

Maine Economic Indicators

July 2023

Maine Department of Administrative and Financial Services

Office of the State Economist

Amanda Rector, State Economist

Denise St. Peter, Economic Analyst

Maine Economic Indicators is a monthly report assembled by the Office of the State Economist that provides a synopsis of current economic trends and indicators for the state in comparison to New England and the United States. The intent of this report is to provide the public with a single document containing data aggregated from different sources typically used to track current economic and demographic conditions in the state.

The appendix provides comprehensive information related to the data presented herein. Data included in this report are assembled from various sources, subject to frequent revision, and provided in this report “as is” at the time of publication. Therefore, data presented in this report are subject to change over time.

Please note that changes in economic indicators cannot uniquely be interpreted as the impact of COVID-19.

1 Snapshot

Indicators in this section provide a summary of Maine's current economic status. Figures for Maine are compared to New England and the United States. Sources are given in the appendix.

Reference Period		Maine	New England	United States
2022	Total population	1,385,340	15,129,548	333,287,557
2021-2022	Annual population percent change	0.6%	0.05%	0.4%
2020-2022	Cumulative population percent change	1.6%	0.4%	0.5%
2021	Average earnings per job	\$59,084	\$80,834	\$71,017
2020-2021	Average earnings per job percent change	4.6%	4.3%	5.0%
June 2023	Unemployment rate	2.4%	2.8%	3.6%
June 2023	Total private nonfarm employment	543,100	6,599,200	133,494,000
June 2023	Labor Force	677,800	7,979,100	166,951,000
June 2023	Labor Force Participation Rate	58.4%	N/A	62.6%

Annualized Percent Change from the previous quarter and Compound Annual Growth Rate (CAGR)

Real GDP	2022:Q2	2022:Q3	2022:Q4	2023:Q1	2022:Q2-2023:Q1
Maine	-1.2	2.8	2.3	1.6	2.2

2 Annual Indicators

Indicators summarized below are updated annually on various release dates and provide a general summary of Maine's demographic and economic status.

Reference Period		Maine	New England	United States
2022	Total population	1,385,340	15,129,548	333,287,557
2021-2022	Annual population percent change	0.6%	0.05%	0.4%
2020-2022	Cumulative population percent change	1.6%	0.4%	0.5%
2022	Births	12,030	146,423	3,688,179
2022	Deaths	17,973	149,549	3,443,099
2022	Net migration	14,125	13,421	1,010,923
2021-2022	Annual rate of total net migration, per thousand (Maine ranks 11 th in the U.S.)	10.2	0.9	3.0
2021	Median age, years (American Community Survey)	44.7	41.0	38.8
2021	Associate degree: percent of population age 25 and above	10.6%	8.1%	8.8%
2021	Bachelor's degree: percent of population age 25 and above	22.2%	24.2%	21.2%
2021	Graduate or professional degree: percent of population age 25 and above	13.8%	19.0%	13.8%
2021	Percent of population below poverty level	11.5%	10.2%	12.8%
2021	Median family income	\$82,842	\$104,939	\$85,806
2021	Median household income	\$64,767	\$82,987	\$69,717
2021	Per capita personal consumption expenditures	\$45,272	\$50,154	\$42,635
2021	Per capita disposable personal income	\$50,559	\$55,813	\$47,915

3 Quarterly and Monthly Indicators

3.1 Gross Domestic Product (GDP)

Maine's real GDP grew 1.6% at an annualized rate in the first quarter of 2023, ranking 29th in the U.S. (growth of 2.0%) and second in New England (growth of 1.6%). The industry sectors that contributed the most to Maine's first quarter growth were health care and social assistance (+0.76 percentage points), agriculture, forestry, fishing, and hunting (+0.75 percentage points), and retail trade (+0.54 percentage points). These gains were partially offset by declines in other industries, including durable goods manufacturing (-0.53 percentage points), finance and insurance (-0.50 percentage points), and nondurable goods manufacturing (-0.31 percentage points).

