RE: Results of Indoor Air Quality Assessment  
Former Beal's Linen  
7 Chestnut Street, Auburn, Maine  
REM ID: 02284

Dear Ms. Blais:

Ransom Consulting, Inc. (Ransom) has prepared this letter report for the Maine Department of Environmental Protection (MEDEP) summarizing the results of the indoor air investigation performed at the multi-tenant apartment building located at 7 Chestnut Street (the “Site”) and the adjoining Webster’s School apartment building and child care center located at 95 Hampshire Street in the City of Auburn, Androscoggin County, Maine.

The objective of the investigation was to assess current indoor air conditions as part of MEDEP’s ongoing investigation of chlorinated volatile organic compounds (CVOCs) recently detected in soil vapor and indoor air samples collected at the Site and along a utility corridor beneath Chestnut Street, which are likely associated with CVOC releases originating from dry cleaning/laundromat facilities (Beal’s Linen/Cleaners & Malo Drycleaners) that formerly operated at the Site.

## SITE DESCRIPTION & HISTORY

The Site consists of a rectangular-shaped parcel of land, encompassing approximately 0.6 acres, located at the southeastern corner of the intersection of Chestnut Street and Webster Street in the City of Auburn, Androscoggin County, Maine. The Site is identified by the City of Auburn Assessor’s Office as Block 335 on Tax Map 250, which corresponds to 7 Chestnut Street. The Site location and Site features are shown on Figures 1 and 2.

The Site is currently improved with one building (the “Site Building”), which is currently utilized as a multi-family apartment building and is partitioned into 15 single-family apartments and one laundry room. The northwestern and southwestern portions of the Site consists of asphalt-paved parking areas and driveways, which are utilized by the Site tenants for automobile parking. The eastern portion of the Site consists of overgrown vegetated/wooded areas.

Based on available information, the eastern portion of the Site was occupied by dry cleaning/laundromat facilities (Beal’s Linen/Cleaners and Malo Dry Cleaners; 7-15 Chestnut Street) from circa 1950 to circa 1985. The former dry cleaning/laundromat buildings were demolished in 1985. The existing Site Building was constructed in 1986 and has been utilized as multi-tenant apartments since its construction.

Ms. Becky Blais  
Maine Department of Environmental Protection

## BACKGROUND

Beginning in Fall 2013, MEDEP collected three soil gas samples within the right of way along Chestnut Street as part of the Dry Cleaner Initiative screening process to help identify sites with potential risks to receptors. In March 2014 MEDEP collected a sub-slab soil vapor and indoor air samples at the Site. The MEDEP sampling included the collection of the following soil vapor and indoor air samples:

1. Sub-slab soil vapor sample (SS-A1) collected beneath the concrete slab of the laundry room in the Site building;
2. Soil vapor sample (SV-A2) collected beneath the asphalt-paved parking area to the north of the building by Apartment #5;
3. Indoor air sample (IA-A1) collected from Apartment #12 and indoor air sample (IA-A2) collected from Apartment #3 in the Site Building; and
4. Soil vapor samples (SG-1 through SG-3) collected along the utility corridor beneath Chestnut Street to the north of the Site.

Elevated concentrations of CVOCs, specifically trichloroethene (TCE) and tetrachloroethene (PCE), were identified in soil vapor and indoor air samples collected from the Site. The concentrations detected suggested the potential for health risks to occupants of the Site Building.

On March 19, 2014, Ransom was notified of the results of MEDEP's investigation and was contracted by MEDEP to assist with their ongoing investigation at the Site and vicinity. Specifically, MEDEP requested that Ransom assist with the collection, data analysis, and interpretation of indoor air samples to be collected from each apartment in the Site Building, an ambient air sample collected at the Site, and one indoor air sample collected from the western adjoining Webster School apartment building, as presented below. MEDEP also requested that Ransom perform a Phase I Environmental Site Assessment (ESA) for the Site, which is provided under separate cover.

