RE: Green Lake WQC  
DEP Application #L-020024-33-D-N  
Green Lake Hydroelectric Project  
(FERC Project No. 7189)

Dear Ms. Loyzim:

I am a full time resident of Green Lake. I oppose the conditions included in the draft Water Quality Certificate circulated on March 14, 2024, conditions 3F-H, that would require the construction of upstream fish passage facilities in the future based on activities at the Ellsworth Dam.

Green Lake is a unique cold water lake with a native population of arctic charr and landlocked salmon. The lake supports many other species as well. It is not appropriate to order fish passage before determining whether fish passage makes sense for Green Lake. Upstream fish passage could introduce invasive species and upset the delicate ecosystem that currently thrives in the lake. In addition, I am concerned that these conditions could render hydroelectric generation and operation of the project uneconomic.

The Green Lake Water Power (GLWP) has been a good neighbor and excellent steward of the resource. I believe that GLWP should continue to operate its project in order to generate hydroelectric energy – a renewable resource – and provide the many significant recreational and aesthetic benefits that GLWP provides today.

Thank you for your consideration.

Sincerely,

James K. Bryan

Leslie G. Bryan
