Please respond to ALL of the questions in the following sections.

PART III: SUPPLEMENTAL INFORMATION

1. Provide a more detailed description and explain the need for the goods, services or grant to supplement the response in Part I.

A contract geologist is needed for the Maine Geological Survey (MGS) to fulfill its obligation under the U.S. Geological Survey's STATEMAP program to provide bedrock geologic maps of portions of coastal Maine by May 2024. This contract covers necessary **bedrock geologic mapping in the Islesboro quadrangle**, Maine. While the MGS has the staff and facilities to compile geologic information, it does not have a sufficient in-house workforce to complete the necessary field mapping for this project in the time required.

Geologic mapping is a statutory responsibility of the Maine Geological Survey (Title 12, Chap. 201-A). Bedrock mapping is essential to the mission of the MGS to provide quality natural resources information for the people of Maine. Through a Geologic Mapping Advisory Committee consisting of state agency, federal agency, university, and private sector users of geologic maps, the Maine Geological Survey has established priorities for geologic mapping and a timetable for completing geologic maps, including this essential mapping task. This project falls within the priorities and timetable.

In our competitive proposal to the USGS's STATEMAP program, we named qualified geologists to work on this project and their qualifications were a large factor in determining the award of federal funds.

2. Provide a brief justification for the selected vendor to supplement the response in Part II. Reference the RFP number, if applicable.

This contract is funded entirely by money provided to the Maine Geological Survey by the National Cooperative Geologic Mapping Program, administered by the U.S. Geological Survey, to support a technical project. This is a competitive program to which each state may submit one proposal each year. Maine's proposals have been among the most competitive partly because we are able to identify highly qualified field mappers directly in the proposal.

The work requires a specialist in the stratigraphic mapping and structural interpretation of complexly deformed metamorphic and igneous rocks. Dr. Reusch is a geologic expert on the geology of Maine and has published studies covering the mapping region accomplished as part of his professorship at the University of Maine at Farmington. He has published bedrock maps with the Maine Geological Survey. Dr. Reusch is one of a small group of geologists in New England with the expertise to conduct this mapping work.

3. Explain how the negotiated costs or rates are fair and reasonable; or how the funding was allocated to grantee.

The rate the Maine Geological Survey pays contract geologists has increased from \$1,000/wk to \$1,500/wk, the former having been the rate since 2004. A Physical Geologist at the Maine Geological Survey with similar responsibilities costs \$2,016/week, fully burdened. Thus, the contract rate is below market value for these types of geological services.

4. Describe the plan for future competition for the goods or services.

The Maine Geological Survey continues to work with the University of Maine and other institutions to train more students to investigate and compile geologic maps. We are working with a small pool of capable geologists well in advance of project needs to ascertain their availability for various map development tasks.

PART IV: AMERICAN RESCUE PLAN ACT (ARPA) / MAINE JOBS & RECOVERY PLAN (MJRP)