## INDOOR AIR QUALITY ASSESSMENT

### Methodology

On March 20 and 21, 2014, Ransom assisted the MEDEP with their indoor air quality assessment of the Site Building and western adjoining Webster School apartment building and child care center. The assessment was accomplished by collecting indoor air samples and one ambient air sample with laboratory-prepared SUMMA® passivated stainless steel canisters with 24-hour flow control valves. Prior to placement of the summa canisters, MEDEP personnel interviewed tenant(s) and Ransom personnel screened the indoor air of each apartment for the presence of organic vapors or total VOCs (TVOCs) using a photoionization detector (PID). The PID was equipped with a 10.6 eV lamp and calibrated to an isobutylene standard at parts per billion by volume (ppbv) units. A summary of sample locations and the highest concentrations of indoor air screening results are presented in the table below. The locations of each indoor air sample collected inside the Site Building are provided on Figure 3.

Ms. Becky Blais  
Maine Department of Environmental Protection

**SUMMARY OF INDOOR AIR SAMPLE LOCATIONS (MARCH 20-21, 2014)**

Sample ID:	Apartment/Location	PID Results (ppbv)
IA-7C-1	Apartment #1	225 ppbv
IA-7C-2	Apartment #2	334 ppbv
IA-7C-3	Apartment #3	1,025 ppbv
IA-7C-4	Apartment #4	400 ppbv
IA-7C-5	Apartment #5	240 ppbv
IA-7C-6	Apartment #6	2,300 ppbv
IA-7C-7	Apartment #7	20 ppbv
IA-7C-9	Apartment #9	400 ppbv
IA-7C-10	Apartment #10	490 ppbv
IA-7C-11	Apartment #11	400 ppbv
IA-7C-12	Apartment #12	700 ppbv
IA-7C-13	Apartment #13	20 ppbv
IA-7C-14	Apartment #14	290 ppbv
IA-7C-15	Apartment #15	190 ppbv
IA-7C-Ambient	Exterior- Behind Apartment #3	0 ppbv
IA-7C-Webster School	Webster School Apartment Foyer	175 ppbv

The SUMMA® canisters were placed approximately 3 to 5 feet above the floor in order to capture representative air samples from within the breathing zone in each apartment unit of the Site Building and in the child care center in the basement of the Webster School apartment building. At the time of the assessment, Apartment #8 was in the process of being renovated and painted. Due to the renovations/painting activities, MEDEP opted not to collect an indoor air sample from this apartment in order to prevent a false positive result of VOCs from chemicals associated with the renovation activities in that apartment and not related to the former dry cleaner operations. The ambient air sample was collected at ground level outside of the Site Building behind Apartment #3 and a duplicate indoor air sample (DUP-01) was collected inside Apartment #3 for quality assurance/quality control measures.

The samples were submitted under chain-of-custody documentation to Katahdin Analytical Services (Katahdin) of Scarborough, Maine and analyzed for the following CVOCs [cis-1,2-dichloroethene (cis-1,2-DCE); trans-1,2-dichloroethene (trans-1,2-DCE), TCE, PCE, and vinyl chloride] by U.S. EPA Method TO-15. Due to a summa canister malfunction at the laboratory, the indoor air sample collected from Apartment #14 could not be analyzed.

Indoor air sample analytical results are presented in Table 1. A summary of duplicate sample analytical results and calculated relative percent differences (RPDs) is presented in the attached Table 2. A copy of the laboratory chemical analysis data report is provided as Attachment A.

Ms. Becky Blais  
Maine Department of Environmental Protection

## Results

The analytical results of indoor air samples collected during this investigation were compared to their respective Residential Indoor Air Targets provided in *Table 2: Maine Remedial Action Guidelines for the Indoor Air Exposure Pathway, by Exposure Scenario*, provided in the MEDEP Bureau of Remediation and Waste Management's (BRWM's) "Remedial Action Guidelines (RAGs) for Sites Contaminated with Hazardous Substances," dated May 10, 2013.

### PCE

As shown in Table 1, elevated levels of PCE exceeding its respective Residential Indoor Air Target of 42 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) were detected at concentrations ranging from 56 to 1,300  $\mu\text{g}/\text{m}^3$  in the indoor air samples collected from Apartments #1, #2, #3, #4, #5, #6, #7, #10, #12, #13, and #15. The highest concentrations of PCE were detected in Apartment #1 (460  $\mu\text{g}/\text{m}^3$ ); Apartment #2 (860  $\mu\text{g}/\text{m}^3$ ); Apartment #3 (710  $\mu\text{g}/\text{m}^3$ ); Apartment #4 (1,300  $\mu\text{g}/\text{m}^3$ ); and Apartment #5 (440  $\mu\text{g}/\text{m}^3$ ), which are located on the ground floor at the eastern portion of the Site Building and within or near the approximate footprint of the former dry cleaner/laundromat buildings at the Site.

