks and must use certificates signed by a known, trusted provider.

Data Security Multiple layers of prevention and detection controls are in place from Cloudflare at the Internet edge all the way into advanced security services in Amazon Web Services (AWS). These

controls include, but are not limited to malware detection, patch management, access control lists (ACLs), security groups, firewalls, gateways, web application firewalls (WAF), rate limiting, malicious IP blocking, intrusion detection, logging, multi-factor authentication, TLS encrypted traffic, DDos protections, database replication, database encryption, use of multiple availability zones, dynamically scalable infrastructure, etc.

Personally Identifiable Information Protection Bonfire collects minimal business contact information including: name, email address, business phone number and business address.

Security/Privacy Issue Occurrence Response time **1st tier:** initial response one hour start work two hours resolution two days **next tier** initial response one hour start work 4 hours resolution three days **next tier** initial response one hour start work one day resolution four days. **Not sure if these tiers are segregated by incident type or severity.**

PII Data Actual/Attempted Access or Disclosure same as above and Bonfire will support and fully cooperate with the customer in their own investigation activities and to help identify the extent or impact of the incident/breach. We cooperate fully with all government regulatory agencies and/or law enforcement agencies having jurisdiction to investigate a Disclosure and/or any known or suspected criminal activity.

Security Breach Reporting same as above and Bonfire will support and fully cooperate with the customer in their own investigation activities and to help identify the extent or impact of the incident/breach.

Implementation Services Requirements

Project Management **BONFIRE project manager identified and project plan attached (3 months, one size fits all)** Bonfire's Project Governance approach is uniquely tailored to each organization and their business practice decisions. Bonfire recommends the creation of a steering committee to determine business practices and implementing best practices in Bonfire. This committee is usually made up by the organization's executive sponsor(s), project managers, and senior end-users. The steering committee will meet regularly with the Bonfire implementation manager(s) and dedicated project manager. Decisions are flexible and not set in stone. Bonfire can accommodate ongoing changes to implementation at the discretion of the steering committee.

Project Implementation Methodology Bonfire's implementation approach follows a structured classroom-style guided training where users are prompted to follow along with the trainer. Bonfire's implementation strategy is customized to the implementation to ensure greatest adoption of the solution. Bonfire also provides clients with access to Bonfire Academy, an online course-based, learning management system where users can self learn with guided courses. Bonfire follows an agile methodology that matches the unique needs of the client and can accommodate individual learning styles, schedules, team sizes and structures. Agile methods allow for ongoing evaluation and prioritization of key components to ensure organization users are learning at their pace and helps to address key challenge components immediately. Change control is managed through the Bonfire Project Manager and the organization's project sponsor. Please see Bonfire's attached Implementation Plan for further details.

Catalog Support Services **Bonfire does not provide catalog and punchout sites and is not responding to this workflow.**

Data Conversion Services Bonfire's Contract Management Module natively supports the Import of Contract metadata, including various default and custom contract fields and users. Bonfire's Client Experience Team will work with the client to ensure all data is clean and acceptable, prior to successfully importing the Metadata. Bonfire's Custom-Built Import tool and customized field mapper will be leveraged for this process.

Interface/Integration Development Services **Bonfire** Platform has been built to support System and Data Integrations through the use of either;

- Event Webhooks and REST APIs.
- Flat File Data Transfers (CSV, XML)

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire Interactive

CATEGORY #(s): 2

DATE: 12/29/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Organizational Change Management (OCM Services **Bonfire's Readiness Assessment** revolves around Pulse Surveys with the following questions:

1. Project Sponsor Vision
2. Project Sponsor has shown clear commitment to making change happen
3. Key Team members Support for the project
4. Alignment with Procurement Processes and Goals
5. Clarity on Success Criteria of the Project

Impact assessments focus on several stakeholder groups: Purchasing teams or end users, potential evaluators, vendor community. Bonfire's 360 communication plan includes vendor communication for preregistration, internal stakeholder memo, benefits to citizens documentation, benefits to vendors documentation. Bonfire Implementation Plan and Enablement plan includes:

- 1) Dedicated Online Training
- 2) Webinar Based Training
- 3) Bonfire Academy
- 4) One-on-One Support

Bonfire's **Resistance Assessment and Management** takes stakeholder first approach. Proactive communication and ensuring the rationale behind the change is critical. This communication should be spread over the multiple levels of your organization including Executive Leadership, Mid-Level managers and Communications to the End-Users the change impacts the most. In the event a risk is identified, Bonfire's Client Experience team will engage the stakeholder and attempt to address any concerns proactively following Engage & Listen methodologies. In many cases, Bonfire can resolve the difficulties without any other stakeholder involvement. **In the event the resistance becomes disruptive the project's progression will document the risk and present the risk to the steering committee or project sponsor to work through potential resolution steps.** Our methodology generally takes the following approach:

1. Anticipate
2. Identify
3. Manage

Training Services Training plan is prescribed by the Implementation team and can be deconstructed into smaller sessions based on level of technical proficiency. Since Bonfire is composed of several different modules, the training will be broken down to cover each module. The training is done on a sample set of projects that reflect actual procurement scenarios. The buyers at the organization are encouraged to provide the Implementation Lead with their own procurement projects. These projects can be used during training to help tailor the sessions to the organization's needs. During the training phase, the buyers at the organization will be able to start setting up draft procurement projects to get hands-on experience in Bonfire. If all participants agree, training sessions will be recorded and the recording will be provided to the buyers at the organization. Method of Training

End-users: Receive approximately 7 hours of webinar based training

Train -the -trainers: Receive approximately 7 hours of webinar based training and exploratory consultative training

Suppliers: Trained with video recording that is embedded in the submission workflow

System Administrators and Participating Entity Helpdesk Staff: At request a session can be conducted to walk these personnel through account activation/deactivation

Help Desk Services

- Providing friendly, efficient and effective support to all clients - use of knowledgebase, videos/screenshots and providing proactive solutions to deter future tickets of the same nature
- Options for self service as well as agent support

Organization Qualifications and Experience

1. Overview of the Organization
 - Out of the Box, should understand if customization is possible if state's will need to change procedures to adopt.
 - Very brief explanation
 -
2. Previous Projects
 - Projects are sections of a state and not a full statewide implementation
 -
 -
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - Smaller Org Chart
 - Primary experience in Canada, not clear how it relates to US procurement
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Something happened in April 2021 to reduce financial strength
 -
 -

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/13/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

- Uses Bonfire Platform
- Business rules cannot be overridden, customer or vendor, configurability limitations
- Sourcing and Bid management platform
- 500 public sector agencies, 50,000 solicitations
- Shopping platform not available
- Workflow and reminder functionality
- Single online platform
- Reporting functionality
- Audit trail
- 500+ teams, 200+ buyers
- Link to state's public portal
- Left-handed navigation panel
- Dashboard
- 2-week platform updates
- 3-year roadmap
- Proposal analysis
- Refining ERP integration

Functional Requirements

- 50% reduction in project cycle times
- Supplier network over 250,000
- "Insights" tool a third party of Bonfire product
- Free access for suppliers
- MWBE certification are good
- Anyone can post solicitations, can it be limited
- No limit to number of files, what about size?
- Virtually manage process
- Templates are beneficial
- Bid tables look very clean, good identification of lowest price
- Evaluator Notes
- Evaluation functions are very intuitive
- Benchmarking process is unique
- Vendor performance management

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/13/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Technical Requirements

- 24/7 access
- AWS redundancy
- History recording for audits
- Defined user roles
- INTERESTING – project roles
- Contract Management module
- Legacy import ability
- Questionnaire templates are a good standardization option
- Readable on desktop, laptop, tablet
- Does not include a mobile application
- Sandbox environment

Security Requirements

- Seeking future FedRAMP / StateRAMP certification
- SOC Type II certified
- AWS Cloud provider
- Encryption at rest and transit
- Two-factor authentication
- Breach notification, limited action beyond notification
- No catalog services
- Training power users, no formal training for casual users

Implementation Services Requirements

- Simplicity and ease of use
- Clear presentation of deliverables for both parties
- Detailed implementation plan
- Bonfire Academy
- Article repository
- Ticket system

Managed Services Requirements

- Did not provide response

Video Demonstrations

- Unable to view video

Individual SME Comments:

Overall

Stand-alone Sourcing tool with Vendor Registration, Contract Mgmt. & basic reporting features

General Principal and Requirements

Key Solution Functionality Elements

10	The Bonfire portal acts as a single point of entry for all procurement activities. From purchasing intake requisitions, to project creation, supplier management, and evaluation, all users have a 118 central access point at a configurable URL. All procurement activities are initiated from this single point of entry.	
	Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway	
	Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).	
	Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users	
	Open marketplace environment-does not provide an open marketplace environment	
	Integration – batch and real-time with existing financial management and other core systems.	
	Workflow – a configurable, rule/role-based approval automation.	
	Document management – automated solution to create, transact and store documents.	
	Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics	
	Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually	
	Transparency – provide public and internal visibility into purchasing activity and outcomes.	

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

User Experience

11-13	Personalization of user's initial screen	
	Intuitive navigation – interface guides users to the appropriate solution	
	Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.	
	Portal that informs users and supports user work management.	
	Functionality optimized for mobile access and use. NO mobile	weakness
	Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.	
	Role-based functionality for drafting, review and approval, evaluator and other processes	

Bidder Best Practices and Roadmap – Meets requirements

14-18	Bonfire provides platform updates every 2 weeks based on the Software Development Life Cycle as defined in Section 19. New versions are available upon each update, meaning improvements and fixes will be incorporated immediately.	
	Specialist and Client Success Manager will continuously assess and recommend opportunities for cost reduction, process improvements, or alternative process approaches and methodologies	
	Clients automatically receive all updates as part of the release process (every 2 weeks).	

Innovations and Value-Added Features/Services

19	Optional – nothing offered	
----	----------------------------	--

Customizations/Extensions

19-20	Not required As Bonfire is a platform-based SaaS tool, customizations/extensions are not built for individual clients as solutions must work for all clients.	
-------	---	--

Alternative Funding Models

20	Optional – nothing offered	
----	----------------------------	--

Contract Transition and Flexibility

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

21	has the ability to transition any current client contract to this newly established portfolio upon request by the client/agency. This can be done during a client's renewal or during a new contract execution.	
----	---	--

Functional Requirements

General Functionality

21-24	Bonfire enables efficiencies throughout the solicitation process. Bonfire automatically eliminates many manual tasks that are facilitated through emails and Excel. All Bonfire clients immediately gain access to the Bonfire Global Supplier Network with over 250,000+ suppliers Suppliers pay no fees and save costs by switching from paper to digital submissions.	
GEN 9	No crosswalk for commodity codes	weakness
GEN 10	Detailed keyword search not available	weakness
GEN 12	Can only search by description in contract management	weakness
GEN 19	Does not store bill to and ship to	weakness
GEN 20	Does not store unique commodity codes	weakness
GEN 22	No filtering on search	weakness
GEN 25	No customization on email address	weakness
GEN 34	No future dating	weakness
GEN 35	No comment library	weakness
GEN 36	No esignature	weakness

THIS SUPPLIER IS ONLY OFFERING THE SOURCING/BID MANAGEMENT WORKSTREAM – STATES THEY HAVE CONTRACT MANAGEMENT BUT DID NOT SUPPLY REQUIREMENTS FOR THAT MODULE.

Individual SME Comments: This response has lots of concerns listed for only offering the sourcing workstream. The supplier has stated in multiple locations of their response that they support contract management, but did not supplied information on that module? The concerns listed below should be addressed to have a solution that would benefit our entities.

I have viewed the extra attachments that Bonfire submitted with their response and my comments are below:

Gantt Chart/Implementation Plan- Devised an implementation plan that shows total implementation time.

Acceptable Use Policy – Submitted to shows use policy to establish trust with supplier.

Business Continuity Policy – Submitted to explain the Business Continuity Plan

Data Protection Policy – Submitted to show their data protection policy.

Information Security Policy – Shows security of the system. Defer to security SME

Operational Controls Policy – Supplied to maintain system confidentiality, integrity, and availability.

Risk Management Plan – Provided to show implementation process and the risks involved.

Support and Incident Mangement Policy – Also states processes for customer support, privacy and security, maintenance, and disaster recovery.

Milestone Plan – Shows high level project milestones used to track progress on implementation.

User Roles – Document shows roles and responsibilities of each of the roles in the solution.

The video offered in this response.....VIDEO access can only be obtained by emailing a contact at Bonfire. Do we want to reach out to them for access?

General Principal and Requirements – Page 3

Key Solution Functionality Elements – Page 3 thru Page 11

- Single point of entry for Sourcing Only
- Guided experience to configure solicitations
- Business rules are written into the platform and cannot be overridden
- Does not provide an open marketplace environment.
- Has an Open API and can create custom integrations.
- Workflow is defined by the end user.
- Document management is used on Vendor Registration and Management, the intake request process, solicitations for the buyer and for the submitted proposals.

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Offered list of reports that can be pulled from the solution on Page 6
- Reporting tool called “Insights” Page 8 and 9
- Highly configurable solution.
- Can advertise on State’s Bonfire public portal. Page 10

User Experience – Page 11 thru Page 14

- Can personalize their initial screens
- Screenshot on Page 12 shows the left-hand side navigation options in a wizard like setting
- Can visualize the work management from the dashboard.
- Does not provide a mobile application, but is available through mobile web browsers
- User with the correct roles and permissions can re-assign work
- Supplied attachment titled “Bonfire User Roles” for more detailed information about roles in the system.

Bidder Best Practices and Roadmap – Page 14 thru Page 19

- Platform updates every 2 weeks
- Development and design assures latest technologies are utilized
- Solution staff continuously assess and recommend for cost reductions.
- Supplied current 3-year roadmap on Page 18 and 19
-

Innovations and Value-Added Features/Services – Page 19

- No response submitted on narrative

Customizations/Extensions – Page 19

- Customizations are not built for individual clients.
- Changes must align with their roadmap.

Alternative Funding Models – Page 20

- No response submitted on narrative

Contract Transition and Flexibility – Page 21

- Offers flexible contracting on an agency by agency basis.

Functional Requirements – Page 21

General Functionality – Page 21

- Efficiency – 50% reduction in project cycle times
- Competition – 250,000 suppliers
- Cost Savings – No fees for suppliers. Bonfire’s BidTables tool used to drive hard savings
- Spend Analytics – Known as Cost Management provides tool for buyers to track spend.
- Compliance and Controls – Built specifically for public sector purchasing teams
- Performance measures – Can capture data across all procurement activities.
- CONCERN - EPROC-GEN-4 – Tab 2 Line 8 – Solution does not offer Purchase Orders or Request through Pay solutions.
- CONCERN - EPROC-GEN-9 – Tab 2 Line 13 – does not provide short list of commodity codes to select from
- CONCERN - EPROC-GEN-10 – Tab 2 Line 14 - Detailed keyword search is not available in all modules

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: BONFIRE

CATEGORY #(s): Category 2 Stage 2 – Individual Workstreams

DATE: 12/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-TECH-5 – Tab 4 Line 9 – Need to send an email to obtain additional backend reporting logs?

Browsers Supported – Page 46

- Provided warning for unsupported browsers on Page 47

User Accounts and Administration –Page 47 – 48

- Provided types of roles on Page 48
- Provided list of roles starting on Page 49
- User are assigned to Projects in the system. Provided project roles starting on Page 51
- Contract Management roles are listed starting on Page 52
- Vendor Management roles are listed starting on Page 53
- Intake Module roles listed on Page 54
- CONCERN - EPROC-TECH-16 – Tab 4 Line 20 – Does not currently have automatic ability to deactivate users.

User Authentication – Page 55

- Meets requirements
- CONCERN - EPROC-TECH-25 – Tab 4 Line 29 - Buyers are not prompted to agree to user agreements.

Federated Identity Management – Page 55

- Meets requirements

Data Conversion – Page 56

- Provided information on importing contracts, solicitations, users and any additional data.
- Importing of data would require an integration to an external system.
- CONCERN - EPROC-TECH-34 – Tab 4 Line 38 - This requirement of the transfer of historical data seems to come with an additional cost?

Interface and Integration – Page 56 – 57

- Each integration is approached as a custom interface and needs to be scoped by their team.
- CONCERN - EPROC-TECH-35 – Tab 4 Line 39 - States narrative has detailed response, but it does not appear to have a detailed response.
- CONCERN - EPROC-TECH-42 thru EPROC-TECH-46 – Tab 4 Lines 46 thru 50 – Supplier states these requirements are not in scope for the solution.
- CONCERN - EPROC-TECH-47 thru EPROC-TECH-60 – Tab 4 Lines 51 thru 64 – The supplier responses to these requirements either state not in scope or makes a reference to narrative where I cannot find said narrative supports the requirement.

Office Automation Integration – Page 57

- Meets requirements of file types
- Explained uploading of vendor templates and the file viewer and data export functionality

Mobile Device Support – Page 58 – 59

- CONCERN – The narrative explains that system is designed to be readable on desktop, laptop and tablet. Does not address mobile device support.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

- Referenced attached exhibit ““Bonfire Implementation Plan” & “Bonfire GANTT Chart for example implementation plan
- Supplied key positions, roles and responsibilities starting on Page 88
- State what the roles, skills and responsibilities of the state entity should be.

Project Implementation Methodology – Page 89

- Access to Bonfire Academy
- Work with implementation manager or configurations
- Does not have system development requirements?
- Does not have testing methodology requirements?
- Referenced attached “Bonfire – Risk Management Plan”
- Uses Zendesk for managing support tickets. Page 91

Catalog Support Services – Page 91

- Does not provide catalog and punchout sites and is not responding to this workflow.

Data Conversion Services – Page 91 – 92

- Only states “Bonfire’s Contract Management Module natively supports the Import of Contract metadata, including various default and custom contract fields and users”. Did not mention any other data conversion.

Interface/Integration Development Services – Page 92 – 96

- Uses APIs or Flat File data transfers – Page 92
- Suggest completing implementation, training and going live, then build any integrations?
- Supplied example scenario on Page 93
- Provided list of terms used when describing integrations on page 94
- Integrations need to be worked by their professional services team who will work with you. They will provide a SOW with pricing before work begins.
- Integration Project Plan provided on Page 95
- CONCERN – SEE BELOW
We recommend that you first complete the Onboarding and Implementation process with our Implementation Specialists prior to engaging with our Professional Services team, as we’ve found clients to be much more successful in determining how they want the integration to behave once they have a deeper understanding of how they’re going to use Bonfire”

Organizational Change Management (OCM Services) – Page 96 – 98

- Uses Bonfire’s Readiness Assessment mentioned on Page 97

Training Services – Page 98 – 111

- Supplied Bonfire Implementation Plan starting on Page 99
- Section 2 of above-mentioned plan contains this vendors training plan.
- Listed a variety of resources available on Page 109

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: CloudBuy

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Est. 1998.
- CloudBuy e-commerce platform.
- Pg 5 – Investor, Al-Rajhi, is currently working on furthering their eCommerce and eProcurement capabilities by integrating CloudBuy eCommerce and eProcurement with their world class SAP systems.

2. Previous Projects

5 projects given. The projects meet Category 2.

- YRDSB. Case study attached to their proposal. YRDSB deploying CloudBuy Procure to Pay solution to reduce supplier spend and automate payment process.
- Bio Rad Antibodies. Implementation of Cloudbuy's e-commerce platform for content management.
- PHB Choices. Managed their personal budgets to purchase consumables such as PPE and approve PA timesheets.
- Ohio Schools Council. Implemented CloudBuy to provide OSC purchases to pay capabilities with Contract Management capabilities and linked to EASi e-auction contracts.
- Spend Insight. Not much info. They possibly analyzed e-invoices.

3. Subcontractors

- Vendor states there are no subcontractors.

4. Organizational Chart

- Yes, a project organization chart and job descriptions are provided.

5. Litigation

- Vendor states there are no litigation.

6. Financial Viability

- Provided financials (profit and loss statements, balance sheet).

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - 2 of 3 Preliminary docs, no cert of insurance
 - e-marketplaces and private purchasing portals.
2. Previous Projects
 - York Schools District School Board - single sign "on"? through online shopping, requisition, approval, purchase order, goods receipt, invoice, invoice matching, payment and funds reconciliation. Procure To Pay
 - Bio Rad Antibodies UK - Content Management Systems and ecommerce system
 - NHS Shared Business Services - personal budgets to purchase consumables (PPE), Timesheets – COVID forced cancellation? Not clear how this project reflected any single stream of eProcurement.
 - Ohio Schools Council (OSC) - purchase to pay capabilities with integrated contract management, EASi e-auction contracts – is this a CloudBuy solution or did they integrate with it?
 - SpendInsight – "Contact details are not available for this project" However the following details were provided but it's not clear how they are associated....UK National Audit Office, National Health Service, Tungsten Network.
 - I did not read in any previous project evidence of a single stream of eProcurement
3. Subcontractors
 - None
4. Organizational Chart
 - Corp org chart
 - not project specific
 - Profiles for key personnel provided
5. Litigation
 - None in the last 5 years
 -
6. Financial Viability
 - Provided a P&L and balance sheet of their short fiscal history due to acquisition/merger
 - Millions or thousands?

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - eCommerce Platform
 - 1 year in business since Aug 2020
 - Perhaps too early for proven record performing at the level for this contract
2. Previous Projects
 - School District in Canada
 - Bio Rad Project since 2011, not clear what company this was at the time that implemented and has since provided service
 - Much investor involvement and instability
 - Examples given without references to the project; concerning
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - UK Company
 - Unsure if there are personnel in United States
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Only one year in business
 - Low sales
 - Staff in UK and India only
 - Concerning financial report

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Started in 1998 and uses Marketplaces
 - Sold company, now in its first year.
 - 30 permanent staff
 - Open Source – no customer lock in?
2. Previous Projects
 - Lists schools, medical clients
 - No dates of when these implementations took place?
 - Missing some contact details on certain projects
3. Subcontractors
 - Stated no use of subcontractors
 -
 -
4. Organizational Chart
 - Supplied company org chart with names and descriptions
 - No listing of the state org chart, roles and descriptions
 -
5. Litigation
 - Stated no litigation exists
 -
 -
6. Financial Viability
 - Unable to provide a Duns report
 - Reported sales from the first 5 months of operation.
 -

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

1. Overview of the Organization
 - Yes. States 20 years of end-to-end procurement and supply chain expertise.
 - Seem to cover all areas of procurement.
2. Previous Projects
 - 5 listed. Four private entities and one university. They all fit Category 2.
 - Viatrix. Improved transparency across company with their system.
 - UCAL. Implemented S2C technology (spend analysis, sourcing, contract management, supplier mgt.) and a public bid site.
 - Chevron. Unified their online system with a mobile system.
 - LDS Church. Implement Contract and Supplier Management solution.
 - UMASS. Developed S2P processes, policies and workflows.
3. Subcontractors
 - Vendor states none.
4. Organizational Chart
 - Provided along with job descriptions.
5. Litigation
 - Vendor states none.
6. Financial Viability
 - D&B provided. Low risk.

Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Product is GEP Software Source-to-Pay process.
- Note: NB Ventures Inc. dba Global eProcure (GEP)
- Product is cloud platform. SaaS.
- The technical proposal begin with small portions of information and I was unsure if they were meeting the mark, but once I was able to dig into the matrix it helped further see what they can do.
- Overall, it looks like much configuration can take place for any State entity. While this is great, I question how this would affect updates to the software (Clarification).
- Matrix - I like seeing that the level complexity is not all "L". It shows GEP put thought into each for each item.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 14)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product is GEP Software Source-to-Pay process. With modules of sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay.

- Single point of entry – yes – a centralized intake form. When I think Single point of entry- I do not think intake form.
- Smart routing – yes – GEP combined this bullet point with Compliance and Workflow. They state the platform can be configured to meet specific compliance policies/rules. GEP gives examples of Guided Buying, Robust Rule Engine, and Category Playbook.
- Compliance – refer to the second bullet.
- Portal – yes – buyers and suppliers have access to dedicated home page portal

- Open marketplace environment – yes – **Configure** hosted catalogs/punchouts.
- Integration – yes – has out of the box integration tool kit and use JSON protocols for document exchange.
- Workflow – yes – refer to the second bullet.
- Document management – yes – stored in centralized repository and accessed per user role.
- Reporting, dashboards and data visualization – yes – in-house cross-functional reporting framework.
- Configurable – yes – GEP Software cloud platform is a preconfigured application. GEP states they will use agile approach to preconfigure sandbox to align to State specific cases / requirements.
- Transparency – Yes – and mention track status on documents.

2. User Experience - pages 14 - 16

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.

2. GEP discusses their intuitive user interface built by using feedback from Fortune 500 costumers, user group requirements, industry standard practices, etc. **I have concerns with the Fortune 500 customers because we want a system that is more relatable to Govt/State business.**

- Initial Screen – yes, mention users can mark initial screen as landing page – **not sure this is what is meant in this section.**
- Intuitive Navigation – yes, GEP combines this bullet with “Wizard-driven capabilities” addresses few clicks, **but doesn't really address wizard capabilities.**
- Wizard-driven capabilities – Refer to second bullet.
- Informative Portal – Yes
- Mobile Optimization – yes, they call it Mobile App – IOS and Android.
- Workload Mgt Functionality – Yes they call it Work Management, addressed; however, **unsure if it contains the same intention of abilities as wanted in the RFP.**
- Role-Based Functionality – Yes, addressed.

3. Bidder Best Practices and Roadmap – pages 16 - 21

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

3. GEP introduced 4 best practices and roadmap: (1) Unified Source-to-Pay Platform, (2) Agile Methodology for Software Development, (3) Software Release and Update Cycles, and (4) Customer Success: Providing a High Touch Support Experience Throughout Engagement.

- Latest Technology – No – don't address any. Address their process as in number 3 above.
- Timely updates – yes – Quarterly and biweekly; however, **it's a bit confusing as they use words such as “generally available” Would like to see a more definite timeframe and surety.**
- Alternative Best Practices – yes see below bullet.

- Cost Reduction – Yes – Claim price compression will save 4% – 7% average realized savings, spend compliance 10%-50% reduction of noncompliant spend, productivity 40%-60% reduction in non-value added work, and working capital 10-20% extension in pay terms and 5-30% Increase in early pay discounts.
- Product Roadmap and Cont. Improvement. – Yes – see number 3 above.

4. Innovations and Value-Added Features/Services – pages 21 - 22

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

4. Yes - Completed section. They list Level (1) Organization Maturity Assessment, (2) Opportunity Assessment (3) Market Intelligence (4) Category Management. Explained further below.

- GEP illustrates their Assessment Approach in a 4 graphs and explains they would work with State to create a plan to outline desired outcomes by looking at various pieces of procurement operating models and identifying areas of improvement along with other types of analysis. **This reminds me of a BPM.**
- GEP illustrates in 3 graphs how they can analyze procurement spend to identify savings opportunities using GEP benchmarks, SME inputs, and industry best practices.
- GEP illustrates in 5 graphs how leveraging GEP's extensive network of SMEs and researchers could elevate the knowledge and awareness of State's procurement.
- GEP illustrates in 2 graphs a process for end-to-end category management across categories for sustainable outcomes

5. Customizations/Extensions – pages 22 - 23

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

They provide preconfigured application deployed as a standard configuration. They suggest using the standard out of the box software, but will configure as necessary per the requirements of the State.

6. Alternative Funding Models – Pages 23 - 27

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outlined above for each recommended funding model.

GEP does not have alternate funding models. They refer to Exhibit 3. Cost Proposal and other revisions of cost proposal.

7. Contract Transition and Flexibility – page 27

GEP complies with the contract review process and transition if negotiate terms. I feel they misunderstood the point of this question.

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. Matrix completed. 5 – High (21, 26, 27, 28, 39), 3 – Medium (9, 25, 36), rest are all “L” Low level of complexity, 3 – “CF Configuration Items (3, 5, 25), 1 – “C Customization/Extension” (39), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Sourcing/Bid Management Software, Contract Management, Procure-to-Pay.
 - For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able to integrate with other eProcurement Workstreams. In areas where GEP does do this they suggest links or to CF.
 - I do like seeing that the level complexity is not all “L”. It shows GEP put thought into each for each item.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
 - #36 GEP has their own built in electronic signature solution instead of a partnership like docusign, or adobe sign
 - #38 For number of licenses – sounds like gave cost based on what was provided in proposal; however, they confirm licensing is unlimited for business and supplier users. This may be deceiving, might want to confirm again that it's unlimited also for “State users”
2. Supplier Portal. Tab 3, SPR-1 through SPR-23. Matrix was completed. 1 – High (19), 1 – Medium (6), rest are all “L” Low level of complexity, 1 – “INT - Integration/Interface”(19), 1- “CF-Configuration Item” (6), and the rest “A – Available”. Solutions/Tools/Modules covered – Supplier Enablement / Management Software, GEP Core Platform, Contract Management, Request through Pay.
 - #13 I find it interesting that GEP has their own OCR in-house system. Nice to know, if State did not want to use or integrate theirs.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 Matrix – was completed. 1 – Medium (36), rest all “L” Low level of complexity, 1- “CF-Configuration Item”, and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement / Management, Core Platform.
 - The “A” fields seem to be satisfactorily answered and their solution meets the standards.
 - For the INT items 19-27. GEP has a partnership with Global Risk Management Solutions (GRMS), Rapid Ratings and with TinCheck that provides most of these services. GEP Software will enable a link to these partners to allow users to view. My concern here would be the risk of leaving their system (if any), what security measures are in place?
4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15. Matrix completed. 1 – Medium (9), rest are all “L” Low level of complexity. 1- “CF-Configuration Item”(9), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Request through Pay Software, GEP Supplier Enablement / Management.
 - The “A” fields seem to be satisfactorily answered.
 - The C and CF items do not seem to pose a problem. Other items seem to be standard within the software.
5. Need Identification. Tab 3, NEED-1 through NEED-7 Matrix completed. All “L” Low level of complexity. 1-“CF-Configuration Item”(5), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Sourcing Bid Management, Contract Management, and Request through Pay Software.

- The CF item does not seem to pose a problem. Other items seem to be standard within the software.
6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11. Matrix completed. 1–High (PRD28), 5–Medium (PRD11, PRD56, WRK13, PO16, PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21, RC4), rest are all “L” Low level of complexity, 17 – “IN - in development” (PC1-3, PC5-8, PC10-15, PC17-PC19, and PC21), 1- “CF-Configuration Item” (RC21), and the rest “A – Available”. Solutions/Tools/Modules covered–GEP Request through Pay Software, Contract Management.
 - For PRD (Purchase Request Development): No issues with this section. GEP’s responses meet the standards and our requests.
 - WRK (Workflow Management): All requirements in this section are sufficiently answered.
 - PO (Purchase Order Generation & Management): All requirements in this section are sufficiently answered.
 - PC (Payment Card Functionality): Much of the complexity is medium and the availability is “in development”. This is concerning if a State is counting on this service.
 - RC (Receiving): All requirements in this section are sufficiently answered.
 - INV (Invoicing): All requirements in this section are sufficiently answered.
 7. Catalog Capability - Tab 3, CAT-1 through CAT-40. Matrix completed. 1–High (19), 5–Medium (4,21,25,32,33) and the rest all “L” Low level of complexity, 4–“CF Configuration Item” (31-34), 1 – “ID - in development” (38), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Request through Pay Software, Contract Management.
 - Missing 38 – “The eProcurement Catalog functionality should provide the ability for catalogs to be accessible and searchable without requiring the user to login (e.g. public access for read/search only access). State must be able to specify any fields that will not be publicly visible (e.g. Tax ID).” GEP says “ID” and will work with State to have.
 - Other than 38 - All requirements in this section are sufficiently answered.
 8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151. Matrix completed. 1–High (151), 5–Medium (31,77,78,83,138) and the rest all “L” Low level of complexity, 7–“CF Configuration Item” (17,18,73,76,102,138,147), 1–“ID - in development”(109), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Core Platform, GEP Sourcing/Bid Management Software, Contract Management.
 - Items 15 and 16 – GEP says they can handle a surplus sealed bid and IFQC, but then say they would further like to discuss the requirement in detail with State as we move ahead in this process. Clarify – can they handle this type of procurement?
 - In some areas they offer multiple ways to tackle a situation – for example SRC72. This is seen throughout the Matrix.
 - Rest of requirements in this section are sufficiently answered.
 9. Contract Management. Tab 3, CNT-1 through CNT-88. Matrix completed. 3–High(30,71,72), 4–Medium (38,41,45,70) and the rest all “L” Low level of complexity, 8–“CF Configuration Item”(20,34,45,51,65,66,71,72), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Items 71 and 72 – GEP says they can track suppliers admin fees , but then say they would further like to discuss the requirement in detail with State and understand the logic behind the calculation.
 - Rest of requirements in this section are sufficiently answered.
 10. Vendor Performance Tab 3, VPE-1 through VPE-25. Matrix completed. 1–High(14), and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(15), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Supplier Enablement/Management, Request through Pay Software, Contract Management.
 - Requirements in this section are sufficiently answered.
 11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37. Matrix completed. 2–High(32,33) and the rest all “L” Low level of complexity, 1–“CF Configuration Item”(37), and the rest “A – Available”. Solutions/Tools/Modules covered – GEP Platform.

- Question #37 – where GEP can offer comparison of punchout item to non contract item. They state yes as long as the supplier is ok exposing themselves to GEP web crawlers. Even if they are ok with this, is there enough security for State and any other web crawlers?
- Rest of requirements in this section are sufficiently answered.

C. **Technical Requirements: pages 49 - 74**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.
 - Maintains a 99.8% uptime with a 24x7 availability.
 - Use Microsoft Azure (for backup)
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Short 3 sentence slide that gives confirmations that GEP: Observes ADA compliance standards, follows WCAG2.1 level AA guidelines, and will provide ACR.
3. **Audit Trail and History RTM:** Tab 4, TECH-1 through TECH-5. Matrix completed. 1–Medium(5) and the rest all “L” Low level of complexity, All “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Audit logs are retained until end of contract life.
 - Mentions backup policies and use of Microsoft Azure backup.
 - Much crossover between slide in technical proposal and matrix. No concerns.
4. **Browsers Supported**
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, Chrome, Firefox, and Safari). No concerns.
5. **User Accounts and Administration RTM:** Tab 4, TECH-6 through TECH-20. Matrix completed. 1–Medium(12) and the rest all “L” Low level of complexity. 1–“CF Configuration Item”(16), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - No concerns. Meets requirements.
6. **User Authentication RTM:** Tab 4, TECH-21 through TECH-25. Matrix completed. 1–High(24) and the rest all “L” Low level of complexity, 1–“ID In Development”(25), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - #21 – Like the fact that they use Microsoft Active Directory for Single Sign on.
7. **Federated Identity Management –** No concerns. Meets requirements.
8. **Data Conversion RTM:** Tab 4, TECH-26 through TECH-34. Matrix completed. 1–High(28), 1–Medium(30), and the rest all “L” Low level of complexity. With all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Software Implementation services for Supplier Enablement Management, Services for Software Implementation, Services for Spend Analysis, Services for Sourcing/Bid Management, and Services for Request through Pay.*
 - Seem flexible in their approach to converting data and working with the State. A couple assumptions, but they are reasonable.
 - GEP provided many slides with graphs and pics laying out the conversion process. – I found this helpful.
9. **Interface and Integration RTM:** Tab 4, TECH-35 through TECH-60. Matrix completed. 1–Medium(60) and the rest all “L” Low level of complexity, 1–“ID In Development”(55), and the rest “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform, Request through pay software, contract management, supplier enablement management.*
 - Met all requirements besides the Pcard #55 which is ID.
 - They list many ERP systems they have or currently integrate with (SAP, Oracle, PeopleSoft, JD Edwards, MS Dynamics, CGI Advantage, etc.) and provide options of how to integrate.

10. Office Automation Integration
 - Yes, GEP integrates with Microsoft products listed and others.
11. Mobile Device Support RTM: Tab 4, TECH-62. Matrix completed. "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Yes it can be accessed Mobily
12. Mobile Applications - Nothing add here.
13. Data Ownership and Access
 - State will retain all ownership of data.
14. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63. Matrix completed. 1– "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Met all requirements. No concerns.
15. Disaster Recovery Plan
 - Coupa.
16. Solution Environments RTM: Tab 4, TECH-64 through TECH-67. Matrix completed "L" Low level of complexity, "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - State would receive four environments Development, Quality Control/User Acceptance Testing, Training, and Production.
 - Graphs of each environment are provided and at what point in the process they are used.
17. Solution Technical Architecture
 - Met all requirements. No concerns.
 - Graphs and tools that will be used are provided in the tech. proposal.
18. Solution Network Architecture
 - Again – great graphs listing the software used and when scans, patching, etc. are done.
19. System Development Methodology
 - Normal PM with much explanation and tables/graphs.
20. Service Level Agreement
 - GEP notes they want to discuss and finalize SLA requirements with State and refers us to the GEP SLA.

D. Security Requirements: pages 75 - 94

1. Cloud Security Alliance (CSA) Compliance
 - GEP supplied a CAIQ in file 3; I will rely on my more experienced SMEs to help evaluate the CAIQ.
2. Security and Privacy Controls
 - No Concerns based on data in the proposal.
3. Security Certifications
 - No Concerns based on data in the proposal.
4. Annual Security Plan
 - GEP details out their annual security plan.
 - GEP notes that they understand NASPO has asked for any additional documents and to see refer to GEP Appendix 2' which is their Information Security Policy. This will need to be reviewed when negotiating.
5. Secure Application and Network Environment
 - refer to GEP Appendix 3' which is their SMART Application Architecture & Security Overview.
6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6. Matrix completed. 2– Medium(1,2) and the rest all "L" Low level of complexity, 1–"CF Configuration Item"(2), 1–"ID In Development"(3), and the rest "A – Available". Solutions/Tools/Modules covered – GEP Core Platform.
 - Mentions backup policies and use of Microsoft Azure backup.
 - GEP meets some of the requirements in this section but need to customize or develop others.
7. Data Security – nothing to add.
8. Personally Identifiable Information Protection – nothing to add.
9. Security/Privacy Issue Occurrence – nothing to add.
10. PII Data Actual/Attempted Access or Disclosure – nothing to add.
11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 95 - 127

- Matrix completed. 1–High(5) and rest “L” Low level of complexity and all “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
 - Seems to have many options for finding help and solutions for customers.
1. Project Management
 - GEP recommends AGILE implementation methodology with sprints and multiple workstreams.
 - They provide graphs and timelines.
 2. Project Implementation Methodology –
 - Reference bullets in #1 above.
 - Roles of both side are explained well.
 - Typical challenges are outlined.
 - The rest is fairly basic project knowledge or definitions of such.
 3. Catalog Support Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 4. Data Conversion Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 5. Interface/Integration Development Services
 - Table and graphs show how the process will work. Seems like it will meet requirements.
 6. Organizational Change Management (OCM Services)
 - Change Management is nice to have as an option. GEP would be performing this. The approach they offer is standard.
 7. Training Services
 - good, maybe a bit more.
 8. Help Desk Services – good.
 - #3 – GEP provides a dedicated team of resources (helpdesk) for users and providers to call 24x5 via phone or email. This is a nice plus.
 - Great.
 9. On-Site System Stabilization Support – nothing to add.

F. Managed Services Requirements: pages 128 - 136

- Matrix completed. All “L” Low level of complexity and “A – Available”. *Solutions/Tools/Modules covered – GEP Core Platform.*
1. Solution Support
 - Lay out roles in GEP and what each role will be responsible for after the implementation.
 - Lay out graphs of how the system is supported as well.
 2. Organizational Change Management (OCM Services) – see section E comments above, but also a nice graph on explaining ADKAR of Change Management.
 3. Training Services – see section E comments above.
 4. Help Desk Services – see section E comments above.
 5. Transition Out Assistance Services
 - GEP says they will be flexible when transitioning out and believes 4-6 months is optimized timeline for transitioning out.

G. Other Available Services: pages 137 - 139

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1
- Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).
- Points to slides 18-37. Which is their Innovations and Value-Added Services Section.

H. Video Demonstrations: pages 140 - Page 140 of their technical proposal – a link

- Yes provided. Detailed and covered all of their 45 min.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (GEP)

CATEGORY #(s): 2

DATE: (09/28/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Preliminary docs provided - no cyber liability insurance
 - GEP Smart Unified Source to Pay software
 - GEP NEXXE Cognitive Supply Nexus
 -
2. Previous Projects
 - Viatris – implemented direct and indirect buying and accounts payable
 - UCAL – Spend Analysis, Sourcing, Contract Management, Supplier Management
 - Chevron – eProcurement not present in project
 - LDS Church – Contract and Supplier Management
 - UMASS – no evidence of eProcurement
 - Reference calls should be coordinated through GEP
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - Combined state and GEP org chart specific to the project
 - Roles defined
 -
5. Litigation
 - None in past 5 years
 -
 -
6. Financial Viability
 - D&B report 10/19/2020 - NB Ventures
 -
 -

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements YES

User Experience YES

Bidder Best Practices and Roadmap AGILE, Maintenance Release/testing tight window for bug fixes, minor/low impact enhancements, manage commercials?

Innovations and Value-Added Features/Services Organizational Maturity Assessment – IT Procurement not identified, spend analysis, Market Intelligence. How is category management providing more value than the solution itself? I expect increased spend visibility, contract compliance, improved Supplier Performance – Is this innovation or additional cost?

Customizations/Extensions YES

Alternative Funding Models "GEP does not have any alternate funding models."

Contract Transition and Flexibility "GEP is able to comply with the contract review process and transition to a state's current contract terms"

Functional Requirements

General Functionality YES - 1 Customized, 3 configurations w/one medium effort, and 36 out of the box.

Supplier Portal - 1 configuration w/medium effort, 1 integration w/high effort, and 21 out of the box

Supplier Enablement/Management 9 integrations w/low effort and 34 out of the box.

Buyer Portal 1 configurations w/medium effort, and 14 out of the box

Need Identification 1 configurations w/low effort, and 6 out of the box

Request through Pay 62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 17 in devp and all w/medium effort and 4 out of box for Pcard, 1 configuration w/low effort, and 20 out of the box for Receiving, 11 out of the box for invoicing.

Catalog Capability 4 configurations w/medium (2) and low (2) LOE, 1 in devp w/low LOE, 34 OOBX

Sourcing/Bid Management 7 configurations w/medium (1) and low (6) LOE, 1 in devp w/low LOE, 141 OOBX

Contract Management 8 configurations w/medium (1) and low (5) and high (2) LOE, 80 OOBX

Vendor Performance 1 configuration w/low LOE, 24 OOBX

Purchasing/Data Analytics 1 configuration w/low LOE, 36 OOBX

Technical Requirements

Availability 7 days/week twenty-four hours/day excluding scheduled maintenance and outages

Accessibility Requirements WCAG2.1 and Accessibility Conformance Report (based off a VPAT)

Audit Trail and History not sure minimum was met for user identifier, date/time stamp, field that was changed and the change that was made.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 2
DATE: 12/30/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Browsers Supported YES Microsoft Edge (Version 70.0 and above), Google Chrome (Version 70.0 and above), Firefox and MacOS Safari
User Accounts and Administration RBAC
User Authentication SAML
Federated Identity Management– SSO MFA
Data Conversion ETL, Cleanse and Standardize addresses (Country, Region, City & Street), “Harmonize”
Interface and Integration CGI Advantage (example) 2 options for integration
Office Automation Integration hosted on Microsoft Azure and integrates with Microsoft Office products
Mobile Device Support GEP Software is a mobile-native procurement platform
Mobile Applications GEPSMART mobile app on Apple App Store and Google PlayStore
Data Ownership and Access Missing?
Data Retention, Archive and Purge Considerations Yes but what standard?
Disaster Recovery Plan Annual test does it include clients, is this Azure’s DR test?
Solution Environments Development/Quality Control, UAT, Training, Production Environments, multi-tenant mode
Solution Technical Architecture YES
Solution Network Architecture YES
System Development Methodology Agile development life cycle using Azure Dev Ops development tools, Functional, SIT, UAT, Regression/Automation, performance testing. Change Request Governance Process.
Service Level Agreement GEP would like to discuss and finalize the SLA requirements

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ
Security and Privacy Controls Did not answer NIST 800-53 question
Security Certifications SOC1 Type II and SOC2 Type II, ISO 27018, PCI DSS v1.1, FedRAMP High, CJIS, IRS Publication 1075, HIPAA
Annual Security Plan No
Secure Application and Network Environment YES
Secure Application and Network Access YES
Data Security YES
Personally Identifiable Information Protection GDPR compliance
Security/Privacy Issue Occurrence reports any high severity security breach within 4 hrs – define high
PII Data Actual/Attempted Access or Disclosure YES
Security Breach Reporting 2 hour and 24 hour notification cannot be met

Implementation Services Requirements

Project Management AGILE, roles/responsibilities defined
Project Implementation Methodology Sm Med Lrg, Risk/Mitigation strategies, Configuration/change control, Issue Tracking/Management,
Catalog Support Services hosted and punchout catalogs
Data Conversion Services Data centralization, Standardization, enrichment, and optimization
Interface/Integration Development Services YES
Organizational Change Management (OCM) Services Human Centric Change Management
Training Services Train the trainer approach no training plan example
Help Desk Services global, severity levels
On-Site System Stabilization Support On site is on call

BIDDER NAME: GEP

CATEGORY #(s): 2-Individual Workstream Implementation

DATE: 8/25/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Heavy marketing visuals in presentation
 - Overuse of market buzzwords
 - Underwhelmingly curious if they perform in all capacities the proposal identifies
2. Previous Projects
 - Results are buzz word driven. No savings identified worthy of expense beyond process efficiencies
 - Results achieved are just marketing focused, with vague points
 -
3. Subcontractors
 - GEP is full-service (why also submitting proposals with subcontractors?)
 -
4. Organizational Chart
 - Separate Org Chart from other GEP proposals.
 - Personnel role responsibilities are general in nature.
 - Different titles of employees from other proposals
5. Litigation
 - No litigation identified
 -
 -
6. Financial Viability
 - D&B results not showing concern
 - Unsure about their subcontract KPMG
 -

A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

- Centralized platform. How is integration with other platforms?
- Do suppliers have access outside of the portal, or is it a member only?
- High levels of functionality
- Non-Value-added work reduction 40-60% is valuable
- Agile no customization to cloud, unclear any potential impact to existing processes
- Bi-Weekly maintenance releases seem overly frequent
- Good gap analysis linking to reporting capabilities
- Would like to see F2F workshops offered as well as virtual
- How does Supplier database incorporate local and OSD vendors?

Functional Requirements

- Interesting how the document process moves from one action to the next
- Show good functionality across different workflows, very robust
- Unsure if catalog search includes both hosted and punchouts. If not a level 2 search that includes the punchouts, buyers are not seeing best value or all products in a seamless manner.
- Concerned about the "Preferred Supplier" and what makes them chosen over others.
- Alludes to level 2 punchouts (searchable in the platform) but only if suppliers allow. How many suppliers allow this?
- Sourcing seems very intuitive
- Vendor Performance is good in the way it creates scorecard type data
- Purchasing data has lots of functionality, would like to better understand if it is perhaps too much
- (RTM Tab 3, line 11, EPROC-SPR-7). Allow supplier access to solicitations, both invited and all others. Response did not meet the requirement. Did not address access to suppliers that have not been invited.

Technical Requirements

- Availability should consider maintenance both planned and unplanned. The method identified is only identifying unexpected events relative to the vendor. The customer is inclusive of all events of any form where the service is unavailable. Their method is not providing accurate percentages.
- Single Sign on is preferred
- Good data normalization
- ERP integration is important as most states have existing solutions they will not abandon

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/13/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- Does not support BYOD. Would Single Sign On at state level allow this?
- Unsure if test environments are available
- Unsure of liability relationship with GEP and MSFT using Azure. GEP reference to MSFT portal only raise concerns with data breaches or problems and who is liable.
- No BYOD support, impact states that do not provide state owned laptops/mobile devices to all employees
- Breach does not include any credit monitoring by vendor or liability acknowledgement

Implementation Services Requirements

- Project Implementation Methodology is robust
- Projected time periods are not discussed, unspecified milestones
- How does future state design consider state needs

Managed Services Requirements

- MSFT Intune is MSFT service, GEP does not manage.
- Are training options varied (virtual/In-Person)

Video Demonstrations

- Dashboard formatting is difficult viewing format
- Can create solicitations within the platform
- Scoring withing platform with weighted percentages or formulas
- Can invite suppliers, can suppliers invite themselves?
- Evaluators score within
- Interesting Parent-Child relationships
- Unknown if shopping search looks at punchout catalogs
- Results show non-contracted items.
- Where do accounting details come from?
- Can reject line items in requisitions or only entire request?
- Compatible with Peoplesoft?
- Supplier management is manual process for data entry?
- Does supplier profile integrate with Oracle or other platforms?
- supplier scorecard with set evaluation criteria
- Reporting seems intuitive
- Reference to “flipping” throughout is a distraction

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

7	Single point of entry for all procurement activity based on their needs or use of the solution	
7	Smart Routing – Wizard driven capabilities	Positive
7	Portal – informs users and supports user work management	

User Experience

8	Wizard driven capabilities	Positive
8	Mobile app has access to many areas. Catalogs, create requisitions, approvals and to view dashboard.	Strength
8	User sets up the look of the dashboard and it stays that way for next login	

Bidder Best Practices and Roadmap

14	Approach to implementation is based on progress made and not timeline	Positive
15	Quarterly general release sent to UAT for a week and then to production. It is sent to production in Default Off mode	Weakness
15	Maintenance release every 2 weeks to fix bugs. Handle like quarterly release – sent to UAT for 1 week first. “the participating entity is not obligated to accept and implement any recommendations.”	Weakness

Supplier Portal

SPR	GEP will onboard all suppliers in the beginning and approved vendors will have access for ongoing basis	Weakness
-----	---	----------

Supplier Enablement/Management

54	Yes, meets requirements and can be used to pre-qualify suppliers	
----	--	--

Buyer Portal

58	Yes, meets requirements. Users can track the entire lifecycle of the transaction from Request – Invoice	
----	---	--

Need Identification

62	Yes, meets requirements	
----	-------------------------	--

Request through Pay

64	Yes, meets requirements. What if there is no contract to match to an order?	
67	3 ways for service procurement.	
PRD 1-12	Yes	
PRD 13	Did not answer correctly	
PRD 14-27	Yes	
PRD 28	Yes, it can handle a trade-in at line item. Would we want to be able to have a negative PO total? For any reason? Not possible here.	Question
PRD 29-36	Yes	
PRD 37-39	User must enter the non-contract items. System does not capture this item for the future or to update a state contract.	Weakness
PRD 40-55	Yes	
PRD 56	Should provide a means to limit creation of backdated purchases. GEP would like to further discuss this requirement in detail with State/Participating entities	Question
PRD 57-62	Yes

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Catalog Capability

70	Hosted Catalogs, Punch out catalogs and internal catalogs. At the time of implementation, GEP will configure any state/participating entity specific punch out catalogs.	
CAT 1-18	Yes	
CAT 19	Can support negative number on line item but cannot have a negative number for the total.	
CAT 20 -37	Yes	
CAT 38	Contracts should be searchable without having to login. State can identify fields that should not be shown	In development
CAT 39-40	Yes	

Sourcing/Bid Management

SRC 1-36	Yes	
SRC 37	Updating a template that is available to all users may cause updates to other's templates already in use	Weakness
SRC 38-55	Yes	
SRC 56	SRC has a "what if" analysis feature that allows sourcing managers to dynamically weigh/assign different weightables to evaluators/sections/price sheets	Positive
SRC 57-66	Yes	
SRC 67	Vendors must contact the buyer to be added to an event if they are not registered.	Weakness
SRC 68-76	Yes	
SRC 83	Pre-responses/pre-proposal event on-line sounds like just a link sent out to supplier. Event takes place and can be recorded and then link put on public procurement website	
SRC 84-101	Yes	
SRC 102	No option for electronic signature	Weakness
SRC 107	Cannot block electronic submittal when asking for only hard copy	Weakness
SRC 108	Yes	
SRC 109	Buyer cannot enter in supplier's proposal so it is electronic. Future functionality	Weakness

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Same information as provided in Category 1
 - SMART is the software
 - Extensive qualifications
2. Previous Projects
 - Oil company, church and a university
 - **Did not supply dates so we could see if the project was completed**
 -
3. Subcontractors
 - Will not use subcontractors and only use their own consulting staff
 -
 -
4. Organizational Chart
 - Supplied both company and state entity org chart.
 - Role names and definitions were supplied
 -
5. Litigation
 - Stated no litigation to report
 -
 -
6. Financial Viability
 - Supplied DUNS Report
 - Low Risk
 -

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual SME Comments: This proposal is the SAME proposal submitted for Stage 2 Category 1 Full Solution. I have copied over the evaluation notes and the RTM from category 1 to category 2 Individual Workstreams

One of my major concerns with this response is the vendor has requested many times that they would like further discussion on some of the requirements listed. This response also has many concerns where the entire requirement listed was not addressed in their response.

I believe the concerns would need to be addressed (i.e., PCard functionality) in order for their solution could be offered. I think some of the "clarifications" need be addressed for me to feel comfortable with their solution offering.

General Principal and Requirements

Key Solution Functionality Elements

- PDF Page 5 – Need form completed to be taken to proper module. Page 6 -Will configure catalogs and punchouts. Restrict access to documents. STRENGTH – Cross Functional reporting. Will configure to state specific cases.

User Experience

- STRENGTH Page 8 PDF – User personalization and access tasks from landing page
- Mobile Capability

Bidder Best Practices and Roadmap

- PDF Page 13 – STRENGTH – Best Practices. PAGE 15 – Default OFF Releases!

Innovations and Value-Added Features/Services

- PDF Page 19 – Organizational and Opportunity Assessment, Market Intelligence and Category Management. Lots of information and informational charts!

Customizations/Extensions

- PDF Page 39 – Highly configurable and lays out customer roadmap

Alternative Funding Models

- CONCERN – No alternative funding models available.

Contract Transition and Flexibility

- This vendor complies to this statement.

Functional Requirements

General Functionality

- STRENGTH EPROC-GEN-5 – Multiple options for posting data.
- WEAKNESS -EPROC-GEN-7 – Fill form to gain access?

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP (Cat 1 & 3)

CATEGORY #(s): Stage 2, Category 2 – Individual Work Streams

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- WEAKNESS - EPROC-GEN-8 – Can search by commodity code?
- STRENGTH - EPROC-GEN-11 – Can increase the file limit of 30MB.
- STRENGTH - EPROC-GEN-17 – Nice to be able to have new release data in the OFF by default mode.
- WEAKNESS - EPROC-GEN-25 – Does not allow email domain change to state email domain on emails sent from the system.
- CONCERN - EPROC-GEN-26 – Need to integrate with ERP to track administrative fees.
- STRENGTH - EPROC-GEN-36 – System has its own “built in” signature process but can integrate as well.

Supplier Portal

- STRENGTH - EPROC-SPR-13- Multiple ways for supplier to submit invoices.
- CONCERN - EPROC-SPR-15 – Did not mention if the SUPPLIER could not get to the historical data in the supplier portal?
- CONCERN - EPROC-SPR-19- Must submit administrative fees via an integration.
- CONCERN - EPROC-SPR-20 – Response seems to be on the user side rather than the supplier portal side?
- CONCERN - EPROC-SPR-23 – Response seems to be on the user side rather than on the supplier side?
-

Supplier Enablement/Management

- STRENGTH - EPROC-VDR-6 – Each contact can have their own log in to the supplier portal.
- CONCERN - EPROC-VDR-13 – Response did not address the foreign suppliers designation?
- STRENGTH - EPROC-VDR-16 - Triggers expire notifications on certificates
- CONCERN - EPROC-VDR-20 thru EPROC-VDR-27 – These responses ALL refer to the response in EPROC-VDR-19 which provides “link” to a management service solution. We need to ask for clarification on these requirements.
-

Buyer Portal-

- CONCERN - EPROC-BPRT-6 – System admin might have to run reports on behalf of the user?
- STRENGTH - EPROC-BPRT-10 – Can perform a “system-wide” search from the buyer landing page.
- CONCERN - EPROC-BPRT-14 -Need to discuss further specific integration requirements? Needs to be addressed at implementation.
- CONCERN - EPROC-BPRT-15 – Did not state if communication would default to user email address?

Need Identification

- PDF PAGE 62 - The need starts with a request form user needs to fill out.
- Meets all other requirements

Request through Pay

- PDF PAGE 66 – Core Features list is pretty extensive
- STRENGTH - EPROC-PRD-8 – Collated purchase requests into one centralized dashboard.
- CONCERN - EPROC-PRD-24 – Can you limit the user access to the form?
- CONCERN - EPROC-PRD-46 – Did not address the political subdivision unique chart?
- CONCERN - EPROC-PRD-47 – Can you control fields availability based on the agency?

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP (Cat 1 & 3)

CATEGORY #(s): Stage 2, Category 2 – Individual Work Streams

DATE: 11/08/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-PRD-56 – Vendor response states wants further discussion. Not sure they can meet this requirement.
- CONCERN - EPROC-PRD-59 – Did not submit information of calendar functionality.
- CONCERN - EPROC-WRK-9 and EPROC-WRK-10 – Did not state if the user could enter a reason for workflow by pass?
- WEAKNESS - EPROC-WRK-22 – Referenced a previous requirement as their response to this requirement.
- CONCERN - EPROC-PO-2 – Supplier wants further discussion.
- CONCERN - EPROC-PO-15 – Did not state if they could print in groups?
- CONCERN - EPROC-PC-1 thru EPROC-PC-3, EPROC-PC-5 thru PC – 8, PC-10 thru PC – 15, PC -17 thru PC -19 and PC - 20 – Pcard functionality in development.

Catalog Capability

- PDF Page 69 – Has 3 catalog options with the Internal Catalog being new to me.
- CONCERN - EPROC-CAT-11 – Supplier has requested further discussion on ability to obtain quotes.
- CONCERN - EPROC-CAT-20 - Concern - Response is quick quote process where I thought we were looking for the ability to enter a quote in the punch out catalog?
- CONCERN - EPROC-CAT-38 – Search catalogs without logging in is in development.

Sourcing/Bid Management –

- PDF Page 74 – Comprehensive Automatic Scoring.
- CONCERN - EPROC-SRC-15 and SRC – 16- Supplier would like further discussions of IFQC and IFQP
- CONCERN - EPROC-SRC-19 thru EPROC-SRC-21 – Supplier response did not address if these event types could be done in the system?
- CONCERN - EPROC-SRC-28 – Response was directed at the supplier side and not for participants on the buyer side (solicitation participants).
- CONCERN - EPROC-SRC-37 – Need ability to update templates automatically but this supplier does not recommend.
- CONCERN - EPROC-SRC-83 – Did not address if recording of pre-proposal conference could be stored as part of the event?
- CONCERN - EPROC-SRC-102 – Response is NOT an electronic signature process.
- CONCERN - EPROC-SRC-109 – The ability to enter paper responses in under development and will aligned with entity's go live date.
- CONCERN - EPROC-SRC-130- Supplier wants further discussion on online collaboration.

Contract Management

- PDF – Page 76 – Key Highlights to their Contract Management Solution.
- The contract request form goes directly to creation of a contract avoiding the need for a bid.
- STRENGTH - EPROC-CNT-8 – Mass update to contracts that have the same contract clause that has been updated.
- STRENGTH - EPROC-CNT-12- Built in electronic signature process but can also integrate.
- CONCERN - EPROC-CNT-18 – Supplier response does not address the sharing of responsibility of the contract record.

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2000.
 - Cloud based Spend Management Solutions.
2. Previous Projects

5 projects given, four of them States and one city dept. The projects meet Category 2.

 - City of New York. Implementation of Full suite of Ivalua software.
 - State of Maryland. Implementation of Ivalua's complete platform. Eprocurement system.
 - State of Ohio. Implemented the Source to pay portion of Ivalua.
 - State of Alabama. Implemented the Source to pay portion of Ivalua.
 - Los Angeles Dept of Water and Power. Implemented Solicitation and Supplier Information Mgt. solution.
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart is provided; however, **no job descriptions.**
5. Litigation
 - Vendor states there are no litigation.
6. Financial Viability
 - Provided financial statements (3 years)

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 1/8/2022

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Comments:

Overall/General

- The Ivalua Solution.
- SaaS Hybrid Cloud Solution.
- State that they built it for the public sector.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 3 - 7

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single landing page for the single point of entry with same look and feel throughout the whole system.
- Smart Routing: workflow is tailored to meet each organization's needs
- Compliance: Ivalua continues to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding
 - Subcontractor Reporting
 - Cooperative Reporting
- Portal: All users (internal and external) have ability to access their account through portal and personalize their page.
- Open Marketplace Environment: They express they want it like a “Google experience” - modern digital and ecommerce experience, driven by search and content.
- Integration: Robust Integration Toolbox with capability to connect with multiple ERP solutions, third-party data providers, and suppliers' systems. Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI,

SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.

- **Workflow:** Ivalua expresses this area as one of their “crown jewels” – area of expertise.
- **Document Management:** Core platform with an integrated foundation.
- **Reporting:** Many out of the box reports and the ability for users to create their own. Reports can be simple to graphs, bar, line, pie, etc.
- **Configurable:** Ivalua claims their SaaS solution is the most configurable hosted solution on the market as extensively reported by industry analysts.
- **Transparency:** public portal allows for transparency and authorized users have ability to get oversight through audit trail.

2. User Experience – p. page 7 - 8

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- **Ivalua's explanation to User Experience is short, but addresses most of the points. I do not see anything on Wizard-driven capabilities.**

3. Bidder Best Practices and Roadmap – p. page 9 - 11

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- **Major Software Product releases are delivered by the Ivalua R&D division twice a year.**
- **Client can choose to upgrade their client application either 18 months or 24 months**
- **Ivalua leverages advanced technologies such as machine learning, natural language processing (NLP) etc. and are members of various industry and procurement or supply chain associations, that contributes to their knowledge.**
- **Updates can be scheduled by the State**
- **During the implementation phase, Ivalua together with State will work to better, more effective solutions, processes, and approaches, based on their experience. These will then be built into the design of the solution.**
- **Product Roadmap: No direct 3 year map, but a high level of what is being worked on.**
 - Investing heavily in developing specific capabilities to meet Public Sector Procurement needs. Approximately 60% of the roadmap items coming from the customers information.
 - They have a dedicated Public Sector team.
 - Enhancements in mobile experience.
 - Invoicing and payments investments.
 - Enterprise-wide AI powered **Contract Lifecycle Management (CLM)**
 - Supplier Risk and Performance – adding and enhancing new features / capabilities
 - Highest level of security – investing resources to maintain highest level.
 - Continue toward more seamless and simpler.

4. Innovations and Value-Added Features/Services – p. page 11 - 13

In addition to the stated requirementGEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

1. **Help Desk – level 1:** Provide suppliers or internal users to get on- demand help from Ivalua if they run into difficulties using the system. Level 1 help desk is the users first interaction when they need help, as opposed to a State/organization managed help desk.
2. **Cooperative reporting enables:**
 - Definition of cooperative contracts within the contract record, including administrative fee
 - Reports automatically generated and sent to suppliers on a given time period (ex. quarterly)
 - Supplier submission of spend on cooperative contracts by external bodies with automated calculation of owed administrative fees
 - Workflow for approval of supplier reports
 - Integration with a payment provider to capture administrative fees if needed

5. Customizations/Extensions – p. page 14

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- The Ivalua SaaS platform relies on configuration, not custom code, as the means for clients to modify and maintain a solution that meets their needs.
- enhancements are not custom code but instead configuration & data and that configuration & data is carried forward with the State's instance as the Ivalua solution is updated.
- Ivalua keeps an extra environment of a copy of the State's customizations / extensions.

6. Alternative Funding Models – p. page 14

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- **No alternative funding proposed. They are open to discussion and options.**

7. Contract Transition and Flexibility – p. page 14

- **Ivalua answers this in one sentence: *Ivalua is certainly willing to enter into good faith discussions with Participating Entities that wish to explore transitioning their current contract under the terms of the newly awarded Master Agreement.***

B. Functional Requirements: pages 28 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. **General Functionality.** Tab 2, GEN-1 through GEN-40 and - p. 15 - 16
 - a. 1-C-“Customization/Extension” and 7-CF “Configuration Item”
 - b. 6 – Medium
 - #4 – No extra cost for integration between solutions – can all be done in software.
 - #9 – Able to use our commodity code, but will need to configure a crosswalk.
 - #35 will need configuration
 - #36 – **Esignature capability.** Ivalua system allows for native plugins of popular softwares (DocuSign, Universign, and AdobeSign), but doesn't have it built into Ivalua system.
2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 16 - 18
 - a. 4-CF “Configuration Item”, 1-TP-“Third Party”
 - b. 3 – Medium
 - #1 - The Ivalua supplier portal is completely free of charge for suppliers
 - #19 – Submitting of admin fee payments will require a third party payment provider.
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 18 - 25
 - a. 5-“INT-Integration/interface”, 2-TP-“Third Party”, 1-“C-Customization/Extension”, 4-CF “Configuration Item”, and 1-N“Not Available”
 - b. 7 – Medium
 - Seem to meet requirements except for:
 - VDR 18, 19, 20, 24, 25, 26, and 27. – All will require integration with a third party system either for tax or SOS, etc. **Ivalua can integrate, but State needs to find their own third party solution.**
 - VDR 31 – Configuration needed on workflows to meet each organizations approvals.
 - VDR 32 – Does not meet requirement – vendor states due to security reasons.
 - VDR 38 – 40. Although realtime, scorecards will need to be configured.
 - VDR 43. Configuration needed.
4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 25 - 26
 - a. 1-“INT-Integration/interface”, 5-“CF-Configuration Item ”
 - b. 3 – Medium
 - BPRT 8 - Ivalua provides the ability to drive notifications for various alerts both on screen and through email, **however not a daily summary notifications. CF needed.**
5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 26 - 27
 - a. 1-“C-Customization/Extension”, 1-“CF-Configuration Item ”
 - b. 2 – Medium
 - NEED 1: The fully integrated system has a single landing page when a user logs in.
 - NEED 4: Ivalua workflows have configurable steps that allow for setup in any sequence, the ability for variations to be invoked based on the context (user's organization, commodity, dollar value, geography, etc.), and workflows can be set to require specific "actors" who have profiles to either approve, amend or deny a request coming to them. Workflows include both manual (human input needed) and "automatic" steps that apply business rules to send alerts and/or route objects (Requisition, PO, Invoice, Contract, sourcing award, etc.) accordingly.
6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 27 - 32
 - a. 2-“INT-Integration/interface”, 1-TP-“Third Party”, 6-“C-Customization/Extension”, 38-CF “Configuration Item”, 5-ID “In Development” and 2-N“Not Available”
 - b. 21 – Medium, 2 - High
 - PRD 12 – **CLARIFY** – Does “force” attaching the terms and conditions of contract to the requisition and carry forward to POs and beyond mean the State will manually need to attach each time (transaction)?
 - PRD 15 – States no size limit to amount of data a client can store – **only cost \$\$ to consider. If enter into Contract with Ivalau make sure to spell this out in the Contract.**
 - PRD 28 – Their system can handle negative items with some configuration.
 - PRD 29 - Their system can handle \$0 value items. **It does not mention configuration.**

- PRD 37 – Ivalua does not have this requirement. They explain it as: “This is possible if data from external sources are loaded through spend analytics for comparison. Web scraping of retail sites to compare pricing to the larger market (outside of the Ivalua system) is not supported.”
 - WRK 1 – 28: Workflow Functionality seems to be a strong suit as it is very streamlined and customizable as needed – a big plus for States. Can meet all requirements with none to some configuration.
 - Meets most PO requirements.
 - PO 6 - Only meets ½ requirement. Creates PO # in system for you. Does not let create own PO number – would need to be configured.
 - PO 16 – Esignature – doesn’t come with the system. Will need to be State’s third party that can be integrated.
 - PO-15: System does not have the capability to have two versions of a printed purchase order.
 - Payment Card Functionality PC 1 – 21: This is not a strong area for Ivalua. They system currently does not provide many of the requirements with a promise of an anticipated release in 2022 that will or customization. A work around will need to be established for Pcards if this system is chosen by a State.
 - Request through Pay Receiving RC1 – 21: Meets all requirements with some configurations needed.
 - Invoicing INV 1 – 11: Meets all requirements with some configurations needed.
7. **Catalog Capability** - Tab 3, CAT-1 through CAT-40 and - p. 33 - 36
- a. 12-CF “Configuration Item”
 - b. 2 – Medium
 - CAT 6 & 7: Meets the requirement of Unlimited catalogs and items per catalog.
 - Meets all requirements with some configurations needed.
8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 36 - 44
- a. 2-TP-“Third Party”, 33-CF “Configuration Item”, 8-“C-Customization/Extension”,
 - b. 6 – Medium, 1- High
 - E-signature third party applies here also.
 - Posting items to the State’s public procurement website (i.e. notice of award and solicitation documentation) requires a High amount of customization and Ivalua recommends another approach. SRC76
 - Otherwise SRC 1-151: Meets the requirements of Sourcing / Bid Management Workstream with some configurations needed.
9. **Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 44 - 48
- a. 3-TP-“Third Party”, 24-CF “Configuration Item”, 3-“C-Customization/Extension”,
 - b. 6 – Medium
 - CNT 12 – 14 requirements – Same E-signature Third Party.
 - CNT 64 – Concern having a link to the punchout/catalog. Not standard functionality in Ivalua, could be customized. Ivalua recommends a standard public item browse in which users can search by contract.
10. **Vendor Performance** Tab 3, VPE-1 through VPE-25 and - p. 49 - 50
- a. 14- CF “Configuration Item”
 - VPE 1 – 11 all require Configurations which are suggested as a questionnaire for metrics.
 - Remaining items meet the requirements of vendor performance none or little configuration needed.
11. **Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37 and - p. 51 - 54
- a. 1-ID-“In Development”, 7-CF “Configuration Item”, 1-“C-Customization/Extension”, 1-INT”Integration/interface”
 - b. 3 – Medium

- PDA 3 – 5: System has a large reporting tool with a variety of adhoc reports that are exportable in common formats.
- PDA 20 – 21: Pcard related reports are not available as the system does not have the function yet – In 2022 version software update.

C. **Technical Requirements:**

1. **Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Page 55. Ivalua is accessible 24/7 days a week. They guarantee a Hosting SLA uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours. Scheduled maintenance occurs once a month on a weekend around midnight and the system is down for a maximum of 30 minutes if required.
2. **Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
 - Page 55. Ivalua is working with a third party to implement accessibility of the system in accordance with the WCAG 2.1; **however, do not have right now. VPATs are completed.**
 3. **Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5 and - p. 56
 - TECH 5 - In the Ivalua Solution, while a user is logged on, all actions and activities are registered, logged and time-stamped.
 - Ivalua meets all the requirements, no concerns.
 4. **Browsers Supported** - p. 56 - 57
 - The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.
 5. **User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20 and - p. 57
 - a. 4- CF "Configuration Item"
 - b. 1 – Medium
 - TECH 6: Access to the app is controlled by an authentication method.
 - TECH 11 – Information is available in real time.
 - TECH 12 – requires CF. Linked accounts set up for internal users only but can be configured to allow a supplier account.
 6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25 and - p. 58
 - a. 1- CF "Configuration Item"
 - TECH 22: Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers.
 - TECH 24 – **CLARIFY** – the system has a password policy, **but unsure if it can conform to the State's password change policy.**

Federated Identity Management – Pages 49 – 50 and - p. 58

 - Users will only require one ID and pw to access the full solution.
 7. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 59
 - a. 2- N "Not Available", 2- CF "Configuration Item"
 - b. 2 – High
 - **TECH 27 – 30 are not supported** (*conversion of in-process purchase request & POs, Active Solicitation data, *All Contract data, and Vendor Performance data). *TECH 27 and 29 can be configured but are rated a very high level of complexity.
 - It seems any historical spend, user account data, and chart of accounts data requirements can be met.
 8. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 59 - 60
 - a. 2- CF "Configuration Item",

- TECH 35 - Ivalua totes their strong integration capabilities with major ERP systems.
 - TECH 36 – **CLARIFY**. They list that they can import and export data with 3 out of the formats the State requests in the requirements. **What about the others?**
9. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 60
 - Meets all Word products mentioned.
 10. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 61
 - Is responsive on a mobile device screen, **but does not have a mobile app.**
 11. **Mobile Applications** - TECH 62 and - p. 61
 - TECH 62 - Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari.
 - **Does not have a mobile app.**
 12. **Data Ownership and Access** - p. 61
 - States remain owners of their own data and control own data.
 - Through term of the contract, State can export data using features available in the Ivalua system through the Query extraction tool.
 13. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 62
 - **CLARIFY** Ivalua responded in TECH 63: *"Ivalua maintains data in its systems with Ivalua's data retention schedule."* But on page 62 it's the **State's data** and they decide what information to be stored, how, when in accordance with the Contract.
 14. **Disaster Recovery Plan** - p. 62 - 63
 - Ivalua does have a Business Continuity (BC) and a Disaster Recovery (DR) Program based off on ISO/IEC 22301 standard framework. The plan is reviewed and approved by Ivalua management annually. Additionally, this is communicated to all relevant stakeholders.
 - Have secondary servers geographically located elsewhere.
 15. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 63
 - Provided 3 environments (Development, Acceptance, and Production).
 - Training or other environments are **EXTRA**.
 16. **Solution Technical Architecture** - p. 63 - 65
 - Ivalua cloud features a "multi-instance" architecture of which isolates all customers' data from each other.
 - All interactive end user activities are performed using a standard Microsoft, Firefox, or Chrome web browser. There is no requirement for customers to install any client software on any desktop, laptop, tablet, or smart phone to access their Ivalua instances.
Application Arch. – Servers are in undisclosed location. The app. is built on Microsoft 64-bit technology stack, including .NET, C#, ASP.NET SQL Server and SQL Server Analysis and open standards such as REST Web Services, JavaScript, HTML, XML, and JSON.
 - Ivalua also provides an EDI tool as part of the products supporting SFTP interface, AS2 and REST APIs, Ivalua Solution also integrates off-the-shelf packages (COTS and Open Source).
 - Diagrams provided.
 17. **Solution Network Architecture** - p. 65 - 67
 - Diagram provided. All Ivalua's data center/IaaS partners adhere to stringent data center certifications such as: ISO 9001/14001/ISO 27001/SOC I and II
 18. **System Development Methodology** - p. 67 - 68
 - Seems to meet.
 19. **Service Level Agreement** - p. 68
 - **Ivalua attached their own SLA, but I do not see where they reviewed the RFP's SLA or commented on it.**
- D. **Security Requirements:** p. pages 69 - 87
1. **Cloud Security Alliance (CSA) Compliance**
 - **CAIQ completed.**
 2. **Security and Privacy Controls**
 3. **Security Certifications**
 4. **Annual Security Plan**
 5. **Secure Application and Network Environment**
 6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.

