Please respond to ALL of the questions in the following sections.

PART III: SUPPLEMENTAL INFORMATION

1. Provide a more detailed description and explain the need for the goods, services or grant to supplement the response in Part I.

Xeos Technology is the sole provider of the satellite tags that we use to track/retrieve the acoustic equipment we use for our passive acoustic monitoring (PAM) projects. As part of a large-scale North Atlantic right whale monitoring program DMR is conducting, we are expanding our PAM work by starting a new PAM project that consist of 26 PAM sites that span the inshore and offshore waters of Maine. For this reason, we need to purchase satellite tags that will help us track and retrieve our acoustic equipment if it is displaced from its mooring. The satellite tags sold by Xeos Technology are unique in that they can be submerged underwater for long periods of time (e.g., 4-5 months) and can be deployed at deep depths (150-200 m). This means that these satellite tags are the only tags that are compatible with our acoustic equipment since they can be deployed for the same time period as our equipment and at the same depths.

2. Provide a brief justification for the selected vendor to supplement the response in Part II. Reference the RFP number, if applicable.

Xeos Technology is the sole provider of these satellite tags. These tags have proven to be a reliable means of tracking and retrieving displaced acoustic equipment in PAM projects with our partners at NOAA. These tags can be deployed for long periods and at deep depths, which makes them compatible with our acoustic equipment.

3. Explain how the negotiated costs or rates are fair and reasonable; or how the funding was allocated to grantee.

The negotiated costs are based on the quoted amount from Xeos Technology, which is the sole provider of these satellite tags. The quoted costs are fair and reasonable for this type of equipment given Xeos has given us a discount. As well, the satellite tags can last for the 4-5 months that our acoustic equipment is deployed before the batteries need to be replaced, and can be submerged at the same depths as our acoustic equipment.

4. Describe the plan for future competition for the goods or services.

Until a similar satellite tag that is operational for similar durations and at similar depths is sold by another company, Xeos Technology is the sole provider for this type of satellite tag, which is a vital component in our ability to retrieve acoustic equipment that has been displaced from its mooring.