Concentrations of PCE detected in the indoor air samples appear to decrease at the central and western portions of the building, as exhibited in the results from Apartment #6 (56  $\mu\text{g}/\text{m}^3$ ); Apartment #7 (90  $\mu\text{g}/\text{m}^3$ ); Apartment #9 (1.6  $\mu\text{g}/\text{m}^3$ ); Apartment #10 (60  $\mu\text{g}/\text{m}^3$ ); Apartment #11 (30  $\mu\text{g}/\text{m}^3$ ); Apartment #12 (68  $\mu\text{g}/\text{m}^3$ ); Apartment #13 (58  $\mu\text{g}/\text{m}^3$ ); and Apartment #15 (66  $\mu\text{g}/\text{m}^3$ ). The only apartments that contained PCE at concentrations below its Residential Indoor Air Target were Apartment #9 (1.6  $\mu\text{g}/\text{m}^3$ ) and Apartment #11 (30  $\mu\text{g}/\text{m}^3$ ), which are located on the ground level and 2<sup>nd</sup> floor, respectively, at the northwestern corner of the Site Building.

Based on this data, it appears that the dry cleaning solvent, PCE, was released to the ground in the vicinity of the former dry cleaner building at the eastern portion of the Site and is currently volatilizing from the ground into the indoor air of the Site Building with the highest concentrations of PCE at the eastern portion of the building and decreasing in concentration at the central and western portions of the building. The highest concentration of PCE (1,300  $\mu\text{g}/\text{m}^3$ ) was detected in the indoor air sample collected from Apartment #4.

### TCE

As shown in Table 1, elevated concentrations of TCE exceeding its respective Residential Indoor Air Target of 2.1  $\mu\text{g}/\text{m}^3$  were detected the indoor air samples collected from Apartment #3 (7  $\mu\text{g}/\text{m}^3$ ); Apartment #4 (16  $\mu\text{g}/\text{m}^3$ ); and Apartment #5 (5  $\mu\text{g}/\text{m}^3$ ), which are located on the ground floor at the east-central portion of the Site Building and within or near the approximate footprint of the former dry cleaner/laundromat buildings at the Site.

TCE appears to decrease to concentrations below its Residential Indoor Air Target (2.1  $\mu\text{g}/\text{m}^3$ ) in the indoor air samples at the eastern, west-central and western portions of the building, as exhibited in the results from Apartment #1 (0.53  $\mu\text{g}/\text{m}^3$ ); Apartment #2 (1.3  $\mu\text{g}/\text{m}^3$ ); Apartment #6 (0.47  $\mu\text{g}/\text{m}^3$ ); Apartment #7 (0.41  $\mu\text{g}/\text{m}^3$ ); Apartment #10 (0.21  $\mu\text{g}/\text{m}^3$ ); Apartment #11 (0.19  $\mu\text{g}/\text{m}^3$ ); Apartment #12

Ms. Becky Blais  
Maine Department of Environmental Protection

(0.75 µg/m<sup>3</sup>); Apartment #13 (0.43 µg/m<sup>3</sup>); and Apartment #15 (0.54 µg/m<sup>3</sup>). The only indoor air sample that did not contain TCE at concentrations above its laboratory reporting limit (0.048 µg/m<sup>3</sup>) was collected from Apartment #9, which is located on the ground level at the western corner of the Site Building.

Based on this data, it appears that PCE is dechlorinating into TCE in the vicinity of the former dry cleaner building at the eastern portion of the Site and is currently volatilizing from the ground into the indoor air of the Site Building with the highest concentrations of TCE at the east-central portion of the building and decreasing in concentration at the eastern, west-central and western portions of the building. The highest concentration of TCE (16 µg/m<sup>3</sup>) was detected in the indoor air sample collected from Apartment #4, which was also the apartment that contained the highest PCE concentration in the building.