2023:Q1	Maine	United States
Nominal GDP (Current dollars)	\$88.3 billion	\$26.5 trillion
Real GDP (Chained 2012 Dollars)	\$65.4 billion	\$20.3 trillion

Real GDP (billions of chained 2012 dollars) - Maine

3.1.1 GDP Now from the Federal Reserve Bank of Atlanta

GDPNow, which is reported by the Atlanta Fed, is “a running estimate of real GDP growth based on available data for the current quarter.” This model uses a similar methodology to the one used by the U.S. Bureau of Economic Analysis in their official GDP estimates and is revised each time the monthly source data is updated. The nowcast estimate for 2023:Q2 as of July 26, 2023, is that U.S. real GDP will **increase by 2.4 percent** at an annual rate.

3.2 Recession Indicators

NBER is the primary source in the United States that declares when recessions begin and end and defines a recession as a significant decline in economic activity that is spread across the economy and lasts more than a few months. Other recession indicators are used to estimate business cycles in real time but are not official sources for when recessions begin and end.

3.2.1 Real-time Sahm Rule Recession Indicator

The Real-time Sahm Rule Recession Indicator¹ signals a recession when the 3-month moving average of the national unemployment rate (U3) rises by at least 0.5 percentage points relative to its low in the previous 12 months. In June 2023, this indicator showed that the three-month average of national U3 was 0.07 percentage points above its 12-month low.

3.2.2 GDP-Based Recession Indicator Index

The GDP-Based Recession Indicator Index² is 4.9 percentage points (2023:Q1), down from 7.6 in the fourth quarter of 2022. The index ranges from 0 to 100, and values above 67 provide a historically reliable indicator that the economy is in recession. This index is calculated with a one quarter lag, which allows for extra insight and accounts for data revisions to make dependable inference. Therefore, the index does not get revised once it is published.