- Requirements in this section are met.
- 7. **Data Security** – nothing to add.
- 8. **Personally Identifiable Information Protection** – nothing to add.
- 9. **Security/Privacy Issue Occurrence** – nothing to add.
- 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
- 11. **Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements:

1. **Project Management** p. 88 - 90
Ivalua's project methodology is a semi-agile based design that is typically composed of the following phases.
 - MOBILIZE
 - EXPLORE/DESIGN
 - BUILD/CONFIGURATION
 - TEST
 - DEPLOY/GO-LIVE
 - RUN
 - Table on page 89 along with a recommended project team structure and percentage of times of each role
 - Deliverables they suggest are: Kick-off presentation, Implementation project plan, status report template, design document, test plan / scripts, cutover plan, and configured environment and integrations.
2. **Project Implementation Methodology** p. 91
 - Rapid deployment and prototyping and agile development.
3. **Catalog Support Services** p. 91 - 92
 - Import process include 2 stages
 - Creating and loading the file
 - Controlling and approving imported data.
 - Supplier Created Catalog
4. **Data Conversion Services** p. 92
 - Ivalua uses partners for data conversion services.
 - They provide a link to an updated list and information on Ivalua partners:
<https://www.ivalua.com/company/partners>.
5. **Interface/Integration Development Services** p. 93
 - Ivalua's approach to integration is to integrate by configuration by mapping State's data to Ivalua data.
 - Connectors include: REST API (json/xml), AS2/EDI, HTTPS, sFTP, OCI, IDOCs and more.
6. **Organizational Change Management (OCM Services)** p. 94 - 95
 - It does not seem Ivalua meets the OCM minimum requirements entirely. They discuss each point; however, I would like to see the tools used in each section and outcome reports/plans that are more typical of OCM.
7. **Training Services** – p. 95 - 96
 - Provide E-learning with eventual Certificate that includes:
 - Key-user Training
 - Administrator Training
 - Technical Administrator
 - Also offered are other training methods: Instructor-Led Training, Web Based, Job Aids, Simulations, and Quick Reference Guides.
8. **Help Desk Services** - Tab 6 IMPL 1 – 5 and – p. 97-98
 - IMPL 3 through 5: Do not have a live chat feature
 - The subscription provides Technical Support (Level 3):
 - Defect requests and corrective maintenance.
 - Maintenance releases and proactive maintenance (new major release upgrade for innovation)
 - Questions on Product

- Specific enhancement analysis (and through partners when applicable)

In addition to the Application Maintenance included in the SaaS, Ivalua provides three optional types of support:

- End-users Help-desk;
- Suppliers Help-desk;
- Administrators Configuration Support.
- A Value-Added option is available also for extra cost \$\$ – see #4 page 3 above.

9. On-Site System Stabilization Support – p. 98

- Provides on-site support (they call it Hypercare) for 3 months after go-live. Meets requirements.

F. Managed Services Requirements:

1. Solution Support – p. 100 - 102

- Yes met. Fully explained – see pages 100-102 of proposal.

2. Organizational Change Management (OCM Services) – p. 103

- They state they include OCM as part of implementation proposal section and do not see the need for it here.

3. Training Services – p. 103

- They state they include Training Services as part of implementation proposal section and do not see providing additional training services.

4. Catalog Support Services – p. 103

- They state they include Catalog Support Services as part of implementation proposal section and do not see providing additional catalog services.

5. Help Desk Services – p. 103

- See Helpdesk response in 17e.

6. Transition Out Assistance Services – p. 105

- Hold State's processed data and files for limited period of time according to Contract then delete according to Contract. A backup can be provided to client upon request.
- Will work with PE to assist with understanding their requirements and tailor a plan and scope to support the Transition Out activities. No detail is provided.
- Not much detail overall in this section.

G. Other Available Services: p page 106: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- **Aware** – in-house developed tool that tracks all the activities of the production instance and generates statistics like simultaneous users, hit rate, response times across various pages of the application, overall response time, errors etc.

H. Video Demonstrations:

- 44 minute demo. Well done from beginning to end. Was able to follow the eprocurement process from beginning to end of each module of their total solution.
- .

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (Ivalua Inc)

CATEGORY #(s): 2

DATE: (09/28/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Preliminary docs provided, 10 mil cyber liability insurance
 - cloud based Spend Management solutions
 - S2C (source to contract) and P2P (Procure to pay)
 - Ivalua solution is modular: Supplier Risk & Performance, Solicitations & Bid Management, Contract Management, eProcurement, Invoicing, and Spend Analytics
 -
2. Previous Projects
 - City of New York - SRM, eSourcing, Contracts & Catalogs, eProcurement, Invoicing and Business Intelligence
 - State of Maryland - implemented eMaryland Marketplace Advantage (eMMA), digital platform integrates with other State systems for all users and procurement processes
 - State of Ohio – “OhioBuys” an online purchasing solution for buyers within state government and suppliers to the government
 - State of Alabama - Ivalua's Source to Pay solution
 - Los Angeles Department of Water and Power - Solicitation and Supplier Information Management solution; part of the Ivalua Source to Pay platform
 - Did not provide client contacts now but will if they move forward in selection
3. Subcontractors
 - Ivalua Cloud (except for Azure based regions) is hosted in third-party datacenters, and all the infrastructure equipment is owned, administered, and monitored by Ivalua personnel only. Since Ivalua does not rely on any 3rd party personnel or 3rd party infrastructure, we know at all times where the client data is stored.
4. Organizational Chart
 - Combined state and Ivalua proposed project org chart
 - Roles not defined
5. Litigation
 - No litigation in past 5 years to impact this contract
6. Financial Viability
 - Financial statements provided with 2019 being most recent

RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Ivalua
CATEGORY #(s): 2
DATE: 12/31/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Catalog Capability 12 configurations w/medium (2) and low (10) LOE, 1 Not available, 27 OOBX
Sourcing/Bid Management 33 Configurations with medium and low level of effort , 2 third parties with low level of effort, 8 customizations with 1 medium and 7 low level of effort, 108 OOBX
Contract Management 3 customizations with low level of effort, 24 configurations w/low and medium LOE, Three Third parties with low level of effort , 58 OOBX
Vendor Performance 14 Configurations with low level of effort , 11 OOBX
Purchasing/Data Analytics, 1 customization with medium level of effort, 7 configurations with low level of effort, 1 in development with medium level of effort, 1 integration with medium level of effort, 27 OOBX

Technical Requirements

Availability Accessible 24 hours a day seven days a week hosting SLA uptime 99.8% outside of scheduled maintenance.
Accessibility Requirements Working towards meeting WCAG 2.0 level AA. Working with third party company to audit and value a platform VPAT completed in available upon request
Audit Trail and History All user actions and activities are registered logged in time stamped. Every transaction created every status change every movement to the next step in a workflow in every addition or deletion of a data item is logged. If audit trail must be activated for specific field the auditable checkbox can be marked corresponding to the field on the value a table.
Browsers Supported Internet Explorer all Microsoft supported versions , Microsoft Edge last three major releases, Chrome last three major releases, Firefox last three major releases.
User Accounts and Administration Application pages and functions are controlled by profiles , authorization, and perimeters. A perimeter can be geographic or functional , or a combination of both. User roles and user access are defined through administrative components. Only users with the appropriate profile can load a page or execute a function. Possible to limit the data access of business objects on a per user basis.
User Authentication Supports multiple authentication schemes; login password authentication, single sign on with saml 2, two factor authentication, reverse proxy II S agent. Password rules are fully customizable.
Federated Identity Management– supports SAML 2.0 protocols for Single Sign On
Data Conversion Conduct a data assessment. Data strategy will be established identifying the data conversion scope. Leverage ivalua tools. Combination of ivalua and participating entity resources perform data conversions which include methodology to perform several iterations in small batches to test and validate. Too Simple? Data cleansing not evident at the source or during testing.
Interface and Integration Integration capabilities with major ERP systems and standard integration with suppliers and 3rd party business services. Offer standard interface templates out of the box.
Office Automation Integration Word excel and PDF
Mobile Device Support Screen menus change from PC layout to mobile friendly layout.
Mobile Applications Mobile solution is not based on mobile app but mobile web solution
Data Ownership and Access Applies a single data classification to all customer data. Internally customer data is confidential and limited to a small number of individual individuals on a need to know basis. Customers remain the data owner and data controller of all data and control it in accordance with their access control data retention and data classification policies. Through the term of contract customers can export data.
Date Retention, Archive and Purge Considerations Customers decide what information is to be stored, how it is to be used, and how long it is retained. I value a does not delete or modify customer data unless requested by the customer , and only processes data in accordance with contractual obligations and customers configuration of their instances

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/31/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Disaster Recovery Plan BC and Dr program is based on ISO I EC 22301 standard framework and is tested annually. Not clear if clients are involved with testing unless they are relevant stakeholders.

Solution Environments Development, acceptance, production.

Solution Technical Architecture Multi instance architecture delivers a logical single tenancy by isolating all customers data from each other. Application servers are in a discrete network segment. Database layer consists of database servers, installed in a discrete non Internet routable network segment. No Co mingling of any customer data between application instances and databases.

Solution Network Architecture Dedicated DMZ, network segmentation, dedicated URL, and site to site VPN which is a paid service. Intrusion detection system and intrusion prevention system monitors.

Firewalls filter inbound and outbound connections to the Internet as well as between intra sites VLAN zones. VLAN partition various networks. Principle of least access. Monitoring logs unexpected network activity and notifies staff in real time via emails and text messages physical access control through identity control, badge access, interior and exterior video surveillance . Security guards 24 7365 dedicated locked racks on interruptible power supply with diesel generator redundant heating ventilation air conditioning firesafety inert gas all components are fully fault tolerant including uplinks storage chillers HVAC systems HV AC everything is dual powered.

System Development Methodology Open web application security project OWASP. Secure SDLC policy and procedures. New features are evaluated for security impact during design phase with regular code reviews peers and SA St tools. Tested for effectiveness during the QA process. Development process based on agile methodology with iterative approach. Penetration testing conducted prior to major software release by independent security firm. Cloud services are in accordance with NIST security focused configuration management of information systems guidelines. All application changes and updates are at the customer request and controlled by the customer they are performed behind the scenes for minor updates or through scheduled downtime for major updates.

Service Level Agreement SLA performance credits When performance falls below 99 point 8%. RTO 48 hours 8 hours 4 hours RPO 24 hours 24 hours 12 hours these are standard premium and platinum service levels and presumably additional cost

Security Requirements

Cloud Security Alliance (CSA) Compliance CAI Q completed

Security and Privacy Controls currently validating controls and safeguards against NIST SP 800 53 revision 4 moderate

Security Certifications ISO IEC 27001, SOC2 , ISAE 3402 Europe , annually audited for HIPAA. Not currently audited for PCI DSS compliance. Fedramp ready with our Gov cloud

Annual Security Plan Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE3402 (Europe).

Secure Application and Network Environment Ivalua has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.

Secure Application and Network Access Ivalua uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest

Data Security Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers.

Our model creates a very distinct boundary between the data of each client. Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also

facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances.

Personally Identifiable Information Protection compliance with the GDPR

Security/Privacy Issue Occurrence Ivalua has a Security Incident Response Plan and Procedure; reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours. Details, special cases, and additional terms can be discussed during discovery.

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management Methodology is a semi agile based designed . Phases include mobilize, explore design, build configure, test, deploy go live, run. Customer resources to support project; project sponsor 15% project manager 75% business leads 50 or 100% technical lead 20 or 100% third party system and middleware SME's 20 or 100% administrator 50% process experts pilot users 25%

Project Implementation Methodology Implementation Methodology is based on the principles of rapid deployment and prototyping that reflect the **same agile development principles we use to build our software.**

Catalog Support Services Ivalua excels at "flipping" a contract or sourcing event into an e-catalog, a traditional catalog loading process that leverages either excel, CSV file formats, EDI, email or a template that suppliers filled and load it by themselves.

Data Conversion Services network of partners conversion services are leveraged to provide data conversion services such as needs assessment data cleansing tools accelerators.

Interface/Integration Development Services **integrate by configuration**

Organizational Change Management (OCM Services provides an array of change management and custom training services, including Change Management and Custom Training development (Instructor led training, Train-the-trainer, Web-based recording, and Quick Reference Guides (QRGs))

Training Services e-learning program for customers, partners, and our own staff to learn at their own pace using documentation, video instruction and study guides

Help Desk Services the Application Maintenance included in the SaaS, Ivalua provides three optional types of support:

- End-users Help-desk;
- Suppliers Help-desk;
- Administrators Configuration Support

On-Site System Stabilization Support provides On-Site System stabilization support after the 'go-live'. hypercare provided for a period of 3 months for the Participating Entity

Managed Services Requirements

Solution Support Ivalua is a SaaS solution. The infrastructure is administered and monitored by Ivalua IT staff. All updates of Ivalua Solution application are at the customer request and control, and they will be performed automatically with no downtime (for minor updates) or through scheduled downtime (for major updates). Ivalua manages environments and their lifecycle using Ivalua's 'Factory'. Release packages are automatically created and deployed using the Factory. Each client project has its own versioning managed by the Ivalua source code control server.

Organizational Change Management (OCM Services no

Training Services as part of our implementation proposal section

Help Desk Services Same as above in implementation services.

Transition Out Assistance Services Ivalua will work with the Participating Entity to understand their requirements and tailor a plan and scope to support the Transition Out activities needed.

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Collaborative Network
 - Six modules
 - Proposal for this section not specific to what workstream it would provide, same as Category 1
 - Take note of how modules integrate with outside solutions in practice
2. Previous Projects
 - NYC Mayor's office is a very narrow implementation
 - Maryland Good reference of Statewide implementation; however unspecific results given to validate the value of efforts.
 - Ohio good representation of state implementation; only a single module test to limited agencies in 2018. Supplier supports expanding, no mention if Ohio does or will.
 - Alabama is limited in scope and still in implementation; unknown if successful
 - LA water department limited scope and still in implementation; premature reference as there is no ROI provided
3. Subcontractors
 - Interesting that Data for on-prem is stored by third party. Exploration is needed on data security and liability to end users.
 -
 -
4. Organizational Chart
 - Extremely brief and general org chart
 - Note that a minimal number of resources are lvalua resources; most are Customer Resources. This lends itself to customer providing more effort than Ivana for solution
 -
5. Litigation
 - No Litigation
 -
 -
6. Financial Viability
 - Statements in Euros
 -
 -

Individual SME Comments:

General Principal and Requirements

- POSITIVE (p.4)– Routing workflow appears efficient
- QUESTIONING (p.5) Is/can MWBE be broken out into subcategories or customized?
- QUESTIONING (p.5) Search 360 appears to be level 2 punchout but uncertain if that is the functionality
- POSITIVE – document management across modules is very efficient
- QUESTIONING – FedRAMP ready not yet FedRAMP certified

Functional Requirements

- QUESTIONING – Is every supplier even for low dollar purchase required to establish an account?
- QUESTIONING – Can Supplier portal import other ERP solution data
- QUESTIONING – can buyers be restricted to certain business practices?
- POSITIVE – Audi workflow is good. How long is it maintained?
- QUESTIONING – are hosted catalogs searchable withing the solution and not just independently?
- POSITIVE – Search 360 ability to consider punchouts in the search
- POSITIVE – Document versioning
- INTERESTING – Public portal can act similarly to current webpage activities
- POSITIVE – MS Word document synching seems a valuable tool to save time. Would like to see more on what that looks like
- POSITIVE – reporting seems to give the user many options

Technical Requirements

- POSITIVE – multiple authentication options
- QUESTIONING – Data conversion seems very tentative and non-committal to success, just explains a very broad set of all potential options
- QUESTIONING – What ERP systems are supported?
- QUESTIONING – WebKit is for iOS. How are PC devices supported?
- POSITIVE – different environments are needed to properly test
- QUESTIONING (p.70) When will Ivalua be compliant with PCI-DSS for payment cards
- QUESTIONING – How long is the FedRAMP process to become authorized?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/13/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- POSITIVE – limitations of access based on need
- POSITIVE – data at-rest and in-transit encrypted
- QUESTIONING – Customer data is limited, but customer should apply access controls. What responsibility does Ivalua have in a breach?
- QUESTIONING – What does Ivalua do in a breach situation aside from notification within 72 hours?

Implementation Services Requirements

- QUESTIONING – Imbalance of customer resources to Ivalua resources.
- QUESTIONING – very general process information. What percentage of clients achieve implementation on time and within original budget?
- POSITIVE – different levels and types of training identified
- QUESTIONING (p.98) 90% of tickets level one and solved within 1 hour. Does this demonstrate a challenge to client training quality?

Managed Services Requirements

- Standard services presented
- QUESTIONING – What is Ivalua data retention schedule

Video Demonstrations

- POSITIVE - Modules
- INTERESTING – FOIA request from the solution
- POSITIVE – repository for documents
- POSITIVE – Other third-party integration (which ones?)
- POSITIVE – Catalog Management
- POSITIVE – Roles
- POSITIVE – Workflows and notifications on dashboard
- POSITIVE – Good supplier data
- NEGATIVE – P2P information limits supplier access to RFPs?
- INTERESTING – Project types can be for individual low dollar quotes
- QUESTIONING – are Outlook addresses imported for SME's?
- QUESTIONING – how are suppliers not in the system notified and able to respond?
- POSITIVE – email templates are good
- NEGATIVE – How are small businesses with technology challenges able to respond?
- QUESTIONING – Have SME expressed concern with challenges to evaluate, there are many steps and files to review?
- QUESTIONING – how are no definite quantity awards considered
- POSITIVE – contract templates
- INTERESTING – Parent child hierarchy
- POSITIVE – proposal pricing comes from vendor bid
- POSITIVE – Edit versioning is good
- POSITIVE – workflows triggered by sections edited are efficient

	information management capabilities allows to quickly and easily onboard suppliers for RFPs, orders and invoices, and push data to ERP or other relevant systems. Suppliers can easily register with basic information such as their tax identification number, email address, and company name to establish an account within the system. Note that in the lvalua system, there is no charge for suppliers to use the solution, allowing organizations to have unlimited suppliers with unlimited users registered to do business with their organization	
--	--	--

Supplier Enablement/Management

18-25	Registration is 2 parts. Available 24/7 365 days. No charge for suppliers conditional logic can be utilized to tailor the registration page to specific information required by type – such as US vs. non-US suppliers. At this time, the supplier can register for notifications for solicitations that are released within their scope, based on the commodity code(s) that they register for and/or the areas they serve across the organization. Fields captured through the registration process will be tailored to your needs	
VDR 15	Does not check for duplicate registrations	
VDR 19,20 & 24-27	State will have to license 3 rd party system	

Buyer Portal

25-28	internal users can login to the system through their secure username/password, where password rules can be setup by each organization. Alternatively, suppliers can login via SSO with their organization. Once the user login they will be directed to their homepage. Each homepage features a dashboard is unique to the user based on their user. Page 26 role. In addition, authorized users can also add new aspects to their homepage or rearrange the webparts on the screen, to ensure that their portal caters to their unique needs. From the user's homepage they will have access to all the actions throughout the solution that they support. In addition, the user's homepage will have a quick link to all their workflow tasks as well as shortcuts to their frequently created or in-progress objects.	
-------	---	--

Need Identification

26-27	lvalua offers a suite of integrated procurement services, entity buying profiles, and entity data-driven dynamic workflow. lvalua provides users the ability to initiate any procurement action from a single spot through the platform. Each

DEPARTMENT/STATE: Purchasing North Dakota State University

	action is driven by data setup (entity buying profile) and workflow setup specific to that user and heir organization. Ivalua also provides a powerful and flexible workflow engine that not only invokes approval flows, but also provides the ability to invoke processes. This ability to invoke business processes allows procurement policies and regulations to become part of workflow and not something the end-user needs to think about. Ivalua will guide the end user to begin any type of procurement activity by clearly identifying and outlining the process and steps that need to be taken	
--	--	--

Request through Pay

27-33	Did not address the requirements for external retail	
27-33	All purchases within the Ivalua solution will begin from a purchase request within the tool. These can be created from a catalog, automatically carrying over all item information, or from scratch. Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions	
	Once the requisition is submitted, it will route through organization users for approval, where needed. Ivalua uses a combination or algorithms and user approval to navigate through the approvals that are necessary, as well as performing automated checks to verify if there are any issues. The organizations/agencies and public bodies will have the ability to define conditional logic to determine when and who should be approving each requisition. This makes our workflow dynamic, so they are automatically routed to the appropriate approvers. Additionally, different organizations and commodities can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases. Approvers will have a full audit trail of approval activity directly on their workflow screen, including any rejections and comments. They will also receive email notifications of workflow tasks pending their approval, as well as can receive reminders if they do not act. Ivalua workflows can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase.	
	Invoices can be created in multiple ways within the Ivalua solution • PO flip • From scratch • EDI/cXML transmission (for enabled suppliers) • OCR capability	
PRD 1-6	Yes	
PRD 7	Requires a manual step for future release of a PO once the date has passed.	weakness
PRD 8-12	yes	
PRD 13	There is no automated functionality that will include text or attachments based on a commodity or other field value.	weakness

Contract Management

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

44-48	The contract record within lvalua captures all aspects of contract information, documentation, activity, and performance within the single record. The tabs on the left, shown in figure 51 can capture the different areas that will consist of the contract record, including dates, items, documents, subcontractor information, among others.	
	Contracts can be created from a complete solicitation or from scratch.	
	MS WORD can be used for authoring contracts	
CNT 1-88	yes	

Vendor Performance

49-50	Over the life of the supplier, users can create performance assessments against their suppliers or contracts. All performance information is maintained within the supplier's profile for reporting, as well as can trigger alerts to users if a supplier is consistently performing poorly.	
	Performance assessments can be triggered manually or periodically. Templates for performance criteria are stored within lvalua for users to respond to questions related to the supplier's performance and based on the weights of each question, will roll up a total score.	
	lvalua provides the ability to track exceptions and collaborate with suppliers to address these exceptions. If a supplier scores poorly on a performance or risk assessment, exceptions can be created to inform the supplier of areas that need improvement. The exception documents the issue or non-conformance and the severity, tied to the triggering event (for example, contract, delivery, or invoice exception). The supplier is notified of the exception	
	Improvement plans provide a collaboration tool to help improve supplier performance at a granular level by creating tasks that will lead to overall supplier improvement	
VPE 2-12	System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data

51-54	There are three different types of reporting with the lvalua solution, ranging from simple excel extracts to data visualization dashboards. The system can, by default, report on all data stored within the system from across modules. Importing data from an external system can be accommodated. lvalua has over 100 out of the box reports that are provided within our system, but additional reports can be configured during implementation or by super users. The different types are reports within lvalua are detailed below.	
	Any browse page within lvalua can become a report by utilizing powerful search and filter capabilities combined with the ability to extract pages into excel.	
	Queries are Excel based reports that are run via SQL statements in lvalua's reporting module	
	Analysis reports provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users.

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Started in 2000.
 - Received multiple awards for their application
 - Their platform is module based
2. Previous Projects
 - State, cities and municipalities as clients
 - Supplied contact information and implementation dates
 -
3. Subcontractors
 - No Subcontractors
 - Data is housed in data centers listed
 -
4. Organizational Chart
 - Supplied both the company and customer org chart
 - **Did not provide descriptions of roles for each.**
 -
5. Litigation
 - State no litigation to report
 -
 -
6. Financial Viability
 - The Q&A allowed to provide 3 years of financial statements instead on DUNS
 - **Marked Confidential**

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

This proposal is the same as submitted for Stage 1 and the notes supplied are listed below. I have copied my notes over from the full solution response to the individual workstream category.

Stage 1 and Stage 2 proposal documents are the same except for pg. 12 of the Technical Proposal.

- Stage 1 had discussions on Advanced Services, Expenses and Vendor Master Management, Stage 2 Technical Proposal did not include this text
- Stage 2 had a discussion on a "Cooperative Reporting module" that was not included in the Stage 1 Technical Proposal.

Individual SME Comments: *The video demonstrated an overview of the solution and provided information from both sides of the application. The response could have offered more information in some of the areas that seemed to need a better explanation. The solution does NOT offer PCard functionality and some of the help desk requirements are not available either. The supplier does state these requirements are in development. This supplier could offer a solution over time, but the client needs to be made aware of the functionality that does not exist.*

General Principal and Requirements Page 3 – Addressed all requirements listed.

Key Solution Functionality Elements – Page 3

- Single landing page with access to other modules from this landing page.
- Workflow can be attached to any object in the system or be based on different criteria. Workflow is configured during implementation. Figure 2 page 4 is sample workflow.
- Can configure solution to meet our needs which include personal dashboards and internal collaboration tools (blogs, forums, and comments)
- Google search experience in the open marketplace which allows for side-by-side comparison of products.
- Robust integration capability which supports multiple formats. Can connect to any data source
- Workflows come out of the box with best practices but can configure workflows.
- Documents are available throughout all the modules.
- Reporting is out of the box, or users can create their own reports and use graphics for display
- Highly configurable.
- Transparency from the supplier portal with authorized user have oversight to all procurement activity.

User Experience – Page 7

- Homepages are configurable. Sample Homepage Page 8 Figure 3
- User experience is role based
- Tasks assigned can be accessed from the user's home screen (i.e., workflow)
- Can delegate functionality – Page 8 Figure 4

- Self-manage users with roles when they set them up in the system. Account has system admin to manage supplier's account.
- CONCERN - EPROC-SPR-5 – TAB 3 Line 9 – Does the system notification get sent via email, or does supplier just have to monitor notifications on their supplier dashboard?

Supplier Enablement/Management – Page 18

- Enablement is 2 parts, public facing page to create an account, and “full enrollment” used to be fully onboarded – Page 18
- Sample supplier registration Page 19 Figure 8
- Supplier Full Enrollment happens after workflow approval. The information required here is banking information and W9 documents. Page 20 Figure 9
- Integrations can be designed to verify real-time profile information. Page 21 Figure 10
- Can create their own user contacts. Page 21 Figure 11
- Supplier accounts have document storage and tracking. Page 22 Figures 12 and 13
- Solution has supplier workflow. Page 23 Figure 14
- Internal users (Buyers) can have access to search for suppliers. Page 23 Figure 15
- Access to view the supplier record. Page 24 Figure 16
- Suppliers maintain their own profiles, but changes can be put into workflow for approval by internal users.
- STRENGTH - Ability to have “changes” done on a registration get put into workflow.
- CONCERN - EPROC-VDR-32 – Line 61 – Supplier's response leads me to believe they did not understand the requirement. We asked if other agencies be put into workflow, not have data passed into other state systems?
- CONCERN - EPROC-VDR-36 – Line 65 – Need to release an RFI to reminder suppliers to log in and update their registration?

Buyer Portal – Page 25

- This is the access point for procurement activities. Homepage Dashboard -Page 25 Figure 17
- SSO can be a login and each user's dashboard are based on their user roles
- User roles are tied to authorizations and the user is assigned a “perimeter”. Page 26 Figure 18
- CONCERN - EPROC-BPRT-7 – Line 81 – The requirement is for the Buyer Portal, but the response received is for the “vendor” portal?
- CONCERN - EPROC-BPRT-8 – Line 82 – Does not support daily summaries of buyer notifications.
- CONCERN - EPROC-BPRT-9 - Line 83 – Cannot provide link to external users due to security
- CONCERN - EPROC-BPRT-15 – Line 89 - Supplier notification needs to be handled through the RFI module?

Need Identification – Page 26-27

- The solution has a single point of entry and can manage a request in several ways via “requests”.
- Options include request form, purchase, or exemption request, create a sourcing event or contract, or gather quotes. Page 27

Request through Pay – Page 28

- Process starts with a “request” that will populate relevant requisition details. Page 28 Figure 19
- Exceeding contracted amount could be triggered by the allocations grid. Page 29 Figure 20
- Requisitions are submitted to workflow. Page 29 Figure 21

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Once approved, the requisition is flipped to a purchase order. Page 30 Figure 22
- CONCERN – Page 30 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.
- Can flip purchase orders into receipts. Page 30 Figure 23
- Receipts are shown on the receipt page (Page 31 Figure 24) and then the receipt is submitted to workflow. Page 31 Figure 25
- Invoice will be created (Page 32 Figure 26), and then payment can be applied to the invoice. Page 32 Figure 28
- CONCERN - EPROC-PRD-1 – Line 102 - Response refers to Sourcing event from the requisition, but requirement is asking for need identification to Purchase Request?
- CONCERN - EPROC-PRD-15 – Line 116 – Does not support executables file type
- CONCERN - EPROC-PRD-37 – Line 138 – Capturing noncontract price for later analysis is not supported.
- CONCERN - EPROC-WRK-24 Line 189 – Can the PO, PR or change request be re-submitted after it was changed?
- CONCERN - EPROC-PO-17 – Line 212 – eFax submission of orders in not supported.
- CONCERN - EPROC-PO-26 – Line 221 - Additional configuration will be required for facilitate fiscal year end.
- CONCERN - EPROC-PC-1 thru EPROC-PC-4 – Lines 227 thru 230 – These PCard requirements are in the process of being developed.
- CONCERN - EPROC-PC-5 – Line 231 - Full administration of PCards is not available in the system
- CONCERN - EPROC-PC-6 – Line 232 – Pcard maintenance is not currently available but is anticipated for release in 2022.
- CONCERN - EPROC-PC-7 – Line 233 – Ghosted cards are not currently available but is expected to be released mid to late 2022
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 – These requirements will require some kind of customization, configurable item, or integration.

Catalog Capability – Page 33 – 34

- Ability to view catalogs are limited to the user’s organization scope
- Search results landing screen – Page 34 Figure 29
- Can shop via hosted or punch out catalogs. Page 34 Figure 30
- Hosted catalog process can be done by supplier. Internal user can compare catalog versions Page 34 Figure 31
- Users can use the search functionality to search and filter results. Page 35 Figure 32
- Item tags to find preferred items
- Search punchout and hosted in the same search. Page 35 Figure 34
- CONCERN - EPROC-CAT-32 – Line 317 – The ability to compare catalog item search results in NOT supported.
- CONCERN - EPROC-CAT-34 – Line 319 – Additional functionality is required to compare items and will be based on number of punchouts required.

Sourcing/Bid Management – Page 36 thru Page 44

- Wizard solicitation set up – Page 36 Figure 35
- Supplier can be added several ways (commodity code selection, public site, etc.) – Page 37 Figure 36

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 11/24/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Has Sealed Bid functionality
- Conditionality can be applied to questions.
- Item grid (pricing) has multiple set up options. Page 39 Figure 40
- Notifications to supplier about event and has access to public portal
- Suggest posting information to client's website and provide link to public portal to view full solicitation. Page 40 Figure 42
- Suppliers need to add open solicitations to their account to create a response. Page 41 Figure 44
- Supplier can Management of Responses. Page 42 Figure 46
- Users can monitor suppliers' activity and award events
- Can notify suppliers and create a contract from the solicitation. Page 44 Figure 50
- CONCERN - EPROC-SRC-3 thru EPROC-SRC-9 and EPROC-SRC-11 – Lines 330 thru 336 and 338 – Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-14 thru EPROC-SRC-21 – Lines 341 thru 348 - Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-22 -Line 349 – The response talks about envelope bidding, but requirement talks about separate Cost and Technical sections?
- STRENGTH - Has no limit on number of suppliers being invited to an event.
- CONCERN - EPROC-SRC-68 – Line 395 – eFax is not supported
- CONCERN - EPROC-SRC-70 – Line 397 – This response does not address the requirement that states the eProcurement file of the event needs to be "complete" to meet public records laws. SRC 71 has this same response which meets that requirement.
- CONCERN - EPROC-SRC-83 – Line 410 – System does not support web conferences, but supplier offered the ability to upload the recorded conference. Do they support that file type?
- STRENGTH – Size limitations can be set up by system administrator
- CONCERN - EPROC-SRC-143 – Line 470 - Must start a new solicitation instead of cancelling award on bid and move to the next highest bidder?

Contract Management – Page 44 – 45

- Wizard driven entry. Page 45 Figure 51
- Information brought over from the contract header
- Alerts on documents uploaded to the document section – Page 46 Figure 53
- Native authoring (Word) – Page 47 Figure 54
- Subcontractors can be added.
- Can integrate with multiple eSignature tools. Page 48 Figures 57 and 58
- CONCERN - EPROC-CNT-16 – Line 496 – Loading of external price list for contracts will need to be worked out to identify data elements. Additional cost possible?
- CONCERN - EPROC-CNT-52 thru EPROC-CNT-63 – Line 532 thru line 543 – The supplier has used the same response for all of these requirements, but the response does not mention the requirement? Also see lines 555 and beyond as an example. These responses are duplicate but at least start with "this information".
- CONCERN - EPROC-CNT-66 – Line 546 – Response states alert could be posted to public portal, but requirement asks if it can be posted to state's procurement website.
- CONCERN - EPROC-CNT-67 – Line 547 – The response does not address the email notification listed in the requirement?

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Vendor Performance – Page 49

- System has supplier performance dashboard. Page 49 Figure 59
- Allows ability to track a supplier's performance.
- Improvement plans provide a collaboration tool to help improve the supplier performance. Page 50
- CONCERN - EPROC-VPE-3 thru EPROC-VPE-11 – Line 573 thru line 581 – The response to each of these requirements refers back to the response on line 572 which states vendor performance needs to be handled by a questionnaire.

Purchasing/Data Analytics – Page 51

- System has 3 different types of reporting, Ad Hoc, Queries and Analysis
- Reports are compiled by running a search and exporting data to Excel.
- Analysis reports can be put on dashboard for view of any user.
- Offers 100 standard reports
- CONCERN - EPROC-PDA-5 thru EPROC-PDA-16 – Line 602 thru line 613 – A duplicate response was used to answer all of these requirements, but the response does not reference the reporting requirement? Can this supplier supply reports based on the listed requirement?
- CONCERN - EPROC-PDA-20 and EPROC-PDA-21 - Line 617 and 618 – This supplier currently does not have PCard functionality.
- CONCERN - EPROC-PDA-36 – Line 633 – This supplier currently does not have PCard functionality.

Technical Requirements – Page 55

Availability – Page 55

- Meets requirements

Accessibility Requirements – Page 55

- CONCERN – States they are committed to being Section 508-compliant as soon as possible.

Audit Trail and History – Page 56

- Meets requirements

Browsers Supported – Page 56 – 57

- Supports the most update browser versions

User Accounts and Administration – Page 57

- Controlled by an authentication method and roles, authorization and perimeters.

User Authentication – Page 58

- Supports multiple authentications and password rules are fully customizable.

Federated Identity Management – Page 58

- Meets requirements

Data Conversion – Page 59

- Offers data assessment to determine data requirements
- Historical data conversions require a larger scope where cost needs to be determined

- CONCERN - EPROC-TECH-28 -Line 32 – Solicitation data conversion is NOT supported.
- CONCERN - EPROC-TECH-30 -Line 34 – Vendor performance data conversion is NOT supported.

Interface and Integration – Page 59

- Provided communication protocols and data formats that are supported.
- CONCERN – Did NOT identify all finance system/ERP's where their solution has existing interface/integration capabilities in the narrative.
- CONCERN - EPROC-TECH-35 – Line 39 - Did not supply complete technical details on interface.

Office Automation Integration – Page 60

- STRENGTH – Can import Word documents in the contract tool and break them into clauses
- Supports Word, Excel and PDF

Mobile Device Support – Page 61

- Meets requirements

Mobile Applications – Page 61

- Based on a mobile web solution rather than a mobile application

Data Ownership and Access – Page 61

- Meets requirements

Date Retention, Archive and Purge Considerations – Page 62

- Should be discussed at implementation.

Disaster Recovery Plan – Page 62

- Notification of data breach is 72 hours.
- CONCERN – Could have supplied more detailed information about this requirement

Solution Environments – Page 63

- CONCERN – Could have supplied more detailed information in the narrative but did list 3 environments that are offered with some offered at additional maintenance fees.

Solution Technical Architecture – Page 64

- Supplied application and environment architecture. Page 64 Figure 66
- Application Architecture. Page 65 Figure 67
- Supplied Database Architecture. Page 65

Solution Network Architecture – Page 65-66

- Provided Ivalua Network Architecture. Page 66 Figure 68
- Supplied data center locations. Page 67
- Mentioned briefly monitoring and maintenance. Page 67
- Can compare KPI's with SLA's
-

System Development Methodology – Page 67 – 68

- Defer to subject matter experts

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - KPMG, LLC over 120 old.
 - Proposing the "Ivalua solution"
 - Much experience in source-to-pay.
2. Previous Projects
 - 5 projects listed, all State. The projects listed fit Category 2.
 - State of Ohio. Interfaced both inbound and outbound with the State's PeopleSoft ERP.
 - State of Arizona. Integrated and interfaced both between CGI Advantage ERP, Tririga, and Ivalua.
 - State of Alabama. Integrated and interfaced both between CGI Advantage ERP and Ivalua.
 - State of Texas (TRS). Interfaced both inbound and outbound with the State's PeopleSoft ERP.
 - California Dept. of Transportation. Migrated contracts from legacy system to Ivalua.
3. Subcontractors
 - Ivalua – Est. 2000. Eprocurement platform.
4. Organizational Chart
 - Yes – both org. chart and job descriptions.
5. Litigation
 - Vendor states they have no pending litigation that **will materially affect** the firm's operations or ability to perform services for us.
6. Financial Viability
 - Yes. Provided unaudited balance sheets and further descriptive information.

Individual Comments:

Overall/General

- Intro (page 2) discusses what areas KPMG/Ivalua will provide.
- After full review KPMG is offering: A (6) Alternative Funding Models, E. Implementation, F. Managed Services, and G. Other Available Services, to apply towards the Ivalua Solution. Because of this, I have highlighted these areas specifically to be aware of what is KPMG.
- KPMG LLG with The Ivalua Solution.
- SaaS Hybrid Cloud Solution.
- KPMG is not mentioned much at all in the Matrix.
- Have numerous concerns with the number of assumptions they take.
- Many of these assumptions (page 181 – 187) are contractual terms and conditions in nature versus an assumption.
- Some assumptions may be deal breakers for the Contract.
- Concerns with the numerous exceptions (pages 189-221) they take and that many States could not agree with.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 2 - 5

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- Single landing page for the single point of entry with same look and feel throughout the whole system.
- Smart Routing: workflow is tailored to meet each organization's needs
- Compliance: Ivalua continues to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management

- Sealed Bidding
- Subcontractor Reporting
- Cooperative Reporting
- Portal: All users (internal and external) have ability to access their account through portal and personalize their page.
- Open Marketplace Environment: They express they want it like a “Google experience” - modern digital and ecommerce experience, driven by search and content.
- Integration: Robust Integration Toolbox with capability to connect with multiple ERP solutions, third-party data providers, and suppliers’ systems. Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.
- Workflow: Ivalua expresses this area as one of their “crown jewels” – area of expertise.
- Document Management: Core platform with an integrated foundation.
- Reporting: Many out of the box reports and the ability for users to create their own. Reports can be simple to graphs, bar, line, pie, etc.
- Configurable: Ivalua claims their SaaS solution is the most configurable hosted solution on the market as extensively reported by industry analysts.
- Transparency: public portal allows for transparency and authorized users have ability to get oversight through audit trail.

2. User Experience – p. page 6 - 7

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- KPMG’s explanation of Ivalua’s User Experience is short, but addresses most of the points. I do not see anything on Wizard-driven capabilities.

3. Bidder Best Practices and Roadmap – p. page 7 - 9

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- Major Software Product releases are delivered by the Ivalua R&D division twice a year.
- Client can choose to upgrade their client application either 18 months or 24 months
- Ivalua leverages advanced technologies such as machine learning, natural language processing (NLP) etc. and are members of various industry and procurement or supply chain associations, that contributes to their knowledge.
- Updates can be scheduled by the State
- During the implementation phase, Ivalua together with State will work to better, more effective solutions, processes, and approaches, based on their experience. These will then be built into the design of the solution.
- Product Roadmap: No direct 3-year map, but a high level of what is being worked on.
 - Investing heavily in developing specific capabilities to meet Public Sector Procurement needs. Approximately 60% of the roadmap items coming from the customers information.

- They have a dedicated Public Sector team.
- Enhancements in mobile experience.
- Invoicing and payments investments.
- Enterprise-wide AI powered **Contract Lifecycle Management (CLM)**
- Supplier Risk and Performance – adding and enhancing new features / capabilities
- Highest level of security – investing resources to maintain highest level.
- Continue toward more seamless and simpler.

4. Innovations and Value-Added Features/Services – p. page 9 - 11

In addition to the stated requirement, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

KPMG discusses Ivalua offering all these innovations and value adds versus KPMG on any of them.

1. **Help Desk – level 1: Provide suppliers or internal users to get on- demand help from Ivalua if they run into difficulties using the system. Level 1 help desk is the users first interaction when they need help, as opposed to a State/organization managed help desk.**
2. **Advanced Services Procurement:**
3. **Expenses:**
4. **Vendor Master Management**

5. Customizations/Extensions – p. page 11

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.

• Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- **The Ivalua SaaS platform relies on configuration, not custom code, as the means for clients to modify and maintain a solution that meets their needs.**
- **enhancements are not custom code but instead configuration & data and that configuration & data is carried forward with the State's instance as the Ivalua solution is updated.**
- **Ivalua keeps an extra environment of a copy of the State's customizations / extensions.**

6. Alternative Funding Models – p. page 11

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
 - Explain how each model would work;
 - Identify the benefits that Participating Entities and their suppliers would realize; and
 - Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- **KPMG proposes two options:**
 - **Hybrid fixed fee plus transaction-based funding model – a model where the State pays a reduced fixed fee and they finance a portion of the program cost through a transaction fee-based funding model.**

- Value-Based Funding Model – a model more common in commercial/private procurement programs is to develop a “self-funding” or “value-based” funding model with limited cost to the State.

7. Contract Transition and Flexibility – p. page 13

- KPMG notes what can go into transitioning and then answers this with: *We will work with the PE to assess the above and other factors and mutually agree to transition from a state's current contract to a new contract or amendment under the terms of a newly awarded Master Agreement and PA where requested or applicable.*

B. Functional Requirements: pages 15 – 51

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

- General Functionality.** Tab 2, GEN-1 through GEN-40 and - p. 15
 - 1-C-“Customization/Extension” and 7-CF “Configuration Item”
 - 6 – Medium
 - #4 – No extra cost for integration between solutions – can all be done in software.
 - #9 – Able to use our commodity code, but will need to configure a crosswalk.
 - #35 will need configuration
 - #36 – **Esignature capability.** Ivalua system allows for native plugins of popular softwares (DocuSign, Universign, and AdobeSign), but doesn't have it built into Ivalua system.
- Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 15 - 16
 - 4-CF “Configuration Item”, 1-TP-“Third Party”
 - 3 – Medium
 - #1 - The Ivalua supplier portal is completely free of charge for suppliers
 - #19 – Submitting of admin fee payments will require a third party payment provider.
- Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 17 - 23
 - 5-“INT-Integration/interface”, 2-TP-“Third Party”, 1-“C-Customization/Extension”, 4-CF “Configuration Item”, and 1-N“Not Available”
 - 7 – Medium
 - Seem to meet requirements except for:
 - VDR 18, 19, 20, 24, 25, 26, and 27. – All will require integration with a third party system either for tax or SOS, etc. **Ivalua system can integrate, but State needs to find their own third party solution.**
 - VDR 31 – Configuration needed on workflows to meet each organizations approvals.
 - VDR 32 – Does not meet requirement – vendor states due to security reasons.
 - VDR 38 – 40. Although realtime, scorecards will need to be configured.
 - VDR 43. Configuration needed.
- Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 23 - 25
 - 1-“INT-Integration/interface”, 5-“CF-Configuration Item ”
 - 3 – Medium
 - BPRT 8 - Ivalua system provides the ability to drive notifications for various alerts both on screen and through email, **however not a daily summary notifications. CF needed.**
- Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 25
 - 1-“C-Customization/Extension”, 1-“CF-Configuration Item ”
 - 2 – Medium
 - NEED 1: The fully integrated system has a single landing page when a user logs in.
 - NEED 4: Ivalua system workflows have configurable steps that allow for setup in any sequence, the ability for variations to be invoked based on the context (user's organization, commodity, dollar value, geography, etc.), and workflows can be set to require specific "actors" who have

profiles to either approve, amend or deny a request coming to them. Workflows include both manual (human input needed) and "automatic" steps that apply business rules to send alerts and/or route objects (Requisition, PO, Invoice, Contract, sourcing award, etc.) accordingly.

6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 26 - 30
 - a. 2-"INT-Integration/interface", 1-TP-"Third Party", 6-"C-Customization/Extension", 38-CF "Configuration Item", 5-ID "In Development" and 2-N"Not Available"
 - b. 21 – Medium, 2 - High
 - PRD 12 – **CLARIFY** – Does "force" attaching the terms and conditions of contract to the requisition and carry forward to POs and beyond mean the State will manually need to attach each time (transaction)?
 - PRD 15 – States no size limit to amount of data a client can store – **only cost \$\$ to consider. If enter into Contract with Ivalau make sure to spell this out in the Contract.**
 - PRD 28 – Their system can handle negative items with some configuration.
 - PRD 29 – The Ivalua system can handle \$0 value items. **It does not mention configuration.**
 - PRD 37 – **Ivalua system does not have this requirement.** They explain it as: *"This is possible if data from external sources are loaded through spend analytics for comparison. Web scraping of retail sites to compare pricing to the larger market (outside of the Ivalua system) is not supported."*
 - WRK 1 – 28: Workflow Functionality seems to be a strong suit as it is very streamlined and customizable as needed – a big plus for States. Can meet all requirements with none to some configuration.
 - Meets most PO requirements.
 - PO 6 - Only meets ½ requirement. Creates PO # in system for you. Does not let create own PO number – would need to be configured.
 - PO 16 – Esignature – doesn't come with the system. Will need to be State's third party that can be integrated.
 - PO-15: System does not have the capability to have two versions of a printed purchase order.
 - **Payment Card Functionality PC 1 – 21: This is not a strong area for Ivalua. They system currently does not provide many of the requirements with a promise of an anticipated release in 2022 that will or customization. A work around will need to be established for Pcards if this system is chosen by a State.**
 - Request through Pay Receiving RC1 – 21: Meets all requirements with some configurations needed.
 - Invoicing INV 1 – 11: Meets all requirements with some configurations needed.
7. **Catalog Capability** - Tab 3, CAT-1 through CAT-40 and - p. 31 - 33
 - a. 12-CF "Configuration Item"
 - b. 2 – Medium
 - CAT 6 & 7: Meets the requirement of Unlimited catalogs and items per catalog.
 - Meets all requirements with some configurations needed.
8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 33 - 42
 - a. 2-TP-"Third Party", 33-CF "Configuration Item", 8-"C-Customization/Extension",
 - b. 6 – Medium, 1- High
 - E-signature third party applies here also.
 - Posting items to the State's public procurement website (i.e. notice of award and solicitation documentation) requires a High amount of customization and Ivalua recommends another approach. SRC76
 - Otherwise SRC 1-151: Meets the requirements of Sourcing / Bid Management Workstream with some configurations needed.
9. **Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 43 - 46
 - a. 3-TP-"Third Party", 24-CF "Configuration Item", 3-"C-Customization/Extension",
 - b. 6 – Medium
 - CNT 12 – 14 requirements – Same E-signature Third Party.

- CNT 64 – Concern having a link to the punchout/catalog. Not standard functionality in Ivalua System, could be customized. Ivalua recommends a standard public item browse in which users can search by contract.

10. Vendor Performance Tab 3, VPE-1 through VPE-25 and - p. 46 - 47

a. 14- CF “Configuration Item”

- VPE 1 – 11 all require Configurations which are suggested as a questionnaire for metrics.
- Remaining items meet the requirements of vendor performance none or little configuration needed.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 48 - 51

a. 1-ID-“In Development”, 7-CF “Configuration Item”, 1-“C-Customization/Extension”, 1-INT”Integration/interface”

b. 3 – Medium

- PDA 3 – 5: Ivalua system has a large reporting tool with a variety of adhoc reports that are exportable in common formats.
- PDA 20 – 21: Pcard related reports are not available as the system does not have the function yet – In 2022 version software update.

C. Technical Requirements: pages 53 - 67

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Page 53. Ivalua is accessible 24/7 days a week. They guarantee a Hosting SLA uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours. Scheduled maintenance occurs once a month on a weekend around midnight and the system is down for a maximum of 30 minutes if required.

- 2. Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*

- Page 53. Ivalua is working with a third party to implement accessibility of the system in accordance with the WCAG 2.1; however, do not have right now. VPATs are completed.

- 3. Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5 and - p. 53

- TECH 5 - In the Ivalua Solution, while a user is logged on, all actions and activities are registered, logged and time-stamped.
- Ivalua meets all the requirements, no concerns.

- 4. Browsers Supported** - p. 54

- The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.

- 5. User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20 and - p. 54 - 57

a. 4- CF “Configuration Item”

b. 1 – Medium

- TECH 6: Access to the app is controlled by an authentication method.
- TECH 11 – Information is available in real time.
- TECH 12 – requires CF. Linked accounts set up for internal users only but can be configured to allow a supplier account.

- 6. User Authentication** RTM: Tab 4, TECH-21 through TECH-25 and - p. 57

a. 1- CF “Configuration Item”

- TECH 22: Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers.

- TECH 24 – **CLARIFY** – the system has a password policy, but unsure if it can conform to the State's password change policy.
- Federated Identity Management** – Pages 49 – 50 and - p. 58
- Users will only require one ID and pw to access the full solution.
7. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 59
- 2- N "Not Available", 2- CF "Configuration Item"
 - 2 – High
- **TECH 27 – 30 are not supported** (*conversion of in-process purchase request & POs, Active Solicitation data, *All Contract data, and Vendor Performance data). *TECH 27 and 29 can be configured but are rated a very high level of complexity.
 - It seems any historical spend, user account data, and chart of accounts data requirements can be met.
8. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 59 - 61
- 2- CF "Configuration Item",
- TECH 35 - Ivalua totes their strong integration capabilities with major ERP systems.
 - TECH 36 – **CLARIFY**. They list that they can import and export data with 3 out of the formats the State requests in the requirements. **What about the others?**
9. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 61
- Meets all Word products mentioned.
10. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 61
- Is responsive on a mobile device screen, but does not have a mobile app.
11. **Mobile Applications** - TECH 62 and - p. 61
- TECH 62 - Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari.
 - Does not have a mobile app.
12. **Data Ownership and Access** - p. 62
- States remain owners of their own data and control own data.
 - Through term of the contract, State can export data using features available in the Ivalua system through the Query extraction tool.
13. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 62
- **CLARIFY** Ivalua responded in TECH 63: "Ivalua maintains data in its systems with Ivalua's data retention schedule." But on page 62 it's the State's data and they decide what information to be stored, how, when in accordance with the Contract.
14. **Disaster Recovery Plan** - p. 62 - 63
- Ivalua does have a Business Continuity (BC) and a Disaster Recovery (DR) Program based off on ISO/IEC 22301 standard framework. The plan is reviewed and approved by Ivalua management annually. Additionally, this is communicated to all relevant stakeholders.
 - Have secondary servers geographically located elsewhere.
15. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 63
- Provided 3 environments (Development, Acceptance, and Production).
 - Training or other environments are EXTRA.
16. **Solution Technical Architecture** - p. 63 - 65
- Ivalua cloud features a "multi-instance" architecture of which isolates all customers' data from each other.
 - All interactive end user activities are performed using a standard Microsoft, Firefox, or Chrome web browser. There is no requirement for customers to install any client software on any desktop, laptop, tablet, or smart phone to access their Ivalua instances.
Application Arch. – Servers are in undisclosed location. The app. is built on Microsoft 64-bit technology stack, including .NET, C#, ASP.NET SQL Server and SQL Server Analysis and open standards such as REST Web Services, JavaScript, HTML, XML, and JSON.
 - Ivalua also provides an EDI tool as part of the products supporting SFTP interface, AS2 and REST APIs, Ivalua Solution also integrates off-the-shelf packages (COTS and Open Source).
 - Diagrams provided.
17. **Solution Network Architecture** - p. 65 - 66
- Diagram provided. All Ivalua's data center/laaS partners adhere to stringent data center certifications such as: ISO 9001/14001/ISO 27001/SOC I and II

18. System Development Methodology - p. 66 - 67

- Seems to meet.

19. Service Level Agreement - p. 67

- Ivalua attached their own SLA, but I do not see where they reviewed the RFP's SLA or commented on it.

D. Security Requirements: p. pages 69 - 81

1. Cloud Security Alliance (CSA) Compliance

- CAIQ completed.

2. Security and Privacy Controls

3. Security Certifications

4. Annual Security Plan

5. Secure Application and Network Environment

6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6.

- Requirements in this section are met.

7. Data Security – nothing to add.

8. Personally Identifiable Information Protection – nothing to add.

9. Security/Privacy Issue Occurrence – nothing to add.

10. PII Data Actual/Attempted Access or Disclosure – nothing to add.

11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 83 - 101

1. Project Management

- KPMG will provide a dedicated senior PM.
- They mention similar projects in Alabama, AZ, Ohio, and Vermont.
- Key PM tasks KPMG commits to:
 - Establish PM Office and Project Governance
 - Scope Management
 - Schedule Management
 - Budget Management
 - Quality Management
 - Resource Management
 - Communication Management
 - Risk Management
 - Issue Management
 - Set up program logistics
 - Align on project templates for status reporting
 - Establish and execute program meeting and communication plan
 - Execute program and governance management processes
 - Execute progress status reporting
 - Perform ongoing risk mitigations and issue tracking
 - Execute project change control and escalation process
 - Setup processes for and conduct Steering Committee updates per your organization's structure
 - Coordinate with eProcurement solution provider CSM
 - Manage all dependencies are accounted for across all parts of the implementation.

2. Project Implementation Methodology p. 101 – 112

- KPMG calls their implementation methodology "Powered Procurement" and label it as a proprietary and accelerated Enterprise Business Transformation approach for Ivalua and other cloud-base solutions. Additionally, they claim acceleration through proprietary tools and templates. The tools mentioned are all very familiar PM tools, unsure how proprietary they are.
- KPMG describes the following approach/methods for implementation to accelerate their process:
 - Vision
 - Validate
 - Construct
 - Deploy

- Evolve
- Supplier Enablement
- Change Management
- Learning and Development

3. Catalog Support Services p. 112 – 115

- Ivalua has a robust catalog capability for items within the system.
- For items outside the system, KPMG offers to deliver and support a marketplace solution.

4. Data Conversion Services p. 115 – 123

- KPMG will work with the State to define the data conversion strategy and convert in three steps:
 - Extract
 - Transform and load
 - Data reconciliation

4. Interface/Integration Development Services p. 123 – 128

- KPMG will help perform for the State with the assumption (page 128) that there will be middleware solution or adapter to manage the integration of data between Ivalua, your ERP, and any optional applications.

5. Organizational Change Management (OCM Services) p. 128 – 138

- KPMG describes their OCM methodology as proprietary and calls it “Make It” methodology; however, it's typical OCM.

5. Training Services – p. 138 – 148

- Will provide all training as requested / required.

6. Help Desk Services - Tab 6 IMPL 1 – 5 and – p. 148 - 149

- KPMG will develop the appropriate support strategy. They will train all help desk staff to prepare for ongoing post implementation support. They offer to provide level/tier 2.
 - Tier 1 is to be provided by the “Client”
 - Tier 2 is to be provided by KPMG
 - Tier 3 is to be provided by Ivalua or Client, depending on whether the issue is with the Ivalua system or the Client-side integration/interface.

7. On-Site System Stabilization Support – p. 150

- Meets some of the onsite system stabilization support. – Handles it through level /tier 2. negotiation suggested

F. Managed Services Requirements: 154 - 166

1. Solution Support – p. 154 - 158

- KPMG provides what they call Powered Evolution services to help sustain the State's investment.

2. Organizational Change Management (OCM Services) – p. 159 - 160

- Yes, see above, meets requirements.

3. Training Services – p. 160 - 162

- Yes, see above, meets requirements.

4. Catalog Support Services – p. 162

- Yes, see above, meets requirements.

5. Help Desk Services – p. 162 - 163

- Partially meets req'ts. It is unclear whether KPMG would provide Tier 1 support or if the Participating Entity must provide that level. Note that in the Support Services section on pg. 155 the Table list “Base Services” refers to L2 and L3 support which implies that the Participating Entity is providing L1 (Tier 1) support

6. Transition Out Assistance Services – p. 163 - 165

- They provide a complete transition out assistance service plan.

G. Other Available Services: p page 167 - 175: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- Strategic Sourcing: Provide “strategic sourcing process entails spend analysis, market analysis, demand research, go-to market strategy development, bid document creation, bid evaluation and analysis, supplier negotiations, and contract awards.”

- Should-Cost Modeling: Provide cost modeling using “Data Engineering, External Market Data Library, Granular Economic Modeling, Advanced Root Cause Analysis”.
- Contract Performance Management (CPM): Provide contract management for the State/Entity, identifying contract leakage and taking corrective action.
- Localization Support: “help onboard the remaining agencies as a part of the post implementation activities”... “loading data, training end users, and deploying the solution”.

H. Video Demonstrations:

- 44 minute demo. Well done from beginning to end. Was able to follow the eprocurement process from beginning to end of each module of their total solution.
 - Cooperation; Use of information and State Materials.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (KPMG - Ivalua)

CATEGORY #(s): 2

DATE: (10/3/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- All 3 Preliminary docs
- No cyber liability
- Ivalua solution
- Full-scale procurement transformation solutions; help optimize "Source-to-Pay" processes.
- 300+ eProcurement implementations
- Powered Enterprise approach, pre-configured, eProcurement solution, providing a set of leading practices as a starting point to map requirements. This could benefit a single stream approach so long as modules do not have strict dependencies.
- Challenges and trends for government procurement
- Factors shaping the future of procurement

2. Previous Projects

- State of Ohio – eMarketplace, Supplier Management, Procure-to-Pay. Source-to-Contract
- State of AZ - Vendor Management, Requisitions, Purchase Orders, Receipts, Invoices, Master Data, and Inventory
- State of Alabama - Master Data (Suppliers, Chart of Account Elements)—Budget Validation—Purchase Orders—Invoices
- Teachers Retirement System of Texas - Source-to-Pay implementation, including general platform, supplier management, purchase request/intake, sourcing, contract authoring and management, KPMG proprietary tool cognitive contract management (CCM), purchase/change order, invoicing, payment, and reporting
- CalTRANS - Supplier Information (internal facing only) and Contracts modules (SINGLE STREAM example)

-
-
-

3. Subcontractors

- Ivalua
- Description and qualifications

reduced to 50 75% of implementation costs. A transaction fee of 1- 3 percent added to every purchase order processed. **Option 2** Value based funding model - Value levers R strategic sourcing, spend visibility, spend compliance, early payment discounts, improved P card usage , supplier payment method, process efficiency improvement.
Contract Transition and Flexibility will work with the participating entity to assess.

Functional Requirements

General Functionality - 1 Customization with medium level up effort , 7 configurations w/5 med 2 low loe, and 32 out of the box.
Supplier Portal - 4 configuration w/2 medium and 2 low level of effort, 1- 3rd party w/med effort and 18 out of the box
Supplier Enablement/Management 4 integrations w/med effort, 1 customization, 4 configurations with low level of effort, 1 not available, 2 third party with medium level of effort, 1 third party and integration with medium level of effort, and 30 out of the box.
Buyer Portal 5 configurations w/2 medium and 3 low effort, 1 configuration with medium Loe, and 9 out of the box
Need Identification 1 Customization with low effort, 1 configuration with low effort, and 5 out of the box
Request through Pay 40 out of the box, 1 n/a, 21 configurations with low and medium LOE, – **Purch Req**, 4 Configurations with 1 med and 3 low effort , 1 customization with medium level of effort, 1 third party with low level of effort comma 26 out of the box for **Wrkflw mgt**, 2 customizations with medium level of effort, 8 configurations with low and medium level of effort, 19 out of the box for **PO gen and mgt**, 6 customizations with 2 low and 2 medium and 2 high level of effort 21 out of box for **Pcard**, 1 configuration w/low effort, 1 business process with low level of effort, One customization with low level of effort, 7 configurations with 1 low and 6 medium level of effort, and 14 out of the box for **Receiving**, 2 configurations with low level of effort, 9 out of the box for **invoicing**.
Catalog Capability 12 configurations w/medium (2) and low (10) LOE, 1 Not available, 27 OOBX
Sourcing/Bid Management 33 Configurations with medium and low level of effort , 2 third parties with low level of effort, 8 customizations with 1 medium and 7 low level of effort, 108 OOBX
Contract Management 3 customizations with low level of effort, 24 configurations w/low and medium LOE, Three Third parties with low level of effort , 58 OOBX
Vendor Performance 14 Configurations with low level of effort , 11 OOBX
Purchasing/Data Analytics, 1 customization with medium level of effort, 7 configurations with low level of effort, 1 in development with medium level of effort, 1 integration with medium level of effort, 27 OOBX

Technical Requirements

Availability Accessibility 24 hours a day seven days a week hosting SLA uptime 99.8% outside of scheduled maintenance.
Accessibility Requirements Working towards meeting WCAG 2.0 level AA. Working with third party company to audit and value a platform VPAT completed in available upon request
Audit Trail and History All user actions and activities are registered logged in time stamped. Every transaction created every status change every movement to the next step in a workflow in every addition or deletion of a data item is logged. If audit trail must be activated for specific field the auditable checkbox can be marked corresponding to the field on the value a table.
Browsers Supported Internet Explorer all Microsoft supported versions , Microsoft Edge last three major releases, Chrome last three major releases, Firefox last three major releases.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG

CATEGORY #(s): 2

DATE: 12/31/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

User Accounts and Administration Application pages and functions are controlled by profiles , authorization, and perimeters. A perimeter can be geographic or functional , or a combination of both. User roles and user access are defined through administrative components. Only users with the appropriate profile can load a page or execute a function. Possible to limit the data access of business objects on a per user basis.

User Authentication Supports multiple authentication schemes; login password authentication, single sign on with saml 2, two factor authentication, reverse proxy II S agent. Password rules are fully customizable.

Federated Identity Management– supports SAML 2.0 protocols for Single Sign On

Data Conversion Conduct a data assessment. Data strategy will be established identifying the data conversion scope. Leverage ivalua tools. Combination of ivalua and participating entity resources perform data conversions which include methodology to perform several iterations in small batches to test and validate. Too Simple? Data cleansing not evident at the source or during testing.

Interface and Integration Integration capabilities with major ERP systems and standard integration with suppliers and 3rd party business services. Offer standard interface templates out of the box.

Office Automation Integration Word excel and PDF

Mobile Device Support Screen menus change from PC layout to mobile friendly layout.

Mobile Applications Mobile solution is not based on mobile app but mobile web solution

Data Ownership and Access Applies a single data classification to all customer data. Internally customer data is confidential and limited to a small number of individual individuals on a need to know basis.

Customers remain the data owner and data controller of all data and control it in accordance with their access control data retention and data classification policies. Through the term of contract customers can export data.

Date Retention, Archive and Purge Considerations Customers decide what information is to be stored, how it is to be used, and how long it is retained. I value a does not delete or modify customer data unless requested by the customer , and only processes data in accordance with contractual obligations and customers configuration of their instances

Disaster Recovery Plan BC and Dr program is based on ISO I EC 22301 standard framework and is tested annually. Not clear if clients are involved with testing unless they are relevant stakeholders.

Solution Environments Development, acceptance, production.

Solution Technical Architecture Multi instance architecture delivers a logical single tenancy by isolating all customers data from each other. Application servers are in a discrete network segment. Database layer consists of database servers, installed in a discrete non Internet routable network segment. No Co mingling of any customer data between application instances and databases.

Solution Network Architecture Dedicated DMZ, network segmentation, dedicated URL, and site to site VPN which is a paid service. Intrusion detection system and intrusion prevention system monitors.

Firewalls filter inbound and outbound connections to the Internet as well as between intra sites VLAN zones. VLAN partition various networks. Principle of least access. Monitoring logs unexpected network activity and notifies staff in real time via emails and text messages physical access control through identity control, badge access, interior and exterior video surveillance . Security guards 24 7365 dedicated locked racks on interruptible power supply with diesel generator redundant heating ventilation air conditioning firesafety inert gas all components are fully fault tolerant including uplinks storage chillers HVAC systems HV AC everything is dual powered.

System Development Methodology Open web application security project OWASP. Secure SDLC policy and procedures. New features are evaluated for security impact during design phase with regular code reviews peers and SA St tools. Tested for effectiveness during the QA process. Development process based on agile methodology with iterative approach. Penetration testing conducted prior to major software release by independent security firm. Cloud services are in accordance with NIST security

focused configuration management of information systems guidelines. All application changes and updates are at the customer request and controlled by the customer they are performed behind the scenes for minor updates or through scheduled downtime for major updates.
Service Level Agreement SLA performance credits When performance falls below 99 point 8%. RTO 48 hours 8 hours 4 hours RPO 24 hours 24 hours 12 hours these are standard premium and platinum service levels and presumably additional cost

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed
Security and Privacy Controls currently validating controls and safeguards against NIST SP 800 53 revision 4 moderate
Security Certifications ISO IEC 27001, SOC2, ISAE 3402 Europe, annually audited for HIPAA. Not currently audited for PCI DSS compliance. Fedramp ready with our Gov cloud
Annual Security Plan Ivalua has built its security program and implemented an Information Security Management System (ISMS) in accordance with ISO-27001. The security controls deployed are in alignment with ISO/IEC 27001 and NIST SP 800-53 "Moderate" baseline requirements to address the information security risks. We are certified SSAE-18 (US) and ISAE3402 (Europe).
Secure Application and Network Environment Ivalua has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.
Secure Application and Network Access Ivalua uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest
Data Security Ivalua Solution architecture leverages a multi-instance tenancy model on shared servers. Our model creates a very distinct boundary between the data of each client. Each client application instance runs under a dedicated application pool process with a client dedicated identity. This model also facilitates the ability to perform upgrades and maintenance on an individual basis without impacting other clients' instances.
Personally Identifiable Information Protection compliance with the GDPR
Security/Privacy Issue Occurrence Ivalua has a Security Incident Response Plan and Procedure; reporting obligations are set forth in Ivalua's customer contract. In the absence of a contractual requirement, in the event of any breach of PII, the customer will be notified without undue delay but no later than 72 hours. Details, special cases, and additional terms can be discussed during discovery.
PII Data Actual/Attempted Access or Disclosure same as above
Security Breach Reporting same as above

Implementation Services Requirements

Project Management KPMG project management methodology an approach includes APP M overview toolkit and governance model which includes scope, schedule, budget, quality, resource, communications, risk, and issue management. Robust offering.
Project Implementation Methodology KPMG's Powered Procurement is a proprietary and accelerated Enterprise Business Transformation approach
Catalog Support Services To enable the correct catalogs within your Ivalua, KPMG takes a methodical approach in identifying the correct suppliers fit for punch-out and hosted catalogs. Our approach consists of the following: Vision, validate, construct, deploy, evolve.
Data Conversion Services KPMG overall data conversion from your legacy system consists of three broad steps extract, transform and load, data reconciliation. Initial data extract, mock data extract,

DEPARTMENT/STATE: Maine

production data extract, data cleansing and harmonization, transform and load process, quality assurance and reconciliation data load templates cognitive contract management optional.

Interface/Integration Development Services **KPMG will use the** Ivalua platform model to configure (rather than code-level customization) and includes its own workflow engine, document management support, SOA/web- service integration capabilities, template/field/form and related editing, security, reporting, collaboration, and third-party supplier/partner network connectivity at the core.

Organizational Change Management (OCM Services **KPMG's** approach to Organizational Change Management and Training (OCMT) is centered around engaging the right people, at the right time, with the right information. Robust methodology.

Training Services Our approach to training your organization's end users, system administrators, help desk staff, and suppliers to use Ivalua is centered on several key components; for instance: —An integrated organizational change management and training approach and methodology that drives adoption and aligns to the phases of the transformation —A Target Learning Model which builds on our experience and a robust Training Needs Assessment to deliver a robust approach to training—A collaborative approach to work with your organization and its project members to provide a strong and sustainable training solution—A blended learning approach for both internal and external stakeholder groups that helps raise end user confidenceand reinforces increased retention and adoption—A comprehensive Train-the-Trainer (TTT) program to train your identified trainers, change agents, and super users so they are ready and able to deliver end user training to their colleagues—An emphasis on internal staff preparation via Ivalua Academy and knowledge transfer sessions to help enable a Post-Implementation Transition Plan that builds lasting knowledge of the Ivalua platform. **KPMG** approach aligns with our implementation plan.

Help Desk Services The **KPMG** Service Desk will augment existing Help Desk capability by providing Case Management support for client Power Users via tickets raised through **KPMG's** ServiceNow ticketing system. Tickets will be assigned to Tier 1/Level 1 (L1) Support (Client i.e. your organization), Tier 2/Level 2 (L2) Support (**KPMG**), or Tier 3/Level 3 (L3) Support (eProcurement solution provider or Client IT Support) as applicable. **KPMG/KPMG** subcontractor can provide Tier 1/Level 1 support as well, which would be contracted by your organization. Defect resolution will include a root-cause analysis, solution explanation, testing, and deployment.

On-Site System Stabilization Support post go-live, post-implementation support/Hypercare will be provided to your organization by **KPMG** to address defects and transition to steady state run and operate mode for a period of three months. Post-implementation support will be a blend of on-site (implementation project team members) and off-site resources (**KPMG** Service Center for Help Desk Support).

Managed Services Requirements

Solution Support **KPMG's** Powered Evolution services help sustain your investment in the Target Operating Model (TOM) by keeping it refreshed and maintained after the post-implementation stabilization phase. This helps ensure that your processes continuously improve and extend capabilities and capacity as your business evolves. Robust offering.

Organizational Change Management (OCM Services Post implementation, our Organizational Change Management & Training (OCMT) practitioners help create a sense of consistency as technical changes arise. We do this by working with the implementation team to help maintain stability as the solution reaches a larger audience and as testing is conducted. Our OCM team works with Manage Services throughout the duration of Ivalua Hypercare, standard and / or enhanced support, Optional Service Packs or T&M.

Training Services **KPMG** will devise and implement a training program that will incorporate your organization's evolving policy and procedure changes and allow both Operations staff and general users

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG-Ivalua

CATEGORY #(s): 2-Individual Workstream Implementation

DATE: 8/25/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Large company; good representation of 4 states and 3 local government initiatives
- Called out implementing Ivalua 7 out of past 9 projects
- Unsure if KPMG is consulting only
- Preconfigured solutions; do not allow unique procurement laws to be included
- Jargon with solutions, not very specific

2. Previous Projects

- Ohio is complete solution; no ROI identified
- Alabama very limited implementation primarily financial activities; too early to validate (go live 6/28/2021)
- Teachers retirement system of Texas is very limited in scope compared to statewide scope required, hasn't gone live yet still in implementation

•

3. Subcontractors

- Ivalua is new to full solution implementation (2013) previously source to pay since 2000.

•

•

4. Organizational Chart

- KPMG acting as project manager; significant customer requirement
- Implementation of Ivalua solution
- General descriptions, not specific to NASPO

5. Litigation

- Non Answer.
- Appears they are declining to disclose as requested

•

6. Financial Viability

- Did not provide D&B financial data but references a good credit rating from them. What is in the B&B report that is unfavorable that KPMG does not provide is as requested.
- Financial reports are not audited, brings accuracy into question; overly condensed and only for short period; high debt to partners.

Individual SME Comments:

General Principal and Requirements

- POSITIVE– Routing workflow appears efficient
- QUESTIONING Is/can MWBE be broken out into subcategories or customized?
- QUESTIONING Search 360 appears to be level 2 punchout but uncertain if that is the functionality
- POSITIVE document management across modules is very efficient
- QUESTIONING – FedRAMP ready not yet FedRAMP certified
- QUESTIONING – Ivalua help desk is an area not contemplated in the RFP

Functional Requirements

- QUESTIONING – Is every supplier even for low dollar purchase required to establish an account?
- QUESTIONING – Can Supplier portal import other ERP solution data
- QUESTIONING – can buyers be restricted to certain business practices?
- POSITIVE – Audi workflow is good. How long is it maintained?
- QUESTIONING – are hosted catalogs searchable withing the solution and not just independently?
- POSITIVE – Search 360 ability to consider punchouts in the search
- POSITIVE – Document versioning
- INTERESTING – Public portal can act similarly to current webpage activities
- POSITIVE – MS Word document synching seems a valuable tool to save time. Would like to see more on what that looks like
- POSITIVE – reporting seems to give the user many options

Technical Requirements

- POSITIVE – multiple authentication options
- QUESTIONING – Data conversion seems very tentative and non-committal to success, just explains a very broad set of all potential options
- QUESTIONING – What ERP systems are supported?
- QUESTIONING – WebKit is for iOS. How are PC devices supported?
- POSITIVE – different environments are needed to properly test
- QUESTIONING (p.70) When will Ivalua be compliant with PCI-DSS for payment cards
- QUESTIONING – How long is the FedRAMP process to become authorized?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

BIDDER NAME: KPMG - Ivalua

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/14/22

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- POSITIVE – limitations of access based on need
- POSITIVE – data at-rest and in-transit encrypted
- QUESTIONING – Customer data is limited, but customer should apply access controls. What responsibility does Ivalua have in a breach?
- QUESTIONING – What does Ivalua do in a breach situation aside from notification within 72 hours?

Implementation Services Requirements

- KPMG implementing
- Detailed description of steps, overall general in nature, unspecific to Ivalua
- Good balance of roles
- Project implementation methodology appears general in description
- Description is detailed but unspecific to Ivalua
- Punchout out does not identify Tier 2 capability
- KPMG supports loading catalogs
- KPMG has larger role in data conversion
- Customized training plan
-

Managed Services Requirements

- KPMG service desk services
- Detailed levels of focus change management focus
- Unsure what level of functionality requires additional services

Video Demonstrations

- POSITIVE - Modules
- INTERESTING – FOIA request from the solution
- POSITIVE – repository for documents
- POSITIVE – Other third-party integration (which ones?)
- POSITIVE – Catalog Management
- POSITIVE – Roles
- POSITIVE – Workflows and notifications on dashboard
- POSITIVE – Good supplier data
- NEGATIVE – P2P information limits supplier access to RFPs?
- INTERESTING – Project types can be for individual low dollar quotes
- QUESTIONING – are Outlook addresses imported for SME's?
- QUESTIONING – how are suppliers not in the system notified and able to respond?
- POSITIVE – email templates are good
- NEGATIVE – How are small businesses with technology challenges able to respond?
- QUESTIONING – Have SME expressed concern with challenges to evaluate, there are many steps and files to review?
- QUESTIONING – how are no definite quantity awards considered
- POSITIVE – contract templates

Individual SME Comments:

Overall

Appendix B -31 exceptions to Maine T&Cs
- 28 exceptions to the NASPO ValuePoint T&Cs
- Added terms for Help Desk and Managed Services:
o Definitions
o Provider Services Personnel
o Term and Termination
o Disclaimer and Limitation of Liability
o Indemnification
o Cooperation; Use of information and State Materials

Page 180-187 Assumptions

General, pg. 181/182

o 1st bullet: Participating Entities will "contract directly with the eProcurement Solution provider for the software licenses and with KPMG for implementation services". CONCERN, this may not be possible with some States or other Participating Entities based on their laws.

o 4th bullet: pricing is "subject to five percent year-over-year increase". CONCERN, not all Participating Entities can agree to an automatic price increase. In some cases they may need to use a Term/Condition for price increases based on an index instead. NEGOTIATION, suggest negotiating this.

o 7th bullet: "KPMG assumes up to 25% travel". NOTE, pricing reflects this amount of travel expense. NEGOTIATION, suggest having a means to reduce costs if a particular project does not need this much KPMG travel.

o 14th bullet: WEAKNESS... KPMG "may not be permitted to participate in a NASPO ValuePoint Administrative Fee or a State imposed administrative fee under this contract"

- Project Related, pg. 182-184

o 1st bullet: Fixed prices assume implementation periods of Small State=12 months, Medium State=15 months & Large State=24 months. CONCERN, this may make the prices between proposals not be comparable. Also, the time period for Small and Medium is too short.

o 2nd bullet: "Implementation plans provided assume 15 pilot agencies during each implementation. Any additional agencies/localization is out of scope and may be contracted by your organization as a change order." CONCERN, it is unrealistic to have assumed the same number of agencies for each size of State. So the pricing is not realistic and also not going to be comparable to other proposals.

o 9th bullet: "any modifications to the out of the box functionality requiring custom code" is limited to only situations where there are "statutory requirements". CONCERN, there may be RFP/RTM req'ts that end

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG Ivalua

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

up requiring "custom code" so suggest getting this language modified to include any changes necessary to comply with RFP/RTM reqts. NOTE, this assumption is repeated under reports (10th bullet, pg. 186) o 13th bullet: "Client will procure five environments". CONCERN, on pg. 63, "Solution Environments" it refers to 3 environments. Need to CLARIFY what is included in the pricing.

o 15th bullet "up to three supplier management questionnaires" will be configured. NEGOTIATION, suggest getting this number increased to five for Medium and Large State implementations.

o 16th bullet: "will configure up to five contract templates". NEGOTIATION, suggest getting this number increased to ten for Medium and Large State implementations.

o 17th bullet: "maximum of 25 configured fields". NEGOTIATION, suggest getting this number increased to 50 for Medium and Large State implementations.

o 19th bullet: "eProcurement system is considered the system of record for eProcurement supplier information". CONCERN, some Participating Entities may have to have the Finance System be the system of record, depends on the implementation. Suggest NEGOTIATING to strike this assumption.

o 24th bullet: "During hypercare" the Participating Entity will "perform Tier 1 support". "KPMG will act as Tier 2 support" and Ivalua "will act as Tier 3 support". NOTE, need to check this against the narrative regarding Implementation Services HELP DESK.

