

Maine Economic Indicators

January 2025

Maine Department of Administrative and Financial Services
Office of the State Economist

Amanda Rector, State Economist

Denise St. Peter, Economic Analyst

Maine Economic Indicators is a monthly report assembled by the Office of the State Economist that provides a synopsis of current economic trends and indicators for the state in comparison to New England and the United States. The intent of this report is to provide the public with a single document containing data aggregated from different sources typically used to track current economic and demographic conditions in the state.

The appendix provides comprehensive information related to the data presented herein. Data included in this report are assembled from various sources, subject to frequent revision, and provided in this report “as is” at the time of publication. Therefore, data presented in this report are subject to change over time.

1 Snapshot

Indicators in this section provide a summary of Maine’s current economic status. Figures for Maine are compared to New England and the United States. Sources are given in the appendix.

Reference Period		Maine	New England	United States
2024	Total population	1,405,012	15,386,085	340,110,988
2023-2024	Annual population percent change	0.4%	0.8%	1.0%
2020-2024	Cumulative population percent change	3.1%	1.7%	2.6%
2023	Average earnings per job	\$64,310	\$83,918	\$74,499
2022-2023	Average earnings per job percent change	3.0%	1.8%	2.5%
December 2024	Unemployment rate	3.2%	3.6%	4.1%
December 2024	Total private nonfarm employment	552,200	6,650,500	136,020,000
December 2024	Labor Force	707,000	8,198,800	168,547,000
December 2024	Labor Force Participation Rate	60.2%	N/A	62.5%

Annualized Percent Change from the previous quarter and Compound Annual Growth Rate (CAGR)

2 Annual Indicators

Indicators summarized below are updated annually on various release dates and provide a general summary of Maine's demographic and economic status.

Reference Period		Maine	New England	United States
2024	Total population	1,405,012	15,386,085	340,110,988
2023-2024	Annual population percent change	0.4%	0.8%	1.0%
2020-2024	Cumulative population percent change	3.1%	1.7%	2.6%
2024	Births	11,609	140,809	3,605,563
2024	Deaths	16,766	141,865	3,086,925
2024	Net migration	10,525	123,328	2,786,119
2023-2024	Annual rate of total net migration, per thousand (Maine ranks 20 th in the U.S.)	7.5	8.0	8.2
2023	Median age, years (American Community Survey)	44.9	41.4	39.2
2023	Associate degree: percent of population age 25 and above	10.5%	8.0%	8.8%
2023	Bachelor's degree: percent of population age 25 and above	23.2%	24.4%	21.8%
2023	Graduate or professional degree: percent of population age 25 and above	13.7%	19.7%	14.3%
2023	Percent of population below poverty level	10.4%	10.1%	12.5%
2023	Median family income	\$91,546	\$115,746	\$96,401
2023	Median household income	\$73,733	\$92,017	\$77,719
2023	Per capita personal consumption expenditures	\$60,250	\$65,660	\$56,202
2023	Per capita disposable personal income	\$58,110	\$71,982	\$61,291

3 Quarterly and Monthly Indicators

3.1 Gross Domestic Product (GDP)

Maine’s real GDP grew 3.6% at an annualized rate in the third quarter of 2024, ranking 17th in the U.S. (growth of 3.1%) and third in New England (growth of 2.9%). The industry sectors that contributed the most to Maine’s third quarter growth were retail trade (+1.71 percentage points), state and local government (+0.54 percentage points), and healthcare and social assistance (+0.33 percentage points). These gains were partially offset by declines in other industries, including administrative and support and waste management and remediation services (-0.17 percentage points) and agriculture, forestry, fishing and hunting (-0.16 percentage points).

2024:Q3	Maine	United States
Nominal GDP (Current dollars)	\$97.9 billion	\$29.4 trillion
Real GDP (Chained 2017 Dollars)	\$77.8 billion	\$23.4 trillion

3.1.1 GDP Now from the Federal Reserve Bank of Atlanta

GDPNow, which is reported by the Atlanta Fed, is “a running estimate of real GDP growth based on available data for the current quarter.” This model uses a similar methodology to the one used by the U.S. Bureau of Economic Analysis in their official GDP estimates and is revised each time the monthly source data is updated. The nowcast estimate for 2024:Q4 as of January 29, is that U.S. real GDP will **increase by 2.3 percent** at an annual rate.