#### cis-1,2-DCE

As shown in Table 1, low-level concentrations of cis-1,2-DCE below its respective Residential Indoor Air Target of 63 µg/m<sup>3</sup> were detected in the indoor air samples collected from Apartment #3 (0.25 µg/m<sup>3</sup>); Apartment #4 (2.1 µg/m<sup>3</sup>); and Apartment #5 (0.48 µg/m<sup>3</sup>), which are located on the ground floor at the east-central portion of the Site Building and within or near the approximate footprint of the former dry cleaner/laundromat buildings at the Site. Cis-1,2-DCE was not detected at concentrations above its laboratory reporting limit (0.059 µg/m<sup>3</sup>) in remaining indoor air samples collected in the apartments in the building.

Based on this data, it appears that TCE is dechlorinating into cis-1,2-DCE in the vicinity of the former dry cleaner/laundromat buildings at the eastern portion of the Site and is currently volatilizing from the ground into the indoor air of the Site Building with the highest concentrations of cis-1,2-DCE at the east-central portion of the building and decreasing in concentration at the eastern, west-central and western portions of the building. The highest concentration of cis-1,2-DCE (2.1 µg/m<sup>3</sup>) was detected in the indoor air sample collected from Apartment #4, which was also the apartment that contained the highest PCE and TCE concentrations in the building.

#### Vinyl Chloride & trans-1,2-DCE

As shown in Table 1, vinyl chloride and trans-1,2-DCE were not detected at concentrations above the laboratory reporting limits in any of the indoor air samples collected in the apartments in the building. Based on this data, it appears that TCE is not dechlorinating into trans-1,2-DCE and cis-1,2-DCE is not dechlorinating into vinyl chloride at the Site.

#### Ambient Air

As shown on Table 1, a low-level concentration of PCE (4.7 µg/m<sup>3</sup>) was detected in the ambient air sample collected behind Apartment #4. TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride were not detected at concentrations above their laboratory reporting limits in the ambient air sample. Based on this data, it appears that PCE is currently volatilizing from the ground into atmospheric air within or near the approximate footprint of the former dry cleaner/laundromat buildings at the Site, but its breakdown constituents are not volatilizing into atmospheric air at detectable concentrations.

Ms. Becky Blais  
Maine Department of Environmental Protection

#### Webster School Apartment Building

As shown on Table 1, a low-level concentration of PCE ( $0.2 \mu\text{g}/\text{m}^3$ ) was detected in the indoor air sample collected inside the western adjoining Webster School apartment building below its Residential Indoor Air Target of  $42 \mu\text{g}/\text{m}^3$ . TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride were not detected at concentrations above their laboratory reporting limits in the indoor air sample collected inside the Webster School apartment building. Based on this data, it appears that a very low concentration of PCE is present in the indoor air of the adjoining Webster School building, which may be attributable to former dry cleaner and laundromat operations at the Site. The presence of low-level PCE detected at this property may also be attributable to former or current operations at the property, including boiler maintenance or general cleaning activities in the Webster School apartment building, which may have used cleaning solvents containing PCE.

#### Duplicate Indoor Air Sample Sample

As shown in Table 2, PCE, TCE, and cis-1,2-DCE were detected in the indoor air sample collected from Apartment #3 (IA-7C-3) and its duplicate indoor air sample (DUP-01) with calculated RPDs below the 35 percent guideline. Therefore, the precision of these indoor air sample results are acceptable for this investigation. Vinyl chloride and trans-1,2-DCE were not detected above their respective laboratory reporting limits in the indoor air sample collected from Apartment #3 (IA-7C-3) or its duplicate indoor air sample (DUP-01); therefore, no RPD was applicable for these CVOCs.

### **INDOOR AIR RISK ASSESSMENT**

As part of this investigation, MEDEP completed an indoor air risk assessment by calculating the Hazard Index (HI) and Incremental Lifetime Cancer Risks (ILCR) for each apartment utilizing the analytical results in accordance with MEDEP's RAGs. Based on MEDEP's calculations, PCE, TCE, and cis-1,2-DCE exceeded their applicable HI throughout the building. Concentrations detected in apartments #1 through #7 also exceeded the MEDEP threshold of 1 in 100,000 for ILCR. The concentrations of these CVOCs do not present an ILCR to occupants of the adjoining Webster School apartment building. A copy of MEDEP's risk assessment calculations and summary letter are included as Attachment B.