- Help Desk/Managed Services (pg. 184-185)

o 1st bullet: Participating Entities will be limited to 25 users that can submit tickets to the KPMG Service Desk. NEGOTIATIONS, suggest increasing this number for Medium and Large States.

o 3rd bullet: On-going help desk services assumes that the Participating Entity will provide "Tier 1 support". NOTE, need to check this against the narrative regarding Managed Services HELP DESK.

o 6th bullet: "assumes approximately 1% of the users will call/day with an average call duration lasting between 10 to 20 minutes". CONCERN, what about support for Suppliers? Are they considered "users"?

o 7th bullet: "20 to 35 calls/analyst/day is assumed (8:00 AM to 5:00 pm local time)". CONCERN, unclear how this metric fits with the "1% of the users" in the previous bullet. Also, what is meant by "local time"?

Also, same question as previous bullet regarding Suppliers.

o 9th bullet: End-user support numbers. WEAKNESS

§ the "Total end-users" count does not match the Cost Workbook req'ts.

§ The "At Go-live" numbers are too low

§ "Ramp-up" numbers based on quarters along with the implementation plan months in the Projects assumptions means Large doesn't get to 8000 users until end of 3rd year of implementation and just past 2 years for Medium and Small. This is not realistic.

o 10th bullet: WEAKNESS, Supplier support numbers for "Total Suppliers" should be 50,000 for each size State according to the Cost Workbook req'ts. Also the numbers are too low for "At Go-live".

o 13TH bullet: SLA metrics.

§ KPMG is only agreeing to two of the 10 Production SLAs, Catalog Onboarding/Maintenance and External Sources Onboarding.

§ KPMG is not agreeing to any of the Implementation SLAs

§ Ivalua is responsible any other SLAs and according to the Service Level Agreement section (pg. 67) they have their own "hosting and maintenance SLA".

§

- Reports/Conversion/Interfaces, pg. 185/186

o 1st bullet: Limits the number of reports for each size of State. NEGOTIATION, suggest increasing to at least twice the listed numbers.

o 16th bullet, pg.186: "only active suppliers, purchase orders, and contracts will be converted/moved".

NOTE, this conflicts with Implementation Req'ts Data Conversion Services, pg. 118-120, which states the "preliminary recommendation of the data conversions based on the req'ts state in the RFP" includes In-

EVALUATOR NAME: Tom Hastings

EVALUATOR DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Consulting firm -KPMG
 - Global and working with Ivalua
 - Experience in government procurement
 - Supplied challenges and trends
2. Previous Projects – **Marked Confidential**
 - Listed state projects
 - Supplied contact information
 - Supplied implementation dates
3. Subcontractors
 - Ivalua is the subcontractor solution vendor
 -
 -
4. Organizational Chart
 - Supplied org chart for KPMG, Ivalua and the State!
 - Supplied role names and descriptions
 -
5. Litigation
 - Stated were named as defendants but no current litigation to report
 - Stated this information is confidential
 -
6. Financial Viability – **Marked Confidential**
 - Supplied balance sheets for last 2 years
 -
 -

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG - Ivalua

CATEGORY #(s): Stage 2 Category 2 Individual Workstreams

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

This response is the same response as submitted in Stage 1. The notes from the comparison are below. I have copied over the eval notes and RTM notes over from stage 1 to this stage 2 individual work stream category.

KPMG-Ivalua: Stage 1 and Stage 2 proposal documents are the same except the Stage 2 Technical Proposal includes an "Introduction" section on pg. 2

Individual SME Comments: *The video demonstration for KPMG is the SAME as offered in the Ivalua response. The video shows the Ivalua solution, so I have copied the video notes over from the Ivalua response.*

The narrative for this response is in a different FONT than the Ivalua response, but the CONTENT in some of the response sections is the same!

The Implementation Services Requirements section moving forward (Pages 85 thru 233) is different than the Ivalua response. These sections contain much more detailed information than the Ivalua response. The RTM for this response is the same response as Ivalua.

General Principal and Requirements

Key Solution Functionality Elements – PDF Page 4 thru PDF Page 7

- Single point of entry with landing page displaying profile information. Can search from this page.
- Offers workflow routing known as Smart Routing – PDF Page 5 has sample workflow chart.
- Can tailor the system to match each organizations compliance requirements.
- Offers portal to all users external and internal that will display dashboards to manage the tasks needing to be addressed.
- Marketplace can house hosted and punch out catalogs with searching across all catalogs
- Powerful Integration tool box
- Workflow is highly configurable containing over 50 different controls. PDF Page 6
- Document management with reporting capabilities across all modules
- Public portal is offered to view the source to pay activities without an account.

User Experience – PDF Page 8

- User has configurable homepage landing which helps the user in deciding what needs to be done. PDF Page 8 shows sample homepage
- Users access is role based and tied to "authorizations". Can delegate workflows. PDF Page 9 shows delegate functionality screenshot.

Bidder Best Practices and Roadmap – PDF Page 9 thru PDF Page 11 – *Same as Ivalua response notes copied over.*

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Releases are performed twice a year and allows the client to choose which version and when to apply upgrades. Customers are in control of the upgrades
- Constant communication with customers to stay up to speed with new technologies.
- Work closely with customers to learn their best practices
- 60% roadmap comes from clients with 20% reserved for innovation and 20% for market trends.
- Areas of significant investment are Mobile, Invoicing, Contract Management, Supplier Risk and Security. PDF Page 10
- Leveraging new AI technologies. PDF Page 11
- Automated obligation tracking and management is being enhanced.
-

Innovations and Value-Added Features/Services – PDF Page 11 thru PDF Page 13 – Same response as the Ivalua response. Notes copied over.

- Offers Help Desk support. PDF Page 12
- 90% of tickets solved in an hour. PDF Page 11
- Advanced Services Procurement - Improvements to contingent labor PDF Page 12
- Expenses – Capture PCard transactions. PDF Page 12
- Vendor Master Management – Better manage vendor data. PDF Page 13
-

Customizations/Extensions – PDF Page 13 - Same response as the Ivalua response. Notes copied over.

- Client is responsible for when they go through an upgrade cycle.
- The platform relies on configuration not custom code.

Alternative Funding Models – PDF Page 11 thru PDF Page 15 –

- Offering 2 options for this section and numbers presented are representational only.
- Option 1 - Hybrid fixed fee plus transaction-based model. Fixed fee payment and/or transaction fee of 1-3%. PDF Page 14
- Option 2 – Value Based Funding Model – Self-Funding model. Table of examples provided on PDF Page 14 and 15

Contract Transition and Flexibility – PDF Page 15

- State this process is complicated and will work with our entities based on the terms in the awarded Master Agreement.

Functional Requirements – PDF Page 16

General Functionality – PDF Page 17 - Same response as the Ivalua response. Notes copied over.

- Full Source to Pay Solution – PDF Page 17
- Automated notifications
- Single Platform and configurable solution – PDF Page 17
- Offers native public site for posting – RTM line 7
- CONCERN - EPROC-GEN-6 – TAB 2 Line 10 – Can the system be integrated based on this response?
- CONCERN - EPROC-GEN-11 -TAB 2 Line 15 - Has a limit on a file type (executables) and states size limits do exist?
- CONCERN - EPROC-GEN-15 – TAB 2 Line 19 - PO is the only printing format that is printable?

Supplier Portal – PDF Page 17 - Same response as the Ivalua response. Notes copied over.

- Unlimited suppliers with free supplier portal.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG - Ivalua

CATEGORY #(s): Stage 2 Category 2 Individual Workstreams

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- After establishing an account, the supplier portal has a one stop shop on their homepage. PDF Page 18
- Self-manage users with roles when they set them up in the system. Account has system admin to manage supplier's account.
- CONCERN - EPROC-SPR-5 – TAB 3 Line 9 – Does the system notification get sent via email, or does supplier just have to monitor notifications on their supplier dashboard?

Supplier Enablement/Management – PDF Page 19 thru PDF Page 25 - **Same response as the Ivalua response. Notes copied over.**

- Enablement is 2 parts, public facing page to create an account, and “full enrollment” used to be fully onboarded –
- Sample supplier registration PDF Page 20
- Supplier Full Enrollment happens after workflow approval. The information required here is banking information and W9 documents. PDF Page 21
- Integrations can be designed to verify real-time profile information. PDF Page 21
- Can create their own user contacts. PDF Page 22
- Supplier accounts have document storage and tracking. PDF Page 22 and PDF Page 23
- Solution has supplier workflow. PDF Page 23
- Internal users (Buyers) can have access to search for suppliers. PDF Page 24
- Access to view the supplier record. PDF Page 24
- Suppliers maintain their own profiles, but changes can be put into workflow for approval by internal users.
- STRENGTH - Ability to have “changes” done on a registration get put into workflow.
- CONCERN - EPROC-VDR-32 – Line 61 – Supplier's response leads me to believe they did not understand the requirement. We asked if other agencies be put into workflow, not have data passed into other state systems?
- CONCERN - EPROC-VDR-36 – Line 65 – Need to release an RFI to remind suppliers to log in and update their registration?

Buyer Portal – PDF Page 25 - **Same response as the Ivalua response. Notes copied over.**

- This is the access point for procurement activities. Homepage Dashboard – PDF Page 26
- SSO can be a login and each user's dashboard are based on their user roles
- User roles are tied to authorizations and the user is assigned a “perimeter”. PDF Page 26
- CONCERN - EPROC-BPRT-7 – Line 81 – The requirement is for the Buyer Portal, but the response received is for the “vendor” portal?
- CONCERN - EPROC-BPRT-8 – Line 82 – Does not support daily summaries of buyer notifications.
- CONCERN - EPROC-BPRT-9 - Line 83 – Cannot provide link to external users due to security
- CONCERN - EPROC-BPRT-15 – Line 89 - Supplier notification needs to be handled through the RFI module?

Need Identification – PDF Page 27 - **Same response as the Ivalua response. Notes copied over**

- The solution has a single point of entry and can manage a request in several ways via “requests”.
- Options include request form, purchase, or exemption request, create a sourcing event or contract, or gather quotes. PDF Page 27

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Request through Pay – PDF Page 28 thru PDF Page 32 - Same response as the Ivalua response. Notes copied over

- Process starts with a “request” that will populate relevant requisition details. PDF Page 28
- Exceeding contracted amount could be triggered by the allocations grid. PDF Page 29
- Requisitions are submitted to workflow. PDF Page 29
- Once approved, the requisition is flipped to a purchase order. PDF Page 29
- CONCERN – Page 29 – “At the same time, the order is transmitted to the supplier through their email, including a PDF version of the order”. No other way to send order to supplier.
- Can flip purchase orders into receipts. Page 30
- Receipts are shown on the receipt page (PDF Page 31) and then the receipt is submitted to workflow. PDF Page 31
- Invoice will be created (PDF Page 32), and then payment can be applied to the invoice. PDF Page 32
- CONCERN - EPROC-PRD-1 – Line 102 - Response refers to Sourcing event from the requisition, but requirement is asking for need identification to Purchase Request?
- CONCERN - EPROC-PRD-15 – Line 116 – Does not support executables file type
- CONCERN - EPROC-PRD-37 – Line 138 – Capturing noncontract price for later analysis is not supported.
- CONCERN - EPROC-WRK-24 Line 189 – Can the PO, PR or change request be re-submitted after it was changed?
- CONCERN - EPROC-PO-17 – Line 212 – eFax submission of orders in not supported.
- CONCERN - EPROC-PO-26 – Line 221 - Additional configuration will be required for facilitate fiscal year end.
- CONCERN - EPROC-PC-1 thru EPROC-PC-4 – Lines 227 thru 230 – These PCard requirements are in the process of being developed.
- CONCERN - EPROC-PC-5 – Line 231 - Full administration of PCards is not available in the system
- CONCERN - EPROC-PC-6 – Line 232 – Pcard maintenance is not currently available but is anticipated for release in 2022.
- CONCERN - EPROC-PC-7 – Line 233 – Ghosted cards are not currently available but is expected to be released mid to late 2022
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 – These requirements will require some kind of customization, configurable item, or integration.
-

Catalog Capability – PDF Page 33 - - Same response as the Ivalua response. Notes copied over

- Ability to view catalogs are limited to the user’s organization scope
- Search results landing screen – PDF Page 33
- Can shop via hosted or punch out catalogs. PDF Page 33
- Hosted catalog process can be done by supplier. Internal user can compare catalog versions PDF Page 34
- Users can use the search functionality to search and filter results. PDF Page 34
- Item tags to find preferred items
- Search punchout and hosted in the same search. PDF Page 35
- CONCERN - EPROC-CAT-32 – Line 317 – The ability to compare catalog item search results in NOT supported.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG - Ivalua

CATEGORY #(s): Stage 2 Category 2 Individual Workstreams

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-CAT-34 – Line 319 – Additional functionality is required to compare items and will be based on number of punchouts required.

Sourcing/Bid Management – PDF Page 35 – KPMG uses “vendor” where Ivalua uses “supplier”. Same response as the Ivalua response. Notes copied over

- Wizard solicitation set up – PDF Page 36
- Supplier can be added several ways (commodity code selection, public site, etc.) – PDF Page 37
- Has Sealed Bid functionality
- Conditionality can be applied to questions.
- Item grid (pricing) has multiple set up options.
- Notifications to supplier about event and has access to public portal
- Suggest posting information to client's website and provide link to public portal to view full solicitation.
- Suppliers need to add open solicitations to their account to create a response. PDF Page 41
- Supplier can Management of Responses. PDF Page 42
- Users can monitor suppliers' activity and award events
- Can notify suppliers and create a contract from the solicitation. PDF Page 44
- CONCERN - EPROC-SRC-3 thru EPROC-SRC-9 and EPROC-SRC-11 – Lines 330 thru 336 and 338 – Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-14 thru EPROC-SRC-21 – Lines 341 thru 348 - Responses to these requirements refers back to EPROC-SRC-2, Line 329 which did NOT require a response? **Attention to detail!**
- CONCERN - EPROC-SRC-22 -Line 349 – The response talks about envelope bidding, but requirement talks about separate Cost and Technical sections?
- STRENGTH - Has no limit on number of suppliers being invited to an event.
- CONCERN - EPROC-SRC-68 – Line 395 – eFax is not supported
- CONCERN - EPROC-SRC-70 – Line 397 – This response does not address the requirement that states the eProcurement file of the event needs to be “complete” to meet public records laws. SRC 71 has this same response which meets that requirement.
- CONCERN - EPROC-SRC-83 – Line 410 – System does not support web conferences, but supplier offered the ability to upload the recorded conference. Do they support that file type?
- STRENGTH – Size limitations can be set up by system administrator
- CONCERN - EPROC-SRC-143 – Line 470 - Must start a new solicitation instead of cancelling award on bid and move to the next highest bidder?

Contract Management – PDF Page 45 - Same response as the Ivalua response. Notes copied over

- Wizard driven entry. PDF Page 45
- Information brought over from the contract header
- Alerts on documents uploaded to the document section – PDF Page 46
- Native authoring (Word) – PDF Page 46
- Subcontractors can be added.
- Can integrate with multiple eSignature tools. PDF Page 48
- CONCERN - EPROC-CNT-16 – Line 496 – Loading of external price list for contracts will need to be worked out to identify data elements. Additional cost possible?
- CONCERN - EPROC-CNT-52 thru EPROC-CNT-63 – Line 532 thru line 543 – The supplier has used the same response for all of these requirements, but the response does not mention the

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

requirement? Also see lines 555 and beyond as an example. These responses are duplicate but at least start with "this information".

- CONCERN - EPROC-CNT-66 – Line 546 – Response states alert could be posted to public portal, but requirement asks if it can be posted to state's procurement website.
- CONCERN - EPROC-CNT-67 – Line 547 – The response does not address the email notification listed in the requirement?

Vendor Performance – PDF Page 48 - **Same response as the Ivalua response. Notes copied over**

- System has supplier performance dashboard. PDF Page 48
- Allows ability to track a supplier's performance.
- Improvement plans provide a collaboration tool to help improve the supplier performance. PDF Page 49
- CONCERN - EPROC-VPE-3 thru EPROC-VPE-11 – Line 573 thru line 581 – The response to each of these requirements refers back to the response on line 572 which states vendor performance needs to be handled by a questionnaire.
-

Purchasing/Data Analytics – PDF Page 50 - **Same response as the Ivalua response. Notes copied over**

- System has 3 different types of reporting, Ad Hoc, Queries and Analysis
- Reports are compiled by running a search and exporting data to Excel.
- Analysis reports can be put on dashboard for view of any user.
- Offers 100 standard reports
- CONCERN - EPROC-PDA-5 thru EPROC-PDA-16 – Line 602 thru line 613 – A duplicate response was used to answer all of these requirements, but the response does not reference the reporting requirement? Can this supplier supply reports based on the listed requirement?
- CONCERN - EPROC-PDA-20 and EPROC-PDA-21 - Line 617 and 618 – This supplier currently does not have PCard functionality.
- CONCERN - EPROC-PDA-36 – Line 633 – This supplier currently does not have PCard functionality.

Technical Requirements – PDF Page 54 - **Same response as the Ivalua response. Notes copied over. KPMG provided screenshots where Ivalua did not in this section.**

Availability – PDF Page 55

- Meets requirements

Accessibility Requirements – PDF Page 55

- CONCERN – States they are committed to being Section 508-compliant as soon as possible.

Audit Trail and History - PDF Page 55

- Meets requirements

Browsers Supported – PDF Page 56

- Supports the most update browser versions

User Accounts and Administration – PDF Page 56 – 57 – **Narrative response is different**

- Supplied multiple authentication options. PDF Page 57
- Access is controlled by authentication. Pages in the system are controlled by users roles and permissions.

**STATE OF MAINE

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Supplied screen shot of authorization functionality. PDF Page 58
- Organization hierarchy supplied on PDF Page 59
- Workflow can be applied and is highly configurable.

User Authentication – PDF Page 59 – 60 - **Narrative response is different**

- Supports multiple authentications and password rules are fully customizable.

Federated Identity Management – PDF Page 60 - **Same response as the Ivalua response. Notes copied over**

- Meets requirements

Data Conversion – PDF Page 61 – **Narrative is different but matrix response is the same.**

- Meets requirements.
- CONCERN - EPROC-TECH-28 -Line 32 – Solicitation data conversion is NOT supported.
- CONCERN - EPROC-TECH-30 -Line 34 – Vendor performance data conversion is NOT supported.

Interface and Integration – PDF Page 61 – 62 - **Narrative is different but matrix response is the same.**

- Provided communication protocols and data formats that are supported.
- CONCERN – Did NOT identify all finance system/ERP's where their solution has existing interface/integration capabilities in the narrative.

Office Automation Integration – PDF Page 63 - **Same response as the Ivalua response. Notes copied**

- STRENGTH – Can import Word documents in the contract tool and break them into clauses
- Supports Word, Excel and PDF

Mobile Device Support – PDF Page 63 - **Same response as the Ivalua response. Notes copied**

- Meets requirements although response not very informative

Mobile Applications PDF Page 63 - **Same response as the Ivalua response. Notes copied**

- Based on a mobile web solution rather than a mobile application

Data Ownership and Access – PDF Page 64 - **Same response as the Ivalua response. Notes copied**

- Meets requirements

Date Retention, Archive and Purge Considerations – PDF Page 64

- Should be discussed at implementation.

Disaster Recovery Plan – PDF Page 64 – 65 - **Same response as the Ivalua response. Notes copied**

- Notification of data breach is 72 hours.
- CONCERN – Could have supplied more detailed information about this requirement

Solution Environments – PDF Page 65 - **Same response as the Ivalua response. Notes copied**

- CONCERN – Could have supplied more detailed information in the narrative but did list 3 environments that are offered with some offered at additional maintenance fees.

Solution Technical Architecture – PDF Page 65 - **Same response as the Ivalua response. Notes copied**

- Supplied application and environment architecture. PDF Page 66

Help Desk Services - PDF Page 165

- Provided table of process on PDF Page 165
- CONCERN - EPROC-IMPL-3 thru EPROC-IMPL-5 – Tab 6 Line 6 thru line 8 – These requirements for help desk services are not available

Transition Out Assistance Services - PDF Page 165 thru PDF Page 167

- Provided "Power Evolution managed service termination framework" chart and table with explanation on PDF Page 166

Other Available Services - PDF Page 168 thru PDF Page 177

- Listed quite a few optional available services

Appendix A; Assumptions – PDF Page 182 thru PDF Page 189

Appendix B; Exceptions – PDF Page 190 thru PDF Page 223 – Red lining of NASPO documents.

Appendix C; Sample Implementation Plan - PDF Page 224 thru PDF Page 233

Video Demonstrations – This video submitted with this proposal is the SAME video used in the Ivalua response. I have copied over the notes from the Ivalua response. The video demonstrated an overview of the solution and provided information from both sides of the application.

Full Suite platform containing end to end procure to pay. Supplier Login screen has additional links to other services, FOIA request, public bid site, new supplier registration and help desk information. Supplier portal page has announcements, registration progress and many other widgets showing information about the vendor. Links on left takes supplier to registration information. Has change log for changes to registration. Links across top takes them to contracts,

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG - Ivalua

CATEGORY #(s): Stage 2 Category 2 Individual Workstreams

DATE: 12/2/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

bids, catalogs, invoicing and performance links. Buyer has landing page with to do lists and many other widgets and analytical reports. Links on right allow access to supplier registration, sourcing, contracts, etc. Across the top has links to the other modules they have access based on the roles assigned. Can search suppliers from the supplier landing screen. 360 supplier is available, and the left side of the landing page give the user access to each of the section of a supplier's registration. Bid Management module has search ability and project creation. Solution is wizard driven and has setup options on left side of screen. Has scoring capability and houses templates and libraries to aid in bid creation. Supplier can view bids without logging into their portal. If interested, can add themselves to the bid and log into their portal. Responses are wizard driven. The system allows for individual and consensus scoring of proposals. Can send out award notifications to suppliers by creating scenarios. Can create separate contract record or create a contract from a sourcing event. The creating contract process is wizard driven. Offers Word authoring of contracts and a library to house contract templates that can be used to create contracts. Can submit contracts into workflow approval. Has integration with DocuSign and other solutions. Buyers search for products via the procurement home page with is configurable dashboard. Can have hosted or punch out catalogs which are searched on with each search. Can put items in a "kit" search. Requisitions can be configured with budget information sent over from the ERP. Workflow can be applied to each requisition. Requisition and PO are linked in the system. Supplier logs in to their support to manage orders. Invoicing module has several invoice options. User can flip an invoice to a receipt which can be put into workflow. Supplier can see payment status in their customer portal. System does have analytics with 3 different options for reports including queries and data visualization.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG - SirionLabs

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- KPMG, LLC over 120 old.
- Much experience in source-to-pay.

2. Previous Projects

5 projects listed, all State. The projects listed fit Category 2.

- State of Ohio. Interfaced both inbound and outbound with the State's PeopleSoft ERP.
- State of Arizona. Integrated and interfaced both between CGI Advantage ERP, Tririga, and Ivalua.
- State of Alabama. Integrated and interfaced both between CGI Advantage ERP and Ivalua.
- State of Texas (TRS). Interfaced both inbound and outbound with the State's PeopleSoft ERP.
- California Dept. of Transportation. Migrated contracts from legacy system to Ivalua.

SirionLabs also provided previous projects pgs 17 – 19

- A US State Technology Authority. Using Sirion's contract mgt and supplier mgt solutions software they automate and Standardize it Contract Management process.
- A Canadian Airport. Using Sirion's contract mgt and supplier mgt solutions software they streamlined supplier relationship management.
- A large US Bank. Used SirionLab's platform to transform the risk, performance, and vendor management processes.

3. Subcontractors

- SirionLabs, Inc. Est. 2013. Contract Lifecycle Management technology for public entities.

4. Organizational Chart

- Yes – both org. chart and job descriptions.

5. Litigation

- Vendor states they have no pending litigation that **will materially affect** the firm's operations or ability to perform services for us.

6. Financial Viability

- Yes. Provided unaudited balance sheets and further descriptive information.

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Comments:

Overall/General

- Sirion is SaaS solution.
- Workstreams being offered:
 - Contract Management
 - Supplier / Vendor Performance
- KPMG and SirionLabs can implement as workstream packages or as a combination of workstream packages based on your organization's needs.
- Sirion founded by legal and contract practitioners.
- Have numerous concerns with the number of assumptions they take.
- Many of these assumptions (pages 139 - 146) are contractual terms and conditions in nature versus an assumption.
- Some assumptions may be deal breakers for the Contract.
- Concerns with the numerous exceptions (pages 147 - 180) they take and that many States could not agree with.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 4 - 9

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
 - Single Point of Entry: Yes. Sirion Contract Lifecycle Management integrates with SSO
 - Smart Routing: Yes. Sirion template wizard pulls information.
 - Compliance: No. not addressed.
 - Portal: Yes. Integrated portal for suppliers. Doesn't mention State.
 - Open Marketplace environment: Yes. Sirion provides a hierarchical document tree with a full text search option.

- Integration: Yes. Sirion provides two-way integration via connector or application programming interface (API) to a variety of systems. KPMG will leverage integration adapters to integrate with enterprise system identified in the RFP.
- Workflow: Yes. Sirion has an engine that supports workflows that can be configured.
- Document Management: Yes. Sirion for contracts. No storage limit on contract and related document storage.
- Reporting/dashboards/ rule role based: Yes. Sirion over 250 standard reports
- Configurable: Yes.
- Transparency: Yes.

2. User Experience – p. page 9 - 15

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
 - Capability: Sirion provides user-based views to be saved based on role, need or use case to view and access their contracts.
 - Intuitive: pop-out menu with dashboards based on role and access.
 - Wizard driven: Help manual and FAQ section.
 - Portal work management: Yes.
 - Mobile access: No App., but can be viewed on phone.
 - Workload: Sirion – review and reports of workload, reassignments are managed within the platform.
 - Role-based: Doesn't cover specifically, but is mentioned throughout this section.

3. Bidder Best Practices and Roadmap – p. page 16 - 18

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
 - Quarterly release cycle with patches on an ad-hoc basis
 - Multi-tenant SaaS-based App
 - Alternative approaches: Sirion does surveys and reviews. They also have a Customer Advisory Council to solicit feedback

4. Innovations and Value-Added Features/Services – p. page 18

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Automated obligation and service level management. No further explanation.

5. Customizations/Extensions – p. page 18

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such

customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- They list that they develop functions, features, fixes, and updates that will benefit its users. Not sure this meets this requirement.

6. Alternative Funding Models – p. page 18

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- N/A.

7. Contract Transition and Flexibility – p. page 18

- Didn't agree to, instead they State: "Sirion is committed to discussing mutually agreed terms that would help ensure long-term relationships and continued use of the platform"

B. Functional Requirements: pages 20 – 48

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The electronic procurement solution **must** be cloud-based with a Software as a Service (SaaS) delivery model

1. General Functionality. Tab 2, GEN-1 through GEN-40

- N/A

2. Supplier Portal. Tab 3, SPR-1 through SPR-23

- N/A

3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43

- N/A

4. Buyer Portal. Tab 3, BPRT-1 through BPRT-15 and

- N/A

5. Need Identification. Tab 3, NEED-1 through NEED-7

- N/A

6. Request through Pay Workstream. Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11

- N/A

7. Catalog Capability - Tab 3, CAT-1 through CAT-40

- N/A

8. Sourcing/Bid Management Workstream. Tab 3, SRC-1 through SRC-151

- N/A

9. Contract Management. Tab 3, CNT-1 through CNT-88 and - p. 20 - 22

- a. 15 -“INT-Integration/interface”, 4 – CF “Configuration Item”
- b. 17 – Medium
 - CNT 14: **CLARIFY** – it seems they do not meet the E-Signature requirement with their answer, but the answer is vague.
 - Meets most of the CNT requirements with many integrations needed.
 - Sirion’s end-to-end AL-powered Contract Lifecycle Management Solutions Software.
 - Software aligns around: Procurement, legal, finance, and others.
 - The solution provides:
 - Contract repository
 - Contract Analytics
 - Invoice Management
 - Collaboration
 - Reports and Dashboards

10. Vendor Performance Tab 3, VPE-1 through VPE-25 and - p. 22 - 23

- a. 3 -“INT-Integration/interface”, 2 – CF “Configuration Item”
- b. 3 – Medium
 - 20 out-of-the-box, 3 integration, and 2 configurations with 92% requiring low effort.
 - Real-time visibility and drill-down actionable items.
 - Supporting documents can be attached to associated vendor performance records. Sirion provides the ability to include attachments in formats such as doc, docx, xls, xlsx, pdf, jpg, png etc. Please note that the maximum file size allowed is 200Mb.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37

- N/A

C. Technical Requirements: pages 25 - 35

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider’s (ISP’s) should also be in place.

- Availability is 99.95% - **doesn’t meet requirement of 99.8%**
- Uses AWS.
- 2 locations used for AWS
- 24x7 support at not additional fees.
- Provides incident management chart from their SLA (page 25)

- 2. Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*

- Yes, meets.

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5

- Sirion has full audit trail capabilities. Sirion maintains an audit log for each record and entity on the system. It captures all actions performed (creation, modification, workflow step, deletions, archival, etc.), timestamp, who performed the action, and who it was requested by. It even captures metadata level change history for key metadata fields.

4. Browsers Supported

- The general web browsers are supported (Microsoft Internet Explorer, M Edge, G Chrome, Firefox, and Safari). No concerns.

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20

- Sirion provides several modes of permissioning via its User admin module:
 1. Role based (e.g. Contract Manager, Finance Approver, etc.)
 2. Rule based (e.g. see data of a particular business unit, geography, etc.)

3. Instance based (this includes individual based permissions)
4. Counterparty permissions (e.g. what specific modules, features, IDs, does the counterparty see or not see)
5. User group based (e.g. alias which includes all lawyers, etc.)
 - Sirion's unique permissioning mechanism allows easy and quick configurations of global multi-geography, multi-business unit teams, therefore allowing for short implementation times. Further details regarding our permission mechanisms are provided below:
 - Sirion offers Role Based Access Control (RBAC). Each user may be assigned access rights in the following ways:
 - User Role Groups: These are access templates containing a predefined set of all operations a user assigned this template may perform on Sirion. Such a template can be given a name, such as 'Operations Director' or 'Finance SME', and any number of users may be assigned a template or what is known as a user role group. In some cases, the client's identity management system may maintain a mapping of a user's organization profile/title and their Sirion user role group. The identity management system may also contain details of the access rights the user role group entails. Any changes in access rights associated with a user role group or an individual user are updated in the identity management system on a periodic basis.
 - Entity Stakeholders: For effective supplier governance, the Sirion platform contains multiple entity types such as supplier, obligations, actions, etc. Each entity type on Sirion has a set of stakeholders with assigned permissions. If a user is assigned as a stakeholder in an entity, they automatically receive all associated permissions for that entity. For example, if John Doe has been entered as the 'Approver' stakeholder in obligation X, and the obligation 'Approver' stakeholder has been assigned permission to view and push the approve/reject buttons on obligations, then John Doe will automatically receive these permissions for obligation X by virtue of being the Approver.
 - Individual User Access: Each user has a profile and can be assigned custom permissions to perform system operations and access data on the system from their page in the user admin module.
6. **User Authentication** RTM: Tab 4, TECH-21 through TECH-25
 - a. 1 – CF "Configuration Item"
 - Form based user authentication module that allows users to be authenticated via a login/PW. Can also support State's SSO.
 - Supports SAML 2.0 and 2-factor integration.
 - Tech 25 – Needs configuration
 - Federated Identity Management** – Pages 27
 - Yes.
7. **Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 27
 - a. 9-"INT-Integration/interface"
 - b. 9 – Medium
 - They state that Sirion and KPMG will work with State closely to determine right level of data conversion for a successful integration.
 - **TECH 26 – 34 are all INT and M and state:** " Yes. Sirion uses its integration framework to build migration scripts to upload historical data such as supplier and supplier metadata, contract and contract metadata, historical invoices, SLs etc. It also has in-built bulk and batch processing capabilities using end-user managed utilities which can upload historical data through easy to use Sirion templates.
In addition, the system analyses legacy contracts and provides analytics on missing clauses, usage and deviations. Sirion's advanced AI-powered auto extraction engine OCRs documents (if required) and enables extraction of key metadata values from executed contracts. This data can be utilized to benchmark against standard contract language. The system further enables users to create business intelligence dashboards to monitor and regularly benchmark against standard contract language.
Please note that the scope of integrations will be finalized during the implementation phase. "
8. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60
 - a. 5-"INT-Integration/interface"

b. 5 – Medium

- Sirion supports many integration modes.
- **TECH 35 – 38 are all INT and M and state:** “ Yes. Sirion supports various integration modes to support a diverse set of data transfer mechanisms for integrations with other systems-of-record.

These modes support unlimited real-time two-way data sync and updates.

- *Connectors: Sirion provides connectors to interface into Sirion features for all major platforms like Salesforce, SAP, Oracle, PeopleSoft, ServiceNow, DocuSign. These connectors enable two-way communication between SirionLabs applications and client applications*

- *Email: Provides standard email formats and executes the required functionality when an email is received from known certified senders*

- *Enterprise Service Bus (ESB): Sirion exposes required functionality as end-points on ESB based on agreed requirements*

- *File Systems: Sirion has the ability to extract and transform content from different file types like csv, xlsx, dat and xml post which they are uploaded into Sirion at a pre-defined location (e.g. SirionLabs SFTP Server) Web Services (REST APIs): Sirion publishes functionality that can be accessed using Web Services / REST APIs. List API and GET API (Search APIs) are available for all entities of Sirion. All the APIs accept JSON as a Payload and provide response in respective JSON formats.*

- For the ability for developing integrations for bulk data processing, please refer to the response provided above for Req #4.1.5.

- Sirion also has connectors with many standard enterprise systems. Some examples are:

- *P2P and ERP, such as SAP, wherein data is pulled to provide spend analytics on Sirion*
- *Document management systems such as Box, SharePoint, OneDrive, wherein documents can be migrated, Sirion's AI engine extracts relevant data and creates dashboards, such as contract portfolio risk analytics.*
- *CRM, such as Salesforce, wherein account and contract data is exchanged, and contracting analytics are generated including account size, contract status, etc.*
- *GRC such as RSA Archer, wherein risk related data can be pulled in and composite views of regulatory and other risk can be viewed on Sirion*
- *Performance management systems, such as ServiceNow or Remedy, wherein raw performance data is pulled in to Sirion, fulfilment of SLs and obligations is computed, and presented through Sirion dashboards.*
- *Sirion can integrate with databases like Dun & Bradstreet to pull in relevant data.*

Sirion is a listed technology partner for RSA Archer (look here:

<https://community.rsa.com/community/products/rsa-ready>). Sirion also offers easy integration with all leading TPRM solutions (e.g. Hiperos, ServiceNow etc.), enabling real-time data transfer and pull-in 3rd party risk data (for example PESTLE from LexisNexis). The scope of integrations is discussed during the implementation phase.

For details on Sirion's integration capabilities, please refer to the documents 'Sirion - Architecture, Security & Integration.pdf', 'SirionLabs - Integration Case Studies.pdf', 'Ariba Sirion Integration.pdf', 'Coupa Sirion Integration.pdf', 'ServiceNow Sirion Integration.pdf', 'Salesforce Sirion Integration.pdf' “

- **TECH 40 – 46 : N/A**

9. Office Automation Integration RTM: Tab 4, TECH-61

- Yes – out of the box MS Word plugins.

10. Mobile Device Support RTM: Tab 4, TECH-62

- Available to view on mobile devices, but no application yet.

11. Mobile Applications -

- Available to view on mobile devices, but no application yet.

12. Data Ownership and Access

- Yes, at end of contract, all information will be exported to a secure FRP location.
- Data disposed of 30 days later.

13. Date Retention, Archive and Purge Considerations RTM: Tab 4, TECH-63

- x-“INT-Integration/interface”, x- “BP-BusinessProcess”
- x – Medium
 - During contract – archiving ability is built into solution – see Page 33 – **does not fully meet requirement.**
 - Data retained 30 days after contract expiration.
 - TECH 63: *“Archiving capability is built into the solution. Automatic deletion can be set up as per the State’s retention policy parameters. For active contracts in Sirion, the owner will get a notification for confirmation to terminate or archive a contract beyond expiry date. This is to ensure that no contract which is being worked upon for renewal gets archived on the system. Any archived entity can be accessed only with special privileges as it might disrupt the renewal process.”*

14. Disaster Recovery Plan

- Yes page 34

15. Solution Environments RTM: Tab 4, TECH-64 through TECH-67

- x-“INT-Integration/interface”, x- “BP-BusinessProcess”
- x – Medium
 - Sandbox environments provided, but no other. The claim is this environment serves for testing and training needs for any new feature or enhancement before releasing into Production. **Doesn’t meet requirement**

16. Solution Technical Architecture

- Yes meets.

17. Solution Network Architecture

- Yes meets. AWS

18. System Development Methodology

- Yes, Appendix D. Meets.

19. Service Level Agreement

- 8 to 5 and 24 to 7 support

D. Security Requirements: p. pages 37 - 40

1. Cloud Security Alliance (CSA) Compliance

- Sirion’s application is hosted on Amazon Web Services which is certified under the Cloud Security Alliance. KPMG completed the CAIQ.

2. Security and Privacy Controls – nothing to add.

3. Security Certifications – nothing to add.

4. Annual Security Plan – nothing to add.

5. Secure Application and Network Environment– nothing to add.

6. Secure Application and Network Access – Tab 5, SEC-1 through SEC-6.

- 2 - N

- SEC 2 **Doesn’t meet requirement.**– *“ Compliant with hardening principles and secure system development principles, Sirion does not allow concurrent users. “*

7. Data Security – nothing to add.

8. Personally Identifiable Information Protection – nothing to add.

9. Security/Privacy Issue Occurrence – nothing to add.

10. PII Data Actual/Attempted Access or Disclosure – nothing to add.

11. Security Breach Reporting – nothing to add.

E. Implementation Services Requirements: pages 42 - 112

1. Project Management

- KPMG will provide a dedicated senior PM.
- They mention similar projects in Alabama, AZ, Ohio, and Vermont.
- Key PM tasks KPMG commits to:
 - Establish PM Office and Project Governance
 - Scope Management

- Schedule Management
 - Budget Management
 - Quality Management
 - Resource Management
 - Communication Management
 - Risk Management
 - Issue Management
 - Set up program logistics
 - Align on project templates for status reporting
 - Establish and execute program meeting and communication plan
 - Execute program and governance management processes
 - Execute progress status reporting
 - Perform ongoing risk mitigations and issue tracking
 - Execute project change control and escalation process
 - Setup processes for and conduct Steering Committee updates per your organization's structure
 - Coordinate with eProcurement solution provider CSM
 - Manage all dependencies are accounted for across all parts of the implementation.
- 2. Project Implementation Methodology**
- KPMG calls their implementation methodology “Powered Procurement” and label it as a proprietary and accelerated Enterprise Business Transformation approach for cloud-base solutions. Additionally, they claim acceleration through proprietary tools and templates. **The tools mentioned are all very familiar PM tools, unsure how proprietary they are.**
 - KPMG describes the following approach/methods for implementation to accelerate their process:
 - Vision
 - Validate
 - Construct
 - Deploy
 - Evolve
 - Supplier Enablement
 - Change Management
 - Learning and Development
- 3. Catalog Support Services**
- For items outside the system, KPMG offers to deliver and support a marketplace solution.
- 4. Data Conversion Services**
- KPMG will work with the State to define the data conversion strategy and convert in three steps:
 - Extract
 - Transform and load
 - Data reconciliation
- 5. Interface/Integration Development Services**
- 6. Organizational Change Management (OCM Services)**
- KPMG describes their OCM methodology as proprietary and calls it “Make It” methodology; **however, it's typical OCM**
- 7. Training Services**
- Will provide all training as requested / required.
- 8. Help Desk Services - Tab 6 IMPL 1 – 5 (not completed.)**
- KPMG will develop the appropriate support strategy. They will train all help desk staff to prepare for ongoing post implementation support. They offer to provide level/tier 2.
 - Tier 1 is to be provided by the “Client”
 - Tier 2 is to be provided by KPMG
 - Tier 3 is to be provided by Client, depending on whether the issue is with the Client system or the Client-side integration/interface.
- 9. On-Site System Stabilization Support**

- Meets some of the onsite system stabilization support. – Handles it through level /tier 2. negotiation suggested

F. Managed Services Requirements: pages 113 -

1. **Solution Support** – p. 154 - 158
 - KPMG provides what they call Powered Evolution services to help sustain the State's investment.
2. **Organizational Change Management (OCM Services)** – p. 159 - 160
 - Yes, see above, meets requirements.
3. **Training Services** – p. 160 - 162
 - Yes, see above, meets requirements.
4. **Catalog Support Services** – p. 162
 - Yes, see above, meets requirements.
5. **Help Desk Services** – p. 162 - 163
 - Partially meets req'ts. It is unclear whether KPMG would provide Tier 1 support or if the Participating Entity must provide that level. Note that in the Support Services section in the Table list "Base Services" refers to L2 and L3 support which implies that the Participating Entity is providing L1 (Tier 1) support
6. **Transition Out Assistance Services** – p. 163 - 165
 - They provide a complete transition out assistance service plan.

G. Other Available Services: RTM: Tab 7 MNGD-1 **(not completed.)** – page x

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- **Strategic Sourcing:** Provide "strategic sourcing process entails spend analysis, market analysis, demand research, go-to market strategy development, bid document creation, bid evaluation and analysis, supplier negotiations, and contract awards."
- **Should-Cost Modeling:** Provide cost modeling using "Data Engineering, External Market Data Library, Granular Economic Modeling, Advanced Root Cause Analysis".
- **Contract Performance Management (CPM):** Provide contract management for the State/Entity, identifying contract leakage and taking corrective action.
- **Localization Support:** "help onboard the remaining agencies as a part of the post implementation activities"... "loading data, training end users, and deploying the solution".

H. Video Demonstrations:

Yes.

DATE: (10/3/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - All 3 Preliminary docs, no cyber liability insurance
 - SirionLabs
2. Previous Projects
 - Invalua projects from previous KPMG proposals – relevance to SirionLabs?
 - SirionLabs, Inc. - A US State Technology Authority - automate and standardize its contract management processes, digitizing contracts repository, obligation and service level management, and business intelligence and analytics
 - SirionLabs, Inc.-Canada's Largest Airport - contract management & supplier management - Sirion is used for collaboration management, contract storage, and advanced analytics.
 - SirionLabs, Inc. -Global ?US Bank? - Centralized repository of contracts, AI powered automation of contract management processes, standardized authoring process, spend visibility, and third party governance
3. Subcontractors
 - SirionLabs, Inc.
 - Credentialed by listing projects as noted above
 -
4. Organizational Chart
 - Combined org chart but difficult to determine state, KPMG, and SirionLabs
 - Roles defined where KPMG, SirionLabs, and state (NASPO PE) were listed
 - RACI chart
5. Litigation
 - no pending litigation that would materially affect KPMG's operations or ability to perform services for this RFP
 -
 -
 -
6. Financial Viability
 - Unaudited condensed balance sheets provided from 2020 - 2018
 -
 -

Individual SME Comments:

Individual Workstream definition by KPMG (Why only these two?)

—7. Contract Management

—8. Supplier/Vendor Performance

General Principal and Requirements

Key Solution Functionality Elements **Sirion Labs solution** implemented by KPMG. single sign-on (SSO) and can integrate with an entities procurement, ERP, CRM, service desk, etc. systems. advanced workflow engine supports high configurability and guided contracting and routing. Sirion Template Wizard pulls information provided in the request form to automatically generate the first draft. These 'smart tags' populate information across the entire contract package with a single click. **Multiple users in parallel can edit parts of the contract** they have been authorized to edit within the familiar MS Word environment, after which the system automatically reconciles and consolidates all the changes into a single version. electronic environment of goods and services that provides a "catalog of catalogs" system includes keyword, phrase, Boolean, and wild card searches on long text fields. a hierarchical document tree (displaying parent-child relationship) Key capabilities:

—Complete document repository containing all drafts and final versions along with related comments and communications, allowing easy navigation to the version user requires.

—Conversion of non-searchable documents into searchable documents using optical character recognition (OCR).

—AI-powered digitization of contract portfolio through contract metadata extraction from legacy documents.

—AI-driven automated extraction of data from all types of pages, including multicolumn pages and tables in different languages.

—A hierarchical document tree (displaying parent-child relationships) with full text search capability, and an integrated document viewer.

—Robust access control to prevent unauthorized access to sensitive information, and detailed audit trail.

—Intuitive, single-click access from a contract page to contained obligations, changes, interpretations, and service levels and vice versa.

—Comprehensive listing of contract draft requests with current status, priority, and assignee details, and the ability to filter this list by key attributes.

—Fully searchable, allowing full-text search of documents as well as detailed search of stored contract metadata.

—Contract draft linked to prior contracts, issues, disputes, and risk items related to the counterparty, enabling the creation of better contract.

Sirion's workflow engine supports:

—Customizable workflows with unlimited steps, views, permissions (can include customer + third party users), and conditional steps

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG & Sirion Labs

CATEGORY #(s): 2

DATE: 12/31/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

—Multi-party workflows involving client and their supplier users (can provide limited access to certain user types)

—Workflow capabilities such as create, prioritize, edit, record, assign/reassign, monitor, resolve, report, escalate, re-open etc., each of which are access controlled

—Easy addition or removal of workflow steps

—Define stakeholders responsible for each step

—Ability to configure probes in a workflow to measure lead times, aging, cycle time, etc.

Additional workflow attributes:

—Serial and parallel workflows

—Addition or removal of workflow steps at once

—Define stakeholders responsible for each step

—Conditional workflows based on system attributes

—Ability to configure probes in a workflow to measure lead times, aging, cycle time, etc.

—Metadata field configurability to make fields mandatory/editable/non-editable, show/hide fields, etc.

—Configuring email notifications for any workflow steps

—Weekly reminder to users with list of overdue and upcoming tasks. All email notifications include a direct link to the records for easy navigation. The system can also send alerts or notifications to supervisors/managers if the current task has been pending for more than a predefined number of days.

—Delegation of a task to another person

User Experience user-based views to be saved based on role, need, or use case – **no personalization** pop-out menu and functional areas can be accessed via dashboards, reducing the need to click. **No wizards** web design that can be accessed on any web-enabled device—desktop, laptop, tablet, mobile phone, workload mgt - reassignments are managed within the platform

Bidder Best Practices and Roadmap Quarterly release cycle. Emergent patches R performed on an ad hoc basis. SaaS based application which is multitenant. Net Promoter score survey and customer

Advisory Council.

Innovations and Value-Added Features/Services Automated obligation and service level management functionality.

Customizations/Extensions Upgrades are backward compatible

Alternative Funding Models Not Applicable

Contract Transition and Flexibility Sirion is committed to discussing mutually agreed terms that would help ensure long-term relationships and continued use of the platform.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG & Sirion Labs

CATEGORY #(s): 2

DATE: 12/31/2021

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Availability availability target in MSA is 99.8%. fully redundant environment within Amazon Web Service (AWS). RTO for all customers is less than 120 minutes and RPO is 30 minutes or less of data loss.

Accessibility Requirements compliant with Web Content Accessibility Guidelines (WCAG) 2.0 AA.

Audit Trail and History compliant with Web Content Accessibility Guidelines (WCAG) 2.0 AA.

Browsers Supported Google Chrome version 67 and above, Internet Explorer version 11 and above, Mozilla Firefox version 60 and above, apple safari version nine and above, Microsoft Edge version 25 and above.

User Accounts and Administration User access management provides granular rule, role and instance-based access, with an unlimited variety of combinations. Role based access controls (RBAC) Sirion provides several modes of permissioning:

—Role-based (e.g., contract manager, finance approver, etc.)

—Rule-based (e.g., view data of a particular business unit, geography, etc.)

—Instance-based (includes individual-based permissions)

—Counterparty permissions (e.g., Counterparty access to specific modules, features, IDs, etc.)

—User-group based (e.g., alias which includes all lawyers, etc.)

User Authentication form-based user authentication module that allows users to be authenticated via a login/ password. The Sirion platform also supports the use of customer's single sign-on (SSO) and hence can integrate with the client's Identity Provider system (which may be based on different types of protocols, (e.g., SAML), to allow login into Sirion. Additionally, Sirion supports SAML 2.0 integration and two-factor authentication.

Federated Identity Management— supports SAML 2.0 protocols for Single Sign On

Data Conversion Sirion leverages an integration framework to build migration scripts to upload historical data such as supplier and supplier metadata, contract and contract metadata, historical invoices, SLs, etc. It also has in-built bulk and batch processing capabilities using end-user managed utilities which can upload historical data via Sirion templates. Sirion has the ability to extract and transform content from different file types, such as csv, xlsx, data and xml post, which are uploaded into Sirion at a pre-defined location (e.g., SirionLabs SFTP server).

Interface and Integration Sirion offers integrations with most typical data connection to a CLM solution, including Oracle, Peoplesoft, CGI, SAP Ariba, Jaggaer, Ivalua, RSA Archer, ServiceNow, DocuSign and others. Sirion uses an ETL tool to achieve deep integration functionality by implementing an integration layer which helps integrate with other enterprise systems. The integration uses an inbuilt processor, but if the functionality is unavailable, the Integration Team can write a reusable customer processor to achieve the missing functionality.

Office Automation Integration Sirion has out-of-the box MS Word plugins that works seamlessly with MS Office applications. Sirion also works seamlessly with Microsoft Outlook via email notifications and alerts. A Sirion user can also send a PDF version of a draft, so they can provide comments but not edit the draft.

Mobile Device Support Sirion is accessible via any mobile device using native browsers where all capabilities are made available. A native Sirion mobile app is currently in the beta stage and will be rolled out to customers at no additional cost at the end of 2021. Mobile app functionality will mirror platform functionality, however, it is important to understand the needs of a user and thus there will likely be limits to what a user would want to accomplish on a mobile app outside of approvals or status reviews.

Mobile Applications Same as above

Data Ownership and Access at the end of the contract all customer data is exported to a secure FTP location and credentials are shared with the customer so data can be downloaded from that location.

Data will be disposed of after 30 days of termination or expiration of the agreement between the customer and Sirion (or as defined in the contract). Sirion will dispose the data on the Sirion instance hosted on AWS using technology compliant with U.S. Department of Defense (DOD 5220.22M) standard. If

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

required, the data volume will also be deleted, and Sirion's infrastructure provider, AWS, will decommission the hardware using techniques outlined in DoD 5220.22-M ("National Industrial Security Program Operating Manual") or NIST 800-88 ("Guidelines for Media Sanitization"), and in certain cases, degauss or physically destroy the hardware in accordance with industry-standard practices.

Date Retention, Archive and Purge Considerations Sirion does not take ownership of an entities' data. Archiving capability is built into the solution. Automatic deletion can be set up per retention policy parameters. For active contracts in Sirion, the owner will receive a notification for confirmation to terminate or archive a contract beyond expiry date. This will help ensure that contracts up for renewal will not be archived on the system. Archived entities can be accessed only with special privileges as it might disrupt the renewal process. Sirion takes regular incremental backups of customers' production data every 30 minutes. The system also takes a full back up of customer data daily. These backups are stored in the secondary data centers (i.e., disaster recovery locations).

Disaster Recovery Plan Sirion maintains business continuity and disaster recovery measures that help ensure the RTO of 120 minutes and the RPO of 30 minutes. Sirion takes regular incremental back up of customers' production data every 30 minutes. The system also takes a full back up of customer data daily. As a disaster recovery strategy, all production servers are deployed at two locations, so the system can switch between servers in case of failure. Each production instance is mirrored in a geographically-diverse location. Sirion regularly moves processing to the mirrored location to enable maintenance and new releases. **No plan, no testing**

Solution Environments sandbox and production.

Solution Technical Architecture a modern MVC architecture with some business micro-services. IT is based on Java, Spring, PostgreSQL and Elasticsearch. For more details on Sirion technical architecture, see Sirion - Architecture, Security & Integration within Appendix D: SirionLabs technical documentation

Solution Network Architecture Sirion is hosted on AWS, which provides the following key advantages:

—A single instance on AWS, dedicated to the client, is technically no different from the client's other on-premise infrastructure. In fact, AWS is the world's leading provider of scalable and secure cloud infrastructure and would be a logical addition to the client's on-premise infrastructure.

—Sirion is optimized for AWS, hence the cost on a non-AWS platform to host Sirion will be significantly higher (3-5x) given incremental instance maintenance and deployment resource requirements.

—Any tech stack changes to the Sirion product will be managed by Sirion if hosted on AWS. If hosted on a non-AWS platform, tech stack changes may be quite expensive, and in certain situations, may not be possible.

—Dynamic load adjustment to scale up based on multiple factors like utilization, speed and response time is critical for the success of any SaaS solution, and Sirion on AWS comes in-built with such capabilities. On a non-AWS platform, such automated capabilities may not exist, or may need to be added at additional costs to the client.

—If hosted on AWS, SirionLabs will be responsible for the implementation of the instance and ongoing maintenance. In an on-premise scenario, SirionLabs will not be responsible for infrastructure, set up, or management, hence all infrastructure-related issues will need to be managed by the respective entity resources.

System Development Methodology Every new feature, enhancement, or change requested by the customer goes through a thorough design, specification development, and review and approval process before development begins. Upon development, thorough testing is performed by the QA team to identify and report any bugs to the development team. Post the elimination of bugs and prior to going live, all in-scope functionality is tested by the client SMPs in the sandbox environment.

Service Level Agreement Sirion has an in-house support team that provides 8*5 (client's business hours) help desk support at no additional cost. Standard help desk services are provided in English and include

access to ticketing and email support. An additional level of support, including 24x7 support, is available as an option.

Sirion standard SLAs

—Severity Level 1: Response time 90% in two business hours and update frequency two hour

—Severity Level 2: Response time 90% in four business hours and update frequency one business day

—Severity Level 3: Response time 90% in one business day and update frequency four business days

Security Requirements

Cloud Security Alliance (CSA) Compliance hosted on Amazon Web Services (AWS) which is certified under the Cloud Security Alliance CAIQ completed. in the process of completing CSA Star registry Security and Privacy Controls Sirion is committed to data protection and compliance with broader privacy regulations such as GDPR that provides a mechanism to address multiple privacy regulations and requirements. Sirion has implemented technical and operational controls to help ensure personal data protection. Sirion also has a formal privacy policy and procedures in place and conducts an annual Data Privacy Impact Assessment for high impact processes that involve personal data and helps ensure remediation of gaps, if any.

Security Certifications Sirion's application is hosted on **AWS and compliant** with the leading security practices, including:

—SOC 1/SSAE 16/ISAE 3042(formerly SAS 70)

—SOC-2

—SOC-3

—FISMA, DIACAP and FedRAMP

—DOD CSM Level 1 to 5

—PCI DSSLEVEL-1

—ISO 9001 / ISO 27001

—ITAR

—FIPS 140-2

—MTCS Level 3

Annual Security Plan No annual security plan but they will sign Data Protection Agreement (DPA).

Secure Application and Network Environment has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.

Secure Application and Network Access AWS references, laptop security, physical building security at SirionLabs

Data Security SirionLabs uses a Web Application Firewall (WAF) to protect against common web exploits that may affect availability, or compromise security. AWS Security Groups (firewall), Network Intrusion Detection Systems (NIDS), and Denial of Service (DoS) Protection are also implemented to control inbound and outbound traffic. The Security Groups restrict traffic by protocol, service port and IP address.

Personally Identifiable Information Protection SirionLabs is committed to data protection and to helping ensure compliance with privacy regulations like GDPR.

Security/Privacy Issue Occurrence Discuss controls but there are no incident procedures.

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting Sirion has documented incident management policies and procedures in place. In case of errors, failures, outages, anomalies, irregularities, breaches, etc., Sirion will share the detailed RCA of the incident.

Implementation Services Requirements

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: KPMG & Sirion Labs
CATEGORY #(s): 2
DATE: 12/31/2021
SME/EVALUATOR NAME: Joe Zrioka
DEPARTMENT/STATE: Maine

Project Management KPMG project management methodology an approach includes APP PPM overview toolkit and governance model which includes scope, schedule, budget , quality, resource, communications, risk, and issue management. Robust offering.

Project Implementation Methodology KPMG's Powered Procurement is a proprietary and accelerated Enterprise Business Transformation approach

Catalog Support Services To enable the correct catalogs within your , KPMG takes a methodical approach in identifying the correct suppliers fit for punch-out and hosted catalogs. Our approach consists of the following: Vision, validate, construct, deploy, evolve.

Data Conversion Services KPMG overall data conversion from your legacy system consists of three broad steps extract, transform and load , data reconciliation . Initial data extract, mock data extract, production data extract, data cleansing and harmonization, transform and load process, quality assurance and reconciliation data load templates cognitive contract management optional.

Interface/Integration Development Services KPMG will use the Vision initiate and analyze, validate design, construct build configure and test, deploy cutover train moved to production, evolve post implementation hypercare.

Organizational Change Management (OCM Services KPMG's approach to Organizational Change Management and Training (OCMT) is centered around engaging the right people, at the right time, with the right information. Robust methodology.

Training Services Our approach to training your organization's end users, system administrators, help desk staff, and suppliers to use is centered on several key components; for instance:

—An integrated organizational change management and training approach and methodology that drives adoption and aligns to the phases of the transformation

—A Target Learning Model which builds on our experience and a robust Training Needs Assessment to deliver a robust approach to training

—A collaborative approach to work with your organization and its project members to provide a strong and sustainable training solution

—A blended learning approach for both internal and external stakeholder groups that helps raise end user confidence and reinforces increased retention and adoption

—A comprehensive Train-the-Trainer (TTT) program to train your identified trainers, change agents, and super users so they are ready and able to deliver end user training to their colleagues

—An emphasis on internal staff preparation via Academy and knowledge transfer sessions to help enable a Post-Implementation Transition Plan that builds lasting knowledge of the platform. KPMG approach aligns with our implementation plan.

Help Desk Services The KPMG Service Desk will augment existing Help Desk capability by providing Case Management support for client Power Users via tickets raised through KPMG's ServiceNow ticketing system. Tickets will be assigned to Tier 1/Level 1 (L1) Support (Client i.e. your organization), Tier 2/Level 2 (L2) Support (KPMG), or Tier 3/Level 3 (L3) Support (eProcurement solution provider or Client IT Support) as applicable. KPMG/KPMG subcontractor can provide Tier 1/Level 1 support as well, which would be contracted by your organization. Defect resolution will include a root-cause analysis, solution explanation, testing, and deployment.

On-Site System Stabilization Support post go-live, post-implementation support/Hypercare will be provided to your organization by KPMG to address defects and transition to steady state run and operate mode for a period of three months. Post-implementation support will be a blend of on-site (implementation project team members) and off-site resources (KPMG Service Center for Help Desk Support).

Managed Services Requirements

Solution Support KPMG's Powered Evolution services help sustain your investment in the Target Operating Model (TOM) by keeping it refreshed and maintained after the post-implementation

stabilization phase. This helps ensure that your processes continuously improve and extend capabilities and capacity as your business evolves. Robust offering.

Organizational Change Management (OCM Services Post implementation, our Organizational Change Management & Training (OCMT) practitioners help create a sense of consistency as technical changes arise. We do this by working with the implementation team to help maintain stability as the solution reaches a larger audience and as testing is conducted. Our OCM team works with Manage Services throughout the duration of Hypercare, standard and / or enhanced support, Optional Service Packs or T&M.

Training Services KPMG will devise and implement a training program that will incorporate your organization's evolving policy and procedure changes and allow both Operations staff and general users to remain current and compliant with these policy and procedures, as related to the solution. Operations staff also need to be equipped with answers to "How do I?" questions that users might present.

Help Desk Services KPMG's ServiceNow ticketing system.

Transition Out Assistance Services Powered Evolution Managed Service Termination Framework - phased approach allows KPMG to hold formal toll gate discussions as check points – robust offering.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG-SirionLabs

CATEGORY #(s): 2-Individual Workstream Implementation

DATE: 8/25/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Large company; good representation of 4 states and 3 local government initiatives
- Unsure if KPMG is consulting only
- Preconfigured solutions; do not allow unique procurement laws to be included
- Jargon with solutions, not very specific

2. Previous Projects

- Ohio solution was also given with Ivalua as subcontractor; no ROI identified
- Alabama very limited implementation primarily financial activities; too early to validate (go live 6/28/2021)
- Teachers retirement system of Texas is very limited in scope compared to statewide scope required, hasn't gone live yet still in implementation

•

3. Subcontractors

- SirionLabs is a Singapore company with USA representation
- Large project examples

•

4. Organizational Chart

- KPMG and SirionLabs and State efforts not identified
- Very general org chart, unsure if it will be effective with NASPO requirements
- General descriptions, not specific to NASPO

5. Litigation

- Non Answer.
- Appears they are declining to disclose as requested

•

6. Financial Viability

- Did not provide D&B financial data but references a good credit rating from them. What is in the B&B report that is unfavorable that KPMG does not provide is as requested.
- Financial reports are not audited, brings accuracy into question; overly condensed and only for short period; high debt to partners.

This supplier's response is submitting only for Contract Management Section 7 and Supplier/Vendor Performance as noted on PDF Page 4 of their response. Requirement EPROC-CNT-83 on Tab 3 Line mentions modules titled "Financial Management?"

Individual SME Comments: The video was a helpful demonstration of how their solution works for contract management and vendor performance. They state they have financial management module, but I did not seem to find it in the video, and they did not submit a response to the technical and functional requirements for financials?

This solution has some innovative functions (WORD integration) that I believe would benefit our entities. The CLM solution would be beneficial and I would hope that the clarifying questions and those requirements they do not support could be addressed.

General Principal and Requirements

Key Solution Functionality Elements – PDF Page 6

- Single Sign On with integration option
- Smart routing with form that pulls information to generate first draft
- Portal for suppliers to collaborate through the life of the contract
- Parallel edit access and chat functionality within WORD.
- Has Sirion MS Outlook integration
- Shows integration information on PDF Page 8
- Provides highly configurable workflows
- Tracks all documents on contracts, attachments and amendments
- Supports dashboards and data visualization Referenced Appendix D SirionLabs technical documentation
- Offers role based and user group-based functionality
- Simple integration to provide public and internal visibility

User Experience – PDF Page 11

- User will have dashboards to view tasks
- Pop out menu from icons on the left
- Offers online manual and pop-up help for navigations
- Can use pre-defined clause/definition libraries along with template libraries
- Parallel editing replaces the check in/out functionality and supports versioning
- Users and managers can see workloads and action items from dashboards
- Mobile app scheduled for release in 2021
- Provided example dashboards on PDF Pages 17 and 18

Bidder Best Practices and Roadmap – PDF Page 18

- Quarterly new release cycle. Provided screen shot on PDF Page 19

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: KPMG & SirionLabs

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/28/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Referenced Appendix for information on latest technologies
- KPMG is the implementation Service provider – PDF Page 19 bottom of page
- Provides opportunities to supply information via surveys sent by Sirion

Innovations and Value-Added Features/Services – PDF Page 20

- Offers to discuss needs to further explore the right size solution

Customizations/Extensions - PDF Page 20

- "It is recommended that an entity choose Sirion's multi-tenant SaaS platform that includes leading contract templating, as well as library, repository and management features, over a custom solution."

Alternative Funding Models - PDF Page 20

- States this is not applicable.

Contract Transition and Flexibility - PDF Page 20

- Willing to discuss agreed terms.

Functional Requirements

General Functionality – N/A

Supplier Portal – N/A

Supplier Enablement/Management – N/A

Buyer Portal - – N/A

Need Identification – N/A

Request through Pay – N/A

Catalog Capability – N/A

Sourcing/Bid Management – N/A

Contract Management – PDF Page 22

- Provide list of advanced features on PDF Page 22
- Offers a contract repository and a digital foundation of the contract portfolio
- Invoice management is offered in the solution. PDF Page 23
- Collaboration functionality with Reporting and Dashboards
- STRENGTH - EPROC-CNT-7 – Tab 3 Line 489 – Offers new functionality called Parallel Editing over the check in/out process
- CONCERN - EPROC-CNT-17 – Tab 3 Line 499 – Did not supply availability or level of complexity on this requirement?
- CONCERN - EPROC-CNT-28 – Tab 3 Line 510 – The payment part of this requirement will be need to be made in a system outside of Sirion
- CONCERN - EPROC-CNT-30 – Tab 3 Line 512 – Need to clarify their statement made in the comment section of this requirement? "UB to check with Product team"
- CONCERN - EPROC-CNT-32 – Tab 3 Line 514 - Maximum allowed attachment is 200MB
- CONCERN - EPROC-CNT-43 – Tab 3 Line 525 - Does the supplier have their own system account, or the same access as the buyer?
- CONCERN - EPROC-CNT-70 – Tab 3 Line 552 - Requirement asks if "suppliers" have the ability to load sales reports. This response states the user has this ability?

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

- CONCERN - EPROC-CNT-83 – Tab 3 Line 565 – Confused here as the response states the solution has a “Financial Management” module?
- CONCERN - EPROC-CNT-87 – Tab 3 Line 569 - Need to clarify their statement made in the comment section of this requirement? “UB to confirm with product about procedure to reactivate”

Vendor Performance – PDF Page 24

- User role-based dashboards and configurable KPI's
- Provided features of performance management
- CONCERN - EPROC-VPE-15 – Tab 3 Line 587 - Response does not specify if the “vendors” can complete the survey?

Purchasing/Data Analytics – N/A

Technical Requirements

Availability – PDF Page 27

- Availability exceeds 99.95%
- Supplied standard SLAs for incident management
- Referenced Appendix D

Accessibility Requirements - PDF Page 27

- “Sirion is compliant with Web Content Accessibility Guidelines (WCAG) 2.0 AA.”

Audit Trail and History - PDF Page 27

- MS Word plug in enables comparison
- Has full audit capabilities

Browsers Supported - PDF Page 28

- Supplied list of browsers supported

User Accounts and Administration - PDF Page 28

- User based roles with standard role groups
- Offers advanced user access control
- RBAC – Role based access controls
- CONCERN - EPROC-TECH-7 – Tab 4 line 12 - This requirement asks about solicitations and contracts but supplier response is N/A?
- CONCERN - EPROC-TECH-12 – Tab 4 Line 15 - This requirement asks about both the buyer (user) and the supplier accounts, but the response is N/A?
- CONCERN - EPROC-TECH-18 – Tab 4 Line 20 - This response leads me to believe that the ability to deactivate users is not “automatic”?

User Authentication - PDF Page 29

- Supports SSO functionality

Federated Identity Management - PDF Page 29

- Meets requirements

Data Conversion - PDF Page 29

- Provided table of process on PDF Page 165
- CONCERN - EPROC-IMPL-3 thru EPROC-IMPL-5 – Tab 6 Line 6 thru line 8 – These requirements for help desk services are not available

Transition Out Assistance Services - PDF Page 165 thru PDF Page 167

- Provided "Power Evolution managed service termination framework" chart and table with explanation on PDF Page 166

Other Available Services - PDF Page 168 thru PDF Page 177

- Listed quite a few optional available services

Video Demonstrations

The videos supplied with this response had them divided into 4 separate videos but it really a continuous video and my notes on the video are listed below:

SironCLM – Has wizard driven options with left hand side menu bar. Has authoring option icon on this menu bar. The system has tabs across the top for different sections of the contract record. Can see tasks assigned on a personal dashboard. Color coded statuses show where the contract is in the lifecycle. Uses create request forms to start the contract process. Then it allows the addition of other information from the template and clause library. Users receive email notifications about the status of the contract record. System has data conditional fields to help drive workflow. System shows the cycle time of the contract after it has been submitted. Can communicate in the system with other users about the contract. Sets up a possible master services agreements with all other supporting documentation attached. Versions are tracked and can upload other attachments to the contract. Can add or upload contract line items. Contracts are generated in WORD. Sirion is added to the word toolbar in WORD that can be used to update the document. Can insert clauses and languages to the document. Changes made drive workflow for approvals. Can work on contracts in Sirion or in WORD. All changes are tracked in the system. Can collaborate with the vendors from the system or from WORD. No spoofing of email addresses and a reply email goes back into the system and in OUTLOOK. Has drag and drop functionality for contracts. Uses a joint collaboration with other participants in the collaboration mode. Only one person edits a section at a time with one consolidated view and it tracks versions. Can do a

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - “Implementation and Development Services” Gold Partner of SAP (Ariba)
 - “Reseller” of SAP software.
2. Previous Projects
 - 5 listed. One university. One private. Three State or public entity. All fit within Category 2.
 - San Diego County, CA. Implemented Ariba public sector supplier and Contract mgt. and integrated it with Oracle.
 - University of Kentucky. Implemented SAP HCM, Finance, SAP Student Lifecycle Management, BW,SRM/PPS 7.0 and Analytics.
 - Sempra Energy. Implemented Ariba Contract mgt. and integrated to MS Dynamics ERP.
 - City of San Diego, CA. Implemented SAP Ariba procurement platform.
 - CA Dept. of Healthcare Services. Deployed SAP Ariba procurement platform.
3. Subcontractors
 - Vendor states it will not be utilizing subcontractors for this engagement.
4. Organizational Chart
 - Yes, Org. chart provided along with job descriptions
5. Litigation
 - Vendor states no litigation.
6. Financial Viability
 - DnB provided. Low to Moderate risk.

DATE: 1/8/2022

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Hybrid Cloud Solution.
- Product is SAP Ariba. Cloud Services with technical architecture of SaaS
- LSI Consulting is a Gold Partner and is submitting proposal as a part of the Partner Managed Cloud (PMC) who is offering the professional services portion of the proposal (implementation, long-term support, etc)
- Really touts the Spend Management portion of SAP Ariba.
- LSI takes seven exceptions (pages 142 – 145), These will want to be reviewed carefully and negotiated should this offeror be in negotiations.
- There are 34 items in the “Assumptions” (page 140 – 141) that require CLARIFICATION or negotiation where many or most States could or would not agree. Examples are: #4 State must follow the LSI provided methodology to implement software, #6 – can’t revisit deliverables once they have been closed, #18 – Postponements and delays of scheduled events due to lack of State staff availability will likely result in an extended project schedule and/or additional fees, #12 –in case of sickness or vacation, the key State decision-makers will have an alternate assigned.

A. General Principal and Requirements

1. Key Solution Functionality Elements (pages 8 – 21)

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

1. Product/Solution components: pages 8 - 10

a. SAP Ariba Cloud-based. For eProcurement solution (Sourcing, Contracts, Procure to Pay, etc.)

- Single point of entry. Yes – Single Sign on.
- Smart routing. Yes

- Compliance. Yes
- Portal. Yes . “SAP Portal product portfolio”. Can obtain as:
 - as “SAP Enterprise Portal (on-premise)
 - on SAP BTP as SAP cloud Portal service
 - (portal-like) sap Launchpad service
- Open Marketplace Environment. Yes – uses the SAP Ariba Business Network (SBN) for business-to-business network (B2B) and use Spot Buy as the catalog solution.
- Integration. Yes. With the use of integration with out-of-the-box SAP's intelligent suite along with end-to-end business process.
- Workflow. Yes. “SAP Business Workflow enables the design and execution of business processes”
- Document management. Yes. “SAP Ariba Contract Management module can track, manage, and store documents”.
- Reporting, dashboards and data visualization. Yes. “SAP Ariba is delivered with native reporting and analytics, including numerous pre-packaged reports.”
- Configurable. Yes. “Configurable workflows to document templates” with “the flexibility to reflect state-wide or agency-specific rule-sets and processes
- Transparency. Yes - “Vendor Portal” built on SAP's Portal Services. “The offering includes a customer specific deployment of a Transparency Portal. This portal is scoped to meet each entities specifications by giving the organization the ability to surface procurement activity and information to public stakeholders including solicitations, contracts, supplier information and purchasing reporting data.” .

2. User Experience - pages 10 - 12

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- Do not cover all the characteristics in the user experience explanation, but they do offer that “The interface has been designed with special attention to:
 - Minimizing clicks and number of steps
 - Seamless transition from mobile app to desktop with "follow-me" process from one another
 - Community help
 - Visual workflows, reminders and notifications
 - Bulk actions over many items (i.e. bulk receive purchase orders)
 - Integrations to facilitate multiple catalog search (items in the material master, inventoried items, MRO Supplies and contracted supplier catalogs), cost accounting and more”

3. Bidder Best Practices and Roadmap – pages 12 - 13

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.

- [“Quarterly Releases](#) – Releases are delivered every quarter in February, May, August, and November each year. Individual products may be released on any or all of the quarterly dates. You should expect to receive advance communication of features and should allow time to prepare for impactful changes to your systems. “
- [“Monthly Feature Deliveries](#) – Major products may have an optional, no-impact release on harmonized monthly feature delivery weekends. As with the quarterly releases, each product has the option to release during any or all these windows. You should not need to prepare for or take action for the monthly feature deliveries. Changes delivered in a feature delivery should be virtually invisible to the end users. Many of our largest cloud products follow a harmonized release calendar.”
- [Road Map](#) is provided in an attachment.

4. Innovations and Value-Added Features/Services – pages 13 - 16

In addition to the stated requirement(s), the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

Yes . they give some past and present innovations.

- SAP Ariba has:
 - Launched the first online catalog for procurement.
 - Developed the first software to conduct reverse auctions.
 - Created the Ariba Network, the first business network that today is the largest, most global on the planet, with more than 2 million companies transacting nearly \$1 trillion in commerce on an annual basis.
 - Went live with Ariba Discovery, the first business matching service that like Match.com, connects buyers with needs to sellers who can fulfill them.
 - Ariba Spot Buy
- SAP FieldGlass.
- SAP Ariba Supplier Risk Management.

5. Customizations/Extensions – pages 17 - 20

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder’s base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder’s product roadmap submitted with the proposal.

• Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- SAP Ariba Application Extension Partners and Applications
- Help deliver new and innovative applications that augment SAP Ariba solutions. List of SAP Ariba App Extensions and our Partners:
 - **Spotline Inc.** Chatbot
 - **Seal Software.** Helps organizations gain visibility, control, mitigate risk and better manage their contracts o Seal Contract Discovery and Analytics helps organizations gain visibility, control, mitigate risk and better manage their contracts in conjunction with various SAP products including SAP Ariba. Seal’s AI powered engine extracts many types of data elements, and presents that data in an intuitive user experience. Seal integrates to SAP Ariba to load contracts and metadata directly into Ariba leveraging APIs. New and existing SAP

Ariba contract workspaces can be sent to Seal to clean up existing content and for many high-value use cases such as regulatory, risk, M&A, audit, etc.