3.2 Recession Indicators

NBER is the primary source in the United States that declares when recessions begin and end and defines a recession as a significant decline in economic activity that is spread across the economy and lasts more than a few months. Other recession indicators are used to estimate business cycles in real time but are not official sources for when recessions begin and end.

3.2.1 Real-time Sahm Rule Recession Indicator

The Real-time Sahm Rule Recession Indicator¹ signals a recession when the 3-month moving average of the national unemployment rate (U3) rises by at least 0.5 percentage points relative to its low in the previous 12 months. In December 2024, this indicator showed that the three-month average of national U3 was **0.40 percentage points above its 12-month low**.

3.2.2 GDP-Based Recession Indicator Index

The GDP-Based Recession Indicator Index² is 2.3 percentage points (2024:Q3), down from 2.4 in the second quarter of 2024. The index ranges from 0 to 100, and values above 67 provide a historically reliable indicator that the economy is in recession. This index is calculated with a one quarter lag, which allows for extra insight and accounts for data revisions to make dependable inference. Therefore, the index does not get revised once it is published.

¹ Created by Dr. Claudia Sahm, Federal Reserve Board of Governors

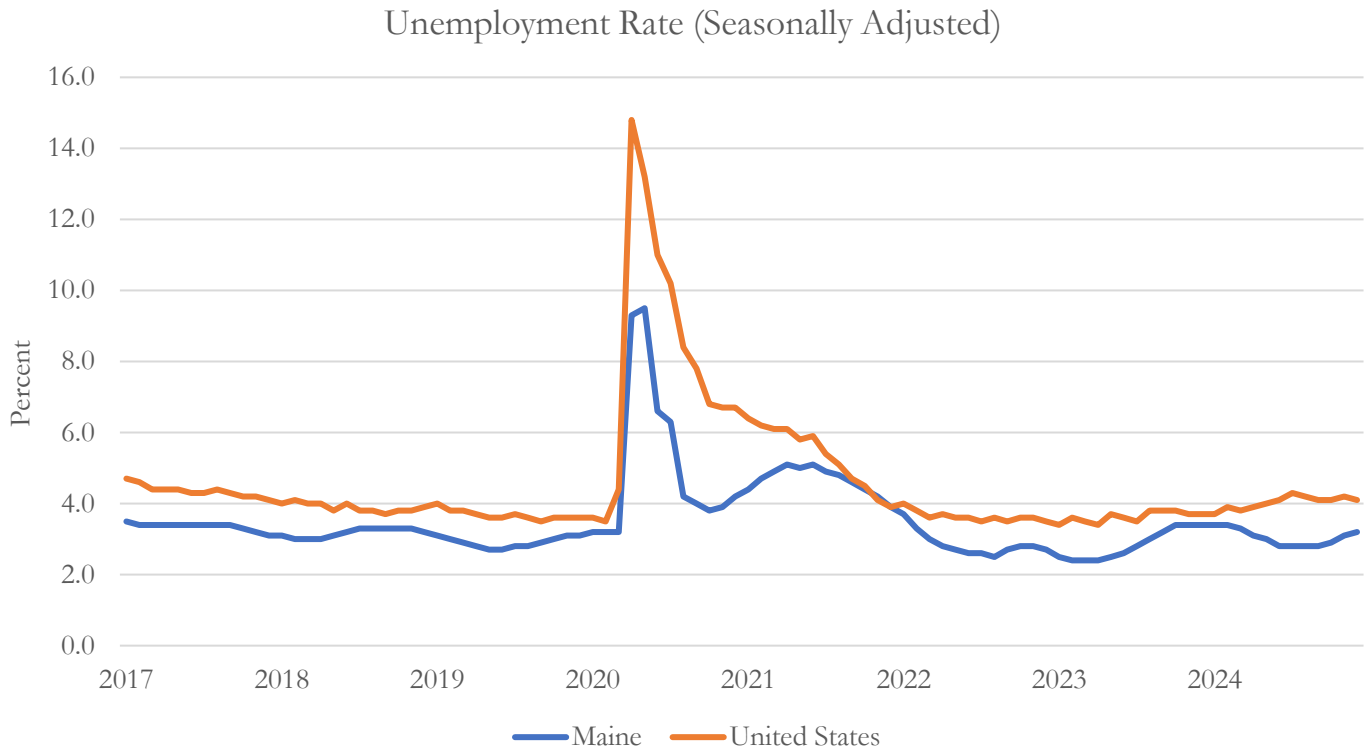

² Created by Dr. James Hamilton, University of California San Diego

3.3 Labor Markets³

3.3.1 Unemployment Rate **December 2024: 3.2%**

Maine's seasonally adjusted unemployment rate was 3.2% in December, up from 3.1% in November. [Maine Department of Labor notes](#) that this year's pattern of lower unemployment rates in the summer months and somewhat higher rates toward the end of the year is consistent with recent years. Increases in the unemployment rate in the fall and winter months are often more pronounced in preliminary data and less pronounced once the data is revised (annually in March).

Maine's 3-month average unemployment rate from October to December was 3.1%, up from 2.8% for the three months prior. Maine's unemployment rate has been trending below the U.S. unemployment rate since early 2022 and was below the New England rate of 3.6% in December.

3.3.2 Labor Force Participation Rate **December 2024: 60.2%**

Labor force participation (LFP) was 60.2% in December, up slightly from 60.1% in November.

The employment to population ratio (EPOP), an alternative measure of labor market activity which measures the total number of employed working-age adults divided by the total working-age population, was 58.2% in December, down slightly 58.3% in November.

