PETITION TO SET WATER LEVELS/MINIMUM FLOWS

PLEASE TYPE OR PRINT

GENERAL INFORMATION

The undersigned PETITIONERS hereby petition the Department of Environmental Protection to hold a public hearing and establish a water level regime and/or minimum flows for the water body described below.

NAME OF WATER BODY: NORTH POND

LOCATION OF WATER BODY- TOWN(S): SMITHFIELD, MERCER, ROME

COUNTY(IES): SOMERSET

The undersigned PETITIONERS hereby represent that, to the best of their knowledge, the water body named above is impounded by or receives flows from the man-made dam described below.

LOCATION OF DAM: SMITHFIELD WITHIN GREAT MEADOW STREAM

NAME OF DAM OWNER: NORTHPOUND ASSOCIATION

ADDRESS OF DAM OWNER: PO BOX 44 SMITHFIELD, ME 04978

The undersigned PETITIONERS hereby agree to have all official correspondence and notices regarding this petition served in their behalf on the spokesperson identified below.

NAME OF SPOKESPERSON: TIM DOWNING

MAILING ADDRESS: PO Box 24 SMITHFIELD, ME 04978

TELEPHONE NUMBER(S): HOME: 207 215-4635 BUSINESS: _____

The undersigned PETITIONERS hereby represent and aver that they are littoral or riparian proprietors on the water body impounded by or receiving flows from the dam described above.

CERTIFICATION OF FILING

By signing below, the spokesperson agrees to: (1) serve as an intermediary between other petitioners and the DEP; (2) share information, correspondence, notices, draft orders and other official documents with other petitioners; and (3) send comments on behalf of other petitioners to the DEP.

Fishes

Brown trout	Minnows
Smallmouth bass	Golden shiner
Largemouth bass	Fallfish (chub)
White perch	White sucker
Yellow perch	Hornpout (bullhead)
Northern pike	Banded killifish
Chain pickerel	Pumpkinseed sunfish
	American eel

Physical Characteristics

Area - 2,225 acres
Maximum depth - 20 feet
Temperatures
Surface - 71°F
17 feet - 71°F
Principal fisheries: Smallmouth bass, largemouth bass, white perch, chain pickerel

North Pond, located in southern Somerset County, is a large headwater pond in the Belgrade Lakes system. The town of Smithfield is situated on the east shore. Primary access to North Pond is via a state-owned boat launch on Bog Stream.

North Pond provides excellent habitat for warmwater gamefishes. Good fisheries for both largemouth and smallmouth bass are present in this shallow, weedy pond. Chain pickerel and white perch are abundant and offer good action for winter and summer anglers. Northern pike, which were illegally introduced to the Belgrade lakes several years ago, are now present in North Pond. How the presence of this large, voracious predator will affect existing sport fishes is uncertain at this time.

Brown trout are occasionally stocked when surpluses occur in the hatchery system. Brown trout from upstream East Pond, where they have been routinely stocked, occasionally drop down into North Pond and become available to anglers there.

Surveyed - August, 1940

North Pond Water level/minimum flows petition

1. Little / North Pond property owners have experienced significant erosion as the result of high water levels which stem from current dam management irregular and inconsistent management and cleaning of the dam. Additionally, water quality has been degrading since the onset of North Pond Association's management of said dam. Embankments are eroding and trees are falling into the pond, their root systems disrupting the embankments and exacerbating the problem. Previous management would release water from the dam weekly/bi-weekly to keep a flow through the pond and Great meadow stream. Great meadow stream suffers stagnation and excessive vegetation growth from the lack of water flow. The ability to swim and fish for trout in Great Meadow Stream has been absent, while North Pond association has managed the dam. In order to minimize shoreline erosion and the introduction of additional phosphorus to the waters of North Pond and create a healthier body of water, the landowners hereafter signed, seek to attain impartial ruling for optimum water level, minimum water flow and responsible dam management for North Pond and Great Meadow stream.
2. See attached
3. The North Pond Association is nonresponsive to the plight of the lake residence and the downstream water body Great Meadow Stream. In recent years, the North Pond Association annual meetings are held via Zoom and do not allow questions or feedback. All questions and comments are screened, stifling public input.
4. Both this year, 2022, and in past years, the North Pond Association has been largely hands-off with the dam, which has resulted in stagnated water. This year, the dam was closed in mid-May and is not planned to be opened again until after the summer season. The dam was managed the same way in 2021, with little water flow during summer months. This has created high waters which cause excessive shoreline erosion from wave action. Early closure also interrupts the spawn of white perch and other fishes. Their absence in local fishing areas have affected both local fishermen and tourists. In 2018, the East Pond dam was left open in May to lower waters for the purpose of performing maintenance on the dam in August, three months prior. This created abnormally low stagnated warm waters throughout the summer and may have also created our pond's first full algae bloom. In addition to poor water flow management, debris removal is often done by private citizens who independently notice issues and take it upon themselves to remedy the situation.
5. Undersigned landowners of impounded waters and several in the downstream waters of Great Meadow stream desire an official unbiased assessment and instructions for the

#2 Attachment

North Pond landowners are requesting that Maine Department of Environmental Protection (D.E.P.) perform a water level and minimum water flow assessment for the impounds of the North Pond dam and Great Meadow stream.

Mitigating shoreline erosion and the introduction of phosphorus that accompanies it is imperative. The early spring closure of the dam holds maximum water levels, creating unnecessary soil exposure and erosion. Tree root systems are being undermined causing the embankment to collapse with the tree into the lake. New practices need to be employed to reduce phosphorus introduction.

The Smithfield selectboard has decided not to pursue a water level/minimum water flow ordinance but has encouraged a citizen action. The Maine D.E.P. is requested to perform the assessment. Specifically optimum water levels, flows, and greater fall drawdowns for greater water turnover ratio.

CERTIFICATION OF PETITIONERS

The undersigned town/city clerk(s) hereby certify the number of valid petitioners from each affected municipality who have signed the attached petition to set water levels/minimum flows.

To be a valid petitioner, a person (including individuals, partnerships, corporations, governmental entities, associations, and public or private organizations of any character) must own or lease property on the shore of the pond or lake impounded by a dam or on the banks of the river or stream receiving flows from a dam.

If the number of valid petitioners from a given municipality is less than 50, the appropriate town/city clerk(s) also hereby certify the total number of land owners in that municipality on the shore of the pond or lake impounded by a dam or on the banks of the river or stream receiving flows from to dam.