- **CloudTrade** - Optimize your PDF Invoicing channel
- ISMS Applications. Provide compliance to suppliers for a healthy supply chain
- Keelvar Sourcing. The Keelvar Sourcing Optimizer Connector to send event data (suppliers & item master data) from SAP Ariba to Keelvar Sourcing Optimizer. Run, analyze and award complex or large events in Keelvar Sourcing Optimizer, then send awarded supplier data back to SAP Ariba Contracts.
- AppZen AI. Real-time accounts payable fraud and non-compliance detection
- Cordis.
 - Procure-to-Pay integration between SAP Ariba and Oracle
 - Add a layer of protection to personally identifiable information .
 - Digitize your supplier invoices into a single compliant e-invoice process o Intelligent Invoice Express (IIE) allows you to automatically capture and register purchase invoices in one application for verification, validation and efficient processing in Ariba Invoicing or ERP Accounts Payable, even for suppliers who are not yet on the Ariba Network (AN).
 - A prebuilt analytical dashboard for procurement using SAP Ariba and SAP ERP data o Category Manager Dashboard provides valuable insights and reporting, plus the ability to integrate aggregated data across Sourcing, Contracts, Spend, Performance and Risk. It provides a status for each project to manage the category of spend, including a display of all associated business documents.
 - Combine your catalog and non-catalog requests into the e-procurement process, Intelligent Content Capture.
- Fairmarkit.
 - Automatically get quotes for purchase requests from your existing suppliers.
 - Empower end users to competitively bid their purchases
- Vertex - Tax calculation during purchase requisition and invoice reconciliation o Vertex provides automated tax calculation during requisition & invoice reconciliation. During requisition, purchasing managers can view tax implications when approving or rejecting a purchase request and during invoice reconciliation.
- • Accenture - Intelligent chatbot for a simplified buying experience o Paula is an intelligent chatbot designed to modernize user's experience through a simple and intuitive process allowing organization to transform their tasks into value-added work..
- • EcoVadis - Sustainability ratings for procurement - Manage supplier risk and performance.
- • D&B- Proactively identify vendor financial stress to mitigate supply chain disruption.
- • APOS Systems - Live mode data connectivity for SAP Ariba o Live Data Gateway for SAP Ariba provides virtualized data connectivity to SAP Ariba data from SAP Analytics Cloud. Live Data Gateway can also serve data to SAP Data Warehouse Cloud, SAP HANA, and many others.
- • Nitor Relish Xbridge – Seamless SAP Ariba & Qualtrics XM for suppliers integration.
- Nitor Relish DATA ASSURE - Fully automatic supplier data validation in one step, without human interaction.
- • iCertis AI - AI from Icertis turns contracts into live documents connected to your business o Icertis is enabling SAP users to address previously intractable contract challenges. This includes digitizing legacy contracts and importing third-party contracts at scale, analyzing past negotiation history to gain insights for improvement, and deep data visualization.
- • Globality - Seamlessly Integrate Globality's Platform with SAP Fieldglass o Globality's AI Platform transforms sourcing of high-value, complex services by automating the demand creation, supplier identification, tendering, proposal evaluation, and SoW creation process through a self-serve, consumer-like solution. SoW data are automatically sent to SAP Fieldglass

6. Alternative Funding Models – Pages 20

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and

be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
 - Explain how each model would work;
 - Identify the benefits that Participating Entities and their suppliers would realize; and
 - Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

They do not offer any alternative funding models, but do recommend SAP Fieldglass app.

7. Contract Transition and Flexibility – page 20 - 21

LSI possesses an extremely high level of flexibility to transition from a state's current contract to a new contract or amendment".

B. Functional Requirements: pages 22 – 46

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40. Currently the following applications are widely deployed and support the procurement functions of Ariba customers:

- SAP Ariba Buying& Invoicing
- SAP Ariba Sourcing
- SAP Ariba Contracts
- SAP Ariba Supplier Lifecycle & Performance Management
- SAP Ariba Network
- SAP Fieldglass

- Uses Native Integration for integration of purchase requests.
- Supports all types of files and mentions a “really robust search engine” in many of the comments.
- “A super user will be granted broader access to the solution by assigning multiple roles” to access functionality across the solution and “provide administration capabilities across the solution or for specific functional areas”. Except for Guided Buying.
- #3 is marked as “partial”, which is not a choice in the codes. **Based on the notes it looks like they do not have the ability to integrate to post on the State's procurement website.**
- #38 is marked N/A, which is not a choice in the codes. **After reading the reply – it seems the answer is “N” as they do not comply with this.**
- For most of the items in 1 – 7 GPE offers use of their system, but these questions are about being able
- Many of the Comments state **“Standard Functionality”** (there are 22 of these). As a nonuser of ASP Ariba's system, I do not know what is “standard functionality” for that particular requirement. I believe that is why the instructions outline to *“describe how the identified tools/solution will meet the requirement. Include benefits or limitations.”* **Based on the vagueness and essentially a guess on my part, these lines won't be evaluated.**

2. Supplier Portal. Tab 3, SPR-1 through SPR-23.

- Ariba seems to have a good handle on the Supplier portal side and a understanding of what the suppliers need.
- SAP Ariba Business Network (SBN) for the supplier portal includes:
 - Ariba Business Network (aka Ariba Network, Ariba Supplier Network)
 - Ariba “Supplier Enablement Services” for the Network are included
 - Supplier Portal functionality across all customers, not specific to a State/Entity using Ariba
- #3 states suppliers can integrate their financial systems to Ariba Network. While the State will want supplier spend reports, **I am not certain about connecting to the system – for security reasons the State would want to look into this.**

- #7, 8, where allow supplier to access solicitations and to submit proposals... IBM responds that State APIs are available to post but suppliers will need to be directed to an external State website. **This is concerning – as this is a requirement of the eprocurement system.**
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43.
 - SAP Supplier Enablement Team will “design and develop the most effective enablement strategy” based on their “profile, PO and invoice volume, and spend”. Segment the “State’s vendor master data to effectively target/onboard suppliers in tiered waves”.
 - Provides IRS TIN/Name “verification capabilities”
 - For the Ariba Network, offers suppliers “user guides, FAQs, technical documentation, and free online seminars”.
 - Can have “account specific information” via a “supplier information portal embedded in the Ariba Network”.
 - Suppliers are able to self register and meet requirements 1 – 10
 - **It's not clear if the system accepts commodity codes**, as the answers given to the questions are not straightforward.
 - #18 - #27 are marked as “INT” and the State asks that the verification of the supplier items be done. **IBM's answer is they can validate the format, I am unsure if this will meet the requirement.**
 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15.
 - The answer to #11 is of concern. The State can download any account information (data) as long as subscribed, but only within the functionality of their application. It doesn't answer the question if we can get the minimum items that are asked for in the requirement.
 5. **Need Identification.** Tab 3, NEED-1 through NEED-7.
 - The CF item does not seem to pose a problem. Other items seem to be standard within the software.
 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11.
 - **PRD 4 – Doesn't seem to answer the Role question. They answer it with groups, but not by role.**
 - **PRD 15 and 16, WRK12, PO11 and 12 – Limit attachments to 100MB size limit, but can support any type of attachment.**
 - **PRD49 – Ariba uses UNSPSC (United Nations Standard Products and Services Code) – it seems much configuration will need to be done to work in State's chart of accounts.**
 - **PRD59 – is essentially not answered.** Gives “Standard Functionality supported and configurable”.
 - **WRK28 – only one user in Que at a time.**
 - **PC 6 – Comment that it's not supported; however, they list as “Available”.**
 7. **Catalog Capability -** Tab 3, CAT-1 through CAT-40.
 - **#3 - 3 channels that catalogs can be updated from: (1) Loaded directly by customer via CSV or CIF format, (2) Loaded by us acting as the catalog management service to the customer, (3) Self-loaded by the supplier via the Ariba Network.**
 - **#6 and 7. Catalogs are limited to 5,000 catalogs and there is a limit to 500,000 items in a catalog.**
 - **#19 – To enter Items of negative values is not an option.**
 8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151.
 - **#2 – System has several solicitation templates to use; however, most all State's will want to use their AG approved templates and forms. Some such as the RFI are delivered out of the box, unsure if can configure.**
 - **#36, 52, 63, 70 – limited to 100MB**
 - **#76 – Ariba's system doesn't provide ability to post solicitation documentation unless manually done.**
 - **#138 – Ariba's system does not post award results to State's procurement website. It must be done manually.**
 9. **Contract Management.** Tab 3, CNT-1 through CNT-88.
 - **#45 – Ariba's system doesn't support read only format with redaction properties.**

- #52 through #62 – Ariba's system doesn't support posting of various items to State's public Contracts website. The State must manually post
- 10. Vendor Performance** Tab 3, VPE-1 through VPE-25.
- VPE 21 – **CLARIFY** that the system provides this requirement as IBM says it does, because they comment that the best way is through scorecards, which in my mind is paper or a simple excel form. Maybe scorecards is a name of one of their forms. **If not, this does not meet the requirement.**
 - VPE 25 – **File size limit 100MB per attachment. – does not meet requirement.**
- 11. Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37.
- PDA 1 – Ariba solutions comes with 250 pre-packaged reports.

C. Technical Requirements: pages 47 - 59

- 1. Availability.** *The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.*
- Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.*
- SAP offers a 99.5% system availability percentage during each month for production versions, with exception of **regularly scheduled and emergency maintenance. CLARIFY – How often is regular maintenance and during what hours and days. Additionally, how often in the past has SAP had emergency maintenance (example of how many times in one year?).**
- 2. Accessibility Requirements.** *The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.*
- Page 45. They state they will provide accessibility to customers upon request. **It seems the software does not come with accessibility requirements.**
- 3. Audit Trail and History** RTM: Tab 4, TECH-1 through TECH-5.
- TECH 3 – 5 are “INT”; however, they repeat TECH 1 and do not explain/detail out how or why integration or interface is needed.
- 4. Browsers Supported**
- The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.
- 5. User Accounts and Administration** RTM: Tab 4, TECH-6 through TECH-20.
- TECH 12 – **Does not meet requirement.**
- 6. User Authentication** RTM: Tab 4, TECH-21 through TECH-25.
- 7. Federated Identity Management**
- Refers to a link. Page 50
- 8. Data Conversion** RTM: Tab 4, TECH-26 through TECH-34.
- SAP plans to use “SAP's Activate Methodology”
 - Integration of legacy systems are extra cost 10
- 9. Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60.
- “integrate with all the major ERP systems. We provide flexible integration support for Oracle, PeopleSoft, AS400 and SAP. Given our flexible EAI infrastructure, we have also mapped out applications to Salesforce, Lawson, GEAC and a multitude of custom developed legacy systems.”
 - Real-time and/or batch integration
 - HTTPS using CSV interface
 - SAP Web services
 - REST APIs
- 10. Office Automation Integration**
- Yes, they integrate with Microsoft products listed and others.

11. **Mobile Device Support** RTM: Tab 4, TECH-61.
 - Yes it can be accessed Mobily
12. **Mobile Applications** - TECH 62.
 - Nothing to add here..
13. **Data Ownership and Access**
 - State owns the data.
14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63.
 - Data retention is governed by the active contract.
15. **Disaster Recovery Plan**
 - Meets requirements.
16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67.
 - State would receive two environments by default: Test and Production.
 - Additional environments (i.e. Development, Quality Control/User Acceptance, Training) are additional charges.
17. **Solution Technical Architecture**
 - They described some tools and gave some “various” options for exchanging data between SAP Ariba and external system.
18. **Solution Network Architecture**
 - Diagram on page 57.
 - SAP Ariba solutions are offered and delivered in a true subscription-based model
19. **System Development Methodology**
 - Based upon Agile Scrum Development methodology.
20. **Service Level Agreement**
 - UNABLE to open embedded document.
- D. **Security Requirements:** pages 60 - 72
 1. **Cloud Security Alliance (CSA) Compliance**
 - SAP Ariba is officially not certified for NIST 800-53, SAP Ariba use SOC guidelines.
 2. **Security and Privacy Controls**
 3. **Security Certifications**
 4. **Annual Security Plan**
 5. **Secure Application and Network Environment**
 6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.
 - Mentions backup policies.
 7. **Data Security** – nothing to add.
 8. **Personally Identifiable Information Protection** – nothing to add.
 9. **Security/Privacy Issue Occurrence** – nothing to add.
 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
 11. **Security Breach Reporting** – nothing to add.
- E. **Implementation Services Requirements:** pages 73 - 126
 1. **Project Management**
 - LSI provides a basic PM layout diagram on page 73 explanation of PM.
 - Very prescriptive in nature, almost regulatory.
 - Do not see a timeline
 - Does not address most of PM section in RFP.
 2. **Project Implementation Methodology**
 - Very prescriptive in nature, almost regulatory.
 - LSI would like that most SAP cloud implementations use the SAP Activate Cloud methodology. The SAP Activate Cloud methodology follows Agile principles and is well suited to cloud software implementation.
 - Sample role assignment charts are provided for deliverables (pages 79 – 81 and 83 and 88 – 90 and 93). Will want to review these for negotiations if are awarded a contract.
 - **Note:** There are many PM areas that should be reviewed in the Assumptions section (pages 140 – 141) of this proposal.
 3. **Catalog Support Services**

- Uses SAP Ariba Catalog management services or Spot Buy.
- The supplier is responsible for uploading catalogs on Ariba Network.
- Suppliers hosting content on their sites provide a catalog feed with links to their content as authenticated by Ariba Network. Both Level 1 PunchOut (Site and Aisle/category level) as well as Level 2 PunchOut (Aisle, Shelf, and Item level for cross-PunchOut search experience) are supported. SAP Ariba catalog management services manage the enabled catalogs including validation, cleansing, catalog activation and any subsequent refreshes. The catalog set-up includes setting up a catalog hierarchy. Enablement of Punch Out catalogs are available as an optional item for additional charges – Clarify charges.
- Doesn't address training staff or suppliers on catalog management roles.

4. Data Conversion Services

- 6 activities make up the conversion project:
 - Strategy
 - Analyze
 - Design
 - Build
 - Test/Implement
 - Deploy

5. Interface/Integration Development Services

- Pages 98-99 - *“LSI will recommend, design and deploy interfaces based on the best practices and the latest tools available with the SAP environment. In addition to technical assessment, we develop an **Interface Strategy document** that includes the general architecture of the Current and Future Landscape, describes various Interface types, file transfer and process of interface design and implementation.”*

6. Organizational Change Management (OCM Services)

- Explains their OCM method well and with diagrams. They seem to have done OCM before.
- Meets requirements.

7. Training Services

- Training is divided into two different but critical areas:
 - Project Team Training
 - End User Training

8. Help Desk Services – good.

- Page 117 - *“LSI will provide post implementation support / SAP Application Management Services (“AMS”) Services.”*
- Confusion on what LSI is providing and what SAP might be providing or if LSI is providing all.

9. On-Site System Stabilization Support

- LSI explains post go-live stabilization support and some of the help desk again, but don't seem to commit to the 3-month post go-live coverage requirement.

F. Managed Services Requirements: pages 127 - 131

1. Solution Support

- Yes seems to meet requirements

2. Organizational Change Management (OCM Services)

- They offer an hourly rate in their cost proposal, but do not offer any description of services. Unable to evaluate.

3. Training Services

- Meets requirements – point to Section E for description of services.

4. Catalog Support Services

- Provided at an hourly rate but separate from services from proposal. No description of services offered. Unable to evaluate.

5. Help Desk Services

- Meets requirements. – point to Section E for description of services.

6. Transition Out Assistance Services

- Sample transition plan offered. Would like to see a description of how they help transition out. Does not meet requirement.

G. Other Available Services: pages 131 - 138

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1

- Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- SAP S/4 Financials Assessment.
- SAP Fieldglass

H. Video Demonstrations: page 139

- 44 minute demo.
- Some areas the author kept saying they would show more at the demo. Which is confusing since this is the demo.
- Looks very user friendly for Catalog purchasing of items.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **SAP ARIBA** implemented by **LSI Consulting**. single point of entry
smart routing compliance portal open marketplace environment integration workflow document
management reporting configurable transparency

User Experience "Guided Buying" capabilities, - UX experts redesigned user's view to deploy a platform adaptable on multiple platforms (desktop, tablets, mobile) •Minimizing clicks and number of steps•Seamless transition from mobile app to desktop with "follow-me" process from one another•Community help•Visual workflows, reminders and notifications•Bulk actions over many items (i.e. bulk receive purchase orders)•Integrations to facilitate multiple catalog search (items in the material master, inventoried items, MRO Supplies and contracted supplier catalogs), cost accounting and more Bidder Best Practices and Roadmap **A configurable system** is OOBX solution that allows the owner to easily personalize certain aspects of the system, without the help of costly software developers. Configurable software is flexible, scalable and can be continually shaped to meet an organization's industry-specific and organization-specific needs. Configurable solutions carry a much lower total cost of ownership. You don't pay for updates. **A customized system** is developed specifically and only for one customer, locking that organization into a static workflow that can only be changed by hiring cost prohibitive engineers to make updates to the system's code. This increases the total cost of ownership exponentially. The system is static and does not evolve with the industry. SAP® Ariba® Best Practices Center.

Innovations and Value-Added Features/Services •SAP Fieldglass•SAP Ariba Supplier Risk Management - Customizations/Extensions SAP arriba application extensions and partners; spot line chat bot, seal software, cloud trade, I SMS applications, kill var sourcing, app Zen artificial intelligence, core disc, fair market, vertex, Accenture, echo vedis, Dun and bradstreet, APOS systems, nitor, iCertis artificial intelligence, globality.

Alternative Funding Models **LSI CONSULTING** did not propose any

Contract Transition and Flexibility flexibility to transition from a state's current contract to a new contract or amendment under the terms of a newly awarded Master Agreement and Participating Addendum.. SI becomes a one-stop-shop for the participating State for software and services contracting. **Could not open PDF**

Functional Requirements

General Functionality - 2 integration w/medium and low LOE, 1 not available, 1 partial requirement met for posting solicitations on state website, 36 Out of the box.

Supplier Portal - 1 integration w/Medium Loe an API where suppliers can access a posted solicitation , and 21 out of the box, 1 business process to handle vendor complaints outside of the tool.

Supplier Enablement/Management 9 integrations w/med LOE and 34 out of the box.

DEPARTMENT/STATE: Maine

Buyer Portal 15 out of the box
Need Identification 7 out of the box
Request through Pay 62 out of the box – Purch Req, 28 out of the box for Wrkflw mgt, 29 out of the box for PO gen and mgt, 21 out of box for Pcard, 21 out of the box for Receiving, 11 out of the box for invoicing.
Catalog Capability 1 not available items with negative dollar value, 39 OOBX
Sourcing/Bid Management Three not available, 1 partial sourcing bid management not displayed publicly, 147 OOBX
Contract Management 74 OOBX, One not supported 11 not available and must be performed manually. 2 Available however these are manual processes.
Vendor Performance 25 OOBX
Purchasing/Data Analytics 37 OOBX

Technical Requirements

Availability 99.5% system availability percentage during each month for production versions, with the exception of regularly scheduled and emergency maintenance.
Accessibility Requirements 301 549 is a European standard for digital accessibility.
Audit Trail and History logs are retained so long as the customer has an active contract with SAP.
Browsers Supported Apple Safari (64-bit)•Google Chrome (64-bit)•Microsoft Edge (32-bit)•Microsoft Edge Chromium (32-bit and 64-bit)•Mozilla Firefox (64-bit)•Microsoft Internet Explorer (32-bit) until December 31, 2021oNote: Compatibility mode isn't supported
User Accounts and Administration RBAC
User Authentication Customers may activate 2 factor authentications if they use SAML based authentication or ADFS for accessing the SAP Ariba Cloud Services.
Federated Identity Management– see user authentication above
Data Conversion LSI will leverage SAP's activate methodology however methodology was hard to determine as far as specific data conversion tasks.
Interface and Integration Using SAP ARIBA open APIs. Oracle and PeopleSoft and they also integrate with SAP?
Office Automation Integration Word excel and Powerpoint
Mobile Device Support the Ariba Mobile app to view, track, and approve purchase requisitions, nudge approvers, and access informative articles on the Exchange User Community, all from their mobile devices.
Mobile Applications IOS version 7. X, Android Kit Kat 4. 4 and lollipop 5.0
Data Ownership and Access Data retained so long as the contract is active however it's not clear how long they will keep data after termination
Date Retention, Archive and Purge Considerations Retains customer data for the life of this subscription in accordance with their terms and conditions
Disaster Recovery Plan Annual test does it include clients? Data centers appear to be SAP owned RPO 5 minutes. (RTO) to not exceed four hours. LSI Consulting leveraging SAP plan.
Solution Environments production and test; Extra charge for more environments
Solution Technical Architecture The native integration with SAP ECC and S/4HANA covers the full suite of SAP Ariba applications including Ariba Network Automation, SAP Ariba Buying and Invoicing master data and transactional interfaces as well as SAP Ariba Sourcing and SAP Ariba Contracts and direct materials management. This is accomplished by using the SAP Ariba Cloud Integration Gateway (CIG). The Cloud Integration Gateway provides a means of integrating SAP Ariba with SAP ERP products (S/4 and ECC6) without the use of middleware for delivery. Detailed architectural diagram provided.

Secure Application and Network Environment SAP Ariba provides 24/7 monitoring from a Security operation center

Secure Application and Network Access SAP ARIBA uses a variety of strong encryption and key management protocols, cyphers, and processes from encrypting data/files in transit and at rest

Data Security Access based on leased privilege

Personally Identifiable Information Protection solutions are designed Business to business transaction, and do not support storing HIPAA/PII/Personal data

Security/Privacy Issue Occurrence incident response procedures are confidential, overview only

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management **LSI CONSULTING** will have leadership provided by the Program Sponsor, Engagement Lead and Project Manager who share responsibility for the successful delivery of the State implementation. •Clearly define project scope, responsibilities, and authority via the project charter and responsibilities matrix. •Finalize the project team resources and organizational chart •Implement the toolset and procedures for scope, risk and issue management •Establish communication protocols including status reporting and issue reporting •Create the project requirements traceability matrix framework •Prepare a Kick Off presentation to communicate PMO standards and expectations to the project team.

Project Implementation Methodology **LSI CONSULTING** will use the SAP Activate Cloud methodology. Extensive detail on this methodology.

Catalog Support Services **LSI CONSULTING** takes will use SAP Ariba catalog management service is a complete, end-to-end combination of proven technology, extensive domain expertise and expert services. Elements include: Supplier Road Mapping, Project Management, Electronic Catalog Enablement, Catalog Maintenance, PunchOut Catalog Enablement, Punch-Out Catalog Maintenance, and State & Supplier Helpdesk Support.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Data Conversion Services **LSI CONSULTING** data conversion project plan is broken down into six activities, which mirror the project phases; Strategy, analyze, design, build, test implement, deploy. Data cleansing appears to be the sole responsibility of the state because no tools were mentioned.

Interface/Integration Development Services **LSI CONSULTING** will develop and implement interfaces and integrations with legacy systems. **LSI** will recommend, design and deploy interfaces based on the best practices and the latest tools available with the **SAP environment**. **LSI will develop an Interface Strategy document** that includes the general architecture mn of the Current and Future Landscape, describes various Interface types, file transfer and process of interface design and implementation.

Organizational Change Management (OCM Services **LSI consulting** has a robust organizational change management road map. It has five phases; prepare, explore, realise, deploy, run post go live. A comprehensive strategy and communication plan will be created to drive the creation and delivery of effective messaging. This plan is a dynamic, living, and breathing document. It will be updated periodically to ensure the right communication is getting to the right stakeholders at the right time. The following principles lay the foundation for effective communication: •Message redundancy is related to message retention. •The use of several communication channels is more effective than the use of one single medium to convey a message. •Face-to-face communication is a preferred medium for providing a forum of dialogue with constituents. •The existing organization structure is oftentimes the best channel for disseminating information about the implementation. •Direct supervision is the expected and most effective source of organizationally sanctioned information. •Opinion leaders, who may not necessarily be organizational leaders, are effective change agents. •Information that is consistent and reinforces basic values and beliefs is effective in changing opinions and attitudes. •Personally relevant information is better retained than abstract, unfamiliar or general information

Training Services **LSI CONSULTING** Training is divided into two different but critical areas: 1. Project Team Training 2. End User Training approach aligns with our implementation plan. **LSI CONSULTING will leverage online SAP Services courses**. **LSI** will train State personnel with business expertise to conduct instructor led classroom training, virtual learning classrooms or deskside coaching for fellow employees. **LSI** will train State trainers in best practice training principles and familiarize them with the training content to be used by conducting tailored train-the-trainer workshops for each applicable area.

Help Desk Services The **LSI CONSULTING** These services were designed to complement our customers in house support team. Our service is easily adapted to integrate with State's support provider. **LSI's Application Support Services** offers application support across all modules. Support is made available at a predetermined rate, with guaranteed response time. End-users simply call a dedicated toll-free number, or enter their problem tickets over the web to receive direct access to consulting resources. Application Helpdesk support covers Level II Application Critical Support, and Level III Application Enhancement Support . Level III or Enhancement Support is designed for customers who want to expand the functionality of their current systems. Level III (Tier Three) support must be approved by Customer's Support Manager. The intention of Level III is to give Customer flexible and cost-effective access to consulting resources to continually improve Customer's SAP systems. Each level III request is **priced separately** and will be evaluated, quoted on a case by case basis, and must be approved by the customer. JIRA Work Management for Customer Care system

On-Site System Stabilization Support **LSI CONSULTING will run Hypercare** for 3-months post go-live. On site not clear.

Managed Services Requirements

Solution Support All of our Ariba customers run the latest release of our products. As part of our SaaS deployment model, we handle all maintenance packs, services packs, and product upgrades. Customers automatically receive patches and upgrades when they become generally available for no additional cost. We schedule releases during off-peak hours and weekends to minimize the impact of downtime. Many of

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Installing Ariba SAP
 - LSI is consulting role
 - Partner managed cloud; should consider liability and data security terms
 - Gateway to full SAP saturation
2. Previous Projects
 - Large list of clients; all but a few are municipalities/cities or smaller entities than full statewide scope
 - Provide examples, but no reference to ROI; provides limited value to spend the money for the services
 -
3. Subcontractors
 - No subcontractors; should be identifying SAP?
 -
 -
4. Organizational Chart
 - All work aside from highest level is done by Ariba and SAP resources
 - Job descriptions show limited responsibilities of LSI. Majority of work appears by States
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Research needed if LSI absorbs risk to project or defers to SAP or others. States should be aware of liability limits for prime vendors when acting as project managers but do not own solution

Individual SME Comments:

General Principal and Requirements

- SAP Ariba Solution
- POSITIVE SAP Ariba Solution, SaaS
- POSITIVE SAP manages infrastructure
- QUESTIONING Spot buy catalog avenue to encourage off contract purchases.
- POSITIVE mobile platform focus
- POSITIVE End to end system, task management functions
- NEGATIVE Many value-added services, why not included in base products
- QUESTIONING Extension partners for functionality what is relationship and liability
- POSITIVE – Gold Partner for SAP
- QUESTIONING – GovOne Accelerator template benefits or restriction
- POSITIVE – SAP is widely used throughout the industry
- POSITIVE – Modules are beneficial to choose which are best
- QUESTIONING – Is vendor portal a barrier to entry for technology challenged small business
- QUESTIONING – SAP Fieldglass and Supplier Risk Management, using LSI as a third party to implement, and various application extension partners demonstrates a complex fragmented solution.

Functional Requirements

- POSITIVE – separate modules
- POSITIVE – Use of UNSPSC codes is preferred
- POSITIVE – Ariba is far reaching
- QUESTIONING – how simple is the network considering the size and effort needed to implement
- POSITIVE – Resources on page 30 seems interesting
- QUESTIONING – mention of approval workflows
- QUESTIONING – page 34 references guided buying, how does this influence the buyer
- INTERESTING – Need guidance seem very manipulative
- POSITIVE – Catalog features and attribute designations are good
- QUESTIONING – How do technologically challenged vendors submit a bid response?

Technical Requirements

- QUESTIONING – accessibility for differently-abled?

Overall

Exception to #7 of NASPO T' & C's

General Principal and Requirements

Key Solution Functionality Elements

8-10	Ariba is the solution	
	Single point of entry	
	Smart routing – dynamic workflow engine	
	Compliance – SAP s/4 HANA – you can manage regulations, track registrations and substance volumes, classify products and create compliance documents	
	Portal – SAP portal product	
	Open Marketplace Environment – users choose to have access to all of the available catalogs or just their own. Also has spot buy catalog solution available	
	Integration – holistic integration application	
	Document Management – module can track, manage and store documents that can help digitize the contracting process.	
	Reporting, dashboard, and data virtualization. – native reporting and analytics including-packaged reports	
	Configurable – highly configurable solution	
	Transparency – Vendor Portal streamline operations and engagement with your vendor community.	

User Experience

10-12	Guided buying	
	Multiple platforms. Designed to deliver a fast and ergonomic user experience.	
	Interface designed to minimize clicks, seamless transition from mobile to desktop app, visual workflows, bulk actions, and integration s to facilitate multiple catalog searches

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

This response is the same as the response submitted for Stage 1. The notes from the SME are below. I have copied the eval and RTM notes over from Stage 1 to this Stage 2

Individual SME Comments: *The video provided did show the functionality of the system, but at a very high level. It concentrated more on tips and lessons learned rather than getting deep into the functionality of the system. I got the impression this company wanted to provide a deeper explanation of the system when they offer a "demo" but not sure what that meant?*

Some of the responses in the RTM are completed by stating "standard functionality" which does not show me they understand the requirement and can state that their solution can perform the requirement. Another issue is the vendor's response comments state an integration will be needed, but the "availability" on the RTM is labeled "A" which means out of the box. See example on Tab 3 Line 198 on suppliers RTM.

I am confident that the system can be offered to state clients but would feel that the concerns listed in these notes would need to be addressed/verified so clients and this supplier are clear on any discrepancies.

General Principal and Requirements – Page 8

Key Solution Functionality Elements – Page 8

- Offers the SAP Ariba Guided Buying with SSO
- Smart Routing is workflow that can be configured.
- Compliance helps track registrations.
- Portal provides access for employees
- Have open marketplace functionality with Spot Buy catalog solution to aid buyers in finding goods.
- Offers integration, workflow, document management and configurable dashboards.
- The vendor portal helps with the transparency requirements.

User Experience – Page 10

- Each module has configurable dashboards - Page 11
- Allows for mobile use to save time.

Bidder Best Practices and Roadmap – Page 12

- Presents both Quarterly and Monthly releases.
- Supplied 2 attachments embedded in the response document showing their expected road maps. These documents contain good information and could be very useful
- Best Practices Center service provides access to knowledge of best practices

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Innovations and Value-Added Features/Services – Page 13

- “Moving away from customized systems to configurable systems is the key to enable innovation”
Page 14
- Offers SAP Ariba APIs.
- Does offer some other tools that would be advantageous to the State. SAP Fieldglass and SAP Ariba Supplier Risk Management. Page 15
- Supplied Link to YouTube video explaining that SAP Fieldglass aids to develop external workforces. Can submit a SOW and then work with the vendor. Can integrate with existing systems.
- Supplied YouTube link to explain Supplier Risk Management. I tried to access the video but received a warning stating this is a “private video” – Page 16

Customizations/Extensions – Page 17 thru Page 20

- Supplied a well define list of extensions and partners. Page 17
- Chat bots, pdf invoices, integrations with Oracle, supplier data validation are some examples. I am just curious if these are included or offered at an additional cost.

Alternative Funding Models – Page 20

- SAP Fieldglass is offered with an option to pay as you go and only pay for what you use at the end of the month.

Contract Transition and Flexibility – Page 20 – 21

- Partner Managed Cloud (PMC) is a tool to offer expedition the legal review process.
- Referred to document titled LSI Partner Managed Cloud attachment which provided information on the benefits for using this tool.

Functional Requirements – Page 22

General Functionality – Page 22 thru Page 24

- Single platform for supplier and buyers
- Buying & Invoicing, Sourcing, Contracts, Supplier Lifecycle and Performance, Ariba Network and Fieldglass are the solutions listed.
- Profiles can be set up via an integration.
- User should configure their own dashboards to simplify the user experience.
- CONCERN - EPROC-GEN-11 – Line 15 - Did not address the ability to Import/Export attachments
- CONCERN - EPROC-GEN-13 – Line 17 - Did not address the ability to re-assign work to another user?
- CONCERN - EPROC-GEN-26 – Line 30 - The ability to track admin fees in not available with integration to state's ERP?

Supplier Portal – Page 24 thru Page 30

- Proposing the SAP Ariba Business Network (SBN) as the single point of entry.
- Landing page for all suppliers has access to all procurement related transactions.
- Offers Open, Smart, and Simple network services.
- Sourcing, contracts, catalogs, and invoice access for the suppliers.
- Supplier support with training tutorials and documentation.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Has supplier mobile app functionality
- CONCERN - EPROC-SPR-9 and EPROC-SPR-10 – Lines 13 and 14 - The comment response of "Partner" is not familiar to me?
- CONCERN - EPROC-SPR-18 and EPROC-SPR-19 – Lines 22 and 23 – One line is not supported and the other line the comment response of "Partner" is not familiar to me?

Supplier Enablement/Management – Page 30

- Buyers can manage the entire purchasing process.
- Offers a supplier enablement team
- Offer supplier education and training materials
- Help manage data collection.
- CONCERN - EPROC-VDR-19 thru EPROC-VDR-27 – Line 48 thru line 56 – The responses here are labeled as needing an “integration”, but I am not clear what integration is required?
- CONCERN - EPROC-VDR-31 thru EPROC-VDR-39 – Lines 60 thru line 68 - Concern - This is a duplicate response from requirements in this section. Does the system offer this requirement?
- CONCERN - EPROC-VDR-43 - Concern - This is a duplicate response from requirements in this section. Does the system offer this requirement?

Buyer Portal – Page 31 thru Page 34

- Can have a configurable landing page with a dashboard, or have a user experience a guidance in buying.
- User will log in using the same portal and what they see can be set up within their roles.
- Casual users purchase, complete forms and be linked to other solutions like ServiceNow
- Power users can have dashboards, run reports, manage records, and post solicitations.
- Provided screen shots on pages 33 and 34

Need Identification – Page 34 thru Page 36

- Guided Buying provides access to catalogs and state contracts and the vendor thinks this is the perfect solution to Need Identification.
- Can trigger workflows that can be configured.
- Can configure a landing page dashboard containing widgets to guide the user in the buying process.

Request through Pay – Page 36

- The narrative response from this supplier is very limited on information.
- Interpretation of Purchase Request – Could be a form or “request” that is filled out or could be the result of submitted a “shopping cart” that goes to a PR (purchase request or requisition) and then to a purchase order. See response in RTM line 106
- CONCERN - EPROC-PRD-15 – Line 116 - Attachment size limit is 100 MB per attachment
- CONCERN - EPROC-WRK-12 – Line 177 – Can you add comments, and can you control if comments go to the vendor?
- CONCERN - EPROC-WRK-14 – Line 179 - States the workflow will not be re-triggered. Would if we want workflow started again?
- CONCERN - EPROC-PO-3 – Line 198 – Response states requirement needs an integration, but “Availability” is marked with A which means out of box?
- CONCERN - EPROC-PO-6 – Line 201 – PO number is not configurable by the State.
- CONCERN - EPROC-PO-16 – Line 211 – Cannot electronically sign Purchase Orders

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-PC-6 – Line 232 – Pcard as part of the user's profile is not supported.
- CONCERN - EPROC-PC-10 – Line 236 - Availability states out of the box, but wouldn't this require an integration? Loading data from the bank.
- CONCERN - EPROC-RC-4 – Line 253 – Cannot record a receipt without a reference to a PO.

Catalog Capability – Page 36 – 37

- Cross- catalog search among the catalogs.
- Spot Buy catalogs for those items not found in other catalogs.
- CONCERN - EPROC-CAT-6 – Line 291 – Does not have an unlimited number of catalogs. 5000
- CONCERN - EPROC-CAT-7 – Line 291 – Does not have an unlimited number of items. 500,000
- CONCERN - EPROC-CAT-10 – Line 295 - Supplier availability states out of box but response is talking about custom forms - Should be labeled C for customization?
- CONCERN - EPROC-CAT-11 – Line 296 - Supplier availability states out of box but response is talking about custom forms - Should be labeled C for customization?
- EPROC-CAT-19 – Line 304 - Items with negative dollar value not supported
- CONCERN - EPROC-CAT-39 – Line 324 - This response is the same requirement in line 323. Does not address the publish announcement about new catalog requirement.

Sourcing/Bid Management – Page 37 thru Page 40

- SAP Ariba Sourcing is the solution name.
- Ariba Discovery is the supporting public posting.
- Integrates with SAP Ariba Contracts solution
- Configurable templates allow for agency process variations
- Has project management process – Page 39
- Side by side comparison
- Offered links for more information on Public Posting which is also contained in Section 10 Vendor Performance of their response. Page 40
- CONCERN - EPROC-SRC-15 – Line 342 - This response shows the functionality of qualified vendor lists and not if the Sourcing module can handle this solicitation type.
- CONCERN - EPROC-SRC-39 - The system assigned number is not configurable by the State
- CONCERN - EPROC-SRC-41 - Does it support Adobe Acrobat?
- CONCERN - EPROC-SRC-63 – Line 390 - The system has a 100-supplier limit for events
- CONCERN - EPROC-SRC-76 – Line 403 - Response does not state what means this information is to be posted? Integration? Line 404 states integration with that requirement?
- CONCERN - EPROC-SRC-102 – Line 429 - eSignature functionality is limited to contracts not sourcing events.
- CONCERN - EPROC-SRC-130 – Line 457 - The response references communication between buyer and supplier, but requirement is referencing evaluation panel members?
- CONCERN - EPROC-SRC-131 - The requirement references communication between the "buyer side" of the application, but the response references the supplier communication ability?
- CONCERN - EPROC-SRC-143 – Line 470 - I interpret this requirement as being able to "unaward" and awarded solicitation and then awarding it to the next responsive supplier. The response submitted does not address that requirement.

Contract Management – Page 40 thru Page 42

- SAP Ariba Contract Management is the solution proposed

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Offers both Contract Management and Administration
- Bridges the sourcing process to the transactional procurement process.
- Contract can be published to SAP Ariba Buying and Invoicing and then leverage Guided Buying
- Leverage workspaces, templates, documents, and libraries
- Configure contract dashboards to help manage contracts
- Contains numerous pre-packaged reports
- CONCERN - EPROC-CNT-25 – Line 505 – Does the solution support Adobe Acrobat?
- CONCERN - EPROC-CNT-65 – Line 545 – Buyer cannot control which contracts or content is displayed on public site. Can the system use the contract status?
- CONCERN - EPROC-CNT-71 – Line 551 – The vendor's response did not address the administrative fee requirement. Only talked about updating prices on price file.

Vendor Performance – Page 42 thru Page 44

- SAP Ariba Supplier Lifecycle and Performance is the solution name.
- Supplier has self-service access to maintain data
- Centralized view of supplier's data
- Offers vendor performance tool.
- Can use API to display supplier performance.
- Can send surveys and system automatically scores the response.

Purchasing/Data Analytics – Page 44 thru Page 47

- SAP Ariba Reporting is the solution name.
- Reporting can be created with many data elements and displayed on personal dashboards.
- System offers pre-packaged reports across the solution.
- Offer Ad Hoc Reports. (Wizard driven)
- I liked that they copied a duplicate response on lines 602 thru 608 but bolded the requirement in the duplicate response that showed they could meet the requirements. This practice is better than "see requirement XXX".
-

Technical Requirements Page 47

Availability – Page 47

- Guarantee 99.5% availability.
- Offered example of their SLA

Accessibility Requirements – Page 47

- Offered link to a design guide of the system.

Audit Trail and History – Page 48

- Meets requirements

Browsers Supported – Page 48

- Listed browsers supported and noted compatibility mode is not supported

User Accounts and Administration – Page 48 – 49

- Based on roles and permissions and assignment to groups
- Common data is shared across modules automatically

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: LSI Consulting

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/03/21

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-TECH-12 – Line 16 Dual sign-on via one account is not supported. Buyer/Supplier
- CONCERN - EPROC-TECH-16 – Line 20 - Deactivating an account is not automated.
- CONCERN - EPROC-TECH-17 – Line 21 – System does NOT display profile information, even under the user profile?
- CONCERN - EPROC-TECH-20 – Line 24 - This response does not address the searchable functionality that was mentioned in the requirement?

User Authentication – Page 49 – 50

- Offers regular authentication or single sign on
- Supplied password information policies

Federated Identity Management – Page 50

- Suppliers' response referred back to previous section, User Authorization section 6 Page 49-50

Data Conversion – Page 50

- Plan to leverage SAP's Activate Methodology which provides tools with rapid migrations.
- Supplied suggested role names and responsibilities.
- CONCERN - EPROC-TECH-26 – Line 30 - Legacy integration is provided as an extra cost

Interface and Integration – Page 51

- Stated 3 kinds of integration options, HTTPS, SOAP, and REST
- CONCERN - EPROC-TECH-57 – Line 61 - The supplier response refers to THEIR SLA. I thought the requirement was to address an SLA entered in the system.

Office Automation Integration – Page 51

- Meets requirements

Mobile Device Support – Page 52

- Uses the mobile "app" to perform system tasks and supplied list of features available with the app.

Mobile Applications – Pages 52 – 54

- Listed the operating system that the mobile app supports
- SAP Ariba mobile app is not certified with mobile device management (MDM) platforms. Page 53
- Listed security features offered by the app

Data Ownership and Access – Page 54

- Customer owns the data throughout the life of the subscription

Date Retention, Archive and Purge Considerations – Page 54

- Does not mention how the purge and archive functionality works in the narrative response.
- CONCERN - EPROC-TECH-63 – Line 67 – Does not provide detailed information about the purge process

Disaster Recovery Plan – Page 54 -55

- SAP Ariba uses a documented system recovery plan.

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Would have been beneficial to share this documented plan?

Solution Environments – Page 55

- Narrative offered very limited information on environments proposed other than to mention test and production.
- CONCERN - EPROC-TECH-64 – Line 68 - This response does not address the "refresh" functionality

Solution Technical Architecture – Page 55 thru Page 57

- Solution is single platform with solutions natively integrated.
- The SAP Ariba Cloud Integration Gateway allows all the solution modules to be integrated.
- cXML language for document exchange.
- Offered information on integration to external systems. Page 56
- System shares servers.

Solution Network Architecture – Page 57 – 58

- Chart on page 57 shows network structure

System Development Methodology – Page 58 – 59

- Uses Product Lifecycle Methodology to help with development.
- Some changes are subject to change management procedures.

Service Level Agreement – Page 29

- Provided/referenced the embedded SLA offered in their response. 2 different versions.

Security Requirements – Page 60 – Most of my responses to this section I will need to defer to a security SME

Cloud Security Alliance (CSA) Compliance – Page 60

- Referenced the CAIQ document embedded in this response. Excel spreadsheet looks complete

Security and Privacy Controls – Page 60

- Not officially NIST 800-53 certified.
- Offered link to certification compliance Page 60
- Offered link to Attestation of Compliance.
- Defer rest of evaluation to Security SME

Security Certifications – Page 60 thru Page 62

- Current certificates available upon request. Provided link
- Offer link to Service Organization Controls (SOC) reports. Page 61
- PCI and DSS certified
- Provided link to current Attestation of Compliance
- Defer rest of evaluation to Security SME

Annual Security Plan – Page 62

Other Services Available – Page 131 thru Page 138

- Financial Systems Assessment
- Workforce Management
- Vendor Management System to Manage Projects and Services

Video Demonstrations

SAP Ariba is the solution that is being proposed with this response. The first step in the solution is Guiding Buying which helps the user decide what path to take for procurement. The access is given to users by roles and permissions and access to ordering certain items can be restricted to users. Can support any catalog, internal or external. Search feature results are from all catalogs across the solution. Can configure alerts on purchases and accounting information to show up on the requisition along with workflow. Once flipped to a PO, the user can request a change request on the order as this is now a PO that has already been sent to the supplier. The supplier receives an alert and then logs into his supplier portal. The supplier can create an invoice for the order. The AP staff for the state will receive an alert that the supplier has invoiced them for the order. The system from the accounts payable view has a landing page containing data generated for reports. The order can now be received by the AP person.

Sourcing – User has a landing page that can be configured with tiles of tasks need to be performed. Manager of user can assign or re-assign workloads of users. Events can be created from templates or

copied from a previous event. Event can be awarded to multiple vendors and allows to create different award scenarios. Can view bid content, suppliers, reports, messages, and award content.

.
Contract Management – Can configure their own landing page that will contain all information related to contracts. The creation of contracts is wizard driven and information is populated from the event. You can also use a template to create contracts. After contract creation, tabs available are overview, documents, tasks, team, message board and history. You can see the contract spend on the contract and enter tasks assigned to team members. Can sign documents electronically.

Supplier Management – Has a configurable landing page with tasks or reporting available. Allows to view and report on supplier performance. User can create supplier requests which contains custom fields, and templates can be used here as well. Can view supplier information in a 360 view.

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2000.
 - Software solution: "Negometrix4" (NX4) – eprocurement application
 - 2/10/2021 Negometrix joined the Mercell group.
2. Previous Projects
 - 3 projects given. The projects meet Category 2 and seems that they could have met Category 1.
 - Volusia County FL. Implementation of NX4's Solicitations module and Contract Management module.
 - Town of Palm Beach. Implementation of NX4's Management module, Solicitations module, and Contract Management module.
 - New York State office of General Services. Implementation of NX4's Intake Management module, Solicitations module, and Contract Management module
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart and job descriptions are provided; **however, the folks/job descriptions dedicated are only a few. This is concerning for large projects.**
5. Litigation
 - Vendor states there are no litigation.
6. Financial Viability
 - Pg 9 - **Says financial report and DnB attached, but do not find. Need clarification?**

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): 2

DATE: 1/20/2022

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Comments:

Overall/General

- Negometrix4 - Mercell's eProcurement platform,
- Off the shelf solution
- The Negometrix4 platform is an entirely cloud-based Software as a Service (SaaS) solution that is hosted on Microsoft Azure in the United States.

A. General Principal and Requirements - pages 5 - 15

1. Key Solution Functionality Elements – p. page 5 - 6

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

- Single Point of Entry: Yes and enter into a suite of modules.
- Smart Routing: yes
- Compliance: Yes
- Portal: Yes
- Open Marketplace Environment: N/A, catalog functionality not included
- Integration: Yes
- Workflow: Yes
- Module: Yes
- Document Management: Yes
- Reporting, Dashboards & Data Visualization: Yes
- Configurable: Yes
- Needs: Yes
- Transparency: Yes

2. User Experience – p. page 6 - 9

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
 - **Capability: N/A – Currently not available**
 - **Intuitive navigation: Yes.**
 - **Wizard driven: Yes.**
 - **Portal work mgt: page 7 “Yes, this holds true for both suppliers and buyers. For suppliers, they are notified of any bid opportunities that match their profile (by location and NIGP codes). The suppliers are also notified of any addenda issued related to any solicitations they are participating in, in addition to notifications 7 days, and 24 hours before the submission deadline.”**
 - **Functionality mobile access: Fully supported and app.**
 - **Workload mgt: Yes**
- **Role-based Functionality: yes**

3. Bidder Best Practices and Roadmap – p. page 9 - 11

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
 - **Constantly maintaining, updating and enhancing the systems capability. Users are informed of the updates occurring in the system. – Does not seem to be any scheduled / timely releases etc. as it is continuous.**
 - **Concern as users seem to be notified of the changes after the fact. This could effect many agencies etc. if one enhancement did not go as planned.**
 - **Uses Agile Method for system enhancements.**
 - **Gave a general 3-year roadmap. No detail. They state their current practice is not to share unless awarded. Partially meets.**
 - **Do not see anything on latest technologies.**
 - **Do not see anything on cost reduction.**

4. Innovations and Value-Added Features/Services – p. page 10 - 11

In addition to the stated requirementGEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• **Inline Narrative:** If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference “Innov, Value-Adds, Addl Svc” Tab).

- **Listed as a value added feature – Service desk?**
 - **7am – 8pm EST on working days.**
 - **They tout you could even speak to the President of Merrell when you call for help. This is a concern, as help should stay in a centralized and trained help dept.**
- **Continued Learning**
 - **Open training every third Tuesday of the month.**

5. Customizations/Extensions – p. page 11

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such

customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- *"As an off-the-shelf solution, the majority of the Agency-specific implementation needs in the platform are accomplished with configurations to the agency's environment. Configurations are performed by our consultants during the implementation period, and they will coordinate with the agency's purchasing team to make iterative improvements until the agency is completely satisfied."*
- The above is a concern – as I do not believe most State's IT would want or allow configuration to their system.

6. Alternative Funding Models – p. page 12 - 15

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
 - Explain how each model would work;
 - Identify the benefits that Participating Entities and their suppliers would realize; and
 - Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- They offer a license structure, but based on their explanation I am not sure if they understand State Government or I am not sure if this would fit as there is not enough information.
- Additionally any cost items were not to be included in the technical proposal.

7. Contract Transition and Flexibility – p. page 15

- One sentence: *"Mercell is flexible in the contracting process and will work with every Agency to tailor the transition to their unique needs and take the current contract situation into consideration"*

B. Functional Requirements: pages 15 - 64

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The electronic procurement solution **must** be cloud-based with a Software as a Service (SaaS) delivery model

Concern and General comment – For the most part Mercell did not complete the Level of Complexity column in the RTM, which in some/many instances makes it difficult to evaluate the time and cost it will take.

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 15 - 16

- The Negometrix4 platform is an entirely cloud-based Software as a Service (SaaS) solution that is hosted on Microsoft Azure in the United States.
- Gen 4, 9, 12, 14, 18, 19, 21, 24, 26, 27, 28, 34, 35, 36 Not Available. Because of the large number – reference the matrix.

- **Concern** – when so many of the GENERAL Functionalities are not available it is concerning.
2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 16 - 20
 - SPR 4 – Platform does not support Purchase Order functionality.
 - SPR 13, 16 , 19 – 22: Not Available
 - “single point of entry for all supplier facing functions”
 - “can also click “View Bid Opportunities” to browse through all published bid opportunities”
 3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 20 - 22
 - Can integrate with State’s ERP system
 - VDR 5, 10, 32, 36, 37, 40 – Not Available
 - VDR 18 – 27: Supplier registration functionality is **not available**.
 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 22 - 23
 - BPRT 1 – *“As a cloud based solution, the platform is easily accessible via a simple URL link, which can easily be linked to the state’s website.”*
 - BPRT 4 – Not available. Work management view.
 5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 23 - 26
 - NEED 1 – *“Yes, with the Intake Management Module, a customizable purchase request form will be configured to the agency’s needs. This smart form will be accessible via a unique link that can be housed on the agency’s intranet or other internal information base. The form is intelligent in that it uses user input to trigger new sets of questions and approval workflows depending on the answers given. Any user can access the form using the unique link and fill out all of the fields, which will then be submitted and visible on a Purchase Request dashboard for the Purchasing Team. Custom approval workflows can also be configured, based on the input provided. Approval persons will receive an email, and they can, Approve, Decline, or Send back the form for edits.”*
 - NEED 4 – **Not completed in comments**. – possibly not available since #5 is not? They do mark it with an “A”
 - NEED 5 – **Not available** – Routing of business rules and definition.
 -
 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 26
 - N/A
 7. **Catalog Capability** - Tab 3, CAT-1 through CAT-40 and - p. 26
 - N/A
 8. **Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 36 - 54
 - SRC 2: *“ Yes, we define our Solicitations Module as “Advanced Digital Sourcing”, to differentiate between the basic e-Procurement vendors and those who provide the full scope of procurement in a digital environment. The full scope of procurement includes: preparation, publication, broadcast, receiving responses, opening offers, offer evaluation, award, contract, vendor performance monitoring, and reporting/exporting of solicitation and contract data.*

The Negometrix4 platform is built to cover all of these procurement functions in one platform where all data is structured for the organization. In this section we detail how the Solicitations Module covers the full scope of the solicitation, as well as all of the unique features that the software offers. The Solicitations Module allows for purchasing organizations to post any type of solicitation (RFP’s, It’s, RFQ’s, RFI’s, Quotations, addendum, notice of intended award/tabulation, meeting notices and notice of awards, etc.) via the Negometrix4 platform. “

- SRC 62: **Not Available**. Allow authorized users removing or adding registered suppliers, multiple at a time from the list.
- SRC 77: The eProcurement Sourcing/Bid Management functionality should provide the ability for the Buyer/Analyst to post an alert associated with a specific solicitation on the State's public procurement website.

- Merrell indicates they can meet the rest of the requirements.

9. Contract Management. Tab 3, CNT-1 through CNT-88 and - p. 54 - 61

- CNT 1: **Does not fully meet this requirement.** *“An authorized user can go from the Intake Management Module (Need Identification component) to the Contract Management Module, while bypassing the Solicitations Module. However, the information from the Intake Management Module will not automatically carry over to the contract.”*
- CNT 2 – 11: **Not Available** - The eProcurement Contract Management functionality must provide repository of standard documents and templates that can be established and available for a specific state agency/organization, set of agencies/organizations or Central Purchasing authority to create a Contract. This Repository functionality will include, at a minimum:
- CNT 12 – 14, 23-24, 26-28,30-31, 34-36, 39 – 40, 49, 66, 68-72, 85, 87-88: **Not available**
- Contract authoring or routing is not supported
- Any document type can be uploaded.
- Contract authoring or routing is not supported
- CNT 51 – 64: **Not Available.** Search functionality *“ The Public Organization Profile allows an agency to choose what information and documents should be accessible to the public, as it relates to both solicitation and contract information. With publishing contracts, a contract manager can select exactly which documents should be visible to all, while others can be kept as internal documents. Other information that can be made public relating to contracts is renewal information, contract duration, contract value, and supplier. The search functionality within the public contracts overview is on the roadmap for development. “*

10. Vendor Performance Tab 3, VPE-1 through VPE-25 and - p. 62 - 63

- VPE 1 *“ The platform extends past the standard tracking and storage of contracts and adds additional value with the combination of the KPI tool and Performance Survey feature. Depending if there is an existing method to capture/store this data, the KPI's can be tracked by means of simply entering the scores on each category, or these scores can be obtained using performance surveys that link back to the supplier's KPI's. Surveys can be customized, templated, modified, and re-used for suppliers/contracts. All desired criteria can be added to the performance surveys for milestone tracking. The agency can send survey invitations to any colleague(s) within the organization (or to external parties) in which they can fill out these surveys without having to log in. They can submit their responses and the Contract Manager can see the results through one simple dashboard. Each survey can be set up with questions and requirements relevant to the supplier/contract. “*
- VPE 18: **Not available.** Allow contractors to upload documents to assigned contracts.
- VPE 20: **Not available.** Send notifications to the buyer/analyst when contract items are ordered without using the contract number.
- VPE 23: **Not available.** Send notifications to the buyer/analyst when a contractor does not meet the performance criteria.
- VPE 25: **Requirement partially met** – Any type of document can be uploaded but only up to 2GB. **Concern, 2GB is very low.**
- Meet rest of requirements.

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 63

- PDA 6: **Not standard reports available for:**
 - b. Purchase Orders and Blanket Orders;
 - e. Catalog Use Analysis;
 - f. State Agencies/organization purchase dollars;
 - i. Responses/Proposals by Supplier;
 - o. Supplier dollars with ability to view PCard and non-PCard values separately; and
 - p. PCard Purchase Analysis.
- PDA 35 – 37: **Not available.**
- Pcard is not a functionality of the software.
- Meets rest of requirements

C. Technical Requirements: pages 65 - 80

1. Availability. Page 65

The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- One sentence: *"The Negometrix4 solution ensures peak availability 24/7 and this includes the business hours during the work week."*

2. Accessibility Requirements. Page 65

The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.

- *"Negometrix4 support users with disabilities in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. The Negometrix4 platform is compliant with the regulatory requirements of the Americans with Disabilities Act (ADA). The platform has the ability to create solicitations that are ADA compliant. This includes solicitations such as RFP, RFB and RFI as well as any addenda that are issued during the procurement process. Both the Solicitation and Contract Management modules are ADA compliant and both support document file types that are also compliant (such as Word Check Accessibility). When a contract or contract amendment is created it will be accessible to all persons."*

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 66

- *TECH 1: "Within the Solicitations Module, all actions (for both buyers and suppliers) are tracked in "Log Files," which includes the user, time, and action. Within the Contract management module, all changes made to a contract record are tracked in the Changes tab."*
- *TECH 2- 3, 8, 14 , 16 18-19, 24-25, 32-33, 37-38, Not Available*

4. Browsers Supported - p. 66 - 67

- *The general web browsers are supported (Microsoft Internet Explorer, M Edge, M Edge Chromium, G Chrome, Firefox, and Safari). Microsoft Internet Explorer compatibility mode is not supported. No concerns.*

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 67 - 68

- *TECH 2- 3, 8, 14 , 16 18-19. Not Available*
- *"User roles can be defined on an organization level and solicitation level to reflect the distinct processes and rights the Agency would like various users to have. The solicitation level user rights/roles were explained in the Solicitations Module section above. However, on an organization level, the rights/roles look a bit different. By default, there are two groups, Administrators and All Colleagues. To add a new user group, click 'New' within the User Rights tab within the Organization Settings. Give the group a name and select the desired rights (some of which may require a license)."*

6. User Authentication RTM: Tab 4, TECH-21 through TECH-25 and - p. 68

- *TECH 24-25. Not Available*
- *"Negometrix4 supports various user authentication tools. Depending on the Agency's needs Merrell can configure User Provisioning, 2-Factor Authentication (2FA), Single Sign On (SSO). SSO is based on SAML2.0, both Microsoft AD and Okta support this authentication method. Negometrix uses the email address of the employees to determine which user should be logged in."*

7. Federated Identity Management – Pages 49 – 50 and - p. 69

- *SCIM 2.0 protocol*

8. Data Conversion RTM: Tab 4, TECH-26 through TECH-34 and - p. 69

- *TECH 25, 32-33. Not Available*
- *Boilerplates (such as templates, award language can be transferred).*

- They do not refer to actual data or cleansing, etc.

-

9. **Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 69

- TECH 37-38, 43-51, 53-57, 59: **Not Available**. The eProcurement Solution architecture should provide well defined alternatives to correct performance and scalability bottlenecks.
- Interface: *"The solution exposes functionalities through REST APIs. Event based notification is supported through Web Hooks."*
- Intergrations: *"We facilitate in a comprehensive API framework and consults on the technical details (see Attachment, Negometrix Integrations)"*

10. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 70

- *"Yes, the system is compatible with Microsoft Word, Microsoft Excel and Microsoft PowerPoint."*

11. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 70

- *"Yes, the system supports Microsoft Windows and Apple iOS. IE, Chrome, Firefox, and Safari."*

12. **Mobile Applications** - p. 71

- Yes

13. **Data Ownership and Access** - p. 71

- *"The data in the Negometrix4 platform is owned by the Participating Agency. Merrell has the right to keep information logs for auditing purposes. Data is easily extractable from the system. The Agency will be able to download .zip files to access any (and all) information from within the system. Zip files will be exportable within one business day. The file formats inside the zip files are pdf, excel, txt etc. Exporting data comes at no cost."*

14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 71

- *"Negometrix4 does not purge any information, so agency is at liberty to purge any information they feel is necessary."*

15. **Disaster Recovery Plan** - p. 72 - 76

- *"Two times a year Merrell engages in penetration testing"*

16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 76

- TECH 68: Not Available.
- Merrell can create a test environment upon request. **Otherwise does not meet requirements.**

17. **Solution Technical Architecture** - p. 77 - 79

- *"Since Negometrix4 is cloud based SaaS (Software as a Service) web application it relies on the IaaS (Infrastructure as a Service) and PaaS (Platform as a Service) solutions provided by Microsoft Azure. Those solutions use Virtualization layer and high availability services in order to minimize the disruption due to hardware failure"*

18. **Solution Network Architecture** - p. 79 - 80

- *"The Negometrix4 web application and web services are only accessible through HTTPS; the encryption protocol is configurable. The connection to the database is encrypted, via TLS 1.2. The database files (.mdf and .ldf files) are stored in an encrypted form as well, just like the database backups."*

19. **System Development Methodology** - p. 80

- Page 80

20. **Service Level Agreement** - p. 80

- Merrell Inc. complies with all items in the provided in the Master SLA; however, there is a inconsistency because the Merrell's SLA, does not comply with the RFP SLA..

D. **Security Requirements:** p. pages 81 - 85

1. **Cloud Security Alliance (CSA) Compliance**

- CAIQ completed.

2. **Security and Privacy Controls** nothing to add.

3. **Security Certifications** nothing to add.

4. **Annual Security Plan** nothing to add.

5. **Secure Application and Network Environment**

6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.

- SEC 3: **Does not meet requirement**

- SEC 4: **Not Available.** *"Negometrix4 does not use cookies so this is not functionality the software offers."*
7. **Data Security** – nothing to add.
 8. **Personally Identifiable Information Protection** – nothing to add.
 9. **Security/Privacy Issue Occurrence** – nothing to add.
 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
 11. **Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements: 85 - 102

1. **Project Management** p. 85 - 88
 - PM – Emma S.
 - Implementation plan is **Extremely short.**
 - Roles are listed
2. **Project Implementation Methodology** p. 89- 93
 - Some PM, but not many phases. *Seem like they could use more like UAT.*
3. **Catalog Support Services** p. 93
 - N/A.
4. **Data Conversion Services** p. 94
 - States are responsible for data cleansing.
 - No real plan other than meeting to see what needs to be converted
 - **Prefer to use Excel spreadsheets to transfer data. – concerning.**
5. **Interface/Integration Development Services** p. 94 - 95
 - Vague. Again sit down and meet.
6. **Organizational Change Management (OCM Services)** p. 95 - 97
 - Not sure how much help State's will receive on OCM.
 - Not sure that it addresses true OCM services.
7. **Training Services** – p. 97 - 100
 - Yes – many options.
8. **Help Desk Services** - Tab 6 IMPL 1 – 5 and – p. 100 - 102
 - IMPL4: *"Yes, as mentioned above a live chat tool is available. The chats are responded to by live members of the internal Negometrix4 team."* **Concerned with this. If an individual is working after hours will they be able to chat if normal help desk is open 7-8 M-F?**
 -
9. **On-Site System Stabilization Support** – p. 102
 - Y

F. Managed Services Requirements: pages 102 - 109

1. **Solution Support** – p. 102 - 107 RTM: Tab 7 MNGD-1
 - *"Provided under MNGD-1: "Negometrix4 service desk is available Monday- Friday from 7 am to 8 pm EST. This time zone accommodates until 5 pm on the west coast. Calls are answered within 7 seconds during business hours. Chats are answered within 2 minutes and emails within a half hour."*
2. **Organizational Change Management (OCM Services)**
 - Does not meet requirements.
3. **Training Services**
 - Yes, meets requirements
4. **Catalog Support Services**
 - N/A
5. **Help Desk Services**
 - Yes, meets requirements
6. **Transition Out Assistance Services**
 - Hold State's processed data and files for limited period of time according to Contract then delete according to Contract. A backup can be provided to client upon request.
 - Will work with PE to assist with understanding their requirements and tailor a plan and scope to support the Transition Out activities. No detail is provided.

- Not much detail overall in this section.

G. Other Available Services: p page 106: RTM: Tab 7 MNGD-1

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

- RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- N/A

H. Video Demonstrations:

- Unable to watch. When click on link it says the item was deleted or to try asking the person who shared it with you.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (Merrell Inc)

CATEGORY #(s): 2

DATE: (10/3/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - All 3 Preliminary docs, cyber liability insurance – 2 mil
 - Negometrix4 -SaaS (4th generation? NX1, NX2, and NX3)
 - Our Single-page application (SPA)
 - ISEA3000/SOC2 and ISO 27001 certified,
2. Previous Projects
 - Volusia County - Solicitations module and contract mgt - < 2 month implementation
 - Palm Beach FL- Intake management , solicitations, and contract management modules < 2 month implementation
 - New York State office of General Services - Intake management, solicitations, and contract management modules, less than four months implementation
 -

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: **Merrell**
CATEGORY #(s): 2
DATE: **1/3/2022**
SME/EVALUATOR NAME: **Joe Zrioka**
DEPARTMENT/STATE: **Maine**

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **Merrell** suite of modules that cover all the strategic functions in procurement. Smart routing functionality built into all parts of the eProcurement solution. Guided every step of the way with recommended tasks in the solicitation process. Anytime a user is assigned a task such as answering a suppliers question that user will receive a notification and a link to where they can complete that task. Same for evaluations need identification intake management and contract management. Entire platform uses templating to streamline and standardize procurement efforts. During implementation consultants will work with the agency and current processes and regulations that will guide workflows incorporate them into templates so that compliancy can be achieved. Designed for collaboration with agency stakeholders and suppliers. Although off the shelf it is still customizable to each agency and personalization can be achieved. A shared supplier database enables agency to take advantage of the broader vendor pool. **Catalog functionality is not supported by Merrell.** Integration is accomplished through APIs for both solicitations in contract data. Workflow can be configured to suit agency needs. Within the intake module intake management module approvals can be customized to be triggered based on the input provided by the end user which can be dependent on multiple factors. In the solicitations module approvals can be assigned per solicitation on several different actions. Any approvals and workflows can be managed as tasks in the contract management module and automated or added manually. Merrell allows agencies to manage any documents related to all stages in the procurement workflow which includes but not limited to purchase requests solicitations contracts in supplier profiles. Each module is designed with robust reporting. Each module has their own dashboard. All data in the system can be managed in reported using standard and ad hoc reports. Completely configurable to suit each individual's needs. Transparency is an essential piece to the mercel solution. Within the solicitations module documents and information are only made public when a buyer purposefully OPS to publish it . Similarly the contract management module allows users to choose which contracts and accompanying documents are accessible to the public.

User Experience **no personalization** the Negometrix4 software is user-friendly, guiding the user through every action, reducing the number of steps and clicks along the way. the modules can be used as stand-alone solutions. software consists of smart (**wizard-like**) functions to take the user to the right place in the software and only present relevant information. suppliers are notified of any bid opportunities that match their profile (by location and **NIGP codes**). The suppliers are also notified of any addenda issued related to any solicitations they are participating in, in addition to **notifications 7 days, and 24 hours before** the submission deadline. Negometrix4 is fully supported on any mobile device. All items within the platform can be re-assigned to another user. role-based rights for different functionalities.

Bidder Best Practices and Roadmap system enhancements, our team uses the Agile Method. Releases appear to be monthly based on release notes , however, the most recent release notes are dated January 28th 2020. A more detailed roadmap would be made available if awarded by an Agency. Our current

Technical Requirements

Availability peak availability 24/7 and this includes the business hours during the work week.

Accessibility Requirements compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. external software provider to gauge the accessibility of our websites and platform. - initial assessment was a 90 percent compliance rating, we have continued to pursue improvements in this area. We are currently contracting with a consultant that specializes in ADA compliance of websites in order to make further enhancements. Our standard is Web Content Accessibility Guidelines (WCAG) 2.0, Level AA. In partnership with our industry consultant, we will complete and provide a Voluntary Product Assessment Template (VPAT) to the Agency.

Audit Trail and History all user accounts, including login and file uploads, are fully logged and auditable. Must be requested.

Browsers Supported All major web browsers are supported by the Negometrix4 software and can be used to access the system. Microsoft browser, Chrome and Firefox are all supported.

User Accounts and Administration User roles can be defined on an organization level and solicitation level to reflect the distinct processes and rights the Agency would like various users to have.

User Authentication Mercell can configure User Provisioning, 2-Factor Authentication (2FA), Single Sign On (SSO). SSO is based on SAML2.0, both Microsoft AD and Okta support this authentication method. Negometrix uses the email address of the employees to determine which user should be logged in.

Federated Identity Management we use the SCIM 2.0 protocol.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Data Conversion Based on what modules are implemented the Mercell consultants can transfer all existing boilerplates into the Negometrix4 system. Boilerplates can include solicitations templates, award language, supplier invitations, requisition forms and contracts. **Where is the conversion?**

Interface and Integration REST APIs. Negometrix4 has standardized the integration process with other ERP systems (e.g., Oracle & SAP).

Office Automation Integration compatible with the Microsoft office suite and Adobe.

Mobile Device Support Negometrix4 is fully supported on any mobile device. Any functionality that we develop for our web platform, we also take into consideration the size and constraints needed to navigate and use on a mobile device.

Mobile Applications Same as above

Data Ownership and Access owned by the Participating Agency. Mercell has the right to keep information logs for auditing purposes. Data is easily extractable from the system. The Agency will be able to download zip files to access any (and all) information from within the system. Zip files will be exportable within one business day. The file formats inside the zip files are pdf, excel, txt etc. Exporting data comes at no cost.

Date Retention, Archive and Purge Considerations data is stored through Microsoft Azure. Database backup schedule:

\$ Full database backup – weekly

\$ Differential database backup – Daily

\$ Transaction log backup – Hourly

\$ Retention period – 14 days

The database files (.mdf and .ldf files) are stored in an encrypted form, just like the database backups. For the encrypted storage of the data we use Transparent Data Encryption (TDE).

The application stores its data in SQL Server databases. The backup strategy for the production database of Mercell is:

\$ Weekly Full Database backups – every Saturday at 2:00

\$ Daily Differential Database backups – every day at 20:00

\$ Transaction log backups – hourly

\$ The retention period is 3 months.

once Mercell transfers the data and the authority confirms receipt, Mercell will certify purging of data. If the Agency were to change vendors, see below for the data transition process:

- Upon termination of the Agreement, Mercell will close access to the Web Service for regular use on the end date.

- With a maximum of 2 End Users, the Client will have access to the Web Service for 1 month after termination for the purpose of exporting the desired Data.

- The Client exports Data via the standard functions.

- The Client's Data will be kept for 6 months after termination. After 6 months, Mercell will remove the Data and issue a written confirmation to the Client.

- If and insofar as agreed in writing, the Client shall have the option of an extended data retention on termination of the Agreement for a period of a maximum of 6 years after termination on payment of an amount equal to 8% of the most recent User Fee. If the Client wishes to make use of this extended data retention, this must be formalized within 6 months after termination.

Disaster Recovery Plan Data breach procedures explained here and they were extensive. Unsure of a DRP unless it was somewhere else in proposal

Solution Environments Development, test, acceptance, live (only environment open to clients).

Solution Technical Architecture Negometrix4 is cloud based SaaS (Software as a Service) web application it relies on the IaaS (Infrastructure as a Service) and PaaS (Platform as a Service) solutions provided by

Microsoft Azure. All data **pf** the application is stored in SQL Server 2017 which complies to ANSU 1989 SQL. There is full support of ACID transactions and point in time restore.

Solution Network Architecture The Negometrix4web application and web services are only accessible through HTTPS; the encryption protocol is configurable. The connection to the database is encrypted, via TLS 1.2. The database files (.mdf and .ldf files) are stored in an encrypted form as well, just like the database backups. For the encrypted storage of the data, we use Transparent Data Encryption (TDE) System Development Methodology **Performance and SLA description found here.**

Service Level Agreement **SLA attached**

Security Requirements

Cloud Security Alliance (CSA) Compliance **CAIQ completed.**

Security and Privacy Controls **Merrell is ISO/IEC 27001:2013 Information security management systems certified. ISO 27001 is consistent with NIST 800-53. Negometrix is ISAE 3000 Type II certified.**

Security Certifications **Attachment C: Merrell Security Attachment(Part 1)**

Annual Security Plan **No annual security plan mentioned but see Attachment C-Merrell Security Attachment**

Secure Application and Network Environment **has implemented proactive security procedures, such as perimeter defense and network intrusion prevention systems to secure its perimeter. Dedicated DMZ, network segmentation, dedicated URLs, and Site-to-Site VPN (note: a paid service) are some of the other measures implemented to protect customer instances from cyber-attacks.**

Secure Application and Network Access **Attachment C-Merrell Security Attachment(Part 2 & 3)**

Data Security **Attachment C-Merrell Security Attachment(Part 2 & 3)**

Personally Identifiable Information Protection **Attachment C-Merrell Security Attachment(Part 2 & 3)**

Security/Privacy Issue Occurrence **Attachment C-Merrell Security Attachment(Part 2)**

PII Data Actual/Attempted Access or Disclosure **Merrell will perform all necessary measures in the case of security privacy issues including:**

- Notify the Participating Entity within two (2) hours of the Bidder becoming aware that the issue was of the unauthorized Disclosure or Intrusion;

- Investigate and determine if an Intrusion and/or Disclosure has occurred; Fully cooperate with the Participating Entity in estimating the effect of the Disclosure and/or Intrusion's effect on the Participating Entity and fully cooperate to mitigate the consequences of the Disclosure or Intrusion;

- Make a report to the Participating Entity including details of the Disclosure and/or Intrusion and specify the corrective action to be taken;

- Take corrective action to prevent further Disclosure and/or Intrusion; and

- In the case of a Disclosure, cooperate fully with the Participating Entity to notify the effected persons as to the fact of and the circumstances of the Disclosure of the PII. Additionally, Bidder must cooperate fully with all government regulatory agencies and/or law enforcement agencies having jurisdiction to investigate a Disclosure and/or any known or suspected criminal activity.

Security Breach Reporting **Attachment C-Merrell Security Attachment(Part 2 & 3)**

Implementation Services Requirements

Project Management **month and a half project implementation. Identified PM, Emma.**

Project Implementation Methodology **Kickoff meeting, design and validation, training, go live, close down.**

Catalog Support Services **Merrell does currently not facilitate in catalogs functionality. Creating a pool of pre-qualified suppliers that can submit their prices in response to a mini-bid is what would come closest to catalogs and that is we refer to as the Merrell Dynamic Purchasing System (or Marketplaces).**

Data Conversion Services **receive the contract dates, documents, reminders, tasks and participants through an Excel export from the current contract management. Participating Entities will be responsible for data cleansing with their prior services.**

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Interface/Integration Development Services **customers with the best integration end-result, initially started to use Negometrix without an integration.**

Organizational Change Management (OCM Services Define the preliminary scope, agree upon final acceptance, document, embrace innovation pulling from best practices and industry standards, stakeholder analysis and assessment, readiness assessments, impact assessment, communications plan development, coaching plan development, and resistance assessment and management plan development.

Training Services training consists of several parts, namely:

Nx-Training 1: takes one hour; involves a general overview of the platform, preparing and publishing the Solicitation/Bid, and interacting with vendors through the Q&A module

Nx-Training 2: takes one hour; teaches staff how to evaluate offers, awarding via Mercell and communicating award documentation

On site instructor lead , continued learning office hours, thought leadership.

Help Desk Services Two levels of support:

Level 1 functional support managed through our Service Desk and

Level 2 technical support.

On-Site System Stabilization Support Following the “go live” of the full solution implementation, account maintenance will be handed off to a designated account manager. The account manager will be able to address all minimum requirements listed above (system setup/configuration changes, issue assessment/resolution, system performance and stability monitoring/adjustment, system use assessment, mentoring of Agency operations staff, coordination of Contractor **off-site** tasks and support resources, coordinate documentation)and will be able to provide **on-site** support if needed.

Managed Services Requirements

Solution Support Mercell guarantees the software is always up to date. Several times (usually 8) per year, an update with new or improved functionalities is pushed live to the Mercell e-Procurement Platform. All environments will be monitored, have patches applied, and system logs administered.

Organizational Change Management (OCM Services All platforms under Mercell US (eProcurement, Contract Management, Supplier Management) are supported

Training Services All platforms under Mercell US (eProcurement, Contract Management, Supplier Management) are supported

Help Desk Services All platforms under Mercell US (eProcurement, Contract Management, Supplier Management) are supported

Transition Out Assistance Services Throughout the participating entity’s transition out, the account’s dedicated account manager will handle all items related the process, including general assistance and information gathering.

Other Available Resources None provided.