³ The data for unemployment rates and labor force are derived from the Local Area Unemployment Statistics (LAUS) program and data for nonfarm payroll jobs are derived from the Current Employment Statistics (CES) program. The numbers presented below are estimates which vary month to month in either direction and are subject to substantial revision. The Maine Department of Labor cautions users to analyze general trends over several months as opposed to making conclusions based on changes month to month.

Labor Force Participation & Employment-Population Ratio (Maine)

3.3.3 Total Nonfarm Payroll Job Estimates **December 2024: 656,100**

Seasonally adjusted nonfarm jobs increased by 200 to 656,100 in December. On an annual basis, nonfarm jobs are up 2,000 from December 2023. Healthcare and social assistance and leisure and hospitality have had the most gains over the year.

Total Nonfarm Employment Maine (seasonally adjusted)

3.4 National inflation measures

3.4.1 Consumer Price Index vs. Personal Consumption Expenditures

There are two measures of inflation in the United States. The Consumer Price Index is released by the Bureau of Labor Statistics and is based on surveys of urban consumers, while Personal Consumption Expenditures price index is calculated by the Bureau of Economic Analysis and based on surveys of what businesses are selling. Both are used officially for various federal purposes, although the Federal Reserve focuses on PCE in monetary policy decisions.

In December the PCE price index grew by 2.6% year-over-year (up from a 2.4% year-over-year change in November). On a monthly basis, it grew by 0.3%. The CPI all-items index grew by 2.9% in December before seasonal adjustment. Growth in both indexes has decelerated since June 2022 but inflation remains elevated above the 2% Federal Reserve target. On January 29, the Federal Reserve Federal Open Market Committee decided not to change its target interest rate due to their assessment of a strong labor market and concerns over elevated inflation.

Measures of inflation, Year-Over-Year Percent Change

3.4.2 Expenditure categories of the CPI

The CPI for all urban consumers increased 2.9% year-over-year in December, up from 2.7% in November. On a seasonally-adjusted monthly basis, the all-items index was up 0.4% from the month before. Energy contributed over 40% of the all-items increase.

The energy index was up 2.6% in December and is down 0.5% year-over year. Fuel oil and gasoline both increased 4.4% in December, though they remain down from a year ago.

The shelter index was up 0.3% in December and is up 4.6% year-over-year. The food index increased 0.3% in December and is up 2.5% year-over-year. The core index, which excludes volatile food and energy prices, increased 0.2% from the prior month and is up 3.2% year-over-year.

