PART III: SUPPLEMENTAL INFORMATION

1. Provide a more detailed description and explain the need for the goods, services or grant to supplement the response in Part I.

Cellebrite UFED (Universal Forensic Extraction Device) is the primary Smartphone/cell phone/mobile device forensic extraction tool used by the Maine State Police Computer Crimes Unit (and the vast majority of computer forensic units throughout law enforcement). In order to achieve the desired level of effectiveness and efficiency in the job, it is important to provide forensic analysts and Investigators with tools necessary to achieve these goals. By providing forensic analysts training on the use of Cellebrite UFED software, It will aid them in the extraction and analysis of digital media where they can be more effective and provide accurate information in less time, reducing the current backlog and providing more evidence for prosecution and the Unit will be better able to protect Maine citizens and prosecute criminals who offend them.

We are requesting basic/intermediate Cellebrite training and certification passes for 2 new forensic analysts that are joining our unit.

2. Provide a brief justification for the selected vendor to supplement the response in Part II. Reference the RFP number, if applicable.

Cellebrite, Inc is the provider of Cellebrite UFED and its proprietary software. As the provider for this proprietary device/software package, Cellebrite USA, Inc. is uniquely qualified to provide training on its usage.

3. Explain how the negotiated costs or rates are fair and reasonable; or how the funding was allocated to grantee.

Funding for the Magnet Software Axiom training passes is comparable to other software training passes and has been secured through our current ICAC Grant funding.

4. Describe the plan for future competition for the goods or services.

The Maine State Police Computer Crimes Unit routinely evaluates new forensic software tools in an ongoing effort to further our capabilities to extract critical data from the myriad of digital components (smart phones, tablets, game stations, cameras, etc.) that are in use and may be developed for future use (and unfortunately misuse) by consumers. The Unit has, on occasion, been used as a beta-test site for new forensic software. We do this to improve our work product and spur improvement within the computer forensic field. Cellebrite is a known industry standard in mobile forensic examination tools.