### **CONCLUSIONS & RECOMMENDATIONS**

Findings from this investigation indicate CVOCs, specifically PCE and its breakdown constituent, TCE, were detected in the indoor air samples collected throughout the building. Contaminants were detected at concentrations exceeding their MEDEP Residential Indoor Air Targets in all units with the exception of apartments #9 and #11. The highest concentrations of CVOCs were detected in the indoor air sample collected from Apartment #4, which is located within or near the approximate footprint of the former dry cleaner/laundromat buildings at the Site. The concentrations of CVOCs in indoor air in the Site Building appear to decrease laterally from Apartment #4; however, Apartments #1 and #2, which are located to the east of Apartment #4, contain elevated concentrations of TCE exceeding its MEDEP Residential Indoor Air Target. Additionally, Apartment #5, which is located to the west of Apartment #4, contains elevated concentrations of TCE exceeding its MEDEP Residential Indoor Air Target. Based on MEDEP's

Ms. Becky Blais  
Maine Department of Environmental Protection

calculations, these CVOCs exceeded their applicable HI throughout the building. Concentrations detected in apartments #1 through #7 also exceeded the MEDEP threshold of 1 in 100,000 for ILCR.

CVOCs were not detected in the indoor air sample collected from the western adjoining Webster School apartment building at concentrations exceeding their MEDEP Residential Indoor Air Targets and do not present an ILCR to occupants of the building. The low-level concentration of PCE detected in the indoor air in the Webster School apartment building may not be attributable to dry cleaning solvent releases originating from the Site and does not warrant indoor air mitigation measures for this building.

Based on these results, Ransom recommends additional indoor air assessments at properties in the Site vicinity. Vapor mitigation activities (i.e., installation of a sub-slab depressurization system) are warranted for the Site Building in order to mitigate known impacts to indoor air quality from vapor intrusion of CVOCs likely originating from dry cleaning solvent releases at the Site.

Should you have any questions regarding this letter report, please do not hesitate to call.

## TECHNICAL NARRATIVE

### Organics Analysis

The samples of Work Order SH1399 were analyzed in accordance with “Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air: Compendium Method TO-15.” 2<sup>nd</sup> Edition, 1999, Office of Research and Development, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

### TO-15 Analysis

The target analytes 1,3-dichlorobenzene, 1,2,4-trichlorobenzene, naphthalene, and/or hexachlorobutadiene were detected in the method blanks WG139871-2, and WG139879-2 above the MDL but below the PQL. The laboratory policy is not to take corrective action unless the concentration of the target analyte is above the PQL. If the analytes were also detected in the associated samples, the analytes are flagged with a “B” qualifier indicating they were detected in the method blank analyzed concurrently with the sample.

There were no other protocol deviations or observations noted by the organics laboratory staff.

## **KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS**

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

- U** Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

- \* Compound recovery outside of quality control limits.

- D** Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

- E** Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

- J** Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

- J** Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

- B** Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

- C** Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

- L** Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

- M** Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

- N** Presumptive evidence of a compound based on a mass spectral library search.

- A** Indicates that a tentatively identified compound is a suspected aldol-condensation product.

- P** Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin inspects and verifies all equipment including, but not limited to, canisters and flow controllers before being sent to the client. As the client you have agreed to pay a rental fee for use of this equipment, which is the sole property of Katahdin. All equipment will be inspected for damage and completeness upon return to Katahdin. In the event that rental equipment is missing and/or damaged, by signing this COC, you (the client) agrees to pay Katahdin for replacement of any unuseable, damaged or missing equipment.

RE: Katahdin Lab Number: SH1400

Project ID: Former Beal's Linen, Auburn  
Project Manager: Ms. Shelly Brown  
Sample Receipt Date(s): March 06, 2014

Dear Ms. Blais:

Please find enclosed the following information:

- \* Report of Analysis (Analytical and/or Field)
- \* Quality Control Data Summary
- \* Chain of Custody (COC)
- \* Login Report

A copy of the Chain of Custody is included in the paginated report. The original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to <http://www.katahdinlab.com/cert.html> for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,  
KATAHDIN ANALYTICAL SERVICES