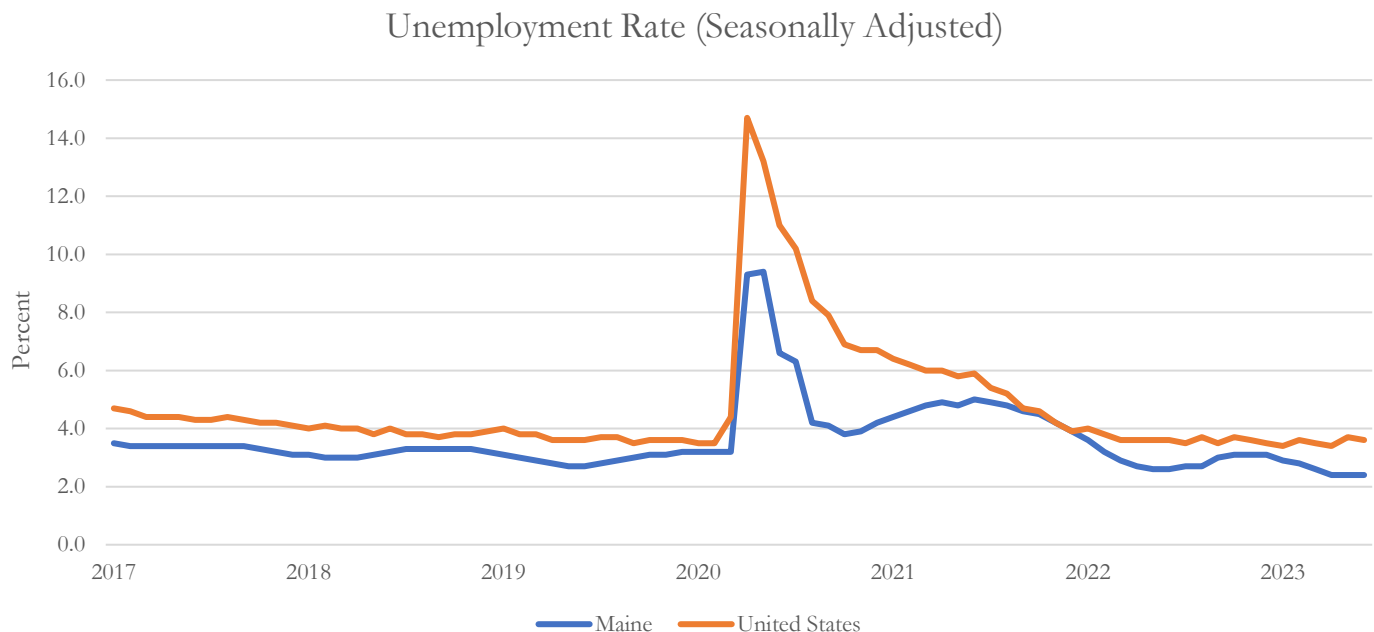

¹ Created by Dr. Claudia Sahm, Federal Reserve Board of Governors

² Created by Dr. James Hamilton, University of California San Diego

3.3 Labor Markets³

3.3.1 Unemployment Rate June 2023: 2.4%

Maine's seasonally-adjusted unemployment rate remained at a record low 2.4% for the third consecutive month. The 3-month average unemployment rate from April to June was 2.4%, down from 2.8% for the three months ending in March. Maine's unemployment rate has been trending below the U.S. unemployment rate since early 2022. It also remains below the New England rate of 2.8%.

3.3.2 Labor Force Participation Rate June 2023: 58.4%

Labor force participation (LFP) was 58.4% in June, up 0.1% from May. Maine Department of Labor is continuing to track the [divergence between payroll survey data and household survey data](#). Household survey data, the source of the labor force participation figures, may be underestimating the labor force.

The employment to population ratio (EPOP), an alternative measure of labor market activity which measures the total number of employed working-age adults divided by the total working-age population, was 57.0% in June, up from 56.9% in May. Labor force participation and EPOP are trending up. Average labor force participation was up by 0.3% for April-June compared to the previous quarter average. EPOP was up by 0.5% during the same period.

³ The data for unemployment rates and labor force are derived from the Local Area Unemployment Statistics (LAUS) program and data for nonfarm payroll jobs are derived from the Current Employment Statistics (CES) program. The numbers presented below are estimates which vary month to month in either direction and are subject to substantial revision. The Maine Department of Labor cautions users to analyze general trends over several months as opposed to making conclusions based on changes month to month.

Labor Force Participation & Employment-Population Ratio (Maine)

3.3.3 Total Nonfarm Payroll Job Estimates June 2023: 643,100

Seasonally adjusted nonfarm jobs decreased by 2,900 in June. Half of this decrease was in the leisure and hospitality and retail sectors, as rainy weather reduced tourism activity. The other half was in the manufacturing and professional/business services sector where there were layoffs in paper mill and COVID testing supply facilities. On an annual basis, nonfarm jobs are up 6,600 since June 2022.

Total Nonfarm Employment Maine (seasonally adjusted)

3.4 National inflation measures

3.4.1 Consumer Price Index vs. Personal Consumption Expenditures

There are two measures of inflation in the United States. The Consumer Price Index is released by the Bureau of Labor Statistics and is based on surveys of urban consumers, while Personal Consumption Expenditures price index is calculated by the Bureau of Economic Analysis and based on surveys of what businesses are selling. Both are used officially for various federal purposes, although the Federal Reserve focuses on PCE in monetary policy decisions.

In June, the PCE price index grew by 3.0% year-over-year, down from 3.8% in May. The CPI all-items index grew by 3.0% in June before seasonal adjustment, down from 4.0% in May. Growth in both indexes has decelerated considerably since June 2022 and both are at their lowest points since early 2021. Both measures of inflation remain above the 2% Federal Reserve target but are getting much closer.

3.4.2 Expenditure categories of the CPI

The CPI for all urban consumers increased 3.0% year-over-year in June and 0.2% from a month prior. This was the smallest 12-month increase since March 2021. Shelter (+0.4%) was again the largest contributor to the monthly all-items increase and accounted for more than 70% of the all-items increase.

The energy index was up 0.6% for the month after declining in May. The monthly changes to the major components, Gasoline (+1.0%), Fuel Oil (-0.4%), Electricity (+0.9%), and Utility gas(-1.7%), were relatively small. The energy index is down 16.7% from June 2022.