Individual SME Comments:

General Principal and Requirements

- Mercell eProcurement platform (Bid/Contract Management, Supplier Portal)
- Single point of entry
- Open marketplace environment
- Real time and batch integration with core financial systems
- Workflow
- Reporting
- System is completely configurable
- Wizard driven capabilities
- Mobile device functionality, no mention of app currently or in development
- Role based functions
- Three-year roadmap for users, shows year one and beyond year one
- Majority of implementation needs in the COTs platform
- Lists several additional modules at additional cost, unsure if Mercell or third-party

Functional Requirements

- Negometrix 4 platform AWS based
- Additional modules identified where appears shopping platform was the workflow presented
- Supplier Portal
- Buyer Portal (task management or shopping?)
- Need Identification (Intake Management Module?)
 - Purchase Request Form
- Configurable Workflows
- Manages Purchase Orders
- No request through Pay
- No catalogs
- Solicitation Module
- Digital Pricing Sheets
- Templates
- Contract Management
- Automatic Reminders
- Version Control
- Federated Identity Management

Individual SME Comments:

Overall

General Principal and Requirements

Key Solution Functionality Elements

1-15	Single point of entry – a single initiation points for all procurement activity	
	Smart routing – a rules engine that digitally guides users down the appropriate procurement pathway.	
	Compliance – a technology solution that has business rules and controls “baked in” (See APSPM	
	Portal – a solution that integrates access, collaboration, community, personalization, resources, and information for both buying and supplier users	
	Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts, and external internet retail marketplaces. Catalog functionality is not supported by Mercell	
	Integration – batch and real time with existing financial management and other core systems	
	Workflow – a configurable, rule/role-based approval automation.	
	Document management – automated solution to create, transact and store documents	
	Reporting, dashboards, and data visualization – a solution to provide detailed reports and interactive visual analytics	
	Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually	
	Transparency – provide public and internal visibility into purchasing activity and outcomes	

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercel

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

User Experience

6-9	Capability that allows user personalization of their initial screen based on their needs or use of the Solution. Currently this is not possible.	
	Wizard driven capabilities	
	Portal that informs users and supports user work management	
	Functionality optimized for mobile access and use. Yes, Negometrix4 is fully supported on any mobile device	
	Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts	
	Role-based functionality for drafting, review and approval, evaluation, and other processes.	

Bidder Best Practices and Roadmap

9-10	A more detailed roadmap would be made available if awarded by an Agency. Our current practice is to not share details of our roadmap with the public, as sometimes things change or are rescheduled. Any agency can be assured our roadmap will lead to additional and improved functionalities fitting the need of the procurement department. In fact, our clients have significant influence on this roadmap	
------	---	--

Innovations and Value-Added Features/Services

10-11	Response referred to Aftercare and all of the internal staff having to work the Helpdesk.	

Customizations/Extensions

11	n the event that an Agency need cannot be met through the configuration process, an integration/customization is possible with support from our development team.	
----	---	--

DEPARTMENT/STATE: Purchasing North Dakota State University

Alternative Funding Models

12-15	In addition to an enterprise fee structure (outlined in Exhibit 4), Mercell also offers a per-license cost structure, which is typically used by smaller organizations. Any agency that does not identify itself with the scenarios for Small, Medium & Large States from Exhibit 4 can use pricing as indicated with Alternative Funding Models below. Please note that for these smaller/non-state agencies, implementation and training costs are waived. Intake Management Module/Need Identification (Annual Cost) The Intake Management Module allows an agency to receive all decentralized purchasing requisitions in a structured manner. All requests will be registered and presented for evaluation to the purchasing team, using an integrated approval workflow. In order to have the form created in line with the existing process of the agency, a Mercell consultant will analyze the existing process together with an expert from the purchasing team to break down the exact process flow. This process flow will be configured to a responsive form for your organization. Mercell Intake Module – Annual Fee, unlimited usage The annual maintenance fee for this module is set at \$1,500. Lead-buyer License (Annual cost) Mercell differentiates between the actual purchasing professionals and all other users. Purchasing professionals (‘Lead-buyers’), need a named user license. All other users (e.g., initiators, evaluators, auditors, approval managers, etc.) use Negometrix free of charge	
-------	--	--

Contract Transition and Flexibility

15	Mercell is flexible in the contracting process and will work with every Agency to tailor the transition to their unique needs and take the current contract situation into consideration.	
----	---	--

Functional Requirements

General Functionality

15-16	The Negometrix4 platform is an entirely cloud-based Software as a Service (SaaS) solution that is hosted on Microsoft Azure in the United States.

THIS SUPPLIER IS OFFERING A RESPONSE TO NEED IDENTIFICATION, SOLICITATION MODULE, CONTRACT MANAGEMENT AND SUPPLIER RELATIONSHIP MODULE – SEE NARRATIVE ON PAGE 16

Individual SME Comments: Did not provide information on the LEVEL OF COMPLEXITY on their RTM response?

-Video link has been deleted so could not watch any video
- This response shows lots of requirements that are NOT supported and that is the major concern for me on this response. I am sure they could offer services to some entities, but I think those entities need to know up front all of the requirements that are not supported by this supplier.

General Principal and Requirements PDF Page 5

Key Solution Functionality Elements – PDF Page 5

- Single point of entry via a single log in
- Has smart routing which is a rules engine to guide users
- Contains business rules
- Portals for both the buyer and the supplier
- They do NOT support catalog functionality
- Integrations with Solicitations and Contract modules and can configure workflows too.
- Offers document management and reporting capabilities with each module having their own dashboards
- Full configurable system and allows for transparency both public and internal.

User Experience – PDF Page 6

- Does NOT allow for personalization of the user initial screen
- Negometrix4 is the solution name with URL in notification emails to be directed to item needing attention.
- Wizard- like functions for each module.
- Both the supplier and user have portals. The user portal contains a “My Tasks” dashboard of work they have been assigned.
- Fully supported on mobile devices. Supplied screen shot of supplier logged in to event on cell phone. PDF Page 8
- Solution offers workload management and role-based rights for each of the modules.

Bidder Best Practices and Roadmap – PDF Page 9

- Currently increasing software development staff from 3 to 5 teams.
- Enhancements using the Agile Method mentioned on PDF Page 9
- Supplied link to updates occurring in the system. Could contain more information

- Provided General Three-Year Roadmap and Topics beyond a year on PDF Pages 9-10
- **Do not share details of roadmap with public** – PDF Page 10

Innovations and Value-Added Features/Services – PDF Page 10

- Provided information on what “aftercare” means to them on PDF Page 10
- STRENGTH – Dedicated Account Manager – PDF Page 10
- Offers Continued Learning for customers to attend monthly.

Customizations/Extensions – PDF Page 11

- Configurations are done during the implementation phase.
- Offers an integration/customization if the exact need and value can be defined.
- **Suggest starting to use the solution without integration.** Testing workflows and experience in the system leads to define better details of the integration.
- Supplied questions that you should be able to answer to gauge if you are ready for an integration on PDF Page 12

Alternative Funding Models – PDF Page 12

- Solution has an enterprise fee structure (Exhibit 4), but Mercell also offers a per-license cost structure for smaller organizations PDF Page 12
- Lead- buyer license is an option. Abilities and fees are listed on PDF Pages 12 – 13
- A discount on annual licensing costs if combining modules.
- Provided key advantages of Solicitation and Contract modules
- Provided contract management pricing on PDF Page 15

Contract Transition and Flexibility – PDF Page 15

- Mercell is flexible in the contracting process.

Functional Requirements – PDF Page 15

General Functionality – PDF Page 15

- Negometrix4 is cloud based.
- Intake Management Module is the Need Identification Module
- Module will be configured with data fields and workflows
- Approved requests display on the purchasing dashboard. The solicitation process can then be initiated.
- Upon award, the process moves to the Contract and Supplier Relationship Management module for contract creation.
- CONCERN- The maximum file upload for attachments is 2GB
- CONCERN - EPROC-GEN-4 – Tab 2 Line 8 - Does not offer Purchase Order or Request through Pay options
- STRENGTH - EPROC-GEN-7 – Tab 2 line 11 - The need request can skip the solicitation process and go right to contract.
- CONCERN - EPROC-GEN-9 – Tab 2 line 13 – Supplier states commodity code function is not available in the purchase request
- CONCERN - EPROC-GEN-12 – Tab 2 line 16 – Search by file name not supported

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): Category 2 Stage 2 Individual Workstreams

DATE: 12/26/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-GEN-14 – Tab 2 line 18 - Spell check is not currently supported but is on the roadmap for development.
- VERIFICATION - EPROC-GEN-17 – Tab 2 line 21 – Can you toggle specific features in ALL modules?
- CONCERN - EPROC-GEN-18 – Tab 2 line 22 – Header level fields are not supported.
- CONCERN - EPROC-GEN-19 – Tab 2 line 23 – Bill To and Ship To addresses storage is not supported.
- VERIFICATION - EPROC-GEN-20 – Tab 2 line 24 – Are commodity codes supported in the contracts module too?
- CONCERN - EPROC-GEN-21 – Tab 2 line 20 – Does not support means to upgrade the commodity code set.
- CONCERN - EPROC-GEN-24 – Tab 2 line 28 - Does not support the ability to search for transaction types
- CONCERN - EPROC-GEN-25 – Tab 2 line 29 – This response talks about single user email messages but the requirement is talking about system emails sent from system?
- CONCERN - EPROC-GEN-26 – Tab 2 line 30 – Does not support ability to track and report on administrative fees
- CONCERN - EPROC-GEN-27 – Tab 2 line 31 – Does not support ability to create administrative fees invoices.
- CONCERN - EPROC-GEN-28 – Tab 2 line 32 - Does not support ability to track the payment of supplier administrative fees.
- CONCERN - EPROC-GEN-34 – Tab 2 line 38 - Does not support future dating
- CONCERN - EPROC-GEN-35 – Tab 2 line 39 – Does not support a system wide library
- CONCERN - EPROC-GEN-36 – Tab 2 line 40 – Does not support electronic signature but is on the roadmap for solicitations and contracts

Supplier Portal – PDF Page 16

- Single point of entry for suppliers that allows administrative abilities for all procurement functions.
- Supplier Registration Form – Figure 2 on PDF Page 17
- Can add colleagues to supplier registration who can create their own username and password.
- Provided supplier tutorial video – Could not open link
- Supplier must have an account to participate in a solicitation.
- Free of charge services are listed on PDF Pages 17 – 18
- Solution offers automated supplier notifications. PDF Page 18
- Figures 3 and 4 show examples of a supplier submitting a response. PDF Page 19
- Wizard-driven sections turn “green” when section is complete. Figure 5 PDF Page 20
- CONCERN - EPROC-SPR-4 – Tab 3 Line 8 – Does not support purchase order functionality
- CONCERN - EPROC-SPR-13 – Tab 3 Line 17 – Does not support submitting invoice functionality
- CONCERN - EPROC-SPR-16 – Tab 3 Line 20 – Does not offer catalog functionality
- CONCERN - EPROC-SPR-19 – Tab 3 Line 23 – Does not support administrative fee payments
- CONCERN - EPROC-SPR-20 – Tab 3 Line 24 – Does not support a work management view of summary metrics for suppliers
- CONCERN - EPROC-SPR-21 – Tab 3 Line 25 – Does not support order fulfillment status updates
- CONCERN - EPROC-SPR-22 – Tab 3 Line 26 – Does not support electronic ASNs

Supplier Enablement/Management – PDF Page 20

- Single point of entry Figure 6 on PDF Page 21

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: **Mercell**

CATEGORY #(s): **Category 2 Stage 2 Individual Workstreams**

DATE: 12/26/2021

SME/EVALUATOR NAME: **Tom Hastings**

DEPARTMENT/STATE: **State of Montana**

- Supplier submits registration and the record goes through approval process. Figures 7 and 8 on PDF Page 22
- Can integrate with the Solicitations module (contains supplier registration) and the contracts module.
- CONCERN - EPROC-VDR-5 – Tab 3 Line 34 – Does not support all business locations with associated addresses.
- CONCERN - EPROC-VDR-10 – Tab 3 Line 39 – Does not support ACH Payment information.
- CONCERN - EPROC-VDR-15 – Tab 3 Line 44 - Only matches duplicate registration on FEIN?
- CONCERN - EPROC-VDR-19 thru EPROC-VDR-27 – Tab 3 Line 48 thru line 56 – Does not support automated verification capabilities on these **9 requirements! Supplier verification/validation is not available**
- CONCERN - EPROC-VDR-32 - Tab 3 Line 61 – Does not support routing suppliers registration through workflow to other state organizations for review.
- CONCERN - EPROC-VDR-36 - Tab 3 Line 65 - Does not support sending out yearly reminder to email on supplier account to update their registration.
- CONCERN - EPROC-VDR-37 - Tab 3 Line 66 – Does not support auditable history that documents all changes made to a supplier account.
- CONCERN - EPROC-VDR-40 - Tab 3 Line 69 - Does not support functionality for a supplier to be notified based on a re-solicited contract.

Buyer Portal – PDF Page 22 - 23

- Single point of entry and are directed to their Task Dashboard. Figure 9 PDF Page 23
- Users can then navigate to the other modules they are a part of.
- CONCERN - EPROC-BPRT-6 - Tab 3 Line 80 – Does not support summary metrics of bids and contracts.

Need Identification – PDF Page 23

- Build a customized digital form called the Purchase Request Form
- Requests appear on a dashboard for the team's view
- Information on form is pulled into a solicitation. Figure 10 PDF Page 24 shows example of form.
- Provided benefits for the Intake Management Module on PDF Page 24
- Can build customize approval workflow. PDF Page 25
- Can approve or decline the purchase request. PDF Page 25 Figure 12
- Figure 13 on PDF Page 26 shows the purchase request dashboard.
- STRENGTH – Can skip the solicitation process and go right to contract.
- CONCERN - EPROC-NEED-4 – Tab 3 Line 95 – Supplier did not submit a approach comment to this requirement.
- CONCERN - EPROC-NEED-5 – Tab 3 Line 96 - Does not support the routing business rule associated with this requirement.

Request through Pay - N/A

Catalog Capability – N/A

Sourcing/Bid Management – PDF Page 26

- “we define our Solicitations Module as “Advanced Digital Sourcing”, to differentiate between the basic eProcurement vendors and those who provide the full scope of procurement in a digital environment”
- “This includes preparation, publication, broadcast, receiving responses, opening offers, offer evaluation, award, **contract**, vendor performance monitoring, and reporting/exporting of solicitation and contract data.

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- The Negometrix 4 platform is built to cover all the functions mentioned above.
- Can Post and Receive Electronic Bids/Proposals
- Ability to Upload Paper responses by the entity user
- Provides use of templates listed on PDF Page 28
- Mobile capability with integrated website solution for posting public information. Figure 14 on PDF Page 29. Can post unlimited number of documents and solicitations
- Document Upload example figure 15 on PDF Page 30
- Can choose from solicitation templates. Figure 16 on PDF Page 31
- Scheduling examples figures 17 and 18 on PDF Page 32
- Offers approvals on solicitations. Figure 19 on PDF Page 33
- Add team members ("evaluators or collaborators") to your event. Figures 20 and 21 on PDF Page 34. Figure 22 on PDF Page 35 shows you can invite a colleague through email.
- Can import pricing sheets. Figure 23 and 24 PDF Pages 35 and 36. Can apply formulas as well
- **CONCERN – Does the system only support NIGP codes?**
- Vendors can navigate to bid opportunities site. Figure 27 on PDF Page 38
- Can invite vendors to register by setting up invitation templates. Figures 28 and 29 on PDF Page 39. These will show on the invitation dashboard. Figure 30
- Q&A functionality. Figure 31 on PDF Page 40. Public announcement page – Figure 32 on PDF Page 41
- Planholders list functionality of PDF Page 41
- Can see or hide the name of the firm on submitted responses in the Locked Digital Vault. Figure 34 on PDF Page 42. Can be opened with password and shows timestamps
- Automatic Creation of tabulations. Figure 37 and export options. Figure 38 on PDF Page 43
- Can assign weights to questions and then assign those questions to your evaluators. Figure 39 on PDF Page 44
- Can view evaluation of assigned items and see the committee progress monitor. PDF Page 45
- STRENGTH – Offers consensus scoring. Figure 42 on PDF Page 46 and Automated evaluation comparison table. PDF Page 47
- System can show bid tab including quality and disqualified proposers. And can export bid tabulations. Figures 44 and 45 on PDF Page 48
- Offers award communication management through the Document Authoring Tool used for solicitation summaries. Figure 45 on PDF Page 49
- Messaging and Announcements tab allows communication internally and externally. Figure 50a-b on PDF Page 52
- Offers Proxy offer to enter paper bids into the system
- Can create custom user roles. Figure 53 on PDF Page 54
- CONCERN - EPROC-SRC-35 – Tab 3 line 362 – Does not support the check in/out capability.
- CONCERN - EPROC-SRC-45 – Tab 3 line 372 – Does not support the ability to combine multiple Purchase Requests into a single solicitation.
- CONCERN - EPROC-SRC-46 – Tab 3 line 373 – Approvals exist but not with configurable rules with this module.
- CONCERN - EPROC-SRC-47 – Tab 3 line 374 – Workflow rules not offered in the solicitation module but is offered in the Intake Management Solution.
- CONCERN - EPROC-SRC-60 – Tab 3 line 387 - Does not support including prior or active suppliers on supplier list for solicitation
- CONCERN - EPROC-SRC-62 – Tab 3 line 389 – Does not support that authorized users can add or remove registered suppliers.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): Category 2 Stage 2 Individual Workstreams

DATE: 12/26/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SRC-75 – Tab 3 line 402 - Response does not address if the supplier can opt of a solicitation they are participating in?
- CONCERN - EPROC-SRC-76 – Tab 3 line 403 - System does not automatically publish information to external state site.
- CONCERN - EPROC-SRC-78 – Tab 3 line 405 – Does not support posting an alert with a specific solicitation.
- CONCERN - EPROC-SRC-80 – Tab 3 line 407 – Does not support ability to gather basic supplier information that are attempting to download documents from state website.
- CONCERN - EPROC-SRC-81 – Tab 3 line 408 - Does processing an amendment create the record as a new version?
- CONCERN - EPROC-SRC-102 – Tab 3 line 429 - Response states entering their password upon submittal serves as electronic signature?
- CONCERN - EPROC-SRC-104 – Tab 3 line 431 – Does not support supplier contacts other than individual submitting.
- CONCERN - EPROC-SRC-106 – Tab 3 line 433 – Does not support the ability to submit a redacted proposal
- CONCERN - EPROC-SRC-107 – Tab 3 line 434 – Does not support requiring suppliers to submit proposals outside of the system.
- CONCERN - EPROC-SRC-117 – Tab 3 line 444 – Does not support the hiding of names of the suppliers when evaluating.
- CONCERN - EPROC-SRC-121 – Tab 3 line 448 – Does not support the ability to attach documents to the evaluation.
- CONCERN - EPROC-SRC-132 – Tab 3 line 459 - This response does not address of the award being routed through workflow?
- CONCERN - EPROC-SRC-136 – Tab 3 line 463 – Does not support generation of purchase orders
- STRENGTH – Awards can be cancelled and changed to a different supplier.

Contract Management – PDF Page 54 thru Page 62

- “ Contract Authoring and Contract Management/Administration are two different processes and are usually executed by different departments and professionals within your organization”
- Information need to draft a contract is pulled from solicitations module
- **CONCERN** -The drafting on the legal language and clauses is done outside of the platform
- **CONCERN** – “ Once the contract is drafted and signed, purchasing again will be responsible for the monitoring and administration of the contract: expiration dates, validity of associated documents, supplier performance management, etc. Furthermore, all of these processes are digitized and part of our comprehensive solution.” PDF Page 55 First Paragraph
- Has contract dashboard as landing page which is configurable. Figure 54 on PDF Page 56
- Contracts are assigned to workgroups and user roles determine what tasks can be performed. Figure 55 on PDF Page 57
- Contract has tasks assigned to stakeholders
- Contract has changes tab where changes and amendments are tracked.
- Can create customized contract templates used to create all contracts. Figure 56 on PDF Page 58
- Can upload contract documents into customizable sections. Figure 57 PDF Page 58
- Documents from the Sourcing module are pushed to the Contract Management Module.

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Can link contract records. Figure 58 on PDF Page 59
- Can choose what documents to make public and post them on the Public Organization Profile as shown in Figures 59 and 60 on PDF Page 60
- Can set up automatic reminders and create customizable tasks as shown on Figures 61 and 62 on PDF Page 61
- Contract status should be included in a contract status field. PDF Page 62.
- Offers version control which allows to view changes on a contract. Figure 63 on PDF Page 62
- CONCERN - EPROC-CNT-1 – Tab 3 Line 480 – The need identification data does NOT carry over to the contract
- CONCERN - EPROC-CNT-2 thru EPROC-CNT-11 – Tab 3 Lines 482 thru 491 – Contract authoring requirement is not supported.
- CONCERN - EPROC-CNT-12 – Tab 3 Line 492 - Does not support electronic signature but is on the roadmap
- CONCERN - EPROC-CNT-13 – Tab 3 Line 493 – Does not support electronic signatures for supplier or state signers.
- CONCERN - EPROC-CNT-14 – Tab 3 Line 494 – Does not support an electronic signature integration but is on the roadmap.
- CONCERN - EPROC-CNT-18 – Tab 3 Line 498 – Does not support the creation of a contract by one organization on behalf of another.
- CONCERN - EPROC-CNT-23 – Tab 3 Line 503 – Does not support contract authoring
- CONCERN - EPROC-CNT-24 – Tab 3 Line 504 – Does not support workflow approval routing of contract.
- CONCERN - EPROC-CNT-26 – Tab 3 Line 506 – Does not support capability to define rules that will allow workflow approval.
- CONCERN - EPROC-CNT-27 – Tab 3 Line 507 – Does not support workflow approval functionality
- CONCERN - EPROC-CNT-28 – Tab 3 Line 508 – Does not support ability to establish contracts for a pool of suppliers
- CONCERN - EPROC-CNT-30 – Tab 3 Line 510 – Does not support ability to enter payment retainage.
- CONCERN - EPROC-CNT-31 – Tab 3 Line 511 - Does not support ability to enter payment types
- CONCERN - EPROC-CNT-34 – Tab 3 Line 514 – Does not support backdated contract dates.
- CONCERN - EPROC-CNT-35 – Tab 3 Line 515 – Does not support ability to designate contract use. e.g. Mandatory.
- CONCERN - EPROC-CNT-36 – Tab 3 Line 516 – Does not support ability to establish specific default coding values.
- CONCERN - EPROC-CNT-39 – Tab 3 Line 519 – Does not support ability to provide a means for Suppliers to submit subcontractors payments
- CONCERN - EPROC-CNT-40 – Tab 3 Line 520 – Does not support ability to have Cooperative members to submit payment data.
- CONCERN - EPROC-CNT-49 – Tab 3 Line 529 – Does not support ability to allow changes be made to a contract that will not result in an amendment.
- CONCERN - EPROC-CNT-51 thru EPROC-CNT-62 – Tab 3 Lines 531 thru 542 – Search functionality listed in these requirements is not currently available but is on the roadmap.
- CONCERN - EPROC-CNT-63 – Tab 3 Line 543 – Does not support contract list keyword search functionality.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): Category 2 Stage 2 Individual Workstreams

DATE: 12/26/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-CNT-64 – Tab 3 Line 544 – Does not support contract list search results functionality
- CONCERN - EPROC-CNT-66 – Tab 3 Line 546 – Does not support ability to post alerts associated with a specific contract
- CONCERN - EPROC-CNT-68 – Tab 3 Line 548 – Does not support the ability to flag a contract as SWAM.
- CONCERN - EPROC-CNT-69 – Tab 3 Line 549 – Does not support the ability to track orders placed against a contract.
- CONCERN - EPROC-CNT-70 – Tab 3 Line 550 – Does not support the ability to load/submit contract sales reports.
- CONCERN - EPROC-CNT-71 – Tab 3 Line 551 – Does not support the ability to identify administrative fees on a contract.
- CONCERN - EPROC-CNT-72 – Tab 3 Line 552 – Does not support the ability to track and monitor fees on a contract
- CONCERN - EPROC-CNT-85 – Tab 3 Line 565 – Does not support the ability to initiate an order from a contract
- CONCERN - EPROC-CNT-87 – Tab 3 Line 567 – Does not support the catalog/punchout functionality
- CONCERN - EPROC-CNT-88 – Tab 3 Line 568 – Does not support pricing on contracts.

Vendor Performance – Page 62

- Offers user the ability to track supplier performance versus their SLA
- Can set up surveys to send out to users who can complete them without logging in. The contract manager can see the results on a dashboard. PDF Page 63
- CONCERN - EPROC-VPE-18 – Tab 3 Line 588 – Does not allow contractors to upload documents to assigned contracts.
- CONCERN - EPROC-VPE-19– Tab 3 Line 589 – Does not support providing a summary on the spend on a contract.
- CONCERN - EPROC-VPE-20 – Tab 3 Line 590 - Does not support sending notification to buyer when items are ordered without the contract number.
- CONCERN - EPROC-VPE-23 – Tab 3 Line 593 - Does not support notifications sent to buyer when contract does not meet performance criteria

Purchasing/Data Analytics – Page 63

- CONCERN – The reports only include data on sourcing and contracting.
- The report manager tool allows a user to build their own reports and use templates to help create reports.
- Figure 65 on Page 64 shows how to build a report and Figure 66 on Page 65 how an example of a contract expiring report.
- Provided a list of example reports on page 65 but the system is not limited to these reports.
- CONCERN - EPROC-PDA-7 – Tab 3 Line 604 – Does not support reports for canned purchase orders.
- CONCERN - EPROC-PDA-10 – Tab 3 Line 607 – Does not support catalog use analysis
- CONCERN - EPROC-PDA-11 – Tab 3 Line 608 – Does not support reports on purchase dollars
- CONCERN - EPROC-PDA-14 – Tab 3 Line 611 – Does not support reporting of responses/proposals by Supplier
- CONCERN - EPROC-PDA-20 – Tab 3 Line 617 – Does not support PCard functionality

- Account manager will be able to address if on-site support is needed

Managed Services Requirements – Page 102

Solution Support – Page 102

- Meets requirements

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Mercell

CATEGORY #(s): Category 2 Stage 2 Individual Workstreams

DATE: 12/26/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Provided several links for more information

Organizational Change Management (OCM Services) – Page 107

- " All platforms under Mercell US (eProcurement, Contract Management, Supplier Management) are supported"

Training Services - Page 107

- Mentions Catalogue Support Services?

Help Desk Services - Page 107

- " All platforms under Mercell US (eProcurement, Contract Management, Supplier Management) are supported for our Help Desk services."

Transition Out Assistance Services - Page 108

- Meets requirements

Video Demonstrations – I attempted to watch the video via the link supplied and the error below is what appear when copying and pasting this link into a browser.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Proactis

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 1996.
 - Development of Cloud-based procurement solutions
 - “WebProcure” name of solution. Business is solely procurement. COTS, SaaS solution.
2. Previous Projects
 - 4 listed. All States. All fit nicely into Category 2.
 - State of Missouri. Implement the full suite of WebProcure
 - State of New York. Created eMarketplace to connect with their ERP (Peoplesoft)
 - State of Rhode Island. Implemented WebProcure for procurement and integrated with their ERP financial system.
 - State of Connecticut. Chose WebProcure to replace their inhouse procurement application.
3. Subcontractors
 - Civicinitiatives. Listed 7 of their previous projects.
4. Organizational Chart
 - Yes, the org. chart is provided, but **the job descriptions are not.**
5. Litigation
 - The vendor states they do not have any.
6. Financial Viability
 - Provided highlights and 3 years of annual reports.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Proactis_Perfect Commerce

CATEGORY #(s): 2

DATE: 1/12/2022

EVALUATOR NAME: Angie Scherbenske

EVALUATOR DEPARTMENT/STATE: ND State Procurement Office

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Comments:

Overall/General

- Solution is called WebProcure.
- COTS solution
- SaaS solution.
- Designed, built, and developed by public sector professionals specifically for state and local government users.
- Real time integration when using their enterprise-integration platform ProcureLink.
- Great graph on page 5 showing the layout of all the modules and who (buyer or supplier) has what.
- Requirements in the Matrix Proactis asked for more information or clarification. Note: Two question and answer periods were held.
- Many spelling and grammar errors.

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 5 - 7

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls “baked in” (See APSPM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources, and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a “catalog of catalogs” like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts, and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.

- In this section Proactis introduces their WebProcure system and all their modules with a brief description of what each does. They do not directly answer the Key Solution Functionality Elements above. The modules are:
 - Vendor Management
 - Solicitation Management
 - Contract Management
 - Request Management
 - Order Management
 - Invoice Management

- Analytics & Reporting
 - Supplier Portal
 - Public Components
- Single point of entry: Does not mention directly, although alludes to in its modules. Found in next section – page 8.
- Smart Routing: Does not mention directly, although alludes to in modules.
- Compliance: Yes – explained throughout modules.
- Portal: Yes – Supplier portal module.
- Open Marketplace Environment: Yes – Catalog Management module.
- Integration: Yes, real time integration when using their enterprise-integration platform ProcureLink.
- Workflow: Does not mentioned directly, although workflow is mentioned in a couple of the modules.
- Document Management: Possibly the Contract Management module. Need to **CLARIFY**.
- Reporting: Yes – Analytics & Reporting module.
- Configurable: seems to.
- Transparency: Yes, see graph on page 5 and the Public Components Module.

2. User Experience – p. page 7 - 9

The Solution must provide a user experience that is simple, direct, and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations, and contracts.
- Role-based functionality for drafting, review and approval, evaluator, and other processes.
- This section does speak to the single point of entry (page 8)
- Yes, have a portal.
- Intuitive in that each menu (of module) is arranged similarly to help with familiarity.
- Homepage can be customized.
- Mobile use – yes. Designed to fit tablet and smartphone formats. **Unsure yet, if have an app.**
- **Nothing discussed on Wizard-driven capabilities.**

3. Bidder Best Practices and Roadmap – p. page 10

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits, and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- SaaS model so latest version, enhancements, and technology delivered to customer.
- Use a Lean-Agile approach to our software development lifecycle to ensure continuous development and improvement of WebProcure.
- Deliver releases approximately 6 - 8 times a year.
- Will provide a Strategic Account Manager (“SAM”) that will meet with your state team frequently for business reviews, discusses challenges and opportunities, and other ways to simplify and gain efficiencies.
- **A 3-year product Roadmap was not provided.**

4. Innovations and Value-Added Features/Services – p. page 11 - 16

In addition to the stated requirements, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Proactis partners with Civic Initiatives to support public procurement in three main areas.
 - Acquisition Support Services: Civic Initiative provides direct support of acquisitions events.
 - Instant-on Staff Extension
 - Workload and Backlog Analysis
 - Group / Individual Staff Training
 - Category Market Assessments
 - Full Solicitation Management
 - Strategic Procurement Transformation: *Increase program capacity to be a strategic asset.*
 - Program Benchmarking
 - Contract Portfolio & Spend Analysis
 - Policy/Process Redesign
 - Training & Certification Models
 - Contract Grant Management Programs
 - Procurement Automation Success: *Help procurement organizations assess their options and implement procurement automation in a way that emphasizes the business value and the opportunity for transformation.*
 - Automation Readiness Assessments
 - Solution Definition/Platform Selection
 - Implementation Planning/Execution
 - Marketplace Creation/Maintenance
 - Change Management & Onboarding
- Under innovative – Proactis has INSTANTmarkets. They explain it as: A Search Engine that *allows any authorized entity to post RFP/RFP solicitations or bid packages that are intelligently searchable by potential bidders. If an entity already has its own e-procurement system or bid board, the bids are automatically pulled from the entity's bid board on to the InstantMarkets platform. In addition, InstantMarkets also pulls all solicitations/bids from various federal government sites along with data such as location of performance that is relevant to the vendor community. This allows for total participation of all government entities in the county and availability of all bids in a single search engine to improve vendor discovery / participation. "A Google like search engine"*
- I like that the vendors do not need to have NIGP or UNSPSC or other commodity code knowledge to search.

5. Customizations/Extensions – p. page 17 - 18

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck, or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate, or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade, or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- WebProcure is a COTS solution. Proactis does state that it has been designed to allow it to be configurable and fully extensible without requiring code development. They point to the areas of platform, templates, and supplemental data fields of examples of such.

6. Alternative Funding Models – p. page 18

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.

- No alternative funding proposed. They are open to discussion and options.

7. Contract Transition and Flexibility – p. page 18

- Proactis answers this in one sentence: *Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.*

B. Functional Requirements: pages 19 – 98

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. General Functionality. Tab 2, GEN-1 through GEN-40 and - p. 19 - 22

- 1-C-“Customization/Extension” and 1-ID “In Development”, 4 – TP”ThirdParty”
 - 1 – Medium
- Gen12 – Searching for attachments by file name. Proactis has marked this one as A and ID. **CLARIFY** what is in development.
 - GEN25 – in order to meet this requirement of sending from the State’s domaine’s, e.g., maine.gov, proper access must be granted WebProcure to use State’s email servers. **This could be a concern or potential problem for some State’s.**
 - Gen27 – **Marked as TP. But probably should be N as Proactis system does not provide the ability for administrative fee invoices to be created and disseminated automatically in accordance with the state's pre-determined billing cycle.**
 - Gen28 - **Marked as TP. But probably should be N as Proactis system does not provide functionality to track payment of supplier administrative fees, create second and final notices for unpaid fees, and create reports on state-determined collection metrics.**
 - Gen32 – **Partially** meets the requirement of required languages.
 - Gen36 – WebProcure supports (will integrate with) Esignature, **but does not** have it as part of their software. Additional fees apply for this.
 - Seem that the rest of the requirement are fully met.

2. Supplier Portal. Tab 3, SPR-1 through SPR-23 and - p. 23

- 1-C-“Customization/Extension”, 1-TP-“Third Party”
 - 2 – Medium
- An inline narrative **was not provided** in the technical proposal.
 - Vendor Management module is used.
 - Many of the deliverables are marked with “integrated suppliers” **CLARIFY** difference of what integrated suppliers vs. suppliers can do and what is meant by integration.
 - Suppliers self-register on registration page on the State’s website and maintain their profiles thereafter.
 - SPR 18 – Proactis asked for further context/information to answer this. **CLARIFY**
 - SPR 19 – system needs a third party to be able to submit administrative fee payments.
 - SPR 23 – System does not have the ability to let suppliers initiate a contract change from within the system.

3. Supplier Enablement Management Workstream. Tab 3, VDR-1 through VDR-43 and p. 24 - 29

- 6-“INT-Integration/interface”, 1-“C-Customization/Extension”

- b. 1 – High
 - WebProcure gives vendors the ability to self-register 24/7 directly from State's website using Proactis's white-label, java applets. The State defines the data fields, documents, requisite information, and process flow.
 - VDR 19 – 27: A majority of them require integrating a third party to automatically verify the IRS TIN/Name, Debarment status, licensure with state, state tax registry, OFAC list, and SOS certs.
 - VDR 43 – will require a high level of customization to obtain pre-qualification functionality to control access to be able to bid on specific categories of goods/services. Currently the workaround is to add "gating" questions.
 - Rest of requirements seem met.
- 4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 30 - 32
 - a. 1-"INT-Integration/interface"
 - BPRT 2 – "The eProcurement Buyer Portal must, for State employees, provide secure login capabilities." May require integration, Proactis's solution supports single sign-on for secure authentication of State employees.
 - Meets rest of requirements in the Buyer Portal arena.
- 5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 33 - 35
 - a. 1-"INT-Integration/interface"
 - b. 1 – Medium
 - NEED 5 – Requires Integration. *"Checking stock levels or availability would require integration with 3rd party solutions. Users have the ability to search contracts, create informal (quick quote) or formal solicitations or search the catalog for goods/services at contract rates."*
 - Meets the rest of requirements in Need Identification.
- 6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 36 - 54
 - a. 6-"INT-Integration/interface", 6-BP "Business Process", 7-"C-Customization/Extension", 1-ID "In Development", 1-INT-"Integration/interface", and 10-N"Not Available"
 - b. 2 – Medium, 13 - High
 - **PRD 3** - Proactis system unable to create PO to not be dispatched, but they can integrate with the State's ERP system and then not dispatch the PO once created.
 - **PRD 7** – Meeting this requirement is contingent on upon the State's ERP system.
 - **PRD 8** – Did not answer. **CLARIFY**
 - **PRD 9** - Purchase requests for similar items cannot be combined into a single purchase order.
 - **PRD 19** – Partially meets the requirement.
 - **PRD 46 and 47** – Can support State's chart of accounts, but must be integrated from State's ERP over to the Proactis system.
 - **PRD 57** – The solution supports user-defined request types. However, the different types do not dynamically create different supplemental fields.
 - Meets rest of the PRD requirements
 - **WRK 5** – Solution does not meet deliverable (does not restrict purchase order creation into a new biennium).
 - **WRK 27** - Solution **does not have/ meet requirement** of workflow based on request type.
 - Meets rest of the WRK requirements
 - **PO 9** – Partially meets requirement. Can not support organization level field configuration.
 - **PO 26 – 28:** BP on these *"A request by an authorized user requiring no approval automatically creates a PO."*
 - Meets rest of the PO requirements
 - Can manage user Pcard data in the system.
 - System complies with PCI standards.
 - **PC 8 – 21:** Other than **PC16. Requirements not met.** *"PCard reconciliation would occur in the ERP."*
 - **RC 16:** Partially met. System can over receive, but does not enforce a commodity, dollar, or percentage tolerance.
 - **RC 19 – Not met.** Routing approval occurs with the invoice

- **RC: 21: Not met.** System does not handle unit of measure conversions.
 - Meets rest of the RC requirements
 - Integrated suppliers can electronically deliver invoices via EDI, cXML, etc.
 - Meets rest of the INV requirements
- 7. Catalog Capability** - Tab 3, CAT-1 through CAT-40 and - p. 55 - 63
- a. 1-BP "Business Process",
 - CAT 6 and 7 - There is no limit to number of catalogs or items within catalogs.
 - CAT 14 – can enter zero-dollar amounts.
 - **CAT 19** – System does not meet requirement through ability to enter a negative dollar value; instead, it's a workaround of creating credit memos.
 - Meets most of all the Catalog Capability requirements.
- 8. Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 64 - 79
- a. 5-TP-"Third Party", xx-CF "Configuration Item", 2-BP "Business Process", and 7-"C-Customization/Extension",
 - b. 6 – Medium
 - SRC 12 – 13: A third party solution (reverse auction and surplus auction) is required to meet this requirement.
 - **SRC 34 – Does not meet requirement.** Solution does not contain Version control to track changes to documents, terms/conditions, and templates.
 - **SRC 43 - Does not meet requirement.** The solution does not provide the ability to temporarily or permanently re-assign work between users within the defined organizational hierarchy.
 - **SRC 65 - Does not meet requirement.** System does not automatically eliminate duplicate e-mail addresses from the Supplier e-mail list.
 - **SRC 82 - Does not meet requirement.** The solution does not provide the ability for users authorized to access the solicitation to create documents, notes, and attachments (any size or type) to a solicitation that are for internal purposes only (e.g., administrative changes) which (1) will not create an Addenda/Amendment to the solicitation; (2) will not publish to the state's public procurement website and (3) will not send electronic notifications to suppliers.
 - **SRC 82 - Does not meet requirement.** The solution does not have the ability to have the system hide the name of the suppliers;
 - Meets most of the remaining SRC requirements.
- 9. Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 80 - 90
- a. 1-TP-"Third Party", 1-N "Not Available", 3-"C-Customization/Extension",
 - b. 3 – Medium
 - **CNT 6 – 7: Does not meet requirement.** Software does not contain version control to track changes to documents and templates; and Check-in/out capabilities for maintenance/management of documents and templates with audit history of changes.
 - **CNT 9 - Does not meet requirement.** Software does not contain the capability to identify templates and contracts that include documents, terms/conditions and specifications that have been updated.
 - CNT 12 – Solution does not have ESignature, but will integrate with Esignature third party solutions.
 - CNT 41 – **Proactis does not answer.** Asks for more information.
 - Remaining CNT requirements are met.
- 10. Vendor Performance** Tab 3, VPE-1 through VPE-25 and - p. 91 - 93
- a. 2- C Customization/Extension", 1-TP-"Third Party", 3 – BP "Business Process",
 - b. 1 – Medium
 - **VPE 10: Fees** and invoiced payments would need to be pulled from TP and put into system to be tracked for KPIs.
 - **VPE 14 and 15: Does not meet requirement.** Software does not support offline templates. They offer a workaround of an informal event could be created to solicit this feedback.
 - **VPE 17: Does not meet requirement.** Software does not provide cure templates for contracts that are in default based on the performance issues.

- **VPE 18 :** It seems the State will manually need to update the specific contract; whereas the Contractors can perform the uploads.
- **VPE 20: Does not meet requirement.** Software does not provide the ability to send notifications to the buyer/analyst when contract items are ordered without using the contract number.
- **VPE 25:** There is no size limit for any safe file type attachments.
- **Meets most of the remaining VPE requirements.**

11. Purchasing/Data Analytics Tab 3, PDA-1 through PDA-37 and - p. 94 - 98

a. 1- INT"Integration/interface"

- **Meets all of the PDA requirements with one requirement requiring an integration.**

C. Technical Requirements: pages 99 - 125

1. Availability. pages 99 - 100

The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- **Yes – they explain their availability well and seem to meet. A bit of concern with the 8 hours recovery time as an object. This seems like a bit long.**

2. Accessibility Requirements. page 100

The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.

- **Meets the requirement.**

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 101 - 102

- **Ad hoc reporting module is a good module for viewing audit info.**
- **Meets these requirements.**

4. Browsers Supported - p. 103

- **Chrome 70 or newer**
- **Firefox 68.4 or newer**
- **Microsoft Edge 80 or newer**
- **Internet Explorer 11 (NOTE: As of August 2021, Internet Explorer 11 is no longer being supported by Microsoft.)**
- **Safari 13 or newer**

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 103 - 104

- **Meets these requirements.**

6. User Authentication RTM: Tab 4, TECH-21 through TECH-25 and - p. 105 - 106

a. 1- BP"BusinessProcess", 1-"C-Customization/Extension"

- **TECH 21: State's Requirement - The eProcurement Solution should provide 2-factor authentication capabilities. Concern as WebProcure single sign-on. Doesn't discuss 2-factor.**
- **TECH 25: Currently doesn't have this requirement. – provide capability to automate acceptance and tracking off user acceptable use agreements and electronic notice...**

7. Federated Identity Management – Pages 49 – 50 and - p. 107

- **For single sign-on, WebProcure uses Ping Identity's Federation Server to connect with the State's authentication service using standard SAML message platforms.**

8. Data Conversion RTM: Tab 4, TECH-26 through TECH-34 and - p. 107 - 109

a. 1-"INT-Integration/interface", 1-"C-Customization/Extension",

b. 5 – Medium, 2 High

- **Bulk upload tools.**
- **They provide a data conversion / migration tasks of responsibilities of parties' chart (page 107) – Would want to review in negotiations.**

9. Interface and Integration RTM: Tab 4, TECH-35 through TECH-60 and - p. 110 - 113

a. 19-"INT-Integration/interface"

- b. 19 – Medium
 - Meets all matrix requirements either out of box or by integration.
 - WebProcure is ERP agnostic capable with real-time integration with use of ProcureLINK (powered by webMethods).
- 10. **Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 114 - 115
 - Supports Microsoft Word products.
- 11. **Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 116 - 117
 - Yes, a responsive design framework, but no application.
- 12. **Mobile Applications** - TECH 62 and - p. 118
 - Accessible from any mobile device or tablet with internet connection; however, no application.
- 13. **Data Ownership and Access** - p. 118
 - Proactis states that the ownership of all data within the system is at all times the States.
- 14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 118 - 119
 - Proactis does not archive or purge State data.
- 15. **Disaster Recovery Plan** - p. 120
 - State they maintain a plan.
- 16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 120 - 121
 - The SaaS subscription provides two environments:
 - Production
 - UAT / Training
 - Proactis maintains the following environments; however, these environments are not customer accessible.
 - Development
 - QA
- 17. **Solution Technical Architecture** - p. 122 - 123
 - Webprocure is a Java based application
 - XML data formats
 - CSV (Comma Separated Values)
 - Tab separate file
 - Microsoft Excel
 - xCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
 - EDI (Electronic Data Interchange)
 - Communication data file types
 - FTP over secure 3-DES VPN tunnel
 - Secure FTP or SFTP
 - SCP or secure copy protocol
 - Secure HTTP or HTTPS
- 18. **Solution Network Architecture** - p. 123 - 125
 - WebProcure is hosted in the US at a Flexential facility. The facility is Tier 1 hosting providers with five-level security defenses, including biometric scanning and 24/7 internal and external video.
- 19. **System Development Methodology** - p. 125
 - Use agile methodology for software development.
 - Customers get an opportunity to review the updates in the UAT environments.
- 20. **Service Level Agreement** - p. 125
 - Proactis states: "...will work with each Participating Entity to mutually agree to a SLA framework that governs each agreement in proportion to the scope of work. Holistically, Proactis supports this framework."
- D. **Security Requirements:** p. pages 126 - 136
 1. **Cloud Security Alliance (CSA) Compliance**
 - CAIQ completed.
 2. **Security and Privacy Controls** partially provide the requirement of meeting the NIST SP 800-53 requirements.
 3. **Security Certifications** – Only meet two certificates of the 9 provided in the RFP. However, list many others they do have. Page 126

4. **Annual Security Plan** Discussed the annual security plan and they can partially provide the requirement of meeting the NIST SP 800-53 requirements.
5. **Secure Application and Network Environment** - nothing to add.
6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-6.
 - Requirements in this section are met.
7. **Data Security** – Proactis utilizes a primary and secondary data center (500 miles apart). They list many additional failsafe measures they feel aid data security (pages 131-134)
8. **Personally Identifiable Information Protection** – say they have and provide a link.
9. **Security/Privacy Issue Occurrence** – nothing to add – say they have.
10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add – say they have.
11. **Security Breach Reporting** – nothing to add – say they have.

E. Implementation Services Requirements: 137 - 211

- **Project Management** p. 137 – 192
 - PM process well defined. A typical PM.
 - Key aspects of the Proactis' project management methodology include, among others, these primary critical components:
 - Project Planning
 - Project Tracking, Oversight
 - Change Control/Configuration Management
 - Communication Management
 - Issues Management
 - Document Management
 - Schedule Management
 - Subcontractor Management
 - Proactis states they developed a preliminary Project Workplan and attached it. The workplan covers 2/4/2019 to 7/22/2020. Their dates are outdated. The time range of a 1.5 years may work for small project. They have it marked as a "Simple Project Plan".
 - Did a great job providing the staffing plan and key positions with resumes to identify skills and qualifications, etc.
 - Outlined responsibility roles and activities in a graph (pages 156 – 160). **Should mark this area for review for negotiations as needed.**
- **Project Implementation Methodology** p. 193 - 198
 - Use iterative and agile methods and the Kanban methodology.
 - The PM implementation approach is standard.
 - Implementation methodology is outlined in phases with key tasks/deliverables under each:
 - Project Planning
 - Solution Design
 - Solution Build
 - Test Readiness
 - Solution Deployment
 - Transition
- **Catalog Support Services** p. 199 - 200
 - Yes, can supply. Key work steps and deliverables in the implementation phase include:
 - Supplier and spend assessment to identify and prioritize contracts as potential for hosted or punchout catalog
 - Conversion plan for catalog data (i.e., contract line item or legacy catalogs)
 - Creation of hosted catalogs
 - Setup/configuration of punchout sites
 - On-boarding and training of suppliers to prepare them to manage catalog content
 - Training of State support staff to assume catalog management duties
- **Data Conversion Services** p. 201
 - Can provide. Has upload tools to help in data conversion and migration of legacy data.

- **CLARIFY.** Nothing is straightforwardly addressed on the cleansing of data; however, in looking at the matrix provided on data conversion (page 201) it looks like the State is possibly responsible for this (*Develop data extract from existing system*).
- **Interface/Integration Development Services** p. 202 - 203
 - ProcureLINK is utilized to integrate numerous systems.
 - WebProcure is capable of real-time integration with a variety of external systems and ERPs.
 - The data formats that are supported by WebProcure are as follows:
 - XL (Extensible Markup Language)
 - CSV (Comma Separated Values)
 - Tab separate file
 - Microsoft Excel
 - XCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
 - EDI (Electronic Database Interchange)
 - WebProcure typically utilizes the following communication conduits for the exchange of the aforementioned data file types:
 - FTP over secure 3-DES VPN tunnel
 - Secure FTP or SFTP
 - SCP or secure copy protocol
 - Secure HTTP or HTTPS
- **Organizational Change Management (OCM Services)** p. 203 - 205
 - Proactis discusses the customers and processes that will be impacted by OCM services and how it will affect them.
 - They provide a framework of the key processes in OCM.
 - There is no discussion about how the actual implementation, assessments they will use, type of OCM (i.e., Prosci) using, analysis tools to be used, etc. to provide the OCM.
- **Training Services** – p. 205 - 208
 - Training needs assessment – will meet and work with State to customize a training plan. Training will be provided at multiple points during the process.
 - Training plan –
 - Typically begins with broad based training sessions for large groups (remote web-based), they do offer onsite, but recommend remote. State data (live) will be used.
 - Train the trainer plan program suggested next.
 - Train the system admins
 - Train the supplier management admin.
 - Attached an example of a full system training plan along with hours (page 206)
 - Training materials - they provide online training portal with a FAQ section , learning videos, and interactive tutorial videos.
 - Suppliers can for help or use the online training portal.
- **Help Desk Services** - Tab 6 IMPL 1 – 5 and – p. 208 – 210
 - 1-ID-“In Development”, 1- INT”Integration/interface”
 - Client-facing support is available:
 - Mission critical: 24/7.
 - First level support: Monday- Friday, 8:00 a.m. to 8:00 p.m. EST, excluding holidays.
 - Online context sensitive help that includes video tutorials is available for both the State and its suppliers.
 - Meets first three matrix requirements.
 - IMPL3 - Chat tool not available yet. A system update is promised “sometime” in the near future.
 - IMPL5 – **CLARIFY** – do not seem to fully answer.
- **On-Site System Stabilization Support** – p. 211
 - Proactis will provide the 3 months post project stabilization support.
 - Additionally they will assign to the State a Customer Operations Manager (COM) and a Strategic Account Manager (SAM) for the lifecycle of the Contract.

F. Managed Services Requirements: page 212

- Proactis has marked this section as N/A. This would indicate that none of the below services are being offered after implementation. **This may be Concerning.** **Note:** Maine has called this a requirement, but do state: *Bidders may propose to provide any of the following services separate from the services proposed in the implementation section of this RFP.*

1. **Solution Support**
2. **Organizational Change Management (OCM Services)**
3. **Training Services**
4. **Catalog Support Services**
5. **Help Desk Services**
6. **Transition Out Assistance Services**

G. Other Available Services: RTM: Tab 7 MNGD-1. Page 213

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- **The inline narrative is not provided**
- The matrix is completed; however, MNGD-1, **they do not meet the requirement.** They will consider a third party performing the monitoring of their system using an independent response time measurement service vs. handling it internally (**this would result in extra costs**).

H. Video Demonstrations: Page 214

- Yes, provided. It was a bit clunky in accessing it, as Proactis provided a PW and seven different videos that made up the demonstration. The PW needed to be entered for each video. Not as professionally presented as others. Once inside and watching
- Total time 53:23 minute demo, which was beyond the 45-minute maximum length requirement (page 47 of RFP)
- Demonstrated Missouri and RI's website, which was nice to see how another State uses the system.
- Was set up sequentially in how a typical procurement might take place and was able to view screens.
- Solution look seems outdated.

BIDDER NAME: (Perfect Commerce LLC)

CATEGORY #(s): 2

DATE: (10/3/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by **individual** evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - All 3 Preliminary docs, cyber liability 5 mil
 - 180 day proposal shelf life
 - Proactis
 - Procure-to-Pay suites
 - Sourcing and Supplier Relationship Management
 - Forrester Now Tech Supplier Risk and Performance Management
 - WebProcure COTS SaaS solution
2. Previous Projects
 - State of Missouri - MissouriBUYS - **implementing** WebProcure's full end-to-end eProcurement solution
 - State of New York- PeopleSoft
 - State of Rhode Island - WebProcure eliminated redundant software applications in use, interfacing with their ERP financial system
 - State of Connecticut - standardized e-sourcing technology
 - Links to these states were more illustrative of the projects work done
3. Subcontractors
 - Civic Initiatives, LLC
 -
4. Organizational Chart
 - Org chart not specific to project
 - Roles not defined
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Annual reports with financial statements for 2020-2018
 -
 -

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **WEBPROCURE** (by proactis) designed, built, and developed by public sector professionals specifically for state and local government users. This source-to-pay (S2P) system incorporates industry best practices for the public sector. Available as a Software-as-a-Service (SaaS) solution, WebProcure is capable of real-time integration with a variety of external systems and ERPsvia our enterprise-integration platform ProcureLINK. Modular platform offers

- vendor management,
- solicitation management,
- contract management,
- catalog management,
- request management,
- order management,
- invoice management,
- analytics and reporting,
- supplier portal
- public components.

User Experience Single point of entry home page supports customization for personal as well as organizational dashboards

Bidder Best Practices and Roadmap **A Configurable off the Shelf (COTS) solution, which is designed and delivered as a SaaS model.** deliver releases approximately 6 -8 times a year.

Innovations and Value-Added Features/Services partner, Civic Initiatives, the State can benefit from numerous value-added services - Acquisition support services, strategic procurement transformation, procurement automation success. InstantMarkets a new generation of bids and contracts search engine,

Customizations/Extensions **WEBPROCURE** highly configurable and fully extensible without requiring complex code development. WebProcure enables business process and facilitates additional user capabilities through workflow rules in the different application modules. Templates are used throughout the solution to serve as a consistent and approved structure for users to perform an activity efficiently.

Alternative Funding Models **Proactis is open to additional funding models and will engage with each potential buyer on an account-by-accountbasis when specific detail is known.**

Contract Transition and Flexibility Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.

Technical Requirements

Availability system availability percentage ?????? current Recovery Time Objective is less than 8 hours.

UPS, redundant HVAC, fire suppression , physical security

Accessibility Requirements designed with Section 508 standards in mind; Web-Based Intranet

and Internet Information Applications Standards (section 1194.22)

Audit Trail and History audit engine logs all user activity including changes at the field level with date and time stamps. WebProcure's **automated** audit tool also provides a **manual** audit feature to capture events like phone calls and emails, which occur outside of the system. ad hoc reporting module provides a quick and easy way for you to view audit information.

Browsers Supported • Chrome 70 or newer

• Firefox 68.4 or newer

• Microsoft Edge 80 or newer

• Internet Explorer 11 (NOTE: As of August 2021, Internet Explorer 11 is no longer being supported by Microsoft.)

• Safari 13 or newer

User Accounts and Administration hierarchical structure for assigning roles and permissions to multiple organizations and users within each organization. Access is controlled at the top, starting at the enterprise level, where enterprise-level users determine appropriate access levels to a set of agencies and their respective users. Each module has associated roles, permissions, and scope parameters.

User Authentication username and password or via single sign-on

(SSO). Passwords must be at least 8 characters in length, must be a mix of upper-case letters, lower-case letters, numbers, and special characters, and must not be the same as any password used within the past five (5) generations. For SSO, we use Ping Identity's Federation Server to connect with the State's authentication service using standard SAML message platforms

Federated Identity Management– see user authentication above

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Data Conversion variety of bulk upload tools to aid in data conversion and the transfer of legacy data. Bulk upload import tools include data related bill to / ship to addresses, contracts, solicitations, and vendors. Bulk upload tools allow our customers to collect or export data from existing data sources and format them into an easy to use Excel file. The Excel file can then be uploaded into WebProcure by a system administrator.

Interface and Integration WebProcure is ERP agnostic. data formats supported by WebProcure are as follows:

- XML (Extensible Markup Language)
- CSV (Comma Separated Values)
- Tab separate file
- Microsoft Excel
- xCML and xCBL (commerce eXtensible Markup Language and XML Common Business Library)
- EDI (Electronic Data Interchange)

Office Automation Integration supports Microsoft Office suite products

Mobile Device Support WebProcure built within a responsive design framework accessible from any mobile device or tablet with an Internet connection.

Mobile Applications Currently, there are no apps required to access any of the WebProcure modules.

Data Ownership and Access at all times and will always remain vested in the State. At no time will Proactis have title to data provided by the State, wherever located. The State has access within numerous areas of the solution to download its data on demand without cost.

Date Retention, Archive and Purge Considerations Proactis does not archive or purge State data. If specified and mutually agreed to in writing, Proactis IT Operations will execute against the policy retention schedules on behalf of the State to ensure compliance

Disaster Recovery Plan disaster recovery plan designed to combat any number of eventualities which might interrupt service. WebProcure is hosted in both a primary and secondary data center with full replication between locations and a distance of more than 700 miles between each data center. In the event of a system failure that requires implementation of our disaster recovery plan, the applications can be transferred to the secondary location and recovered. In the event of a complete site failure where a disaster has been declared, utilizing VMware's Site Recovery Manager (SRM), Proactis will stand up the production application servers, synchronization of file share data will stop, and the servers will be taken out of read only mode so they are available to the application. Databases will mount the latest snapshot from the replication manager and will be brought online. The Proactis disaster recovery process is regularly tested (with clients?) and audited to ensure compliance with published and audited disaster recovery procedures, and as part of our ISO 27001 certification.

Solution Environments two (2) instances: Production and UAT/Training environments. development and QA instances are not customer accessible.

Solution Technical Architecture WebProcure is a java based application developed for cloud deployment. flexible scalability depending on transaction capacity with the ability to scale to each customer's current and future growth rates. servers are load balanced using redundant Cisco ACE Load Balancers. utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange.

Solution Network Architecture hosted in the United States at a state-of-the-art hosting facility operated by Flexential, which is a Tier 1 hosting providers with five-level security defenses, including biometric scanning and 24/7 internal and external video. The data centers are more than 500 miles apart. They are compliant with numerous information security

standards including SSAE 18 Type II standards which ensures our solution offering demonstrates established control objectives and effectively designed control activities. We have front-to-back fault tolerance and redundancy built into our system. From routers and switches, to servers, to power sources, everything is redundant in the environment. We replicate data across a secure data connection between our primary and secondary data centers utilizing block level duplication on our SAN solution. Our current Recovery Time Objective is less than 8 hours. Our systems can be rolled back to any point in the preceding 30 days with our EMC Recover Point appliance. File level replication and storage has a snapshot every 2 weeks and is saved for 6 months. Database snapshots (deltas) happen daily with two full backups (level 0) every week. These policies apply to applications servers, databases and file shares.

System Development Methodology Agile methodology for all software development. Customers get an opportunity to review the updates in our UAT environments.

Service Level Agreement Proactis will work with each Participating Entity to mutually agree to a SLA framework that governs each agreement in proportion to the scope of work.

Security Requirements

Cloud Security Alliance (CSA) Compliance CAIQ completed – Do you have the capability to restrict the storage of customer data to specific countries or geographic locations? - **NO**

Security and Privacy Controls maintains a comprehensive security plan that comports with ISO 27001 and ISAE 3402 standards which encompass many of the NIST SP 800-53 requirements. To illustrate Proactis' compliance with ISO 27001 and ISAE 3402 standards, Proactis conducts annual, independent third party audits and certifications. Upon request from a Client, Supplier is willing provide independent third party audit reports and/or certifications for ISO 27001 and ISAE 3402 SOC 1, Type 2 annually.

Security Certifications

- ISO27001
- PCI DSS
- ISAE 3402
- SOC 1 Type II
- SOC 2 Type II
- SOC 3 Type II
- NIST 800-53
- ITAR
- SSAE 18
- HITRUST CSF
- EU-US Privacy Shield framework

Secure Application and Network Environment addresses issues such as: which ports and services are required to support access to systems holding Customer data and limiting access to these points; firewalls; internet protocol specification for source and destination; authentication procedures; logical segregation; encryption; packet filtering; activity logging within the product and for the system infrastructure; implementation of security fixes and patches; data privacy; disaster recovery; business continuity; penetration and vulnerability testing; and access control. The Proactis mobile device policy is part of the Proactis security plan, and under this policy and the associated procedures Customer data is not accessible via mobile and portable devices.

Secure Application and Network Access secure data transmission protocols including SSL protocols, public key authentication, signing and encryption in relation to the WebProcure SaaS solution and the solution infrastructure. As a SaaS solution we do not have direct access to Customer systems/networks. Proactis supports modern standard such as TLS 1.2 and TLS 1.3. We allow no

non-encrypted traffic to be used in conjunction with our services. Integration data will normally be provided using either in-built web API's, SFTP or site to site VPN connectivity.

Data Security Proactis replicates data across a secure data connection between our primary and secondary data centers utilizing block level duplication on our SAN solution, and has a recovery point objection (**RPO**) of 30 minutes and a recovery time objective (**RTO**) of no more than **six hours (8?)** which support our business continuity plan.

Personally Identifiable Information Protection control objectives managing the security of personal data, access controls of information systems, and a robust privacy policy. Proactis' solutions are designed to require only the minimum personal data necessary to operate the solutions.

Security/Privacy Issue Occurrence Customers will be notified about security or privacy issues which involve their particular solution and/or service as soon **as reasonably possible** after Proactis has confirmed a security or privacy event has occurred.

PII Data Actual/Attempted Access or Disclosure same as above

Security Breach Reporting same as above

Implementation Services Requirements

Project Management **PROACTIS** projects are conducted according to a structured, well-defined, phased project life cycle.

- Project Planning
- Project Tracking, Oversight
- Change Control/Configuration Management
- Communication Management
- Issues Management (workflow)
- Document Management (workflow)
- Schedule Management
- Subcontractor Management

Proactis developed a preliminary project workplan. **One size fits all?** RACI chart outlines the activities and responsibilities in each phase of each solution workstream of the project. Extensive Representative Personnel Qualifications provided.

Project Implementation Methodology **Proactis** methodology utilizes iterative and agile methods for delivery, and structured risk and change management for the project management. Our product development organization utilizes highly optimized Kanban methodology enabling consistent delivery of products meeting customers' demands on time while continuously adapting to change on a weekly basis.

Catalog Support Services **Proactis** During the implementation phase of the project, our catalog enablement team will provide the services necessary for the initial launch of the marketplace. These services include the creation, loading, management, and maintenance of hosted catalogs and punchout sites. Key work steps and deliverables in the implementation phase include:

- Supplier and spend assessment to identify and prioritize contracts as potential for hosted or punchout catalog
- Conversion plan for catalog data (i.e. contract line item or legacy catalogs)
- Creation of hosted catalogs
- Setup/configuration of punchout sites
- On-boarding and training of suppliers to prepare them to manage catalog content
- Training of State support staff to assume catalog management duties

Data Conversion Services **Proactis** can provide assistance with both data conversion and data migration.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Interface/Integration Development Services **Proactis** will work in conjunction with the customer to determine what interfaces and integrations are necessary for each particular project and will also assist in those integrations. The majority of the transaction interchanges take place through the integration platform ProcureLINK. ProcureLINK utilizes established, standard, distributed information exchange mechanisms like web services, SOAP (Simple Object Access Protocol), XML over HTTP, SMTP, and IMAP to achieve this form of secure and reliable data interchange.

Organizational Change Management (OCM Services **Proactis** The first and most significant incorporation of OCM activities is during implementation, where OCM processes are embedded in tasks related to process design, configuration, report development and of course training. OCM framework; stakeholder management, change impacts, communication, change readiness, knowledge and training, sustainment.

Training Services **Proactis** During the discovery sessions we will perform a detailed walkthrough, or demonstration, of all the system modules with the relevant core team members. Proactis begins with broad based training sessions used to train large numbers of users. We will conduct as many web-based training sessions as is necessary to adequately train the anticipated 100+ users. In our experience, remote web-based training sessions are the most effective way to deliver end user training to a large number of end-users, but we can also conduct on-site, inperson trainings provided logistical constraints allow. All training exercises will be conducted on a live training environment with State data, which is by far the most effective hands-on learning experience. Trainees will be guided through customized training activities based on the State's business processes. Train-the-Trainer program has proven to be the most effective method to encourage customer ownership and system usage.

Help Desk Services Ongoing help desk support is available for both **buyers and suppliers** who interact with the State via our solution. Client-facing support is available 24/7 for mission critical items. First level procurement support is available Monday through Friday from 8:00 a.m. to 8:00 p.m. Eastern Standard Time, excluding holidays. All support staff, including Level 2 Development, is located at our US headquarters in Virginia. Support is accessible via email, telephone, and our on-line support ticketing system Help Desk

On-Site System Stabilization Support **Proactis** will provide resources as necessary to support a stabilization period of 3 months post project implementation. **Onsite not clear.**

Individual SME Comments:

General Principal and Requirements

- Uses WebProcure platform, COTS
- QUESTIONING-Vendor identity is unclear, perfect commerce, proactis, web procure, ProcureLINK, etc.
- POSITIVE-Modules are good. Can solution be only for certain ones or only for all?
- POSITIVE-Web Access makes easily available, App?
- QUESTIONING-The look and feel is very industrial looking
- INTERESTING-releases 6-8 times a year requires end user to test quite often
- QUESTIONING-civic initiatives at additional cost? Does this complicate the vendor/customer relationship?
- QUESTIONING-instant markets as third party or within team?
- POSITIVE-Templates are good

Functional Requirements

- QUESTIONING-Is vendor registration restrictive to where it could be a barrier to entry
- POSITIVE-Vendor KPI is a valuable tool if it is accurate
- QUESTIONING-Can data be exported from another source or solution?
- QUESTIONING-How are contracts negotiated? Versioning of edits available
- QUESTIONING-How are promotional price items available to buyers
- POSITIVE-Attributes (buy local, etc.) are presented well in shopping platform
- POSITIVE- Workflow appears functional for approvals
- NEGATIVE-No identification if level 2 catalog search available
- QUESTIONING (pg.67)-Select, remove or add vendors during bid creation is not an open bid
- QUESTIONING-Vendor performance is good, but based on what data?
- POSITIVE-the scheduling of reports is convenient

Technical Requirements

- POSITIVE-Data center infrastructure
- POSITIVE-SSO for ease of access
- QUESTIONING-Mobile functionality limited? Based on pg.116 direction not to use mobile devices as primary device.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce (Proactis)

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/14/2022

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Security Requirements

- POSITIVE-ISO certifications and standards
- QUESTIONING-RPO 30 mins, RTO 6 hours, how frequently utilized?
- POSITIVE-Data encryption at rest and in transit is preferred
- NEGATIVE-PII attempted access, will notify "as soon as reasonably possible" is not a comfortable position for the customer.

Implementation Services Requirements

- POSITIVE-Detailed project plan information provided
- POSITIVE-Meeting planning considers normal business obligations
- QUESTIONING-Activities and responsibilities (p.156) seem imbalanced with overabundance of state responsibilities
- QUESTIONING-Resumes have no names but specific work experience. Noncommittal appearance by bidder in not identifying that.
- POSITIVE-End user training appears beneficial, videos did not demonstrate such level of personal activity.

Managed Services Requirements

- Not Applicable

Video Demonstrations

- POSITIVE-Web Procure is cloud online solution
- INTERESTING- Modules, help has a great deal of information, impersonal
- QUESTIONING-Vendor Data platform seems like a word heavy form style
- POSITIVE-Appears solution can be customized for end user
- POSITIVE-Bid Board seems intuitive
- POSITIVE-Contract board and bid board connectivity is efficient
- NEGATIVE-Format of site is aged, could have a better presentation
- POSITIVE-Solicitations both formal and informal are good
- POSITIVE-Converting solicitation to contract is efficient
- POSITIVE-Request module provides clear information
- QUESTIONING-How are invoices entered, roles?
- POSITIVE-Scanning pdf invoices is a very good function
- POSITIVE-Scheduling reports is good

Individual SME Comments:

Overall

General Principal and Requirements

Key Solution Functionality Elements

5	This source-to-pay (S2P) system incorporates industry best practices for the public sector. Available as a Software-as-a-Service (SaaS) solution, WebProcure is capable of real-time integration with a variety of external systems and ERPs via our enterprise-integration platform Procure LINK.	
	Vendor Management	
	Solicitation Management	
	Contract Management	
	Catalog Management	
	Order Management	
	Invoice Management	
	Analytics & Reporting	
	Supplier Portal	
	Public Components	

User Experience

8-9	single point of entry to create new transactions.	
	The homepage can be customized	
	Because menu selections within each module are arranged similarly, knowing one module promotes familiarity with all other modules.	
	WebProcure was designed using responsive web design methods allowing the application to natively fit different tablet and smartphone formats. Rather than developing a standalone app, the responsive design enforces user roles and promotes security.

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce

CATEGORY #(s): 2 Stage 2

DATE: 12/20/2021

SME/EVALUATOR NAME: Stacey Winter

DEPARTMENT/STATE: Purchasing North Dakota State University

Bidder Best Practices and Roadmap

10	6-8 releases per year	
	Proactis will provide a Strategic Account Manager (“SAM”) who will work closely with you and meet with your team frequently to conduct business reviews and discusses challenges and opportunities you may have which we can support within the business.	

Innovations and Value-Added Features/Services

11	Acquisition Support Services	
	Strategic Procurement Transformation	
	Procurement Automation Success	

Customizations/Extensions

17	While WebProcure is a Commercial off the Shelf (COTS) SaaS based solution, we’ve designed it to be highly configurable and fully extensible without requiring complex code development	
	From a platform perspective, WebProcure enables business process and facilitates additional user capabilities through workflow rules in the different application modules. These workflow rules are built dynamically based on the properties of the State’s business document (e.g. solicitation pre-addenda, contract approval, requisition approval based on a specific commodity, etc.). Workflows can be serial or parallel.	
	Templates are used throughout the solution to serve as a consistent and approved structure for users to perform an activity efficiently. Our registration template is 100% customizable to capture vendor data and documentation unique to the State	

Alternative Funding Models

18	Did not offer	
----	---------------	--

Contract Transition and Flexibility

18	Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers.	
----	---	--

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

This appears to be the same response as in Category 1 – Full Solution. No notes from the SME stated as such. I copied the Category 1 eval and RTM notes over from Category 1 to this Category 2

Individual SME Comments: The video that was supplied was very helpful. This response was acceptable except for the vendor stated that section F was not applicable? It would be beneficial if the list of concerns listed were addressed so we could accurately be scored.

Again, I believe the requirements where verification is needed should be requested as this will help improve this suppliers solution. I have given an example below where it stated they could meet the requirement, and then the next requirement which is similar in nature states it is external to the system:

- CONCERN - EPROC-GEN-26 – Line 30 - Tracking admin fees has been a difficult requirement to meet. This response seems too vague to guarantee they can meet the requirement. Next requirement (below) it was stated admin fees is external to the system, so how can you report on them from the system in this requirement?
- CONCERN - EPROC-GEN-27 and EPROC-GEN-28 – Lines 31 and 32 - Admin fees invoicing is external to the system.

General Principal and Requirements – Page 5

Key Solution Functionality Elements – Page 5 thru Page 7

- WebProcure is the solution name.
- ProcureLINK is the enterprise-integration tool.
- Modular, role-based solution.
- Provided list of all components on Page 5 of response

User Experience – Page 7 thru Page 9

- All modules integrate with each other.
- Home page can be either personal or organizational dashboards. Can view multiple dashboards from the home page. Page 8
- Wizard-driven functionality when entering data. Page 9

Bidder Best Practices and Roadmap – Page 10

- Deliver releases 6-8 times a year.
- STRENGTH - Provides a Strategic Account Manager (SAM) who will work closely with the state team on business reviews and discuss challenges and efficiencies.

Innovations and Value-Added Features/Services – Page 11 thru Page 17

- Civic Initiatives is a tool used to provide value-added services. Page 11
- Supports the State in 3 main areas of focus.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- #1 – Acquisition Support Services – Direct support of acquisitions events. Page 12
- #2 – Strategic Procurement Transformation - Find difference between procurement and purchasing
- #3 – Procurement Automation Success – Helps implement procurement automation.
- InstantMarkets is a new generation of bids and contracts search engine.
- Vendors and contractors can search keywords in the bid search engine. Page 15
- Provided example of this functionality in Figure 2 Page 17

Customizations/Extensions – Page 17 thru Page 18

- Expansion of additional capabilities in the areas of platform, templates, and supplemental data fields. Page 17
- Platform (workflow) and templates are mentioned as possible areas of improvement. Page 18

Alternative Funding Models – Page 18

- Here is the response for this section – “Proactis is open to additional funding models and will engage with each potential buyer on an account-by-account basis when specific detail is known.” Page 18

Contract Transition & Flexibility – Page 18

- Here is the response for this section – “Proactis will allow existing customers to transition to the new Master Agreement and Participating Addendum should the terms extend greater benefit to our customers. “

Functional Requirements – Page 19

General Functionality – Page 19 thru Page 23 – **Inserted “screen shots” of their RTM response into the narrative response.**

- Supplied table of solution modules available in WebProcure on Page 19
- STRENGTH - EPROC-GEN-3 – Line 7 – Departments can post bids from their departments separately from other departments.
- CONCERN - EPROC-GEN-12 – Line 16 – Search across system for attachments by file name is in development.
- CONCERN - EPROC-GEN-20 – Line 24 - Licensing for supporting version of the commodity code set in the ERP is the responsibility and cost of the state.
- CONCERN - EPROC-GEN-26 – Line 30 - Tracking admin fees has been a difficult requirement to meet. This response seems too vague to guarantee they can meet the requirement. **Next requirement (below) it was stated admin fees is external to the system, so how can you report on them from the system in this requirement?**
- CONCERN - EPROC-GEN-27 and EPROC-GEN-28 – Lines 31 and 32 - Admin fees invoicing is external to the system.
- CONCERN - EPROC-GEN-32 – Line 36 - Our solution supports English and French today. Additional languages can be added at an additional cost per language.
- CONCERN - EPROC-GEN-38 - Line 42 - “Proactis has many different subscription methods depending on customer and situation. Exhibit 3 provides various scenarios that we will address” Not sure what Exhibit 3 is?

Supplier Portal – Page 23 - **Inserted “screen shots” of their RTM response into the narrative response.**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SPR-18 – Line 22 - The supplier portal does not allow vendors to respond to complaints.
- CONCERN - EPROC-SPR-19 – Line 23 - The supplier portal does not allow vendors to submit administrative fee payments.
- CONCERN - EPROC-SPR-23 -Line 27 - Suppliers do not have the ability to initiate a contract change from the supplier portal.

Supplier Enablement/Management – Page 24 thru Page 30. **Inserted “screen shots” of their RTM response into the narrative response.**

- Vendors can self-register.
- State is notified on new registrations and can approve or reject the record.
- Changes on certain fields in the vendor registration can trigger workflow and needs to be approved.
- Vendors can perform all procurement functions via their portal.
- Module provides supplier performance.
- Listed capabilities of Vendor Management on Page 25
- CONCERN - EPROC-VDR-14 - Line 43 - Supplier users have unique accounts with unique login credentials. Can the system support multiple user accounts?
- CONCERN - EPROC-VDR-23 thru EPROC-VDR-27 -Line 52 thru line 56 - The response is a duplicate for the multiple lines of requirements. It appears this is handled with an integration, but what happens when a vendor is self-registering?
- CONCERN - EPROC-VDR-41 – Line 70 - The requirement states automated email notification, but response states a manual process of searching and then sending email.

Buyer Portal – Page 30. **Inserted “screen shots” of their RTM response into the narrative response**

- Buyer logs on via link or single sign on.
- Landing page can be a personal dashboard specific to a user. Page 30

Need Identification – Page 33 thru Page 35 - **Inserted “screen shots” of their RTM response into the narrative response**

- Provided example of step-by-step procurement path in figure on page 33

Request through Pay – Page 36 thru Page 55. **Inserted “screen shots” of their RTM response into the narrative response**

- Provided list of types of purchase requests.
- Provided list of terms used with a description of each term. Page 36
- Requests can also trigger many other options like 3 orders, contracts, or sourcing event. Page 37
- Provided Purchase Order Status & Actions, Page 38 and Order Receipt information. Page 39
- Provided Invoicing information on page 40
- CONCERN - EPROC-PRD-8 – Line 109 – Here is the response when asked about collaboration with other users. “This is a very broad requirement spanning requests for orders, solicitations, contracts, invoices. Further clarity is desired.”
- CONCERN - EPROC-PRD-9 – Line 110 - Combining like item purchase request into a single order is NOT supported.
- CONCERN - EPROC-WRK-5 – Line 170 - Our solution does not currently restrict purchase order creation into a new biennium.