Table 1. Percent Change in Consumer Price Index by Expenditure Category	Year-Over-Year (not seasonally adjusted)		Month-Over-Month (seasonally adjusted)	
	Nov-24	Dec-24	Nov-24	Dec-24
All items	2.7	2.9	0.3	0.4
Food	2.4	2.5	0.4	0.3
Energy	-3.2	-0.5	0.2	2.6
<i>All items less food and energy</i>	3.3	3.2	0.3	0.2
Commodities (less food and energy)	-0.6	-0.5	0.3	0.1

Recreation services	3.5	2.7	0.7	0.4
Education and communication services	1.8	1.8	-0.2	0.2
Other personal services	4.2	3.7	0.4	-0.3

3.5 Energy

3.5.1 Gasoline

The average price of a gallon of gasoline in New England was \$3.16 on January 27, \$0.04 higher than the month prior and \$0.07 lower than the same week last year. The average price of gasoline in the month of January was up by just \$0.005 from December. Prices have been very stable for the past four months.

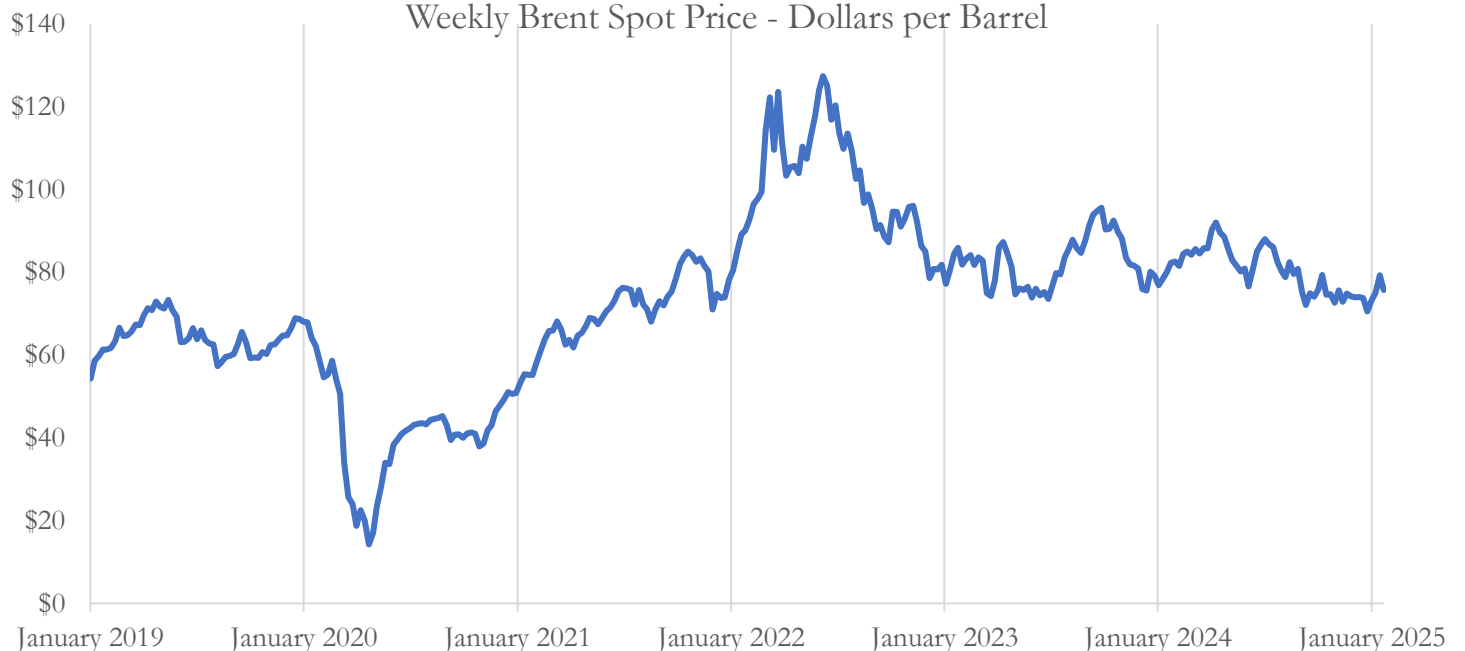

New England - All Grades and Formulations Gasoline Price Per Gallon

3.5.2 Brent Spot Prices

The weekly Brent spot price averaged \$75.83 for the month of January to date and was at \$75.73 for the week ending January 24, 2025. The spot price has increased by \$5.22 since the week ending December 27, 2024.