The food index was up 0.1% in June and up 5.7% year-over-year. The core index, which excludes volatile food and energy prices, increased 0.2% since May and is up 4.8% year-over-year.

	Year-Over-Year (Not seasonally adjusted)		Month-Over-Month (Seasonally adjusted)	
Table 1. Percent Change in Consumer Price Index by Expenditure Category	May-23	Jun-23	May-23	Jun-23
All items	4.0	3.0	0.1	0.2
Food	6.7	5.7	0.2	0.1
Energy	-11.7	-16.7	-3.6	0.6
<i>All items less food and energy</i>	5.3	4.8	0.4	0.2
Commodities (less food and energy)	2.0	1.3	0.6	-0.1

Other personal services	6.7	6.5	0.5	0.2

3.5 Energy

3.5.1 Gasoline

The average price of a gallon of gasoline in New England was \$3.676 on July 24, \$0.02 higher than a month prior and \$0.91 lower than the same week of 2022. For all weeks in July, the average price of gasoline was about \$0.01 higher than the June average. Prices have been relatively stable throughout 2023 to date, with a per gallon range of only \$0.31.

New England - All Grades and Formulations Gasoline Price Per Gallon

3.5.2 Brent Spot Prices

The weekly Brent spot price averaged \$78.62 for the month of July and was at \$79.43 for the week ending July 21, 2023. The Brent spot price increased by \$5.93 since the week ending June 30, 2023.

Weekly Brent Spot Price - Dollars per Barrel

3.6 Housing

3.6.1 Sales

Home sales decreased statewide by 19.2% in June 2023 compared to June 2022. Three counties (Piscataquis, Waldo, and Washington) saw increases compared to last year. The three-month rolling average of April to June continues to show a negative change in the number of sales in all counties when compared to the same three months of 2022.

The median sale price in Maine was \$385,000 in June, an increase of 3.2% from May and an increase of 6.5% year-over-year. When looking at 3-month rolling averages, annual price changes are ranging from -2.78% in Waldo County to +15.68% in Oxford County.

June 2023 Sales				
Geography	No. of Units Sold	One Year Change (Units)	Median Sale Price	One Year Change (Price)
Androscoggin	83	-29.1%	\$335,000	9.8%
Aroostook	62	-13.9%	\$149,500	-1.8%
Cumberland	286	-21.2%	\$574,250	11.5%
Franklin	33	-29.8%	\$240,000	4.4%
Hancock	62	-31.9%	\$383,250	-10.0%
Kennebec	129	-13.4%	\$340,000	15.3%
Knox	48	-31.4%	\$445,000	-0.6%
Lincoln	52	-8.8%	\$431,750	7.9%
Oxford	68	-38.2%	\$340,145	13.4%
Penobscot	155	-11.9%	\$250,000	0.0%
Piscataquis	38	8.6%	\$165,500	-17.3%
Sagadahoc	32	-43.9%	\$482,500	13.4%
Somerset	66	-1.5%	\$226,950	10.7%
Waldo	43	14.0%	\$300,000	-14.3%
Washington	33	10.8%	\$220,000	-20.0%
York	246	-12.1%	\$474,950	0.0%
Maine	1,436	-19.2%	\$385,000	6.5%

3.6.2 House Price Index

In the first quarter of 2023, Maine's year-over-year growth in the house price index (HPI)⁴ was 8.8%, slower than previous quarters, but more than double the U.S. growth (4.3%) and considerably higher than the New England growth (6.2%). On a seasonally-adjusted basis, Maine's growth was the third highest in the nation, below only South Carolina (9.5%) and North Carolina (9.4%). On a seasonally adjusted quarterly basis, Maine's house price index increased 1.4% from the fourth quarter of 2022, compared to 2.1% in New England and 0.5% in the U.S. Among Maine's metropolitan statistical areas, Lewiston-Auburn grew more slowly than the state, at 4.9% year-over-year, compared to 11.8% in Portland-South Portland and 15.1% in Bangor. Maine's nonmetropolitan areas collectively grew 11.3% year-over-year.