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-WRK-6 – Line 171 - This response does not address the by pass requirement?
- CONCERN - EPROC-WRK-27 – Line 192 - Does not currently support workflow based on request type.
- CONCERN - EPROC-PO-5 – Line 200 - The response does not address the requirement to configure purchase order templates.
- CONCERN - EPROC-PO-9 – Line 204 – “we currently do not support org level field configuration”
- CONCERN - EPROC-PO-15 – Line 210 – Do you support the ability to print versions of orders?
- CONCERN - EPROC-PC-5 -LINE 231 – Does not support ability to limit spend on a PCard.
- CONCERN - EPROC-PC-8 thru EPROC-PC-21 – Lines 234 thru 247 - These requirements are not supported and vendor response is “PCard reconciliation would occur in the ERP”
- CONCERN - EPROC-RC-3 and EPROC-RC-4 – Lines 252 and 253 – Does not support the ability to create a receipt with a PO.
- CONCERN - EPROC-RC-19 – Line 268 – Does not support receipt workflow approvals. Vendor stated this happens at the invoice approval step.
- CONCERN - EPROC-RC-21 – Line 270 – Does not support conversion of PO unit of measure to inventory unit of measure.

Catalog Capability – Page 55 thru Page 64 - **Inserted “screen shots” of their RTM response into the narrative response**

- Can search both hosted and punch-out catalogs with maintenance being the responsibility of the vendor.
- Offers 2 catalog options – Standard and Advanced catalogs
- Search manager capabilities listed on page 56
- Catalog manager helps control vendor catalogs. It also aids the vendor in managing their catalog.
- CONCERN - EPROC-CAT-34 – Line 319 - States the search results for hosted vs.punchout are not similar
- CONCERN - EPROC-CAT-38 – Line 323 – Only the State catalog can be made accessible without a login?

Sourcing/Bid Management – Page 64 thru Page 80 - **Inserted “screen shots” of their RTM response into the narrative response**

- Wizard-like tool is used to set up solicitations – Page 64
- Bids are posted to State’s website
- Have vendor activity report
- Has evaluation capabilities.
- Solicitation Management capabilities listed on Page 67 and 68
- CONCERN - EPROC-SRC-12 – Line 339 - Reverse Auction is offered outside of the system.
- CONCERN - EPROC-SRC-13 and EPROC-SRC-14 – Lines 340 and 341 – A third party solution is required for Surplus Auction and Surplus Sealed Bid.
- CONCERN - EPROC-SRC-28 – Line 355 – The response given here (editing a solicitation) does not address the online collaboration requirement.
- CONCERN - EPROC-SRC-34 and EPROC-SRC-35 – Lines 361 and 362 – These requirements are not currently available and are planned on a future enhancement. (Version control and check in/ out functions
- CONCERN - EPROC-SRC-40 – Line 367 - This response talks about award recommendations but the requirement is asking for solicitation fields?

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN - EPROC-SRC-43 – Line 370 - Workload assignment is a planned future enhancement.
- CONCERN - EPROC-SRC-65 – Line 392 - Does not support elimination of duplicate email addresses.
- CONCERN - EPROC-SRC-75 – Line 402 – Opt out of notifications will require an enhancement to the solution
- CONCERN - EPROC-SRC-82 – Line 409 - The ability to create documents for internal purposes only is not supported but is being considered for a future enhancement
- CONCERN - EPROC-SRC-102 – Line 429 - Response "Suppliers who authenticate to their portal can submit bids" does not address the eSignature requirement
- CONCERN - EPROC-SRC-117 – Line 444 – Ability to hide the name of the suppliers in not currently supported but is planned in a future enhancement.
- CONCERN - EPROC-SRC-130 and EPROC-SRC-131 – Lines 457 and 458 - Does not support online collaboration requirement. Offered a business process suggestion like TEAMS and then upload the file to the solution.
- CONCERN - EPROC-SRC-138 – Line 465 – Response does not state if information can be posted to state website?
- STRENGTH - EPROC-SRC-143 – Line 470 – Ability to perform award reversals and award to another vendor

Contract Management – Page 80 thru Page 91 - **Inserted "screen shots" of their RTM response into the narrative response**

- Listed contract management abilities on Page 80
- Wizard like process to enter contracts. – Figure on page 81
- Contracts are posted to the contract board – Page 82
- Capabilities of Contract Management listed on Page 82
- CONCERN - EPROC-CNT-6 and EPROC-CNT-7 – Lines 486 and 487 – Version control and check in/out capabilities are planned for a future enhancement.
- CONCERN - EPROC-CNT-9 – Line 489 – Identify templates and contracts that have been updated is planned for a future enhancement.
- CONCERN - EPROC-CNT-14 – Line 494 - This response appears to be referencing contract approval and not the eSignature process
- CONCERN - EPROC-CNT-16 – Line 496 - This response states price list can be uploaded to supplier profile, but can price file be loaded to the contract as line items?
- CONCERN - EPROC-CNT-38 – Line 518 - This response does not address the ability to have detailed information of subcontractors on the contract record.
- CONCERN - EPROC-CNT-39 – Line 519 - Subcontractor payments cannot be tracked on a specific contract.
- CONCERN - EPROC-CNT-40 – Line 520 – This response shows this vendor is not clear on the requirement. This is asking for process to track spend on contracts.
- CONCERN - EPROC-CNT-41 – Line 521 – Vendor is not clear that SWAM is Small, Women-owned or Minority owned.
- CONCERN - EPROC-CNT-72 – Line 552 - Solution does not automatically calculate the admin fee assessed to a contract.
- CONCERN - EPROC-CNT-85 – Line 565 - This response does not address the ability to imitate an order from a CONTRACT?

- The State owns the data

Date Retention, Archive and Purge Considerations – Page 14 - **Inserted “screen shots” of their RTM response into the narrative response**

- Does not archive or purge State data.
- CONCERN - EPROC-TECH-63 – Line 67 - States can archive records but does not purge data.

Disaster Recovery Plan – Page 120

- Site Recovery Manager (SRM) is the solution tool.

Solution Environments – Page 120 - **Inserted “screen shots” of their RTM response into the narrative response**

- Offers 2 environments with the TEST environment configured to reflect the production one.
- Can the UAT environment be wiped and then production copy over to TEST?

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Perfect Commerce - PROACTIS

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/10/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Solution Technical Architecture – Page 122

- Offered chart on page 122 showing structure
- Provided data formats listed on pages 122-123

Solution Network Architecture – Page 123

- Listed failsafe measures on Page 124

System Development Methodology – Page 125

- Agile methodology
- Process end result is an update in a future release.

Service Level Agreement – Page 126

- System supports this framework

Security Requirements - Page 126

Cloud Security Alliance (CSA) Compliance – Page 126

- Supplied the CAIQ as an attachment

Security and Privacy Controls – Page 126

- Meets requirements

Security Certifications – Page 126

- Provided list of certificates

Annual Security Plan – Page 126-127

- Will provide third party audit reports upon request
- Defer rest of comments to security SME

Secure Application and Network Environment – Page 127 – 128

- Will provide third party audit reports upon request
- Defer rest of comments to security SME

Secure Application and Network Access – Page 128 -129 - **Inserted “screen shots” of their RTM response into the narrative response**

- Meets requirements

Data Security – Page 131 thru 134

- System offers redundancy.
- Provided failsafe measures.
- Provided security architecture on page 132
- Defer rest of response to security SME

Personally Identifiable Information Protection – Page 134

- Provided link to Proactis privacy policy - <https://www.proactis.com/us/policies/privacy-policy/>
- Access defined by roles and permissions
- More in depth information is in item 44 in their response.

Video Demonstrations

Proactis Public Sector is named in the video demonstration and the solution name was WebProcure. The videos were presented in sections and I have entered my comments per section in the notes below.

Solution introduction – Web based system using roles and permissions for access. The system is a one platform system with access to each of the modules. Has across the solution search functionality from the help “home” page. Provides tutorials on this page where the user can learn how the functionality works by the system showing you and then the user can try it. Support contact information is supplied on this page.

Public Components and Supplier Management – Used the State of Missouri and the State of Rhode Island as examples in this section. Showed how a vendor can self register. The data in this section is fully customizable. The fields can be set up to validate the data that the vendor enters. Uses the “now or later” functionality to help vendors complete parts of the registration at a later time. Record gets submitted to workflow for approval. Has a bid board and contract board link from the registration landing page. Contracts and bids compiled in the solution are automatically displayed on the vendor page. On the

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

buyers side, the user can create or view invitations and can manage or view vendors records. System checks for duplicate vendor records. Offers supplier score cards

Solicitations – Has formal and informal bid types. No limit on the types of solicitations and each type has different sections. Bids sections include header, requirements, questionnaire, attachments, item specs, suppliers and summary. Category section denotes which vendors get added to the bid. Templates are compiled and the information is brought into the bid based on the bid type. The user can pick and choose what sections of the template applies to the bid. Bid goes through the approval stage and approver will receive email. You can also create a solicitation from a request that goes through the approval process. Showed the process that a vendor needs to complete in order to submit a response. Award process can be by item or can create evaluation teams. CAN REVERSE the bid award! Can generate a contract from the solicitation.

Contracts – Can create new or contracts from a bid. Supports master contract functionality. Sections offered are Header, Notifications, Contract Clauses, Catalog Items, Attachments and Authorization. Has the ability to use templates for the contract type. Can add custom fields and make them required. Can use custom notifications and pull from the library. Clauses can be added from the library and can set up to edit or not to edit them. Can submit contract into approval workflow. Supports eSignature but did NOT show that process.

REQ PO – This section talks about the request and purchase order process. It starts by searching for an item and view the search results which can be configured by the State. Request gets flipped to a PO and user can attach accounting codes. Can add custom fields and submit to approval workflow. User can look at their orders they placed. Orders can be sent to vendors in many ways. User can do a receipt against the purchase order. Vendors receive emails about all orders and can collaborate with the State.

Invoicing – 2 ways to create invoices, the buy side, or the supply side. Vendors can create a invoice from a PO. User can create an invoice on behalf of the vendor. The invoice section contains header, invoice items, attachments, invoice matching and summary sections. Can import invoices and can create credit memos and invoice vouchers.

Reporting Dashboards – Data analytics is this part of the solution. Can create personal or organization dashboards. Can create your own reports or create those already set up in the system. Has drag and drop functionality. Can use charts which helps with visual data. Can schedule and export reports.

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2001
 - “ePro” – Periscope’s eProcurement solution.
 - Affiliated with NIGP
2. Previous Projects
 - 5 projects listed. All States. All fit well into Category 2
 - State of Arkansas. Implemented ePro and interfaced with SAP
 - State of Oregon. Implemented ePro
 - State of Illinois. Implemented ePro and interfaced with SAP
 - Commonwealth of Massachusetts. Implemented ePro
 - State of New Jersey. Implemented ePro and interfaced with CGI
3. Subcontractors
 - The vendor states they perform prime on 100% of their projects, but can sub-contract with companies such as CGI, Accenture, PCG, Deloitte, Civic Initiatives, Guidehouse, and more.
4. Organizational Chart
 - Yes, the org. chart is provided, but **the job descriptions are not.**
5. Litigation
 - The vendor states they do not have any.
6. Financial Viability
 - Provided audited summary.

Individual Comments:

Overall/General

- Solution is called Periscope EPro
- SaaS solution and COTS.
- One Stop Shop. Modular in nature. Can implement one or all modules.
- Page 60 "ePro™ was created as an enterprise-class, end-to-end public procurement solution by public procurement professionals."
- Page 116 "AWS is Periscope's strategic partner for hosting services."

A. General Principal and Requirements

1. Key Solution Functionality Elements – p. page 2 - 27

The electronic procurement solution must not only address the functionalities and processes described in subsequent sections but also bring specific capabilities that provide the following high-level functions to Participating Entities:

- Single point of entry – a single initiation point for all procurement activity.
- Smart routing – a rules engine that electronically guides users down the appropriate procurement pathway.
- Compliance – a technology solution that has business rules and controls "baked in" (See APSM).
- Portal – a solution that integrates access, collaboration, community, personalization, resources and information for both buying and supplier users.
- Open marketplace environment – an electronic environment of goods and services that provides a "catalog of catalogs" like shopping experience with access to content in Participating Entity issued contracts, external Cooperative Contracts and external internet retail marketplaces.
- Integration – batch and real-time with existing financial management and other core systems.
- Workflow – a configurable, rule/role-based approval automation.
- Document management – automated solution to create, transact and store documents.
- Reporting, dashboards and data visualization – a solution to provide detailed reports and interactive visual analytics.
- Configurable – to address the specific and varying needs/uses of organizations within a Participating Entity both as an enterprise and individually.
- Transparency – provide public and internal visibility into purchasing activity and outcomes.
- **Single point of entry: Yes – both suppliers and agency users have single point of entry. Also supports SSO.**
- **Smart Routing: yes, can also create rule based fields.**
- **Compliance: Yes – worked with public sector agencies for past 20 years so able to meet and build in.**
- **Portal: Yes – Supplier portal workbench and a separate single portal for agency user s to manage.**
- **Open Marketplace Environment: Yes – Unlimited number of catalogs and can add all type (punchout, open market, internal contract catalogs)**
- **Integration: Yes many – page 7**
- **Workflow: Yes. Well explained**
- **Document Management: Yes pg 26**
- **Reporting: Yes. Pg 27**
- **Configurable: yes pg 27**
- **Transparency: Yes, meets requirements. Page 27**

2. User Experience – p. page 28 - 37

The Solution must provide a user experience that is simple, direct and effective. Characteristics of this experience at a minimum must include, but not be limited to:

- Capability that allows user personalization of their initial screen based on their needs or use of the Solution.
- Intuitive navigation that guides users to the appropriate Solution component with as few clicks as possible.
- Wizard-driven capabilities that can direct the user to the appropriate process or functionality of the Solution.
- Portal that informs users and supports user work management.
- Functionality optimized for mobile access and use.
- Workload management functionality that will allow the re-assignment of work to another user. This includes, at a minimum, purchase requests, solicitations and contracts.
- Role-based functionality for drafting, review and approval, evaluator and other processes.
- Initial screen: Yes, allows users to personalize through Homepage/dashboards – users can individualize their dashboard.
- Intuitive: Yes, Clean look with a left navigation bar for quick access and a regular and an advanced Search option.
- Wizard driven: Yes, page 31 *“Periscope ePro provides guided user processes and functionalities based on role, organization, and record type.”*
- Portal: Yes, page 31 *“The six colored boxes on the Homepage change based on the user's role and display the number of documents for each status that requires the user's attention and/or action. These boxes highlight the document statuses that are most important to the user based on his/her role.”*
- Mobile use: yes, can support mobile use.
- Workload Mngt: Yes, page 35 *“ePro enables authorized users to access procurement records (requisitions, bid solicitations, purchase orders, etc.) and reassign them to another user within the organization, department, or location.”*
- Role Based functionality: Yes, page 35 – *“Periscope ePro provides standard roles (department user, basic purchaser, accounts payable, auditor, super users, and multiple administrative roles) with the ability to assign unique privileges to each user. The role and privilege within the assigned organization and department will define the actions a user may take in the procurement process. Roles and privileges will enable users to create and maintain documents, conduct audits with view-only rights, complete approvals, participate in evaluations, and more. Multi-organization access is granted to users as part of their overall user profile. This access is granted by Internal Administrators, a role that provides administrative privileges across all organizations.”*

3. Bidder Best Practices and Roadmap – p. page 38 - 45

Participating Entities are seeking a best value opportunity and Bidders should consider best practices and alternatives including the cost benefits of alternative solutions. Proposed solutions must demonstrate creativity, innovation, benefits, and the outcomes brought to Participating Entity. For any project initiated by a Participating Entity the Contractor will:

- Incorporate new Solution version releases or new features/tools when they are available.
- Ensure that the Solution is utilizing the latest technologies.
- Ensure that updates happen in a timely manner.
- Present alternative processing approaches, services, methodologies, business processes or any other best practices to the Participating Entity for consideration of adoption that demonstrates a commitment to continuous improvement.
- In addition, the Contractor must constantly assess and recommend opportunities to reduce costs associated with any aspect of the contract, including project implementation and other services. The Participating Entity is not obligated to accept and implement any recommendations.
- Additionally, Bidders must include the current 3-year product roadmap and describe in detail how it demonstrates continuous improvement for the Participating Entity.
- Provide Enhancements...: Yes. Very focused on Govt.
- Solution latest Technologies: System is highly configurable. – page 38 *“and during the implementation process, we will ensure that the system administrator(s) are comfortable making changes. We implement with client sustainability in mind so that a client does not have to come back to us for most modifications. However, at times we realize enhancements are necessary. Periscope is accustomed to providing product enhancements to meet new legislation or new business initiatives”*
- Use Agile methodology
- Updates Timely: Page 39 – 4 new releases a year.
- 3-year Roadmap: Design a roadmap around user's business needs. They have a fully thought-out roadmap!

4. Innovations and Value-Added Features/Services – p. page 46 - 53

In addition to the stated requirementGEs, the State seeks creative innovations, value-added features and value-added services not contemplated in the RFP.

Response requirement: OPTIONAL

• Inline Narrative: If responding to this section, Bidders must provide a detailed description of any additional proposed innovations and value-added features/services as well as the benefits and outcomes Participating Entities and Suppliers would realize. Bidders must be prepared to demonstrate these benefits and outcomes. Bidders must indicate if any of the innovations or value-added services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- Periscope is offering the following optional innovation and value-add services (Services are explained on pages 46-53):
 - Periscope Supplier Network (PSN) & S2G Supplier Experience
 - ePro™ For Locals
 - Periscope Reconciler
 - Payment Gateway within ePro
 - Sustainability - Ecovadis
 - Grants Management
 - NIGP Consulting Services
 - Strategic Sourcing
 - Equity Diversity and Inclusion
 - SAP Experts - Phoenix Team
 - Procurated

5. Customizations/Extensions – p. page 54

Proposed electronic procurement solutions are expected to be out of the box, configurable solutions. However, it is understood that for any project initiated by a Participating Entity some of the expected innovations and functional requirements may necessitate customizations/extensions to an existing solution. Any such customizations/extensions provided must become part of the Bidder's base electronic procurement product(s), upgraded in all future versions, available to all other Participating Entities and adhere to the following:

- Bidders must advise the Participating Entity of any out of the box or configured functionality that could be used in lieu of customizations/extensions to meet requirements and identify any necessary changes to requirements, processes, policies and, if applicable, revised Participating Entity legal code.
- Customizations/extensions must not introduce a performance issue, bottleneck, or processing delay in the implemented electronic procurement solution.
- Customizations/extensions must not invalidate, negate, or minimize any warranty or maintenance requirement as agreed to between a Participating Entity and their current third-party providers that support the current Participating Entity systems.
- Customizations/extensions must not be constructed in such a manner as to confound, add complexity to, or introduce technical burdens that would impact the maintenance, upgrade, or new releases of the electronic procurement Solution.
- Bidders must advise the Participating Entity of any organizational change management (OCM) impacts that will result from proposed customizations/extensions.
- While the State expects customizations/extensions to be completed during the project implementation period, release of any customizations/extensions that extend beyond the implementation period must be identified on the Bidder's product roadmap submitted with the proposal.
- Inline Narrative: Bidders must provide a brief description of how the proposed solution addresses the bullets above in regard to customizations/extensions that may be created in the execution of a project for a Participating Entity.

- Agile method which allows for enhancements to be applied at a rapid pace.
- Will sit down with customer and discuss. The roadmap is published 1 year ahead of schedule so State may align with their needs

6. Alternative Funding Models – p. pages 55 - 57

Although proposals will be evaluated based on offered price discounts, Bidders are encouraged to recommend alternative funding models that could be available to Participating Entities when they execute an agreement from a Contract resulting from this RFP. Recommended funding models must be documented in detail and be independent of all pricing proposed in the cost workbook. These funding models should reflect any ongoing funding and investment requirements necessary for all project implementation and other services costs. The recommended alternative funding models must:

- Be described in detail to fully;
- Explain how each model would work;
- Identify the benefits that Participating Entities and their suppliers would realize; and
- Identify any successes experienced by other clients implementing the model. Bidders must be prepared to demonstrate these benefits and successes.
- Inline Narrative: If responding to this section, Bidders must provide a detailed description as outline above for each recommended funding model.
 - Periscope mostly explains how if you apply their entire solution where and with what modules you will save money, efficiency, etc.
 - They also offer an administrative fee collection process. (Page 57)

7. Contract Transition and Flexibility – p. page 58

- Yes, Periscope answers this with: *"Periscope will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions. Ultimately, we let our clients determine what the best path forward is for them. We have transitioned clients from one contract vehicle to another without any issues or interruption in service."*

B. Functional Requirements: pages 61 – 99

The following functional requirements must be addressed by Bidders and are organized by the electronic procurement workstreams identified below. Each workstream has corresponding detailed requirements identified in the Requirements Traceability Matrix (RTM) document.

Bidders may submit proposals that address one or more workstream however Bidders must respond as directed in each workstream section and provide detailed responses to each individual requirement in the corresponding section of the RTM.

Proposed solutions may rely on third party software components or other partnerships to provide a complete solution. Bidders are encouraged to look for partnerships that will bring an innovative, integrated, and comprehensive Solution to Participating Entities.

General F: The General Functionality section includes requirements that apply to either the entire electronic procurement solution or multiple components of the solution. The **electronic procurement solution must be cloud-based with a Software as a Service (SaaS) delivery model**

1. **General Functionality.** Tab 2, GEN-1 through GEN-40 and - p. 61
 - a. 2- N "Not Available"
 - b. 2 - Extreme
 - **Gen 6** (Purchase/Data Analytics must integrate with the State data warehouse and State BI reporting tool; to provide access to all transaction...) - **Doesn't meet requirement.** *"This functionality is on the future roadmap for Periscope."*
 - **Gen 31** (The eProcurement Solution should provide the capability to translate web and application pages into foreign languages including but not limited to Spanish, French, Chinese, German, Russian, Japanese, Italian) - **Doesn't meet requirement.** *"Periscope ePro does not provide translation capabilities, but is open to language exploration, as needed."*
 - Rest of GEN requirements are met.
2. **Supplier Portal.** Tab 3, SPR-1 through SPR-23 and - p. 23 and pages 61-62
 - a. All "A" and "L"
 - Meets all of the SPR requirements.
3. **Supplier Enablement Management Workstream.** Tab 3, VDR-1 through VDR-43 and p. 62-63
 - a. 7-"INT-Integration/interface"
 - b. 7 – Medium
 - **VDR 3** – Marked as "A" but will require Integration. **CLARIFY.**
 - **VDR 19 – 27:** Integration marked on many of these for tax, SOS etc.
 - Meets rest of requirements.
4. **Buyer Portal.** Tab 3, BPRT-1 through BPRT-15 and - p. 64
 - a. 1-BP "Business Process", 1-"INT-Integration/interface"
 - **BPRT 12:** (Search capability for - Performance metrics information (e.g. On-time delivery)) – **Doesn't meet requirement.** *"Search capabilities do not currently include supplier performance data as a search criterion, as our supplier Performance module allows each customer to configure performance criteria and rating approaches differently. However, supplier performance data is visible from the supplier profile listed in the search results and can be utilized in the Business Intelligence tool"*
 - Meets rest of requirements.
5. **Need Identification.** Tab 3, NEED-1 through NEED-7 and - p. 64-65
 - a. All "A" and "L"
 - Meets all of the SPR requirements.
6. **Request through Pay Workstream.** Tab 3, PRD-1 through PRD-62; WRK-1 through WRK-28; PO-1 through PO-29; PC-1 through PC-21; RC-1 through RC-21; INV-1 through INV-11 and - p. 65-72
 - a. 20 - N "Not Available", 2 - BP "Business Process", 2 -"INT-Integration/interface"
 - b. 5 – Medium, 19 - High
 - **PRD 11:** (The eProcurement Request Development functionality should provide the ability for end users to configure a standard purchase request for recurring purchases with the option to establish an automatic schedule to submit the purchase request for processing.). **Doesn't meet requirement.** *"ePro does not currently support this functionality. We will consider this as part of our Product Roadmap for future enhancement."*
 - **PRD 59:** (The eProcurement Request Development functionality should provide the functionality to alert users when a date (e.g., Delivery date, bid open date) is selected that is a non-work day. To support this, include details of calendar functionality.). **Doesn't meet requirement.** *" This functionality is not supported in ePro. Periscope will consider it for future enhancements as part of our product roadmap. When selecting a date within the transactions, a visual calendar is displayed enabling users to see weekends and weekdays being selected. "*

- **WRK 10:** (The eProcurement Workflow Management functionality must record the specific user that provided the approval and if the approval rule was Role based, then remove the pending approval action from the accounts of all other users in the same approval group.) **Doesn't meet requirement.** " *Approvers are not able to perform this action...only Creator can initiate this process.* "
 - **WRK 13:** (The eProcurement Workflow Management approvals functionality should be configurable to allow approvers to either approve or deny a request in total or by individual line items with approved items going forward.) **Doesn't meet requirement.** " *The functionality to approve at a line-item level is not supported in ePro and has not been identified by our other state and local government customers as a necessity. Periscope will consider it for future enhancements as part of our product roadmap.* "
 - **PC 8 - 21** (Pcard functionalities). **Doesn't meet requirement.** " *Pcard reconciliation capabilities are not supported. Periscope is open to evaluating this need and determining if can fit into our product development roadmap. We are also open to a 3rd party integration if outside solution supports it.* "
 - **RC 3 and 4** (Recording receipts for POs not in solution and associate to the receipt of PO at a later time). **Doesn't meet requirement.** " *On the outset, this request is not best practice and we would strongly discourage allowing receipts without a PO. A receipt must be linked to a Purchase Order within the solution. Periscope would be interested in a use case to determine if this is something we are willing to put on our product roadmap.* "
 - **INV 8** (The eProcurement Invoicing functionality should provide the capability to send an email notification to a supplier with comments and relevant attachments for rejected invoices. For electronic invoices, rejection transaction should be transmitted to the supplier.). **Doesn't meet requirement.** " *This functionality is not supported in ePro. Periscope will consider it for future enhancements as part of our product roadmap.* "
 - Meets rest of requirements.
- 7. Catalog Capability -** Tab 3, CAT-1 through CAT-40 and - p. 73-75
- **CAT 19** – marked as "A", but states " *ePro Marketplace currently does not supports the ability to enter negative line items for things such as trade ins, credits, etc. However, negative line items may be added to a requisition, purchase order and invoice.* " **Doesn't meet requirement.**
 - Meets rest of requirements.
- 8. Sourcing/Bid Management Workstream.** Tab 3, SRC-1 through SRC-151 and - p. 76-87
- a. 1 - N "Not Available", 2 – C – "Customize", 1 - BP "Business Process"
 - b. 2 – Medium, 1 - High
 - **SRC 4** – **Doesn't meet requirement.** EPro does not support a Two Step ITB.
 - **SRC 13** – **Doesn't meet requirement.** EPro does have some auction functionality but not specific surplus auction.
 - **SRC 14** – **Doesn't meet requirement.** EPro does have some auction functionality but not specific surplus sealed bid.
 - **SRC 144** – Partially meets requirement.
 - Meets rest of requirements.
- 9. Contract Management.** Tab 3, CNT-1 through CNT-88 and - p. 87 - 91
- a. 2 - BP "Business Process"
 - b. 1 - High
 - **CNT30** – **Workaround needed.**
 - Meets rest of requirements.
- 10. Vendor Performance** Tab 3, VPE-1 through VPE-25 and - p. 91
- Meets all VPE 1 - 25 requirements.
- 11. Purchasing/Data Analytics** Tab 3, PDA-1 through PDA-37 and - p. 92 - 99
- a. 1-N "not Available"
 - b. 1 - High
 - **PDA 37:** (The eProcurement Purchasing/Data Analytics functionality should have the ability for fixed price, item type contracts to compare contract items to non-contract items available in the eProcurement marketplace for price analysis.). **Doesn't meet requirement** " *ePro does not currently support this requirement, but we are very interested in further exploring the specific use*

cases for this functionality and identifying an innovative solution. Periscope looks forward to working with the State to develop a mutually agreed upon solution for this requirement. “

- Meets rest of requirements.

C. Technical Requirements: pages 100 - 144

1. Availability. pages 100

The solution should be architected to ensure 100% availability between peak use hours of any of the associated Participating Entity that has an agreement resulting from this RFP (i.e., 7am – 6pm local time, Monday –Friday). Availability is defined as the ability to process transactions according to service level agreement (SLA) performance levels specified in the Participating Entity agreement.

Sufficient redundancy must be maintained so that the system appears to be available 24-hours-a-day 7-days-a week. Redundant servers, mirrored servers or fail-over devices should be architected so failure of a single component does not affect overall system availability. Multiple points of presence to multiple internet service provider's (ISP's) should also be in place.

- Periscope directs us to their SLA for days/times. It's important to note for Negotiations (should they take place) that Periscope wants their Implementation, ongoing support, and operations to be governed by their standard SLA's, but will consider in negotiation.
- Looking at their SLA attachment – 99.9 %.

2. Accessibility Requirements. Page 100

The Solution should provide capabilities to support users with disabilities that are in compliance with Section 508 of the Federal Rehabilitation Act and W3C Web Accessibility Initiative standards/guidelines. Proposals must describe existing accessibility capabilities, compliance with these standards/guidelines and identify any existing associated certifications. This discussion must address both publicly available and login-secured components of the Solution.

- Yes, meets requirements.

3. Audit Trail and History RTM: Tab 4, TECH-1 through TECH-5 and - p. 100

- **Tech 4** (Procurement Solution must provide for an authorized user to override approval rules) – Not available – Doesn't meet requirement; however, they mark it as available in the software. **CLARIFY**
- **Tech 5** (The eProcurement Solution should provide a user transaction history across all entities, delineated by entity ID) . They can customize; however, they mark it as available in the software. **CLARIFY**
- Rest of requirements met.

4. Browsers Supported - p. 101

- Yes, meets requirements.
- Page 101 – “ Our products and all their features are designed to be browser and operating system agnostic and work best on all the latest manufactures' supported browsers. Thus, it will look and function the same if the user is on a Windows, Android, Apple, or another device; and with Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari browsers.”

5. User Accounts and Administration RTM: Tab 4, TECH-6 through TECH-20 and - p. 102 - 103

a. 1-N “Not Available”, 1-BP “Business Process”

b. 1 – Medium, 1 - High

- SuperUser Roles (page 102):
 - Organization Administrator
 - Internal Admin.
 - Vendor Admin.
 - Accounts Payable Superusers
 - Department Access Superusers
 - Basic Purchaser (BP Supervisor)
- Standard User Roles (page 102):
 - Basic Purchaser / Buyer
 - Audit inquiry Role
 - Department Access
 - Accounts Payable
 - Supplier
- Can also create roles for users (Market place User Roles (page 103)
- Tech 12 (The eProcurement Solution should provide capability for entities that have both buying and supplier accounts to have dual sign-on via one account) – Periscope does not meet this

- requirement *“Periscope does not support this. A government agency may have Seller and Buyer accounts BUT they are separated by unique login information and access”*
- Tech 16: Marked as “A” in the system, but the answer alludes to customizing They can customize; however, they mark it as available in the software. **CLARIFY.**
 - Tech 18 – BP – Periscope doesn’t send emails, but does log information. Requirement not met.
 - Rest of Tech requirements met.
- 6. User Authentication** RTM: Tab 4, TECH-21 through TECH-25 and - p. 104
- **Tech 25** (The eProcurement Solution should provide capability to automate acceptance and tracking of end user 'acceptable use' agreements and provide electronic notice to users to "renew/reaccept" on a scheduled basis (e.g. annually, bi-annually) as part of the login process). *“Periscope does not support this and would consider it as a future enhancement”*: Not available – Doesn’t meet requirement; however, they mark it as available in the software. **CLARIFY**
 - Rest of requirements met.
 - Page 104. *“Periscope SSO is based on SAML 2.0 specifications. SAML 2.0 is supported by several well-known IdPs listed below that can be used to set up SSO with ePro™. Other SAML-based IdPs can also be used but have not been tested and verified by Periscope. Some of our successful SSO integrations include:*
 - • Active Directory Federation Services (ADFS) 2.0 and 3.0
 - • OneLogin
 - • Okta
 - • Auth0
 - • Salesforce.”
- 7. Federated Identity Management** – p. 105
- Page 105. *“Periscope SSO is based on SAML 2.0 specifications. SAML 2.0 is supported by several well-known IdPs listed below that can be used to set up SSO with ePro™. Other SAML-based IdPs can also be used but have not been tested and verified by Periscope. Some of our successful SSO integrations include:*
 - • Active Directory Federation Services (ADFS) 2.0 and 3.0
 - • OneLogin
 - • Okta
 - • Auth0
 - • Salesforce.”
- 8. Data Conversion** RTM: Tab 4, TECH-26 through TECH-34 and - p. 105
- a. 9 - Extreme
- All are marked at an extreme level of complexity, but they are also marked at already “A” available. Most all can be done, but Periscope highly recommends against. See Tech26 response – *“Periscope provides tools to convert data from legacy systems, and has done so with other clients. However, we strongly advise against wholesale conversion of legacy data, as implementation of a new eProcurement solution is an opportunity to start fresh. Data conversion of unnecessary data simply clogs the new system in many cases. Our recommendations for what data should/shouldn’t be migrated are outlined below.”*
 - This may give an impression of Periscope not being well versed in data conversion.
- 9. Interface and Integration** RTM: Tab 4, TECH-35 through TECH-60 and - p. 106
- a. 1-INT-“integration/Interface”,
- b. 26 - Extreme
- Concern: Again – all these (TECH 35 – 60) are marked as extreme level of complexity which gives an impression of Periscope not being well versed in data conversion. **CLARIFY** – was this intentional because much of the requirements seem to be able to be met?
 - Tech 50 – Partially meets requirement
- 10. Office Automation Integration** RTM: Tab 4, TECH-61 and - p. 109
- TECH 61 – *“ePro supports document formats created in Microsoft Word, Microsoft Excel, and Microsoft PowerPoint”*
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met.
- 11. Mobile Device Support** RTM: Tab 4, TECH-62 and - p. 111

- TECH 62 – “ePro and its modules (Marketplace) are built to be screen size responsive and can be utilized on all devices that can access a browser and internet.”
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met
12. **Mobile Applications** - p. 111
- Yes, meets requirements
13. **Data Ownership and Access** - p. 112 - 114
- Can't find anything on State owning the data – doesn't meet requirement. They did discuss ways to access the data.
14. **Date Retention, Archive and Purge Considerations** RTM: Tab 4, TECH-63 and - p. 114
- Page 114 – “Periscope’s ePro solution, by default, maintains information in perpetuity. However, Periscope can configure it to meet State-specific retention policies.”
 - TECH 63 – “ePro provides the ability to archive data from a production environment while keeping the data available for reporting on historical data.”
 - **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met.
15. **Disaster Recovery Plan** - p. 115
- Yes, has a full plan.
16. **Solution Environments** RTM: Tab 4, TECH-64 through TECH-67 and - p. 116
- a. 2- Extreme
- **CLARIFY** – was the E “extreme” intentional because the requirement(s) seem to be able to be met
 - AWS is Periscope’s strategic partner for hosting services.
 - 3 environments are deployed - UAT, Training, and Production – Partially meets requirement missing development.
17. **Solution Technical Architecture** - p. 117 - 125
- Meets the requirements for what they gave us in their statements such as adhering to NIST 800-53 standards, SOC II, and PCI-DSS Audits; however, Periscope will not provide technical network information without a non-disclosure agreement.
18. **Solution Network Architecture** - p. 126
- Meets requirements
 - Amazon Web Services (AWS) hosted
 - Each ePro client segregated in their own virtual private clouds to ensure absolute isolation between clients.
 - All system interoperability between Periscope and clients is executed via HTTPS and TLS 1.2.
 - Failover availability in separate zones on the opposite side of the country.
 - Databases solely US based cloud storage and separate from other databases
19. **System Development Methodology** - p. 126
- Yes. Meets Requirements.
20. **Service Level Agreement** - p. 130 - 144
- Page 130 – Periscope states: “Periscope’s implementation and ongoing support and operations will be governed by Periscope’s standard SLAs, provided as part of our proposal, to align the State’s SaaS offering with those provided to all other customers. Periscope is willing to negotiate the addition of certain elements with the State if awarded this RFP.”
 - I do not see where they addressed the State/NASPO SLA – did not meet this portion of the requirement.
- D. **Security Requirements:** p. pages 145 - 155
1. **Cloud Security Alliance (CSA) Compliance**
 - Didn’t provide either report. Doesn’t meet requirement.
 2. **Security and Privacy Controls** nothing to add.
 3. **Security Certifications** nothing to add.
 4. **Annual Security Plan** nothing to add.
 5. **Secure Application and Network Environment** nothing to add.
 6. **Secure Application and Network Access** – Tab 5, SEC-1 through SEC-5.

- SEC 5 and 8 - Do not meet requirement(s)
 - Meets remaining requirements.
7. **Data Security** – nothing to add.
 8. **Personally Identifiable Information Protection** – nothing to add.
 9. **Security/Privacy Issue Occurrence** – nothing to add.
 10. **PII Data Actual/Attempted Access or Disclosure** – nothing to add.
 11. **Security Breach Reporting** – nothing to add.

E. Implementation Services Requirements: 156 - 207

1. **Project Management**
 1. They layout PM responsibilities.
 2. All their PM's are PMP certified with public sector experience. They give names and bios of possible PM's.
 3. Standard PM process.
 4. Meets requirements
2. **Project Implementation Methodology** p. 177 - 186
 5. Meets requirements
 6. 4 phases: Project Setup/Analysis, exploration/design, system implementation/configuration, and postimplementation go live and support.
3. **Catalog Support Services** p. 187
 7. Yes. Will tackle onboarding current Contracts first. Then communicate with suppliers.
 8. Suppliers can use Periscope's supplier enablement team to assist them throughout life of the Contract with the State. **CLARIFY – is there a cost to the provider or state.**
 9. 4 different types of catalogs that are handled differently – page 188 – 189
 - a. Hosted catalog
 - b. Internal catalog
 - c. Punchout catalog
 - d. Integration to the online retail marketplace
4. **Data Conversion Services** p. 190
 10. Work with State to create a data migration plan. A typical plan includes:
 - a. • Supplier data
 - b. • Contract header data
 - c. • Contract items (descriptions, pricing, unit of measure, etc.)
 - d. • Organizational data, including agencies and departments
 - e. • Departmental bill to/ship to addresses
 - f. • User data, including role assignments
 11. It looks like the State is responsible for data cleansing and extracting.
5. **Interface/Integration Development Services** p. 191 - 192
 12. Yes – can integrate across multiple financial systems
 13. Page 192 – *“The State will be responsible for providing technical resources with expertise on the financial and other State systems. These resources will use the XML produced by the Periscope ePro™ Integration module and process it in such a way as to post data into the receiving system. Periscope will work with those resources to confirm the design and to test the resulting functionality.”*
6. **Organizational Change Management (OCM Services)** p. 192 - 205
 14. Meets requirements.
 15. Discusses / explains typical OCM fundamentals.
 16. A big plus - Page 193 *“Periscope uses Prosci's ADKARR Model of individual change to support, supplement and reinforce our OCM approach.”*
7. **Training Services** – p. 198 - 203
 17. Yes, meets requirements.
 18. A very impressive Training plan to include:
 - a. Micro-learning videos
 - b. E-Learning & Simulations
 - c. Virtual instructor-led training

d. Instructor-led training

8. **Help Desk Services** - Tab 6 IMPL 1 – 5 and – p. 204 - 207

19. IMPL 1 – 5 Meets all requirements

20. IMPL 5 - Periscope utilizes Zendesk to support tickets submitted by the State.

9. **On-Site System Stabilization Support** – p. 207

21. Yes, Meets requirements.

F. **Managed Services Requirements:** page 208 - 248

1. **Solution Support**

22. Releases are at scheduled times throughout the year.

23. Allow twenty days to test before deployment and can submit issues to the Zendesk. **_Unsure if this is standard time or if more time should be allowed.**

24. Meets Requirements

2. **Organizational Change Management (OCM Services)**

25. Yes, meets requirements. Same as OCM notes above.

3. **Training Services**

26. Yes. A very impressive Training plan to include:

- a. Micro-learning videos
- b. E-Learning & Simulations
- c. Virtual instructor-led training
- d. Instructor-led training

4. **Catalog Support Services**

27. Yes, meets requirements. Refer to implementation section of OCM services page 187.

5. **Help Desk Services**

28. Yes, meets requirements. Refer to implementation section of OCM services page 204.

6. **Transition Out Assistance Services**

29. Yes, they will work with the customer based upon the agreed upon SOW.

G. **Other Available Services:** RTM: Tab 7 MNGD-1. Page 248

Bidders are to identify and provide details on any additional services that will be available to Participating Entities.

• RTM: Tab 7, MNGD-1

• Inline Narrative: If responding to this section, Bidders must provide a detailed narrative response that describes any other available Services. Bidders must indicate if any of the additional services are at an additional cost and identify those in the cost workbook (reference "Innov, Value-Adds, Addl Svc" Tab).

- MNGD1: Application performance - near real time.
- MNGD1: Use an external **solution (Pingdom, one of the top services available)** to monitor average response time from across the United States 24 hours a day.
- **Note: Keep subcontractor in mind for negotiation purposes.**
- For further services they refer us back to the Value-add services section which has: Periscope is offering the following optional innovation and value-add services (Services are explained on pages 46-53):
 - Periscope Supplier Network (PSN) & S2G Supplier Experience
 - ePro™ For Locals
 - Periscope Reconciler
 - Payment Gateway within ePro
 - Sustainability - Ecovadis
 - Grants Management
 - NIGP Consulting Services
 - Strategic Sourcing
 - Equity Diversity and Inclusion
 - SAP Experts - Phoenix Team
 - Procurated

H. **Video Demonstrations:** Page 249

- 43-minute demo. Well done and addressed the full system beginning to end.
- Serve 8 states and over 1,000 locals
- Understand that every Government Entity is unique.
- Nice look to dashboard

- Like how can view mine or others as a master role (example State Procurement Office) Will help us help them.
- Bolded sections are state defined fields.
- Can compare products / suppliers

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: (Periscope Holdings)

CATEGORY #(s): 2

DATE: (10/3/2021)

EVALUATOR NAME: (Joe Zrioka)

EVALUATOR DEPARTMENT/STATE: (State of Maine Division of Procurement Services)

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- All three preliminary docs, certificate of insurance, cyber liability 4 mil
- Periscope's system is modular in nature. An organization can implement modules stand-alone or adopt various combinations of modules.
- ePro™, Periscope's proprietary eProcurement solution (SaaS)
- public portal- find suppliers, view current solicitations and state contracts, expirations and spend against those contracts
- tool that central procurement, agency end-users, and local governments use - while providing appropriate controls
- affiliated with the National Institute of Governmental Purchasing
- Periscope Supplier Network
- Winner of the NASPO Bronze Cronin Award
-

2. Previous Projects

- State of Arkansas – ARBuy - vendor management, solicitations, CLM, and Marketplace.
- State of Oregon - OregonBuys - full Procure-to-Pay functionality including requisitions, solicitations, purchase orders, contracts, vendor management, receiving, invoice matching/processing integrates with State financial system FMS supporting budget validation, vendor/supplier management, invoice/receiving and payment processing
- State of Illinois - BidBuy eProcurement - requisition, bid/solicitation, catalog, Supplier Punchout shopping and purchase order, change order, extension, and amendment functions
- Commonwealth of Massachusetts – COMMBUYS - Supplier Registration and Supplier Enablement with an integration to the State's Department of Revenue taxation system Sourcing; Contract Management; Catalog searching; Catalog Ordering; Requisitions; Purchase Orders; Business Intelligence Enhanced Business Intelligence
- State of New Jersey - requisitions, solicitations, purchase orders, contracts, vendor management, receiving, invoice matching/processing, integrating to the State financial system

3. Subcontractors

- CGI for this project due to ERP affiliation with Maine
- Accenture, PCG, Guidehouse, Deloitte, Civic Initiatives used elsewhere

4. Organizational Chart

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements **PERISCOPE EPRO** (by Periscope) developed modules, built within ePro for a seamless connection, but also designed to function as a "stand-alone" solution. Single point of entry smart routing rule based fields to direct users to the appropriate module, compliance portal open marketplace environment integration with multiple ERP's like CGI, Ellucian, B2G now, work day, ASAP, ecovadis, Tyler technologies, new world systems, sun gard, Oracle, PeopleSoft.

User Experience Allows user personalization of their initial screen based on their needs or use of the Solution. Home page and dashboards search feature on central search bar, advanced search, guided process and functionality based on role organization and record type, status action boxes, recent documents, alerts and notifications, mobile access, workload management, role based functionality.

Bidder Best Practices and Roadmap government focus: 100%. an agile development framework. schedule allows 4 new releases a year with sprints, In 2020 we further developed enhancements in a PCI compliant P-card vault, improved integration with a Contract Lifecycle Management module, and delivered a new ePro module called Reconciler - a supplier report and fee payment portal. 2021 road map goals; enhanced catalog loading and shopping enhanced supplier fee administration, enhanced business intelligence. Road map focus areas beyond 2021; predictive intelligence, guided buying, enhanced user experience, and Self-funded Experience

Innovations and Value-Added Features/Services

- Periscope Supplier Network (PSN) & S2G Supplier Experience
- ePro™ For Locals
- Periscope Reconciler
- Payment Gateway within ePro
- Sustainability – Ecovadis
- Grants Management
- NIGP Consulting Services
- Strategic Sourcing
- Equity Diversity and Inclusion
- SAP Experts - Phoenix Team
- Procurated **Pricing TBD based on level of desired integration.**

Customizations/Extensions Periscope will sit down with the customer and understand their business needs, and first see if there are processor methodologies in the current toolset that may provide the best outcome. If a new enhancement is the best solution, Periscope will provide a quote and timeline to add the request in the next available release. Also, we will work with the customer to lay out a change management plan in which to implement best practice procedures within their organization to successfully incorporate the new functionality.

DEPARTMENT/STATE: **Maine**

Alternative Funding Models **Periscope** (risk-sharing of convenience fees), also referred to as a self-funded approach, would allow the State to obtain the new eProcurement system at no cost
Contract Transition and Flexibility **Periscope** will work with any existing clients to provide them the best contract options at the time of renewal or when their current contract has exceeded extensions. Ultimately, we let our clients determine what the best path forward is for them. We have transitioned clients from one contract vehicle to another without any issues or interruption in service.

Functional Requirements

General Functionality - 1 N/A on translation, 39 Out of the box

Supplier Portal – 23 out of the box

Supplier Enablement/Management 7 INT w/med LOE, and 36 out of the box.

Buyer Portal 1- biz process w/low LOE, 1 INT w/low LOE, 14 OOBX.

Need Identification 7 OOBX

Request through Pay 2 biz process w/med LOE, 2 INT w/low and med LOE, 2 N/A, 56 OOBX – **Purch Req**, 2 N/A approver override, and line-item veto, 26 out of the box for **Wrkflw mgt**, 29 OOBX for **PO gen and mgt**, 13 N/A (wow), 7 out of box for **Pcard**, 2 N/A, 19 OOBX for **Receiving**, 1 N/A rejected invoice notification, 10 out of the box for **invoicing**.

Catalog Capability 40 OOBX

Sourcing/Bid Management 1 biz process w/low LOE, 2 custom w/med LOE, 2 N/A 2 step ITB and hiding supplier name, 1 3rd party w/low LOE, 145 OOBX

Contract Management 2 biz process w/low LOE, and 88 OOBX

Vendor Performance 1 N/A and 24 OOBX

Purchasing/Data Analytics 1 N/A and 36 OOBX

Technical Requirements

Availability **see SLA**

Accessibility Requirements We provide regularly updated accessibility compliance certification through our Voluntary Product Assessment Template (VPATs). With new feature releases, our software is tested for web accessibility standards with the Rehabilitation Act Federal ICT Accessibility / Section 508, W3C Accessibility Initiative, and WCAG 2.1 Level AA (which exceeds Section 508's standards). Our Quality Assurance program utilizes both the WAVE and ANDI toolsets, along with randomized keyboard testing.

Audit Trail and History **Auditing Event Tracking**

- User ID
- Date/time of change
- Information that was changed
- Outcome of an event
- NIST 800-53 (Rev 4) security-related events
- Other information the State requires can be developed

Additional Administrator Capabilities include:

- Ability to set inclusion or exclusion of events based on policy and operating requirements
- Export logs in text format based on UTC
- Generate reports based on ranges of dates and times
- Audit data only accessible by authorized users •
- No deletion or modifications permissions
- Logs reporting user access errors and exceptions
- Workflow consents are tracked as well as any changes

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Browsers Supported Windows, Android, Apple, or another device; and with Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari browsers.

User Accounts and Administration Role based; super user, standard user, marketplace user, agency user, supplier user

User Authentication • Active Directory Federation Services (ADFS) 2.0 and 3.0 • OneLogin • Okta • Auth0 • Salesforce

Minimum Password Length At least 7 characters

Maximum Password Length At least 7 characters

Enforce Alphanumeric Passwords Enabled always

User Password Lifetime Days 90 days or less (maximum)

Password Reuse Prevention 4 times or less

Maximum Login Attempts before Lockout 6 attempts or less

Lockout Period 30 minutes or more

Federated Identity Management– see user authentication above

Data Conversion our approach focuses on migrating **ONLY** that data necessary to support core business functions in the new system at go-live. **Historical data should be accessed outside** of the new eProcurement system (e.g., in a data warehouse, etc.).

Interface and Integration ERP's such as Oracle, CGI, SAP, and PeopleSoft

Office Automation Integration Microsoft Office suite of products (.docx, xlsx, pptx, etc. – and previous versions) are considered a standard for business automation and used for digital transformation. also accept Adobe products and other standard transformation file formats such as RTF, JPG, XML, & CSV for uploading, attaching, and linking for business documentation.

Mobile Device Support Periscope utilizes responsive web design rather than unique applications for each device type. **Would have to see it.** iOS, Android, etc.

Mobile Applications look and function the same if the user is on a Windows, Android, Apple, or other devices; and with Google Chrome, Firefox, Microsoft Edge, or Apple Safari browsers.

Data Ownership and Access Not clear whether the state owns the data or not. What makes our offering different is that we deliver using the powerful concepts of domains and topics. Domains and Topics are the layers that hide the complexities of a relational database structure of tables, rows, and columns. The process of creating domains using the BI domain builder maps the technical representation of purchasing data for example and creates a 'wrapper' with documentation in business language that an end-user can understand. End-users can then access this business 'wrapper' (domain) to get at the data they need the most. It is through this mechanism that our BI offering delivers on ad hoc functionality. The **following diagram (where?)** provides a visual of this 'abstraction layer that takes the inherent technical nature of a database schema and simplifies for the delivery of ad-hoc reporting. Published domains come with standard system language.

Date Retention, Archive and Purge Considerations Periscope's ePro solution, by default, maintains information in perpetuity. However, Periscope can configure it to meet State-specific retention policies.

Disaster Recovery Plan Periscope's Contingency Plans and Disaster Recovery Plans (CP / DRP) are designed to mitigate the risk of system and service unavailability by providing written solutions for the prompt and effective continuation or resumption of mission-critical services in the event of an incident or disaster. During the Notification and Activation Phase, initial actions are taken to detect and assess the damage inflicted by a disruption to the Periscope Platform. Based on the assessment of the event, the CP / DRP may be activated by the Disaster Recovery Team. Also, **AWS** has independently audited disaster recovery and business continuity plans for **AWS** headquarters & support services.

Solution Environments Production, Training, and UAT

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope Holdings

CATEGORY #(s): 2

DATE: 1/3/2022

SME/EVALUATOR NAME: Joe Zrioka

DEPARTMENT/STATE: Maine

Solution Technical Architecture Periscope ePro strictly adheres to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits. Periscope solutions are hosted with Amazon Web Services (AWS) with each ePro client segregated in their own virtual private clouds to ensure absolute isolation between clients. All system interoperability between Periscope and our clients is executed via HTTPS and TLS 1.2. All Buy Speed™ modules are written with Java technology. ePro™ supports both SOAP and REST web service formats and easily integrates with many standard systems.

Solution Network Architecture described in part above in solution tech archit.

System Development Methodology Agile Software Development Framework as the standard for all development efforts.

1. Project Initiation/Definition–Discovery, Estimation, SOW, High level Requirements
2. Risk Assessment
3. Functional User Requirements (User Stories)
4. Technical and Architectural Systems Design
5. System Programming or Customized Off the Shelf (COTS) Software Development/Acquisition
6. Quality Assurance
7. Documentation and Training
8. Systems Testing and Acceptance
9. Installation
10. Maintenance / Application Sunset

Service Level Agreement Periscope's implementation and ongoing support and operations will be governed by Periscope's standard SLAs, provided as part of our proposal, to align the State's SaaS offering with those provided to all other customers. Periscope is willing to negotiate the addition of certain elements with the State if awarded this RFP. Severity levels and credits.

Security Requirements

Cloud Security Alliance (CSA) Compliance adhere to the NIST 800-53 standards and are certified annually via a FISMA audit as well as SOC II and PCI-DSS audits. We are confident that the control families in the CAIQ are already addressed by these audits.

Security and Privacy Controls Our solutions capture data and content for the procurement space. As such it has elected to follow the NIST methodology to develop and put in place NIST best practices as it relates to a process and technical controls. Periscope performs an annual FISMA compliance audit administered by an independent third party to ensure that we maintain the appropriate security posture for a medium categorized offering. The audit confirmed that the hosting environment satisfied the required technical controls as specified within NIST 800-53 revision 4 for a moderately categorized SaaS solution.

Security Certifications

certified FISMA, SOC II-Type II, and PCI-DSS compliant.

Secure Application and Network Environment Periscope Platform is architected as a 3-tier application with a clear separation between the web, application, and database layers. The application layer will only accept requests through the web tier over specific protocols and ports. In addition, when hosted, Periscope secures the environment to ensure that perimeter devices such as firewalls and IDS are configured correctly to allow only recognized and valid connections. Our Tier III data center provides for a completely redundant and continually operating facility that has a 99.9% uptime track record. It is a carrier-neutral environment with 24 / 7 security and engineering staff.

Secure Application and Network Access ePro is hosted with AWS. Access to the system is restricted via VPN authentication, AWS Identity management, and ssh keys. Application access is secured with SSL (port 443) certificates supplied by the customer or issued through AWS route 53. No customer Hypervisor

DEPARTMENT/STATE: **Maine**

settings are in place. Virtualization is controlled with Terraform and is version controlled. The system is scanned for vulnerabilities by Rapid7 and patched as available. Meraki IDS is in place to detect and mitigate external threats to the network., Being hosted in AWS, physical access is limited to AWS personal as outlined in the following link. <https://aws.amazon.com/compliance/data-center/controls/> As our clients are hosted in AWS, we leverage Cloud trail <https://aws.amazon.com/cloudtrail/> This gives visibility into API calls and console access logging each transaction and associating it to a specific user. System access logs are maintained and reviewed for tracking users, IP, time, and exact commands that are executed. All employees are vetted with background and reference checks.

Data Security The Periscope data classification system is based on the concept of the need to know. Personally Identifiable Information Protection Periscope Solutions do not have PII information as a part of its data set.

Security/Privacy Issue Occurrence Our service level agreements are designed to accommodate the handling of all issues, including Security and Privacy Issues. **Responded to this as if a system outage occurred.**

PII Data Actual/Attempted Access or Disclosure Periscope Solutions do not have PII information as a part of its data set.

Security Breach Reporting Our service level agreements are designed to accommodate the handling of all issues, including Security and Privacy Issues. **Responded to this as if a system outage occurred.**

Implementation Services Requirements

Project Management **PERISCOPE** project management approach begins with a shared understand and shared goals. If we get that piece right, we have significantly improved the project's potential for exceeding expectations. Implementation plan , project deliverables , phase one project set up in process analysis, phase two exploration and design, phase three system implementation and configuration, phase four go live and go live support. Staffing plan; Project director project manager business lead technical lead organizational change manager hosting and infrastructure team supplier enabled enablement and marketplace onboarding customer success and support team

Project Implementation Methodology **same as above with a business process inventory added.**

Catalog Support Services primary and initial focus will be on suppliers that have a statewide contract and then shift to other suppliers doing business with the state wishing to do so.

- Supplier categorization and prioritization
- Marketing and communication
- Registration
- Marketplace catalog uploads and/or punchout enablement
- Ongoing guidance and support

Data Conversion Services approach focuses on migrating only that data necessary to support core business functions in the new system at go-live. Historical data should be accessed outside of the new eProcurement system (e.g., in a data warehouse, etc.).

Interface/Integration Development Services **Periscope** designed to support the unique integration needs of state governments, particularly as it relates to the need to provide integration capabilities to multiple financial systems. Interface needs, interface design, interface configuration and unit test.

Organizational Change Management (OCM Services **Periscope** OCM approach is focused on the organizational change management elements of communication, stakeholder engagement, and resistance management. The objective is to provide key stakeholders with the information and tools needed to successfully transition to the new ways of working. Engage stakeholders, communicate vision, highlight benefits, various channels, repeat messages, preferred senders, manage resistance, monitor and measure.

Training Services **Periscope** training approach and program has been developed so that it can be delivered in multiple formats. This approach caters to the different learning needs and requirements of impacted employees. Microlearning videos, elearning and simulations, virtual instructor LED training, and instructor LED training.

Help Desk Services

- Online support portal and ticketing system to report and track issues: Available 24 hours a day, 7 days a week; monitored during Business Hours (Monday-Friday 8am - 7pm Eastern excluding Periscope holidays);
- Ability to contact call center to report technical and functional issues during Business Hours;
- An easily accessible frequently asked question list and a technical and functional team available during Business Hours;
- Non-Business Hours response to tickets reported as Severity Level One issues;
- Ability to review responses to and update issues in the Online Support Portal;
- Ability to access online functional help tools such as quick reference guides and online video tutorials; and
- Ability to view all functional issues reported by the Customer in the Online Support Portal.

On-Site System Stabilization Support **Periscope** will provide a sufficient, appropriate combination of on-site and remote resources to support the State for ninety (90) days after the final, full implementation

Managed Services Requirements

Solution Support **Appears to be a repeat of implementation section.**

Organizational Change Management (OCM Services **Appears to be a repeat of implementation section.**

Training Services **Appears to be a repeat of implementation section with exception of a training plan example.**

Help Desk Services **Appears to be a repeat of implementation section.**

Transition Out Assistance Services In the event that a customer transitions away from our solutions, Periscope stands ready to assist in order to provide an effective transition. Our experience is that such a transition can take various forms and require different levels of involvement: some customers require simply a copy of their data, whereas other customers have requested additional services to assist with data translation to a new vendor. As such, Periscope works with each customer to identify needs, scope accordingly, and develop a specific SOW for the delivery of identified services.

Other Available Resources Other available services are included in Periscope's Innovation, Value-Add Section. Periscope is offering the following optional innovation and value-add services:

- Periscope Supplier Network (PSN) & S2G Supplier Experience
- ePro™ For Locals
- Periscope Reconciler
- Payment Gateway within ePro
- Sustainability – Ecovadis
- Grants Management
- NIGP Consulting Services
- Strategic Sourcing
- Equity Diversity and Inclusion
- SAP Experts - Phoenix Team
- Procurated

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- 8 states, 1000 cities as clients
- Work with buyer and supplier
- Ensure buyers receive the right bids. May be beneficial, but may also be a liability should an anticipated vendor not get notification
- Proprietary Solutions
- Supplier Network may be a conflict of interest if contracts are competitively bid
- Product is "ePro"
-

2. Previous Projects

- Large Client list provided; many cities, municipalities
- Good examples of results from their solution, not fiscal results though
- Some examples are full solutions, others partial
- Focus on revenue generating model; not all states utilize administrative fees

3. Subcontractors

- CGI is systems integrator (project manager?)
- Identified numerous subcontractors but only spoke with any description to CGI (Accenture, PCG, Guidehouse, Deloitte, Civic Initiatives, and more)
-
-

4. Organizational Chart

- Org Chart evenly distributes between state resources and vendor
- Lacking description what each role responsibility
-

5. Litigation

- None
-
-

6. Financial Viability

- Revenue almost entirely based on subscription model
-
-

Individual SME Comments:

General Principal and Requirements

- Periscope platform presented
- POSITIVE-single sign on
- NEGATIVE-Very small font, difficult to read
- QUESTIONING- Is solution customizable
- NEGATIVE-redefining terms such as clouds and blanket detract
- POSITIVE-Good showing different ERPs can integrate into
- QUESTIONING-White paper regarding PeopleSoft integration provided excessive information but was good to see.
- POSITIVE-Screen personalization is good
- POSITIVE-State Action boxes are a nice function
- QUESTIONING-Does supplier network create a barrier to entry?
- NEGATIVE-concerned about periscope additional income model with suppliers accessing other bids as potential conflict of interest
- QUESTIONING-If locals can use ePro at no additional cost, that alludes that other vendors are required to pay for access. If so, it is an absolute deviation from open and accessible bid opportunities.
- QUESTIONING-Periscope annual SaaS fee for reconciler seems to demonstrate a significant fee-based structure imposed to users for Periscope's solution
- NEGATIVE-is ECOVadis as a third party is at another additional cost, this time to both suppliers and clients
- NEGATIVE-Consulting services is yet another additional cost.
- QUESTIONING-How does Procured compared to Periscope which seems duplicative

Functional Requirements

- POSITIVE- developed for procurement initially
- QUESTIONING-Periscope has the term "ePro" trademarked?
- QUESTIONING-How are informal transactions addressed if Suppliers not awarded a formal contract
- POSITIVE-Level 2 punchouts identified
- INTERESTING-Reverse auction functionality
- POSITIVE-Notification of intent to award and non-award is a time saving function
- INTERESTING-Brief description of protest process is interesting but would need to know more
- QUESTIONING-Are contract negotiations versions retained in system throughout process?

BIDDER NAME: Periscope

CATEGORY #(s): Cat 2 Workstream, Stage 2 Proposed Services

DATE: 1/9/22

SME/EVALUATOR NAME: Michael Bacu

DEPARTMENT/STATE: Government Support Services / Delaware

Technical Requirements

- QUESTIONING-no reliability percentage provided
- POSITIVE-Roles are preferred to control access to system
- NEGATIVE-Periscope places data migration almost completely on customer
- POSITIVE-Good description of various reports available
- NEGATIVE-Disaster declaration suspends SLA, when services may be needed the most, Periscope may not be available

Security Requirements

- NEGATIVE-Disaster declaration suspends SLA, when services may be needed the most, Periscope may not be available

Implementation Services Requirements

- Project Management is SCRUM
- POSITIVE-Thorough description of project management approach

Managed Services Requirements

- INTERESTING-No names on resumes
- Training seems more heavily invested in online than in-person

Video Demonstrations

- Only public sector, 8 states
- Integrate to ERP solutions
- Modular, can stand alone
- Supplier Data is customizable
- Bids and solicitations detailed options
- Workflow approvals are good before being publicly viewable
- Can bids be locked as sealed until a certain date and time
- Contract templates, collaborate internally or external edits
- Can send email from the solution
- Changes be versioned for audit
- The interface is basic but professional looking, blocky
- Diversity attributes showing in the shopping results is good
- Complex catalog support is a good functionality
- Purchase orders is attentive to details, workflows are good
- Integration for payment the pulls back status is good
- Reporting is good, ad hoc is a good option, dashboard that are customizable
- PO list has very small text and lots of white space
- Integration is very generalized as described- basic steps applicable to any implementation
- Good mention of training, generalized discussion

Individual SME Comments:

Overall

General Principal and Requirements

Key Solution Functionality Elements

2-27	Both the supplier community and agency users have a single point of entry	
	A rules engine that electronically guides users down the appropriate procurement pathway.	
	Compliance -our solutions have evolved to changing processes, regulations, and technology demands. A	
	Periscope delivers what we call State eProcurement "Clouds". This cloud is truly a single portal that seamlessly connects each and every part of the procurement lifecycle for both buyers and suppliers. Buyers have the ability to track every single process and click directly to associated documents and historical information for each procurement phase	
	Marketplace enables an unlimited number of catalogs (punchouts level 1 and 2, external cooperative contracts, hosted catalogs loaded by the Supplier or State and other agencies publicly sourced and publicly shared catalogs) to be stored.	
	Periscope has provided proven integrations to State systems across our different customers and customer needs	
	Authorized users, typically an Organization Administrator manage approval workflow configurations. This role restricts their privileges to only their own agency. If a transaction triggers both an inherited (statewide or multi-org) approval workflow and a local workflow rule (meaning both apply based on their rules), then the transaction document would need to go through both approval paths. However, it should be noted that local government/co-op members are typically set up as "standalone organizations". That means that they do not inherit statewide approval paths from the State. Therefore, those approval workflows "inherited" by state agencies do not apply to standalone organizations. Users can be added to an approval path for special routing, and users can proxy to other users for vacation/absentee situations. Approval paths can be inherited and can be grouped logically to work conditionally and together. Users with administrative authority can edit approval paths.	
	provides an enterprise-level procurement solution enabling automated processes and a central location to store all records and documents. Based on

DEPARTMENT/STATE: Purchasing North Dakota State University

	State / Agency defined business processes, ePro can automate steps guiding users through procurement activities. T	
	provides reports and dashboards using data collected throughout the procurement process. Every field within ePro, including State Defined Fields, may be used when creating published reports, ad-hoc reports, and dashboards.	
	we offer extensive configurability through our solution to support unique processes and needs	

User Experience

28-37	Allows user personalization of their initial screen based on their needs or use of the Solution	
	Users can personalize dashboards in several ways: • They can select their individual dashboard from among a list of published dashboards. • An administrator can select default dashboards for each role type. • Users with ad hoc report creation privileges can build their own custom dashboards and leverage them on their ePro™ user homepage.	
	The left navigation bar provides access to your documents by type (e.g., purchase orders)	
	Controlled procurement processes guide a user through the electronic steps/milestone of the ePro solution. Processes such as supplier registration, transaction creation to completion, approval paths, etc. ensure process protection	
	The six colored boxes on the Homepage change based on the user's role and display the number of documents for each status that requires the user's attention and/or action. These boxes highlight the document statuses that are most important to the user based on his/her role.	
	ePro has been designed to support mobile use delivering different screen size options	
	ePro enables authorized users to access procurement records (requisitions, bid solicitations, purchase orders, etc.) and reassign them to another user within the organization, department, or location.	

Bidder Best Practices and Roadmap

38-45	We work on an agile development framework with sprints, to ensure our customers receive enhancements in a timely manner.	
	Our current schedule allows 4 new releases a year	
	before the final production release. In this manner, the customer knows exactly what will be available to them, and provide any feedback required before going into production.

This response is the same response that was submitted for category 1. The SME notes on this subject are listed below. I have copied the eval and RTM notes over from category 1 to category 2.

Periscope:

- Their Technical Proposal file 1 for Category 1 & 2 were the same as was the RTM.
- Their Technical Proposal file 2 for Category 2 had five additional pages where they included a "Senior Technical Analyst" position resume on PDF pgs. 46-50. Otherwise the content in File 2 was the same for both Proposals.

Individual SME Comments: *The video supplied with this vendors response provided a high level explanation of how the system operates. I found it very similar in nature to what I am used to seeing in a system.*

I can tell in this response that this vendor does have experience in working with State governments. I think that the "concerns" addressed in my notes are things that should be addressed and those requirements listed as possible "enhancements" should be implemented.

They supplied extensive information in the Implementation and Managed Services section of their response, but I did find that most of the information in these 2 sections are the same.

General Principal and Requirements – PDF Page 15

Key Solution Functionality Elements – PDF Page 15

- SSO for entry. Both the supplier and the user log in from the same page
- State can enter user defined fields to help navigate where the user needs to be.
- Meets "baked in" requirement.
- Access for both the buying and supplier users by using the same portal.
- Can configure landing page dashboards
- Listed what buyers and suppliers can manage on PDF Page 18
- Meets open marketplace requirements like search across catalogs.
- Can compare prices that are a result of a search
- Included a sample ePro/Peoplesoft Integration Whitepaper on PDF Page 21 thru PDF Page 38
- Meets the requirements of the workflow – PDF Page 39

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Market place shopping across all the catalogs. PDF Page 80
- Can prioritize what catalogs users need to utilize and compare search results.
- Fig 4.10 is the Periscope's Marketplace. PDF Page 81
- Workflow and approvals are configurable
- Orders go to Pos and then can create a receipt on that order.
- Solution offers Invoicing and other Payment options with configurable workflows.
- PCards can be used for placing orders. PDF Page 84
- Solution offers invoice matching and credit memos functionality along with subcontractor payment tracking.
- ePro Integration module is offered and explained on PDF Page 85
- CONCERN - EPROC-PRD-11 – Tab 3 Line 112 - Currently does not support standard purchase request for recurring purchases.
- CONCERN - EPROC-PRD-59 – Tab 3 Line 160 – Alerting users when a non-work date is selected is not currently supported.
- CONCERN - EPROC-WRK-10 – Tab 3 line 175 – Allow authorized approvers to override/bypass workflow is not currently supported.
- CONCERN - EPROC-WRK-13 – Tab 3 Line 178 – Allowing users to either approve or deny a request is not supported. Will consider this in future enhancements.
- CONCERN - EPROC-PO-16 – Tab 3 Line 211 - Does not support electronic signatures on approved orders.
- CONCERN - EPROC-PC-8 thru EPROC-PC-19 – Tab 3 Lines 234 thru 245 – These requirements are tied to credit card reconciliation which is NOT supported.
- CONCERN - EPROC-PC-21 – Tab 3 Line 247 - The ability to assign another user as a "proxy" to perform reconciliations actions on a Pcard in not supported.
- CONCERN - EPROC-RC-3 – Tab 3 Line 252 – Does not support recording receipts for POs not in the system
- CONCERN - EPROC-RC-4 – Tab 3 Line 253 – Does not support recording receipts without a reference to a purchase order.
- CONCERN - EPROC-RC-20 – Tab 3 Line 269 - The data provided from the ASN does not auto populate in the receiving screens
- CONCERN - EPROC-INV-8 – Tab 3 Line 280 – Does not support the ability to send an email to a supplier containing information about a rejected invoice.

Catalog Capability - PDF Page 86 thru Page 88

- Has one search capability with no limit of catalogs to be loaded.
- Lists of capabilities on PDF Page 87
- Listed benefits of their Marketplace – PDF Page 87
- Offers multiple options for establishing catalogs – PDF Page 88
- CONCERN - EPROC-CAT-19 – Tab 3 line 304 - Concern - Does not currently support negative dollar value as it is only available on Req, PO, or invoice

Sourcing/Bid Management - PDF Page 89 thru Page 100

- Listed states that have implemented this solution. PDF Page 89
- All solicitation documents are linked together in the system.
- Screenshot of managing a solicitation on PDF Page 90
- Has bid document management listed on PDF Page 91
- Integrated with Periscope Supplier Network

INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Offers special solicitation types frequently used by state government. PDF Page 92 - 93
- Notification for solicitations PDF Page 94
- Suppliers can send responses and they can be evaluated in the system. PDF Page 96
- Awards can be made in system and can create a contract or one time PO. PDF Page 99
- Bulk notifications. PDF Page 100
- CONCERN - EPROC-SRC-4 – Tab 3 Line 331 - System does not support Two-Step ITB
- CONCERN - EPROC-SRC-83 – Tab 3 Line 410 – Does not support web conferencing capabilities
- CONCERN - EPROC-SRC-102 – Tab 3 Line 429 - Does not support eSignature of a submitted response.
- CONCERN - EPROC-SRC-117 – Tab 3 Line 444 - Does not support the ability to hide name of suppliers from evaluators.
- CONCERN - EPROC-SRC-133 – Tab 3 Line 460 - The buyer needs to be an approver in a workflow step to be notified of an approver step?
- CONCERN - EPROC-SRC-138 – Tab 3 line 465 - Response addresses supplier receiving email about notification of award, but requirement is for posting award results to website.
- CONCERN - EPROC-SRC-140 – Tab 3 Line 467 - Response does not address if notifications contain that supplier was disqualified? Only states email lists awarded suppliers?
- CONCERN - EPROC-SRC-141 – Tab 3 line 468 - Response addresses multiple distributors, but requirement is asking if a non-award notification is sent?
- CONCERN - EPROC-SRC-143 - Tab 3 Line 470 - Response addresses the awarded contract or PO. The requirement is asking if the SOLICITATION can be cancelled and awarded to a different supplier.
- CONCERN - EPROC-SRC-146 – Tab 3 Line 473 - Responses does not state if a non-award email is sent?
- CONCERN - EPROC-SRC-147 – Tab 3 Line 474 - Response addresses the re-solicitation of information, but does not address the ability to post notice?

Contract Management - PDF Page 100 thru Page 104

- Contract Management workflow figure on PDF Page 100
- Offers contract creation, clause library and reporting functions.
- Contract Workflow and archival capabilities.
- Can track spend on contracts. PDF Page 103 – Financial Management
- Offers amendments process, eSignature, and the ability to define contract supplier fees. PDF Page 103
- CONCERN - EPROC-CNT-9 – Tab 3 Line 489 - Response does not address if system identifies if templates and contracts have been updated?
- CONCERN - EPROC-CNT-21 – Tab 3 Line 501 - Response does not address if system has user defined contract fields or error warnings?

Vendor Performance - PDF Page 104

- Based on “ticket” functionality sent to the supplier.

Purchasing/Data Analytics - PDF Page 105 thru Page 113

- Business Intelligence Solution is the solution name.
- Used to analyze the purchase data
- Offers numerous benefits listed on PDF Page 105

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- Offers Analytical Reporting
- Spend Analysis Reports are included and listed on PDF Page 105-106
- Cycle Time reports and listed on PDF Page 106
- Offers Workload Management, Contract Usage, Financial Management, Supplier, Ad Hoc Reporting
- The solution also offers dashboards as a reporting tool. PDF Page 108
- Offers Multi-Org Reporting. PDF Page 112
- CONCERN - EPROC-PDA-37 – Tab 3 Line 634 – Does not support ability to compare contract items to non-contract items in the Marketplace

Technical Requirements – PDF Page 113

Availability – PDF Page 113

- Stated this requirement will be governed by the standard SLA provided as part of this proposal.
- Provided an attachment link but was not operational for me.

Accessibility Requirements – PDF Page 113

- Seems to meet requirements

Audit Trail and History – PDF Page 113-114

- Listed compliance tools and administrator capabilities
- CONCERN - EPROC-TECH-4 – Tab 4 Line 8 - States the ability to override approval rules in not supported

Browsers Supported – PDF Page 114

- Meets req

User Accounts and Administration – PDF Page 115 -116

- Offered list of SuperUser and Standard User roles on PDF Page 115
- Listed Marketplace user roles for agency and suppliers on PDF Page 116
- “Degree of functionality increases over time” PDF Page 116
- CONCERN - EPROC-TECH-12 – Tab 4 Line 16 - System does not support dual sign on accounts via one account
- CONCERN - EPROC-TECH-18 – tab 4 Line 22 – System does not provide emails to users when changes are made to their account.

User Authentication – PDF Page 117

- Offers SSO capabilities.
- Supplied Login and Password Security Policy on PDF Page 117
- CONCERN - EPROC-TECH-25 – tab 4 Line 29 - System does not support automation of end user agreements

Federated Identity Management – PDF Page 118

- Meets requirements

Data Conversion – PDF Page 118

- Suggest only migrating that data necessary to support core business functions in the new system.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

- CONCERN- Their RTM makes suggestions on what data to convert, but it should be the state's decisions.

Interface and Integration – PDF Page 119 thru 122

- Experience with multiple ERP systems
- Vendor account data on PDF Page 119
- Transactions Processing is done with the financial system. PDF Page 119
- Offered definitions of pre-encumbrance and encumbrance on PDF Page 120
- Supplied typical Requisition and Purchase order configurations on tables on PDF Page 121
- Supplied status and message auditing process.
- CONCERN - EPROC-TECH-43 – Tab 4 Line 47 - Inventory update and checking integration would need to be scoped out.