## TECHNICAL NARRATIVE

### Organics Analysis

The samples of Work Order SH1400 were analyzed in accordance with “Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air: Compendium Method TO-15.” 2<sup>nd</sup> Edition, 1999, Office of Research and Development, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

### TO-15 Analysis

The target analytes acetone, methylene chloride, 1,3-dichlorobenzene, 1,2,4-trichlorobenzene, naphthalene, and/or hexachlorobutadiene were detected in the method blanks WG139772-2, WG139871-2, and WG139879-2 above the MDL but below the PQL. The laboratory policy is not to take corrective action unless the concentration of the target analyte is above the PQL. If the analytes were also detected in the associated samples, the analytes are flagged with a “B” qualifier indicating they were detected in the method blank analyzed concurrently with the sample.

There were no other protocol deviations or observations noted by the organics laboratory staff.

## **KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS**

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

- U** Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

- \* Compound recovery outside of quality control limits.

- D** Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

- E** Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

- J** Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

- J** Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

- B** Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

- C** Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

- L** Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

- M** Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

- N** Presumptive evidence of a compound based on a mass spectral library search.

- A** Indicates that a tentatively identified compound is a suspected aldol-condensation product.

- P** Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin inspects and verifies all equipment including, but not limited to, canisters and flow controllers before being sent to the client. As the client you have agreed to pay a rental fee for use of this equipment, which is the sole property of Katahdin. All equipment will be inspected for damage and completeness upon return to Katahdin. In the event that rental equipment is missing and/or damaged, by signing this COC, you (the client) agrees to pay Katahdin for replacement of any unusable, damaged or missing equipment.

MEDEP's Memorandum & Indoor Air Risk Assessment

Results of Indoor Air Quality Assessment  
Former Beal's Linen  
7 Chestnut Street  
Auburn, Maine  
REM ID: 02284

STATE OF MAINE  
DEPARTMENT OF ENVIRONMENTAL PROTECTION  
Bureau of Remediation and Solid Waste Management  
Division of Technical Services

## **MEMORANDUM**

**TO:** Becky Blais, Uncontrolled Sites Project Manager,  
Environmental Specialist III, Division of Remediation

**FROM:** Troy Smith, Certified Environmental Hydrogeologist, GE502,  
Technical Services Division

**DATE:** March 27, 2014

**PROGRAM:** Uncontrolled Sites

**SITE:** Beal's Linen, 7 Chestnut Street, Auburn

**REMEDIATION NUMBER:** REM02284

**SUBJECT:** Summary of Sample Results from March 20-21, 2014, Indoor Air Sampling at 7 Chestnut Street

---

The purpose of this memo is to provide a summary of the results from the indoor air sampling event that took place on March 20 and 21, 2014 at 7 Chestnut Street and 95 Hampshire Street. Additionally, I have included the data from the air monitoring station located approximately one mile from the site.

The attached map presents the location of the apartment complex sampled on March 20-21, located at 7 Chestnut Street. The attached diagram shows the approximate locations of the apartments, including the second floor layout at the southwestern end of the complex. The attached table presents the results from each location by apartment number or street address. The attached summary table also includes a summary of the indoor air risk calculator results. Exceedances of the risk guidelines are highlighted in red. Incremental lifetime cancer risk exceedances are in bold.

For comparison purposes I have attached an e-mail from Andrea Galasyn, MEDEP Air Bureau that provides the monitoring data for the Lewiston air monitoring station, located approximately 1 mile from the site. I also included a map showing the air monitoring station on Canal Street in Lewiston and the Beals Linen Site on Chestnut Street in Auburn.

Apartment Number	Number/Age of occupants	PCE	TCE	cis-1,2-DCE	trans-1,2-DCE	Vinyl Chloride	Chronic	Chronic HI	Sub-chronic	Sub-chronic HI

Hi Troy,

Here is the monitoring data for the Lewiston site over the last year. Let me know if you would like anything more, thanks!

Data from Monitoring Site CKP (Lewiston, ME) 2/3/2013-2/4/2014

	Mean (ug/m3)	Median (ug/m3)
Trichloroethylene	0.022	0.000
Tetrachloroethylene	0.294	0.253
cis-1,2-Dichloroethene	0.012	0.000
trans-1,2-Dichloroethene	0.016	0.000
Vinyl Chloride	0.023	0.000
