DEP Solid Waste Project Manager Karen Knuuti,

Dear Commissioner Loyzim,

Our family has lived our property in Orono for nearly 100 years, 5 generations. I have 4 children and at least one of whom will spend their life here. We love our lives and are very thankful to have a piece of nature right in the middle of town. We are trying to keep our land healthy and encourage wildlife and the natural landscape to flourish.

Every decision cannot be made with only profit in mind. Being in the business of trash is ok, to handle the trash for the people in the immediate area. But ruining the future of our land and water to make profit from trash not from here is so completely unjustified. There is no safe way to do this. Please do not allow this expansion.

I strongly oppose the Public Benefit Determination application for the expansion of Juniper Ridge Landfill. The application fails to meet the necessary criteria and poses significant risks to our environment and communities.

The expansion contradicts Maine's Solid Waste Management Hierarchy. It does nothing to increase reduction, reuse, or recycling efforts. Instead, it perpetuates a system that prioritizes disposal over sustainable waste management.

The proposed expansion violates the environmental justice legal standards. The landfill has already disproportionately burdened the Penobscot Nation and nearby communities for years, contaminating sacred waters and exposing residents to harmful odors and potential health risks.

Casella's track record raises serious concerns about their ability to safely manage an expanded facility. Past issues with odor control, PFAS contamination, and the 2023 fire are just some examples of the risk of a further expansion.

The proposal does not address long-term waste reduction needs. It's a short-sighted solution that fails to invest in the infrastructure and programs needed for a sustainable waste management future.

I urge you to issue a negative Public Benefit Determination, pursue an independent environmental review of Casella's landfill practices and the cumulative environmental justice

impacts, and focus instead on developing zero-waste solutions that protect our environment and communities.

Valerie Wallace