Office Automation Integration – PDF Page 122

- Meets requirements

Mobile Device Support – PDF Page 124

- No app required. Periscope uses web design.

Mobile Applications - PDF Page 124

- Meets requirements

Data Ownership and Access - PDF Page 125 – 127

- Same information supplied on PDF Pages 105 thru Page 113 of this vendors response.

Date Retention, Archive and Purge Considerations - PDF Page 127

- Can configure to meet the State's needs
-

Disaster Recovery Plan - PDF Page 128

- Meets requirements

Solution Environments - PDF Page 129

- Provide UAT, training, and production environments
-

Solution Technical Architecture - PDF Page 130

- Uses Java technology PDF Page 130
- Supplied Software Development Lifecycle Policy – PDF Page 131 thru Page 139

Solution Network Architecture - PDF Page 139

- Meets requirements

System Development Methodology - PDF Page 139 thru Page 142

- Uses a Software Development Life Cycle process. PDF Page 139
- Supplied steps and roles for above mentioned process. PDF Page thru Page 142

Service Level Agreement – **MARKED CONFIDENTIAL**

- Provided sample of their SLA- PART 2 Document PDF Pages 2 thru Page 15

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Security Requirements – PART 2 Document – PDF Page 16

Cloud Security Alliance (CSA) Compliance - PART 2 Document – PDF Page 16

- Adhere to the NIST 800-53 standards
- Defer any further comments to the Security SME

Security and Privacy Controls - PART 2 Document – PDF Page 16

- Put into place the NIST best practices.
- Defer any further comments to the Security SME

Security Certifications - PART 2 Document – PDF Page 16

- Certified FISMA, SOC II-Type II, and PCI-DSS compliant.
- Defer any further comments to the Security SME

Annual Security Plan - PART 2 Document – PDF Page 16

- Strictly adhere to NIST 800-53 standards.
- Defer any further comments to the Security SME

Secure Application and Network Environment - PART 2 Document – PDF Page 18 thru Page 21

- High desire to protect all clients
- Must use multi-factor authentication for certain types of data
- Defer any further comments to the Security SME

Secure Application and Network Access - PART 2 Document – PDF Page 121

- Hosted with AWS
- Defer any further comments to the Security SME
- CONCERN - EPROC-SEC-1 – Tab 5 line 5 – System does not support capability to track usage to detect a new device
- CONCERN - EPROC-SEC-4 – Tab 5 line 8 - System does not support use of persistent cookies

Data Security - PART 2 Document – PDF Page 22 thru Page 24

- Apply need to know concept
- Seems to meet requirements
- Defer any further comments to the Security SME

Personally Identifiable Information Protection - PART 2 Document – PDF Page 24

- States their solution does not have PII information as a part of its data set

Security/Privacy Issue Occurrence - PART 2 Document – PDF Page 24

- States their SLA is designed to accommodate the handling of all issues.
- Defer any further comments to the Security SME

PII Data Actual/Attempted Access or Disclosure - PART 2 Document – PDF Page 25

- States their solution does not have PII information as a part of its data set

Security Breach Reporting - PART 2 Document – PDF Page 25 thru Page 26

- States their SLA is designed to accommodate the handling of all issues.

DEPARTMENT/STATE: State of Montana

- Defer any further comments to the Security SME

Implementation Services Requirements - PART 2 Document – PDF Page 27

Project Management - PART 2 Document – PDF Page 27 thru Page 48

- Based on experience in implementing the ePRO solution with other states
- Provided an implementation plan and defined roles and responsibilities
- Provided a table of estimated time to spend on projects. PDF Page 31
- Provided a Project Organization Chart listing roles and experience starting on PDF Page 32
- Project Organization Chart with roles on PDF Page 46

Project Implementation Methodology - PART 2 Document – PDF Page 48 thru Page 57

- Implementation project phases on PDF Page 49
- Explained in detail each phase of the project

Catalog Support Services - PART 2 Document – PDF Page 58 thru Page 60

- Provided supplier enablement process. PDF Page 58
- State Communication plan
- Supplied definitions and differences of each catalog option. PDF Page 59 -60

Data Conversion Services - PART 2 Document – PDF Page 61

- Data conversion is based on the experience they have

Interface/Integration Development Services - PART 2 Document – PDF Page 62

- Experience with integration across multiple financial systems.
- Explained the process for implementation of interfaces or integrations.

Organizational Change Management (OCM Services) - PART 2 Document – PDF Page 63 thru Page 69

- Service consists of elements of communication, stakeholder engagement and resistance management.
- Creating Change Readiness – PDF Page 65
- Change Curve Exit Criteria – PDF Page 67
- Sponsorship is the greatest overall contributor to the project success

Training Services - PART 2 Document – PDF Page 69 thru Page 75

- Training Plan - PDF Page 70
- Training Approach & Modalities – PDF Page 71
- User based Training Summary – Tables on PDF Page 71 thru 74
- [Link provided to training plan in the Managed Services Requirements Section](#)
- Provided other links to more training resources – PDF Page 74

Help Desk Services - PART 2 Document – PDF Page 75 thru Page 78

- Provided information on services offered and explained levels of support.
- [Same information is offered in the Managed Services Requirements section.](#)

On-Site System Stabilization Support - PART 2 Document – PDF Page 78

DEPARTMENT/STATE: **State of Montana**

- Provides support 90 days after full implementations

Managed Services Requirements - PART 2 Document – PDF Page 79

Solution Support - PART 2 Document – PDF Page 79 thru Page 84

- Meets requirements

Organizational Change Management (OCM Services) - PART 2 Document – PDF Page 84 thru Page 91

- Same information supplied on PDF Page 63 for the implementation Services Requirements

Training Services - PART 2 Document – PDF Page 91 thru Page 114

- Same information supplied on PDF Page 69 for the implementation Services Requirements
- Contains sample and confidential project training plan starting on PDF Page 96

Help Desk Services - PART 2 Document – PDF Page 114 thru Page 117

- Same information supplied on PDF Page 75 for the implementation Services Requirements
- CONCERN - EPROC-IMPL-4 – Tab 6 Line 7 - Response does not address the live chat tool requirement?

Transition Out Assistance Services - PART 2 Document – PDF Page 117

- Meets requirements

Other Available Services – PDF Page 119 thru Page 127

- Once the scope of work is established for additional offerings, Periscope can develop accurate costs.

Video Demonstrations

This solution can be implemented in a full solution or can be done by module. The video is broken up into the categories that are listed below.

Public Facing Side of Application – Suppliers register here and can log in from this page. State users also log in here and the landing page has the options available to the user based on the roles and permissions assigned to them. Has left side icon navigation to gain access to correct module.

Requisition process is the starting point and the result of this could be a solicitation or a purchase order. Information carries from the requisition to the solicitation. Build the bid, submit to workflow, add suppliers and post electronically. Solution offers tabs across the top of the screen when building a bid. Suppliers can open FORMS associated with the bid and fill them out as part of their response. Workflow is based on the criteria that is entered by the state. Can evaluate the bid response in the system.

Contract Management – Can have contract tied to bid. This solution offers building the document, review rounds, and eSignature application. Solution has access tabs across the top of the application. Also provides different “statuses” of contracts. Can send out the contract to multiple parties right from the contract record. Can perform amendments and renewals.

Marketplace – List of all catalogs including, state catalogs, and punch out catalogs. The system provides a search across all catalog functionality. Can refine the search results and then can compare items.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Periscope

CATEGORY #(s): Stage 2 Category 2 – Individual Workstreams

DATE: 12/20/2021

SME/EVALUATOR NAME: Tom Hastings

DEPARTMENT/STATE: State of Montana

Orders start with requisition, then the approval process. It transitions into a PO and then gets sent to the supplier. The system that can use the receipts process where the user can receive the items in the system. An approval process can be implemented and then it goes to the invoicing process. The invoice will be finalized, and workflow can then be applied.

Reporting – User can access “canned” reports or authorized users can build ad hoc reports. The solution also offers dashboard reporting as well. Can use a workflow dashboard to track workload.

Reconciler Tool – This can be used to help track the spend on contracts. It allows to set up a percentage fee and can use fee exclusions applied to certain lines items. The system allows the vendor to log into his portal and see what fees they are responsible for from the supplier portal. They can pay the admin fees or any other fees and can select multiple payment options.

S2G Tool – This is a tool that allows the supplier to interact with the state governments. Bids, catalog management, and sales reports are some examples.

The last part of the video provided information on implementation services.

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 1999.
 - SaaS Platform - Procurement services automating RFS, RFQ, SOQ, RFP, General/Sub and Trade Contractor bids.
2. Previous Projects
 - 5 previous projects provided; however, only the contact information is provided. There is not enough information to determine what services and software was provided for them. They do provide reference letters from seven more clients that give a bit more information. The letters comment on projects of document control, electronic bidding services, creating a procurement program, modernizing the bidding process, E-bidding, and E-hosting. It seems they fall into Category 2.
 - Provided a long list of completed projects (Client's names) over the last five years (pages 10 – 66)
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart is provided; however, **no job descriptions.**
5. Litigation
 - Vendor states none in the last 22 years.
6. Financial Viability
 - Provided DnB number and states they are 100% liquid. **However, none of the forms requested were provided (DnB snapshot or 3 years of audited financials).**

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Est. 2013.
 - They focus on Product Development, support, research, development operations, and high-end information technology consulting services.
 - They build and support technology products.
 - CMx product is a contract management software. (Enterprise Contract Management Software Platform) – manages Contract lifecycle
2. Previous Projects
 - Provided five previous projects; however, the information provided was limited to contact information with a short description of the system. It seems they all installed all or a portion of the CMx software.
 - Although there is very little information, this small sector would meet Category 2's intent.
3. Subcontractors
 - Vendor states there are no subcontractors.
4. Organizational Chart
 - Yes, a project organization chart is provided; however, **no job descriptions.**
5. Litigation
 - Vendor states there is no litigation.
6. Financial Viability
 - Provided DnB, **but unable to see risk assessment or much other information. Only gave a balance sheet snapshot of 1 year.**

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Sysintellects

CATEGORY #(s): 2-Individual Workstream Implementation

DATE: 8/27/2021

EVALUATOR NAME: Michael Bacu

EVALUATOR DEPARTMENT/STATE: Government Support Services / Delaware

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - Texas Company
 - Unspecific technology solutions?
 - CMx product Contract Experience
 -
2. Previous Projects
 - Smaller engagements, none provided at full state level
 - Provided England project
 - No description of projects to understand how they compare to the NASPO requirements
3. Subcontractors
 - None
 -
4. Organizational Chart
 - Org chart is very general, unspecific to any particular task
 -
 -
 -
5. Litigation
 - None
 -
 -
6. Financial Viability
 - Company is extremely small financially
 - Are they able to finance a large state procurement project or simultaneous projects nationally?
 -

Individual Evaluator Comments: - Contract Management Solution

Organization Qualifications and Experience

1. Overview of the Organization
 - Consulting services
 - CMx – Contract Management
 -
2. Previous Projects
 - Cities, county and state clients
 - Did not provide dates to determine if they were done in the last 5 years
 - Could have provided more detail on these implementations.
3. Subcontractors
 - Stated no subcontractors will be used.
 -
 -
4. Organizational Chart
 - Supplied company org chart – No staff names supplied only experience
 - No names, roles descriptions or responsibilities were supplied
 -
5. Litigation
 - Stated none to be reported.
 -
 -
6. Financial Viability
 - Only 1 screen shot of DUNS supplied
 - Supplied balance sheet and contract and sales agreement examples?
 -

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Value Innovation Technologies

CATEGORY #(s): 2

DATE: 8/27/2021

EVALUATOR NAME: Angie S

EVALUATOR DEPARTMENT/STATE: OMB State Procurement Office – North Dakota

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Est. 2000.
- Value Innovation Technologies (VIT) A SaaS technology and business process automation company. VIT is a spinoff of American Product Distributors with a platform called "eLink"
- "eLink Platform" - shopping carts and e-commerce catalogs

2. Previous Projects

It's hard to determine if the projects meet Category 2.

- There are previous projects listed, **but they are laid out in a confusing format. I believe there are 12 listed with four references listed. The previous projects seem to speak to using eLink for a marketplace and linking it to the client's current system.**

3. Subcontractors

- Vendor states there are no subcontractors.

4. Organizational Chart

- **An organization chart was provided for the company, but a project organization chart (as requested) was not provided. Job descriptions were not provided either.**

5. Litigation

- Vendor states there is no litigation.

6. Financial Viability

- **Did not provided. Vendor stated N/A.**

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - 2 of 3 Preliminary docs, no cert of insurance
 - SaaS business process automation company.
 - B2B commerce and transactions
 - eCommerce platform
 - e-commerce catalogs
2. Previous Projects
 - Northwestern University – developed marketplace with local vendors and integrated the with the Northwestern procurement platform, Aquire (a division of Coupa).
 - City of Cincinnati - developed online marketplace for electrical supplies. Integrated with Maximo
 - Premier Inc. –created an online marketplace for thousands of hospital systems to purchase from Premier's vendor contracts.
 - Johnson & Johnson companies – integrated eLink marketplace with their Ariba procurement platform in **3 weeks**
 - Walmart – integrated with Walmart using **EDI** ASC X12 versions 4010 and 5010.
 - Northrop Grumman (NGC) – integrated with NGC's procurement platform using OCI and xCBL and built a marketplace.
 - Atrium Health –marketplace
 - PepsiCo –printing services marketplace with PepsiCo, APD, and Marfield
 - US Postal Service – implemented office supply marketplace using **EDI** integration with encrypted file transfers using SFTP protocol.
 - City of Evanston, IL –eLink platform.
 - National Drug Source –customized marketplace to sell products to international hospitals
3. Subcontractors
 - None
4. Organizational Chart
 - Corp or chart only - basic
 - Roles not defined
5. Litigation
 - none
6. Financial Viability
 - N/A?

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 1-3)
 - Focus on “Sourcing to Contracts – from requisition to vendor performance”.
 - Works with “public procurement teams” to involve “client base in all product development activities”.
 - “Building new functionality that exposes key data-points from Bonfire’s extensive 65K+ project library”.
 - Service metrics “of a consistent Net Promoter Score of 70+”.
 - Implementations/Prof Services team has delivered “over 500 implementations to-date”.
 - Client Success Management team keeps clients informed on “latest product launches” and gets “training they need”.
 - Bonfire provides “unlimited training and support for all stakeholders (including internal users, vendors, consultants, and whoever else may be involved). Also, “self services resources”, “online learning platform fully integrated into Bonfire, built-in in-application guides and prompts, and over 400 how-to articles and videos”.
2. Previous Projects
 - **Delaware Health and Social Service:** “Digitize solicitation and RFP evaluation process”. Project start March 2020, on-going. (pg. 3/4)
 - **Texas Dept of Transportation:** “Digitize solicitation and evaluation process of all competitive procurement” with “online qualification and evaluation workflows”. Project start June 2020, on-going. (pg. 4)
 - **Port Authority of New York and New Jersey:** “Source-to-Contract software”. “5 purchasing divisions across 30 contract specialists”. Project start June 2020, on-going. (pg. 4/5)
 - **New Mexico Human Services Dept:** Streamline RFP process. Receive digital, structured proposals, multi-user/multi-stage online evaluations. Project start July 2020, on-going. (pg. 5/6)
3. Subcontractors
 - No subcontractors

Individual SME Comments:

Stand-alone Sourcing tool with Vendor Registration, Contract Mgmt & basic reporting features

General Principal and Requirements

Key Solution Functionality Elements, pg. -10 :

- Single Point of Entry: "central access point at a configurable URL"
- Smart Routing: "provides an intuitive guided experience"
- Compliance: "users actions/access to documents/pages are gated based on legal/compliance requirements determined by local and state government agencies."
- Portal: "Bonfire portal is a centralized location for all Sourcing and Bid Management"
- Open Marketplace Environment: "Bonfire does not provide an open marketplace environment."
- Integration: "Bonfire has an Open, RESTful API and can create custom integrations (both batch and realtime)"
- Workflow: "provides a fully customizable approval process for new inbound requests or solicitations"
- Document Management: "allows users to store and manage documents throughout the platform"
- Reporting, Dashboards & Data Visualization:
 - o "Reporting is a key element of Bonfire".
 - o "Bonfire's Spend Analysis... provides a mechanism for buyers to track Current Spend and New Spend".
 - o "Bonfire also provides a reporting tool called 'Insights' that allows users to visualize, pivot, and filter all KPIs (including Spend Analytics)."
- Configurable: "is a highly configurable solution designed to address the specific and varying needs of"
- public sector organizations.
- Transparency: "allows for custom public award statements to be published and the State can determine to share other activity publicly". "allows for contracts to be publicly advertised on the State's Bonfire public portal."

User Experience, pg. 11-13:

- Personalization: " allows users to personalize their initial screen based on their needs or use of the solution."
- Intuitive Navigation: " user interface that helps guide users to appropriate components within Bonfire"

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Wizard-driven: tasks are designed to provide a stepwise creation flow, where needed"
- Portal: "dashboard allows users to easily visualize user work management."
- Mobile access and use:
 - o "Bonfire does not provide a mobile application and is accessible through mobile web browsers.
 - o WEAKNESS: "Bonfire is not optimized for mobile devices but is fully functional and usable on mobile devices." (pg. 13)
- Workload Mgmt: "Specified users are able to re-assign work to other users"
- Role-Based: "provides an extensive amount of user roles for a variety of different functions"

Bidder Best Practices and Roadmap, pg. 14-18: Meets req't's.

- "provides platform updates every 2 weeks"
- "Clients automatically receive all updates"
- "Implementation Specialist and Client Success Manager will continuously assess and recommend opportunities"

Innovations and Value-Added Features/Services, pg. 19:

- Optional req't... nothing offered by Bonfire.

Customizations/Extensions, pg.19-20: Partially meets req't's.

- "customizations/extensions are not built for individual clients as solutions must work for all clients."
- "In the case a functionality gap arises, the Implementation Specialist, Client Success Manager, and Support Team will assist in identifying the out of the box configurations or features that can be utilized in lieu of the customization/extension."

Alternative Funding Models, pg. 20:

- Optional req'ts... nothing offered by Bonfire.

Contract Transition and Flexibility, pg. 21:

- "has the ability to transition any current client contract to this newly established portfolio upon request by the client/agency."

Functional Requirements

General Functionality, pg. 21-24 :

- "Bonfire clients immediately gain access to the Bonfire Global Supplier Network with over 250,000+ suppliers."
- "Suppliers pay no Fees"
- "was built specifically for public sector purchasing teams with compliance a key Consideration"

RTM

- POTENTIAL WEAKNESS, GEN-9: System does not provide a crosswalk capability to short list commodity codes for user selection.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, GEN-10: "Detailed keyword search is not available in all modules". Is available in Contract Mgmt & Vendor Mgmt.
- POTENTIAL WEAKNESS, GEN-12: Can only search for attachments by filename/desc in Contract Mgmt.
- WEAKNESS, GEN-19: System does not have capability to store "potential Bill To and Ship To addresses". Must be manually entered on each solicitation.
- POTENTIAL WEAKNESS, GEN-20: System cannot support Client unique versions of standard commodity codes sets. So Finance System will have to adopt same commodity code set & version.
- WEAKNESS, GEN-22: System does not provide filtering capabilities on Search results.
- WEAKNESS, GEN-25: System does not allow customization of the From email address.
- POTENTIAL WEAKNESS, GEN-34: System does not support future/effective dating.
- POTENTIAL WEAKNESS, GEN-35: System does not provide a Comments Library.
- POTENTIAL WEAKNESS, GEN-36: System does not currently provide eSignature capability. Expected to be available early 2022.
- One req'ts needs clarification.

Supplier Portal: N/A

Supplier Enablement/Management: N/A

Buyer Portal: N/A

Need Identification: N/A

Request through Pay: N/A

Catalog Capability: N/A

Sourcing/Bid Management, pg. 24-41: Partially meets req'ts. Solution provides basic req'd functionality but has some limitations as noted in the RTM review.

- "can create a custom form to allow internal stakeholders to complete their procurement requests while allowing procurement users to have a centralized repository of procurement requests. Intake requests can be assigned to the proper users with built-in approvals."
- "Bonfire provides a public portal for each client with the following format <https://organization.bonfirehub.com>" (pg. 25)
- **Supplier Enablement**
 - o Supplier self-service registration (pg. 25/26)
 - "utilized as a centralized location for suppliers to participate in the State's tendering opportunities."
 - "allows a high degree of configurability in the Supplier Portal."
 - "can be used to collect and track applicable certifications, documents, document expiries, and custom fields against each supplier."
 - Suppliers "can also associate commodity codes to receive notifications for projects tagged with their listed codes."
 - o Supplier Management (pg. 26)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “group together Vendor Lists (for creating lists of qualified suppliers)”
 - “collects and tracks which tenders each supplier has participated in in the past, and where applicable, the contract that was awarded to the supplier.”
- **Solicitation Creation/Posting**
 - “allows teams to create predefined templates with their relevant documents and requirements.”
 - “buyers can utilize Bonfire to internally collaborate with subject matter experts on the solicitation documents
 - “simple tenders can be created with ease; while additional layers of information and nuance can be layered into a tender to facilitate more complex RFP style solicitations.” (pg. 27)
 - “includes a configurable workflow with multi-stage evaluations.”
 - “post any solicitation and solicitation-related documents on line via the procurement portal”
 - “no limit on the number of files that can be uploaded” (pg. 28)
 - “has the ability to make a solicitation publicly accessible, or limit access to be invite only”
 - “email notifications of newly-posted opportunities can be sent to suppliers”
 - Suppliers can post “questions directly within the Bonfire portal” to buyers. (pg. 28)
 - Changes or public notices posted “will trigger a notification to all associated suppliers via email”
- **Responding**
 - Supplier “online submissions with bank-grade encryption during transmission and storage of supplier documents and data.” (pg. 30)
 - Sealed submissions are “automatically encrypted and sealed upon submission”
- **Evaluation**
 - “allows for side-by-side comparison and analysis for large commodity purchases”
 - “Questionnaires feature supports automatic side-by-side scoring to quickly evaluate large amounts of qualitative information.” “suppliers submit their responses in a formatted Excel file in which they must fill in predetermined response fields” (pg. 32)
 - “evaluation module is built to handle all types of RFP evaluations (including multi-stage/envelope RFP committee evaluations, and shortlist/interview stages).”
 - RFP can have “criteria scorecard and instructions to evaluators”. Evaluators can record notes.
 - “Multi-category projects (where multiple items are being sourced for multiple locations or sites”
 - “Supplier can simply select the categories they wish to bid on”
 - “During the evaluation phase, each category becomes its own evaluation project”
 - “Additional information can be requested after the closing date by re-opening the project to specific suppliers with specifically requested information with a new deadline”
- **Other Capabilities**
 - Roles (pg. 35, Evaluator Permissions and Structure)
 - Internal Users: “roles are available, including organization-wide users, department level users, and specific project level users”
 - “Ancillary users”: “draft editors, or evaluation committee members/observers.”
 - “Bonfire can easily support ‘sealed’ bidding, where the price is withheld during the evaluation process.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- “Bonfire’s optional ‘Conflict of Interest’ (or COI) module includes your standard language and requires evaluators to digitally sign the form(s) before accessing supplier submissions.”
- **Award**
 - “allows teams to easily notify winning and losing suppliers when an award decision is made”
 - “immediately capturing the solicitation information and tying it into a contract with Bonfire Contract Management”
 - “contract management import can be heavily templated (for all required data fields and documents) so that moving from award to contract is efficient and easy.”
- **Reporting** - these are exports data into Word or Excel files
 - “pulls all necessary information and organizes it into a clean Microsoft Word or Microsoft Excel File”
- **“Bonfire Benchmarking”** (pg. 37)
 - “Benchmarking assistant” “automatically surfaces insights based on similar projects run by the other Bonfire users”
 - Shows “typical project timespan”, “typical criteria”, “supplier activity”, how other “users are completing a category of tenders”, see “RFx templates from other users”
- **Contract Management** (pg. 38)
 - Dashboard
 - “view a timeline of all your major milestones, actions, lead times, terms/change orders, and reminders”
 - “includes key performance indicators (KPIs) including contracts expiring within a certain timeframe and the subsequent contract values. This can be customized to display other criteria and timeframes”
 - Contract fields – “can add as many customer fields as you wish”
 - “Users can store unlimited contract documents”
 - Contract reporting (pg. 40) – “quickly search, filter, and sort by any applicable data field”
WEAKNESS, this appears to simply be making the screen show a list of Contracts that the user just treats as a report.”
 - “Contracts can be added manually, but more easily and seamlessly from the sourcing project by choosing the “Create Contract” action.”
 - CONCERN: “can store unlimited contract documents (including the contract itself, all documents up to 1GB in size)”. It is not clear if this is an attachment limit or a limit to the Contract record in the system.
 - “When creating a new contract in Bonfire, organization members can select from a predefined list of contract templates”
- **Vendor Performance Management** (pg. 41)
 - “users can see how their suppliers are performing”
 - “can create custom supplier performance surveys for specific suppliers, determine the desired respondents, and set a cadence for surveys to be automatically sent”

RTM

- POTENTIAL WEAKNESS, SRC-13: System does not support Surplus Auctions.
- WEAKNESS, SRC-34: System does not provide version control with documents and templates.
- WEAKNESS, SRC-35: System does not provide check-in/out capabilities with documents and templates.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- WEAKNESS, SRC-37: System does not provide a means to automatically updates templates when they include standard documents that have been updated.
- WEAKNESS, SRC-38: System does not provide a means to identify templates and solicitations that include documents, terms/conditions, specifications that have been updated.
- POTENTIAL WEAKNESS, SRC-40: System does not provide the capability to allow a Participating Entity to define error messages.
- WEAKNESS, SRC-45: System does not have the capability to combine multiple purchase requests into a single solicitation.
- WEAKNESS, SRC-46 through 50: System does not have Rules Engine capability. Must define approvals within each Template or a specific solicitation.
- NOTE, SRC-47: Though the response indicates that there is no capability to create approval rules, the Technical Proposal (pg. 5) does state that "users can define as many approvals as needed". So the system does support the intent of req't SRC-47
- POTENTIAL WEAKNESS, SRC-60: System does not include suppliers from prior contract when creating a solicitation supplier list.
- POTENTIAL WEAKNESS, SRC-64: System does not provide a means for suppliers to request to be notified when an existing Contract is re-solicited. So this type of inclusion for a solicitation supplier list is not supported either.
- POTENTIAL WEAKNESS, SRC-67: Un-registered suppliers must register to be added to a supplier list.
- POTENTIAL WEAKNESS, SRC-71: To make a Solicitation procurement file "publicly viewable" must download the information and manually share/post it for public access.
- NOTE, SRC-73: According to the Technical Proposal (pg. 25, under Supplier Self-Registration" the "public portal" is a website provided by Bonfire for the State. It is NOT the website setup by the State for Procurement.
- NOTE, SRC-78: According to the Technical Proposal (pg. 25, under Supplier Self-Registration" the "public portal" is a website provided by Bonfire for the State. It is NOT the website setup by the State for Procurement.
- WEAKNESS, SRC-80: System requires suppliers to register to download solicitation documents. So there is no public access to the full solicitation.
- NOTE, SRC-82: According to the Technical Proposal (pg. 25, under Supplier Self-Registration" the "public portal" is a website provided by Bonfire for the State. It is NOT the website setup by the State for Procurement.
- POTENTIAL WEAKNESS, SRC-83: System does not have webinar functionality built in.
- POTENTIAL WEAKNESS, SRC-88: System does not allow the Buyer to workflow questions to other users to answer.
- POTENTIAL WEAKNESS, SRC-102: System does not have eSignature capabilities, however planned for "early 2022"
- POTENTIAL WEAKNESS, SRC-105: System does not provide a means to alert suppliers if they are not qualified to respond to a set-aside solicitation.
- POTENTIAL WEAKNESS, SRC-119: System does not have an automated scoring capability of responses.
- WEAKNESS, SRC-128: Buyer must keep Q&A open to be able to collaborate/messaga a supplier during evaluation/negotiation.
- WEAKNESS, SRC-132: Approvals for an Award are not based on Rules. They must be specifically defined within the Template or the Solicitation.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- NOTE, SRC-138: According to the Technical Proposal (pg. 25, under Supplier Self-Registration" the "public portal" is a website provided by Bonfire for the State. It is NOT the website setup by the State for Procurement.
- Four req'ts need clarification

Contract Management: functionality is part of the Sourcing module

Vendor Performance: functionality is part of the Sourcing module

Purchasing/Data Analytics: functionality is part of the Sourcing module

Technical Requirements

Availability, pg. 42-44: Meets req't.

- "Bonfire system is available for access 24 hours a day, 7 days a week, 365 days a year"
- "system are architected to provide uninterrupted business continuity throughout Core Business Hours defined as 8:00 a.m. to 8:00 p.m. EST/EDT"
- "system deployed on Amazon Web Services (AWS)"
- "The system is built leveraging load balancing across multiple availability zones, auto-scaling container clusters, data redundancy (both database and object storage), centralized logging."

Accessibility Requirements, pg. 44: Meets req'ts.

- "is in compliance with Section 508, Federal Rehabilitation Act, and Accessibility for Ontarians with Disabilities Act (AODA)"
- "software is built, tested, and audited to meet WCAG Level 2.0 AA standards"

Audit Trail and History, pg. 45 & TECH-1 thru 5: Partially meets req'ts. Users cannot access full audit/history details themselves, have to get Bonfire support.

- Scoring module: keeps a "history of evaluator scoring" and "action taken"
- Approvals: "Each approval maintains a history of revisions, acceptance, rejections."
- "In the event of an incident where activity tracking and history within the application cannot resolve the Buyers line of inquiry, the Bonfire Support team can provide further assistance."

Browsers Supported, pg. 46:

- "includes Internet Explorer 11 or Microsoft Edge (Windows), Google Chrome (Windows & Mac), Mozilla Firefox (Windows & Mac), or Safari (Windows & Mac)."
- "When accessing the platform from an unsupported browser the user will be redirected to the unsupported Browser page"

-User Accounts and Administration, pg. 47-54 & TECH-6 thru 20:

- "offers a variety of user roles to allow you to control which users have visibility and/or control over which aspects of the platform"
- "User Roles are broken up across all major platform components (Projects, Contract Management, Vendor Management, Insights). Each of the components comes with user roles designed specifically for the functionality of the component."

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "each Bonfire portal is composed of an Organization, which is then broken down to Departments. Departments are used in Bonfire to further segment user"
- "Certain user roles are scoped to the Organization - meaning they are Department-agnostic."
- "Other roles are Department-specific,"
- WEAKNESS, system does not have capability to delegate Admin of specific functions to specific organizations.

RTM

- POTENTIAL WEAKNESS, TECH-6: User access cannot be limited at the field level of a transaction.
- POTENTIAL WEAKNESS, TECH-10: System does not provide means to copy role/permissions from another user.
- POTENTIAL WEAKNESS, TECH-11: System does not provide capability to delegate Admin to lower levels in the organization that is limited to that organization.
- POTENTIAL WEAKNESS, TECH-16: System does not currently does not provide means to deactivate accounts after a period of inactivity.
- Three req'ts need clarification.

User Authentication, pg. TECH-21 thru 25: Partially meets req'ts.

- "supports both built-in authentication and integration with customer identity systems using SAML 2.0."
- WEAKNESS, 2-Factor is not provided. Must use the Participating Entities' SSO system.
- "authentication includes identity verification, minimum password length and complexity requirements following guidelines on passwords established by NIST (SP 800-63)."

RTM

- WEAKNESS, TECH-21: System does not provide 2FA, must use Participating Entity SSO to get 2FA from internal identity management system.
- POTENTIAL WEAKNESS, TECH-23: Password rules are not configurable. One standard for all Bonfire customers.
- POTENTIAL WEAKNESS, TECH-25: System does not provide a means to requires users to accept an "acceptable use" policy.
- No req'ts need clarification.

Federated Identity Management, pg. 55/56: Meets req'ts.

- "system supports and integrates with customer identity provider (IdP) via SAML 2.0 SSO."

Data Conversion, pg. 56 & TECH-26 thru 34: Meets req'ts needs specific to Sourcing & Contracts Mgmt.

- "currently provides import services for legacy imports into the Contract Management Module"
- "can import active solicitations and documents via Internal Submissions to Projects."
- "Users can be bulk imported to individual procurement activities"

RTM

- POTENTIAL WEAKNESS, TECH-30: No OOTB data conversion available for Requisition/Order data. Must be "built"

**STATE OF MAINE

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, TECH-30: No OOTB data conversion available for Vendor performance data. Must be "built"
- POTENTIAL WEAKNESS, TECH-33: No OOTB data conversion available for Historical Spend Data. Must be "built"
- No req'ts need clarification.

Interface and Integration, pg. 56/57 & TECH-35 thru 60: Partially meets req'ts.

- "has the ability to interface on a nightly or real-time basis to support the data inflows and outflows needed with other systems"
- Technical details provide in the Implementation Req'ts Integration section (pg. 92).

RTM

- POTENTIAL WEAKNESS, TECH-37: No OOTB integration with State certification system. Must be custom built.
- POTENTIAL WEAKNESS, TECH-38: No OOTB integration with Sec. of State licensing system. Must be custom built.
- Req'ts TECH-42 thru 46, 49, 55, & 59 are not applicable to Sourcing/Contract Mgmt scope
- WEAKNESS, All other financial system integration reqts (41,47,48, 50-54, 56-58 & 60) must be custom built.
- No req'ts need clarification.

Office Automation Integration, pg. 57 & TECH-61: Meets req'ts.

- "can be configured to receive the following file types; csv, pdf, Excel (xls, xlsx), PowerPoint (ppt, pptx), bmp, gif, jpeg, jpg, jpe, png, tiff, tif, txt, text, rtf, Word (doc, docx, dot, dotx), dwg, dwf, dxf, mp3, wav, avi, mov, mp4, mpeg, wmv, zip."
- "application downloadable reports can be generated either as .CSV, .XLSX, and .DOCX"
- Criteria, Line Items and Questionnaires can be imported as ".xlsx upload or via copying and pasting.CSV data into the import wizards"
- "includes an in browser document viewer" for "PDF and Word documents"

RTM

- Meets req't.

Mobile Device Support, pg. 58/59 & TECH-62: Partially meets req'ts, works with tablets.

- "system is designed to be readable and usable on desktop, laptop, and tablet"
- "the nature of the application... is better suited for a keyboard and larger monitor."

RTM

- WEAKNESS, TECH-62: System is not "mobile adaptive and responsive"

Mobile Applications, pg. 59: Does not meet req'ts.

- WEAKNESS, "The system does not include a mobile application."

Data Ownership and Access, pg. 59: Meets req'ts.

- "data sent to or stored in the Bonfire system remains the ownership of the Participating Entity"
- "are available for viewing or download at any time"

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Date Retention, Archive and Purge Considerations, pg. 60 & TECH-63: Partially meets req'ts. No purge except at Contract Termination.

- "Records can be archived within the system based on user interaction. This involves moving Project or Contract objects into the Archived state in the web-ui."
- "Users have the ability to delete data within the platform rendering it inaccessible and only recoverable by Bonfire Support via a backup recovery procedure"
- "system will retain your data so long as you remain a customer". "Deletion and purging of records from the backups is available upon Contract Termination in accordance with our Data Destruction Policies."

RTM

- POTENTIAL WEAKNESS, TECH-63: Purging of records is only available "upon Contract Termination"

Disaster Recovery Plan, pg. 60/61: Meets req'ts.

- "Bonfire maintains a formal Disaster Recovery Plan that includes policies and procedures for technological disaster recovery."

Solution Environments, pg. 61/62 & TECH-64 thru 68: Does not meet req'ts.

- "provided via an instance in the Production Environment."
- "Participating Entities may request access to a sandbox environment during the implementation phase to test and configure their business process prior to going live"
- WEAKNESS, there is no on-going Environment provided for configuration, testing or training.

RTM

- WEAKNESS, TECH-64 through 67: Test and Train environments will only be provided "during the implementation phase".

Solution Technical Architecture, pg. 62/63: Meets req'ts.

- "modules are built and hosted on Amazon Web Services (AWS)."
- "programmatic data exchange to enable system level integration between the Bonfire platform and external systems there are two methods for interfacing; A REST Web-API or Flat File Data Exchange (.CSV, .XML)."
- "majority of the system is built using Javascript (Node.JS and React), Python, with some components in PHP which are progressively being migrated to Javascript."
- "system is only accessible by HTTPS and any attempted connection via HTTP is automatically redirected to HTTPS."
- "There are no shared network architecture components between customer and the solution."

Solution Network Architecture, pg. 63-65: Meets req'ts, however did not provide web-hosting center details.

- "leverages the power of the AWS cloud to provide a resilient, load balanced and fault tolerant service."
- "Internet bandwidth is scalable to automatically meet customer demands and our infrastructure will automatically scale to meet load."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "All data sent to or stored in Bonfire is replicated and backed up on a continuous basis. We also use multiple availability zones"

System Development Methodology, pg. 65-67: Meets req'ts however CONCERNED with the short timeline for notification (1 month).

- "industry best practices for its Software Development Life Cycle (SDLC)."
- "code first reaches a test environment" for developer QA and verification". "then promoted to the staging environment for internal UAT"
- "all features are developed behind feature flags. This allows the code to be regularly updated, and features to be enabled individually for alpha and beta versions to clients in production." After "alpha and beta version they move to General Availability"
- WEAKNESS, there is not customer UAT except for those participating in alpha/beta program
- Process for Releases
 - o 1 month advance notice of upcoming changes via email/in-platform messaging
 - o Followed by 1 week and 1 day notices
 - o Training webinar to follow within one week of release.
- "Each of the environments (development, testing, staging, and production) are instrumented with SLI/SLO/SLA telemetry and targets which monitor individual metrics for load/response time/reliability." "enables developers to stress test and verify the potential performance issues early in the development process".

Service Level Agreement, pg. 67/68 & Bonfire Terms/Conditions, Schedule B (pg. 12): Partially meets req'ts in that they submitted their own SLA information.

- Response did not review/indicate compliance with RFP SLA however stated that their "policies and procedures are aligned with the expectations of Exhibit 2. RFP 202102021 Model SLA."
- "In order to provide consistent performance and services to the over 500 agencies across Canada, US, and Europe we require that clients standardize our Terms and Conditions" (which includes their SLA
 - o Availability: "Bonfire will use commercially reasonable efforts to make the Platform Services available with a Monthly Uptime Percentage (defined below) of at least 99.5% during any monthly billing period."
 - o "A "Server Outage" is defined as an instance in which no traffic can pass in or out of the Bonfire managed server(s) for more than 15 consecutive minutes ("Service Unavailable")." WEAKNESS, the only criteria for impact to a customer is that the system is not accessible for "more than 15 consecutive minutes".

Security Requirements

Cloud Security Alliance (CSA) Compliance, pg. 69: Meets req'ts.

- "Bonfire has completed and included a point in time Consensus Assessments Initiative Questionnaire (CAIQ) v.3.1 as of spring 2021"

Security and Privacy Controls, pg. 69/70: Partially meets req'ts but did not identify "baseline level" per NIST 800-53.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "We design, develop, and maintain our systems and applications following industry standards and best practices from CIS, NIST, CSA and OWASP."
- "Our goal is to exceed NIST 800-53 baseline levels"
- "SOC2 Type II certification completed, we are looking towards the future with FedRAMP/StateRAMP certification."
- "Based on FIPS 199 Standards for Security Categorization of Federal Information and Information Systems, Bonfire is categorized as LOW for potential impact and data sensitivity."

Security Certifications, pg. 70: Meets req'ts.

- "Bonfire is SOC 2 Type II certified"

Annual Security Plan, pg.70-73: Does not meet req'ts. Response described security practices but did not address/describe their Security Plan as was req'd.

Secure Application and Network Environment, pg. 74-76: Meets req'ts.

Secure Application and Network Access, pg. 77/78 & SEC-1 thru 5: Meets req'ts.

- All communications "are encrypted while in-transit using industry-standard HTTPS/TLS (TLS 1.2 or higher)"
- "No custom hypervisors are in use"
- "Bonfire leverages the power of Amazon Web Services (AWS) using their tested and accredited services"
- "remote access...only over encrypted channels with multi-factor authentication, bastion hosts, strict role based access controls and audit trail logging"

RTM

- POTENTIAL WEAKNESS, SEC-2: System does not have a means of limiting the number of concurrent logins.
- Two req'ts need clarification.

Data Security, pg. 78-80:

- "All communications between the customer and Bonfire portal and APIs are encrypted using industry-standard HTTPS (TLS 1.2 or higher)"
- "customer data is encrypted at rest using AES-256 encryption."
- "controls include, but are not limited to malware detection, patch management, access control lists (ACLs), security groups, firewalls, gateways, web application firewalls (WAF), rate limiting, malicious IP blocking, intrusion detection, logging, multi-factor authentication, TLS encrypted traffic, DDos protections, database replication, database encryption, use of multiple availability zones, dynamically scalable infrastructure, etc."

Personally Identifiable Information Protection, pg. 80-82 & Bonfire Privacy-Policy doc: Partially meets req'ts. Response did not address compliance with Federal PII, HIPAA and GDPR req'ts.

- "All personal information is stored securely at all times and must follow our existing policies on data security and data protection."
- "Bonfire Privacy Policy identifies management/protection of Personal Information."

Security/Privacy Issue Occurrence, pg. 82/83: Does not meet req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "In the event of a security or privacy breach, Bonfire will notify the affected parties."
- "In the case of a breach involving organizational data, organization contacts or affected organizations will be notified."
- "In the case of a personal data breach, the affected individuals will be contacted."
- "Communication of any such event will describe the nature of the event, the information affected, likely consequences, measures that Bonfire will take, and any recommended actions the affected parties should take."
- CONCERN, pg. 83: The Incident Response Standards table does not indicate what Incident Level (A,B,C) will be in effect for a security/privacy occurrence. NOTE the initial response time of 1 hour is better than the req'd 2 hours however the table does not address the other req'd notifications.

PII Data Actual/Attempted Access or Disclosure, pg. 83-85: Does not meet req'ts.

- "In the event of a security or privacy breach, Bonfire will notify the affected parties."
- "In the case of a breach involving organizational data, organization contacts or affected organizations will be notified."
- "In the case of a personal data breach, the affected individuals will be contacted."
- "Communication of any such event will describe the nature of the event, the information affected, likely consequences, measures that Bonfire will take, and any recommended actions the affected parties should take."
- CONCERN, pg. 85: The Incident Response Standards table does not indicate what Incident Level (A,B,C) will be in effect for a security/privacy occurrence. NOTE the initial response time of 1 hour is better than the req'd 2 hours however the table does not address the other req'd notifications.

Security Breach Reporting, pg. 85-87: Does not meet req'ts.

- "In the event of a security or privacy breach, Bonfire will notify the affected parties."
- "In the case of a breach involving organizational data, organization contacts or affected organizations will be notified."
- "In the case of a personal data breach, the affected individuals will be contacted."
- "Communication of any such event will describe the nature of the event, the information affected, likely consequences, measures that Bonfire will take, and any recommended actions the affected parties should take."
- CONCERN, pg. 86: The Incident Response Standards table does not indicate what Incident Level (A,B,C) will be in effect for a security/privacy occurrence. NOTE the initial response time of 1 hour is better than the req'd 2 hours however the table does not address the other req'd notifications.

Implementation Services Requirements

Project Management, pg. 87-89: Partially meets req'ts but with concerns about the timeline.

- "Nathan Tarr, Manager", "will be the dedicated Project Manager. Nathan has helped to implement Bonfire at dozens of governmental agencies of all sizes"
- "will be responsible for configuring the State Bonfire portal, coordinating and facilitating training for all State users, providing State users with proper resources, and ensuring user adoption across State users."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Implementation Plan: the phases and tasks look appropriate however the amount of time allocated for tasks is very short and would only fit a small-scale (not Statewide) implementation, probably for just one Department. CONCERN, need to take a close look at what Bonfire has allowed for in the Cost Workbook for level of effort for implementation for each of the Scenarios.

Project Implementation Methodology, pg. 89-91 & Bonfire Implementation Plan doc: Generally meets req'ts however the approach is informal and seems oriented on small, individual 'shop' implementations.

- "implementation strategy is customized to the implementation to ensure greatest adoption of the solution"
- Bonfire implementation typically fall into three main categories: (Impl. Plan doc, pg. 1)
- General Account Setup
 - o Customization of Portal Feature Set
 - o Determining and Configuring the Departments on the Portal
 - o Determining and Assigning User Roles
 - o Customizing Vendor Registration Form
 - o Customizing Contract Management Attributes and Types
- Training
 - o General training session on the Listing / Evaluation platforms of Bonfire
 - o Specialized training on Bonfire's Advanced Evaluation Modules (Multi-Decision, Questionnaires, BidTables)
 - o Vendor Management & Insights Reports Training
 - o Contract Management Training
- Ramp-up
 - o Review of RFx templates and changes required
 - o Assistance with the creation of the first project at each Department
 - o Implementation Debrief to Management for each Department
 - o Bulk import of all pre-existing contracts into the Contracts Management module
- "provides clients with access to Bonfire Academy, an online course-based, learning management system where users can self learn with guided courses"
- "Bonfire requires no design or building as part of the implementation experience."
- "implementation manager will then enable/disable features as needed and configure any other Bonfire elements"
- WEAKNESS, "Bonfire does not have any testing methodology requirements as part of the implementation process."
- Configuration/Change Control: very informal. "Nathan Tarr will oversee the initial setup configuration and assist and guide with any further changes as needed during implementation."
- "Bonfire uses Zendesk for managing support requests and issues."

Catalog Support Services, pg. 91: Not relevant for Bonfire proposal.

- "Bonfire does not provide catalog and punchout sites and is not responding to this workflow."

Data Conversion Services, pg. 91/92: Meets req'ts. However, Response did not address the req't to provide needs assessment.

- "Bonfire's Contract Management Module natively supports the Import of Contract metadata, including various default and custom contract fields and users."
- "Bonfire's Client Experience Team will work with the client to ensure all data is clean and acceptable, prior to successfully importing the Metadata."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "Bonfire's Custom Built Import tool and customized field mapper will be leveraged for this process."

Interface/Integration Development Services, pg. 92-96: Meets req'ts.

- "built to support System and Data Integrations through the use of either
 - o Event Webhooks and REST APIs.
 - o Flat File Data Transfers (CSV, XML)" (pg. 92)
- "Bonfire application is built using its own APIs
- for Data Inflows and Data Outflows." "can be opened up for you to consume in order to enable an integration scenario"
- "Integration pricing is dependent on the amount of work required by Bonfire and will be determined at the beginning of the Professional Services engagement."

Organizational Change Management (OCM Services), pg. 96-98: Meets req'ts however CONCERN that OCM practices seem to be very informal and oriented on small scale implementations.

- "Implementations will be tailored to client needs and key objectives they have set."
- "Stakeholder Analysis is conducted. Implementation kick-off to gauge what types of stakeholders will be involved and their level of comfort with technology and change generally."
- "Once assessed, Bonfire will tailor the training plan."
- "Bonfire's Readiness Assessment revolves around Pulse Surveys" that focus: Project Sponsor Vision & Commitment, Key Team members support for the project, Alignment with Proc processes/goals & Clarity of Success Criteria.
- "Impact assessments are very standardized" and focus on: Purchasing Teams, Potential Evaluators and Vendor Community.
- "Communication Plan will provide templates to organizations on who they should communicate with and when."
- "Coaching plans will vary from organization to organization"
- "Resistance Assessment and Management" relies on "Proactive communication and ensuring the rationale behind the change is critical." If "resistance becomes disruptive the project's progression" then "document the risk and present the risk to the steering committee or project sponsor to work through"

Training Services, pg. 98-111 & Bonfire Implementation Plan doc (pg. 7-9): Partially meets req'ts with concerns that sessions seem to be oriented for small scale implementations. Also, does not address training Suppliers.

- "Bonfire provides unlimited training to all Bonfire customers." (pg. 102)
- "Training plan (pg. 102-104): CONCERN, the content is very broad and for very short sessions.
 - o General Training Session, 1-2 hours: first training session will cover project (solicitation) creation, evaluation workflow, and project reporting. also provide a thorough overview of project templates, project drafts, and common workflows such as issuing addenda and managing supplier Q&A.
 - o BidTables Training Session, 1 hour: creation of BidTables, the vendor experience when responding to a BidTable, and the workflow used to evaluate pricing on a BidTable. Attendees will be able to set up projects that collect complex pricing information or multi-line item bids from vendors and easily compare all submitted prices using a structured process.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 12/18/22

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Questionnaire Training Session, 1 hour: creation of Questionnaires, the vendor experience when responding to a Questionnaire, and the workflow used to evaluate the vendors' responses to the Questionnaire.
- Multi-Category Projects Training Session, 1 hour: cover the definition of multiple categories, the setup of categories and category items, and strategies to manage the evaluation process on projects of this complexity.
- Vendor Management, Contract Management, and Insights Reporting Training, 1-2 hours: cover vendor lists, vendor management, exports, among other key actions and workflows. The Implementation Lead will also cover the various reports and filter capabilities within the Insights reporting tool.
- Training Materials (pg. 108-110)
 - Bonfire Academy: course-based training platform for all users, called Bonfire Academy. Courses in the platform are interactive, and include videos, slideshows, annotated screenshots, and quizzes.
 - Training Program [TRAINING WEBINARS]: sessions will supplement your implementation training and be a useful resource for learning new features/processes and refreshing your Bonfire knowledge
 - Bonfire Knowledge Base [ONLINE REPOSITORY OF ARTICLES]
 - Support Team [TECHNICAL SUPPORT AND TROUBLESHOOTING]

Help Desk Services,pg. 111-117 & IMPL-1 thru 5: Meets req'ts to provide a Help Desk however CONCERN that it is a email and 'no live call' service.

- Bonfire has utilized a support help desk to assist our clients for 9 years.
- Located in Kitchener ON with team members throughout Southern Ontario.
- Coverage provided from Monday-Friday, 8am EST - 8pm EST.
- Service Targets are first response within 1 hour, aim for end of day resolution if can be dealt with internally on the support team (resolution can take longer if other teams are required to be involved)
- CONCERN: "Our Help Desk team is an Email first support team. If required phone/zoom calls can be scheduled and are prioritized". "Buyers/organizations take first priority for phone/zoom calls. Vendors may have calls scheduled depending on severity/scope/time sensitivity of request"
- " Bonfire support uses Zendesk for a ticketing system". "support team records custom fields within tickets through Zendesk which assist with reporting/issue tracking"
- WEAKNESS, "There is no option for a live call when calling in. Clients must leave a voicemail first, which is then automatically generated as a ticket within Zendesk.
- "Key performance metrics tracked: Total Created Tickets, Total Solved Tickets, First Reply Time (median), Full Resolution Time (median), Agent Reply Brackets, Good vs. Bad Satisfaction Tickets, Vendor Feedback, SLA breaches, Primary & Secondary Reasons (custom field on tickets to track reasons/common themes for incoming tickets)"
- "Bonfire support utilizes JIRA for issue tracking."
- "Bonfire support utilizes Zendesk to monitor CSAT."

RTM

- WEAKNESS, IMPL-2: Bonfire expects State Help Desk to "self serve" training instead of instructor lead training.
- WEAKNESS, IMPL-4: Bonfire Help Desk does not include Chat tool.

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts - Statewide Procurement Division, Texas

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization
 - COTS – RFx;
 - Unlimited training; how-to self-service library
 -
2. Previous Projects
 - State agencies, local.
 - High satisfaction on Net Promoter.
3. Subcontractors
 - None
 -
 -
4. Organizational Chart
 - 90 employees.
 - Detailed key personnel experience with company and other projects.
 -
5. Litigation
 - None reported.
 -

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 1/20/22

SME/EVALUATOR NAME: Gerard MacCrossan

DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual SME Comments:

Sourcing and bid management tool.

General Principal and Requirements

- Key Solution Functionality Elements – P4 single point of entry for all procurement activities. From purchasing intake requisitions, to project creation, supplier management, and evaluation.
 - guided experience to ensure users can configure,
 - build, and run solicitations using the appropriate procurement configurations
 - No marketplace module.
 - P5 Open, RESTful API and can create custom integrations (both batch and realtime) with existing financial management and other core systems
 - P6 reports can also be used as executive project summaries, for audit trail purposes, as well as supplier debriefs.
 - P8 reporting tool called 'Insights' that allows users to visualize, pivot, and filter all KPIs (including Spend Analytics)
 - P9 highly configurable to allow our clients to solicit anything from simple informal bids to multi-million dollar, complex RFP's. Bonfire allows for differing configurability between each client as well as unique configurability for individual users and solicitations.
- User Experience - Personalize initial screen based on role
 - P12 Left side nav showing key components; stepwise creation flow; embedded help tips, support articles and videos.
 - P13 Bonfire is not optimized for mobile devices but is fully functional and usable on mobile devices.
- Bidder Best Practices and Roadmap
 - P6 As part of a future release, Bonfire is building document drafting functionality to create and collaborate on in-progress documentation when drafting a solicitation.
 - P14 platform updates every 2 weeks based on the Software Development Life Cycle as defined in Section 19. New versions are available upon each update, meaning improvements and fixes will be incorporated immediately.
 - P16 Implementation Specialist and Client Success Manager will continuously assess and recommend opportunities for cost reduction, process improvements, or alternative process approaches and methodologies. The organization can decide to accept/reject said recommendations at their discretion.
 - P17 – FUTURE: adding Proposal analysis tool. (aid vendor negotiation with data based on spend category and historical vendor competitiveness; group buying; cooperative contracting; benchmark sharing..
- Innovations and Value-Added Features/Services – N/A

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 1/20/22

SME/EVALUATOR NAME: Gerard MacCrossan

DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Customizations/Extensions – P20 *customizations/extensions are not built for individual clients as solutions must work for all clients*
 - *Success Manager and Support Team will assist in identifying the out of the box configurations or features that can be utilized in lieu of the customization/extension*
 - *new features will not invalidate, negate, or minimize warranty or maintenance requirements, nor will it add complexity to maintain or upgrade to new releases.*
- Alternative Funding Models - N/A
- Transition – would transition customers to new contract.

Functional Requirements

- General Functionality – P22 *average of 50%+ reduction in project cycle times*
 - *access to the Bonfire Global Supplier Network with over 250,000+ suppliers.*
 - *Spend Analysis (known as Cost Management within the Bonfire platform) provides a mechanism for buyers to track Current Spend and New Spend along with target savings goals*
 - *reporting tool called 'Insights' that allows users to visualize, pivot, and filter all KPIs*
 - *P23 Bonfire enables the public display of current solicitations, past/cancelled/closed/awarded solicitations, and even publicly displayed contracts*
 - *EPROC-GEN-10 – keyboard search not available in all modules*
 - *EPROC-GEN-12 – Attachments can't be search in Sourcing/Bid module*
 - *EPROC-GEN-19 – bill to/ship to addresses not in system – seems not necessary for the proposed modules.*
 - *EPROC-GEN-36 – Needs clarification – electronic signatures accepted yet?*
 -
- ~~Supplier Portal~~
- ~~Supplier Enablement/Management~~
- ~~Buyer Portal~~
- ~~Need Identification~~
- ~~Request through Pay~~
- ~~Catalog Capability~~
- Sourcing/Bid Management – Detailed description of module.
 - P26 Online supplier self-registration. Supplier registration is not subject to state approvals.
 - P27 *Bonfire solicitation can be templated (including bid documents, evaluation criteria, submission format, and evaluation groups)*
 - P28 *Bonfire also provides several formats for responses to assist in the evaluation process by forcing suppliers to submit "apples to apples."*
 - Approvals workflow with reminders
 - P30 *BidTables will automatically extract every bid data point from the suppliers' Excel files, allowing the organization to quickly and easily review, filter, and rank your received bids as needed. All bids are displayed side-by-side specifically to the itemized level, with a heat map highlighting bids with the lowest prices.*
 - P31 *Questionnaires feature supports automatic side-by-side scoring to quickly evaluate large amounts of qualitative information*
 - P34 *highlights to project owners any areas of disagreement amongst committee members (defined as a difference in score of >30%).*

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 1/20/22

SME/EVALUATOR NAME: Gerard MacCrossan

DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- *seamless transition into post-solicitation workflow, by immediately capturing*
 - *P36 the solicitation information and tying it into a contract with Bonfire Contract Management*
 - *Benchmarking – timespan, evaluation structure; supplier activity; prior templates.*
 - *EPROC-SRC-34-35 – Template updates don't have version control or check-in/out*
 - *EROC-SRC-37-38 – Template updates don't cascade*
 - *EPROC-SRC- 47-79 - Bonfire does not provide the ability to create approval/workflow rules.*
 - *EPROC-SRC-60 – Supplier lists not generated from previous contracts*
 - *EPROC-SRC-83 – No integrated videoconference.*
 -
- **Contract Management** Needs clarification. Narrative includes description and references to Contract Management and Vendor Performance, however no RTMs were completed for this functionality.
 - *– P28 highly visual user interface, making it easy for you to view contract status at a glance and proactively manage important dates and reminders. Within a contract, you can view a timeline of all your major milestones, actions, lead times, terms/change orders, and reminders*
 - *P38 Dashboard includes key performance indicators (KPIs) including contracts expiring within a certain timeframe and the subsequent contract values.*
 - *P39 implementation specialist will help define the types of contracts the State wishes to store in Bonfire, and which pieces of information/documents will be*
 - *tied to each contract record.*
- **Vendor Performance** – P41 Teams can create custom supplier performance surveys for specific suppliers, determine the desired respondents, and set a cadence for surveys to be automatically sent.
 - *On the Vendor Records page, users can see how their suppliers are performing at a glance and flag any risks with their performance. Supplier surveys can also be configured.*
- ~~Purchasing/Data Analytics~~

Technical Requirements

- Availability - 24/7 access/ Updates scheduled outside core business hours. AWS hosted.
 - P42 Table for notification standards or planned and unplanned events.
- Accessibility Requirements – P44 *compliance with Section 508, Federal Rehabilitation Act; built, tested, and audited to meet WCAG Level 2.0 AA standards.*
- Audit Trail and History – P45 – Scoring changes tracked. Approvals tracked. Bonfire Support can provide additional tracking with back end logs.
- Browsers Supported – lists common browsers (including IE). Javascript and cookies required.
- User Accounts and Administration – Organization, department, project, vendors, intake roles. Visibility and controls limited to areas of responsibility. Definitions provided. Some roles are read-only functionality. Specific roles for contract management and vendor management.
- User Authentication – supports SAML 2.20; SFA, SSO. Password guidelines fall NIST SP 800-63
- Federated Identity Management – See previous.
- Data Conversion – facilitated by Implementation manager; must be formatted into Bonfire-provided .xlsx. Or via FTP and template.
 - Users can import active solicitations and courtmdocs.ents.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 1/20/22

SME/EVALUATOR NAME: Gerard MacCrossan

DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Interface and Integration – P 57 *interface on a nightly or real-time basis to support the data inflows and outflows needed with other systems.*
 - *each integration is approached as a custom interface that needs to be scoped by our professional services team.*
- Office Automation Integration – RTM files list; XLSX or CSV for imports.
- Mobile Device Support – P59 system works on mobile devices but is best used via desktop or laptop due to nature of workflow.
- Mobile Applications – No separate mobile app. See previous.
- Data Ownership and Access P60 *All data sent to or stored in the Bonfire system remains the ownership of the Participating Entity.*
 - All data will be returned or destroyed at end of contract at the request of Participating Entity. No cost for access to data.
- Date Retention, Archive and Purge Considerations – Unlimited data storage during contract. Users may delete data that is only recoverable via backup recovery. At contract end, records can be exported via FTP and scheduled for destruction – policy attached.
- Disaster Recovery Plan – outline of procedures.
- Solution Environments – Only Prod environment available to participating entities. Sandbox may be requested during implementation and for testing.
 - No option for customers to delay new feature releases.
- Solution Technical Architecture – P63 *End user data exchange: web-forms, file uploads, or bulk import/uploads via .CSV/.XLSX*
 - System level integration – Rest Web-API or flat file exchange.
 - Javascript based system. HTTPS access via web browser.
- Solution Network Architecture - *Amazon Web Services (AWS) data centers that have been certified for ISO, PCI, SOC, CSA, FedRAMP, FIPS, NIST, PIPEDA,*
 - *Data can be held in US.*
 - *P66. All data sent to or stored in Bonfire is replicated and backed up on a continuous basis. We also use multiple availability zones so that if one datacenter has an availability issue, the service automatically redirects to another within the same data region.*
- System Development Methodology – SDLC - *Developers are organized into feature teams who work on 2-week sprints in conjunction with Product Management and Product Design teams.*
 - *Code review by Dev, then internal UAT by staff across the company in the Product, Sales, Support, Customer Success, and Implementation teams*
 - *1 month notification via email or in-message platform of new features. Training webinar within 1 week of release.*
 - *Environments are monitored and stress tested.*
- Service Level Agreement – Sample provided.

Security Requirements

- Cloud Security Alliance (CSA) Compliance – CAIQ provided. (Lot of Nos on technical questions with limited notes.)
- Security and Privacy Controls – P69 *We design, develop, and maintain our systems and applications following industry standards and best practices from CIS, NIST, CSA and OWASP.*
 - *P70 Based on FIPS 199 Standards for Security Categorization of Federal Information and Information Systems, Bonfire is categorized as LOW for potential impact and data sensitivity.*

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Bonfire

CATEGORY #(s): 2

DATE: 1/20/22

SME/EVALUATOR NAME: Gerard MacCrossan

DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Security Certifications – SOC-Typ3 li
- Annual Security Plan – p73 role-based permission system to enforce security.
 - *User passwords in Bonfire are hashed and stored using Bcrypt*
 - *If SSO is used, Bonfire does not store any of your passwords*
 - *Bonfire services are scanned regularly internally and externally to identify vulnerabilities, configuration gaps, and missing patches. Annual third-party pen tests.*
- Secure Application and Network Environment – See above.
 - *P76 Endpoint systems have robust security controls in place including device management, anti-malware, web/DNS filtering, protections, automated patch management, secure system configuration policies, idle timeouts, password managers,*
 - **EPROC-SEC-1** – tracking device usage/new device – **not functional**
- Secure Application and Network Access
 - *P78 All communication between the customer and Bonfire solution, including APIs are encrypted while in-transit using industry-standard HTTPS/TLS (TLS 1.2 or higher) over the Internet, ensuring that all traffic between the customer and Bonfire is secure during transit.*
 - *System and application logs are forwarded to a centralized logging repository that include at minimum: Timestamp; Source; Destination; User; Activity/Action*
- Data Security – See previous.
- Personally Identifiable Information Protection - *collects minimal business contact information including: name, email address, business phone number and business address.*
 - *We will keep your Personal Information for as long as it remains necessary for the identified purpose or as required by law, which may extend beyond the termination of our relationship with you. We may retain certain data as necessary to prevent fraud or future abuse, or for legitimate business purposes*
- Security/Privacy Issue Occurrence – *P83 Bonfire will notify the affected parties. In the case of a breach involving organizational data, organization contacts or affected organizations will be notified. In the case of a personal data breach, the affected individuals will be contacted.*
 - *Three-tier response provided – all notification within 1 hour. Response work starts 2 hours to 1 day. Resolution 2-4 days. Incident A is highest threshold.*
- PII Data Actual/Attempted Access or Disclosure – See previous
- Security Breach Reporting – See previous.

Implementation Services Requirements

- Project Management – P88 Bonfire PM staff identified with functions.
 - *Customer staff narrative identifying needed personnel roles; IT staff only needed for SSO integration.*
 - *Steering committee to meet regularly with Bonfire staff*
- Project Implementation Methodology – *classroom-style training plus access to online LMS.*
 - *Agile implementation of key components. 13 page sample implementation plan lists tasks and expected time to completion.*
 - *Focus is on training; not significant configuration or customization in this COTS tool*
 - *Risk management plan provided. – Identification, analysis and mitigation processes/*
 - *Issue tracking: P91 All software issues in Bonfire are tracked through support tickets that are managed by Bonfire's product, development, and support teams. Bonfire uses Zendesk for managing support requests and issues*

—Catalog Support Services

- Data Conversion Services – P92 *Bonfire's Client Experience Team will work with the client to ensure all data is clean and acceptable, prior to successfully importing the Metadata. Bonfire's Custom Built Import tool and customized field mapper will be leveraged for this process.*
- Interface/Integration Development Services – Complete implementation and determine if integrations needed. If needed, Bonfire Professional Services engaged – **Needs clarification - for pricing, would this be additional cost?**
- Organizational Change Management (OCM Services) P97 *Stakeholder Analysis is conducted. Implementation kick-off to gauge what types of stakeholders will be involved and their level of comfort with technology and change generally. Once assessed, Bonfire will tailor the training plan.*
 - *Also may do readiness assessments if needed.*
 - *Impact assessments standard focusing on stakeholder groups – purchasing teams; potential evaluators; vendor community. Also look at documentation.*
 - *Coaching plans leverage resources ; onlin, webinar; one-on-one support.*
 - *P97-98: Resistance methodology: Anticipate, Identify, Manage.*
- Training Services – P99 *Task based:*
 - *General Account Setup*
 - *• Customization of Portal Feature Set*
 - *• Determining and Configuring the Departments on the Portal*
 - *• Determining and Assigning User Roles*
 - *• Customizing Vendor Registration Form*
 - *Training*
 - *• General training session on the Listing / Evaluation platforms of Bonfire*
 - *• Specialized training on Bonfire's Advanced Evaluation Modules (Multi-Decision, Questionnaires, BidTables)*
 - *• Vendor Management & Insights Reports Training*
 - *Ramp-up*
 - *• Review of RFx templates and changes required*
 - *• Assistance with the creation of the first project at each Department*
 - *• Implementation Debrief to Management for each Department*
- Help Desk Services
 - Ontario-based. M-F 8-8 EST Coverage
 - Self-service/personnel. Targets 1 hour; end of day on support team.
 - Email first. Phone/zoom calls scheduled if needed.
 - Knowledgebase of articles; Answerbot helps navigate.
 - EPROC-IMPL-3-4– No phone or live chat support – form only
 - EPROC-IMPL-5 – No integration for help desk tickets.
- On-Site System Stabilization Support
 - On-site support not offered.

Managed Services Requirements

- Solution Support
- Organizational Change Management (OCM Services)
- Training Services
- Catalog support services.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization

- Started to build CloudBuy in 1999 with implementations “around the world” over next 20 years.
- Founding directors purchased CloudBuy in Aug 2020, so new company “is in its first year of operation”.
- Has “30 permanent staff (15 UK and 15 in India)”

2. Previous Projects

- **York Schools District School Board:** “Single sign through online shopping, requisition, approval, purchase order, goods receipt, invoice, invoice matching, payment and funds reconciliation”. Pilot with “few schools/departments” in 2017, full rollout commenced Feb 2018. After one year full rollout usage: 10K invoices totalling \$2.5M with 99.5% invoices matching orders in the system.
- **Bio Rad Antibodies:** “Content Management, portal and ecommerce” with interface to “different payment gateways and ERPs”.
- **PHB Choices:** System used to enter “time sheets and send them for approval” and to “manage the budgets”. Included reporting of “activity from initiation of budget, payment frequencies, employment of Personal Assistants, timesheets” and “consumables”. Project was cancelled due to limited use by staff during merger and then impact from Covid. Cancellation led to founders purchasing “company back” from their US investor.
- **Ohio Schools Council:** Uses “purchase to pay capabilities” of CloudBuy which has been rolled out to the 200 “districts and school boards”.

3. Subcontractors

- No subcontractors.

4. Organizational Chart

- Provided a company organization chart instead of one representing an implementation project. So could not assess the org chart from a project implementation perspective.
- Staff identified have the appropriate roles and background to support the solution.

5. Litigation

- No litigation.

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

6. Financial Viability

- No D&B report available since company is in their “first year of business”.
-
-

**STATE OF MAINE
INDIVIDUAL EVALUATION NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: CloudBuy Limited

CATEGORY #(s): 2

DATE: 9/17/21

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts - Statewide Procurement Division, Texas

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments: Lack of U.S.-based implementation team and relatively low documented turnover points to high level of risk. Low uptake on prior projects causing cancelation is concerning.

Organization Qualifications and Experience

1. Overview of the Organization

- >20 years e-procurement development.
- UK public health, India, U.S. public schools
- Majority owner is integrating CloudBuy with SAP systems
- SQL/Mongo – some open source
- UK NHS project closed down for low uptake – founders repurchased company with new Indian investment

•

2. Previous Projects

- State agencies, local.
- International.

3. Subcontractors

- None

•

•

4. Organizational Chart

- 30 employees. None US based
- Listed several employees with experience prior to restructuring.

•

5. Litigation

- None reported.

•

•

6. Financial Viability

- Reformed company only has one year experience and appears to be operationally supported by capital investment.

•

•

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 2
DATE: 8/26/21
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Instructions: *The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.*

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization - GEP

- Global providing “end-to-end procurement and supply chain services” w/ 20+ years “delivering procurement success” (pg. 4)
- “Top-ranked by Gartner, Forrester, IDC, Spend Matters” (pg. 4)
- “Woman and minority-owned enterprise” (pg. 4). Minority Owned cert- Tennessee, Women Owned cert- New Jersey (pg. 10)
- Can provide Full Suite eProcurement solution and “Managed Services” (pg. 6)

2. Previous Projects (pgs. 13/15)

- Overall:
 - i. Higher Education but no State/Local Gov’t examples
- **Viatris:** Referred to “Unified direct and indirect buying and accounts payable” but they do not clearly say what GEP modules were implemented. Implies it was the Purchasing and Supplier Management modules. \$40B+ spend, 75K suppliers uploaded. *Not a Full Suite eProcurement implementation.*
- **UCAL:** Appears that GEP S2C (“Spend Analysis, Sourcing, Contract Management, Supplier Management) and a “public bid site” were implemented. Spend under management increased to \$47.5B, 1K+ sourcing events. *Not a Full Suite eProcurement implementation.*
- **Chevron:** “Unified, mobile-enabled system” but does not say what GEP modules were implemented. Provided Change Management for “users and suppliers”. *Unclear whether this was a Full Suite eProcurement implementation.*
- **LDS Church:** Contract and Supplier Management. “Managed over 8k suppliers and integrated over 25k contracts”. *Not a Full Suite eProcurement implementation.* Subcontractors
- **UMASS:** “Full suite of Source-to-Pay execution tools and process flows”. “Campus-wide Procurement Support desk and portal”. “Highly effective change management and communication plan”. *Appears to be a Full Suite eProcurement implementation however*

commented that there is a “roadmap” of “key capabilities that will be built out over the next 12-24 months after go-live”. So the implementation may not be complete.

3. Subcontractors
 - No subcontractors.
4. Organizational Chart
 - Organization charts provide sufficient detail to demonstrate that most areas of Full Suite eProcurement implementation are represented. (pg. 22)
 - Staffing Plan (pgs. 23-25) present both the Contractor and Participating Entity staffing/responsibilities. Both lists are reflective of the core positions and responsibilities.
5. Litigation
 - No litigation
6. Financial Viability (pgs. 31-33)
 - GEP (NB Ventures, Inc.): No negative categories or risk concerns cited.

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements

- Single unified platform, pg. 4: "all relevant functionality in a single unified platform:- sourcing, savings tracking, category management, contract management, supplier management, and procure-to-pay"

User Experience

- Intuitive User Experience, pg. 8:
STRENGTH
 - o Users can pick which screen will be their landing page
 - o Users can drag/drop, reorder different sections of the screen. System retains changes for next log in.CONCERN: the "pending tasks" list has all tasks, mixing all types of transactions/tasks in a single list that must be filtered or searched. Will likely be too much in a single list for users.
- Mobile, pg. 9: STRENGTH, iOS and Android apps have very robust functionality.

Bidder Best Practices and Roadmap

- Agile Implementation Methodology, pg. 14: STRENGTH, methodology focused on "Progress over perfection" as detailed allows State/Entity to learn from decisions they make for setup configuration and adjust instead of settle.
- Release/Update Cycles, pg. 15: WEAKNESS, for New Releases and Maintenance Releases the State/Entity will only have a release in UAT for one week before it goes to Production.

Innovations and Value-Added Features/Services

All of these services are likely to be only an occasional fit/need for States/Entities. Suggest making sure these are negotiated and moved to be Optional and are not included in the proposal scope/pricing.

- **Organizational Maturity Assessment**, pg. 19-24: CONCERN, Maturity Assessment work is not often needed/desired by States and is very 'heavy'/intensive work (16 weeks minimum).
- **Opportunity Assessment**, pg. 25-28: CONCERN, Opportunity Assessment is another heavy/intensive effort towards recommending Sourcing actions by the State. This is outsourcing

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

the 'strategy' part of Strategic sourcing and it requires a lot of data that is not easily obtained or categorized... so lot of work to gather and then analyze/classify.

- **Market Intelligence**, pg. 30-34: Reports from GEP resources/data to support a State's Strategic Sourcing efforts. This is not likely to be a heavily use resource/service since it would target situations where the State/Entity feels they don't have sufficient insight for a planned sourcing event.
- **Category Management**, pg. 36-37: This appears to be full outsourcing of Strategic Sourcing work.

Customizations/Extensions

- Customizations/Extensions, pg. 39: NOTE, GEP uses a "Product Advisory Group (PAG)" to get customer feedback on current features, new features and feature enhancements. Should GEP move forward, suggest negotiating to have some part of the post-award ValuePoint Team to be members of this Group to insure that NASPO members have a 'voice' for the roadmap of the system.

Alternative Funding Models

- None offered

Functional Requirements

General Functionality

- Modules included, pg. 46: Spend Analysis, Sourcing/Bid Mgmt, Contract Mgmt, Supplier Mgmt, Item Master, Vendor Master, Reporting/Analytics, Invoice Mgmt, Purchasing, Catalog Mgmt, Guided Buying.

RTM

- WEAKNESS, GEN-3: Suppliers must register to be able to use an RFx link to access a Solicitation Event.
- STRENGTH, GEN-12: System search can search "content with any readable attachments" (e.g. pdf, excel).
- WEAKNESS, GEN-25: All emails generated by the system will have a From email address domain of "gep.com" instead of the State/Entity.
- POTENTIAL WEAKNESS, GEN-35: System does not have a "comment library" feature to store standard comments for use on Transactions.
- WEAKNESS, GEN-38: GEP licensing does not provide for "unlimited licenses for business users and supplier users."

Supplier Portal: does have the functionality.

- GEP Supplier Enablement Team, pg. 50: "will take ownership of onboarding all State/Participating Entity suppliers... at the time of implementation". CLARIFICATION, will this team be responsible for on-going supplier onboarding post-implementation of the system?
- "GEP does not charge the suppliers to transact on our platform" (pg. 50)
- Suppliers have "single login to transact with different States/Participating Entities (pg. 51). So single supplier account to work with all Coupa customers.

RTM

- STRENGTH, SPR-13: Supplier emailed invoices can be OCR scanned to extract metadata and automatically load this into the system.

Supplier Enablement/Management: does have the functionality

- "Pre-Qualified Supplier", pg. 54: CLARIFICATION, are these lists required to be used as the invited supplier list for sourcing events?

RTM

- Meets req'ts

Buyer Portal: does have the functionality

RTM

- Meets req'ts

Need Identification: does have the functionality

- "Central intake form", users provide details on product/service with "category/commodity specific questions/fields". (pg. 62)

RTM

- Meets req'ts.
- STRENGTH, NEED-3: System allows creation of multiple "intake form" capabilities to address different kinds of procurement needs.

Request through Pay: does have the functionality

- pg. 64: CONCERN, "connecting every order to a contract" may mean that the system does not provide means to do non-contract orders in the system.
- pg. 66: Can create purchase orders "without a requisition".
- Services Procurement, pg. 67: STRENGTH, 3 ways to address services procurement
 - o User creates requisition with Milestone line items on a PO.
 - o User creates requisition with Contingent Worker details.
 - o Supplier creates "service entry sheets" with "service line items/rates" from the contract that are "sent for approval".