Reference Period		Maine	New England	United States
2022:Q1-2023:Q1	HPI percent change from previous year	8.8%	6.2%	4.3%

3.6.3 Inventory

There were 2,439 active listings of single-family and condo homes in Maine in June (not seasonally adjusted). Since inventory levels have a defined seasonal pattern, it is most useful to look at changes year-over-year. Inventory has been at historically low levels since 2020 and the number of active listings in June was down 14% from June 2022.

⁴ According to the Federal Housing Finance Agency (FHFA), the HPI “measures average price changes in repeat sales or refinancing on the same properties.”

3.7 Sentiment

The Index of Consumer Sentiment from the University of Michigan was up 11.2% in July from the prior month and up 39% year over year. The Small Business Optimism Index, as measured by the National Federation of Independent Businesses, was up 1.7% in June and up 1.8% in the past 12 months.

Consumer sentiment increased quite dramatically and is at its highest level since October 2021 due to reduced concerns about inflation and increased stability of labor markets. While this increase was quite significant overall, there was a decrease in consumer sentiment for low-income consumers, who anticipate higher inflation and lower incomes in the coming year. For small businesses, there were improvements in perceptions of inflation and hiring challenges, but these concerns still remain well above typical levels.

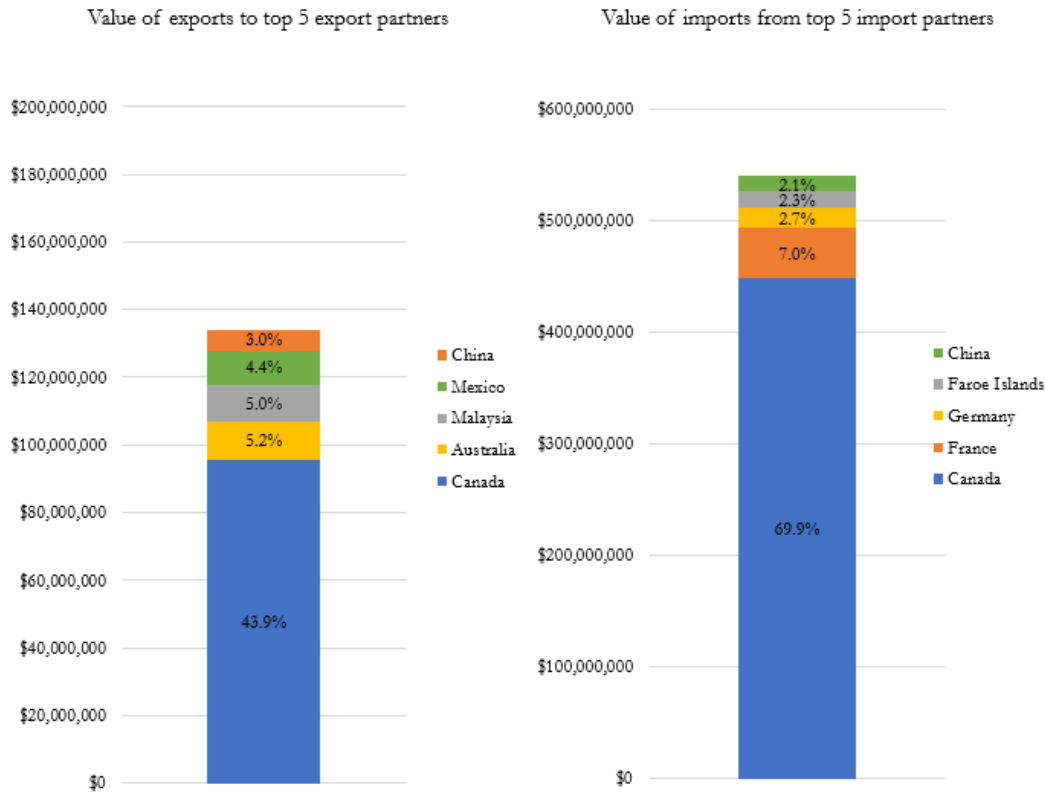

Consumer Sentiment and Small Business Optimism Indexes

3.8 Trade Outlook

3.8.1 Exports and trade partners

In May 2023, total exports were down 20% in Maine, up 6.2% in New England, and down 6.3% nationwide compared to May 2022. Year-over-year exports have been volatile since early 2021. Maine's top trade partner was Canada, which accounted for 70% of imports and 44% of exports.