Weekly Brent Spot Price - Dollars per Barrel

3.5.3 Heating Oil

The price of a gallon of heating oil in Maine averaged \$3.65 in the week ending January 27, according to the U.S. Department of Energy. Prices are down \$0.18 from the same week last year and are \$0.32 above the five-year average for that week in 2020-2024.

According to a weekly survey of heating fuel prices from the Governor's Energy Office, prices on the most recent date measured (January 27) were highest in the Southeast/Greater Portland region of the state, at \$3.87 per gallon on average, and lowest in the East/Downeast region of the state, at \$3.64 per gallon on average.

Source: U.S. Energy Information Agency

3.6 Housing

3.6.1 Sales

The number of home sales in Maine increased by 15.0% in December 2024 compared to December 2023. The median sale price in Maine was \$400,000, an increase of 3.9% from November and 14.1% year-over-year.

Over the calendar year, nine counties had increases in homes sold compared to a year ago, six had decreases, and Somerset County saw little change. All counties except Oxford had increases in median home prices. Franklin County had the largest percent change in median sale price (+20%).

January 1, 2024 – December 31, 2024 Home Sales				
Geography	No. of Units Sold	One Year Change (Units)	Median Sale Price	One Year Change (Price)
Androscoggin	1005	11.2%	\$325,000	4.8%
Aroostook	647	-3.7%	\$161,000	7.3%
Cumberland	2918	6.3%	\$570,000	7.4%
Franklin	402	11.7%	\$300,000	20.0%
Hancock	701	14.5%	\$414,000	2.5%
Kennebec	1267	-1.2%	\$325,000	8.7%
Knox	505	7.0%	\$455,000	5.8%
Lincoln	407	1.0%	\$450,000	2.3%
Oxford	688	-2.4%	\$315,000	-0.9%
Penobscot	1505	6.6%	\$275,000	10.0%
Piscataquis	281	-13.0%	\$225,000	19.1%
Sagadahoc	353	-3.3%	\$448,755	12.0%
Somerset	520	-0.2%	\$229,950	9.5%
Waldo	407	2.8%	\$350,000	7.7%
Washington	351	-6.4%	\$226,000	2.7%
York	2330	12.4%	\$519,500	9.4%
Maine	14,287	4.9%	\$390,200	8.4%

3.6.2 House Price Index

In the third quarter of 2024, Maine’s year-over-year growth in the house price index (HPI)⁴ was 4.3% (seasonally adjusted), 30th highest in the nation for year-over-year growth and fifth in New England. (Rhode Island, Connecticut, and New Hampshire were all in the top 6 nationwide). Maine’s year-over-year growth was the same as the U.S. (4.3%) and below New England growth of 6.3%. On a seasonally adjusted quarterly basis, Maine’s HPI increased 1.1% from the second quarter of 2024 compared to growth of 1.6% in New England and 0.7% in the U.S.

Reference Period		Maine	New England	United States
2023:Q3-2024:Q3	HPI percent change from previous year	4.3%	6.3%	4.3%

3.6.3 Inventory

There were 3,044 active listings of single-family and condo homes in Maine in January. Inventory is increasing, but it remains low compared to five years ago. The number of active listings in January 2025 was up 23% from January 2024, but down 50% from January 2020. Since inventory levels have a defined seasonal pattern, it is most useful to look at changes year-over-year.

⁴ According to the Federal Housing Finance Agency (FHFA), the HPI “measures average price changes in repeat sales or refinancing on the same properties.”

3.7 Sentiment

The **Index of Consumer Sentiment** from the University of Michigan was down 3.9% in January and is down 10% year-over-year. The January decline follows six consecutive months of increases. Consumers expressed concerns about inflation and employment conditions in the year ahead.

The **Small Business Optimism Index**, as measured by the National Federation of Independent Businesses (NFIB), rose in December to its highest levels since October 2018. The December increase follows an even larger increase in November 2024. The index was up 3.3% in December from the month before and was up 14.4% from a year ago. The net percent of owners expecting the economy to improve rose 16 points and had the biggest impact on the overall increase in the index. There were improvements to seven of the ten index components.

