Re: MRC/Fiberight Draft License Review Comments

Dear Tiffany:

We have reviewed the Draft Stormwater Management Law and Natural Resource Protection Act Department Order and have the following comment for your consideration.

In Section B. General Standards on page 3 of 12, the last sentence of the first paragraph says *“the applicants are proposing to reduce runoff volume control to no less than 78.5% of the volume from the impervious area and no less than 98% of the developed area.”* We believe that this should be revised to say *“the applicants are proposing to provide quality treatment to no less than 78.5% of the impervious area and no less than 98% of the developed area.”* Volume controls are addressed through the Flooding Standards which do not apply to this portion of the project. The General Standards address quality treatment.

We appreciate the opportunity to provide comments on the Draft Orders. Please let us know if you have any questions.

Sincerely,
CES, Inc.