Similar to the nation, Maine's trade deficit has grown in recent months as the U.S. dollar has strengthened relative to foreign currencies, which makes imports from other countries cheaper and more attractive. Conversely, a strong U.S. dollar can lead to decreasing exports, as goods and services from the U.S. are more expensive for international consumers. These dynamics contribute to a large trade deficit, both in Maine and the U.S. After peaking in August 2022 at -\$471 million, the six month average trade deficit was -\$384 million as of May 2023.

3.8.2 Real Trade-Weighted Value of the Dollar

The Real Trade-Weighted Value of the Dollar index calculates the inflation-adjusted value of the US Dollar against the currencies of countries with which the state trades, which allows for a more precise analysis of how movements in exchange rates affect demand for states' imports. In May 2023, Maine's RTWVD 6-month change was -1.1%.

5 Glossary

Average earnings per job: Total earnings, which is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income, divided by total full-time and part-time employment.

$$\text{Compound Annual Growth Rate} = \left(\frac{\text{Final Value}}{\text{Initial Value}} \right)^{\frac{1}{\text{No. of Periods}}} - 1$$

Gross Domestic Product: The measure of the market value of all final goods and services produced within a state in a particular period of time. GDP by state differs from national GDP for the following reasons: GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. **Real GDP:** Real GDP by state is an inflation-adjusted measure of each state's gross product that is based on national prices for the goods and services produced within the state. The real estimates of gross domestic product (GDP) by state are measured in chained (2012) dollars.

Housing Price Index: A weighted, repeat-sales index, meaning that it measures average price changes in repeat sales or refinancing on the same properties.

Labor Force Participation Rate: The labor force as a percent of the civilian noninstitutional population ages 16 years and older.

Net Migration Rate: The U.S. Census Bureau defines the net migration rate as the difference between the number of migrants entering and those leaving an area in a year, per 1,000 midyear population. May also be expressed in percent. A positive figure is known as a net immigration rate and a negative figure as a net emigration rate.

Personal Consumption Expenditures by State: A measure of spending on goods and services purchased by, and on behalf of, households based on households' state of residence divided by the resident population of the area.

Personal Income: Income that persons residing in the area receive in return for their provision of labor, land, and capital used in current production as well as other income, such as personal current transfer receipts. *Per capita personal income:* The personal income of a given area divided by the resident population of the area. *Per capita disposable personal income:* The income available to persons for spending or saving (personal income less personal current taxes) of a given area divided by the resident population of the area.

Poverty Level: The U.S. Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is in poverty. If a family's total income is less than the family's threshold, then that family and every individual in it is considered in poverty.

Real Trade Weighted Value of the Dollar: An index that calculates the inflation-adjusted value of the U.S. dollar against the currencies of countries with which the state trades.

Total merchandise exports: Total exports are calculated by adding domestic exports (goods that are grown, produced, or manufactured in the United States) to foreign exports (foreign-origin goods that have previously entered the United States, Puerto Rico, or the U.S. Virgin Islands for consumption, entry into a CBP bonded warehouse, or a U.S. Foreign Trade Zone (FTZ), and at the time of exportation, have undergone no change in form or condition or enhancement in value by further manufacturing).

Total Private nonfarm employment: Each month Current Employment Statistics (CES) surveys a sample of about 2,700 nonfarm private employers (plus federal, state, and local government employers) in Maine asking them to report the number of jobs, hours, and earnings of workers on their payroll during the week including the 12th day

of each month. The sample accounts for just 7% of employers, but 34% of nonfarm jobs in the state because a high share of large employers are surveyed.

Unemployment Rate: Number of unemployed as a percent of the labor force. To be classified as unemployed, persons must be aged 16 years and older with no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment sometime during the 4-week period ending with the reference week.

Wages and Salaries: Remuneration receivable by employees (including corporate officers) from employers for the provision of labor services, measured before deductions such as social security contributions, union dues, and voluntary employee contributions to defined contribution pension plans.
