

INGREDIENTS

Hydrocarbon oil	20%
Cyclohexanone	10%
Perchloroethylene	68%
Paranitrophenol	2%

DIRECTIONS

Wash the leather items with soap and water at a temperature not to exceed 100°F. A washing machine or other device in which the shoes are tumbled may be used. Remove dirt remaining after this treatment by rubbing with a cloth or a brush. Rinse with clean water. Allow leather to drain for five minutes. Apply the compound by immersing the leather items for 10 seconds. When only a small quantity is treated, application may be made with a soft bristled brush, felt dauber or cloth. Apply in a well ventilated place and avoid inhaling the toxic solvent. After applying, wash hands thoroughly with cool water and soap. Allow leather items to dry thoroughly in the open air before wearing. Avoid skin contact.