RTM

- NOTE, there are many req'ts where the response is "yes" and basically repeating the req't without providing details of how the system would do it.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- POTENTIAL WEAKNESS, PRD-13: System does not provide a "library concept of standard specification text or attachments associate with specific commodity codes".
- POTENTIAL WEAKNESS, PRD-37: System does not capture "non-contract match" items when purchasing from a State source.
- POTENTIAL WEAKNESS, PRD-37: System does not capture prices for matching State sources when a non-contract item is selected.
- CONCERN, PRD-56: Response is would "like to discuss" in regards to being able to enter "backdated purchase requests".
- POTENTIAL WEAKNESS, PO-16: System only offers "signature image" for electronic signature of the PO.
- NOTE, PC-1: Pcard functionality for the system is not scheduled for release unty Q1-2022.
- POTENTIAL WEAKNESS, RC-3: System does not provide a means to record receipts in the system without a PO being in the system.

Catalog Capability: does have the functionality

- pg. 69: CONCERN, "catalogs linked with contract" may mean that the system does not support non-contract catalogs.
- pg. 70,
 - o "At the time of implementation, GEP will configure any State/Participating Entity specific punchout catalogs".
 - o "supports level-2 punchouts", suppliers must "expose their APIs to GEP web crawlers".
 - o "Internal Catalogs" that integration with inventory master provides "visibility in on-hand balances/quantity, price to the users".

RTM

- Meets req'ts except, POTENTIAL WEAKNESS, CAT-19: Catalogs cannot have negative values to identify trade-in values.

Sourcing/Bid Management: does have the functionality

- pg. 74, "line sourcing events from opportunities identified through spend analysis".

RTM

- STRENGTH, SRC-29: System allows users to copy/paste from Excel to the price sheet screen.
- POTENTIAL WEAKNESS, SRC-37: Changes to a Solicitation Template may automatically "make specific updates to the sourcing events" where users have used the templates.
- POTENTIAL WEAKNESS, SRC-67: System does not provide a means for suppliers to add themselves to a solicitation bidders list. The buyer must do it manually.
- WEAKNESS, SRC-97: Suppliers cannot withdraw a response once it has been submitted. They must revise their response to say not responding and re-submit to replace their previous response.
- POTENTIAL WEAKNESS, SRC-102: System does not provide a capability for supplies to electronically sign their response. They must sign a printed copy, then scan & attach the document.
- WEAKNESS, SRC-107: System does not provide a way to prevent Suppliers from submitting on-line responses for 'hard copy submission only' Solicitations.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- NOTE, SRC-109: The capability for buyers to enter paper responses on-behalf of Suppliers is not currently a feature but is expected to be available by Award.
- WEAKNESS, SRC-122 & 123: System does not provide a means to define and apply Preferences to response evaluation.
- POTENTIAL WEAKNESS, SRC-148: For cancelled solicitations, any submitted responses will not be locked/encrypted to prevent buyer access and Suppliers cannot withdraw their responses.

Contract Management: does have the functionality

- Pg. 77
 - o Collaborative Authoring", route contract draft internally and externally to suppliers for "review, editing and redlining"
 - o Very comprehensive integration with MS Word with check-out/check-in document control and access clause library from within MS Word.

Video - Strengths

- Contract Wizard method, prompts user for info and system suggests relevant templates then creates draft contract.
- Contract Examiner: loads and scans PDF docs extracting Meta data
- In MS Word editing of contract language redlining user can see list of Clauses from library (Variable Library) that can be added while editing in Word.
- Contract Search from Workbench searches all Contract Metadata and all readable documents.

RTM

- STRENGTH, CNT-8: System has a 'mass' update feature to amend all existing contract to get updated clauses/templates.
- NOTE, CNT-23: Response did not address Contract Authoring however on pg. 77 of the Technical Response this capability is discussed.
- POTENTIAL WEAKNESS, CNT-27: System does not provide a means to restrict access to specific attachments on a Contract.
- POTENTIAL WEAKNESS, CNT-36: System does not provide a means to define default account coding as part of the Contract record that would then be used as default for requisitions/orders from the contract.
- WEAKNESS, CNT-38: To capture Contract subcontractors, resellers, dealers and franchises they must be issued their own contracts in the system.
- WEAKNESS, CNT-41: To capture Contract SWAM certification/participation data each subcontractor must be issued their own contract in the system.

Vendor Performance: does have the functionality

- Pg. 79/80,
 - o Survey questionnaires to users
 - o Initiate performance improvement plans w/ milestones and activities.
 - o Link to Contract obligations to generate "Contract score"
 - o

RTM

- Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 2
DATE: 12/27/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Purchasing/Data Analytics: does have the functionality

- pg. 82: CONCERN, "GEP Minerva" cited as providing AI and machine learning but it is not listed in the components included in the proposal (pg. 46).

RTM

- Meets req'ts

Technical Requirements

Availability

Pg. 86: Meets req'ts.

Accessibility Requirements Pg. 88: Meets req'ts for components behind the login, however response did not address compliance of "publicly available" components.

Audit Trail and History

Pg. 90 & TECH-1 thru 5: Meets req'ts

Browsers Supported

Pg. 92: Meets req'ts

User Accounts and Administration

- Pg. 94/95: Meets User Acct/Admin req'ts except response did NOT address req't to be able to delegate Admin role to agencies.

RTM

- POTENTIAL WEAKNESS, TECH-12: System does not provide a 'one account' feature for user that is both a buyer and a supplier. User must have two accounts.

User Authentication & Federated Identity Management

Pg. 97 & TECH-21 thru 25: Meets req'ts.

Data Conversion

Pg. 99-105 & TECH-26 thru 34: Meets req'ts.

- CONCERN, response refers to "item master data management and vendor harmonization services" but does not indicate whether these are included in the proposed scope/pricing.
- CONCERN, pg. 105 figure references "UNSPSC classification". Does this mean that the system only support UNSPSC commodity codes?

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Interface and Integration

Pg. 107-109: Meets req'ts except for real time integration.

- NOTE, pg. 108 of proposal assumes that the State/Entity will provide Middleware for integration.

RTM

- GAP, TECH-35: System does not provide real-time integration capabilities. Can be "Near Real time and Batch file-based transfers".

Office Automation Integration

Pg. 111 & TECH-61: Meets req'ts.

Mobile Device Support & Mobile Applications

Pg. 113/114 & TECH-62: Meets req'ts

- Pg. 113: STRENGTH, includes both iOS and Android apps which allow approving orders, requisition and invoices, service confirmation, view dashboards, access catalogs, and create requisitions. Apps support "biometric authentication".

Data Ownership and Access

No response provided. This section is missing from the proposal.

Date Retention, Archive and Purge Considerations

Pg. 116 & TECH-63: Meets req'ts.

Disaster Recovery Plan

Pg. 118: WEAKNESS, the proposal did not provide details regarding GEP's Disaster Recovery plan as required.

Solution Environments

Pg. 120: WEAKNESS, the UAT environment is to be used as the Training environment. The required separate training environment is not provided.

RTM

- WEAKNESS, TECH-64 thru 67: A separate Training environment is not provided.

Solution Technical Architecture

Pg. 122/123: Meets req'ts.

Solution Network Architecture

Pg. 125-127: Meets req'ts

System Development Methodology

Pg. 129-132: Discussion/information is not indepth but does present high level of the requested information. Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 2
DATE: 12/27/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

Service Level Agreement

Pg. 134 & GEP Appendix 1-SLA Standard doc: Not comprehensive or good protections for States/Entities

- Support services are only available to State/Entity "Designated Support Contacts" (pg. 1)
- Only service level warranty is "System Availability" at 99.8% avail, 7days/24 hours (pg. 2)
- Service Credits=% of monthly fees... must fall below SL for "three (3) consecutive calendar months" (pg. 2)
- Severity Levels: Sev 1 & 2 are about complete unavailability of entire system or a major feature. Issues around functionality on specific types of transactions (button not visible) or with a specific transaction are Sev 3. SLA does not indicate who sets the Severity. (pg. 3).
- Response Times: most critical State issues will be Sev 3 and response times are not good.
 - o Sev 1: Initial response - 1 hr, Workaround - 1 business day, Fixed – 10 business days
 - o Sev 2: Initial response - 4 hrs, Workaround - 1 business day, Fixed – 20 business days
 - o Sev 3: Initial response - 1 business day, Workaround - 10 business days, Fixed – 45 business days

Security Requirements

Cloud Security Alliance (CSA) Compliance

Pg. 136: Meets req'ts. Completed a CAIQ

Security and Privacy Controls

Pg. 139: Did not indicate level of compliance with NIST 800-53 as req'd however system is "modelled as per ISO 27001" which is international standard on security management systems.

Security Certifications

Pg. 141: Meets req'ts

Annual Security Plan

Pg. 144/145: Response did not "describe the Security Plan" but instead described their security practices and provided copy of their internal "Information Security Policy".

Secure Application and Network Environment

Pg. 147/148: Details are not comprehensive but does meet req'ts.

Secure Application and Network Access

Pg. 149/150 & SEC-1 thru SEC-5: Meets req'ts.

Data Security

Pg. 153/154: Meets req'ts.

Personally Identifiable Information Protection

Pg. 156: Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- CONCERN, GEP's definition of PII did not include Tax ID and may not match each State's/Entities' definition of PII.

Security/Privacy Issue Occurrence & PII Data Actual/Attempted Access or Disclosure

Pg. 158: Does not meet. WEAKNESS, GEP will not comply with the notification/communication req'ts specified in the RFP. Only commits to report/notify "customers within 4 hours of an incident/breach".

Security Breach Reporting

Pg. 160: Meets req'ts. Will not provide initial response within req'd 2 hours but will provide detailed notification will be within 4 hours instead of the req'd 24 hours.

Implementation Services Requirements

Project Management & Project Implementation Methodology

Pgs. 163-183:

- *Detailed Implementation Tasks*, pg. 164:
 - o CONCERN, feels like GEP expectation is little or no special setup for client. OOTB and GEP std setup is expected to fit the client.
 - o WEAKNESS,
 - Req't Gathering & Solutioning: don't see Integration
 - Cutover & GO Live: OCM communications is not happening until cutover phase. Too late for good OCM.
 - Hyper Care: waiting to establish Help Desk and do FAQs until after Go-Live is late, should be earlier.
- *Multiple Workstreams*, pg. 165:
 - o Interfaces Development: CONCERN, chart is showing that the State/Entity must lead SIT testing. This should be GEP led.
 - o Supplier Enablement: CONCERN, chart shows GEP as lead on "Set up Catalogs", need to determine if they are actually creating catalog files and see if there are any assumed limits on the number of catalogs/punchouts.
- *Organizational Chart*, pg. 166: NOTE, unusual to have an org chart that shows Contractor Leads reporting to State/Entity Leads.
- *Timelines*, pg. 167-
 - o Upstream/Downstream separation is good.
 - o Large:
 - Overall timeline of 18 months to final Go-Live is too aggressive. Should be something like 24 months.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
 - 4 months for Deploy/Training (1.5 months Upstream, 2.5 months Downstream) is too short for 12,500 State/Entity users. **NOTE: this is same amount of time as the Medium timeline.**
- Medium:
 - Overall timeline of 15 months to final Go-Live should be 18-20 months
 - Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
 - 4 months for Deploy/Training (1.5 months Upstream, 2.5 months Downstream) is too short for 7,000 State/Entity users.
- Small:
 - Overall timeline of 12 months to final Go-Live should be 16-18 months
 - Design & Build tasks for Upstream and Downstream overlap more than GEP & State resources can support.
 - 3 months for Deploy/Training (1 month Upstream, 2 months Downstream) is too short for 5,000 State/Entity users.
- *GEP Team*, pg. 171: Generally good however WEAKNESS in that the OCM role definitions (Change Lead/Change Analyst) indicate that they are only planners so the State would be doing all OCM *activities*.
- *Roles/Responsibilities*, pg. 175-178:
 - CONCERN, need more details but proposal indicates State/Entity will "own change management with the suppliers".
 - WEAKNESS,
 - Change management work only focuses on "communication" and State is responsible for execution.
 - Hypercare references "enhanced support" and "configuration support" but there are no details on what "support" means, what will they do and what will the State have to do.
 - Training documents, identified as being updated/published during Hypercare but should be done earlier as part of Training.
- *Lessons*, pg. 179: adequate
- *Challenges/Risks*, pg. 180/181: good examples but WEAKNESS in that user adoption and supplier on-boarding areas were not included.
- *Change Control Methodology*, pg. 182: CONCERN, need to confirm that the Change Control Board (CCB) is set up so that the State/Entity is the decision maker regarding changes requests.

Catalog Support Services

Pg. 185-190:

- pg. 190: NOTE: State/Entity is to provide "catalog data" to GEP.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: GEP
CATEGORY #(s): 2
DATE: 12/27/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

STRENGTH, post go-live

- o GEP will "monitor catalog utilization and "engage" State/Entity category managers.
- o GEP will review/assess "free text" purchases to identify new potential catalogs.

Data Conversion Services

Pg. 192-198: WEAKNESS, response focused on Data Management type services and only provided minimal information (pg. 196) on Data Conversion approach.

Interface/Integration Development Services

Pg. 200-202: Meets req'ts.

Organizational Change Management (OCM Services)

Pg. 204-213: Conceptually the OCM approach is insightful however the actual Services offered only provide assessments, strategy/plan development, and monitoring/measuring change. OCM execution is 'hands off' with work being done by State/Entity staff.

-

Training Services

Pg. 215-217: Train the trainer approach. Response did not provide the level of detail req'd but was sufficient to meet the req'ts.

- Unclear on whether GEP or State/Entity is to prepare end user training materials. Pg. 215 says "Trainers" will prepare the "training content" however pg. 217 states "GEP to develop all technology related training materials".
- pg. 217: GEP to train "Super users", State/Entity to train "end users". GEP "can provide support" for key end user training sessions.

Help Desk Services

Pg. 219-225 & IMPL-1 thru IMPL-5: Meets req'ts.

- POTENTIAL WEAKNESS, Issue tracking/reporting, (pg. 223), the reference to "Users" may mean the State Help Desk or the State Solution Admin persons instead of the actual end user since the diagram on pg. 222 only shows those "Solution Admin" as the ones interacting with the GEP Help Desk.
- Pg. 224, See notes regarding SLA in Technical Requirements for issues/concerns around Severity Levels and Response Times.

On-Site System Stabilization Support

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Pg. 227: Response did not provide sufficient detail on the below points to be certain they have met the req'ts.

Tra

- Response did not commit to provide on-site resources.
- Response refers to providing "minute data changes" (meaning small?) and providing Config Support to State/Entity System Admin. Need to lock down that they would be doing all of the config work during the Hypercare period and not making the State do it.
- Support Team section refers to "On call support" and "Mass support" without providing details on what these mean/include.

Managed Services Requirements

Solution Support

- Pg. 231-236 & MNGD-1: Meets req'ts.

Organizational Change Management (OCM Services)

- Pg. 238-249: As noted in Implementation Services, conceptually the OCM approach is insightful however the actual Services offered only provide assessments, strategy/plan development, and monitoring/measuring change. OCM execution is 'hands off' with work being done by State/Entity staff.

Training Services

- Pg. 251: See notes from Implementation Services req't's.

Catalog Support Services

- Pg. 253: See notes from Implementation Services req't's.

Help Desk Services

- Pg. 255: See notes from Implementation Services req't's.

Transition Out Assistance Services

- Pg. 257-258: CONCERN, the GEP indicates a 4-6 month timeline (pg. 258) but the RFP req't allows for 1 year. Need to insure that any agreement doesn't restrict States/Entities to less than 1 year.

Other Available Services

- Pg. 260: See notes from Innovations/Value-Added Features/Services

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is **required** that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

GEP – Global eProcure platform - modules in integrated platform.

General Principal and Requirements

- Key Solution Functionality Elements – Required elements provided in integrated tools. Narrative lacked detail. Video demonstrated functionality and user experience. Elements explained on narrative p46.
- User Experience - Integrated functionality.
- Bidder Best Practices and Roadmap
- Innovations and Value-Added Features/Services – Mostly focused on consulting and reports. (Swamped the narrative description of the primary sourced product.)
- Customizations/Extensions – vague description that future customer needs could be developed. Focused on existing SAAS. **EPROC-PRD-56**
- Alternative Funding Models N/A

Functional Requirements

- General Functionality – Only configuration items relate to publishing to state's website.
 - **EPROC-GEN-25** – Notifications will have @gep.com email domain / doesn't integrate to state's domain. Non-compliant. **Needs clarification.**
 - EPROC-GEN-39 – High level of configuration required to set external posted content. No additional cost proposed or problem identified.
- Supplier Portal - EPROC-SMR-19 – high level of integration for admin fee payments with state's portal. Doable.
- Supplier Enablement/Management – All requirements noted as Native to application.
- Buyer Portal – Out of box
- Need Identification – Out of box except for E-PROC-NEED-5 which would configure priority of state contracts/purchase channels.
- Request through Pay — Out of box **EPROC-PRD-11** (recurring purchase function) noted as Medium complexity to set up. **Clarification needed** if this is a configuration or actually out of box.
 - – backdated function. **Needs clarification.** Response notes as out-of-box, but statement does not address role-based authority or the functional requirement of backdated orders
 - **EPROC-PC** – Listed as in development- **Needs clarification** if functionality available.
- Catalog Capability – **EPROC-CAT-38** – Public-facing search without login not available. Can be developed. **Needs clarification** as is listed as Low complexity.
- Sourcing/Bid Management – All requirements listed as out of box or low complexity configurable except **EPROC-SRC-109** bid submissions entered by purchasing staff – currently requires GEP staff

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s) 2:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

to load into back-end. Listed as in development by contract award date. Needs clarification if functionality now exists.

- Contract Management - All listed as out of box except:
 - **EPROC-CNT-20 – Needs clarification.** Response appears to refer to each individual document internal ID not an overall contract number that may be a single document/file or a collection of files depending on structure.
 - **EPROC-CNT-71 and EPRPOC-CNT-72** – Functionality listed as high complexity config. **Needs clarification** if requirement understood. Is there admin fee functionality/invoicing/tracking separate from payment processing?
- Vendor Performance – all listed as out of box.
- Purchasing/Data Analytics – listed as out of box with some config for level 2 punchout search.

Technical Requirements

- Availability – 24x7 SLA 99.8%
- Accessibility Requirements – WCAG 2.1
- Audit Trail and History – Out of box
- Browsers Supported – Edge/Chrome recommended. Native mobile functionality for ipad and android.
- User Accounts and Administration – MS AD. 2MFA. SAML 2.0 for SSO.
 - **EPROC-TECH-12** – requires SSO for buyer/supplier dual accounts single login config. **Conditional compliance.**
 - **EPROC-TECH-24** – 2MFA doesn't autogenerate new password. 6 digit code required for access to password reset. **(acceptable standard but doesn't meet requirement.)**
- User Authentication – Non SSO – upper/lower/number/special char. 5 attempt lockout. 90 day.
- Data Conversion – Multiple dataset approach. Import of migrated data (flat file). Import of ERP live data. Process to harmonize extensive list of fields where data variation is common. (master file cleanup)
 - **EPROC-TECH-30** – Ongoing vendor performance integration is additional cost.
- Interface and Integration – 50 in-house integration experts for ERP connection. (SAP, Oracle, PS etc.) Real-time and scheduled data migration as appropriate for master or transactional (JSON) data. Customer is responsible for SLI integration. GEP will use state-preferred middleware for integration between ERP and GPE.
 - **EPROC-TECH-55** – P-card hosting is planned for 1Q22 – **needs clarification if available.**
- Office Automation Integration – MS Azure-hosted. Word integrates with GEP through plugin allowing redlining of contract document. "Contract Examiner" extracts clauses from scanned PDFs. Price sheets can be edited offline in Excel and loaded back into GEP. Integrates with Outlook for alerts/notifications.
- Mobile Device Support – Dashboards, viewing catalogs, Approvals. Unclear if ordering can be performed in mobile environment. (Secure biometric access.) Unclear if VPN is required to log into mobile environment.
- Mobile Applications
- Data Ownership and Access – After contract termination, customer data returned in mutually acceptable file format; then purged and destroyed. Time period not stated other than with customer agreement.
- Data Retention, Archive and Purge Considerations
- Disaster Recovery Plan – 1 hour RPO. RTO 4 hrs.

STATE OF MAINE INDIVIDUAL EVALUATION NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: GEP

CATEGORY #(s) 2:

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Solution Environments – UAT and Production. UAT environment developed through investigation and requirements gathering. GEP to develop testing scenarios to validate function prior to go-live.
 - Scalable through MS Azure data centers.
 - Automated processes to maintain continuity between UAT and production environments.
 - Mobile – native adaptive UI
- Solution Technical Architecture - .Net built on Azure.
- Solution Network Architecture
- System Development Methodology
- Service Level Agreement – 99.8% system availability. 4-level Severity priority for cases with response times 1 hour, 4 hour, 1 business day 4 business days initial response provided followed b 3-step support timeline for each level to conclusion. (Appendix 1.) 24x5 (M-F) support services assistance via email, online and phone.

Security Requirements

Notes: GEP SMART Application Architecture & Security Overview, SOC 2 and Information Security policy provided in appendices.

- Cloud Security Alliance (CSA) Compliance – Yes. Completed. No answers of concern.
- Security and Privacy Controls
- Security Certifications - datacenters are SSAE16 certified. The datacenters are SOC1 and SOC2 as well as ISO / IEC 27001:2005 certified and hosts data for Fortune 500 as well as Global 2000 companies.
- Annual Security Plan
- Secure Application and Network Environment -
- Secure Application and Network Access – EPROC-SEC-2 – configuration required for concurrent login limitations in conjunction with customer.
- **EPROC-SEC-3** – forced login **not currently available** – would be developed with customer – no extra cost proposed.
- EPROC-SEC-5 – almost real-time snapshots. Daily, weekly and monthly off-site backups. Primary data center VA, Secondary CA.
- Data Security – Azure PAAS.
- Personally Identifiable Information Protection – Lists compliance in narrative.
- Security/Privacy Issue Occurrence – Acceptable response listed in CAIQ.
- PII Data Actual/Attempted Access or Disclosure
- Security Breach Reporting – Notification with 4 hours of occurrence - Narrative.

Implementation Services Requirements - GEP

- Project Management – Detailed org, role description. GEP and state responsibility.
- Project Implementation Methodology – Agile sprints / JIRA tracking
 - 5 stages: Requirements; Development/config; UAT; go-live; hypercare
 - Implementation schedules for small, med, large [provided.
 - Challenge/risk mitigation strategies identified (p180)
- Catalog Support Services – Separate implementations with suppliers for hosted/punchout catalogs by supplier enablement team. Ongoing hosted owned by customer; ongoing punchout.
 - GEP will test punchout catalogs – signoff required from customer and supplier before go-live.

DATE: 1/10/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Needs clarification: UNSPSC is referenced in graphics – does GEP support NIGP?
 - Needs clarification: GEP Catalog management services – works with suppliers pre- and post-go-live. Is this a supplied cost option?
- Data Conversion Services – emphasis on understanding data, process standards, data mapping prior to migration.
 - Data standardization – centralized data platform for all systems.
 - Clarification needed: who authorizes decision process for “GEP supplier database” to be the data of record when conflicting data exists or is entered in customer system?
- Interface/Integration Development Services – Defined rules established; standard APIs developed; transaction failure notification monitored by GEP integration team; will be retriggered to correct.
- Organizational Change Management (OCM Services) – Steps designing change process; identified stakeholders and impacted by People, Process, and Technology.
 - Communication and training plans based on stakeholders’ impact.
 - Identify readiness through process; communicate change reasons and processes to drive adoption. Change agent roles: Sponsors, Champions, Agents. (Profile of agents)
- Training Services – Train the trainer; self-study modules powerpoint; quick ref guides; desktop procedures; faqs. Delivered in-person and remotely. Staged training based on role/audience.
 - GEP train superusers; end users trained by customer agency superusers.
 - GEP provide technology documentation; customer agency develop process docs.
 - Needs clarification: No online self-paced training mentioned – is this because of configured toolset that requires training of this type to be developed by the customer?
- Help Desk Services – GEP Success portal – 24x7 – case reporting, knowledge bases.
 - 24x5 helpdesk for customer users. Phone, email and chat. Suppliers by email and phone only.
 - EPROC-IMPL-1 - Needs clarification – new release, product update training through webinars – are these webinars for all GEP or customer-specific?
 - Needs clarification: p222 Best practices support model. Is GEP/State helpdesk staffed by GEP or a combination of GEP and customer staff?
 - EPROC-IMPL-2 – ongoing training provided as needed: who defines as-needed? Are their additional cost thresholds for training? For smaller agency, if train the trainer needs to be performed at future stage in the contract due to staff turnover, is GEP committed to providing this post-implementation or is this a cost option? Needs clarification.
- On-Site System Stabilization Support – agreed hypercare period to handhold initial document creation, complete key issues detected post launch; configuration support; issue cleanup; on-demand supplier support.

Managed Services Requirements

- Solution Support – governance plan for ongoing system support;
 - Specific Director; technical account manager, customer support lead roles in addition to customer support team.
 - Repeated 24x7 system uptime/99.8% SLA. Off-business hour updates; vulnerability and patch policy and practice.
 - EPROC-MNGD-1 – findings reported on “regular basis” – is this quarterly meetings? Needs clarification.
- Organizational Change Management (OCM Services) – Repetitive of implementation slides.

Instructions: The purpose of this form is to record proposal review notes written by individual evaluators for this Request for Proposals (RFP) process. It is required that each individual evaluator make notes for each proposal that he or she reviews. No numerical scoring should take place on these notes, as that is performed only during team consensus evaluation meetings. A separate form is available for team consensus evaluation notes and scoring. Once complete, please submit a copy of this document to your Department's RFP Coordinator or Lead Evaluator for this RFP.

Individual Evaluator Comments:

Organization Qualifications and Experience

1. Overview of the Organization (pg. 3/4)

- Founded in 2000
- "Over the last two years Ivalua continued to invest and focus on the public sector by establishing a dedicated Public Sector Practice and fully dedicated team."
- Public Sector team includes "Product Development staff" to "enhance current solution to support public sector" and "develop new products".
- "We view our investment and focus on the Public Sector" to "ensuring our Public Sector customers achieve their goals and objectives"
- Gartner Magic Quadrant
 - i. Sourcing Applications: 2015, 2017, 2018
 - ii. Procure-to-Pay: 2019, 2020
- Forrester Leader
 - i. Supplier Risk/Perf Mgmt: 2018
 - ii. E-Procurement: 2019
 - iii. Source to Contract: 2019
- World Procurement Awards "Best P2P Solutions Specialist Provider": 2019, 2020

2. Previous Projects

- City of New York: "Full-suite Ivalua implementation", "SRM, eSourcing, Contracts & Catalogs, eProcurement, Invoicing and Business Intelligence". Included SSO and Supplier integration with finance system. (pg. 5)
- State of Maryland: "Ivalua's complete platform", "1.) Public Portal, 2.) Supplier Management, 3.) Solicitation to Bid Management, 4.) Strategy & Analytics, 5.) Contract Management, 6.) Procurement, and 7.) Invoicing". "Stood-up within 4.5 months". (pg. 5/6)
- State of Ohio: "Initial deployment" to "12 early adopter agencies" of full suite with "21 key integration points". Maintaining the solution for 130 State Agencies, 24 Cabinet Agencies and 12 Early Adopter Agencies. (pg. 6)
- State of Alabama: "Selected Ivalua's Source to Pay solution because of the flexibility of configuration, and the reporting and dashboard functionality". (pg. 7)
- Los Angeles Dept of Water/Power: "First phases of the project were implementing the Solicitation and Supplier Information Management solution which is part of the Ivalua full Source to Pay platform". (pg. 7)

3. Subcontractors

- No subcontractors.

-
-
- 4. Organizational Chart
 - Organization chart does represent an implementation project and includes both State and Contractor positions. Though generic it does reflect core/key positions.
- 5. Litigation
 - No litigation.
- 6. Financial Viability
 - D&B report not provided. RFP required "3 most recent" Financial Statements but Ivalua only provided 2018 & 2019 reports. Don't know if 2020 hasn't been completed but do note that the 2018 report does show 2017 values (noted below).
 - **2017:** "Net Income" shows positive 1.192M euros (pg. 20). "Closing cash position" was 29.599M euros (pg. 22)
 - **2018:** "Net Income" shows loss of 870K euros (pg. 20). "Closing cash position" was 31.405M euros (pg. 22)
 - **2019:** "Net Income" shows loss of 7.615M euros (pg. 29). "Closing cash position" was 74.829M euros (pg. 31)

Individual SME Comments:

General Principal and Requirements

Key Solution Functionality Elements, pg. 3-7 :

- Single Point of Entry: "has a single landing page when a user logs in. At this point user/profile-specific content is displayed." (pg. 3/4)
- Smart Routing: "Workflow routing is attached to any object in the system". "determine the workflow routing based on business rules for each object." (pg. 4)
- Compliance: "lvalua understands that each organization has their own procurement code they must follow". System has the "flexibility to tailor the solution to meet the needs of individual public organizations" with a "robust configuration layer that allows organizations to add new fields, tailor business rules, add alerts, and managed workflow for your organization". (pg. 5)
- Portal: "they will have one place to manage all their activity and actions throughout the procurement lifecycle". "configurable homepage dashboards, users will be able to quickly see and take action on pending tasks. They will also have the ability to personalize this page to meet their needs". "collaboration tools such as internal blogs, discussion forums, and comments through the process". (pg. 5)
- Open Marketplace Environment: "find it no matter if it is from an internal catalog or an external supplier catalog". "accommodates hosted catalogs (catalogs managed by the organization), punchout catalogs (catalogs managed by retail sites)". "powerful search 360 functionality" which allows "search hosted and punchout catalogs side by side". (pg. 5)
- Integration: "robust integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on.". "multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.)". "includes hundreds of data mapping formats and standard integration templates". (pg. 5/6)
- Workflow: "workflow allows for easy work queue / process management and rule-based assignments.". "Client administrators are given latitude within the tool to adjust approval thresholds and approval assignments without needing to configure". (pg. 7)
- "over 50 different controls per workflow step including even the specific notification methods and addressees and "callback" support that can be used to invoke scripted actions like integration web services calls or cross-workflow signaling ". (pg. 7)
- Document Management: "functionality based on a common data model and a unified code base across all source-to-pay solutions". "consistent access to every data element, workflow element, supplier record, document management, UI functionality, and automation component."
- Reporting: "have an analytics layer across all our solution areas (source-to-pay) with numerous out of the box reports and dashboards as well as easy capabilities for users to create their own

SME DEPARTMENT/STATE: NASPO

reports / dashboard". "users can save their personal reports within their own dashboard as well as share with others, as necessary." (pg. 7)

- Configurable: "Coding is not required to make changes to tailor the solution to meet the needs of each client." Create new fields, Change field names, Add tooltips/watermarks/regex, Conditional logic on fields, Mandatory fields, Tailored workflows, contract templates, standard documents. (pg. 6/7)
- Transparency: "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution". "public portal allows for suppliers or concerned parties without an account to view all aspects of the procurement process within the solution."

User Experience, pg. 7/8 : - Response did not address "Wizard-driven capabilities", "Mobile access/use" or "Workload management" to re-assign work.

- "Homepages are unique per profile, but also can be configured by the individual user." "includes quick links and shortcuts to frequently used objects."
- "access their pending workflow tasks directly from their home screen"
- "Each user is given one or multiple roles in the system which is tied to a series of authorizations. These authorizations will dictate what the users can see and do within the solution."
- "Users can also mass reassign their workflow tasks to other users using the delegate function"
- "Users or administrators can also set-up out of office forwarding for users."

Bidder Best Practices and Roadmap, pg. 8-11 : Did not address "constantly assess and recommend opportunities to reduce costs".

- New Releases: "Major Software Product releases are delivered by the Ivalua R&D division twice a year." "Multi-instance SaaS, "client to decide which major version to choose" and "when to upgrade". "Activable Features which enables customers to take advantage of new innovations in their versions without needing to upgrade"
- Latest Technologies: "specific standards that our platform should adhere to for a specific industry, for example, we achieved the security status of being FedRAMP Ready due to our work in the US Public Sector". "leverage advanced technologies such as machine learning, natural language processing (NLP) and more."
- Timely Updates: "Once a customer decides to schedule an upgrade, together with a dedicated upgrade support team, the customer success manager, and our R&D team, we work to ensure that upgrades happen in the timeframe laid out."
- Alternate Approaches: "we have built up significant in-house knowledge on best practices within the public sector". "During the implementation phase, Ivalua together with our partner community will always be there to guide customers towards better, more effective solutions, processes, and approaches, based on our experience." "customers themselves have a high degree of ownership over the solution, to be able to make changes and evolve as needed, without having to rely on us or our partners".
- Roadmap: "We have a dedicated Public Sector team that interfaces with R&D to ensure necessary and innovative Public Sector requirements and functionality are prominently featured on the roadmap.". "Key areas of investment are focused on":
 - o Enhance Mobile experience: Already have "Progressive Web Apps" for "workflow actions, notifications/alerts and more capabilities". "year to improve and enhance this around contracts, invoicing, supplier mobile capabilities. "
 - o Invoice/Payments: "Enabling the ability to execute payments within Ivalua"

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- AI powered Contract Lifecycle Mgmt: “leveraging AI” for a “more guided, collaborative, and intelligent experience”.
- Supplier Risk/Performance: add new features to existing capabilities.
- Security: Already FedRAMP. “evaluate additional threats and standards (like StateRAMP) to ensure...pursuing the appropriate certifications”

Innovations and Value-Added Features/Services, pg. 11-13:

- Help Desk, pg11/12: Level 1 help desk for suppliers/internal users. CONCERN, response refers to Help Desk as “not contemplated in the RFP” however there are specific req’ts for this in Implementation Services and Managed Services.

- Cooperative Reporting, Pg. 12: STRENGTH

- “keep track of their cooperative agreements in the solution”
- “enables the collection of cooperative usage information”
 - Definition of cooperative contracts within the contract record, including administrative fee
 - Reports automatically generated and sent to suppliers on a given time period (ex. quarterly)
 - • Supplier submission of spend on cooperative contracts by external bodies with automated calculation of owed administrative fees
 - Workflow for approval of supplier reports
 - Integration with a payment provider to capture administrative fees if needed

Customizations/Extensions, pg. 13/14:

- “Ivalua SaaS platform relies on configuration, not custom code”
- “Ivalua does not make coding customizations specific to individual clients; all coding changes on the Ivalua platform are part of their release cycle and are by definition part of the baseline product”
- “Ivalua maintains a copy of the organization’s Ivalua instance.” “upgrades are first applied to that solution, then will be tested, and released, and are subject to the entire cycle of testing, approvals, and quality assurance that is part of our Software Development Life Cycle (SDLC).”

Alternative Funding Models, pg. 14:

- “not proposing an alternative funding model at this time”. “open to discussion”

Contract Transition and Flexibility, pg. 14:

- “willing to enter into good faith discussions with Participating Entities that wish to explore transitioning their current contract “

Functional Requirements

General Functionality, pg. 15/16:

- “Source-to-Pay suite in the market which includes Public Portal, Supplier Risk & Performance Management, Sourcing, Contract Management and P2P processes, standard integrations and extensive system administration and reporting capabilities”
- **NOTE: see detailed notes for Service Level Agreement req’ts. The Ivalua Service Level Agreement sets a limit on the total storage for attached documents (“user-uploaded files”) which**

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

SME DEPARTMENT/STATE: NASPO

includes all attachments to Requisitions, Orders, Receipts, Invoices, Vendor Accounts, Vendor Improvement Plans, Solicitations, Solicitation Responses, Contracts... all records in the system. This limit is either 500GB or 1 TB depending on the "Service Level" in the contract.

NEGOTIATIONS: suggest getting both the Services Level set in the Master Agreement for all potential Participating Entities AND getting the storage level increased.

RTM

- "POTENTIAL WEAKNESS, GEN-15: Transaction print formats are based on "the layout of the screen" and to have "additional templates" for printing format requires "additional effort".

Supplier Portal, pg. 16-18:

- "free supplier portal where suppliers may perform self-registration and other activities with their customers"
- "have unlimited suppliers with unlimited users registered to do business"
- "register with basic information such as their tax identification number, email address, and company name to establish an account" then they "will have access to their supplier portal" to "manage all their activity with the organization from an integrated location"
 - o Manage their account information, user roles & users
 - o Submit contract usage reports
 - o Respond to sourcing events
 - o Manage/redline contracts
 - o Upload catalogs
 - o View orders
 - o Create advanced shipping notices
 - o Create invoices
 - o View their performance
 - o Collaborate on improvement plans

RTM

- Meets req'ts
- One req't needs clarification.

Supplier Enablement/Management, pg. 18-25:

- NOTE, registration is a two step process. Create basic account for one user, then that Admin user needs to log into the system to set up user roles, other users and complete the rest of their registration information that will be needed to create a supplier record in the finance system and award Contracts/POs to the supplier. Primary capabilities of a Basic registration allows them to managed their account and bid.
- "conditional logic can be utilized to tailor the registration page to specific information required by type – such as US vs. non-US"
- "Fields captured through the registration process will be tailored to your needs"
- "submits their registration it is processed through an automated workflow". "workflow process and acceptance/rejection criteria will be established by each client"
- STRENGTH: "onboarding progress tracker" provides "quick view into the remaining items required to complete their activation" (pg. 20)
- Integrations "to external systems in batch processes or in real-time to verify profile information or bring in data from external sources"

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Can "maintain and store documents within their profile"(account). "organization can specify specific documents that are required by the supplier to complete their enrollment" (pg. 21)
- "system can track expiration dates of the documents and trigger reminders to both internal and supplier users when those documents are nearing their expiration" (pg. 22)
- "internal users will also be able to manage the supplier's information, activity, risk, as well as their performance" (pg. 24)
- Suppliers update their accounts by submitting a 'Change Request' (pg. 24)
 - o Change requests are auditable/trackable down to the field level
 - o Can be routed to the workflow for internal approval

RTM

- WEAKNESS, VDR-15: Duplicate registrations are not prevented at the time of registration. They are identified as part of workflow, if auto rejected, vendor is notified after the fact, not while completing the registration. Otherwise the State must resolve the duplicate.
- POTENTIAL WEAKNESS, VDR-19, 20 & 24-27: State will have to license the 3rd party system for validating IRS TIN/Name.
- POTENTIAL WEAKNESS, VDR-39: Response seems to indicate a "score carding" feature which may not provide the automated performance reporting on the metrics identified in this requirement.
- Two req'ts need clarification.

Buyer Portal, pg. 25/26:

- "Once the user login they will be directed to their homepage" which has dashboard that is unique to the user based on their role.
- "users can also add new aspects to their homepage or rearrange the webparts on the screen"
- Users are "given one or multiple roles" which has "authorizations" that "dictate what the user can see and do".
- Users also assigned a "perimeter, which corresponds to the agencies/departments/division they support and/or the commodities they support" which will "further limit the user's view into on seeing or editing objects".

RTM

- STRENGTH, BPRT-4: The capability to for users to be able to "change the layout and reports" on their dashboard is a significant benefit to users.
- One req't needs clarification.

Need Identification, pg. 26/27:

- "provides users the ability to initiate any procurement action from a single spot through the platform."
- "provides a powerful and flexible workflow engine that not only invokes approval flows, but also provides the ability to invoke processes" that "invoke business processes allows procurement policies and regulations to become part of workflow"
- "will guide the end user to begin any type of procurement activity by clearly identifying and outlining the process and steps that need to be taken"

RTM

- Meets req'ts

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Two req'ts need clarification.

Request through Pay, pg. 27-33: NOTE, response did not address the req't for "access to external retail marketplace products".

- "All purchases within the Ivalua solution will begin from a purchase request within the tool"
- "Requests can accommodate multiple types of requests ranging from goods and services, as well as deliverable-based purchases and subscriptions"
- STRENGTH: purchase requests include an "Internal blog to communicate with stakeholders" (pg. 28)
- Workflow (pg. 29)
 - o "uses a combination of algorithms and user approval to navigate through the approvals". "define conditional logic to determine when and who should be approving each requisition"
 - o "can also trigger different workflows to accommodate for varying business processes, as well as trigger different workflows on goods vs. services purchases"
 - o "can also trigger real-time integrations to external systems, such as an ERP at a workflow step, such as checking if budget is available for the purchase"
- "order is transmitted to the supplier through their email, including a PDF version of the order. It can also be extracted and printed". NOTE: Tech Proposal did not address electronic order transmission (EDI/cXML) however this capability was acknowledged in RTM PO-17.
- "Receipts can be created in multiple ways, from a purchase order, from scratch, or from a supplier entered Advanced Shipping Notice". Receipts can be workflowed for review/approval. (pg. 30/31)
- Invoices
 - o "Invoices can be created by PO flip, from scratch, EDI/cXML transmission, OCR capability". (pg. 31)
 - o Invoices are workflowed for review/approval. (pg. 32)
 - o "system will automatically calculate the three-way match based on ordered, received, and invoiced amount, and will display alerts" (pg. 32)
 - o "flexible to accommodate 2-way match if specific commodities do not require a receipt in order to be paid." CONCERN, it may be that 2-way match is decided based on a commodity code which could be too general to fit the situations a State/Entity needs to have supported.
- "Once the invoice is fully reviewed and approved, it will trigger an integration to the ERP for payment". "will push an ok-to-pay file to the ERP"

RTM

- WEAKNESS, PRD-7: Purchase requests with a future release date for the Purchase Order required a manual step to release the PO once the date has passed, it is not automated.
- STRENGTH, PRD-8: The capability to communicate/collaborate with other users "under the request document".
- POTENTIAL WEAKNESS, PRD-13: There is no automated functionality that will include text or attachments based on a commodity or other field value.
- STRENGTH, PRD-19: The State will have access to "Ivalua's Design Mode, Workflow Engine and Alerts & Notification toolbox" which will provide the State with self-service capabilities for configuration.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, WRK-1: The workflow functionality provides both routing rules and approval rules in the single rules engines. Also allows you to build SQL statements to address complex scenarios.
- STRENGTH, WRK-2: The "whiteboard-like" user interface to design workflows.
- STRENGTH, WRK-6: The capability to "include SQL to route requisitions" is significant capability to address exceptions such as the need to have "by-pass conditions".
- STRENGTH, WRK-15: The capability to set up "specific messages" for each step.
- STRENGTH, WRK-22: "State can add fields to be auditable" provides additional flexibility to meet any changes in State audit needs.
- WEAKNESS, PO-15: System does not have the capability to have two versions of a printed purchase order.
- POTENTIAL WEAKNESS, PO-17: eFax of orders "is not currently supported".
- NOTE: Ivalua did not understand that the functionality desired is not the same as bank administration of user Pcards.
- "POTENTIAL WEAKNESS, PC-8: Pcard reconciliation currently can only be provided ""as a customized solution"" with Ivalua's expense module which is not included.
- STRENGTH, RC-17: Fixed asset receiving fields can be available for only "certain types of goods" instead of having to be on the users' receiving screen when they are entering any type of receipt.
- STRENGTH, RC-18: Creation of an "exception" to document an receipt issue and include give "corrective actions".
- Ten req'ts need clarification.

Catalog Capability, pg. 33-35: NOTE, Technical Proposal response did not address the req'ts to "provide access" to "external internet retail or commercial markets of goods/services" or access to "non-contract Suppliers offering goods and services".

- System supports both "internal and external (punchout) catalogs".
- "view catalogs are limited to the user's organization scope" (pg. 33) NOTE: scope = combination of Role/Authorizations/Perimeter/Commodity restrictions assigned to a user.
- Suppliers can "self-service" manage their catalogs by uploading them to the system. Done via excel templates. After upload "system does an automated format check". (pg. 34)
- "routed through an approval process for an internal user to validate" with "side-by-side comparison of old vs. new pricing" (pg. 34)
- "internal users can also upload catalogs on a supplier's behalf"
- "Search 360" (pg. 35)
 - o "predictive and fuzzy search capabilities"
 - o "can also search any field"
 - o "item tags" to "provide visual indicators" on search results to "identify preferred, discounted, or emergency items". Tags can be 'prioritized'.
 - o "has the ability to search both punchout and hosted catalog in the same search. Through an API, external catalog results will be brought into the internal Ivalua catalog"

RTM

- STRENGTH, CAT-24: The capability to route catalogs for approval based more than a user having a role as catalog approver or buyer responsible for a contract. Specifically, can route based on "region, cost center, commodity types, etc."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- STRENGTH, CAT-34: The Search 360 functionality will automatically search punchouts sites as well as hosted catalogs to present both results. Otherwise the user has to search Hosted Catalogs in the system and then go to each punchout individually to do their search.
- No req'ts need clarification.

Sourcing/Bid Management, pg. 36-44:

- "solicitation (BPM) type which drives which tabs and parts of the solicitation process are required." (pg. 36)
- "can accommodate a range of solicitation methods, from very simple quick quote events to multi-phase RFPs with multiple envelopes". (pg. 36)
- "Suppliers can be automatically added to the invited suppliers list based on the commodity or commodities" and "can be added by searching the supplier database". (pg. 36/37)
- Documents Tab: can have unlimited number of attachments, "standard organization documents" and "solicitation owner can upload" docs.
- STRENGTH: "Documents can have workflows associated with them and accommodate versioning." (pg. 37)
- "Bids are protected through lvalua's sealed bid functionality" (PG. 38)
- Questionnaires: (pg. 38/39)
 - o "questionnaire capability, non-price components can be captured from the supplier".
 - o "Templates can be used"
 - o "ability to make a question required, the option to add a comment or attachment to clarify the answer, or to allows more than one response to a question. Conditional logic can also be added to questions to create if-then statements that will determine the visibility of questions based on previous responses."
- Pricing grids ("item grid") can have templates to be "automatically applied to the event". Columns on the grid can be "internal" (only State/Entity user can see) or "external" (Supplier can see). (pg. 39)
- Solicitations have "workflow to approve and release". Once approved "user can manually send out the solicitation or have it released automatically at the opening date and time". (pg. 40)
- Public Portal: (pg. 40)
 - o "public portal allows users without an account to view open and close solicitation, active contracts and facilitate the submission of public facing forms if needed."
 - o "lvalua can also integrate to the organization's website for posting of events."
 - o "public view of the solicitation includes all attributes of the solicitation including general information, documents, questionnaires, and price lists. In addition, the public solicitation page can also post bid tabulations and award posting once the bid due date and time has been reached and an award has been made."
- Responding:
 - o Suppliers can "craft their response within the system or can download the entire solicitation to a zip file to view and response offline if needed." (pg. 41)
 - o Supplier options: "create proposal from scratch, copy forward a previously submitted proposal, cancel a proposal in progress, withdraw a proposal" (pg. 42)
- Analyze and award: (pg. 43)
 - o "view side by side comparisons of items and qualitative information for two or more suppliers."

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "can also select 'award strategies' which will apply a selected algorithm to create the award"
- "review their savings tracking that is based on the target and reference price"
- Awards have workflow/approvals capability. (pg. 44)

RTM

- STRENGTH, SRC-28: The Discussion Forum feature allowing messaging to "private or public" with "chat in real-time" for auctions.
- POTENTIAL WEAKNESS, SRC-25: No check-in/check-out capabilities for "documents, Terms/conditions and templates".
- STRENGTH, SRC-48: "drag-and-drop capabilities" as the user interface for creating workflows is more effective than other, more common options.
- WEAKNESS, SRC-66: System does not provide a means for a user to add "un-registered Vendors" to the "generated Vendor list" of a solicitation.
- POTENTIAL WEAKNESS, SRC-68: System does not support eFax.
- POTENTIAL WEAKNESS, SRC-76: The system does not OOTB provide capabilities to post to the "State's public procurement website".
- "POTENTIAL WEAKNESS, SRC-80: System does not have functionality to require vendors to provide ""basic"" information when downloading a solicitation document from the public website. Also, eFax is not supported."
- POTENTIAL WEAKNESS, SRC-83: System does not have a means to 'conduct pre-response/pre-proposal conferences'. Users would have to provide a link to a external webinar system that is not part of the eProcurement system.
- WEAKNESS, SRC-105: System does not provide notifications to vendors when submitting a response to a "set-aside solicitation and they are not a certified MBE".
- Seven req'ts need clarification.

Contract Management, pg. 44-48:

- "contract record within lvalua captures all aspects of contract information, documentation, activity, and performance within the single record." (pg. 45)
- "system will automatically trigger reminders when the contract is nearing expiration" (pg. 45)
- "Different contract types can determine what field requirements, workflow, and alerts are relevant to the contract being created." (pg. 45)
- Contract documents: (pg. 46/47)
 - "documents tab captures all documentation associated with the contract through attachments".
 - "document has a 'type' associated with it that can categorize the documents"
 - "alerts can be triggered to the user if documentation is missing from the contract record or is nearing expiration"
 - STRENGTH: "has a built-in authoring tool that will allow users to write and redline contracts directly in the lvalua solution". "Redlines are tracked from user to user with the ability to compare previous versions of the contract side by side". "offers a native integration to Microsoft Word, so users redline in the Word can sync their version back to lvalua". With "workflow capability, the "authored document can be passed back and forth between users to facilitate redlines, versioning, and approvals".
- "any subcontractors and distributors that are being used by the prime supplier on the event". "system can also trigger a subcontractor report to prime suppliers " (pg. 47/48)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "accommodates a standard integration with multiple eSignature tools, including DocuSign, Adobe Sign, and Universign." (pg. 48)

RTM

- POTENTIAL WEAKNESS, CNT-7: System only has check-in/check-out capabilities for "documents authored within Microsoft word". Does not provide this for other documents or templates.
- STRENGTH, CNT-25: Authoring contract documents with MS Word is a significant capability.
- STRENGTH, CNT-50: The history feature capturing "at the clause level" is a significant additional feature.
- WEAKNESS, CNT-51 through CNT-63: The Ivalua "Public Contract Browse" feature cannot be modified to meet State needs/req'ts without "Ivalue security review or custom code".
- Three req'ts need clarification.

Vendor Performance, pg. 49/50:

- "users can create performance assessments against their suppliers or contracts."
- "can trigger alerts to users if a supplier is consistently performing poorly."
- "Templates for performance criteria are stored within Ivalua for users to respond to questions related to the supplier's performance". Weights for each question determine a total score.
- "Completed performance evaluations can be routed through a workflow if additional review or approval is needed"
- "ability to track exceptions and collaborate with suppliers to address these exceptions"
- "exception documents the issue or non-conformance and the severity, tied to the triggering event"
- "supplier is notified of the exception, allowing them to respond and actively manage any corrective action associated with the exception"
- "workflow to manage each step of the process" of exception management. "workflow can guide end users to collect documents and collaborate with the supplier to mitigate the identified issue."
- Improvement Plans: (pg. 50)
 - o "creating tasks that will lead to overall supplier improvement"
 - o "typically tied to an exception"
 - o "consist of a list of tasks that can be created from a template or individually"
 - o "Each task is assigned to a user with assigned due dates for both internal tasks and supplier actions"
 - o "Suppliers can access their improvement plans and update the status of their tasks"

RTM

- WEAKNESS, VPE-2 thru 12: System relies on "questionnaire" and users to respond to capture performance metrics. There is not automated capture of performance based on transactions processed or data.
- Three req'ts need clarification.

Purchasing/Data Analytics, pg. 51-54:

- "three different types of reporting with the Ivalua solution, ranging from simple excel extracts to data visualization dashboards" (pg. 51)
- "Importing data from an external system can be accommodated."
- "over 100 out of the box reports" "that can be filtered and drilled down"
- Super users can configure additional reports
- Ad Hoc Reporting: (pg. 51)

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- o "Any browse page within Ivalua can become a report"
 - o "search and filter on any criteria" and "export their results into excel for a quick report"
- Queries: (pg. 51/52)
 - o "Excel based reports that are run via SQL statements in Ivalua's reporting module"
 - o "can combine data from multiple modules within a single report as well as conduct calculations"
 - o "parameters can be set up so users can filter the view of the data before extraction"
- Analysis Reports: (pg. 52/53)
 - o "provide data visualization to users in the form of charts, graphs, and pivot tables that can then be combined to create a dashboard view for any users"
 - o "drill down on source data and apply filters to get a comprehensive view of data"
 - o "users can easily create their own dashboards or rearrange existing ones."
 - o Standard reports "can also be embedded" within dashboards.
 - o "New analysis can be built by using a template or by using an analysis builder"

RTM

- STRENGTH, PDA-1: The spend analysis and PBI modules described is more robust than expected and provides some capabilities beyond what was required.
- WEAKNESS, PDA-32: The system reporting tool does not have a means to publish reports on an "internal or public website". Can only make reports available within the system itself.
- Four req'ts need clarification.

Technical Requirements

Availability, pg. 55: Meets req'ts.

- "accessible 24 hours a day, 7 days a week"
- "guarantee by Hosting SLA an uptime of 99.8% outside of scheduled maintenance, which will never occur during Peak hours"
- "co-locates its production and DR system in state-of-the-art data centers" "with fully redundant subsystems and compartmentalized security zones"
- "data centers have: Uninterruptible Power Supply (UPS, Diesel Generator); Redundant heating ventilation air conditioning and all components are fully fault-tolerant including uplinks, storage, chillers, HVAC systems, etc. Everything is dual powered."

Accessibility Requirements, pg. 55: Does not meet. NOTE: response indicates that work is underway to become compliant but no information was provided to indicate when.

- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "is implementing accessibility of the system in accordance with the Web Content Accessibility Guidelines (WCAG 2.1) standard with the objective of level AA (mid-range) compliance"
- "accessibility audit and compliance are broken into 3 manageable areas, corresponding to very distinct user typologies (internal, external, and anonymous),"
- "Ivalua has completed VPATs which can be provided upon request."

Audit Trail and History, pg. 56 & TECH-1 thru 5: Meets req'ts.

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "provides robust audit and logging capabilities"
- User logged on... "all actions and activities are registered, logged and time stamped."
- Every transaction "is part of this logging effort"
- Fields have an "auditable checkbox" to mark that the field to have an audit trail.
- "audit train can be produced in reports"
- "approval history shows who validated/ actioned the previous steps and who will validate the current step"
- "mail history frame shows the history of notifications/ emails"

RTM

- Meets req'ts
- One req't needs clarification.

Browsers Supported, pg. 56/57:

- "Ivalua works with Internet Explorer, Edge, Firefox, Chrome, and Safari."
- IE: all still supported by MS. MS Edge, Chrome, Firefox: last 3 major releases
- Response did not address req't to support "any browser that is ranked as more than 10% of web traffic"

User Accounts and Administration, pg. 57 & TECH-6 thru 20: Partially meets. Response did not address the req't to be able to delegate "administration responsibilities" of "specific functions and organizations" and did not properly respond to TECH-20.

- Access to "application pages and functions are controlled by profiles, authorization, and perimeters."
- "a user has access to data and can transact across a certain region or other logical portion of the enterprise" or "a user has access to certain features and functionality" "or a combination of both."
- "User roles and user access to Ivalua Solution are defined in the application through the administration components" by "application administrator(s)".
- Option to "limit data access of business objects on a per user basis" which would allow restrictions for situations like "only access PO of the organization" that the user belongs to.
- response did not address the req't to be able to delegate "administration responsibilities" of "specific functions and organizations".

RTM

- Meets all req'ts except TECH-20 where the response did not address the actual req't to provide searchable access to all of the roles, permissions and privileges setup/available in the system. Instead response described the capability to search among all User Profiles.
- Three req's need clarification.

User Authentication, pg. 57/58 & TECH-21 thru 25: Partially meets. Response did not address req'ts for Federation and Identify Proofing.

- "supports multiple authentication schemes including:
 - o Login / password authentication
 - o Single Sign On (SSO) SAML 2 Web based authentication standard
 - o Two-factor authentication

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- Reverse Proxy / IIS Agent based authentication (CA Single Sign On, formerly CA Site Minder)"
- "password rules are fully customizable"

RTM

- Meets req'ts.

Federated Identity Management, pg. 58: Meets req'ts.

- "Ivalua Solution supports SAML 2.0 protocols for Single Sign On. The Ivalua Solution has been integrated with the most popular Identity providers."
- "only require one ID and password to access the full solution, with support for auto-provisioning of roles and permissions"

Data Conversion, pg. 58/59 TECH-26 thru 34: Partially meets req'ts, see comments for TECH-28 &30. However CONCERN, the Technical proposal does not include "historical transactional data conversions" in the standard scope/costs for a project. Proposal is to determine scope/costs "as part of the implementation".

- "will conduct a data assessment to determine the data requirements
- will be established identifying the data conversion scope for the project
- "For historical transactional data conversions, a further assessment will be performed to determine the requirements, project scope, effort, and cost required to perform these conversions
- "will perform the data conversions which will include a methodology to perform several iterations of conversion in small batches to test and validate the data, along with monitoring of performance and quality before the actual production conversion takes place

RTM

- POTENTIAL WEAKNESS, TECH-28: System does not provide an automated means to load/convert active solicitations from an existing system.
- POTENTIAL WEAKNESS, TECH-30: System does not provide an automated means to load/convert Vendor performance data from an existing system.

Interface and Integration, pg. 59/60 & TECH-35 thru 60:

- Integration strategies include unidirectional or bidirectional data flows using batch, asynchronous or synchronous interfaces.
- integration module includes comprehensive format definitions, rules-based transformations, and validated loading of data.

RTM

- Meets req'ts except TECH-60 where response did not address the req't to have "automated failure recovery".
- Two req'ts need clarification.

Office Automation Integration, pg. 60/61 & TECH-61: Meets req'ts

- supports all file types as attachments
- Excel support across the sourcing process
- reporting tools natively export to MS Word, MS Excel, and PDF.
- contract tool we can import MS Word documents and break them into clauses

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: lvalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- contract data can be exported into Word or PDF formats

Mobile Device Support, pg. 61 & TECH-62: Meets req'ts.

- "is a fully responsive HTML application"

RTM

- Meets req't.

Mobile Applications, pg. 61 : Does not meet.

- POTENTIAL WEAKNESS, system does not have a Mobile App. Relies on the system being a "fully responsive" application for use on mobile devices to give access to the entire system.

Data Ownership and Access, pg. 61: Meets req'ts

- Customer is "data owner and data controller"
- Customers can "directly export data using features available" in the system

Date Retention, Archive and Purge Considerations, pg. 61/62 & TECH-63:

- "lvalua does not delete or modify customer data, unless requested by the customer to do so
- "deployment allows the implementation project teams to configure when and what frequency to run the offline archiving functionality

RTM

- Meets req't.

Disaster Recovery Plan, pg. 62/63 :

- "has established a Business Continuity (BC) and Disaster Recovery (DR) Program
- "plan is reviewed and approved by the management annually
- "Program is based on ISO/IEC 22301 standard framework
- "Disaster Recovery Plan is based on a fully duplicated and hot-standby infrastructure".
"Replicated web servers & application servers, replicated database backups and redundant support service"
- "contingency plan includes": " Geographically separate sites, different hosting/internet service providers, recovery site service level equal to primary site.
- "Maximum recovery time can be as low as 4 hours **with the Platinum package**". CONCERN, need to lock in the "package" so there is a specific commitment to recovery time included in proposal and potential contract.
- "DRP plan is tested at least once a year
- Incident Response program "reviewed and approved by the management annually".
- Customer notifications of breaches "within seventy-two (72) hours – unless a shorter time is specified in the contract". NOTE, suggest making sure that the breach notification time limits in any agreement are at least negotiated/locked-in or req'd to meet the notification req'ts specified later in this Security Req'ts section of the RFP.

Solution Environments, pg. 63 & TECH-64 thru 68: Partially meets. Training environment is not included. Need to NEGOTIATE to have Training environment include at no additional cost.

- "Each client will be provided at least 3 environments"

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

- "can also support the need for a training or other additional environments. All of these "extra" environments may come with additional maintenance fees"

RTM

- POTENTIAL WEAKNESS, TECH-65: Only the "acceptance environment" is "integrated" for testing. The Training environment does have integration.
- One req'ts needs clarification.

Solution Technical Architecture, pg. 63-65: Meets req'ts except response did not provide the req'd information to describe development tools, languages and techniques "used in developing application modules".

Solution Network Architecture, pg. 65-67: Meets req'ts except response did not address req'ts to provide a diagram of the network architecture.

System Development Methodology, pg. 67/68: Partially meets req'ts.

- Did identify Development Methodology as "based on Agile methodology" and state that they "embeds Quality Assurance into the ongoing development process". However, response discussed the implementation work to configure, test, launch and manage configuration changes for a customer but did not address the req'd detail regarding the following in context of the system development practices they follow with building their software solution:
 - o Testing processes/tools/methods
 - o Stress testing
 - o QA assurance program
 - o Config/Change Mgmt for application development.

Service Level Agreement, pg. 68: Response did not "review and indicate compliance" with the RFP SLA document.

- "Ivalua offers its own standards and choices between service levels"
- "RTO/RPO and other infrastructure add-on services can be flexibly added."
- "guarantees by Hosting SLA an uptime of 99.8% outside of scheduled maintenance"
- Ivalua SLA doc
 - o No SLAs for implementation period
 - o Service Credits cannot exceed "25% of the Monthly Fees"
 - o "Uptime" definition used in the Availability formula is not 'really' defined.
 - o Part of failing to meet SLA is "Customer was negatively impacted" which is specifically ("i.e.") defined as "attempted to log into or access the Cloud Service and failed". So the only concept of down is if the entire system is not available for users to log into. Doesn't matter whether the functionality is working or not once logged in.
 - o Service Credits can only be applied to "future Professional Services Fees", which is not defined, and they expire in 12 months.
 - o Attachment A of the SLA shows 3 Service Levels which sets both the associated SLA response times but also sets a limit on the "Allocated Storage" which is the limit across the entire system for how much storage is allowed for any type of "user-uploaded files" which includes all attachments to Requisitions, Orders, Receipts, Invoices, Vendor Accounts, Vendor Improvement Plans, Solicitations, Solicitation Responses, Contracts...

STATE OF MAINE INDIVIDUAL SME NOTES

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Ivalua
CATEGORY #(s): 2
DATE: 12/27/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

all records in the system.

Security Requirements

Cloud Security Alliance (CSA) Compliance, pg. 69: Meets req't to complete CAIQ.

Security and Privacy Controls, pg. 69: Partially meets.

- WEAKNESS, Ivalua is not currently in compliance with NIST (SP) 800-53. However they are "currently in the process of validating" to this standards at "Moderate" risk controls.

Security Certifications, pg. 69-70: Meets req'ts. However, note that they are not "currently audited for PCI-DSS compliance" but do have cardholder data controls in place "in accordance with the PCI-DSS standards. Also note that they are "FedRAMP ready".

Annual Security Plan, pg. 70-76: Generally meets req'ts however discussed most req'ts at a high level instead of providing detail.

- POTENTIAL WEAKNESS, Annual Security Plan, Encryption Data At Rest, pg. 73: Encrypting data at rest MAY NOT be part of their standard offering. Their HSM module/tool for this is a "paying option". CONFLICT/NOTE: in the Encryption section it states that "Data at-rest and in-transit is encrypted" however in the 2nd paragraph of this section it refers to "HSM-based encryption for data at rest" as a "value-added service (paying option)". So how can data at rest be encrypted as a standard for the Solution but yet be a "paying option"?

Secure Application and Network Environment, pg. 76-79: Meets req'ts though the detail provided was not comprehensive for the RFP listed req'd topics though some were addressed in previous Security sections of the response.

Secure Application and Network Access, pg. 79-82 & SEC-1 thru 5: Meets req'ts in RFP doc but has weakness in regards to some of the RTM Security req'ts.

RTM

- POTENTIAL WEAKNESS, SEC-1: System can track usage by user account, not device.
- WEAKNESS, SEC-3: System does not provide an admin capability to "force logout/end specific user sessions". Only has an auto logout feature to force all actives users out of the system.
- POTENTIAL WEAKNESS, SEC-4: System does not use "persistent cookies".

Data Security, pg. 82-85: Meets req'ts. NOTE, Risk Mgmt discussed in Annual Security Plan section on pg. 76.

Personally Identifiable Information Protection, pg. 85/86: Meets req'ts, however did not discuss compliance specifically for "Federal PII" requirements.

Security/Privacy Issue Occurrence, pg. 86: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follows "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021
RFP TITLE: eProcurement Solutions and Services
BIDDER NAME: Ivalua
CATEGORY #(s): 2
DATE: 12/27/2021
SME NAME: Robert Sievert
SME DEPARTMENT/STATE: NASPO

PII Data Actual/Attempted Access or Disclosure, pg. 86/87: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

Security Breach Reporting, pg. 87: Partially meets. Standard for Ivalua does not meet the notification timeline req'ts, instead their default is within 72 hours. However, the response implies that they would follow "reporting obligations... set forth in Ivalua's customer contract". So should NEGOTIATE these RFP req'ts into the contract.

Implementation Services Requirements

Project Management, pg. 88-90: Partially meets req'ts. Overall, details were high level without sufficient detail to fully assess the project management methodology/approach. Response did not address

- implementation plan development
- deliverable management
- risk assessment/mitigation
- issue management
- Bidder's staff responsibilities.

Project Implementation Methodology, pg. 88-90: Partially meets.

- Fig. 69, pg. 89: WEAKNESS, Functional teams has too few Ivalua resources whereas the State/Entity resources are more extensive. Implies that the State/Entity will be carrying more work than the Ivalua team. For the Functional Team would expect to have an Ivalua Lead, Testing Lead/Analyst, Configuration specialist.
- Deliverables, pg. 90: WEAKNESS, would expect to see Risk Register, Issues Management and Test Management/Tracking deliverables.
- Fig. 70, Typical Project Steps, pg. 90: The provided example of an implementation plan is too generic to assess.

Catalog Support Services, pg. 91/92: Partially meets.

- WEAKNESS, Ivalua does not provide catalog support services. Response discussed at a very high level the process of suppliers creating catalogs, supplier or state loading catalogs and state approving catalogs.
- Did say they have "partners" who can provide the req'd catalog services but the services are not included in the scope/pricing.

Data Conversion Services, pg. 92: Partially meets.

- WEAKNESS, Ivalua does not provide Data Conversion Services. They provide "partners" that they could have do the work but this isn't included in the proposed scope/pricing.

Interface/Integration Development Services, pg. 92: Partially meets.

WEAKNESS, Ivalua does not provide Data Conversion Services. They provide "partners" that they could have do the work but this isn't included in the proposed scope/pricing.

**STATE OF MAINE
INDIVIDUAL SME NOTES**

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s): 2

DATE: 12/27/2021

SME NAME: Robert Sievert

SME DEPARTMENT/STATE: NASPO

Organizational Change Management (OCM Services) , pg. 93/94: Partially meets.

Details provided were very high level and CLARIFICATION,

- response did not address Impact Assessment, Coaching Plan, and Resistance Assessment/Management plan.
- what all of these OCM services are included as part of the proposed implementation scope/pricing? Note that Fig. 69 identifies specific Ivalua OCM and training resources without details of scope/work included or responsibilities.

Training Services, pg. 95/96: Partially meets.

Details provided were very high level and

- response did not address training needs assessment, developing a training plan or provide the req'd "example Training Plan".
- what all of these Training services are included as part of the proposed implementation scope/pricing? Note that Fig. 69 identifies specific Ivalua OCM and training resources without details of scope/work included or responsibilities.

Help Desk Services, pg. 96-98 & IMPL-1 thru 5: 96-98: Partially meets. WEAKNESS, proposal only includes Level 3 Help Desk support but only to the "Customer Administrator". not to the req'd "users and Suppliers". Support for users/Suppliers is "optional" for additional costs.

RTM

- WEAKNESS, IMPL-4: Ivalua Help Desk does not provide a "live chat feature".
- POTENTIAL WEAKNESS, IMPL-5: Proposal does not provide/support integration between their ticketing system and a State/Entity ticketing system.
- One req'ts needs clarification.

On-Site System Stabilization Support, pg. 98: Meets req'ts.

Managed Services Requirements

Solution Support, pg. 99-102 & MNGD-1: Partially meets. Response did not address:

- Provide reviews of Solution use to make recommendations/suggestions.
- Maintains an e-mail listing for 3rd party components.
- "level of hosting", pg.100: response indicates that the SLA response times are "depending on the level of hosting" but the proposal does not indicate what level is being included in the proposal.

RTM

- Meets req't.

Organizational Change Management (OCM Services) , pg. 102/103: Does not meet req'ts. WEAKNESS, Ivalua is not including OCM services as part of "ongoing / managed services".

Training Services, pg. 103: Does not meet req'ts.

WEAKNESS, Ivalua is not including Training services as part of "ongoing / managed services".

Help Desk Services, pg. 103/104: Meets req'ts.

NOTE: in Implementation Services lvalua is only offering Level 3 support however here in Managed Services they are offering Level 1. Need to make sure that this Level 1 support is included in the proposed scope/cost.

Transition Out Assistance Services, pg. 104/105: Partially meets req'ts.

Response did not address req'ts to be discussed

- provide assistance to transition to another party
- information to the number and function of Contractor personnel
- transfer data, information, deliverables, work products, documentation, etc.
- identify dependencies
- assist in designing plans
- submit a transition plan

Other Available Services

- No additional services identified. Response just discussed their "in-house development tool called Aware".

Individual Evaluator Comments:

Ivalua - Unified Business platform.

General Principal and Requirements

- Key Solution Functionality Elements – fully integrated system. Start from single landing page; homogenous look and feel between modules. Single data ecosystem.
 - P5 Ivalua has extensive experience in delivering procurement solutions for State & Local organizations. As we work with our customers, we have continued to build in public sector best practices throughout the solution. Some of these features include:
 - Native public transparency portal
 - Renaming throughout the solution to align to public procurement terminology
 - M/WBE Management
 - Sealed Bidding
 - Subcontractor Reporting
 - Cooperative Reporting
 - Portal entry – single login, configurable dashboards. Collaboration tools – blogs, forums, comments.
 - Open marketplace - hosted catalogs; punchout catalogs (side-by-side hosted and punchout searches; off catalog searches.
 - P5 Integration toolbox capable of connecting with multiple ERP solutions, third-party data providers, suppliers' systems and so on. Likewise, Ivalua supports multiple format options (cXML, XML, SAP Idocs, XLS(x), DOC(x), CSV, AS2, etc.) and in multiple protocols (manual load, batch load, EDI, SFTP, HTTP, etc.). Our integrations toolkit and library connects to over 60+ ERPs and includes hundreds of data mapping formats and standard integration templates.
 - Workflow, Document Management, Configurable (p6 example list), Public portal – transparency.
- User Experience – login routes to homepage unique to user, role and tasks.
 - One or more roles guide the user experience.
 - No cost for suppliers to access portal to submit bids.
 - P7 search capability is accessed directly from the home screen for users to be able to start searching the catalog, or to create new requests.
 - P7 access pending workflow tasks directly from home screen
 - P9 Users or administrators can also set-up out of office forwarding for users. This will delegate all workflow tasks assigned to that user within a defined time period to another user or group of users.

RFP #: 202102021

RFP TITLE: eProcurement Solutions and Services

BIDDER NAME: Ivalua

CATEGORY #(s) 2:

DATE: 1/15/22

EVALUATOR NAME: Gerard MacCrossan

EVALUATOR DEPARTMENT/STATE: Texas Comptroller of Public Accounts – Statewide Procurement Division

- Bidder Best Practices and Roadmap
 - Major releases delivered 2 times per year.
 - Recommends major updates 18 months for best product maintenance
 - Fedramp ready
 - Public sector longtime focused; best practices developer for public sector tailored solution.
 - Roadmap is 60% customer-sourced.
 - Roadmap – web apps; invoicing and payment execution inside Ivalua; contract lifecycle management using AI; supplier risk and performance; StateRamp; enhanced clause libraries; collaborative authoring.
- Innovations and Value-Added Features/Services
 - P11 Ivalua Help Desk as alternative to state-operated. Level 1 with 0-% tickets solved within 1 hour. Level 2 redirect. (Cost item)
 - P12 Advanced Services procurement. (Cost item)
 - Vendor Master Management – supplier data (Cost item)
 - Adoption of ERP specific source schema tables to support bidirectional master data integration
 - Use of a supplier cleansing workbench for merging and deduplicating records from multiple source systems
- Customizations/Extensions – Configuration not custom code.
 - Coding changes part of release cycle.
 - Users have flexibility to deploy releases. Reduces risk of automated upgrades-prompted problems.
- Alternative Funding Models – Not proposed.
- Contract transition. Existing customers may discuss contract transition with Ivalua. GFE not guarantee.

Functional Requirements

- General Functionality
- Six modules integrated: Supplier Risk & Performance; Solicitations & Bid Management; Contract Management;
 - *P16 Master data throughout the solution for selection of organizations, commodity codes, units of measure,*
 - *Single platform manages the end-to-end solicitation and purchasing process for the organization, suppliers, and political subdivisions*
 - *EPROC-GEN-3 - Posting to Ivalua's native site does not require any integration. Ivalua can also integrate to state's websites or other sites, as needed. Our recommended approach is using Ivalua's public portal and putting a link within the State's website, to leverage the simplicity of standard functionality while easily allowing access for users from the State's website.*
 - *EPROC-GEN-39 - Throughout each implementation, Ivalua works with organizations to identify any additional information outside of standard that should be available on the public portal. Document posting can be controlled at the individual document level or by document type (Ex. confidential documents not made public). Authorized users will be able to modify the document types made public.*

- Supplier Portal – P17 *free supplier portal where suppliers may perform self-registration and other activities with their customers. Ivalua supplier registration & information management capabilities allows to quickly and easily onboard suppliers for RFPs, orders and invoices, and push data to ERP or other relevant system*
 - *Supplier features:*
 - *Managing their supplier information and users*
 - *Submitting reports for cooperative contract usage*
 - *Responding to sourcing events*
 - *Managing/redlining contracts*
 - *Uploading catalogs*
 - *Viewing orders*
 - *Creating advanced shipping notices*
 - *Creating invoices*
 - *Viewing their performance*
 - *Collaborating on improvement plans*
 - **EPROC-SPR-14 Needs clarification** *ERP financial data is integrated into the system as standard throughout the Procure to pay process. Additional fields can be captured through integration. Is this integration included in the price or required to be developed on customer ERP side?*
 - *EPROC-SPR-19 Administrative fee payments will be submitted through a third party payment provider. Ivalua can offer a close integration to the third party provider to track payment within the system*
- Supplier Enablement/Management- p18 *Supplier activation within Ivalua takes place in two parts. The first is a public facing registration page that allows any new supplier to create an account within the system. The second is the 'full enrollment' process, where the supplier can login and collect additional information required to be fully onboarded with the organization and to do business. The registration page can be found by accessing the public facing homepage of Ivalua. Potential suppliers can access the portal 24 hours a day, 7 days a week, 365 days a year. The Ivalua supplier portal is 100% free for the suppliers, no setup and/ or transaction fees.*
 - **EPROC-CDR-18 to -27 – Third party integration to validate supplier data. Needs clarification – Ivalua supplies or customer supplies?**
 - *EPROC-VDR-32 Ivalua segregates organizations – workflow can't pass between organizations.*
 - **EPROC-VDR-40 – Needs clarification** *(vendor email signup) – is this a Customization as marked or a Configuration as stated in comments?*
 - **P 20** *The supplier submits their registration it is processed through an automated workflow that will automatically accept or reject the registration based on system conditions, such as a duplicate check. The workflow process and acceptance/rejection criteria will be established by each client. If the supplier's registration is approved, they will receive an email notification informing them that their account has been created, and they can login using their username and password that were established on the registration page. Needs clarification – is approval following automated step or is there manual intervention by Ivalua or State?*
 - *P21 – documents can be stored in profile for use in response and contract management.*
 - *P24 – supplier self-service for account maintenance then routes to internal user for approval; can sent updates to ERP.*