Consumer Sentiment and Small Business Optimism Indexes

3.8 Trade Outlook⁵

3.8.1 Exports and trade partners

In November 2024, total exports were up 6.0% in Maine, 18.2% in New England, and 5.2% nationwide compared to November 2023. Year-over-year exports have been volatile since early 2021. Maine's top trade partner was Canada, which accounted for 67% of imports and 44% of exports.

⁵ The data reported here reflect conditions in November 2024, prior to any of the trade-related policy changes beginning in January 2025.

Value of exports to top 5 export partners

Value of imports from top 5 import partners

Similar to the nation, Maine's trade deficit has grown in recent years as the U.S. dollar has strengthened relative to foreign currencies, which makes imports from other countries cheaper and more attractive. Conversely, a strong U.S. dollar can lead to decreasing exports, as goods and services from the U.S. are more expensive for international consumers. These dynamics contribute to a large trade deficit, both in Maine and the U.S. After peaking in August 2022 at -\$471 million, Maine's six-month average trade deficit was -\$280 million as of November 2024.

Maine exports vs. imports, 6-month moving average

5. Glossary

Average earnings per job: Total earnings, which is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income, divided by total full-time and part-time employment.

$$\text{Compound Annual Growth Rate:} = \left(\frac{\text{Final Value}}{\text{Initial Value}} \right)^{\frac{1}{\text{No. of Periods}}} - 1$$

Gross Domestic Product: The measure of the market value of all final goods and services produced within a state in a particular period of time. GDP by state differs from national GDP for the following reasons: GDP by state excludes and national GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment, except office equipment. **Real GDP:** Real GDP by state is an inflation-adjusted measure of each state's gross product that is based on national prices for the goods and services produced within the state. The real estimates of gross domestic product (GDP) by state are measured in chained (2017) dollars.

Housing Price Index: A weighted, repeat-sales index, meaning that it measures average price changes in repeat sales or refinancing on the same properties.

Labor Force Participation Rate: The labor force as a percent of the civilian noninstitutional population ages 16 years and older.

Net Migration Rate: The U.S. Census Bureau defines the net migration rate as the difference between the number of migrants entering and those leaving an area in a year, per 1,000 midyear population. May also be expressed in percent. A positive figure is known as a net immigration rate and a negative figure as a net emigration rate.

Personal Consumption Expenditures by State: A measure of spending on goods and services purchased by, and on behalf of, households based on households' state of residence divided by the resident population of the area.

Personal Income: Income that persons residing in the area receive in return for their provision of labor, land, and capital used in current production as well as other income, such as personal current transfer receipts. *Per capita personal income:* The personal income of a given area divided by the resident population of the area. *Per capita disposable personal income:* The income available to persons for spending or saving (personal income less personal current taxes) of a given area divided by the resident population of the area.

Poverty Level: The U.S. Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is in poverty. If a family's total income is less than the family's threshold, then that family and every individual in it is considered in poverty.

Total merchandise exports: Total exports are calculated by adding domestic exports (goods that are grown, produced, or manufactured in the United States) to foreign exports (foreign-origin goods that have previously entered the United States, Puerto Rico, or the U.S. Virgin Islands for consumption, entry into a CBP bonded warehouse, or a U.S. Foreign Trade Zone (FTZ), and at the time of exportation, have undergone no change in form or condition or enhancement in value by further manufacturing).

Total Private nonfarm employment: Each month Current Employment Statistics (CES) surveys a sample of about 2,700 nonfarm private employers (plus federal, state, and local government employers) in Maine asking them to report the number of jobs, hours, and earnings of workers on their payroll during the week including the 12th day of each month. The sample accounts for just 7% of employers, but 34% of nonfarm jobs in the state because a high share of large employers are surveyed.

Unemployment Rate: Number of unemployed as a percent of the labor force. To be classified as unemployed, persons must be aged 16 years and older with no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment sometime during the 4-week period ending with the reference week.

Wages and Salaries: Remuneration receivable by employees (including corporate officers) from employers for the provision of labor services, measured before deductions such as social security contributions, union dues, and voluntary employee contributions to defined contribution pension plans.
